**RE: UM 1690, Infomart's General Comments on Voluntary Renewable Energy Tariffs for Non-Residential Customers**

Infomart Data Centers (formerly Fortune Data Centers) is an industry leader in building, owning and operating highly efficient, cost-effective wholesale data centers. Each of its national facilities meet or exceed the toughest industry standards for data centers in all operational categories of availability, security, connectivity, and physical resilience. Locally in Oregon, Infomart owns and operates a data center in Hillsboro and is a PGE customer.

As a wholesale data center, Infomart owns and operates data centers for our business customers that install their servers and other computing and communication devices in our facility. These businesses are increasingly expressing their interest to us in securing renewable energy supplies for their operations, and these interests extend across a broad range of options. While some of our clients are attracted by PGE's overall generation mix and the ability to participate in the Clean Wind program, others explicitly have asked for Oregon-based options that go "beyond just purchasing RECs".

PGE's ability to offer a range of voluntary renewable energy product options beyond just the RECs available to our company will help us better meet our customers' needs and more effectively compete in our markets.

Sincerely,

A handwritten signature in blue ink, appearing to read 'John Sheputis', with a long horizontal flourish extending to the right.

John Sheputis  
President
