Re: UE ___ In The Matter of IDAHO POWER COMPANY's 2015 Annual Power Cost Update

Attention Filing Center:

Enclosed for filing in the above-referenced matter are an original and five copies of the Testimony of Scott Wright (Idaho Power/100-108). Please direct all communications in this matter to:

Lisa Nordstrom
Idaho Power Company
P.O. Box 70
Boise, ID 83707/0070
lnordstrom@idahopower.com

**BEFORE THE PUBLIC UTILITY COMMISSION
OF OREGON**

UE _____

IN THE MATTER OF IDAHO POWER)
COMPANY'S 2015 ANNUAL POWER)
COST UPDATE)
OCTOBER UPDATE)

)

**IDAHO POWER COMPANY
DIRECT TESTIMONY
OF
SCOTT WRIGHT**

October 21, 2014

1 **Q. Please state your name, business address, and present occupation.**

2 A. My name is Scott Wright. I am employed by Idaho Power Company ("Idaho Power"
3 or "Company") as a Regulatory Analyst II in the Regulatory Affairs Department. My
4 business address is 1221 West Idaho Street, Boise, Idaho 83702.

5 **Q. Please describe your educational background.**

6 A. I received a Bachelor of Science degree in Business Economics from Eastern
7 Oregon University. I have also attended the Center for Public Utilities "Practical
8 Skills for a Changing Electric Industry" course at New Mexico State University in
9 Albuquerque, New Mexico, the Edison Electric Institute "Electric Rate Advanced
10 Course" in Madison, Wisconsin, the NERA "Marginal Costing for Electric Utilities
11 Course" in Los Angeles, California and the Financial Accounting Institute "Utility
12 Finance and Accounting Course" in Las Vegas, Nevada.

13 **Q. Please describe your work experience.**

14 A. In May 1998, I accepted a position as Research Assistant with Idaho Power in the
15 Regulatory Affairs Department. In March 2007, I was promoted to a Regulatory
16 Analyst I. In March 2010, I was promoted to a Regulatory Analyst II. As a
17 Regulatory Analyst II, I am responsible for running the AURORA model to calculate
18 net power supply expenses ("NPSE") for ratemaking purposes, as well as the
19 determination of the marginal cost of energy used in the Company's marginal cost
20 analyses. My duties also include providing analytical support for other regulatory
21 activities within the Regulatory Affairs Department. In my current role, I have served
22 as the Company's power supply expense witness in the last six Annual Power Cost
23 Update ("APCU") filings before the Public Utility Commission of Oregon
24 ("Commission"), UE 203, UE 214, UE 222, UE 242, UE 257, and UE 279.

25 **Q. What is the purpose of your testimony?**

1 A. The purpose of my testimony is to describe the Company's October Update for the
2 2015 APCU, which has been prepared in accordance with Order No. 08-238.

3 **Q. What is the October Update?**

4 A. The October Update is the Company's estimate of what "normal" NPSE will be for an
5 upcoming 12-month test year. In this case, the 12-month test year is April 2015
6 through March 2016.

7 **Q. Was the AURORA model used for this October Update?**

8 A. Yes.

9 **Q. Please describe the AURORA model and how it is used by the Company.**

10 A. The AURORA model is a comprehensive electric market resource dispatch model.
11 For the October Update, the Company uses AURORA to simulate the economic
12 dispatch of its resources to determine NPSE under "normal" conditions.

13 **Q. Please describe the variables that are to be updated in the AURORA model as
14 delineated in Order No. 08-238.**

15 A. Order No. 08-238 identifies a number of variables to be updated in the AURORA
16 model annually in October: fuel prices, transportation costs, maintenance rates, heat
17 rates, and forced outage rates for the thermal plants. This year's NPSE modeling
18 results for the 12-month test year reflect updates to the variables listed above for all
19 Company-owned resources, as well as an updated Sales and Load Forecast.

20 Natural gas prices were updated using the forecast methodology used in prior
21 APCU filings. This methodology uses the Northwest Power and Conservation
22 Council (NPCC), New York Mercantile Exchange (NYMEX), Natural Gas Exchange
23 (NGX), Energy Information Administration (EIA), and Moody's forecast data to
24 develop a normalized gas price. The normalization process is intended to reduce
25 volatility that may occur in the short-term market.

26

1 Public Utility Regulatory Policies Act of 1978 (“PURPA”) contracts and other
2 Purchased Power Agreements (“PPA”) were updated to reflect expected generation
3 and costs during the April 2015 through March 2016 test year.

4 **Q. Have you prepared an exhibit to demonstrate the normalization of variable
5 power supply expenses as determined by the AURORA modeling process?**

6 A. Yes. Exhibit 101 shows the results of the AURORA modeling determination of
7 normalized NPSE for the April 2015 through March 2016 test year. Exhibit 101
8 shows the summary of results containing average variable power supply generation
9 sources and expenses based on 86 historical water conditions.

10 **Q. Please summarize the sources and disposition of energy shown on Exhibit
11 101.**

12 A. As can be seen on Exhibit 101, hydro generation supplies 8.7 million megawatt-
13 hours (“MWh”), approximately 49 percent ($8.7 \text{ million MWh} / 17.9 \text{ million MWh} = 49$
14 percent) of the generation mix. Thermal generation supplies 6.0 million MWh
15 (Bridger 4.2, Boardman 0.3, Valmy 0.4, Langley Gulch 1.1), approximately 33
16 percent ($6.0 \text{ million MWh} / 17.9 \text{ million MWh} = 33 \text{ percent}$) of the generation mix.
17 Danskin and Bennett Mountain are peaking units typically supplying energy at times
18 when resources and/or transmission lines are constrained. Purchases of power are
19 made up of short-term and longer-term market purchases, PPAs, and PURPA.
20 PURPA purchases reflect normalized and annualized generation levels and account
21 for nearly 2.3 million MWh. PURPA purchases are not included on Exhibit 101;
22 however, when combined with market purchases of 0.9 million MWh, total purchases
23 amount to 3.2 million MWh ($2.3 \text{ million MWh} + 0.9 \text{ million MWh} = 3.2 \text{ million MWh}$) or
24 approximately 18 percent ($3.2 \text{ million MWh} / 17.9 \text{ million MWh} = 18 \text{ percent}$) of the
25 generation mix. Of the 17.9 million MWh generated by the system, 15.8 million MWh
26 are utilized for system loads while nearly 2.1 million MWh are sold as surplus.

1 **Q. Have any changes in the variable cost of coal production occurred since last**
2 **year's October Update filing?**

3 A. Yes. The per-unit variable cost of production for each of the Company's coal-fired
4 thermal generation plants have been updated to reflect current operating costs. The
5 per-unit cost of output at the Bridger plant has increased from \$22.70 per MWh to
6 \$26.25 per MWh. The per-unit cost of output at the Boardman plant has increased
7 from \$26.71 per MWh to \$27.57 per MWh. The per-unit cost of output at the Valmy
8 plant has remained relatively unchanged, moving from \$35.58 per MWh to \$35.45
9 per MWh.

10 **Q. Please explain the changes in coal generation costs described above.**

11 A. Fuel costs at the Company's coal plants are expected to vary from year to year in the
12 course of normal operations. These normal variations can be attributed to price
13 variability provided for in existing contracts for coal supply and shipment, plant
14 operational variability, and coal yard operational variability.

15 In addition to the normal variations in coal fuel costs that should be expected
16 from year to year, there were additional factors that contributed to the changes in
17 coal costs at the Bridger plant. The main drivers of increased costs are due to
18 additional roof support to further enhance the safety of Bridger Coal Company
19 miners, and changes in underground mine plans due to coal seam variability, weak
20 geological formations overlying the coal seam, and previously unrecognized faults.
21 Also, the current coal contract with Black Butte will expire before the 2015/2016
22 APCU test period, so new contract provisions based on the recent request for
23 proposal results have been included in this forecast.

24 Similarly the increase in the Boardman plant fuel costs can be attributed to an
25 updated coal price forecast using the provisions of a new contract for low sulfur coal
26 at the Boardman plant.

- 1 **Q. In light of the upward movement in coal generation costs, how does the**
2 **modeled variable cost of production at Bridger and Boardman compare to**
3 **modeled variable cost of other resources?**
- 4 A. With the exception of the Company's hydro generation resources, the per unit costs
5 for Bridger and Boardman are still the lowest cost of all the Company's resources,
6 despite the increase in coal costs described above.
- 7 **Q. Have natural gas prices changed from last year's October Update?**
- 8 A. Yes. The Henry Hub price used for the 2014 October Update was \$4.32 per MMBtu,
9 while the Henry Hub price used in the 2015 October Update is \$4.07 per MMBtu, a
10 decrease of \$0.25 per MMBtu. The decrease in gas prices between the 2014
11 October Update and the 2015 October Update is the result of a combination of
12 several factors. The first factor is that growth in supply has outpaced the growth in
13 demand, which means natural gas is being produced in excess of usage. The
14 second factor is storage levels have recovered from the previous winter's drawdown
15 due to increased supply and lower summer demand.
- 16 **Q. Please describe the change in PURPA generation and expenses since last**
17 **year's October filing.**
- 18 A. PURPA generation has increased from 252 average megawatts ("aMW") to 258
19 aMW, an increase of 6 aMW. Corresponding PURPA expenses have increased from
20 \$165.9 million to \$172.8 million, an increase of \$6.9 million.
- 21 **Q. What drove the changes in PURPA generation since the 2014 October Update?**
- 22 A. The change in PURPA generation and expenses since the 2014 October Update
23 was driven by the expiration of two contracts, the termination of one contract, and the
24 addition of six new contracts, resulting in a net increase of 6 aMW. Three of the new
25 projects are hydro, two of the new projects are biomass, and the last new project is
26 solar, which is the first solar PURPA project to be included in an APCU filing.

- 1 **Q. Have the Company's system loads changed since last year's October Update?**
- 2 A. Yes. The Company's annual normalized system load used in last year's April 2014
3 through March 2015 filing was 1,780 aMW. The Company's April 2015 through
4 March 2016 annual normalized system load used in this filing is 1,798 aMW, an
5 increase of 18 aMW. The increase of 18 aMW is about a one percent increase in
6 loads between the two test years.
- 7 **Q. What forward price curve did the Company use to re-price purchased power**
8 **and surplus sales?**
- 9 A. For the October Update, the Company used the methodology approved in Order No.
10 08-238. This methodology uses a one-year average of the daily forward price curves
11 for April 2016 through March 2017 shown in Exhibit 102, which is then discounted for
12 inflation back to April 2015 through March 2016 according to the quarterly inflation
13 indices provided in Exhibit 103.
- 14 **Q. What average forward price curves did the Company use to re-price purchased**
15 **power and surplus sales for the normalized test year?**
- 16 A. Exhibit 104 shows the revised monthly prices for April 2015 through March 2016.
17 Per Order No. 08-238, these are considered the "normal" forward prices used to re-
18 price the Company's purchased power and surplus sales estimates for the
19 normalized test year.
- 20 **Q. How does the re-pricing of purchased power and surplus sales, using a**
21 **"normal" forward price curve, change purchased power expenses and surplus**
22 **sales revenues as modeled by AURORA?**
- 23 A. Exhibit 101 shows the purchased power expenses and surplus sales revenues
24 before re-pricing as determined by the AURORA modeling process. Exhibit 105
25 shows the same normalized generation dispatch with purchased power and surplus
26 sales re-priced using the normalized forward price curve shown in Exhibit 104. A

1 comparison of Exhibit 101 and Exhibit 105 demonstrates the changes due to re-
2 pricing. Purchased power expenses decrease by \$0.8 million, moving from \$15.0
3 million to \$14.2 million. Surplus sales revenues increase by \$5.5 million, moving
4 from \$56.1 million to \$61.6 million. In this case, the NPSE resulting from the re-
5 pricing methodology shown on Exhibit 105 is a decrease in NPSE of \$6.3 million or
6 approximately \$0.43 per MWh as compared to the AURORA generated expectation
7 shown on Exhibit 101. The difference for the re-pricing of purchased power of \$0.8
8 million and surplus sales of \$5.5 million are shown on Exhibit 106, Columns G and H.

9 **Q. Does the methodology used to estimate the power supply expenses
10 represented in Exhibit 105 conform with the methodology detailed in Order No.
11 08-238?**

12 A. Yes, it does.

13 **Q. What is the October Update unit cost per megawatt-hour (\$/MWh) represented
14 by this filing?**

15 A. Exhibit 105 shows the normalized annual sales at customer level for the April 2015
16 through March 2016 test year are 14,484,458 MWh. Based upon test year sales, the
17 cost per unit for the October Update to become effective on June 1, 2015, is \$23.44
18 per MWh ($\$339.5 \text{ million} / 14.484 \text{ million MWh} = \23.44 per MWh).

19 **Q. How does this \$23.44 per MWh October Update compare to the October Update
20 that resulted from last year's computation?**

21 A. The October Update unit cost which became effective June 1, 2014, was \$21.82 per
22 MWh based upon a determination of total net power supply expenses of \$309.6
23 million. This year's October Update per unit cost of \$23.44 per MWh equates to an
24 increase of \$1.62 per MWh ($\$23.44 - 21.82 = \1.62) or a \$29.9 million increase in
25 system net power supply expenses from last year's October Update.

26

1 **Q. Please explain how the Oregon Jurisdictional revenue deficiency for the**
2 **October Update is calculated using the unit cost of \$1.62 per MWh.**

3 A. The revenue deficiency for the October Update is calculated by multiplying the
4 incremental unit cost of \$1.62 per MWh by the sales for the April 2015 through March
5 2016 test period of 653,468.079 MWh. The result of this calculation indicates a need
6 for an additional \$1.1 million from Oregon customers.

7 **Q. What factors led to a revenue deficiency of \$1.1 million?**

8 A. The main factors that led to a revenue deficiency of \$1.1 million for the 2015 October
9 Update can be seen on Exhibit 106, which compares the AURORA developed
10 results, the re-pricing of purchased power and surplus sales, which was described
11 earlier, and the differences between the 2014 October Update and the 2015 October
12 Update.

13 **Q. What are some of the main differences shown on Exhibit 106?**

14 A. Column F of Exhibit 106 shows the following: an increase in coal expenses of \$5.6
15 million associated with a decrease in coal-fired generation; an increase in natural gas
16 expenses of \$8.3 million associated with an increase in gas-fired generation; a
17 decrease in purchased power expense of \$9.9 million associated with a decrease in
18 purchased power; an increase in PURPA expense of \$6.8 million associated with an
19 increase in PURPA generation; and finally a decrease in surplus sales revenue of
20 \$19.1 million associated with a decrease in surplus sales.

21 **Q. What can be concluded from the information included on Exhibit 106?**

22 A. The combination of lower natural gas prices and generally higher coal costs led to
23 higher gas production and lower coal production. The relationship between modeled
24 coal and gas production costs also drove reductions in surplus sales.

25 **Q. Please explain how the relationship between coal and gas decreased surplus**
26 **sales.**

1 A. The AURORA simulation determines hourly market energy prices for the power
2 markets available to Idaho Power. These prices are generally reflective of the
3 dispatch cost of a combined-cycle gas plant in the region. Therefore, as natural gas
4 prices decrease, AURORA modeled market prices decrease. Whenever electric
5 market prices are changed, the economic dispatch of generation resources also
6 changes. In this case lower modeled market prices led to reduced coal productions
7 due to economics. For example, the average cost for Jim Bridger was \$26.25 per
8 MWh, which is very close to the average cost for surplus sales of \$26.97 per MWh.
9 Total coal generation was reduced by approximately 0.4 million MWh from the 2014
10 October Update which is approximately the same amount as the reduced surplus
11 sales energy. It is also worth mentioning that natural gas units have more flexible
12 operating characteristics than coal units, therefore they are dispatched differently.
13 For example, a coal unit might have a minimum down time of 12 hours once it is shut
14 down, while a natural gas unit might have a minimum down time of 6 hours once it is
15 shut down. These types of constraints are used when AURORA dispatches
16 resources. If a coal unit is unavailable, the model will proceed to the next lowest cost
17 resource, which is often the combined-cycle gas unit.

18 Q. **Is there anything else that can be learned from Exhibit 106?**

19 A. Yes. Purchased power expenses and generation decreased because the majority of
20 the system load was served by Company-owned resources at a cost less than the
21 average \$39.72 per MWh for purchased power. Further, as mentioned earlier in my
22 testimony, six new take-or-pay PURPA projects were added at an expense of \$6.8
23 million.

24 Q. **What method of allocation are you proposing to spread the incremental
25 revenue requirement associated with the October Update to the various
26 customer classes?**

1 A. I am proposing to allocate the revenue deficiency associated with the 2015 October
2 Update according to the revenue spread methodology approved by the Commission
3 in UE 214, Order No. 10-191. Order No. 10-191 established a revenue spread
4 methodology whereby the revenue deficiency for the October Update is allocated to
5 individual customer classes on the basis of the total generation-related revenue
6 requirement approved in the Company's last general rate case. In this instance, the
7 Company's last general rate case, UE 233, was a settled case in which parties did
8 not adopt the Company's class cost-of-service methodology, but rather agreed to a
9 revenue spread methodology that was set forth in Exhibit B to the Partial Stipulation
10 filed on February 1, 2012. In light of the stipulated revenue spread, the Company
11 has utilized the total generation-related revenue requirement detailed on Exhibit B to
12 apportion the October Update revenue requirement to each customer class. The
13 proposed revenue spread resulting from the application of the stipulated
14 methodology in UE 233 is shown on Exhibit 107.

15 Q. **Was the incremental spread of the revenue requirement mentioned above
16 approved in prior years' APCU filings?**

17 A. Yes. The Company used this same methodology in UE 242, UE 257, and UE 279.
18 This methodology was approved in Order No. 12-176 on May 18, 2012.

19 Q. **What is the overall revenue impact in percentage terms of this year's October
20 Update compared to last year's October Update using the rate spread
21 methodology described above?**

22 A. The overall revenue impact of the October Update compared to last year's October
23 Update is a 1.99 percent increase.

24 Q. **Have you prepared an exhibit showing the summary of revenue impact
25 resulting from the October Update proposed by the Company?**

26

1 A. Yes. Exhibit 108 provides a summary of the revenue change resulting from this
2 year's October Update as compared to current revenue.

3 **Q. Does this conclude your testimony?**

4 A. Yes, it does.
