APPLICATION TO TERMINATE WATER SERVICE, ABANDON OR DISPOSE OF WATER UTILITY and MERGE OR CONSOLIDATE WITH ANOTHER WATER UTILITY

Legal Name of Water Utility:	Hiland Water Corp.
Name of Water System if Different:	Whispering Pines Estates Water, Northridge Water Company, Shady Cove Waterworks LLC
Name of Owner or Officer:	Silas Olson, CFO
Mailing Address:	PO Box 699
City, State, Zip:	Newberg, OR 97132
Location Address if Different:	20606 Sawyer Rd.
City, State, Zip:	Shady Cove, OR 97539
Utility Telephone Number:	855-554-8333
Emergency Phone Number:	800-208-0437
Email Address:	silas@hilandwater.com
Website if Available:	www.hilandwater.com

In the Matter of the Application of Whispering Pines Estates Water and Northridge Water Company for an Order Authorizing the Termination of Water Service, Abandonment or Disposal of the Water Utility, pursuant to OAR 860-036-0708 and Merge or Consolidate with Another Public Utility (Shady Cove Waterworks LLC), pursuant to OAR 860-036-0715.

PROVIDE THE FOLLOWING INFORMATION

- (a) The date; **July 6, 2015**
- (b) A precise statement indicating for what actions the water utility is seeking Commission approval;

This is a request for an order to abandon Northridge Water Company (Northridge) and Whispering Pines Estates Water (Whispering Pines) and to consolidate remaining system infrastructures and water users into Shady Cove Waterworks LLC (SCWW). Water rates at Northridge and Whispering Pines will be changed to the water rates used at SCWW and water users will be added to the class of water users at SCWW, which the PUC regulates for service but not rates.

Application to abandon and consolidate

Page 2

Hiland Water Corp. is the owner of Northridge and Whispering Pines. Hiland Water Corp. is also the sole owning member of Shady Cove Waterworks LLC.

(c) The reasons the utility is requesting approval of these actions;

1. **The independent system configurations for Northridge and Whispering Pines are not suitable for the desired use.** Both systems are small in capacity and number of residents. In their independent configurations, both systems must independently shoulder the full burden of system operating costs, including lab testing, governmental reporting, and other direct and administrative costs. Any possibility of growth is negated by unattractive water rates that were set prior to Hiland Water's ownership to cover the operating costs. In addition, there are concerns about long-term water availability.
2. **There is a material risk that the sources are not sustainable while significant components of both systems existed through temporary arrangements and have subsequently been removed.** Even with depressed demand due to punitive usage rates for high users, probability remains relatively high every summer that the existing wells at Northridge will not sustain demand and water hauling will be required. Hauling water, for many reasons, is a highly unattractive alternative. Not only is it costly and inconvenient, but it also presents a health and safety risk to the quality of the drinking water. Additionally, the 30,000 gallon reservoir that previously provided a buffer during high demand periods was on rented property for which the owner increased rent by 36% in 2015 and requested its removal. In June 2015, Hiland Water acquiesced to this request and removed the storage reservoir from the property. Rather than using the storage reservoir to gravity feed water to the users, the water system is now pressurized through a booster pump station located at one of the wells (located at a lower elevation than the rented location for the reservoir). The water system is only able to meet demand during high usage periods now because it is tied to SCWW through a configuration that provides water to the booster station from SCWW on demand.

At Whispering Pines, the issue of capacity was initially largely mitigated through a connection to SCWW. At this time, however, the connection to SCWW (through a 2" line) is no longer in use. Water is still being provided from SCWW through a bulk water contract that was formed in April 2010 for surplus water, but the water now comes through a newer 12" pipe that was constructed in January 2015. Because the agreement is only for surplus water, water users at Whispering Pines could effectively become second tier customers in times of shortage. The well and pump house at Whispering Pines were used under a temporary agreement with the property owner but are no longer in service. Nothing beyond the distribution system at Whispering Pines was designed to function permanently and the water system was never designed to operate permanently as an independent operation.
3. **Without proactive change, water rates may be required to escalate dramatically to ensure adequate water for the communities.** If the two water systems in question were left to operate as independent operations, there is no question that additional, permanent sources of water would need to be established for each system. This would be particularly costly considering the hundreds of wells in the City of Shady Cove that have gone dry. In order to support such improvements, rates would have to increase further. This would further decrease the possibilities of growth and increased economies of scale.
4. **Absorbing the assets and customers of Northridge and Whispering Pines into SCWW will improve the water situation for water users right away.** A formal abandonment of these water systems will not require the water users to experience any noticeable transition. Their service will continue to be provided by the same parent company. They would continue to call the same phone number, go to the same website, and/or email the same company whenever they have water related needs. The only changes the water users would experience would be positive: a secure and dependable source of water, resolution of temporary arrangements, and lowered water costs.

Application to abandon and consolidate

Page 3

The effect upon the current customers will be positive for the following reasons:

1. Increased Supply and Stability

By abandoning their statuses as independent small water systems and consolidating into SCWW to form a single larger entity, Northridge and Whispering Pines water users will instantly enjoy permanent access to an increased water supply with much needed stability to support high use periods.

2. Resolution of Temporary Arrangements

With the installation of the new 12" line from Shady Cove Waterworks, the use of the landowner property and the 2" line are no longer necessary. Additionally, the new booster station at Northridge combined with the water storage at Shady Cove Waterworks (500,000 gallons) allowed for relocation of the 30,000 gallon reservoir from Northridge to other property owned by Hiland Water Corp. (an application has been submitted to the Bureau of Land Management for permanent placement near the old location). Although abandonment and consolidation have not been formalized, SCWW has already facilitated the resolution of temporary agreements so that they will not need to be transferred after consolidation.

3. Shady Cove Waterworks provides superior service

SCWW currently has a water right to take water from the Rogue River that provides ample capacity to serve both Whispering Pines and Northridge water systems. This is its primary source of water and the Water Right allows for 109 acre feet to be drawn from the river per year (35,517,806 gallons). Whispering Pines and Northridge do not hold Water Rights. Because of their small user base and subsequent demand, the wells were operated as exempt.

Additionally, SCWW filters and treats its water in accordance with the Oregon Drinking Water Program through Ultrafiltration and Chlorination. It also boasts a 500,000 gallon reservoir and 16" mainlines to offer superior service and fire protection. This infrastructure will not only provide more reliable service through seasons of high demand, but will also provide fire protection.

4. Lower Water Rates

The usage rates at SCWW are substantially lower and the overall water rate is far more attractive to perspective water users than those at Northridge and Whispering Pines. With the necessary capacity and SCWW rates, it is our belief that growth (based on research in the community) would occur and everyone would benefit from the increased economies of scale.

(d) If approved, the proposed effective date of the actions; **September 1, 2015**

(e) A description of the customers' rates once the companies are consolidated compared with what the old rates were;

The rates at SCWW would be adopted for use at the abandoned water systems. Those rates entail a monthly base fee of \$50.00 that includes up to 7,000 gallons of water use. Overage charges for any use over 7,000 gallons is \$0.50/100 gallons.

Current rates at Whispering Pines entail a monthly base fee of \$46.77 with no allowance for water use. There are two tiers of usage charges. All use up to 5,000 gallons in a month is charged at a rate of \$0.22/100 gallons. Overage charges for any use over 5,000 gallons is \$2.00/100 gallons.

Current rates at Northridge entail a monthly base fee of \$35.00 with no allowance for water use. There are two tiers of usage charges. All use up to 4,500 gallons in a month is charged at a rate of \$0.65/100 gallons. Overage charges for any use over 4,500 gallons in a month is \$3.25/100 gallons.

The following chart shows a comparison of water charges for the three different water systems at various levels of use:

Application to abandon and consolidate

Page 4

Water Use	Northridge	Whispering Pines	Shady Cove Water
0	\$35.00	\$46.77	\$50.00
1,000 gallons	\$41.50	\$48.97	\$50.00
2,000 gallons	\$48.00	\$51.17	\$50.00
3,000 gallons	\$54.50	\$53.37	\$50.00
4,000 gallons	\$61.00	\$55.57	\$50.00
5,000 gallons	\$80.50	\$57.77	\$50.00
6,000 gallons	\$113.00	\$77.77	\$50.00
7,000 gallons	\$145.50	\$97.77	\$50.00
8,000 gallons	\$178.00	\$117.77	\$55.00
9,000 gallons	\$210.50	\$137.77	\$60.00
10,000 gallons	\$243.00	\$157.77	\$65.00

Currently, the average monthly water bill at Whispering Pines is **\$93.66** while the average monthly water bill at Northridge is **\$71.51**. At their average water use levels, the new monthly water bills at SCWW would be **\$50.00**.

(f) Attach a list of the contact information for each affected customer. At a minimum, the list will include each customer's name, mailing address, and service address (if different); **(see accompanying documents)** and

(g) Provide any other information pertinent to the action the utility is seeking approval for.

The Northridge water system serves approximately 75 equivalent dwelling units. The system consists of two groundwater wells and associated easements, a booster station, and meters for all service connections. The main waterline materials are PVC. As an independent system, water was pumped up to a 30,000 gallon reservoir, after which it served the residences, pressurized only through gravity. Now that the booster station pressurizes the system, the reservoir has been removed. The wells have limited production and have experienced shortages in the past, causing high usage rates to be established. The reservoir site had no easement and rent was paid to the landowner, who requested its removal. The wells, booster station, and any water lines on private property have permanent easements and will be kept as part of the SCWW infrastructure (the wells will be available as emergency backup sources). All other water lines are in the public right of way.

The Whispering Pines water system serves approximately 21 equivalent dwelling units. It was served with groundwater through a well (used through temporary agreement with the homeowner of the land on which it exists) and a temporary 2" connection to SCWW to purchase bulk water when available and needed. There were two 5,000 gallon reservoirs and two booster pumps at the well site. A structure was temporarily in use to house the reservoirs and booster pumps, but the building was always owned by the homeowner. The distribution system, which contains 8" PVC mainlines, had been pressurized through booster pumps. Since construction of a new 12" water line from SCWW, Whispering Pines has relied solely on water from SCWW (fed through gravity) and has enjoyed fire protection provided by SCWW. The 5,000 gallon reservoirs and booster pumps have been removed from the well site and the well and building have been turned over to the landowner. All remaining Whispering Pines infrastructure is in the public right of way or on property for which a permanent easement has been granted (the remaining infrastructure is essentially just water lines).

Shady Cove Waterworks will continue to use the existing pipeline infrastructure from both Whispering Pines and Northridge. Whispering Pines was constructed in around the year 2000 and Northridge was constructed around the year 1992. The pipelines at both water systems are in good condition. Since there are already physical interties connecting all three water systems, the transition for SCWW to directly serve all water users and charge SCWW water rates is a formality.

Application to abandon and consolidate
