**RE: UE 339—2019 Transition Adjustment Mechanism  
PacifiCorp's List of Corrections or Omissions**

PacifiCorp d/b/a Pacific Power provides for filing a summary of all identified corrections or omissions to net power costs since the Company's March 30, 2018, initial filing in this docket. This filing complies with Section A(4) of the Transition Adjustment Mechanism (TAM) Guidelines, adopted in Order No. 09-274.

**Corrections:**

- Leaning Juniper wind plant generation losses due to California Independent System Operator (CAISO) curtailment – The generation losses of Leaning Juniper wind plant due to CAISO curtailment in the energy imbalance market are inadvertently excluded from the actual monthly generation history. Adding the monthly curtailment amount back to historical monthly data decreases Oregon-allocation net power costs approximately \$26,000.
- Solar Qualifying Facilities (QFs) – The forecasted solar QF generation in 2019 is calculated based on 2018 Solar QFs generation multiplied by a degradation ratio, which incorrectly forecasted the solar QFs generation for 2019. Correcting this calculation decreased Oregon-allocated net power cost approximately \$621,000.

The total impact of the above identified corrections is a decrease of approximately \$647,000 to the filed Oregon-allocated net power costs. PacifiCorp plans to include these corrections in the TAM Reply Update scheduled to be filed on July 9, 2018.

Please direct any informal questions regarding this filing to Natasha Siores at (503) 813-6583.

Sincerely,

Etta Lockey  
Vice President, Regulation
