Notes:

[a] Screening Levels - No Effect ESLs are based on no observed adverse effect levels (NOAELs) and are the most conservative among plants, invertebrates, birds, and mammals. Low Effect ESLs are based on lowest observed adverse effect levels (LOAELs) for birds and mammals.

[b] Site-specific ecological preliminary remedial goals (EcoPRGs) are risk-based concentrations calculated for receptors that would potentially be found in the area around the Klamath project sites. The bird and mammal EcoPRGs selected for use in the risk estimates are the most conservative of the risk-based values calculated for birds and mammals from the major feeding guilds (herbivores, invertevores, and carnivores) using LOAEL toxicity values and an AUF=1 (100% site use). Supporting information and calculation of EcoPRGs is presented in Appendix G, Table G-2 through Table G-7.

[c] Area use factors for the hermit thrush and vagrant shrew were selected for use in the risk estimates as these two receptors had the most conservative risk-based concentrations. The AUF is calculated from the receptors home range versus the size of the REC. Supporting information and calculation of AUFs is presented in Appendix G, Table G-7.

-- = not available or not applicable
<1 = less than 1
>1 = greater than 1
AUF = area use factor
EcoPRG = ecological preliminary remedial goal
ESL = ecological screening level
HQ = hazard quotient - all values presented to 1 significant figure
ND = not detected
Step 1 = analyte was eliminated in Step 1 of the ecological risk evaluation. No Effect screening HQ was less than 1.
Step 2 = analyte was retained after Step 1 (the screening HQ >1), but was eliminated in Step 2 (the refined HQ <1).

Table G-10. Ecological Risk Estimates - Copco No. 2 Wood Stave Penstock

Notes:

[a] Screening Levels - No Effect ESLs are based on no observed adverse effect levels (NOAELs) and are the most conservative among plants, invertebrates, birds, and mammals. Low Effect ESLs are based on lowest observed adverse effect levels (LOAELs) for birds and mammals.

[b] Site-specific ecological preliminary remedial goals (EcoPRGs) are risk-based concentrations calculated for receptors that would potentially be found in the area around the Klamath project sites. The bird and mammal EcoPRGs selected for use in the risk estimates are the most conservative of the risk-based values calculated for birds and mammals from the major feeding guilds (herbivores, invertevores, and carnivores) using LOAEL toxicity values and an AUF=1 (100% site use). Supporting information and calculation of EcoPRGs is presented in Appendix G, Table G-2 through Table G-7.

[c] Area use factors for the hermit thrush and vagrant shrew were selected for use in the risk estimates as these two receptors had the most conservative risk-based concentrations. The AUF is calculated from the receptors home range versus the size of the REC. Supporting information and calculation of AUFs is presented in Appendix G, Table G-7.

-- = not available or not applicable
<1 = less than 1
>1 = greater than 1
AUF = area use factor
EcoPRG = ecological preliminary remedial goal
ESL = ecological screening level
HQ = hazard quotient - all values presented to 1 significant figure

Table G-10. Ecological Risk Estimates - Copco No. 2 Wood Stave Penstock

REC Name	Location ID	Type	Class	Analyte	Units	Result	Qualifier	Detect	BTV	Screening Levels[a]		Site-Specific EcoPRGs[b]		Area Use Factors[c]			Screening HQs		Site-Specific EcoPRG HQs		Area Use Adjusted EcoPRG HQs		Summary							
										No Effect ESL	Low Effect ESL	Bird EcoPRG	Mammal EcoPRG	Bird	Mammal	Bkg HQ	No Effect HQ	Low Effect HQ	Bird HQ	Mammal HQ	Bird HQ	Mammal HQ	Bkg HQ	No Effect HQ	Low Effect HQ	Bird EcoPRG HQ	Mammal EcoPRG HQ	Bird AUF EcoPRG HQ	Mammal AUF EcoPRG HQ

ND = not detected
Step 1 = analyte was eliminated in Step 1 of the ecological risk evaluation. No Effect screening HQ was less than 1.
Step 2 = analyte was retained after Step 1 (the screening HQ >1), but was eliminated in Step 2 (the refined HQ <1).

Notes:

[a] Screening Levels - No Effect ESLs are based on no observed adverse effect levels (NOAELs) and are the most conservative among plants, invertebrates, birds, and mammals. Low Effect ESLs are based on lowest observed adverse effect levels (LOAELs) for birds and mammals.

[b] Site-specific ecological preliminary remedial goals (EcoPRGs) are risk-based concentrations calculated for receptors that would potentially be found in the area around the Klamath project sites. The bird and mammal EcoPRGs selected for use in the risk estimates are the most conservative of the risk-based values calculated for birds and mammals from the major feeding guilds (herbivores, invertevores, and carnivores) using LOAEL toxicity values and an AUF=1 (100% site use). Supporting information and calculation of EcoPRGs is presented in Appendix G, Table G-2 through Table G-7.

[c] Area use factors for the hermit thrush and vagrant shrew were selected for use in the risk estimates as these two receptors had the most conservative risk-based concentrations. The AUF is calculated from the receptors home range versus the size of the REC. Supporting information and calculation of AUFs is presented in Appendix G, Table G-7.

-- = not available or not applicable
<1 = less than 1
>1 = greater than 1
AUF = area use factor
EcoPRG = ecological preliminary remedial goal
ESL = ecological screening level
HQ = hazard quotient - all values presented to 1 significant figure
ND = not detected
Step 1 = analyte was eliminated in Step 1 of the ecological risk evaluation. No Effect screening HQ was less than 1.
Step 2 = analyte was retained after Step 1 (the screening HQ>1), but was eliminated in Step 2 (the refined HQ <1).

Table G-12. Ecological Risk Estimates - Copco No. 2 Transformer Fire

Notes:

[a] Screening Levels - No Effect ESLs are based on no observed adverse effect levels (NOAELs) and are the most conservative among plants, invertebrates, birds, and mammals. Low Effect ESLs are based on lowest observed adverse effect levels (LOAELs) for birds and mammals.

[b] Site-specific ecological preliminary remedial goals (EcoPRGs) are risk-based concentrations calculated for receptors that would potentially be found in the area around the Klamath project sites. The bird and mammal EcoPRGs selected for use in the risk estimates are the most conservative of the risk-based values calculated for birds and mammals from the major feeding guilds (herbivores, invertevores, and carnivores) using LOAEL toxicity values and an AUF=1 (100% site use). Supporting information and calculation of EcoPRGs is presented in Appendix G, Table G-2 through Table G-7.

[c] Area use factors for the hermit thrush and vagrant shrew were selected for use in the risk estimates as these two receptors had the most conservative risk-based concentrations. The AUF is calculated from the receptors home range vs the size of the REC. Supporting information and calculation of AUFs is presented in Appendix G, Table G-7.

-- = not available or not applicable
<1 = less than 1
>1 = greater than 1
AUF = area use factor
EcoPRG = ecological preliminary remedial goal
ESL = ecological screening level
HQ = hazard quotient - all values presented to 1 significant figure
ND = not detected
Step 1 = analyte was eliminated in Step 1 of the ecological risk evaluation. No Effect screening HQ was less than 1.
Step 2 = analyte was retained after Step 1 (the screening HQ >1), but was eliminated in Step 2 (the refined HQ <1).

Notes:

[a] Screening Levels - No Effect ESLs are based on no observed adverse effect levels (NOAELs) and are the most conservative among plants, invertebrates, birds, and mammals. Low Effect ESLs are based on lowest observed adverse effect levels (LOAELs) for birds and mammals.

[b] Site-specific ecological preliminary remedial goals (EcoPRGs) are risk-based concentrations calculated for receptors that would potentially be found in the area around the Klamath project sites. The bird and mammal EcoPRGs selected for use in the risk estimates are the most conservative of the risk-based values calculated for birds and mammals from the major feeding guilds (herbivores, invertevores, and carnivores) using LOAEL toxicity values and an AUF=1 (100% site use). Supporting information and calculation of EcoPRGs is presented in Appendix G, Table G-2 through Table G-7.

[c] Area use factors for the hermit thrush and vagrant shrew were selected for use in the risk estimates as these two receptors had the most conservative risk-based concentrations. The AUF is calculated from the receptors home range versus the size of the REC. Supporting information and calculation of AUFs is presented in Appendix G, Table G-7.

-- = not available or not applicable
<1 = less than 1
>1 = greater than 1
AUF = area use factor
EcoPRG = ecological preliminary remedial goal
ESL = ecological screening level
HQ = hazard quotient - all values presented to 1 significant figure
ND = not detected
Step 1 = analyte was eliminated in Step 1 of the ecological risk evaluation. No Effect screening HQ was less than 1.
Step 2 = analyte was retained after Step 1 (the screening HQ >1), but was eliminated in Step 2 (the refined HQ <1).

Notes:

[a] Screening Levels - No Effect ESLs are based on no observed adverse effect levels (NOAELs) and are the most conservative among plants, invertebrates, birds, and mammals. Low Effect ESLs are based on lowest observed adverse effect levels (LOAELs) for birds and mammals.

[b] Site-specific ecological preliminary remedial goals (EcoPRGs) are risk-based concentrations calculated for receptors that would potentially be found in the area around the Klamath project sites. The bird and mammal EcoPRGs selected for use in the risk estimates are the most conservative of the risk-based values calculated for birds and mammals from the major feeding guilds (herbivores, invertevores, and carnivores) using LOAEL toxicity values and an AUF=1 (100% site use). Supporting information and calculation of EcoPRGs is presented in Appendix G, Table G-2 through Table G-7.

[c] Area use factors for the hermit thrush and vagrant shrew were selected for use in the risk estimates as these two receptors had the most conservative risk-based concentrations. The AUF is calculated from the receptors home range vs the size of the REC. Supporting information and calculation of AUFs is presented in Appendix G, Table G-7.

-- = not available or not applicable
<1 = less than 1
>1 = greater than 1
AUF = area use factor
EcoPRG = ecological preliminary remedial goal
ESL = ecological screening level
HQ = hazard quotient - all values presented to 1 significant figure
ND = not detected
Step 1 = analyte was eliminated in Step 1 of the ecological risk evaluation. No Effect screening HQ was less than 1.
Step 2 = analyte was retained after Step 1 (the screening HQ >1), but was eliminated in Step 2 (the refined HQ <1).
