**RE: AR 602, Rulemaking on Reporting Disconnection Data  
CNGC Comments on Issues from the July 12, 2017, Workshop**

Cascade Natural Gas Corporation (Cascade or Company) provides the following comments on issues raised at the AR 602 workshop held on July 11, 2017, and reiterated in Phil Boyle's email dated July 12, 2017.

- **Sunset clause (End date versus review after x time)**

Cascade agrees that the rule should contain a sunset provision or a date by which parties evaluate the reporting requirements to assess if the reports are providing the intended value. The intended purpose of the reporting as Cascade understands it from the July 11<sup>th</sup> workshop is to provide the Commission with general information on disconnections and to improve CAPO's ability to move LIHEAP funds to agencies where the need for assistance may be greater.<sup>1</sup> If the rule is not meeting these purposes or contains too little or surplus information, the rule can be altered or the reporting requirement can be removed. Parties can also evaluate if the data has been accessed and used by other third parties--to the degree that we know that-- for what purposes and the value of those purposes. Reporting requirements often perpetuate long after the initial interest in the reported information has faded, so it is valuable to include a provision for assessing whether the requirement should continue as adopted.

---

<sup>1</sup> Customers involuntarily disconnected for nonpayment are not necessarily low income households.

Cascade further agrees with CUB's statement at the workshop that the timeframe for a sunset provision should not be unnecessarily short. Cascade believes checking in on whether the rule is meeting its purpose, and whether or not it should continue, be modified or cease after no less than three full years of reporting would be wise.

- **Data confidentiality (It is Commission public record, which can't be withheld) could the data be held for Public Records Requests?**

If the reports compile disconnect data for geographical regions such as by city, district or zip code, Cascade believes such reports should be submitted as confidential and should be exempt from public records law. Geographically-specific disconnection data is a "trade secret" per ORS 192.501(2) because it is the:

compilation of information which is not patented, which is known only to certain individuals within an organization and which is used in a business it conducts, having actual or potential commercial value, and which gives its user an opportunity to obtain a business advantage over competitors who do not know or use it.

Organizations selling services or products to low income or disadvantaged communities could use the geographically-specific data, otherwise unavailable, to target communities. The Company is concerned that the data could be used to pinpoint populations which might be vulnerable to high cost loans or debt relief products or other such services that may not be in our customers' best interest.

Public data on disconnects by region might also expose certain neighborhoods to utility scams. For instance, individuals have posed as a utility workers, asking homeowners for a cash payment to avoid a disconnection or to be reconnected. If the regions with the most disconnected service were made public, these communities may be targeted for such scams.

Cascade's concern is specific to reporting geographically-specific data. The Company does not believe system wide or state-specific disconnection information would qualify as a "trade secret." If a rule is adopted that requires the reporting of geographically-specific disconnection data, the Company believes it is necessary to state in the rule that the report contains trade secrets per ORS 192.501(2) and exempt the reports from public disclosure.

- **What “Assistance” programs should be included?**

Cascade believes assistance programs should include Low Income Home Energy Assistance Program (LIHEAP) as well as all ratepayer- and donation-funded programs offered by the subject utility where customers are qualified through the community action agencies that also qualify customers for LIHEAP. For Cascade, this definition would include LIHEAP, Oregon Low Income Bill Pay Assistance funded through the Company’s Schedule 31, Public Purpose Charge, and Winter Help, which is a donation program administered by the agencies. This definition would not include donations from third parties such as churches, friends, or Veteran’s assistance groups.

- **Safe Harbor/provision for time frame to be able to get data/upgrade systems, etc.**

Cascade supports having language in the rule that provides allowances for times when compliance to the rule is not possible. Utilities will need time to program queries and test them before having the ability to comply with rule. The time needed is dependent upon the complexity of the final requirements adopted and each utility’s customer information system. Utilities will also need a moratorium from the rule when converting to new customer information systems or revising existing systems. Language in the rule allowing waivers during all such scenarios would be helpful. In such scenarios, the utility could send a letter in lieu of a report explaining why it is taking advantage of the waiver provision for that reporting cycle. This would be a better, more time-efficient process than formal filing petitions for waivers from the rule.

- **Number of days to reconnect (1 or 2) and 7 days or?**

Cascade recommends reporting in the following manner on the number of customers who have had their service involuntarily disconnected and were reconnected after a certain number of calendar days:

0-3 days – The vast majority of reconnects take place within 0 to 3 days. These customers have access to funds shortly after they are disconnected and could

reasonably have gone through the same urgency to obtain those funds upon getting any of the required notices of pending disconnection.

4 to 7 days – Cascade assumes customers reconnected between 4 to 7 days, in general, are struggling to pay and that this is the metric to focus on for determining how many customers more than likely have an unsustainable energy burden. However, it is also worth noting that weekends and calendar days may skew the data somewhat; disconnected customers may be willing to wait for reconnection on the next business day rather than pay extra for reconnection either after hours or on a holiday or weekend.

As mentioned at the workshop, the data is increasingly less reliable beyond 7 days.

The number of customers disconnected for nonpayment who do not reconnect for a long time tend to be people who have service reinstated in another qualified applicant's name, have moved without notifying the Company, or do not want service for a timeframe (for instance, heating customers may not reconnect during the summer.)

The Company does not know if the customers disconnected for nonpayment are low income or not. If low income customers are waiting to be disconnected before getting assistance, it is worth asking agencies if they are requiring some proof of crisis which has the unintended consequence of training customers to engage in poor bill management, or if wait times for agency appointments are excessive resulting in disconnects occurring before assistance can be received.

- **Areas of reporting (County, city, zip, or?)**

Below is a list of the ways in which the Company could report disconnection data geographically:

- **City (as stated in service address whether incorporated or not).** Cascade has 29 cities in Oregon.
- **Taxing jurisdiction.** The data could be presented by taxing city or the taxing county. Taxing city would provide smaller geographic designations, but may omit customers living outside of city limits. Cascade has 29 taxing jurisdictions.

- **Cascade Natural Gas operational district.** Cascade has 3 districts in Oregon. Each is referred to by the largest city in the area. Cascade's Oregon districts are Bend, Pendleton, and Baker City. Each district covers a large geographical area.
- **Zip Code.** Cascade serves 30 zip codes in Oregon. Most are small communities with only one zip code per city or area.

Cascade has no preference on which geographical approach should be used for sorting and presenting the data. The Company defers to those using the data, specifically CAPO, which plans to use the data to increasing the number of customers receiving a bill pay assistance.

- **Reporting period versus the amount of data**

Ideally reporting would contain data per month but would be filed once a year. In lieu of that, Cascade would prefer to report no more than twice in a year in the following manner: 6 months of aggregated year-to-date data provided just after the mid-year and geographically specific annual data provided after the end of the year.

- **Usefulness of report**

Cascade understands that many utilities report state- or system-wide disconnect data to their State Commission and concedes that a general awareness is useful for a regulator. Cascade is more doubtful that the data will be useful to provide additional assistance to communities struggling with their energy bills; beyond general awareness, this is the only other value parties at the workshop articulated they would get from the disconnection data.

Cascade's ratepayer-funded bill pay assistance funds are not allocated to agencies, but are available on a first-come, first-serve basis and have never been expended. These funds do not need to be moved to reach the customers in need. The Company's donation program is provided to agencies on an allocated basis but with Cascade moves funds to balance supply and demand. Again, supply from the Company's programs has never exceeded demand at the agencies' door.

The possible barriers to getting assistance into the hands of qualified customers are many including, staffing limitations at the agency, the difficulty for a customer to make it to an appointment during working hours, or the burden of having to prove positive identification.

Better information than CAPO hopes to get from utilities' disconnection reports is currently available from Oregon Housing and Community Services (OHCS) which oversees the state's OPUS system, a data collection system that documents client-level needs and characteristics through and compiles common information at the agency, community, and state level . Attached is the OHCS's 2015 Poverty Report which provides extensive socioeconomic data per county including percent in poverty, percent unemployed, median income, number of household receiving free/reduced lunches, food stamps, or TANF, number of households receiving energy assistance and the number if disconnects prevented. OHCS has this information available to it in OPUS and CAPO should be using it now to improve bill pay assistance distribution rather than waiting for a less specific data set.

Measuring if value is achieved from the disconnection reports will be difficult. A decrease in year-over-year number of disconnects per region does not necessarily imply those communities are any better off. Customers, energy prices changes, and the resources available to perform disconnections during any period of time may fluctuate. The burden will be on CAPO to demonstrate that the data has been used to reduce the energy burden for low income customers. CAPO should track the number of times pay assistance is moved due to information from the reports. CAPO's feedback will inform parties at the time of the rule's sunset provision-- - assuming one is included in the rule--- if the reports are providing the intended value to parties.

- **How should/can the winter moratorium be integrated into the report?**

Cascade struggles to know how to tie the data on severe weather moratoriums to the disconnection data in a meaningful way. For any correlation to be made, the disconnection data would need to be segmented using the same geographic criteria. Since severe weather moratoriums are decided utilizing weather stations, disconnect data based on service address location would not align one-for-one. However, even if a correlation can be made, it would not

tell us much more than we already know. One potential correlation would be the relationship between an extended period of daily disconnect moratoriums called because of extreme weather and the number of customers seeking assistance. Many qualifying customers do not seek financial assistance until the threat of disconnection is imminent. Without the threat of disconnect during the colder months, service disconnections are pushed to warmer months, and past due amounts required for reconnection are likely to be higher than they otherwise would have been had service been disconnected earlier. This can result in an increase of assistance requests in the spring months when LIHEAP funds are less available or depleted. These are likelihoods the Company predicted in the AR 601, the Severe Weather Moratorium Rulemaking. But even data that hints at such changes neither proves the success or failure of the severe weather moratorium rule. In short, the Company does not know how to integrate reporting on for the severe weather moratorium rule in a meaningful way.

Cascade appreciates the opportunity to provide written comments and the Company looks forward to continued conversations in this rulemaking.

If you have any questions about this filing, please contact Jennifer Gross at (509)734-4465.

Sincerely,

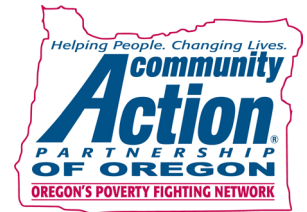

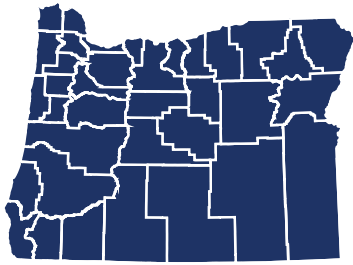

Mike Parvinen

Director, Regulatory Affairs

Published November 2015.

The production of the 2015 Report on Poverty was made possible through the partnership of Community Action Partnership of Oregon (CAPO), and Oregon Housing and Community Services (OHCS).

## Executive Summary

There has been much attention paid this year to the 50th anniversary of the War on Poverty. In 1964, President Lyndon B. Johnson laid out a full plan to provide more opportunities and more support for our most vulnerable citizens. President Johnson spoke of using “our greatest strength” (the talent and abilities of Americans) to combat “our greatest weakness.” Community Action Partnership of Oregon was born out of this plan.

A recent report from the Council of Economic Advisers (CEA)<sup>1</sup> shows that many of the anti-poverty programs and policies implemented as a result of Johnson’s plan have kept an average of 27 million people out of poverty every year between 1968 and 2012, and that in the absence of any tax credits or other benefits the poverty rate would have risen from 27.0% to 28.7% during that time. When taking antipoverty and social insurance programs into account, the 2012 poverty rate falls to 16%.

However, the work is far from complete. CEA reports that there were still nearly 50 million Americans living below the poverty line in 2012, including 13.4 million children. This report provides the most recent data available from the Census Bureau on poverty rates and the characteristics of those living in poverty in every county in Oregon. Data for the state and country as a whole are also provided for context.

The data presented here show that even in the midst of a strengthening economy, the poverty rate in Oregon (16.2%) remains above the national poverty rate (15.4%). In 2013 there were approximately 615,000 Oregonians living below the poverty line; this was nearly 100,000 more people than in 2010. Rural counties continue to be the hardest hit, with Malheur, Benton, Sherman, Josephine, and Lake Counties all facing poverty rates over 20%.

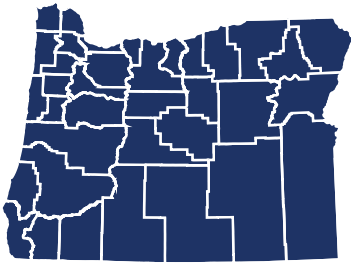

Children are especially vulnerable to the consequences of poverty and continue to be disproportionately represented in the population living in poverty. Children under 18 years of age made up 22% of the total statewide population in 2013, but they made up 30% of the total population living below the poverty line. Furthermore, families with children and single women with children were much more likely to be living in poverty than families overall. Just 11% of all families lived in poverty, compared to 18% of families with children, and 42% of single women with children.

Poverty rates also vary significantly by race and ethnicity throughout Oregon. While the poverty rate among whites was 14.7%, it was much higher for people of color, ranging from 15.9% for Asians up to 34.1% for African Americans.

Household income has remained stagnant in the years since the recession, but housing costs, particularly rents, have been increasing rapidly in many markets. This means that people must spend more of their earnings on the cost of housing, leaving less money left over at the end of the month for other necessities such as food, daycare, transportation, healthcare, or emergency savings. This is an especially difficult situation for people living below the poverty line. When a household spends more than 30% of their income on the cost of housing and utilities, they have a housing cost burden. This report highlights data on household incomes and housing cost burdens at various income levels. The median household income in Oregon was \$50,036 in 2013.

---

<sup>1</sup> Council of Economic Advisers. (2014). The War on Poverty 50 Years Later: A Progress Report. Washington, DC: Executive Office of the President of the United States. Retrieved from [https://www.whitehouse.gov/sites/default/files/docs/50th\\_anniversary\\_cea\\_report\\_-\\_final\\_post\\_embargo.pdf](https://www.whitehouse.gov/sites/default/files/docs/50th_anniversary_cea_report_-_final_post_embargo.pdf).

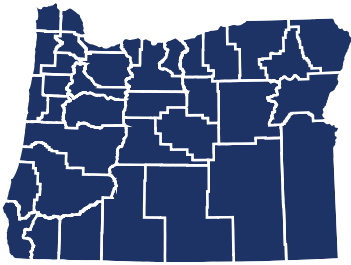

## Executive Summary

More than three-quarters (77%) of households with income at or below 50% of median household income (\$25,018) faced a housing cost burden throughout the state. This income level is very close to the 2013 poverty guideline for a family of four (\$23,550).

Households living below the poverty line who are severely cost burdened (spending more than 50% of income on housing costs) are at an increased risk of homelessness. According to the 2015 Point-in-Time count, completed on one night in January, there were 13,176 homeless people in Oregon. Fifty-six percent of this population was living in unsheltered locations not meant for habitation and the other 44% were living in emergency shelters or transitional housing units.

In addition to data on poverty, household income and homeless counts, this report also provides detail on services provided by the state to assist those living in poverty. Oregon Housing and Community Services (OHCS) funded 1,545 new affordable housing units in 2013, a slight decrease from the number of units created in 2012. More than 83,000 households received assistance for home heating costs, nearly 47,000 households were able to prevent their services from being disconnected in their home, and a little more than 9,000 had service restored in their home because of energy assistance from OHCS. Finally, in 2013 52% of Oregon students were eligible for free or reduced lunch, 20% of all Oregonians received Food Stamps, and 2.3% received Temporary Assistance for Needy Families (2.3%).

It is clear from data and research, as well as from the stories of service providers and families struggling to end the cycle of poverty, that these anti-poverty programs are critical to stabilizing people and getting them back on their feet. This report is intended to provide policymakers, advocates, and the public with the information they need to understand poverty in their communities and work together to find ways to both support existing efforts to end poverty and develop new and innovative strategies for ensuring that no one suffers through hunger, homelessness or the stress of living in poverty.

## How to Use this Report

This report provides readers with the most current information available from the U.S. Census Bureau's American Community Survey (2009-2013) on poverty rates, the characteristics of people living in poverty, and household incomes. Recent data regarding services provided by OHCS and Oregon's Department of Human Services are also included. Finally, the report contains 2015 data on the number of homeless people and households in the state. All information is provided at the national, state, and county levels. In addition to all of these data points, the contact information and website for the Community Action Agency in each county is included.

You can use the information in this report to:

1. **Communicate:** cite and use the poverty statistics of each Oregon County for grant applications, talking points, reports, presentations and fundraisers.
2. **Plan:** Determine the areas of highest need by county or statewide as a starting point for developing plans and policies to reduce poverty.
3. **Analyze:** Use the year-to-year comparisons to analyze the progress of area programs, then modify, and expand the use of programs with the best results.

The report contains the following sections:

### ***Executive Summary***

The Executive Summary includes the main findings from the report, with a focus on the statewide statistics, to provide an overview of poverty trends in Oregon.

### ***Fact Sheets***

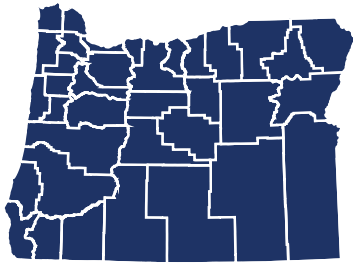

There are two fact sheets that explain the Community Services Block Grant (CSBG) program and demonstrate how anti-poverty programs can – and do – lift people out of poverty. Share this information to show the effects of Community Action Agencies and government programs.

1. **Community Services Block Grant (CSBG)** – an overview of this important funding source and the services that it makes possible.
2. **Oregon Programs That Work** – four sample programs from around the state that are helping to raise Oregonians out of poverty.

### ***State and County Profiles***

This is where you will find all the data on poverty, income, unemployment, and homelessness, as well as data on the services provided to alleviate poverty. Each county profile includes some state and national statistics to allow for comparisons to be made. The state profile also includes the 2013 federal poverty guidelines for each family size.

## How to Use this Report

### ***Fair Market Rents***

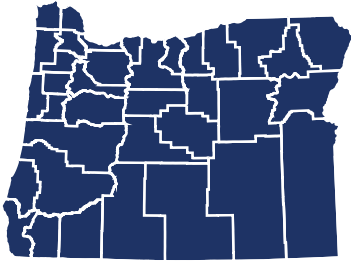

The U.S. Department of Housing and Urban Development releases Fair Market Rents (FMRs) each year to provide estimates of the cost of rent and utilities for modest apartments of various bedroom sizes in every county across the country. The FMRs for Oregon are presented here.

### ***Conclusion***

A summary of the state of poverty in Oregon including challenges, results, successful programs and the tools we can use to fight – and win – the War on Poverty.

### ***Data Sources***

This is where you can go to learn where each statistic in the state and county profiles comes from. Links to the sources are provided, when available.

## Community Services Block Grant (CSBG)

The CSBG program is a federal anti-poverty program administered by the U.S. Department of Health and Human Services. CSBG funds provide assistance to local communities, working through a network of Community Action Agencies (CAAs) and other neighborhood organizations, for the reduction of poverty, the revitalization of low-income communities, and the empowerment of low-income families and individuals to become fully self-sufficient.

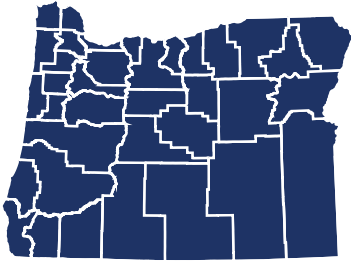

The CSBG Program in Oregon funds a portion of the administrative and programmatic activities of CAAs. These organizations typically coordinate and administer a variety of services to assist low-income Oregonians within their own communities, in both rural and urban areas of Oregon, and serve as key partners to Oregon Housing and Community Services.

Beneficiaries of CSBG-supported programs are low-income individuals and families (at or below 125% of the federal poverty level) who receive services and activities addressing:

- Employment
- Healthcare
- Education
- Emergency services
- Self-sufficiency
- Youth-based initiatives
- Housing
- Elderly-based initiatives
- Nutrition
- Income Management

### ***CSBG goals nationally include:***

- Help low-income people become more self-sufficient
- Improve conditions for low-income households
- Help low-income people own a stake in their communities
- Coordinate local services and providers assisting low-income households
- Help increase Community Action Agencies' ability to achieve results
- Help low-income people, especially vulnerable populations, achieve their potential by strengthening families and creating supportive environments.

## Community Action Initiatives

### *Community Action Initiatives to Reduce Poverty in Oregon Communities*

#### **Community Action Organization (CAO) – Benefits Enrollment**

The Washington County Benefits Enrollment Center (BEC) is a person-centered, community-based support program designed to assist seniors and persons with disabilities who receive benefits ranging from food stamps, energy assistance, Medicare savings program, and Oregon Prescription Drug, to property tax exemptions and deferrals. In addition, connections are made to other services such as Veteran and Medicare enrollment. Since the inception of the program, 1,000 individuals have been served. The estimated value of benefits to date is approximately \$2 million.

#### **Lane County – “Station 7” Program**

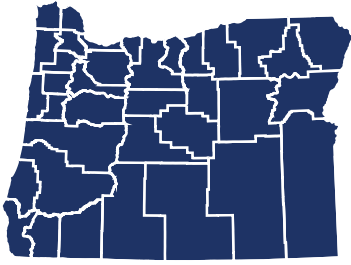

For homeless, runaway and at-risk youth, the Station 7 program provides a continuum of services including: 24/7 crisis intervention, day access services, family reconciliation, crisis transportation, shelter, case management, substance abuse support services, homeless youth transitional housing assistance, and behavioral health services access. Youth participating in the Station 7 program reduce or eliminate behaviors that present barriers to meeting housing, employment, and education goals. In 2012, 182 youth were enrolled in the Station 7 Emergency Shelter and EHA Case Management programs. Of those, almost 40% transitioned to healthy, stable housing.

#### **Oregon Human Development Corporation – Young Parents Program**

This initiative targets parenting or pregnant teens who are on Temporary Assistance for Needy Families (TANF) and focuses efforts to keep those teens in school to finish their high school diploma or transition them to a General Equivalency Diploma (GED) program. Thirty-six percent of teen girls reported that pregnancy/parenthood is a major reason for dropping out of school and 34% of teen mothers earn neither a diploma nor a GED, compared to 6% of young women who are not teen mothers. The funding secured for this program is part of a state block grant under the TANF funds issued by the U.S. Department of Health and Human Services. In 2012 alone, 64% of teen parents were able to stay in school, reengage back into high school, enter a GED program, or graduate.

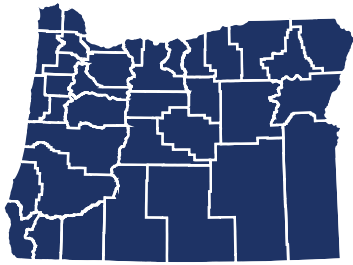

#### **Yamhill Community Action Partnership (YCAP) – The Bike Program**

Low-income people who can't drive have significant transportation issues. A bike provides them with a way to get to work, the grocery store, medical appointments, and other locations and services. YCAP's connections with low-income providers and clients offer optimal connections for distribution of bikes in Yamhill County. The local bike club was recruited to fit the bikes to clients and give them initial safety pointers. The local police office registers the bikes and offers some helmets. Most importantly, low-income clients are provided with transportation. The Bike Program is a collaborative between YCAP, Waste Management, and a local veteran. Waste Management salvages bikes that are taken to the landfill and provides them to a veteran along with some money for parts. The veteran repairs the bikes at a local high school showing students how to do the work. YCAP distributes the bikes to needy adults and children.

## Conclusion

This report provides a unified analysis that brings together evidence across multiple key indicators, thereby allowing a statewide assessment of where problems exist, where achievements are evident, and how a coordinated effort to reduce poverty and equalize opportunity might be improved upon. For example, the Official Poverty Measure (OPM) shows that significant poverty persists in rural communities. The Economic Research Service of the U.S. Department of Agriculture estimates that 85% of persistent poverty counties - counties that have been in high poverty (more than 20% based on the OPM) for at least 30 years - are in rural areas.

As a result of this finding, we are coordinating more than ever before. We are bringing government agencies, the private sector, the nonprofit community and the public to the table and creating better, stronger communities.

For instance, in an effort to focus on rural areas, Oregon Solutions (with the support of ECONorthwest) is working with the Oregon Prosperity Plan to implement two pilot projects using a collaborative implementation model, one of which is in Malheur County. The grassroots initiative called, "Poverty to Prosperity: Malheur County Recovery Plan" has been launched by a cross sector of committed citizens and organizations. One of the five action committees is focused on implementing a Career Technical Education (CTE) program to enable 18-year-old men and women to find good, local jobs if they do not go to college.

Collaboration also created Bridge Meadows multigenerational housing development - a real win-win for its residents. Located in Portland, Bridge Meadows is home to foster children and their adoptive families, while also providing reduced rent apartments to low-income seniors. The elderly residents must complete 10 volunteer hours a week with the foster kids and their families in order to qualify for housing. This combination is producing tangible positive results, for both populations.

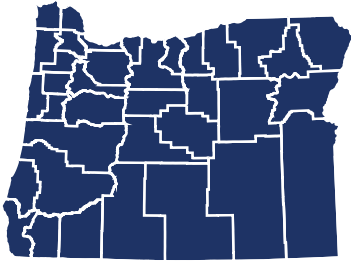

Oregon has an assortment of tools that work to alleviate poverty. Progressive legislation is one of them. The 2014 KIDS COUNT report from the Annie E. Casey Foundation on the well-being of children shows that when Oregon commits to pro-child policies, it can lead the nation in improving outcomes for Oregonians and strengthening the state. Nowhere is this more evident than in children's health, where Oregon leapt from number 17 to number 7 in the report's national rankings in just one year.

A main driver behind the steady climb, year over year, in Oregon's child health ranking is the state's continued success in enrolling children in health care coverage. Oregon's rate of uninsured children decreased by more than half (from 13% to 6%) between 2008 and 2012. This decline was brought about by the 2009 passage of the Oregon Healthy Kids program, which extended low- and no-cost coverage to more children through expanded eligibility and sustained outreach efforts across the state.

This aligns with the national trend that there are fewer children in poverty than last year. The U.S. Census Bureau has announced that in 2013, the poverty rate declined from the previous year for the first time since 2006. The poverty rate for children under 18 declined from 21.8% in 2012 to 19.9% in 2013. The number of children in poverty also declined, from 16.1 million to 14.7 million. This was the first time since 2000 that the child poverty rate declined.

In Oregon, the Earned Income and Child Tax Credits (EITC and CTC) are widely promoted and employed. Both the EITC and the partially refundable component of the CTC increase the reward to work, offsetting payroll taxes and providing a supplement to labor market earnings. Research has shown this increases work

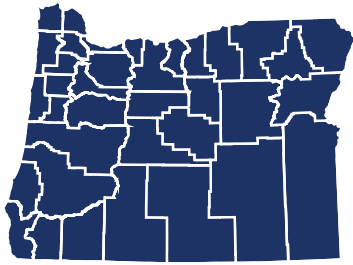

## Conclusion

and earnings as well as participation in the workforce, particularly for single parents. What's more, increased family income in childhood from the EITC and CTC leads to higher student achievement. The EITC and the CTC reduced the 2012 poverty rate by 3 percentage points among all individuals and by 6.7 percentage points among children.

It is possible for America to dramatically cut poverty. Between 1959 and 1973, a strong economy, investments in family economic security and new civil rights protections helped cut the U.S. poverty rate in half. Investments in nutrition assistance improved educational attainment, earnings, and income among the young girls who were some of the food stamp program's first recipients. Expansions of public health insurance have lowered infant mortality rates and reduced the incidence of low birth rates. In more recent history, states that raised the minimum wage have illustrated the important role that policy plays in combating wage stagnation.

There is nothing inevitable about poverty. We can build the political will to enact the policies that will increase economic security, expand opportunities and grow the middle class. We will continue to use our greatest strengths to fight, reduce and eradicate poverty.

## Data Sources

### **Population change since 2000:**

OHCS relies on county population data from the 2000 US Decennial Census and 2009-2013 American Community Survey (Table B01003) for each county and the state.

<http://2010.census.gov/2010census/>

<https://www.census.gov/programs-surveys/acs/>

### **Poverty Rates:**

Data for all counties, the state, and the US come from the 2009-2013 American Community Survey table B17001.

<https://www.census.gov/programs-surveys/acs/>

### **Unemployment Rates:**

2009 through 2014 unemployment rates come from the Oregon Employment Department's local area unemployment statistics for average covered non-farm unemployment rate by county.

<http://www.qualityinfo.org>

### **Poverty Population Characteristics:**

Data for all counties, the state, and the US come from the 2009-13 American Community Survey tables B17001 A-I, B17010, and B17016.

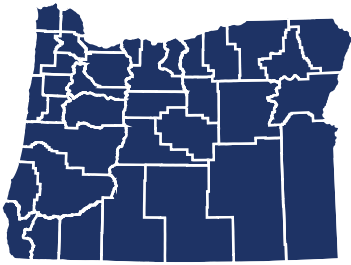

<http://www.census.gov/acs/www/>

### **Services Provided Table:**

- **Units funded with OHCS resources:** this number represents the number of affordable housing units in the county for the specified calendar year that were supported by funding allocated by OHCS. The amounts do not represent rolling totals; the number reflects units funded for the specified year only. These could represent units being renovated or under construction. The data come from the OHCS Department Information System for Housing (DISH), based on the funding approval date.

- **OHCS funding for affordable housing:** this number represents the funds allocated by OHCS to projects in each county in the specified calendar year based on funding approval date. It represents funding from several programs at OHCS implemented to help moderate- to low-income families by developing, financing and preserving locally supported affordable housing. These fund awards can apply to predevelopment, new construction and renovation activities. If there is a dollar amount and no new units in a given year, the specified funding supported predevelopment or non-housing investments (such as community rooms or public facilities). The data come from the OHCS Department Information System for Housing (DISH).

**Households receiving energy assistance-#:** this number represents the number of households who received assistance for home heating costs for the specified calendar year. Energy assistance represents two programs: the Low Income Home Energy Assistance Program (LIHEAP) and Oregon Energy Assistance Program (OEAP). Some households receive assistance from both LIHEAP and OEAP. This data represents an unduplicated count within the county as well as for the state. State totals may not match the county sum of households receiving assistance as some households may have received services in multiple counties. The data come from the OHCS OPUS system.

## Data Sources

- **Disconnects Prevented-#:** this number represents the number of households receiving energy assistance that were able to avoid having services disconnected from their homes. The data come from the OHCS OPUS system.

- **Restored Utility-#:** this number represents the number of households receiving energy assistance that were able to restore utility services to their homes. The data come from the OHCS OPUS system.

- **Household income for energy assistance average-#:** this number represents the average household income of those receiving energy assistance. The county figures are actual averages and the statewide figure is derived from weighted averages of county level data. The data come from the OHCS OPUS system.

- **Students eligible for free/reduced lunch-#:** this figure represents the number of children within each county that were eligible to receive free or reduced-price lunch. In general, students qualify for free or reduced-price lunch when the household receives public assistance, such as Temporary Assistance to Needy Families or food stamps, or if the household income does not exceed 185 percent of the federal poverty level. The data come from the Oregon Department of Education.  
<http://www.ode.state.or.us/data/reports/toc.aspx#students>.

- **Students eligible for free/reduced lunch-%:** this figure represents the number of children within each county that were eligible to receive free or reduced-price lunch as a percentage of all enrolled students. In general, students qualify for free or reduced-price lunch when the household receives public assistance, such as Temporary Assistance for Needy Families or food stamps, or if the household income does not exceed 185 percent of the federal poverty level. The data come from the Oregon Department of Education.  
<http://www.ode.state.or.us/data/reports/toc.aspx#students>.

- **Population receiving Food Stamps-%:** this number represents an unduplicated client count of food stamp recipients as a percentage of the Census population estimate for each year. The data come from DHS program staff.

- **Population receiving TANF-%:** this number represents an unduplicated client count of Temporary Assistance for Needy Families in the year specified as a percentage of the Census population estimate for each year. The data come from DHS program staff.

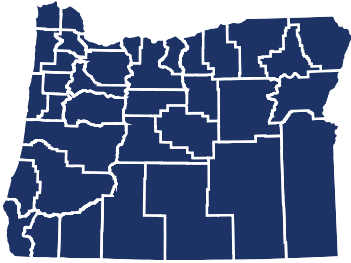

### Household Income and Housing Burden:

Data for all counties, the state and the US come from the Department of Housing and Urban Development's (HUD's) 2008-12 Comprehensive Housing Affordability Strategy (CHAS) data. This dataset is a special tabulation of American Community Survey data provided to HUD by the Census Bureau to incorporate HUD defined income limits and demonstrate the extent of various housing problems, such as housing cost burden.

Housing burden is defined as spending more than 30 percent of household income on gross housing costs including utilities. According to HUD, extremely low-income households earn 30 percent of median income, very low-income households earn 50 percent of median income, and low-income households earn 80 percent of median income.

### Point-In-Time Homeless Count:

Homeless counts come from the January 2015 Point-In-Time Homeless Count (PITHC) as reported to OHCS by each of the seven Continuums of Care in Oregon. This is a count done in a single night and includes single

## Data Sources

individuals and individuals in families receiving shelter and services, those turned away, and those counted on the street.

Consistent with the State of Oregon definition, chronically homeless includes individuals who have been continually homeless for a year or more, or had at least four episodes of homelessness in the past three years, in addition to having a disability, mental illness or addiction disorder.

**Poverty Guidelines (on state page only):**

The US Department of Health and Human Services provides 2013 poverty threshold data by family size.  
<http://aspe.hhs.gov/2013-poverty-guidelines>

**Fair Market Rents:**

The US Department of Housing and Urban Development Fair Market Rent data for each county by unit size.
