Notes:
-- = Not analyzed
CAS = Chemical Abstracts Service
FD = field duplicate sample
J = Estimated value less than reporting limit but greater than method detection limit or value is estimated due to a sampling or laboratory quality control issue
mg/kg = milligram(s) per kilogram
N = normal sample
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit
UJ = The analyte was below the reported sample quantitation limit; however, the reported value is approximate

Bold indicates the analyte was detected
Shading indicates the result exceeded screening criteria

Notes:
-- = Not analyzed
CAS = Chemical Abstracts Service
FD = field duplicate sample
J = Estimated value less than reporting limit but greater than method detection limit or value is estimated due to a sampling or laboratory quality control issue
mg/kg = milligram(s) per kilogram
N = normal sample
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit
UJ = The analyte was below the reported sample quantitation limit; however, the reported value is approximate

Bold indicates the analyte was detected
Shading indicates the result exceeded screening criteria

Notes:
-- = Not analyzed
CAS = Chemical Abstracts Service
FD = field duplicate sample
J = Estimated value less than reporting limit but greater than method detection limit or value is estimated due to a sampling or laboratory quality control issue
µg/L = microgram(s) per liter
mg/L = milligram(s) per liter
N = normal sample
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit
UJ = The analyte was below the reported sample quantitation limit; however, the reported value is approximate

Bold indicates the analyte was detected
Shading indicates the result exceeded screening criteria

Notes:
-- = Not analyzed
CAS = Chemical Abstracts Service
FD = field duplicate sample
J = Estimated value less than reporting limit but greater than method detection limit or value is estimated due to a sampling or laboratory quality control issue
mg/kg = milligram(s) per kilogram
N = normal sample
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit
UJ = The analyte was below the reported sample quantitation limit; however, the reported value is approximate

Bold indicates the analyte was detected
Shading indicates the result exceeded screening criteria

Notes:
-- = Not analyzed
CAS = Chemical Abstracts Service
FD = field duplicate sample
J = Estimated value less than reporting limit but greater than method detection limit or value is estimated due to a sampling or laboratory quality control issue
mg/kg = milligram(s) per kilogram
N = normal sample
U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit
Bold indicates the analyte was detected
Shading indicates the result exceeded screening criteria

Notes:

-- = Not analyzed

CAS = Chemical Abstracts Service

FD = field duplicate sample

J = Estimated value less than reporting limit but greater than method detection limit or value is estimated due to a sampling or laboratory quality control issue

mg/kg = milligram(s) per kilogram

N = normal sample

U = The analyte was analyzed for, but was not detected above the reported sample quantitation limit

UJ = The analyte was below the reported sample quantitation limit; however, the reported value is approximate

Bold indicates the analyte was detected

Shading indicates the result exceeded screening criteria

LANC	Eurofins Lancaster Laboratory
LCL	lower control limit
LCS	laboratory control sample
MS/MSD	matrix spike/matrix spike duplicates
PAH	polycyclic aromatic hydrocarbon(s)
Project	Lower Klamath Hydroelectric Project
QC	quality control
RPD	relative percent difference
SIWP	site investigation work plan
STLC	Soluble Threshold Limit Concentration
SVOC	semivolatile organic compound
TAM2	Eurofins TestAmerica Seattle
TAMC	Eurofins TestAmerica West Sac
TB	trip blank
TCLP	toxicity characteristic leaching procedure
TPH	total petroleum hydrocarbon(s)
UCL	upper confidence limit
VOC	volatile organic compound

1. Introduction

The objective of this data quality evaluation (DQE) report is to assess the data quality of analytical results for water and soil samples collected by Jacobs Engineering Group Inc. (Jacobs) on behalf of PacifiCorp during investigation of pre-existing environmental conditions for the Lower Klamath Hydroelectric Project (Project). The Project is divided between sites in California and Oregon. Jacobs and PacifiCorp have prepared separate Site Investigation Work Plans (SIWPs) for the sites in California and Oregon (Jacobs 2021a and 2021b) and a sampling and analysis plan (Appendix A to the California and Oregon SIWPs). Jacobs is currently preparing a site investigation report for the sites in each state to meet Project-specific requirements.

The individual method requirements and guidelines from the U.S. Environmental Protection Agency (EPA) *National Functional Guidelines for Organic Superfund Methods Data Review* (EPA 2020a) and the EPA *National Functional Guidelines for Inorganic Superfund Methods Data Review* (EPA 2020b) were consulted for this evaluation. This DQE report provides a general data quality assessment and a summary of data issues.

2. Analytical Data

This DQE report covers 17 normal water and 308 normal soil samples, 5 water and 30 soil field duplicates (FDs), 16 equipment blanks (EBs), and 21 trip blanks (TBs) for a total of 39,378 individual sample results. Samples were collected between March 8 and May 14, 2022. A list of samples and collection dates is attached to this report. These sample results were reported under 38 sample delivery groups (Table 1). The analyses were performed by Eurofins Calscience Laboratory (EUCG) in Garden Grove, California, Eurofins Lancaster Laboratory (LANC) in Lancaster, Pennsylvania, Eurofins TestAmerica Seattle (TAM2) in Tacoma, Washington, and Eurofins TestAmerica West Sac (TAMC) in West Sacramento, California.

Table 1. Sample Delivery Groups

580-111242-1	580-111242-3	580-111291-1	580-111291-3
580-111310-1	580-111310-4	580-111378-1	580-111378-5
580-111908-1	580-113389-1	580-113389-2	580-113389-3
580-113389-4	580-113448-1	580-113448-2	580-113501-1
580-113501-2	580-113501-3	580-113534-1	580-113534-2
580-113673-1	580-113673-2	580-113717-1	580-113720-1
580-113720-2	580-113785-1	580-113785-2	580-113790-1
580-113790-2	580-113802-1	580-113809-1	580-113809-2
580-113851-1	580-113851-2	580-113862-1	580-113862-2
580-113864-1	580-113864-2		

Samples were collected and delivered by courier to the laboratories for analysis. Samples were analyzed by the laboratories listed above for the one or more of the parameters/methods presented in the California or Oregon SIWPs (Table 2).

Table 2. Analytical Parameters

Parameter	Method	Laboratory
TPH as Gasoline Range Organics	CALUFTMS/SW8015B-P	TAM2; LANC
Metals	SW6010B/SW6020	TAM2
Metals (STLC Leachate)	SW6010B-STLC	TAMC
Metals (TCLP Leachate)	SW1311/SW6010B	TAM2
Mercury	SW7470A/SW7471A	TAM2
Mercury (STLC Leachate)	SW7470A-STLC	TAMC
Ethylene Dibromide/Dibromochloropropane	SW8011	TAM2
TPH as Diesel Range Organics/Extended Range Organics	SW8015B-E	TAM2
Polychlorinated Biphenyls	SW8082	TAM2
Volatile Organic Compounds	SW8260B	TAM2
Volatile Organic Compounds (STLC Leachate)	SW8260B-STLC	EUCG
Semivolatile Organic Compounds	SW8270C	TAM2
Semivolatile Organic Compounds (STLC Leachate)	SW8270C-STLC	TAMC
Polycyclic Aromatic Hydrocarbons	SW8270SIM	TAM2
Dioxins/Furans	SW8290	TAMC

Notes:

Parameters

STLC = Soluble Threshold Limit Concentration

TPH = total petroleum hydrocarbons

TCLP = toxicity characteristic leaching procedure

Laboratories

EUCG = Eurofins Calscience Laboratory

LANC = Eurofins Lancastor Laboratory

TAM2 = Eurofins TestAmerica Seattle

TAMC = Eurofins TestAmerica West Sac

The assessment of data includes a review of: (1) the chain-of-custody documentation; (2) holding-time compliance; (3) the required field and laboratory quality control (QC) samples; (4) method blanks; (5) laboratory control samples (LCS); (6) surrogate spike recoveries; (7) matrix spike/matrix spike duplicate (MS/MSD) samples; (8) analytical spike data (for example, post-digestion spikes for metals analyses); (9) initial and continuing calibration information; and (10) other method-specific criteria.

Field samples were also reviewed to ascertain field compliance and data quality issues. This included the review of FDs, EBs, and TBs.

Data flags were assigned according to QC acceptance limits. These flags, as well as the reason for each flag, are entered into the electronic database. Multiple flags are routinely applied to specific sample method/matrix/analyte combinations, but there will be only one final flag. A final flag is applied to the data and is the most conservative of the applied validation flags. The final flag also includes blank sample impacts.

The data flags are defined from most conservative to least as follows:

- R = The result was unusable due to deficiencies in the ability to analyze the sample and meet QC criteria.
- J = Analyte was present but the reported value may not be accurate or precise (estimated). The result was estimated due to either being less than the referenced reporting limit but greater than the method detection limit or due to a QC exceedance.
- UJ = Analyte was not detected and the specified detection limit may not be accurate or precise (estimated).
- U = Analyte was not detected at the specified detection limit.

3. Findings

The overall summaries of the data validation findings are contained in the following sections. Qualified data are presented in Table 3.

3.1 Holding Times

All holding-time criteria were met, with the following exceptions:

- The holding time for the STLC leachate of mercury by method SW7470A was exceeded by 15 to 17 days for 22 soil samples. Samples were received by the secondary laboratory after holding time had been exceeded. Analysis was also performed by laboratory on a precautionary basis due to lab capacity issues. After review of the final results for total mercury, the analysis of method SW7470A-STLC was not required. Because hold times had been exceeded, one detected sample result was qualified as an estimated value and flagged "J" and 21 nondetected sample results were qualified as estimated values and flagged "UJ."
- The holding time for 1,2,3-trichloropropane, 1,2-dibromo-3-chloropropane, and ethylene dibromide by method SW8011 was exceeded by 1 to 14 days for one groundwater sample and 112 soil samples because of a laboratory error. The laboratory utilized a holding time of 14 days from sample collection to extraction, then 40 days from extraction to analysis while the methodology recommends using a 14-day holding time from sample collection to analysis like other volatile organic compound (VOC) methods (for example, SW8260B). The data were evaluated based on SW8011 methodology recommendation. Seven detected sample results were qualified as estimated and flagged "J;" 326 nondetected sample results were qualified as estimated and flagged "UJ." One sample was analyzed more than 14 days past the holding time. The associated three sample results were nondetect and were rejected from project use and flagged "R."
- The sample preparation holding time for TPH as Diesel Range Organics/Extended Range Organics by method SW8015B-E was exceeded by 13 to 15 days for two soil samples. Samples were released from hold after the holding time had been exceeded. Three detected sample results were qualified as estimated and flagged "J;" one nondetected sample result was qualified as estimated and flagged "UJ." One water sample was reprepared 2 days past the sample preparation holding because of a laboratory QC exceedance in the original sample batch. One detected sample result was qualified as estimated and flagged "J."
- The sample preparation holding time for benzoic acid by method SW8270C was exceeded by 3 days for 13 soil samples. The samples were reprepared outside holding time because of laboratory QC exceedances in the original sample batch. A total of 13 nondetected sample results were qualified as estimated and flagged "UJ."

- The holding time for the STLC leachate of semivolatile organic compounds (SVOC) by method SW8270C-STLC was exceeded by 4 days for 4 soil samples. Analysis was performed by laboratory on a precautionary basis because of lab capacity issues. SW8270C-STLC analysis was only required for two of the four samples due to pentachlorophenol exceeding STLC limits in the original SW8270C analysis. A total of 264 nondetected sample results were qualified as estimated and flagged "UJ."
- The sample preparation holding time for polycyclic aromatic hydrocarbons (PAH) by method SW8270SIM was exceeded by 6 days for one soil sample, and 2 days for two water samples. The samples were reprepared outside holding time because of laboratory QC exceedances in the original sample batch. A total of 54 nondetected sample results were qualified as estimated and flagged "UJ."
- The sample preparation holding time for dioxins/furans by method SW8290 was exceeded by 1 day for two soil samples because of a laboratory error. A total of 12 detected sample results were qualified as estimated and flagged "J;" 22 nondetected sample results were qualified as estimated and flagged "UJ."

3.2 Calibration

Initial and continuing calibration criteria were met, with the following exceptions:

- Acetone or vinyl acetate in the initial calibration verification standard by method SW8260B were either less than or greater than the acceptance criteria. Two detected sample results were qualified as estimated and flagged "J;" six nondetected sample results were qualified as estimated and flagged "UJ."
- Benzo(a)pyrene in the initial calibration verification standard by method SW8270C was either less than or greater than the acceptance criteria. A total of 14 detected sample results were qualified as estimated and flagged "J;" 20 nondetected sample results were qualified as estimated and flagged "UJ."
- Several VOCs in one or more continuing calibration verification standards by method SW8260B were either less than or greater than the acceptance criteria. A total of 10 detected sample results were qualified as estimated and flagged "J;" 60 nondetected sample results were qualified as estimated and flagged "UJ."
- Several SVOCs in one or more continuing calibration verification standards by method SW8270C were either less than or greater than the acceptance criteria. Three detected sample results were qualified as estimated and flagged "J;" 79 nondetected sample results were qualified as estimated and flagged "UJ."

3.3 Method Blanks

Method blanks were analyzed at the required frequency and were free of contamination that would affect the sample results with the following exceptions:

- Boron was detected less than the reporting limit in three method blanks for method SW6010B. A total of 18 associated results less than five times the blank concentrations were qualified as not detected (EPA 2020b) and flagged "U."
- Beryllium, chromium, copper, selenium, silver, or zinc were detected less than the reporting limit in three method blanks for method SW6010B-STLC. A total of 44 associated results less than five times the blank concentrations were qualified as not detected and flagged "U."
- Several VOCs were detected less than the reporting limit in three method blanks for method SW8260B. A total of 36 associated results less than five times the blank concentrations were qualified as not detected (EPA 2020a) and flagged "U."

- Several SVOCs were detected less than the reporting limit in 12 method blanks for method SW8270C. A total of 223 associated results less than five times the blank concentrations were qualified as not detected and flagged "U."
- Fluorene was detected less than the reporting limit in one method blank for method SW8270SIM. Two associated results less than five times the blank concentrations were qualified as not detected and flagged "U."
- Dioxins/furans were detected less than the reporting limit in 11 method blanks for method SW8290. A total of 311 associated results less than five times the blank concentrations were qualified as not detected and flagged "U."

3.4 Field Blanks

Field blanks consist of Equipment Blanks (EBs) collected to evaluate the potential for contamination from equipment between sites and Travel Blanks (TBs) included in sample shipping containers to evaluate contamination during transit. A total of 16 EBs and 20 TBs were collected and analyzed and were free of contamination that would affect the sample results with the following exceptions:

- Boron was detected less than the reporting limit in three EBs for method SW6010B. A total of 31 associated results less than five times the blank concentrations were qualified as not detected and flagged "U."
- Molybdenum or nickel were detected less than the reporting limit in four EBs for method SW6020. A total of 50 associated results less than five times the blank concentrations were qualified as not detected and flagged "U."
- TPH as Diesel Range Organics/Extended Range Organics were detected greater than the reporting limit in four EBs for method SW8015B-E. Eight associated results less than five times the blank concentrations were qualified as not detected and flagged "U."
- Several VOCs were detected either less than or greater than the reporting limit in two EBs or TBs for method SW8260B. A total of 22 associated results less than five times the blank concentrations were qualified as not detected and flagged "U."
- Bis(2-ethylhexyl) phthalate was detected less than the reporting limit in five EBs for method SW8270C. A total of 66 associated results less than five times the blank concentrations were qualified as not detected and flagged "U."
- Several PAHs were detected less than the reporting limit in one EB for method SW8270SIM. Thirteen associated results less than five times the blank concentrations were qualified as not detected and flagged "U."
- Dioxins/furans were detected less than the reporting limit in eight EBs for method SW8290. A total of 92 associated results less than five times the blank concentrations were qualified as not detected and flagged "U."

3.5 Field Duplicates

Five water and 30 soil FD sets were collected and analyzed during this event. Precision criteria are based on laboratory established precision values. All precision criteria were met, with the following exceptions:

- The TCLP leachate for lead in one soil FD set for method SW1311/SW6010B exceeded the relative percent difference (RPD) limit of less than 20 percent between the native and field duplicate results. Two detected sample results were qualified as estimated and flagged "J."

- The STLC leachate for vanadium or lead in two soil FD sets for method SW6010B-STLC exceeded the RPD limit of less than 20 percent between the native and field duplicate results. Four detected sample results were qualified as estimated and flagged "J."
- Several metal compounds in two water and 19 soil FD sets for method SW6020 exceeded the RPD limit of less than 20 percent between the native and field duplicate results. A total of 182 detected sample results were qualified as estimated and flagged "J."
- Several SVOCs in six soil FD sets for method SW8270C exceeded the RPD limit of less than 50 percent between the native and field duplicate results. A total of 62 detected sample results were qualified as estimated and flagged "J;" four nondetected sample results were qualified as estimated and flagged "UJ."
- Several PAHs in one water and one soil FD sets for method SW8270SIM exceeded the RPD limit of less than 50 percent between the native and field duplicate results. A total of 19 detected sample results were qualified as estimated and flagged "J;" nine nondetected sample results were qualified as estimated and flagged "UJ."
- Four dioxin or furan compounds in one soil FD set for method SW8290 exceeded the RPD limit of less than 40 percent between the native and field duplicate results. Eight detected sample results were qualified as estimated and flagged "J."

3.6 Surrogates

Surrogate spikes were analyzed in each sample for all required methods. All acceptance criteria were met, with the following exceptions:

- Surrogate recoveries were less than the lower control limit (LCL) in five soil samples for method SW8011. Fifteen associated nondetected sample results were qualified as estimated and flagged "UJ." Surrogate recoveries were less than 10 percent in one soil sample. Three nondetected sample results were rejected from project use and flagged "R."
- Surrogate recoveries were less than the LCL in three water and two soil samples for method SW8015B-E. Five associated detected sample results were qualified as estimated and flagged "J;" Three nondetected sample results were qualified as estimated and flagged "UJ."
- Surrogate recoveries were less than the LCL in three water and four soil samples for method SW8082. One associated detected sample result was qualified as estimated and flagged "J;" 61 nondetected sample results were qualified as estimated and flagged "UJ."
- Surrogate recoveries were either less than the LCL or greater than the upper confidence limit (UCL) in two water and 32 soil samples for method SW8260B. A total of 43 associated detected sample results were qualified as estimated and flagged "J" and 1,009 nondetected sample results were qualified as estimated and flagged "UJ."
- Surrogate recoveries were less than the LCL in 21 soil samples for method SW8270C. A total of 63 associated detected sample results were qualified as estimated and flagged "J;" 493 nondetected sample results were qualified as estimated and flagged "UJ." Surrogate recoveries were less than 10 percent in three soil samples. A total of 19 nondetected sample results were rejected from project use and flagged "R."
- Surrogate recoveries were less than the LCL in seven soil samples for method SW8290. Three associated detected sample results were qualified as estimated and flagged "J;" five nondetected sample results were qualified as estimated and flagged "UJ."

3.7 Internal Standards

Internal standards are compounds that have similar properties as the analytes of interest but are not expected to occur naturally in the samples. Some methods require the use of internal standards to compensate for losses during injection or purging or losses due to viscosity. A measured amount of the internal standard is added to the standards, the samples, and QC samples following preparation. Internal standards were analyzed for all required methods. All acceptance criteria were met.

3.8 Laboratory Control Samples

LCS and LCS duplicates were analyzed as required. Accuracy and precision criteria were met, with the following exceptions:

- The recovery for 1,2-dibromo-3-chloropropane in one soil LCS was greater than the UCL for method SW8011. One associated detected sample result was qualified as estimated and flagged "J."
- The recovery for TPH as Extended Range Organics in one water LCS was less than the LCL for method SW8015B-E. One associated detected sample result was qualified as estimated and flagged "J;" three nondetected sample results were qualified as estimated and flagged "UJ."
- The RPD for Aroclor-1260 in one soil LCS/LCS duplicate exceeded the control limit for method SW8082. One associated detected sample result was qualified as estimated and flagged "J."
- The recoveries for several VOCs in one or more soil LCS were either less than the LCL or greater than the UCL for method SW8260B. Nine associated detected sample results were qualified as estimated and flagged "J;" 119 nondetected sample results were qualified as estimated and flagged "UJ."
- The recoveries for several SVOCs in one or more soil or water LCS were either less than the LCL or greater than the UCL for method SW8270C. A total of 57 associated detected sample results were qualified as estimated and flagged "J;" 372 nondetected sample results were qualified as estimated and flagged "UJ." The recoveries of either benzoic acid or pyridine were less than 10 percent in one or more LCS. A total of 21 nondetected sample results were rejected from project use and flagged "R."
- The RPD for several SVOCs in one or more soil LCS/LCS duplicate exceeded the control limit for method SW8270C. A total of 20 associated detected sample results were qualified as estimated and flagged "J;" two nondetected sample results were qualified as estimated and flagged "UJ."
- The recoveries for several PAHs in one or more soil LCS were less than the LCL for method SW8270SIM. A total of 25 associated detected sample results were qualified as estimated and flagged "J;" 23 nondetected sample results were qualified as estimated and flagged "UJ."

3.9 Matrix Spike/Matrix Spike Duplicate

The results of MS/MSD analyses provide information about the possible influence of the matrix on either accuracy or precision of the measurements. A total of 47 MS/MSD sets were submitted by the field team or selected by the laboratory. All acceptance criteria were met, with the following exceptions:

- The recovery for boron in five soil MS/MSD sets was less than the LCL for method SW6010B. Three detected native sample results were qualified as estimated and flagged "J;" two nondetected native sample results were qualified as estimated and flagged "UJ."
- The recoveries for several metal compounds in 20 soil MS/MSD sets were either less than the LCL or greater than the UCL for method SW6020. A total of 86 detected native sample results were qualified as estimated and flagged "J."
- The RPD for several metal compounds in five soil MS/MSD sets exceeded the control limit for method SW6020. A total of 24 detected native sample results were qualified as estimated and flagged "J."

- The recovery for the STLC leachate of mercury in one soil MSD was less than the LCL for method SW7470A. One detected native sample result was qualified as estimated and flagged "J."
- The recovery for mercury in one soil MS/MSD set was less than the LCL for method SW7471A. One detected native sample result was qualified as estimated and flagged "J."
- The recovery for TPH as Diesel Range Organics/Extended Range Organics in one water and two soil MS/MSD sets were either less than the LCL or greater than the UCL for method SW8015B-E. Four detected native sample results were qualified as estimated and flagged "J."
- The RPD for TPH as Diesel Range Organics/Extended Range Organics in one soil MS/MSD set exceeded the control limit for method SW8015B-E. Two detected native sample results were qualified as estimated and flagged "J."
- The recoveries for several VOCs in 12 soil MS/MSD sets were either less than the LCL or greater than the UCL for method SW8260B. One detected native sample result was qualified as estimated and flagged "J;" 477 nondetected native sample results were qualified as estimated and flagged "UJ." The recoveries for several VOCs in two soil MS/MSD sets were less than 10 percent. Six nondetected native sample results were rejected from project use and flagged "R."
- The recoveries for several SVOCs in 14 soil MS/MSD sets were either less than the LCL or greater than the UCL for method SW8270C. Twelve detected native sample results were qualified as estimated and flagged "J;" 74 nondetected native sample results were qualified as estimated and flagged "UJ." The recoveries for several SVOCs in seven soil MS/MSD sets were less than 10 percent. A total of 14 nondetected native sample results were rejected from project use and flagged "R."
- The RPD for several SVOCs in five soil MS/MSD sets exceeded the control limit for method SW8270C. A total of 22 detected native sample results were qualified as estimated and flagged "J."
- The recovery for several PAHs in one water and two soil MS/MSD sets were less than the LCL for method SW8270SIM. Five nondetected native sample results were qualified as estimated and flagged "UJ."
- The recoveries or RPD for two dioxin compounds in one soil MS/MSD set were greater than the UCL for method SW8290. Two detected native sample results were qualified as estimated and flagged "J."

3.10 Laboratory Duplicates

Laboratory duplicate sets were analyzed at the proper frequency for the required methods. All precision criteria were met, with the exception of RPDs for several metal compounds in five laboratory duplicates exceeded the control limit for method SW6020. A total of 18 detected native sample results were qualified as estimated and flagged "J."

3.11 Estimated Maximum Possible Concentrations

Estimated maximum possible concentrations (EMPCs) were reported for Method SW8290 where ion abundance ratio criteria were not met. One or more analytes in 4 water or 69 soil samples exceedance ion abundance ratio criteria. A total of 205 results were qualified as estimated and flagged "UJ."

3.12 Chain of Custody

Each sample was documented in a completed chain-of-custody form and received at the laboratory within temperature criteria and in good condition.

3.13 Overall Assessment

The final activity in the DQE is an assessment of whether the data meet the required precision, accuracy, representativeness, completeness, and comparability (PARCC). The goal of this assessment is to demonstrate that a sufficient number of representative samples were collected, and the resulting analytical data can be used to support the decision making process. The following summary highlights the data evaluation findings for the above defined events:

1) A total of 65 results for Methods SW8011, SW8260B, or SW8270C were rejected due to low LCS, MS/MSD, or surrogate recoveries, or for hold-time exceedances. The completeness goal of 95 percent for water samples or 90 percent for soil samples were met for all method/analyte combinations, except for benzoic acid which was 86 percent complete in soil. Benzoic acid is a historically poor performing analyte; however, based on common industrial uses this analyte is not considered to be a COPC for this site.
2) Approximately 1.7 percent of the data were qualified due to associated method blank and EB contamination. Approximately 1.8 percent of the data were qualified as estimated because of holding-time issues.
3) Approximately 11 percent of the data were qualified as estimated due to quality control exceedances that included: FD and laboratory RPD exceedances, LCS recovery and RPD exceedances, surrogate and internal standard recovery exceedances, MS/MSD recovery and RPD exceedances, calibration standard exceedances, or ion ratio exceedances resulting in reported EMPC values.
4) Overall, the precision and accuracy of the data, as measured by laboratory and field quality control indicators, indicates that the PARCC were met. Data are usable for project decision-making, considering the biases outlined in this data quality evaluation, except for the rejected data.
5) Representativeness and comparability of the data was achieved through adherence to the sampling plan. Consistent sample collection procedures, project laboratories and analytical methodologies were used throughout the sampling event. Data were reported in consistent methods and units for the sampling events.
6) Sensitivity is a measurement based on the analytical instrument method reporting limits determined by each subcontract laboratory and is ensured through compliance with reporting limits being equivalent to, or less than the project screening levels. Any nondetect results that were reported by the laboratory, or were flagged nondetect due to blank contamination, have been evaluated against the project screening levels as discussed in the work plan.

TABLE 3 - Data Qualification Summary						
NativeID	Method	Analyte	Final Result	Units	Final Validation Flag	Validation Reason
C1DP-01-0.5-20220310	SW6020	Barium	67	mg/Kg	J	LabDupRPD

Notes:

CCV<LCL = continuing calibration verification recovery less than the lower control limit

CCV>UCL = continuing calibration verification recovery greater than the upper control limit

EB<RL = analyte detected less than five times associated equipment blank concentration

EB>RL = analyte detected greater than five times associated equipment blank concentration

EMPC = estimated maximum possible concentration

FD>RPD = field duplicate relative percent difference greater than acceptance criterion

HTa>UCL = sample analysis holding time exceeded the method specified control limit

HTp>UCL = sample preparation holding time exceeded the method specified control limit

ICVS<LCL = Initial calibration verification recovery less than the lower control limit

ICVS>UCL = Initial calibration verification recovery greater than the upper control limit

LabDupRPD = laboratory duplicate relative percent difference greater than acceptance criterion

LB<RL = analyte detected less than five times associated laboratory blank concentration

LCS<LCL = laboratory control sample recovery less than the lower control limit

LCS>UCL = laboratory control sample recovery greater than the upper control limit

LCSRPD = laboratory control sample/laboratory contrrol samle duplicate relative percent difference greater than acceptance criterion

TABLE 3 - Data Qualification Summary						
NativeID	**Method**	**Analyte**	**Final Result**	**Units**	**Final Validation Flag**	**Validation Reason**

mg/Kg = miligrams per kilogram

mg/L = milligrams per liter

MS<LCL = matrix spike recovery less than the lower control limit

MS>UCL = matrix spike recovery greater than the upper control limit

MSRPD = matrix spike/matrix spike duplicate relative percent difference greater than acceptance criterion

SD<LCL = matrix spike duplicate recovery less than the lower control limit

SD>UCL = matrix spike duplicate recovery greater than the upper control limit

STLC = Soluble Threshold Limit Concentration

Sur<LCL = surrogate recovery less than the lower control limit

Sur>UCL = surrogate recovery greater than the upper control limit

TCLP = Toxicity Characteristic Leaching Procedure

TB<RL = analyte detected less than five times associated trip blank concentration

ug/Kg = micrograms per kilogram

ug/L = micrograms per liter

Notes:

[a] The screening levels used for human health are the the DTSC (2022) Note 3 Soil Screening Levels for residential soil; if no screening level is available in Note 3, the EPA (2022) Residential Soil RSL was used. Background values are used if available and if higher. Screening levels are based on a target cancer risk of 1E-06 and a target hazard index of 0.1 to account for potential cumulative risk.

[b] Background concentrations for metals in soil in Cascade Range (ODEQ 2013)

[c] Human health COPCs are analytes that exceed the human health SL and the background value, if available.

[d] The screening levels for protection of groundwater from soil leaching are the SFRWQCB values protective of groundwater as a drinking water resource (SFRWQCB 2019, Table S-3).

[e] For chemicals without published DTSC (2022) or EPA (2022) Screening Levels, surrogate values were selected as indicated.

[f] Evaluated using Total 2,3,7,8-TCDD, calculated using toxicity equivalent values.

CAS = Chemical Abstracts Service
COPC = chemical of potential concern
mg/kg = milligrams per kiligram
NA = not available or not applicable
SL = screening level

Copco No. 2 Wood Pile Evaluation of COPCs for Human Health and Leaching to Groundwater

ANALYTIC METHOD	CHEMICAL NAME	CAS	Maximum Detected Concentration in Soil (mg/kg)	CA Human Health SL[a] (mg/kg)	Exceeds CA Human Health SL?	Background Value[b] (mg/kg)	Human Health COPC[c]?	CA Leaching to Groundwater SL[d] (mg/kg)	Exceeds CA Leach to Groundwater SL (COPC)?	Surrogate Chemicals for Human Health[e]
SW8270C	Phenol	108-95-2	2.5E-02	1900	No	NA	No	1.6E-01	No	
SW8270C	Pyrene	129-00-0	1.5E-01	180	No	NA	No	4.5E+01	No	

Notes:

[a] The screening levels used for human health are the the DTSC (2022) Note 3 Soil Screening Levels for residential soil; if no screening level is available in Note 3, the EPA (2022) Residential Soil RSL was used. Background values are used if available and if higher. Screening levels are based on a target cancer risk of 1E-06 and a target hazard index of 0.1 to account for potential cumulative risk.

[b] Background concentrations for metals in soil in Cascade Range (ODEQ 2013)

[c] Human health COPCs are analytes that exceed the human health SL and the background value, if available.

[d] The screening levels for protection of groundwater from soil leaching are the SFRWQCB values protective of groundwater as a drinking water resource (SFRWQCB 2019, Table S-3).

[e] For chemicals without published DTSC (2022) or EPA (2022) Screening Levels, surrogate values were selected as indicated.

CAS = Chemical Abstracts Service
COPC = chemical of potential concern
mg/kg = milligrams per kiligram
NA = not available or not applicable
SL = screening level

Notes:

[a] The screening levels used for human health are the the DTSC (2022) Note 3 Soil Screening Levels for tapwater; if no screening level is available in Note 3, the EPA (2022) tapwater RSL was used. SFRWQCB (2019) ELSs are used for DRO. Screening levels are based on a target cancer risk of 1E-06 and a target hazard index of 0.1 to account for potential cumulative risk.

[b] For chemicals without published DTSC (2022) or EPA (2022) Screening Levels, surrogate values were selected as indicated.

CAS = Chemical Abstracts Service

COPC = chemical of potential concern

ug/L = micrograms per liter

NA = not available or not applicable

SL = screening level

Copco No. 2 Former Mobile Oil Containment Building Evaluation of COPCs in Groundwater for Human Health

ANALYTIC METHOD	CHEMICAL NAME	CAS	Maximum Detected Concentration in Groundwater (ug/L)	CA Human Health SL[a] (ug/L)	Exceeds CA Human Health SL (COPC)?

Notes:

[a] Source: DTSC 2022a

[b] Source: USEPA 2022a

[c] Priority of: 1) DTSC Note 3 value for residential tapwater (DTSC 2022a); 2) EPA RSLfor resident tapwater (EPA 2022a)

CAS = chemical abstract service

COPC = constituent of potential concern

DTSC = California Environmental Protection Agency, Department of Toxic Substances Control

EPA = U.S. Environmental Protection Agency

EPC = Exposure Point Concentration

ug/L = micrograms per liter

RBC = risk-based concentration

RSL = Regional Screening Level

Notes:

[a] Food intake rates (IRf) were calculated using allometric relationships for the receptor group as listed below and normalized to body weight in units of kg/kg-bw/d using the following regression from Nagy (2001): Food Ingestion Rate (grams dry matter ingested/day/gram body weight) = (a x BW^b)/BW

Receptor	*Group*	*a*	*b*	bw	IRf
Hermit thrush	insectivorous birds	0.54	0.705	0.0301	0.198
Mourning dove	granivore (all birds)	0.638	0.685	0.112	0.144
Red-tailed hawk	carnivorous birds	0.849	0.663	0.96	0.084
Coyote	carnivorous mammals	0.102	0.864	10	0.029
Deer mouse	rodentia	0.332	0.774	0.0193	0.170
Vagrant shrew	insectivorous mamma	0.373	0.622	0.008	0.170

[b] Soil ingestion rates are as follows:

Receptor	*Soil ingestion %*	*Notes/Source*
Hermit thrush	10.4%	Assume similar to woodcock (Beyer et al., 1994)
Mourning dove	6.1%	Median soil ingestion rate estimated for mourning dove in Table 3 of the USEPA EcoSSL guidance (2007a)
Red-tailed hawk	2.4%	Median soil ingestion rate estimated for red-tailed hawk in Table 3 of the USEPA EcoSSL guidance (2007a)
Coyote	2.8%	Assumed comparable to red fox (Beyer et al., 1994)
Deer mouse	2.0%	Value for white-footed mouse from Beyer et al., 1994
Vagrant shrew	3.0%	90th percentile for shrews as derived by USEPA EcoSSL guidance (2007a)

-- = not available
BAF = bioaccumulation factor
EcoPRG = ecological preliminary remedial goal
HQ = hazard quotient
kg = kilogram
kg/kg-d = kilogram per kilogram per day
mg/kg = milligram per kilogram
mg/kg-d = milligram per kilogram per day
TEQ = dioxin toxicity equivalents
TPH = total petroleum hydrocarbons
TRV = wildlife toxicity reference value
Most conservative receptor-specific EcoPRG for birds or mammals

Vagrant shrew	1.07	0.35	0.3271	3.8	1	0.04	0.0374	12.9	1

Notes:

Area Use Factor (AUF) - calculated by dividing the acreage of the exposure area by receptor's foraging range. If the foraging range is smaller than the site acreage, the AUF defaults to 1.

The AUFs for the hermit thrush and the vagrant shrew were selected for use in the risk esimates as these were the receptors with the lowest (most conservative EcoPRGs) for the majority of analytes evaluated in Step 3.

Iron Gate Fish Hatchery Settling Ponds	IGSP
Iron Gate Shooting Range	IGSR

Table G-8. Uncertainty Analysis

Assessment Element	Uncertainty	Magnitude of Impact	Direction of Impact
Problem Formulation			
Fate and Transport	It is assumed that chemical concentrations will not change over time, and that concentrations are constant during the exposure duration. Natural attenuation and/or other degradation processes may be significant in some areas resulting in an over-estimation of exposure.	Moderate	Over-estimation of exposure/risk
Representative Species	Representative species were selected to reduce uncertainty; however, differences among species including physiology, reproductive biology, and/or foraging habits can result in different exposures and sensitivities for different receptors.	Low	Over- or under-estimation of exposure/risk
Exposure Pathway Analysis	Exposure routes that are considered minor (inhalation and dermal exposure) were not included in the risk estimation. Although exposure via these routes still contributes to the total risk to each receptor, potential risks may be underestimated because these routes were not quantified.	Low	Under-estimation of exposure/risk
Analysis			
Wildlife Exposure Factors	Exposure parameters for birds and mammals were either modeled using allometric relationships (e.g., food ingestion rates) or were estimated using data from a similar species (soil ingestion rates). Use of modeling and surrogates is a potential source of uncertainty depending on the differences between site-exposures vs. laboratory exposures and differneces in the selected representative species and the surrogate	Low	Over- or under-estimation of exposure/risk
Bioaccumulation Factors	Literature-based BAFs and regression models were used to estimate bioaccumulation. These uptake rates may differ from site-specific rates.	Moderate	Over- or under-estimation of exposure/risk
Bioavailability	Bioavailability of analytes is assumed to be 100%. This likely overestimates risk from some analytes.	Low	Over-estimation of exposure/risk
Exposure Point Concentrations	Risks were estimated on a sample-specific basis. This provides a very conservative evalution as representative species do not spend their entire lifetiime at one sample location. Their actual exposure varies as they forage or travel in the vicinity of the site.	Moderate	Over-estimation of exposure/risk
Risk Characterization			
Risk Estimation	Potential ecological risks were quantified using the HQ approach. The magnitude of the HQ indicates potential for ecological risk, but is not an exact estimation of risk. For example, the actual risk from a chemical with an HQ of 70 could be less than that for a chemical with an HQ of 20 because of uncertainties involved in estimating exposure, selection of effects criteria (TRVs), or field conditions affecting exposure.	Moderate	Over- or under-estimation of risks

Notes:
HQ = hazard quotient
LOAEL = lowest observed adverse effect level
NOAEL = no observed adverse effect level
TRV = toxicity reference value
