PACIFICORP'S REPLY BRIEF

REDACTED

October 5, 2016

TABLE OF CONTENTS

I.	INTRODUCTION	1
II.	ARGUMENT.....	3
A.	The Jim Bridger fueling strategy is prudent and the coal costs included in the 2017 TAM are reasonable.	3
1.	The Company regularly assessed market alternatives to BCC coal.	5
2.	The Company’s planning process was reasonable, even though it did not include a 20-year PVRR(d) analysis of PRB coal in 2013.....	6
3.	In 2013, BCC coal remained the least-cost fuel for the Jim Bridger plant.....	7
4.	Staff cannot reconcile its testimony in previous TAMs with its characterization of the historical record in this case.....	7
5.	Staff’s PVRR(d) analysis is flawed; as corrected, it demonstrates that continued reliance on BCC and Black Butte coal was least-cost, least-risk by a substantial margin.	8
a.	PacifiCorp’s 2013 base case uses the correct forecast prices.	8
b.	The Company’s base case reasonably excluded the capital investments required for PRB coal.	9
c.	The Company reasonably relied on the capital costs included in the Black and Veatch study.	10
d.	The Company’s transportation costs are consistent with its actual contract, which has not been challenged.	12
e.	The Company’s modeled BCC closure costs are reasonable.	12
f.	Staff’s analysis fails to account for the risk associated with a transition to PRB coal.	14
6.	Staff’s alternative prudence disallowance is without merit.	15
7.	There is no basis for the Commission to reverse nearly 40 years of precedent and apply lower of cost or market pricing to BCC coal.	15
a.	ICNU concedes that the lower of cost or market rule has not historically applied to BCC.	15
b.	PRB coal is not <i>available</i> to replace BCC coal in 2017.	16
c.	PRB coal is not lower price than BCC.	17

B.	The Company’s coal supply contracts are prudent and the modeling is reasonable.	19
C.	The Company’s calculated EIM benefits are reasonable.	20
1.	Imputing intra-regional benefits is double-counting.	21
2.	The EIM’s five-minute dispatch produces greater efficiency in actual operations, but not in GRID.	23
3.	CUB miscalculates intra-regional benefits.	23
4.	Staff concedes that its inter-regional benefits are overstated but has not provided alternative, corrected calculations.	24
5.	CUB’s proposal to ignore transmission overstates EIM benefits.	25
6.	It is reasonable to use voluminous data to calculate EIM benefits.	26
7.	The Company’s EIM benefits calculation does not violate the modeling moratorium.	27
8.	Staff incorrectly calculates the EIM benefits from NVE’s participation.	28
9.	CUB concedes its opportunity cost adjustment.	28
D.	The Commission should affirm the system balancing transactions adjustment approved in the 2016 TAM.	28
1.	The parties ignore the Commission’s order approving the adjustment.	28
2.	The adjustment creates a more accurate forward price curve.	29
3.	The adjustment is not arbitrary, irrational, or unrealistic.	30
4.	The adjustment does not exclude benefits.	31
5.	The Company engages in monthly system balancing transactions.	33
6.	The adjustment does not double count day-ahead integration costs.	33
7.	There is no reason to reject the adjustment to allow time for refinement.	33
E.	The TAM Guidelines’ methodology for forecasting QF generation is reasonable.	34
F.	The Commission should affirm the prudence of the Glenrock and Seven Mile Hill wind projects.	35
G.	The Company diligently worked with parties to facilitate review of this filing.	36
H.	The Commission’s methodology for calculating transition charges is reasonable.	37
1.	Noble Solutions has not provided a reliable value for freed-up Renewable Energy Certificates (RECs).	37

2.	Oregon law does not require the Commission to freeze generation costs after five years for purposes of the consumer opt-out charge calculation.	38
3.	Holding fixed generation costs constant in real terms is a reasonable method for forecasting fixed generation costs.....	39
III.	CONCLUSION.....	39

1 **I. INTRODUCTION**

2 PacifiCorp d/b/a Pacific Power (PacifiCorp or Company) respectfully submits this
3 reply brief to the Public Utility Commission of Oregon (Commission), addressing the
4 response briefs filed by Staff, the Citizens' Utility Board of Oregon (CUB), the Industrial
5 Customers of Northwest Utilities (ICNU), and Noble Americas Energy Solutions LLC
6 (Noble Solutions).

7 In the 2017 Transition Adjustment Mechanism (TAM), PacifiCorp seeks a revenue
8 increase of \$16.2 million, or 1.3 percent overall.¹ The parties have proposed several major
9 adjustments, which combined would produce an unrealistically low net power cost (NPC)
10 baseline and a revenue decrease of approximately \$26 million. This result is contrary to the
11 goal of the TAM, which is to produce the most accurate NPC forecast possible.² The parties
12 fail to address whether their adjustments increase forecast accuracy. Staff even contends that
13 the reasonableness of the overall NPC baseline and the Company's historical under-recovery
14 of NPC are irrelevant considerations in this case.³

15 The parties approach this case in a vacuum, ignoring that the Commission recently
16 considered and rejected virtually all of the adjustments they propose. Instead of addressing
17 how their adjustments make sense in the context of recent Commission decisions, the parties
18 present their claims as if the Commission is reviewing them for the first time.

19 Staff's \$23 million adjustment for Jim Bridger fueling costs is illustrative. Less than
20 three years ago in Order No. 13-387, the Commission found that the Company's current

¹ Unless otherwise noted, all amounts stated are Oregon-allocated values.

² *In the Matter of PacifiCorp d/b/a Pacific Power 2013 Transition Adjustment Mechanism*, Docket No. UE 245, Order No. 12-409 at 7 (Oct. 29, 2012).

³ Staff's Response Brief at 4.

1 fueling strategy for the Jim Bridger plant was “fair, just and reasonable.”⁴ Staff claims that
2 the Company was imprudent for not dramatically changing its current fueling strategy in
3 2013, without addressing the Commission’s approval of that strategy that same year. Staff’s
4 response brief does not even cite Order No. 13-387, which is central to assessing the
5 objective reasonableness of the Company’s fuel strategy.⁵ Staff improperly bases its claim of
6 imprudence on the results of a single quantitative analysis (which is inaccurate), without
7 consideration of the broader economic, operational, and regulatory circumstances that show
8 the Company acted reasonably.

9 Similarly, the parties challenge the system balancing transactions adjustment as if the
10 Commission did not approve it in the 2016 TAM in a detailed order based on a fully
11 developed record. The parties have not raised issues the Commission did not consider last
12 year, nor have they demonstrated that the Commission’s order resulted in decreased forecast
13 accuracy or other unintended consequences. Despite near unanimous agreement that the
14 Company experiences system balancing costs that are not otherwise reflected in the NPC
15 forecast, the parties seek complete elimination of the system balancing transactions
16 adjustment without proposing any viable, alternative method of modeling these costs.

17 The Commission also considered and approved the Company’s calculation of Energy
18 Imbalance Market (EIM) benefits in the 2016 TAM. The Company’s total-system EIM
19 benefits increased from \$10.3 million in the 2016 TAM to \$23.7 million in the 2017 TAM,
20 demonstrating both the success of the EIM and the efficacy of the Company’s benefit

⁴ *In the Matter of PacifiCorp, d/b/a Pacific Power, 2014 Transition Adjustment Mechanism*, Docket No. UE 264, Order No. 13-387 at 6 (Oct. 28, 2013).

⁵ Staff’s only citation is footnote 44, noting that PacifiCorp cited Order No. 13-387 in its opening brief.

1 calculation.⁶ Staff and CUB unfairly seek to impute additional benefits by double-counting
2 the intra-regional EIM benefits already accounted for in GRID. Staff and CUB also propose
3 various purported improvements designed to simplify the calculation—in actuality, their
4 proposals are just as complex, less accurate, and admittedly erroneous.

5 With these three adjustments, as well as the other adjustments related to coal plant
6 dispatch and supply contracts, Qualifying Facility (QF) modeling, the prudence of the
7 Company’s wind projects, and direct access, the parties raised many issues—but none of
8 them are new or unresolved. The Company’s 2017 TAM is fully consistent with recent
9 Commission decisions, which resulted in greater alignment between PacifiCorp’s forecast
10 and actual NPC. The NPC forecast in the Company’s reply update is reasonable and the
11 Commission should approve it, subject to the final TAM update.

12 II. ARGUMENT

13 A. The Jim Bridger fueling strategy is prudent and the coal costs included in the 14 2017 TAM are reasonable.

15 The Company demonstrated that its fuel supply for the Jim Bridger plant is
16 objectively reasonable. In 2017, the Company will rely on the fuel supply strategy the
17 Commission approved in Order No. 13-387, while continuing to plan for and develop an
18 alternative, long-term source of supply from the Powder River Basin (PRB).

19 It is undisputed that the conversion of the Jim Bridger plant to solely PRB coal supply
20 requires a multi-year, multi-million-dollar plant retrofit and technical challenges, and will be
21 irreversible.⁷ In its 2015 Long-Term Fuel Plan, the Company proposed an orderly transition
22 to PRB coal supply beginning in 2023, tied to the depletion and closure of the Bridger Coal

⁶ PAC/100, Dickman/26; PAC/400, Dickman/56.

⁷ PAC/500, Ralston/16, 26-27; PAC/1000, Ralston/23, 29.

1 Company's (BCC) underground mine.⁸ To ensure appropriate review, the Company asked
2 the Commission to open an expedited planning docket, supported by an update to the Long-
3 Term Fuel Plan to address recent market changes and other issues raised in this case.

4 While Staff accepts the Company's proposal for a long-term planning docket, it
5 continues to advocate for a \$23.5 million prudence disallowance.⁹ Staff claims that the
6 Company's BCC/Black Butte fuel supply for the Jim Bridger plant is unreasonable, but
7 ignores key components of the Company's case, most notably the Commission's 2013 order
8 approving the reasonableness of that supply strategy. Staff also ignores all of the Company's
9 evidence except four particular analyses, wrongly implying that this is the full extent of the
10 Company's case.¹⁰

11 Because Staff cannot demonstrate the Company acted contrary to Commission
12 directives or failed to consider and reasonably develop an alternative, long-term fuel supply
13 from the PRB, Staff relies solely on the claim that the Company was imprudent for failing to
14 conduct a 20-year present value revenue requirement differential (PVRR(d)) analysis of PRB
15 coal supply, with aggressive assumptions, to justify an expedited conversion to PRB coal
16 supply by 2017.¹¹

17 Staff's position that the Company was imprudent for not conducting a particular
18 analysis at a particular time cannot be squared with Staff's agreement to the Company's
19 articulation of the Commission's prudence standard.¹² This standard requires the Company

⁸ PAC/500, Ralston/10.

⁹ Staff's Response Brief at 25.

¹⁰ *Id.* at 6.

¹¹ *Id.*

¹² *Id.* at 5.

1 to show that its actions are objectively reasonable; it does not prescribe an exact process,
2 documentation or outcome, such as that argued by Staff in this case.¹³

3 Staff's position is also inconsistent with the long-term planning process adopted by
4 the Commission in Order No. 13-387 and outlined in the Company's compliance filing in
5 2014. There, the Company proposed and all parties accepted without comment: (1) a multi-
6 year assessment to address the economics of continued coal supply from BCC, with variable
7 form and content depending on the circumstances; and (2) a five-year planning cycle unless
8 major milestones require more frequent updates.¹⁴ Staff never asserted that the Company had
9 an underlying obligation to perform a 20-year PVRR(d) analysis of PRB coal to justify
10 continuation of its approved fuel supply strategy in each TAM proceeding. The long-term
11 fuel plan process assumes a five-year planning cycle,¹⁵ supporting the reasonableness of the
12 Company maintaining the fuel strategy approved in the 2013 TAM through the 2017 TAM,
13 while the Company continues to develop and assess alternative supply options for the future.

14 **1. The Company regularly assessed market alternatives to BCC coal.**

15 The Company's planning process to develop the least-cost, least-risk fueling plan for
16 the Jim Bridger plant includes annual BCC mine plans, annual 10-year budget plans, and
17 biennial life-of-plant fuel plans to develop a strategy for least-cost, least-risk fueling of the
18 Jim Bridger plant.¹⁶ Staff dismisses these plans, claiming that they do not evaluate market
19 alternatives to BCC coal.¹⁷ But Staff's own analysis in this case relies on the forecasted

¹³ PacifiCorp's Opening Brief at 9; *see In the Matter of PacifiCorp d/b/a/ Pacific Power Request for General Rate Revision*, Docket No. UE 246, Order No. 12-493 at 25 (Dec. 20, 2012); *In the Matter of PacifiCorp, d/b/a Pacific Power, 2012 Transition Adjustment Mechanism*, Docket No. UE 227, Order No. 11-435 at 7 (Nov. 4, 2011).

¹⁴ PAC/501 (Docket No. UE 287, PAC/201).

¹⁵ PAC/501.

¹⁶ PAC/1000, Ralston/8.

¹⁷ Staff's Response Brief at 6.

1 Black Butte and PRB prices taken directly from these planning documents, conclusively
2 demonstrating that the Company’s planning includes third-party suppliers.¹⁸

3 In addition to comprehensive planning, the Company also demonstrated that it
4 assessed market alternatives through a 2014 request for proposals (RFP) for Jim Bridger fuel
5 supply, which was distributed to all potential market suppliers, including PRB mines.¹⁹ This
6 RFP led to the Black Butte contract, which was approved for inclusion in the 2016 TAM
7 without objection.²⁰ Staff’s testimony and brief omit any mention of this RFP—which is
8 irrefutable proof of the Company’s continuing assessment of market alternatives—and Staff
9 now seeks to disallow the Black Butte contract.

10 **2. The Company’s planning process was reasonable, even though it did not**
11 **include a 20-year PVRR(d) analysis of PRB coal in 2013.**

12 It is uncontroverted that the Company evaluated PRB coal supply before, during, and
13 after 2013.²¹ Based on these evaluations, including the Black and Veatch study estimating
14 the cost of PRB conversion at over ██████████ (total plant), PacifiCorp reasonably
15 concluded in 2013 that PRB coal remained an infeasible and uneconomic fuel supply.²² Staff
16 is incorrect that the prudence standard required PacifiCorp to reject the report of its reputable
17 consultant, conduct a 20-year PVRR(d) analysis of PRB conversion in 2013 as if the report
18 did not exist, and begin the conversion in 2013 on this basis.

¹⁸ Staff/611 at 14 (indicating Staff’s Black Butte pricing was taken from PacifiCorp planning documents); Staff/200, Kaufman/51 (referencing PacifiCorp’s inclusion of PRB market prices in planning documents as evidence that PRB is a valid market alternative to BCC); Staff/200, Kaufman/53 (relying on PacifiCorp market forecasts for PRB pricing); Staff/246 (PacifiCorp’s Jim Bridger plant market forecast used in Staff’s analysis).

¹⁹ PAC/1000, Ralston/3.

²⁰ PAC/1000, Ralston/6; *In the Matter of PacifiCorp*, Dockets Nos. UM 995, UE 121, & UC 578, Order No. 02-469 at 7 (July 18, 2002) (if neither the Commission nor parties propose a change to particular rate base item, then item deemed approved even if not specifically addressed in final order).

²¹ A summary of the evidence of the Company’s evaluation of PRB coal supply between 2003 and 2015 is set forth on pages 6-8 of PacifiCorp’s Opening Brief.

²² Highly Confidential Transcript (HC TR.) TR. 10 (Ralston).

1 **3. In 2013, BCC coal remained the least-cost fuel for the Jim Bridger plant.**

2 Staff incorrectly claims that the Company was aware that in 2013, BCC's unit costs
3 of █████ per ton were above PRB coal costs and expected to escalate.²³ Staff relies on a
4 flawed and incomplete calculation to derive 2013 PRB unit costs of █████ per ton, compared to
5 the Company's █████ per ton calculation. Staff's price is significantly understated because it
6 uses the wrong PRB coal price (Staff used the September 2014 8,400 Btu/lb. price, not the
7 September 2013 8,800 Btu/lb. price), excludes the fuel surcharge, anti-freeze/dust
8 suppression and handling costs, and omits the costs for the Btu/lb. adjustment, capital costs
9 for PRB conversion, and all costs related to the closure of the BCC mine.²⁴

10 Staff faults the Company for purportedly relying on 2013 pricing only in assessing
11 PRB conversion.²⁵ The record is clear, however, that the Company relied on other factors in
12 assessing PRB conversion, including the prohibitively high costs of conversion, and the
13 Commission's finding that BCC and Black Butte provided a reasonable, stable coal supply.²⁶

14 **4. Staff cannot reconcile its testimony in previous TAMs with its**
15 **characterization of the historical record in this case.**

16 The record here includes Staff's past testimony confirming the reasonableness of the
17 Company's fueling strategy for the Jim Bridger plant.²⁷ In its response brief, Staff asks the
18 Commission to ignore Staff's prior, contradictory testimony because the Commission is not

²³ Staff's Response Brief at 7, 10.

²⁴ PAC/500, Ralston/17-18, 20; PAC/1003 Revised; PAC/1210; Executive Session Transcript (ES TR.) 21 (Ralston).

²⁵ Staff's Response Brief at 7. Pointing to BCC prices in a single future year, 2027, Staff claims that BCC unit costs were forecast to increase to █████ per ton. In 2027, however, BCC volumes were forecast to be unusually low, so this yearly price is aberrational. To illustrate, in the Company's most recent mine plan, BCC prices ranged from █████ per ton for 2025-2037 for every year except 2030, which was █████ per ton due to relatively low production in that year. See Staff/227, Kaufman/20, 24.

²⁶ HC TR. 10 (Ralston); Order No. 13-387 at 6; PAC/600, Dalley/14-15.

²⁷ See, e.g., PAC/600, Dalley/11-16; PAC/601, Dalley/6.

1 bound by its previous orders.²⁸ Staff’s argument misses the point of this evidence, which is
2 to demonstrate Staff’s improper hindsight review in this case. Staff’s contemporaneous
3 support of the Company’s fuel supply strategy cannot be reconciled with its current position
4 that BCC costs were escalating rapidly since 2010 and the Company should have reacted by
5 converting to PRB coal starting in 2013.²⁹

6 **5. Staff’s PVRR(d) analysis is flawed; as corrected, it demonstrates that**
7 **continued reliance on BCC and Black Butte coal was least-cost, least-risk**
8 **by a substantial margin.**

9 **a. PacifiCorp’s 2013 base case uses the correct forecast prices.**

10 In its surrebuttal testimony, the Company presented a corrected version of Staff’s
11 PVRR(d) analysis that compared a base case, which modeled continued reliance on BCC and
12 Black Butte, and a market case, which modeled a transition to PRB coal.³⁰ The Company’s
13 analysis demonstrated that continued reliance on BCC and Black Butte resulted in customer
14 benefits of nearly ██████████.³¹

15 Staff claims that the Company’s PVRR(d) analysis is flawed because it relied on
16 forecast BCC prices that were used in a mine plan that was not finalized until December
17 2013, even though the Company testified that it would have had to decide to switch to PRB
18 coal in fall 2013.³² Staff is splitting hairs—while the mine plan was not approved until
19 December 2013, the mine plan was substantially completed in fall 2013 and is referred to in
20 the record as the fall 2013 plan.³³ There is nothing improper about using the mine plan
21 developed in late 2013 to assess a decision that would have been made in late 2013.

²⁸ Staff’s Response Brief at 9.
²⁹ PAC/1100, Dalley/8-9; Staff/400, Kaufman/4.
³⁰ PAC/1003 Revised.
³¹ *Id.*; PAC/1210.
³² Staff’s Response Brief at 11.
³³ *See, e.g.*, PAC/1210.

1 Staff's analysis relies on 2012 BCC forecasts that did not include the assumption that
2 the underground mine would close in 2024.³⁴ Staff's position that the Company should have
3 made a decision to convert to PRB coal in 2013 using out-of-date pricing is unreasonable.

4 The comparison of forecast BCC prices used by Staff and the Company is also
5 noteworthy because it shows that between 2012 and 2013, BCC prices decreased.³⁵ Thus, in
6 2013, when Staff claims that the Company was aware of rapidly escalating BCC prices and
7 should have begun the conversion to PRB coal, BCC costs were actually decreasing.

8 **b. The Company's base case reasonably excluded the capital investments**
9 **required for PRB coal.**

10 The base case in the Company's corrected PVRR(d) analysis did not include a
11 transition to PRB coal (or the capital costs of conversion), consistent with the Company's
12 long-term planning in 2013.³⁶ Staff criticizes the Company's base case, claiming that in
13 2013, the Company knew that Black Butte could not replace BCC's underground
14 operations.³⁷ According to Staff, the Company should have known that it would require PRB
15 coal, making the capital investments to receive PRB coal unavoidable even in the base case.
16 Staff makes three points to support this claim, none of which are persuasive.

17 First, Staff claims that the Company requested engineering studies related to PRB
18 coal, which indicates that the Company was planning a conversion.³⁸ This ignores the
19 Company's testimony that the studies were part of the Company's ongoing assessment of
20 PRB as a market alternative to BCC. After the Company received the 2013 Black and

³⁴ Staff/611 at 14.

³⁵ *Id.*

³⁶ PAC/1000, Ralston/32; PAC/1210.

³⁷ Staff's Response Brief at 12.

³⁸ *Id.*

1 Veatch study, it determined that PRB was not a viable replacement at that time.³⁹ The fact
2 the Company requested studies does not suggest that it was committed to PRB coal
3 conversion regardless of the outcome of the studies.

4 Second, Staff claims the Company was aware that Black Butte coal could not produce
5 sufficient volumes to replace BCC's underground operation when it closed at the end of
6 2023.⁴⁰ Staff's only basis for this claim, however, is a 2010 coal inventory study that
7 describes Black Butte's estimated production levels at that time.⁴¹ Staff's reliance on a 2010
8 coal inventory study to determine the 2024 production level at Black Butte is unpersuasive.
9 The Company testified that, as of 2013, Black Butte coal was the preferred alternative to
10 BCC underground coal, a conclusion that reasonably assumed that long-term production at
11 the Black Butte mine would increase to meet demand.⁴²

12 Third, Staff claims that the Jim Bridger plant would require the same rail
13 infrastructure investments to receive Black Butte coal as PRB coal.⁴³ Staff provides no
14 evidence to support this claim, which ignores the key fact that the Black Butte mine is only
15 20 miles away from the Jim Bridger plant, which allows for transportation by rail or truck.⁴⁴

16 **c. The Company reasonably relied on the capital costs included in the**
17 **Black and Veatch study.**

18 In 2013, the Company requested an engineering study from Black and Veatch
19 detailing the *minimum* capital costs necessary to allow the Jim Bridger plant to transition to
20 PRB coal. That study identified capital costs of over [REDACTED] (total plant).⁴⁵ Staff

³⁹ HC TR. 10 (Ralston).

⁴⁰ Staff's Response Brief at 13.

⁴¹ Staff/212, Kaufman/14.

⁴² PAC/1000, Ralston/32.

⁴³ Staff's Response Brief at 13.

⁴⁴ Staff/215, Kaufman/6.

⁴⁵ PAC/1002, Ralston/6.

1 incorrectly argues that the Company unreasonably relied on the Black and Veatch study to
2 determine the capital investment required for conversion to PRB coal.⁴⁶

3 First, Staff claims that the study includes “considerable” contingency costs, without
4 actually stating what those costs are or why they are unreasonable.⁴⁷ Staff does not argue
5 that removal of the contingency costs supports the capital cost estimate used by Staff.

6 Second, Staff claims that the Jim Bridger conversion costs should mirror rail upgrade
7 costs incurred at other plants.⁴⁸ Staff fails to provide any basis to assume comparability of
8 these costs, however.⁴⁹ The Company testified that the infrastructure costs are unique to each
9 plant and depend on numerous factors, rendering Staff’s general comparison inapt.⁵⁰

10 Third, Staff argues that PacifiCorp’s estimated capital costs were near the top of the
11 range of costs estimated by Black and Veatch.⁵¹ Staff does not provide any basis to assume
12 that an estimate near the low end is more reasonable than the point estimate identified by
13 Black and Veatch. The low end of the Black and Veatch study is still substantially higher
14 than the capital costs used by Staff.⁵²

15 Fourth, Staff claims the Company should have conducted a test burn of PRB coal in
16 2013 to verify Black and Veatch’s estimate.⁵³ Staff produced no evidence the Company
17 could have actually completed that test burn in 2013. The record shows the Company

⁴⁶ Staff’s Response Brief at 14.

⁴⁷ *Id.* at 15.

⁴⁸ *Id.*

⁴⁹ PAC/1000, Ralston/28; ES TR. 43 (Kaufman).

⁵⁰ PAC/1000, Ralston/28.

⁵¹ Staff’s Response Brief at 16.

⁵² At hearing, Staff could identify only one cost component that Black and Veatch indicated could be lower. ES TR. 41-42 (Kaufman). But even if that cost component were eliminated entirely, it would only decrease the overall estimate by 4 percent. PAC/1002, Ralston/5-6.

⁵³ Staff’s Response Brief at 16.

1 negotiated a transportation contract for PRB coal as a result of the 2014 RFP, which was
2 effective on January 1, 2015, and reasonably conducted a test burn shortly thereafter.⁵⁴

3 **d. The Company's transportation costs are consistent with its actual**
4 **contract, which has not been challenged.**

5 The rail transportation rate used in the Company's corrections to Staff's PVR(d)
6 analysis was calculated using a U.S. Department of Transportation Surface Transportation
7 Board's Uniform Rail Costing System model—a recognized and reasonable methodology for
8 estimating rates in the industry.⁵⁵ In contrast, Staff used an unorthodox methodology based
9 on limited data, which produced a rate that is roughly 40 percent lower than the
10 Company's.⁵⁶ The Company's 2015 rail contract for delivery of PRB coal to the Jim Bridger
11 plant confirms the accuracy of the Company's estimate, as does Staff's testimony in the 2011
12 TAM, which verified PRB pricing with a transportation rate comparable to the Company's.⁵⁷

13 **e. The Company's modeled BCC closure costs are reasonable.**

14 If the Company had decided to supply the Jim Bridger plant exclusively with PRB
15 coal, BCC would close.⁵⁸ Thus, the PVR(d) analysis comparing BCC and Black Butte to
16 PRB coal must account for BCC closure costs, including the undepreciated investment at the
17 mine and the closure and remediation costs.⁵⁹

18 Staff questions whether BCC's closure costs and undepreciated investment are
19 recoverable from customers.⁶⁰ Staff claims that comparisons to the Deer Creek mine are
20 inapt because Deer Creek was not owned by an affiliate and was included in PacifiCorp's

⁵⁴ PAC/1001; ES TR. 17 (Ralston).

⁵⁵ PAC/1000, Ralston/17.

⁵⁶ Staff's Response Brief at 19; PAC/1000, Ralston/18-22.

⁵⁷ PAC/1000, Ralston/18, 20; ES TR. 16 (Ralston); PAC/1208 at 5; Staff/200, Kaufman/65.

⁵⁸ PAC/500, Ralston/26-27; PAC/1000, Ralston/23.

⁵⁹ PAC/600, Dalley/19-20.

⁶⁰ Staff's Response Brief at 17.

1 rate base.⁶¹ This is incorrect—like BCC, Deer Creek was owned by an affiliate, Energy West
2 Mining Company and Deer Creek was consolidated with PacifiCorp for ratemaking.⁶²

3 Staff also claims the Company’s regulatory asset overstates the undepreciated BCC
4 investment because the Company assumes recovery of avoidable surface mining capital
5 costs.⁶³ Staff provides no evidence to support this claim, which is contradicted by the fact
6 that the Company calculated the undepreciated investment as of the assumed date of mine
7 closure.⁶⁴

8 Staff rejects the Company’s assumed four-year amortization period and claims that its
9 20-year amortization period for the undepreciated investment is reasonable because it
10 represents the remaining life of the Jim Bridger plant.⁶⁵ Staff never acknowledges that the
11 plant’s depreciable life extends to only 2025.⁶⁶

12 Staff claims that the Company’s application of its weighted average cost of capital to
13 the undepreciated investment is contrary to Oregon law because this investment would be
14 recovered in rates after the mine closed.⁶⁷ But if the Company had actually decided to close
15 the mine in 2013, it would have sought accelerated depreciation while the mine remained

⁶¹ *Id.* at 17 n. 96.

⁶³ Staff’s Response Brief at 17.

⁶⁴ PAC/1000, Ralston/25.

⁶⁵ Staff’s Response Brief at 18.

⁶⁶ PAC/1000, Ralston/29. Staff also implies that a four-year amortization period could result in rate shock. Staff’s Response Brief at 18. The rate impact of amortizing this investment is far less, however, than in other cases where the Commission has rejected the rate shock argument. *See, e.g., In the Matter of Re Portland General Electric Company*, Docket No. UE 115, Order No. 01-988 (Nov. 20, 2011) (rejecting rate shock argument related to 38 percent rate increase).

⁶⁷ Staff’s Response Brief at 19.

1 used and useful, consistent with the treatment of early closure of generation plants like
2 Carbon and Boardman.⁶⁸ Staff did not address nor rebut this argument.

3 Staff claims that the Company's undepreciated investment includes capital costs that
4 would have been avoided if the Company had decided to close BCC.⁶⁹ According to Staff,
5 once the decision to close the mine was made in 2013, the Company would have avoided all
6 capital expenditures to operate the mine until 2017.⁷⁰ The Company testified that specific
7 capital investments would be necessary to allow the mine to continue to operate, however,
8 and Staff has not challenged any of those investments.⁷¹

9 **f. Staff's analysis fails to account for the risk associated with a**
10 **transition to PRB coal.**

11 Staff claims that there is no evidence in the record that shows reliance on PRB coal is
12 riskier than receiving coal from BCC and Black Butte.⁷² On the contrary, BCC presents
13 virtually no transportation price or supply risk because it is delivered via conveyor belt
14 directly from the mine to the plant.⁷³ In addition, the Jim Bridger plant's diversified fuel
15 supply from BCC and Black Butte minimizes risk, and BCC has historically provided price
16 leverage on coal supplied from Black Butte.⁷⁴ PRB coal, on the other hand, presents both
17 transportation supply and price risk, as detailed in the evidence presented by Staff in this and
18 other cases.⁷⁵

⁶⁸ PAC/1100, Dalley/10; Order No. 12-493 at 3; *In the Matter of Idaho Power Company Application for Authority to Implement a Boardman Operating Life Adjustment Tariff for Electric Service to Customers in the State of Oregon*, Docket No. UE 239, Order No. 12-235 (June 26, 2012).

⁶⁹ Staff's Response Brief at 23.

⁷⁰ *Id.*

⁷¹ PAC/1000, Ralston/25-26. The only specific investment Staff claims would be avoidable is the investment in Deadman Wash. The Company's undepreciated investment does not include any material capital investments related to the Deadman Wash because it was not scheduled to produce coal until 2021. ES TR. 22 (Ralston).

⁷² Staff's Response Brief at 21.

⁷³ PAC/500, Ralston/8.

⁷⁴ *Id.*

⁷⁵ PAC/1207 at 4; Staff/212, Kaufman/16; PAC/1000, Ralston/10.

1 **6. Staff’s alternative prudence disallowance is without merit.**

2 In its response brief, Staff argues for the first time that even if the Commission
3 concludes that the Company’s coal fueling strategy is prudent, the Commission should
4 nevertheless find that PacifiCorp’s planning process was imprudent “for lack of meaningful
5 analysis related to alternative courses of action.”⁷⁶ The only basis for this argument is Staff’s
6 inaccurate claim the Company has not conducted long-term fueling cost analysis for the Jim
7 Bridger plant. The record here demonstrates the Company regularly and comprehensively
8 studied alternatives to BCC coal, including PRB coal, for at least 15 years.⁷⁷

9 **7. There is no basis for the Commission to reverse nearly 40 years of**
10 **precedent and apply lower of cost or market pricing to BCC coal.**

11 **a. ICNU concedes that the lower of cost or market rule has not**
12 **historically applied to BCC.**

13 ICNU does not dispute that since 1979, the Commission has consolidated BCC with
14 PacifiCorp and applied cost-based pricing to BCC coal.⁷⁸ ICNU argues the Commission
15 should reverse course, treat BCC as an affiliate, and apply the lower of cost or market rule.⁷⁹
16 To support its recommendation, ICNU argues the Commission erred in 1979 when it began
17 consolidating BCC with PacifiCorp for ratemaking purposes because BCC does not hold a
18 “position of dominance over the market for coal that could be used to fuel Jim Bridger.”⁸⁰
19 ICNU contends that without this market dominance, there is no basis for cost-based treatment
20 of an affiliate and the Commission must apply the lower of cost or market standard.

21 The Commission has never concluded that cost-based pricing is appropriate only in
22 the narrow circumstances described by ICNU. Rather, the Commission has repeatedly

⁷⁶ Staff’s Response Brief at 24.

⁷⁷ PAC/600, Dalley/11-16; PAC/1000, Ralston/3, 8-11; PAC/1002, PAC/1208 at 5.

⁷⁸ ICNU’s Response Brief at 11.

⁷⁹ *Id.* at 15.

⁸⁰ *Id.* at 14.

1 affirmed that cost-based pricing is reasonable for BCC (and similar affiliated mines) because
2 consolidation for ratemaking eliminates the possibility of cross-subsidization.⁸¹ Moreover,
3 ICNU concedes that the Commission is not required to apply lower of cost or market pricing
4 because the “ultimate question” is whether PacifiCorp’s rates are just and reasonable.⁸²

5 **b. PRB coal is not *available* to replace BCC coal in 2017.**

6 Even if the Commission were to treat BCC as an affiliate and apply the lower of cost
7 or market rule, PRB coal is not an available market alternative to BCC for 2017. The lower
8 of cost or market rule defines the “market rate” as the “lowest price that is available from
9 nonaffiliated suppliers for comparable services or supplies.”⁸³ Based on this definition,
10 ICNU argues that PRB coal is an “available” alternative to BCC coal in 2017, even though
11 ICNU does not dispute that PRB coal could not actually replace BCC coal in 2017 due to the
12 lack of infrastructure necessary to receive sufficient volumes of PRB coal.⁸⁴

13 The plain and ordinary meaning of the term “available” is “present or ready for
14 immediate use” or “accessible, obtainable.”⁸⁵ Given that ICNU concedes that the Jim
15 Bridger plant cannot physically receive sufficient volumes of PRB coal to replace BCC coal,
16 PRB coal is not “ready for immediate use” or “obtainable.” Thus, PRB coal is not an
17 *available* market alternative and its pricing cannot be used under the lower of cost or market
18 rule. The Commission reached this same conclusion in Order No. 13-387, when it last

⁸¹ *In the Matter of PacifiCorp*, Docket No. UI 105, Order No. 91-513 at 2(Apr. 12, 1991); *In the Matter of Idaho Power Co.*, Docket No. UI 107, Order No. 91-567 at 2 (Apr. 25, 1991).

⁸² ICNU’s Response Brief at 15.

⁸³ OAR 860-027-0048(1)(i).

⁸⁴ ICNU’s Response Brief at 9; PAC/500, Ralston/14-17, 32, 34.

⁸⁵ <http://www.merriam-webster.com/dictionary/available>; *see, e.g., SAIF Corp. v. Frias*, 169 Or App 345, 350 (2000) (“We interpret administrative rules according to their plain meaning.”).

1 rejected ICNU’s lower of cost or market adjustment, concluding in that case that additional
2 Black Butte coal was not *available* to replace BCC coal during the test year.⁸⁶

3 ICNU claims that what matters for purposes of the lower of cost or market rule is that
4 the alternative is “comparable” to BCC.⁸⁷ But this argument effectively reads the term
5 “available” out of the rule. To give full effect to the Commission’s rule, the non-affiliate
6 alternative must be both *available* and *comparable*.⁸⁸ While PRB coal is comparable to BCC
7 coal, the undisputed record shows that it is not available in 2017.

8 Requiring that the nonaffiliated alternative be available is also consistent with the
9 purpose of the lower of cost or market rule, which is to prevent cross subsidization and
10 ensure that customers pay reasonable costs for materials from affiliate suppliers.⁸⁹ If BCC
11 coal is the least-cost coal that can be physically burned in the test year, then customers are
12 not harmed by the Company’s purchase of BCC coal. Potential harm can occur only if the
13 Company could have reduced its costs in the real world, but chose instead to rely on an
14 affiliate supplier. There is no evidence of this harm in this case.

15 **c. PRB coal is not lower price than BCC.**

16 ICNU claims that if PRB coal were available to replace BCC coal in 2017, it would
17 be lower priced.⁹⁰ This is incorrect. As summarized in Mr. Ralston’s testimony, the PRB
18 unit costs of [REDACTED] per ton are [REDACTED] per ton higher than ICNU’s BCC-only unit cost of
19 [REDACTED] per ton, as shown in ICNU’s corrected Table 1R.⁹¹

⁸⁶ Order No. 13-387 at 7.

⁸⁷ ICNU’s Response Brief at 9.

⁸⁸ *PGE v. Bureau of Labor and Industries*, 317 Or 606, 612 n. 4 (1993) (ORS 174.010 applies to interpretation of administrative rules); ORS 174.010 (interpretation must give effect to all terms in a rule).

⁸⁹ *GTE Nw. Inc. v. Pub. Util. Comm’n of Oregon*, 120 Or App 401, 404 (1993).

⁹⁰ ICNU’s Response Brief at 7, 21.

⁹¹ PAC/1000, Ralston/5.

1 ICNU also claims that the Company failed to prove that ICNU did not adjust PRB
2 coal for heat content.⁹² This is also incorrect. In Table 1R of ICNU’s testimony, the BCC
3 coal was [REDACTED] tons and [REDACTED] MMBtus at [REDACTED] Btu/lb.⁹³ Using that same amount
4 of [REDACTED] MMBtus of PRB coal at [REDACTED] Btu/lb. yields [REDACTED] tons not [REDACTED]
5 tons reflected in Table 1R. Therefore, the capital investment amortization should be [REDACTED]
6 per ton, not [REDACTED] per ton. Additionally, the regulatory asset amortization should be [REDACTED]
7 per ton using a four-year amortization period instead of a 13-year period. The total unit costs
8 would therefore be [REDACTED] per ton ([REDACTED]), instead of [REDACTED] per ton.

9 ICNU claims PRB coal costs must be compared to only BCC coal costs, not the Jim
10 Bridger plant’s total fueling costs.⁹⁴ As just noted, whether PRB coal is compared to BCC
11 coal or total plant costs (including Black Butte and PRB coal), PRB unit costs are higher.⁹⁵

12 ICNU contends that the regulatory asset resulting from the closure of BCC should be
13 amortized over 13 years, rather than the four years modeled by the Company.⁹⁶ ICNU
14 acknowledges that the Company’s proposal is consistent with past Commission cases.⁹⁷
15 ICNU argues that the four-year amortization period approved in the Deer Creek case was
16 aligned with the depreciable life of the mine, but this does not support ICNU’s
17 recommendation for a 13-year amortization period. In addition, in the Deer Creek case, the
18 Commission specifically rejected ICNU’s theory that the amortization period should align
19 the costs and benefits of the mine closure.⁹⁸

⁹² ICNU’s Response Brief at 20.

⁹³ ICNU/200, Mullins/9.

⁹⁴ ICNU’s Response Brief at 21.

⁹⁵ PAC/1000, Ralston/5.

⁹⁶ ICNU’s Response Brief at 17.

⁹⁷ *Id.*

⁹⁸ Order No. 15-161 at 7.

1 ICNU also claims that the Commission should apply a debt cost to the undepreciated
2 investment in BCC, rather than the weighted average cost of capital included in the
3 Company’s analysis.⁹⁹ As explained above, the Company used the weighted average cost of
4 capital on the assumption that if it had decided in 2013 to close BCC in 2017, it would have
5 sought accelerated depreciation to fully amortize the investment before the mine closed.¹⁰⁰

6 **B. The Company’s coal supply contracts are prudent and the modeling is**
7 **reasonable.**

8 Staff and CUB challenge the minimum-take provisions in the Company’s coal supply
9 contracts. These provisions are common in coal supply contracts to provide favorable
10 pricing for the buyer and investment security for the seller.¹⁰¹ CUB admits that it has the
11 burden of producing evidence to support its claim that three recent coal supply contracts are
12 imprudent because they include minimum-take provisions.¹⁰² CUB produced no such
13 evidence, nor has it reconciled the fact that, just last year, it supported approval of the largest
14 of these contracts.¹⁰³

15 Staff continues to claim that the Company’s modeling of minimum-take provisions is
16 a prohibited modeling change, despite the Company’s undisputed evidence that it has used
17 this modeling since 2005.¹⁰⁴ Staff claims that the Company has not demonstrated that parties
18 were provided notice of the modeling change “in accordance with the TAM guidelines or

⁹⁹ ICNU’s Response Brief at 19.

¹⁰⁰ PAC/1100, Dalley/10.

¹⁰¹ PAC/500, Ralston/32.

¹⁰² CUB’s Response Brief at 3.

¹⁰³ *Id.* at 17; PAC/500, Ralston/35-36.

¹⁰⁴ Staff’s Response Brief at 52; PAC/400, Dickman/48-49; PAC/800, Dickman/37.

1 otherwise.”¹⁰⁵ But the modeling predated the TAM Guidelines and the Company did provide
2 notice when it revised GRID in 2005.¹⁰⁶

3 Staff previously argued that before making any modeling adjustment to account for
4 minimum-take provisions, the Company should fully use its coal stockpiles.¹⁰⁷ Now Staff
5 states that it “could concede that utilizing the Company’s coal stockpile flexibility” to
6 manage minimum-take provision is “problematic.”¹⁰⁸ But Staff still claims that the Company
7 has “no adequate analysis or planning to mitigate minimum-take requirements.”¹⁰⁹ This is
8 untrue. The Company testified that every coal contract is individually analyzed in the
9 context of the expected plant requirements during the term of the contract.¹¹⁰

10 Staff quantified its adjustment in its response brief based on the minimum-take
11 provisions implicated in the initial filing, not the reply update, where its adjustment would
12 now be zero. Staff also double-counts the impact at the Jim Bridger plant because Staff
13 separately included the same adjustment in its proposed disallowance for Jim Bridger coal
14 supply.¹¹¹

15 **C. The Company’s calculated EIM benefits are reasonable.**

16 The Company’s reply update includes \$23.7 million in inter-regional transfer benefits
17 and flexibility reserve savings (total company), in addition to the intra-regional dispatch

¹⁰⁵ Staff’s Response Brief at 53.

¹⁰⁶ See *In the Matter of PacifiCorp d/b/a Pacific Power 2009 Transition Adjustment Mechanism*, Docket No. UE 199, Order No. 09-274 (July 16, 2009) (approving TAM Guidelines); *In the Matter of PacifiCorp Request for a General Rate Increase in the Company’s Oregon Annual Revenues*, Docket No. UE 179, PPL/500, Widmer/5-6 (Feb. 23, 2006) (“The Company provided a more detailed description of the code changes [in GRID version 5.3] to the stakeholders when the new releases were placed into production. *The Company sent a notice covering releases 5.2 and 5.3 in December 2005.*”) (emphasis added).

¹⁰⁷ Staff/400, Kaufman/42.

¹⁰⁸ Staff’s Response Brief at 53-54.

¹⁰⁹ *Id.* at 54.

¹¹⁰ PAC/1000, Ralston/7.

¹¹¹ Staff’s Response Brief at 2, 52; Staff/400, Kaufman/30; PAC/400, Dickman/47.

1 benefits that are already included in the GRID modeling.¹¹² The Company’s benefits are
2 more than twice the level reflected in the 2016 TAM and reflect the continued growth in
3 benefits from the participation in the EIM.¹¹³

4 **1. Imputing intra-regional benefits is double-counting.**

5 The EIM produces intra-regional benefits due to the more efficient balancing of the
6 Company’s system through the California Independent System Operator Corporation’s
7 (CAISO) security constrained economic dispatch model.¹¹⁴ Because these benefits are
8 included in GRID, the EIM allows the Company’s actual NPC to more closely match GRID.

9 Staff argues that intra-regional benefits must be quantified outside GRID and then
10 deducted from its results.¹¹⁵ Staff’s only basis for the imputation of these benefits is its claim
11 that the counterfactual used by CAISO to calculate EIM benefits is identical to GRID.¹¹⁶

12 In pre-filed testimony, Staff argued that the counterfactual and GRID are identical
13 because both models are perfectly efficient optimized models and neither mimics manual
14 dispatch.¹¹⁷ In its response brief, Staff reverses itself and now claims that the counterfactual
15 and GRID are identical because both models mimic manual dispatch (and by implication are
16 not perfectly efficient).¹¹⁸ Staff’s new position that GRID mimics manual dispatch has
17 absolutely no support in the record.¹¹⁹ Because GRID does not model manual dispatch,

¹¹² PAC/400, Dickman/56.

¹¹³ PAC/100, Dickman/26; PAC/400, Dickman/56.

¹¹⁴ PAC/400, Dickman/57-58; TR. 43-46, 50-51 (Dickman).

¹¹⁵ Staff’s Response Brief at 36.

¹¹⁶ *Id.* at 40-41.

¹¹⁷ Staff/100, Crider/10-11 (“the counterfactual is not a comparison of the manual operational solution to a more efficient automated system . . . [both the counterfactual and GRID] represent[] the optimized security-constrained, economically dispatched solution to balancing load with generation in the absence of the EIM.”).

¹¹⁸ Staff’s Response Brief at 40, 42.

¹¹⁹ *Id.* at 42 (“both the Counterfactual and GRID use the same type of resources” for system balancing has no citation to the record).

1 while the counterfactual does, there is no basis for Staff’s imputation of intra-regional
2 benefits.¹²⁰

3 The counterfactual mimics manual dispatch by using a limited pool of resources to
4 balance the Company’s system.¹²¹ The limited pool consists of generators that can ramp up
5 quickly, like gas units, because those are the units that a manual dispatcher would likely
6 choose based on the lack of perfect information and the time constraints imposed by real-
7 world operations.¹²² GRID, on the other hand, does not rely only on fast ramping resources
8 because it has perfect information and foresight, *i.e.*, GRID knows exactly how the load will
9 change and the least-cost resource to meet changing load.¹²³ Given this perfect foresight,
10 GRID always selects the least-cost resource and is not constrained by ramping times.¹²⁴
11 CUB agrees that “GRID is not the CAISO counterfactual,” arguing that the “problem with
12 the CAISO study” is that it compares actual results to the counterfactual, not GRID.¹²⁵

13 Moreover, Staff’s response brief did not dispute that CAISO’s description of Nevada
14 Energy’s (NVE) EIM benefits confirms that intra-regional benefits result from the transition
15 from manual to computerized dispatch.¹²⁶ Because GRID does not model manual dispatch, it
16 already captures these benefits.

17 Staff notes that its intra-regional benefits of \$12.3 million is “exactly at the mid-point
18 of the E3 Report’s range[.]”¹²⁷ But Staff did not dispute that the E3 study states that intra-
19 regional benefits are already captured in a perfectly efficient dispatch model like GRID.¹²⁸

¹²⁵ CUB’s Response Brief at 10.

¹²⁶ PAC/400, Dickman/62; PAC/900, Brown/15-17.

¹²⁷ Staff’s Response Brief at 39.

1 Staff also questions the Company's claim that GRID cannot quantify intra-regional
2 benefits.¹²⁹ Quantification would require the Company to model its real-world pre-EIM
3 operations, which GRID does not do.¹³⁰ The E3 study stated that perfectly efficient dispatch
4 models like GRID include the intra-regional benefits but cannot quantify them.¹³¹

5 **2. The EIM's five-minute dispatch produces greater efficiency in actual**
6 **operations, but not in GRID.**

7 Staff and CUB continue to argue that the EIM's five-minute dispatch creates
8 efficiencies over GRID's hourly modeling that support the imputation of intra-regional
9 benefits.¹³² But neither Staff nor CUB dispute that GRID's modeling does not include
10 within-hour costs,¹³³ and therefore it is unreasonable to impute within-hour benefits. And
11 neither party reasonably disputes the Company's testimony that the use of five-minute
12 modeling *in GRID* would actually *increase* NPC because varying load within the hour
13 creates higher average costs compared to static load.¹³⁴ Thus, while five-minute dispatch
14 creates cost savings in actual operations, it does not in GRID.

15 **3. CUB miscalculates intra-regional benefits.**

16 CUB recommends the imputation of CAISO's estimate of intra-regional benefits,
17 which CUB quantifies as \$26.2 million, or in the alternative, one-half that amount.¹³⁵

¹²⁸ Staff/106, Crider/49.

¹²⁹ Staff's Response Brief at 47.

¹³⁰ TR. 51-54 (Dickman).

¹³¹ Staff/106, Crider/49.

¹³² Staff's Response Brief at 43; CUB's Response Brief at 8-9.

¹³³ PAC/400, Dickman/63.

¹³⁴ *Id.*; TR. 47, 49 (Dickman). If load varied within the hour, then there would be some five-minute intervals with higher load than the hourly average and some with lower load than the hourly average. For the intervals with higher load than the average, GRID would dispatch up higher cost resources, thus increasing the average cost for that interval. For the intervals with lower load than the average, GRID would dispatch down lower cost resources, thus increasing the average cost for that interval. And higher than average intervals would have to be offset by lower than average intervals to maintain the same average load for the hour.

¹³⁵ CUB's Response Brief at 10.

1 CAISO, however, does not separately quantify intra-regional benefits.¹³⁶ The \$26.2 million
2 identified by CUB is CAISO’s calculation of the *total* EIM benefits for 2015.¹³⁷

3 **4. Staff concedes that its inter-regional benefits are overstated but has not**
4 **provided alternative, corrected calculations.**

5 The Company calculates inter-regional benefits of \$19.2 million (total company).¹³⁸
6 Staff calculates inter-regional benefits of \$31.2 million, but admits that its results “should be
7 reduced somewhat to account for some of the corrections proposed by PacifiCorp.”¹³⁹
8 Correcting these errors reduces Staff’s inter-regional benefits to \$15.7 million (total
9 company).¹⁴⁰

10 Staff acknowledges that its calculation used 13 months to calculate the dollars and
11 volumes for exports and imports and that it used 15 months of data to calculate the
12 production costs. Staff does not dispute the other corrections identified by PacifiCorp;
13 rather, Staff could not confirm the Company’s calculations.¹⁴¹ For clarification, the
14 Company corrected the volume mismatch between Staff’s export volumes and volumes used
15 to calculate production costs by applying the average production cost reflected in Staff’s
16 workpaper, to the missing volumes, as described in PacifiCorp’s testimony.¹⁴² The Company
17 corrected Staff’s import benefit calculation by accounting for the costs paid by PacifiCorp for

¹³⁶ See, e.g., PAC/1200 at 5 (showing CAISO’s benefit calculations, which are not broken down by category).

¹³⁷ Staff/100, Crider/8.

¹³⁸ PAC/400, Dickman/56.

¹³⁹ Staff’s Response Brief at 46. In addition, Staff’s total benefits of \$46.1 million are not incremental to the Company’s calculated benefits, they are in the alternative.

¹⁴⁰ PAC/400, Dickman/56; PAC/800, Dickman/21. Staff’s brief does not address the undisputed fact that its production cost calculation was also based export volumes that were reported for greenhouse gas compliance purposes, and not the actual energy transfers resulting from the EIM.

¹⁴¹ Staff’s Response Brief at 46. Staff’s brief blames the Company for not providing a workpaper showing its calculations. But, as described at hearing, the Company used Staff’s own workpaper and did not prepare anything additional. And despite Staff’s claimed inability to verify the Company’s calculations, Staff cross-examined Mr. Dickman at length, but chose not to ask him anything to verify the calculations.

¹⁴² PAC/800, Dickman/21, n. 44. The workpaper is an Excel file called “Crider workpaper CONFIDENTIAL EIM Revenues 2015.” The production costs were calculated by dividing the total costs for production by the total volumes (refer to tab “Revenue” and divide cell Q34 by cell O34).

1 the imports. Import benefits equal the difference between the avoided costs and the cost
2 paid, but Staff’s calculation did not account for the cost paid.¹⁴³ PacifiCorp calculated this
3 amount by summing the costs for imports identified in Staff’s workpaper for 2015.¹⁴⁴

4 Staff also agrees that the Company’s benefits should be calculated using the marginal
5 production costs,¹⁴⁵ even though Staff’s methodology relies on the average cost of
6 production.¹⁴⁶ Staff’s response brief fails to reconcile these contradictory positions. Staff’s
7 methodology also assigns a zero marginal cost to hydro resources, rather than the cost of
8 replacement power used in the Company’s calculation.¹⁴⁷ Staff never disputes that hydro
9 resources are finite and every megawatt-hour of hydro sold into the EIM must be replaced
10 with non-hydro energy.¹⁴⁸ Finally, Staff argues that the marginal cost for wind should be
11 zero.¹⁴⁹ The Company uses a *negative* marginal price for wind, meaning that the marginal
12 price is *added* to the revenue to calculate the benefits.¹⁵⁰ Staff’s zero marginal price *reduces*
13 EIM benefits.

14 **5. CUB’s proposal to ignore transmission overstates EIM benefits.**

15 CUB argues that the inter-regional benefits should be based on “actual operations”
16 and not account for available transmission.¹⁵¹ CUB’s adjustment cannot be reconciled with
17 its concessions that: (1) actual transfers with CAISO are subject to the transmission available
18 to move the energy from PacifiCorp to CAISO; and (2) modeling the same transmission for

¹⁴³ Staff’s Response Brief at 43.

¹⁴⁴ Referring to Staff’s workpaper, the costs for imports are found in column M (labeled “Total Cost”) of the first tab (labeled “from PAC”) in the cells labeled “Import.” Summing the import values in column M for January through December 2015 results in the [REDACTED] identified in PAC/800, Dickman/21.

¹⁴⁵ Staff’s Response Brief at 44.

¹⁴⁶ Staff/300, Crider/13.

¹⁴⁷ Staff’s Response Brief at 45.

¹⁴⁸ TR. 87 (Brown).

¹⁴⁹ Staff’s Response Brief at 45.

¹⁵⁰ PAC/900, Brown/6 (negative marginal price based on value of the production tax credit and REC).

¹⁵¹ CUB’s Response Brief at 14.

1 EIM and non-EIM transactions does not reflect actual operations and is physically
2 impossible.¹⁵² CUB wrongly implies that the Company’s models export benefits exclusively
3 based on available transmission, not historical exports.¹⁵³ The Company’s benefits are based
4 on the historical exports, scaled to account for the available transmission forecast in 2017.¹⁵⁴

5 **6. It is reasonable to use voluminous data to calculate EIM benefits.**

6 While Staff recommends a simplified approach to calculating EIM benefits, it has
7 never disputed that its approach still requires the analysis of every five-minute interval in the
8 year—thereby relying on the same data as the Company.¹⁵⁵ Staff’s methodology
9 unreasonably compromises accuracy for simplicity, as demonstrated by its erroneous results.

10 CUB argues that the TAM is a streamlined process and “producing an accurate NPC
11 forecast” that “require[s] complex analysis of voluminous data” is “utterly contradictory to
12 the core purpose of the TAM.”¹⁵⁶ The Commission has repeatedly stated that the goal of the
13 TAM is to produce the best NPC forecast and has approved complex modeling to further that
14 goal, as it did just last year.¹⁵⁷ CUB’s argument is also contradicted by its own testimony
15 that “getting the forecast right is important.”¹⁵⁸

¹⁵² PAC/400, Dickman/77; CUB/100, McGovern/16.

¹⁵³ CUB’s Response Brief at 14.

¹⁵⁴ PAC/400, Dickman/77.

¹⁵⁵ Staff’s Response Brief at 46; PAC/800, Dickman/13; Staff/300, Crider/13.

¹⁵⁶ CUB’s Response Brief at 13.

¹⁵⁷ *In the Matter of PacifiCorp d/b/a Pacific Power’s 2016 Transition Adjustment Mechanism*, Docket No. UE 296, Order No. 15-394 at 4 (Dec. 11, 2015) (approving modeling changes to create a “more accurate estimate of net power costs”).

¹⁵⁸ CUB/100, McGovern/14.

1 **7. The Company’s EIM benefits calculation does not violate the modeling**
2 **moratorium.**

3 CUB argues that the Company’s EIM calculations violate the TAM’s current
4 modeling moratorium.¹⁵⁹ Refinements to the calculation of EIM benefits are not covered by
5 this moratorium because they do not involve changes to the GRID model.¹⁶⁰ In this case, the
6 Company simply used a full year of actual results, rather than the partial forecast used in
7 docket UE 296,¹⁶¹ and a more precise method to identify the resources supporting EIM
8 export.¹⁶² These are minor refinements, not changes to the GRID model.

9 CUB also argues that the Company improperly changed its calculation of transfers to
10 NVE during this case.¹⁶³ The Company initially calculated transfers to NVE using the same
11 methodology as transfers with CAISO, *i.e.*, the Company assumed that the benefits would
12 depend on available transmission.¹⁶⁴ In its reply update, the Company updated its calculation
13 for actual results, which indicated that transfers to NVE were not similarly constrained.¹⁶⁵
14 Contrary to CUB’s claim that it had to “sort through pages and pages of workpapers” to
15 discover this change, the Company explained it in its reply testimony.¹⁶⁶ Notably, the update
16 increases EIM benefits—and CUB recommends the same change for CAISO transfers.¹⁶⁷

¹⁵⁹ CUB’s Response Brief at 12.

¹⁶⁰ *In the Matter of PacifiCorp d/b/a Pacific Power’s 2016 Transition Adjustment Mechanism*, Docket No. UE 296, Order No. 15-353 at 2 (Oct. 26, 2015) (“We are imposing a one-year moratorium on PacifiCorp changing the GRID model[.]”).

¹⁶¹ PAC/400, Dickman/12.

¹⁶² PAC/400, Dickman/52.

¹⁶³ CUB’s Response Brief at 6, 17.

¹⁶⁴ TR. 15-19 (Dickman).

¹⁶⁵ *Id.*

¹⁶⁶ PAC/400, Dickman/54; CUB’s Response Brief at 13. CUB also faults the Company for not including this change in its list of corrections. But the change was not a correction.

¹⁶⁷ CUB’s Response Brief at 14.

1 **8. Staff incorrectly calculates the EIM benefits from NVE’s participation.**

2 For the first time in its response brief, Staff contends that the additional benefits
3 resulting from NVE’s participation in the EIM are \$9.8 million, based on the difference
4 between the EIM benefits in the initial filing and reply update.¹⁶⁸ Although Staff does not
5 propose a separate adjustment based on this calculation, Staff claims that its benefits do not
6 include this amount and are therefore a conservative estimate. But NVE’s participation was
7 included in both filings; the increase was due to additional months of actual results for all
8 EIM participants, not just NVE.¹⁶⁹

9 **9. CUB concedes its opportunity cost adjustment.**

10 CUB’s response brief ignores its recommendation to increase EIM benefits by
11 removing a purported opportunity cost offset; therefore, CUB abandoned this adjustment.¹⁷⁰

12 **D. The Commission should affirm the system balancing transactions adjustment**
13 **approved in the 2016 TAM.**

14 **1. The parties ignore the Commission’s order approving the adjustment.**

15 In Order No. 15-394, the Commission approved the system balancing transactions
16 adjustment after concluding that it would produce a more accurate NPC forecast.¹⁷¹ The
17 Commission rejected the parties’ objections and made several specific factual findings,
18 including that parties “had sufficient time and opportunity to review and assess” the
19 adjustment.¹⁷² Staff, CUB, and ICNU have renewed their objections to the adjustment,
20 without acknowledging that they were rejected last year. Staff states only that the

¹⁶⁸ Staff’s Response Brief at 37; PAC/400, Dickman/56.

¹⁶⁹ PAC/400, Dickman/53.

¹⁷⁰ Order No. 13-387 at 10 (“Parties must clearly present all proposed adjustments in their briefs.”).

¹⁷¹ Order No. 15-394 at 4.

¹⁷² *Id.*

1 Commission approved the adjustment without addressing the details of the order.¹⁷³ ICNU
2 acknowledges that the Company introduced the adjustment in the 2016 TAM, but not that it
3 was approved.¹⁷⁴ CUB argues that the Company failed to meet its burden of proof, without
4 recognizing that last year the Commission found the Company met its burden.¹⁷⁵

5 None of the response briefs describe the Commission’s rationale for approving the
6 adjustment or explain why that rationale no longer applies. No party explains why the
7 Commission was wrong when it approved an adjustment Staff now claims is arbitrary,
8 irrational, and unrealistic, or explains why the Commission must reverse itself just one year
9 later. No party identified any factual findings that are wrong or any facts that changed in the
10 last year justifying a reversal. Instead, the parties act as if this adjustment is an issue of first
11 impression and that the 2016 TAM never happened.

12 **2. The adjustment creates a more accurate forward price curve.**

13 Staff argues that there is no evidence that the adjustment produces a more accurate
14 NPC forecast.¹⁷⁶ But Staff agrees that the Company’s short-term power purchases
15 systematically exceed the costs of short-term sales, and there is no dispute that the
16 adjustment’s refinement to the forward price curve reflects this reality by including a higher
17 purchase price and a lower sales price.¹⁷⁷ Thus, the adjustment reflects a forward price curve

¹⁷³ Staff’s Response Brief at 26.

¹⁷⁴ Response Brief of ICNU at 4.

¹⁷⁵ CUB’s Response Brief at 18.

¹⁷⁶ Staff’s Response Brief at 26-27. Staff misstates how the adjustment works, claiming that it “account[s] for the fact that the Company tends to be a price-taker, paying more in heavy-load hours (HLH) than average actual market prices, and selling for lower than average market prices during light load hours (LHL).” Staff’s Response Brief at 26. In fact, the adjustment accounts for the fact that the Company historically buys at higher than the average monthly price and sells at lower than the average monthly price *across all hours*. PAC/100, Dickman/17.

¹⁷⁷ *Id.* at 26.

1 that is more indicative of the actual prices the Company will experience in the test period.¹⁷⁸
2 In Order No. 15-394, the Commission found that the refined forward price curve produced a
3 “more accurate estimate of net power costs” and Staff has provided no analysis that warrants
4 reversal of this finding.¹⁷⁹

5 Staff further argues that the Company’s historical under-recovery of NPC is not
6 related to system balancing transactions.¹⁸⁰ But in Order No. 15-394, the Commission found
7 that the system balancing transactions adjustment includes NPC costs that are not in GRID, a
8 conclusion confirmed here.¹⁸¹ Given that the adjustment includes costs that are actually
9 incurred and not captured in GRID, the adjustment creates a more accurate forecast, and the
10 historical absence of the adjustment contributed to the under-recovery of NPC.

11 **3. The adjustment is not arbitrary, irrational, or unrealistic.**

12 Staff argues that the adjustment’s use of monthly averages is arbitrary because the
13 selection of “any time period would be arbitrary.”¹⁸² But Staff’s own proposal to refine the
14 forward price curve also uses monthly average prices and the differential between the
15 purchase and sale price holds regardless of the period used to determine the average price.¹⁸³

16 Staff also claims that the adjustment does not address the correlation between market
17 prices and demand because PacifiCorp makes simultaneous purchases at one market hub and
18 sales at another.¹⁸⁴ Staff does not dispute the historical evidence that the Company buys high
19 and sells low, however, even when it is engaged in simultaneous transactions at different

¹⁷⁸ PAC/100, Dickman/18-19.

¹⁷⁹ Order No. 15-394 at 4.

¹⁸⁰ Staff’s Response Brief at 27.

¹⁸¹ Order No. 15-394 at 4; PAC/100, Dickman/18-20; CUB’s Response Brief at 18 (“...GRID does not accurately capture DA-RT[.]”).

¹⁸² Staff’s Response Brief at 28.

¹⁸³ Staff/200, Kaufman/36.

¹⁸⁴ Staff’s Response Brief at 29.

1 hubs that reduce overall NPC.¹⁸⁵ Thus, the refined forward price curve is accurate even
2 though the Company is not exclusively buying or selling in each hour. Without the
3 adjustment there would be a single price each hour regardless of whether demand is high or
4 low, which has less correlation between market prices and demand than the adjustment.¹⁸⁶

5 Staff further argues that the adjustment is irrational because the volume of overall
6 market transactions should correlate to balancing costs, *i.e.*, as the Company engages in more
7 market transactions in GRID, the adjustment should increase.¹⁸⁷ Such a result is not expected
8 in all circumstances, however.¹⁸⁸ Because the adjustment captures system balancing costs
9 that are not modeled in GRID, it is logical that when GRID models more system balancing
10 transactions, the size of the adjustment decreases.

11 **4. The adjustment does not exclude benefits.**

12 Staff claims the adjustment “embeds costs associated with a fixed volume of historic
13 sales at historic prices” without a compensating adjustment for reduced fuel costs that may
14 have offset the increased balancing costs.¹⁸⁹ The Company testified, however, that Staff’s
15 reasoning is flawed and that changes in fuel use resulting from changes in market prices
16 would actually *increase* NPC.¹⁹⁰ Staff’s response brief did not rebut this testimony and
17 Staff’s own proposal makes no adjustment for changes in fuel costs, indicating the
18 superficiality of Staff’s concern.¹⁹¹

¹⁸⁵ *Id.* at 26. To be clear, the scenario described by Staff occurs when Company buys at relatively high prices in one market and sells at relatively low prices in another market, but still earns revenue overall. The pricing adjustment reflects the diminished differential between the two markets in the GRID results.

¹⁸⁶ PAC/800, Dickman/35.

¹⁸⁷ Staff’s Response Brief at 30-31.

¹⁸⁸ PAC/800, Dickman/33.

¹⁸⁹ Staff/200, Kaufman/12; Staff’s Response Brief at 31-32.

¹⁹⁰ PAC/400, Dickman/28.

¹⁹¹ Staff/400, Kaufman/36.

1 Staff also argues that the adjustment excludes the benefits of arbitrage transactions.¹⁹²
2 Staff argues that, “[a]ccording to PacifiCorp, the [adjustment] adder only incorporates
3 arbitrage benefits to the extent that sale prices are above average and purchase prices are
4 below average.”¹⁹³ At hearing, the Company testified that “any transactions that resulted in
5 [the Company] doing better than market” are included in the adjustment and that these
6 benefits are *in addition to* the benefits of arbitrage transactions.¹⁹⁴

7 To be clear, the additional volumes included in the adjustment are priced to cover the
8 Company’s historical average net system balancing costs not already in GRID.¹⁹⁵ The
9 historical net system balancing costs include revenue earned through arbitrage transactions.
10 Thus, to the extent that arbitrage revenue is not already reflected in GRID, it is included in
11 the calculation of the adjustment. Further, Staff agrees that the Company typically buys high
12 and sells low, despite the impact of historical arbitrage transactions.¹⁹⁶

13 Staff also claims that the adjustment limits arbitrage opportunities in GRID, without
14 providing any evidence that historical arbitrage transactions are higher than those in GRID
15 after the application of the adjustment.¹⁹⁷

16 Staff claims that 64 percent of the transactions included in the adjustment are
17 arbitrage.¹⁹⁸ This figure is not in Staff’s testimony and cannot be verified because it is not
18 apparent from the record how Staff identified purported arbitrage transactions.¹⁹⁹

¹⁹² Staff’s Response Brief at 32.

¹⁹³ *Id.* at 34.

¹⁹⁴ TR. 63 (Dickman).

¹⁹⁵ PAC/400, Dickman/22.

¹⁹⁶ Staff’s Response Brief at 26.

¹⁹⁷ *Id.* at 33.

¹⁹⁸ *Id.* at 32.

¹⁹⁹ The exhibit Staff used for this calculation appears to pair all transactions occurring on the same day, without consideration of whether the transactions were within the same hour. The sales and purchase volumes also differ, which should not occur if Staff were truly measuring arbitrage transactions.

1 **5. The Company engages in monthly system balancing transactions.**

2 Staff argues the Company does not engage in monthly transactions at every market
3 hub included in the adjustment in every month.²⁰⁰ But the Company never claimed it
4 engages in monthly transactions *at every single market hub in every single month*; rather, as
5 Staff concedes, it engaged in monthly transactions in every month.²⁰¹

6 **6. The adjustment does not double count day-ahead integration costs.**

7 ICNU argues that the Company’s day-ahead integration costs are captured in the
8 adjustment and therefore the separate day-ahead integration charge must be removed.²⁰²
9 ICNU incorrectly assumes that the day-ahead integration charge quantifies the impact of
10 market transactions that are otherwise included in the system balancing transactions
11 adjustment. On the contrary, the day-ahead integration charge primarily accounts for the
12 costs resulting from the change in the dispatch of the Company’s resources.²⁰³ PacifiCorp
13 can balance its system by going to market or by re-dispatching its own resources. The
14 system balancing transactions adjustment is designed to capture only the costs of balancing
15 with market transactions. ICNU is wrong that the adjustment captures both the balancing
16 costs of market transactions and the balancing costs resulting from less than optimal resource
17 dispatch due to day-ahead forecast uncertainty.²⁰⁴

18 **7. There is no reason to reject the adjustment to allow time for refinement.**

19 In the 2016 TAM, Staff asked the Commission to reject the system balancing
20 transactions adjustment to allow additional time for the parties to propose alternatives.²⁰⁵

²⁰⁰ Staff’s Response Brief at 34-35.

²⁰¹ See Staff/606.

²⁰² Response Brief of ICNU at 6.

²⁰³ TR. 10-11 (Dickman); PAC/400, Dickman/39-40; PAC/800, Dickman/30-32.

²⁰⁴ Response Brief of ICNU at 7.

²⁰⁵ Order No. 15-394 at 3-4.

1 The Commission ruled against Staff after finding that parties “had sufficient time and
2 opportunity to review and assess” the adjustment in that case.²⁰⁶ The parties have now had
3 an additional year, and Staff again recommends rejection so the parties can develop
4 alternatives.²⁰⁷ Staff’s argument this year has no more merit than last year.

5 Staff claims that it has provided a “specific methodology” to refine the forward price
6 curve and produce a single stream of prices, instead of the system balancing transactions
7 adjustment.²⁰⁸ But Staff’s “proposal” consists of three sentences presented in its final
8 testimony and no workpapers.²⁰⁹ The Company cannot implement Staff’s proposal because
9 it lacks details and it is unknown whether it will produce a more accurate NPC forecast.

10 Moreover, Staff’s use of a single stream of prices will increase NPC because the
11 single stream will include greater variation relative to the Company’s refined forward curve
12 with two prices—a point Staff has not contested.²¹⁰ Greater variation means more expensive
13 resources are dispatched more frequently, while less expensive resources are backed down
14 more frequently, resulting in an overall NPC increase.²¹¹ There is no reason to *decrease* the
15 NPC forecast by rejecting the system balancing adjustment while parties develop a
16 methodology to *increase* the forecast.

17 **E. The TAM Guidelines’ methodology for forecasting QF generation is reasonable.**

18 Staff and CUB continue to recommend adjustments to decrease the Company’s
19 forecast of QF energy.²¹² Neither party, however, disputes that the Company has historically
20 under-forecast QF generation, nor have they provided any justification for increasing this

²⁰⁶ *Id.* at 4.

²⁰⁷ Staff’s Response Brief at 35.

²⁰⁸ Staff’s Response Brief at 29-30.

²⁰⁹ Staff/400, Kaufman/36.

²¹⁰ PAC/800, Dickman/36.

²¹¹ *Id.*

²¹² Staff’s Response Brief at 48-49; CUB’s Response Brief at 16-17.

1 forecasting error. Staff never quantified its adjustment; CUB quantified its adjustment
2 without explaining the basis for the quantification. CUB testified that “getting the forecast
3 right is important,” so there is no basis to reduce a forecast that is already understated.²¹³

4 **F. The Commission should affirm the prudence of the Glenrock and Seven Mile**
5 **Hill wind projects.**

6 The Commission found the Glenrock and Seven Mile Hill wind projects were prudent
7 in 2008, despite the projects’ siting on avian-sensitive areas and the risk of non-compliance
8 with the Migratory Bird Treaty Act.²¹⁴ Eight years later, Staff now argues that the
9 Commission should reverse its decision because there is no evidence in the record *in this*
10 *case* that the Company considered alternate sites for the projects in 2008.²¹⁵ Based on what
11 was known in 2008, the Commission found the projects prudent; Staff’s improper hindsight
12 review must be rejected.²¹⁶

13 Staff argues the Commission must “restore to ratepayers the full benefits of the assets
14 approved by the Commission in UE 200.”²¹⁷ The Commission rejected this argument last
15 year, confirming that rates should be set using the “most recent reliable data,” not the
16 estimates used to demonstrate prudence in 2008.²¹⁸

²¹³ CUB/100, McGovern/14. CUB’s brief also refers to an article published in the Bend Bulletin regarding the potential construction delays related to several QF projects. As described in more detail in the Company’s response to CUB’s Motion for Official Notice, this article does not strengthen CUB’s position because the purported delays in the article are already reflected in the Company’s reply update modeling and additional delays can be further updated as needed in the Company’s final attestation.

²¹⁴ PAC/800, Dickman/39.

²¹⁵ Staff’s Response Brief at 56.

²¹⁶ Order No. 02-469 at 4-5.

²¹⁷ Staff’s Response Brief at 56.

²¹⁸ Order No. 15-394 at 7; *In the Matter of PacifiCorp 2009 Renewable Adjustment Clause Schedule 202*, Docket No. UE 200, Order No. 08-548 at 21 (Nov. 14, 2008).

1 **G. The Company diligently worked with parties to facilitate review of this filing.**

2 CUB complains that the Company has “not been forthcoming in its duty to work with
3 parties to understand its calculations and adjustments.”²¹⁹ To the contrary, the Company
4 accelerated production of its workpapers to expedite the parties’ review of its filing.²²⁰ The
5 Company held two technical workshops and a settlement conference workshop and provided
6 a tour of its trading floor to interested parties, including CUB.²²¹ The Company met
7 individually with both Staff and CUB to ensure each had access to GRID and understood
8 how to use the model and to provide additional training if requested.²²² The Company also
9 offered to perform alternative GRID runs for the parties.²²³ And over the course of this case,
10 the Company responded to more than 350 data requests before it filed its reply testimony.²²⁴
11 CUB’s response brief does not acknowledge any of these efforts or explain why they were
12 insufficient to allow CUB to understand the Company’s filing. In fact, the only specific
13 deficiency CUB identified in this case was the lack of a Commissioner workshop.²²⁵ But
14 CUB never explained why having an additional workshop would have been sufficient for it
15 to understand the issues in this case, while the three workshops that were held were not.

²¹⁹ CUB’s Response Brief at 3.

²²³ *Id.*

²²⁴ PAC/400, Dickman/16.

²²⁵ CUB/200, McGovern/8.

1 **H. The Commission’s methodology for calculating transition charges is reasonable.**

2 **1. Noble Solutions has not provided a reliable value for freed-up Renewable**
3 **Energy Certificates (RECs).**

4 Noble Solutions claims that its proposal here no longer requires PacifiCorp to sell the
5 freed-up RECs because the Commission can simply assign the RECs value.²²⁶ Without an
6 actual sale, however, there is no reliable method to value the RECs.²²⁷ Noble Solutions
7 relies on national data and the results of PacifiCorp’s recent RFP to value RECs.²²⁸ Generic
8 data is not indicative of the value that PacifiCorp could actually realize, particularly given the
9 Company cannot sell all of the RECs it markets.²²⁹ Noble Solutions does not contest the
10 Company’s evidence that the RFP transactions are materially different from hypothetically
11 selling a limited quantity of freed-up RECs.²³⁰ Valuing RECs is therefore different from
12 valuing freed-up energy, which relies on well-established modeling that produces reasonable
13 and reliable results. And even using Noble Solutions’ own analysis indicates that the value is
14 roughly one percent of the transition charges paid by participants in the five-year program.²³¹

15 Noble Solutions contends that the Company will not need to track the hypothetically
16 sold RECs because participants in the five-year program will not return, ignoring the fact that
17 these customers have the right to return.²³² Noble Solutions claims that if one- and three-year
18 program customers return they are entitled to the new RECs generated upon their return.²³³

²³³ Noble Solutions’ Response Brief at 17.

1 But that is not the issue. It is inequitable for a returning customer to receive value from the
2 same REC that was hypothetically sold when the customer left.²³⁴

3 **2. Oregon law does not require the Commission to freeze generation costs**
4 **after five years for purposes of the consumer opt-out charge calculation.**

5 The consumer opt-out charge can recover only uneconomic investments, which
6 according to Noble Solutions are statutorily defined as investments made before the
7 departure of the direct access customer.²³⁵ The Commission, however, has never adopted
8 Noble Solutions' interpretation, and it has consistently included fixed generation costs
9 incurred after the customer departs in transition adjustments.²³⁶ Noble Solutions concedes
10 that these transition adjustments are legal and reasonable and has failed to articulate any basis
11 for treating the consumer opt-out charge differently.²³⁷

12 Noble Solutions also argues that the Commission's rules require freezing the fixed
13 generation costs after year five.²³⁸ But the ongoing valuation methodology compares the
14 Company's fixed generation costs to the value of freed-up energy *over the entire valuation*
15 *period*, not for the first five years only.²³⁹ Noble Solutions' methodology is contrary to the
16 Commission's rules, which require that the fixed generation costs and freed-up energy are
17 valued over the same time period.

²³⁹ OAR 860-038-0005(41).

1 **3. Holding fixed generation costs constant in real terms is a reasonable**
2 **method for forecasting fixed generation costs.**

3 Ongoing valuation requires the Commission to value fixed generation costs over the
4 same 10-year period that it values the freed-up energy.²⁴⁰ Because the departing customer
5 pays the consumer opt-out charge in years one through five, the Commission must forecast
6 the fixed generation costs for years six through 10, just as it forecasts the value of freed-up
7 energy during that same time period. The record demonstrates that using an inflation
8 adjustment to keep generation costs constant in real terms is a reasonable methodology to
9 forecast generation costs in years six through 10.²⁴¹ Noble Solutions' only counter to this
10 methodology is the meritless claim that the generation costs must be capped after five years.

11 Noble Solutions claims that PacifiCorp has changed its position and now agrees that
12 the consumer opt-out charge accounts for new generation investment in years six through
13 10.²⁴² This is untrue. The Company's position here has not changed—the consumer opt-out
14 charge can legally account for new generation investment, but does not actually do so.²⁴³

15 **III. CONCLUSION**

16 PacifiCorp respectfully requests that the Commission approve the 2017 TAM and
17 allow a rate increase of \$16.2 million, or 1.3 percent overall, subject to the TAM final
18

²⁴⁰ *Id.*

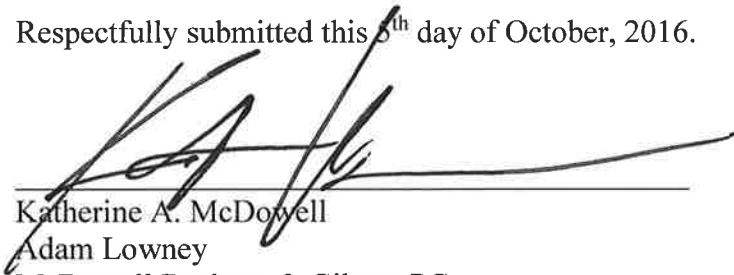

²⁴¹ Order No. 15-394 at 12; PAC/400, Dickman/93-94.

²⁴² Noble Solutions' Response Brief at 24.

²⁴³ PAC/800, Dickman/51.

1 update. The purpose of the TAM is to forecast the Company's 2017 NPC as accurately as
2 possible. The Commission can accomplish this by approving the Company's filing and
3 rejecting the parties' proposed adjustments.

Respectfully submitted this 8th day of October, 2016.
