REPORT NAME: Annual Reliability Report for Calendar Year 2016

COMPANY NAME: Pacific Power

DOES REPORT CONTAIN CONFIDENTIAL INFORMATION? No Yes

If yes, please submit only the cover letter electronically. Submit confidential information as directed in OAR 860-001-0070 or the terms of an applicable protective order.

If known, please select designation: RE (Electric) RG (Gas) RW (Water) RO (Other)

Report is required by: OAR OAR 860-023-0151

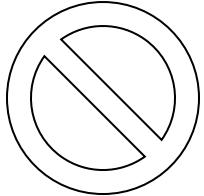

- Statute
- Order
- Other

Is this report associated with a specific docket/case? No Yes

If yes, enter docket number: RE 171

List applicable Key Words for this report to facilitate electronic search:
Reliability

DO NOT electronically file with the PUC Filing Center:

- Annual Fee Statement form and payment remittance or
- OUS or RSPF Surcharge form or surcharge remittance or
- Any other Telecommunications Reporting or
- Any daily safety or safety incident reports or
- Accident reports required by ORS 654.715

Please file the above reports according to their individual instructions.

RE: Annual Reliability Report for Calendar Year 2016

PacifiCorp d/b/a Pacific Power submits for filing its Annual Reliability Report for calendar year 2016. This filing is made in compliance with OAR 860-023-0151.

Please direct any questions on this report to Natasha Siores, Manager, Regulatory Affairs, at 503-813-6583.

Sincerely,

R. Bryce Dalley
Vice President, Regulation

RELIABILITY

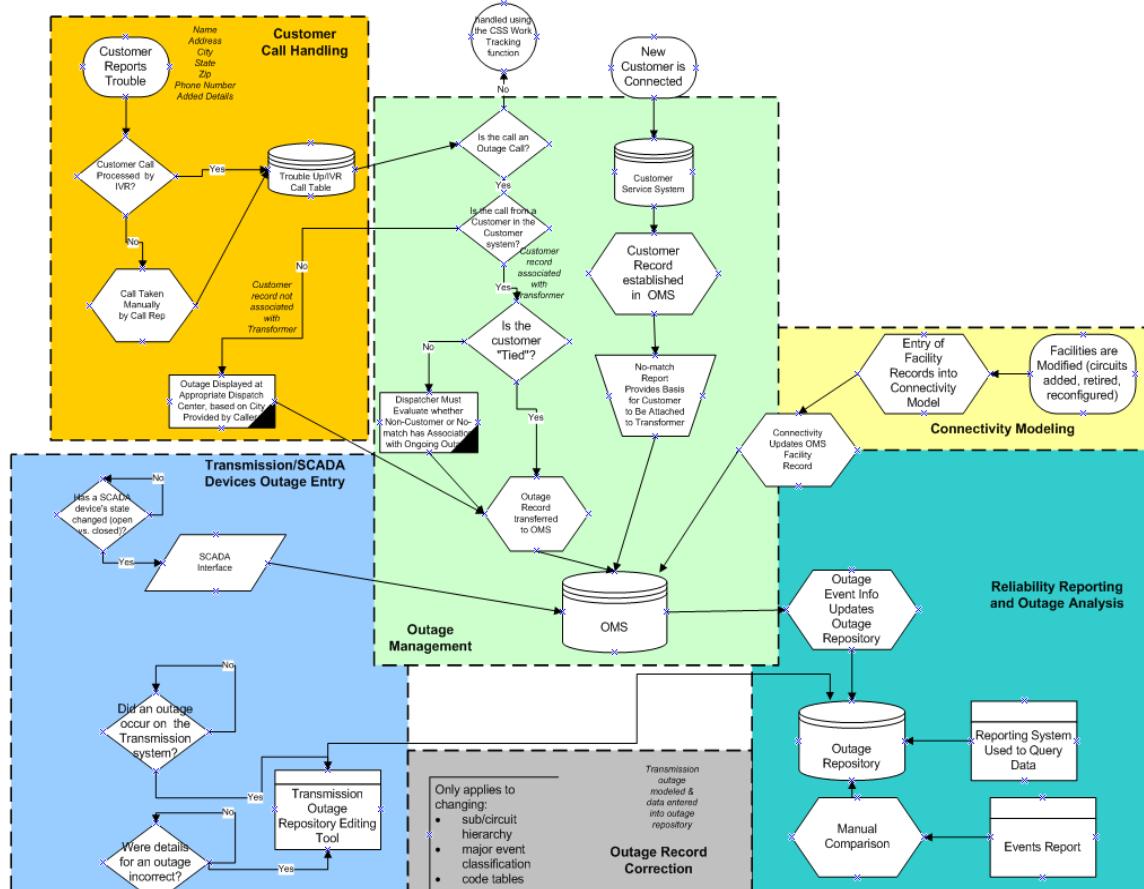

Introduction and Reliability Discussion

This year's reliability report includes a brief overview of Pacific Power's programs and initiatives to evaluate and enhance reliability. Changes to this section have been made in compliance with administration rules 860-023, 024 and 028.

Monitoring, Recording, and Reporting Reliability

How Pacific Power Monitors Reliability

Pacific Power operates automated outage management and reporting systems; a diagram of the data flow process is shown below. Customer trouble calls and SCADA events are interfaced with the Company's real-time network connectivity model, its CADOPS system (Computer Aided Distribution Operations System). By overlaying these events onto the network model, the program infers outages at the appropriate devices (such as a transformer, fuse or other interrupting device) for all customers down line of the interrupting device. The outage is then routed to appropriate field operations staff for restoration and the outage event is recorded in the Company's Prosper/US outage repository. In addition to this real-time model of the system's electrical flow, the Company relies heavily upon the SCADA system it has in place. This includes the Dispatch Log System (an SQL database application) which serves to collect all events on SCADA-operable circuits. That data is then analyzed for momentary interruptions to establish state-level and circuit-level momentary interruption indices, per agreement with the Oregon PUC Staff. The Company is in the midst of implementing an advanced metering infrastructure (AMI) system, after which modifications to the outage communication process and reliability will occur. As the Company rationalizes the effects of these changes it will apprise the Commission Staff about the changes and their measured impacts to reliability metrics.

Reliability Reporting: Interpreting Indices and Metrics

Raw reliability data comes in the form of outage start and stop times, numbers of customers interrupted and outage cause codes. Out of these are derived an array of indices and acronyms that attempt to reduce complex data to a handful of numbers. This section briefly describes the metrics used by Pacific Power for reliability measurements.

SAIDI, SAIFI, CAIDI and MAIFI_e are the most common indicators or indices used by utilities across the nation for measuring and reporting reliability. Along with other indices, they were first rigorously documented in Institute of Electrical and Electronics Engineers (IEEE) Standard 1366-1998, and since modified in IEEE 1366-2003/2012, IEEE Guide for Electric Power Distribution Reliability Indices. This standard for reporting reliability performance was adopted in OAR 860-023 and reports provided thereafter have adhered to this standard.

For performance reporting as contained within this document¹, Pacific Power uses the current standard indices, applied at the state level as well as to its defined reliability reporting regions. In years preceding 2012 the major events excluded from performance during the period were determined using the historic “10% of operating area customers” method, not the IEEE 1366 “2.5 beta” TMed method applied to these reliability reporting regions. Therefore, year-on-year comparisons need to be made carefully.

Regional reliability reporting areas were established by using statistical tools to determine the granular level at which performance complied with assumptions underlying the development of the major event thresholds adopted within the standard. For the Customer Guarantee element of the Performance Standards Program, exceptions to the guarantees may also be determined based on data at a state level.

In order to devise circuit-level performance measures, Pacific Power performed research into which metrics are appropriate for ranking reliability investments in order to better serve the needs of customers. The need to reliably serve the areas with the greatest numbers of customers must be balanced against the need to maintain focus on service levels where there are fewer customers. To do this, Pacific Power implemented in 1999 a balanced set of circuit performance indices (known as CPI⁹⁹) and methods that improve on those documented in IEEE 1366. Circuit performance is reviewed at least annually against these various metrics to determine the selection of circuits to be addressed within the Company’s Worst-Performing Feeders Program; as time has elapsed and tools have evolved the Company has focused its analysis at a lower level than circuit, i.e. sub-circuit selection may have been chosen as the optimal improvement activity. Mining of this data allows the company to optimize cost against reliability metric improvements.

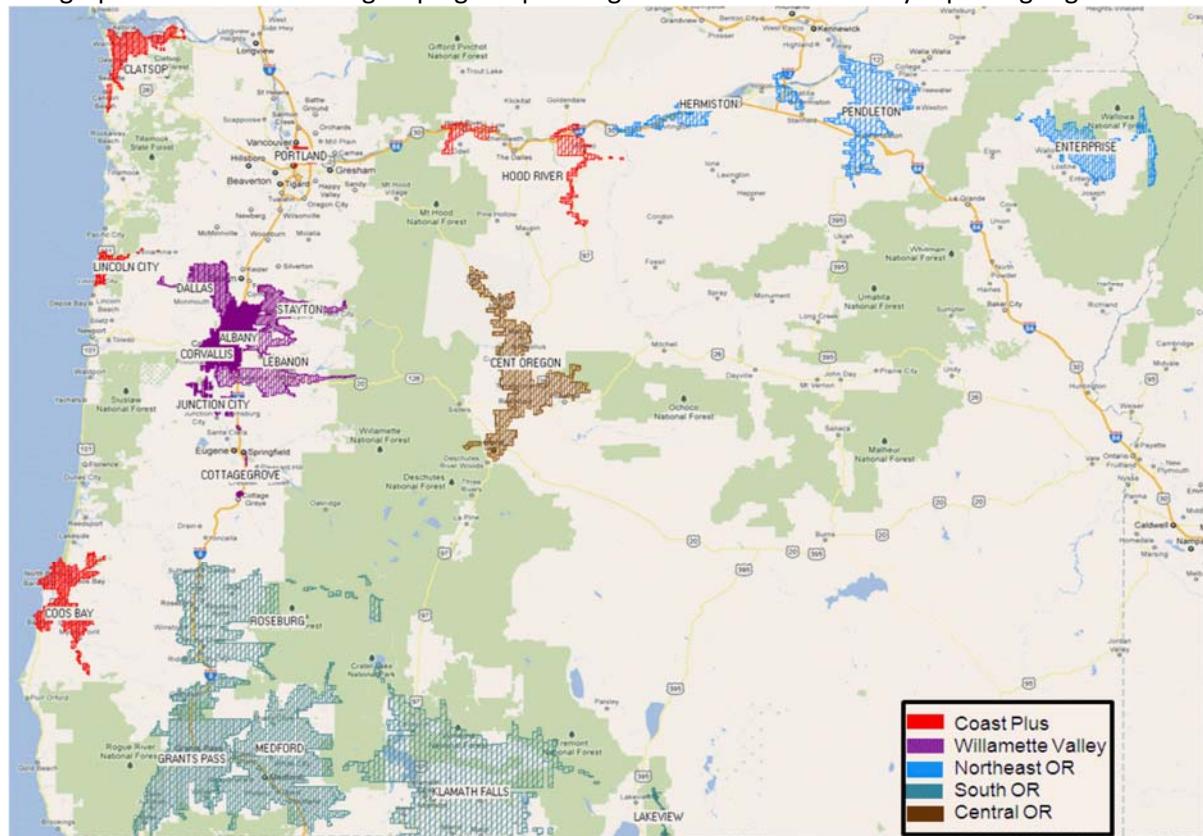

¹ State administrative rules regarding service reliability were modified during 2011, which has resulted in significant modifications to this section of the report.

Reliability Tools: Improving Indices and Metrics

Pacific Power uses the reliability data in a variety of ways that are designed to improve reliability to its customers. It has devised methods that are contained in the recently-adopted industry guide for electric reliability, IEEE 1782-2014². Some of these analytical methods render the outage data in a tabular, graphical and geospatial manner. All of them serve as input to developing projects that improve reliability, including the Company's fuse coordination program, Fuse It or Lose It (FIOLI), its circuit hardening program, Saving SAIDI, and its capital construction program, Network Initiatives. These programs are evaluated for their forecast improvements to network reliability, as measured by the avoidance of customer interruptions, customer minutes interrupted and momentary customer interruptions. Each project is assigned a value for reduced interruptions along with the cost for that project, and based upon the best cost projects, selected to align with budget and resource capacity targets. Other tools the Company has created to deliver better reliability to customers include web-based notifications when interrupting devices (such as circuit breakers, reclosers or fuses) have experienced more operations within a given time period than is the norm. This enables field engineering and operations management team members to promptly evaluate means to modify performance in that area of the system. These ad-hoc activities augment the Company's reliability planning process (which is completed annually with periodic updates); review of historic reliability performance demonstrates the process' efficacy. Annually the Company designates five circuits that are designated as "underperforming circuits" against which the Company reports blended reliability metrics (SAIDI, SAIFI, MAIFI and breaker lockouts) to highlight performance changes for that family of circuits over the next five years; these circuits are identified subsequently.

Reliability Reporting Regions Map

The graphic below shows the grouping of operating areas into five reliability reporting regions.

² NEW P1782 (PE/T&D) Guide for Collecting, Categorizing and Utilization of Information Related to Electric Power Distribution Interruption Events was approved on March 27, 2014 and contains many of the approaches used by Pacific Power to evaluate system reliability and determine areas where improvements should be deployed.

Major Event Thresholds

Effective CY2012, the administrative rules were modified to replace the 10% of operating area customers methodology with IEEE P1366 “2.5 beta” or TMed methodology for determining major events. For Pacific Power’s service territory in Oregon, all operating areas were grouped into five reliability reporting regions and each reliability region’s threshold determined according to IEEE 1366-2003/2012. The tables below depict the composition of each region and its threshold as used during CY2016 and for application during CY2017. Since certain major events may be filed as a statewide event, the state threshold and history is also supplied.

2016 Major Event Threshold			
Reliability Region	TMED SAIDI	TMED CMI	Operating Areas within Region
Central OR	4.95	383,788	Bend/Redmond, Madras
Coast Plus	9.45	1,421,626	Clatsop/Astoria, Coos Bay/Coquille, Hood River, Lincoln City, Portland

Major Events Excluded Report

Pacific Power filed written documentation for four Major Events in 2016 that were excluded from reliability performance results. They are summarized in the table below.

Oregon 2016 Major Events - Written Filings									
Event Date	Reliability Reporting Region – Description	CML	CI	PUC Report Required	Region TMED SAIDI	Region Event SAIDI	Oregon SAIDI	Oregon SAIFI	Oregon CAIDI
January 1	Coast Plus – Wind Storm	1,720,990	3,437	Yes	11.09	11.44	2.91	0.01	501
January 16-17	Coast Plus – Wind and Rain Storm	6,720,604	13,507	Yes	11.09	44.67	11.36	0.02	498
April 13-15	Southern – Wind Storm	6,448,973	19,448	Yes	12.35	29.32	10.90	0.03	332
October 13-15	Oregon – Storm	11,103,124	65,146	Yes	7.85	18.77	18.77	0.11	170
TOTAL Oregon Major Events Filed		25,993,691	101,538				43.95	0.17	256

The company excluded 10 events where CAIDI was less than five hours (300 CAIDI minutes), for which no filing is required according to Oregon Administrative Rules.

Oregon 2016 Major Events - Low CAIDI (<300) No Filings

Oregon Underlying Events - Excludes Major Event	65,943,786	632,022	-	111.49	1.07	104
Oregon Total Performance - Includes Major Event	131,808,041	941,886	-	222.85	1.59	140

Under-Performing Circuits

After the completion of the development of reliability improvement plans, the Company evaluates those circuits whose blended reliability scores rank low, using its Circuit Performance Indicator (CPI). This is the primary basis for the next year's Worst Performing Feeders element of its Targeted Reliability Program. CPI is an acronym for Circuit Performance Indicator, which uses 3-year weighted reliability metrics of the circuit to identify underperformance. The Company has evaluated the effectiveness of the CPI, determining whether inclusion of major events and transmission outages produce better results. The inclusion of major event and transmission outages, reporting period comparisons yielded a limited ability to identify the benefits of improvements made on each of the circuits. The application of CPI99 proved to demonstrate more consistently how performance comparisons could be made. The variables and equation for calculating CPI are:

$$\text{CPI} = \text{Index} * ((\text{SAIDI} * \text{WF} * \text{NF}) + (\text{SAIFI} * \text{WF} * \text{NF}) + (\text{MAIFI} * \text{WF} * \text{NF}) + (\text{Lockouts} * \text{WF} * \text{NF}))$$

Index: 10.645

SAIDI: Weighting Factor 0.30, Normalizing Factor 0.029

SAIFI: Weighting Factor 0.30, Normalizing Factor 2.439

MAIFI: Weighting Factor 0.20, Normalizing Factor 0.70

Lockouts: Weighting Factor 0.20, Normalizing Factor 2.00

Therefore, $10.645 * ((3\text{-year SAIDI} * 0.30 * 0.029) + (3\text{-year SAIFI} * 0.30 * 2.439) + (3\text{-year MAIFI} * 0.20 * 0.70) + (3\text{-year breaker lockouts} * 0.20 * 2.00)) = \text{CPI Score}$

The following distribution feeders were selected as under-performing based on CPI scores ending 12/31/2016 (in addition to other criteria, discussions with area engineers) and identified as Program Year 18 (2017) circuits in the Network Initiatives program:

Program Year 18 (2017) UNDER-PERFORMING CIRCUITS				
CIRCUIT ID	CIRCUIT NAME	KV	OPERATING AREA	CPI ⁹⁹
4M25	Buena Vista	20.8	Dallas/Independence	163
4C106	Coos River	20.8	Coos Bay/Coquille	212

Average # Tree Crews on Property (YTD)

78

¹ Amounts acquired from Vegetation Management ten year plan. 2013-2015 include \$3M additional funding.

² Tree removals reduce costs in future years, while herbicide costs are assumed to increase in same time period.

INSPECTION AND MAINTENANCE PROGRAMS

Inspection and Repairs

In Calendar Year 2016 (January 01 through December 31, 2016), among distribution and transmission facilities (both overhead and underground), 1,717 'A' Priority conditions were recorded and 1,715 were corrected.

For 'B' priority conditions, 16,551 were identified and 21,320 were corrected in CY2016.

For 'C' priority conditions, 549 were corrected in CY2016. Reporting of 'C' priority conditions was terminated early 2014, however some are still occasionally entered into the inspection system inadvertently. 45 were identified in 2016 and these will be reviewed and reprioritized as required.

Pole and Overhead Facilities

- PacifiCorp is currently on a 10-year cycle for the Detail inspection and treatment of overhead Distribution and Transmission facilities. In CY2016, 37,737 Distribution, 3,316 Local Transmission and 6,429 Main Grid Transmission Detail inspections were performed. Detail inspections were performed on 10.4% of the total 457,613 overhead facilities. Additionally 539 Distribution poles were given a second Detail inspection in CY2016 due to failure of the internal audit process of the initial inspection results or as a follow up aerial inspection of woodpecker damage.
- 37,508 Distribution poles, 3,273 Local Transmission poles and 1,075 Main Grid Transmission poles were Tested and Treated. Test and Treatment was performed on 9.1% of the total 457,613 overhead facilities.
- PacifiCorp replaced or reinforced 739 poles that were rejected through the Test and Treat inspection program. The CY2016 rejection rate was 2.21% for Distribution, 2.69% for Local Transmission and 4.37% for Main Grid Transmission. The overall reject rate for CY2016 was 2.30%.

A. Visual Inspections

The visual inspection of the Distribution and Transmission system is on a 2-year cycle. In CY2016, 202,579 Distribution, 17,251 Local Transmission and 17,871 Main Grid inspections were performed for a total of 237,701 inspections which equates to 51.9% of the total overhead facilities. Random re-inspections were performed by operations managers to ensure uniform results and adherence.

B. Underground Facilities

The inspection of underground facilities is on a 10-year cycle. It includes a detail inspection of primary underground facilities and an infrared inspection of accessible terminals and splices. During CY2016, 10,960 inspections were performed; 9.3% of 118,154 underground facilities.

C. Marina Inspection Program

The inspection of marinas is annual. In CY2016, 100% of marinas were inspected.

D. Line Equipment Maintenance

Line Equipment – Overhead Reclosers, Sectionalizers, Regulators, Switches

Line equipment is inspected during the 2-year cycle Visual Survey; therefore, inspection requirements have been met for Reclosers, Sectionalizers and Regulators and Switches.

SUBSTATION MAINTENANCE PROGRAMS

A. Performance Measure X3 Substation Maintenance Programs

1. Description - Substations are critical utility network facilities requiring more frequent inspections and testing of all its equipment. The Company will provide, at the annual meetings, information of its Substation maintenance programs.
2. Program Interval - The program interval will be dictated by the substation equipment operational requirements.
3. Program Expenditures - PacifiCorp is to submit an annual actual versus budgeted expenditures for all substations equipment maintenance programs.

B. Substation Security Inspections

Substation security inspections are performed on cycles based on policy. This includes a detailed inspection of the fence, gates, warning signs, grounding systems, etc. The inspector is trained to look for security violations and public hazards. Copies of the inspection results are filed at the substation and field office. Field personnel are instructed to immediately correct all perimeter security violations.

Reference PacifiCorp Maintenance Policy 034 - Substation Inspection Policy and form 3274F-Substation Inspection.

PacifiCorp operates 280 substation and communication facilities in Oregon. PacifiCorp performed 99% of the planned substation security inspections in CY2016.

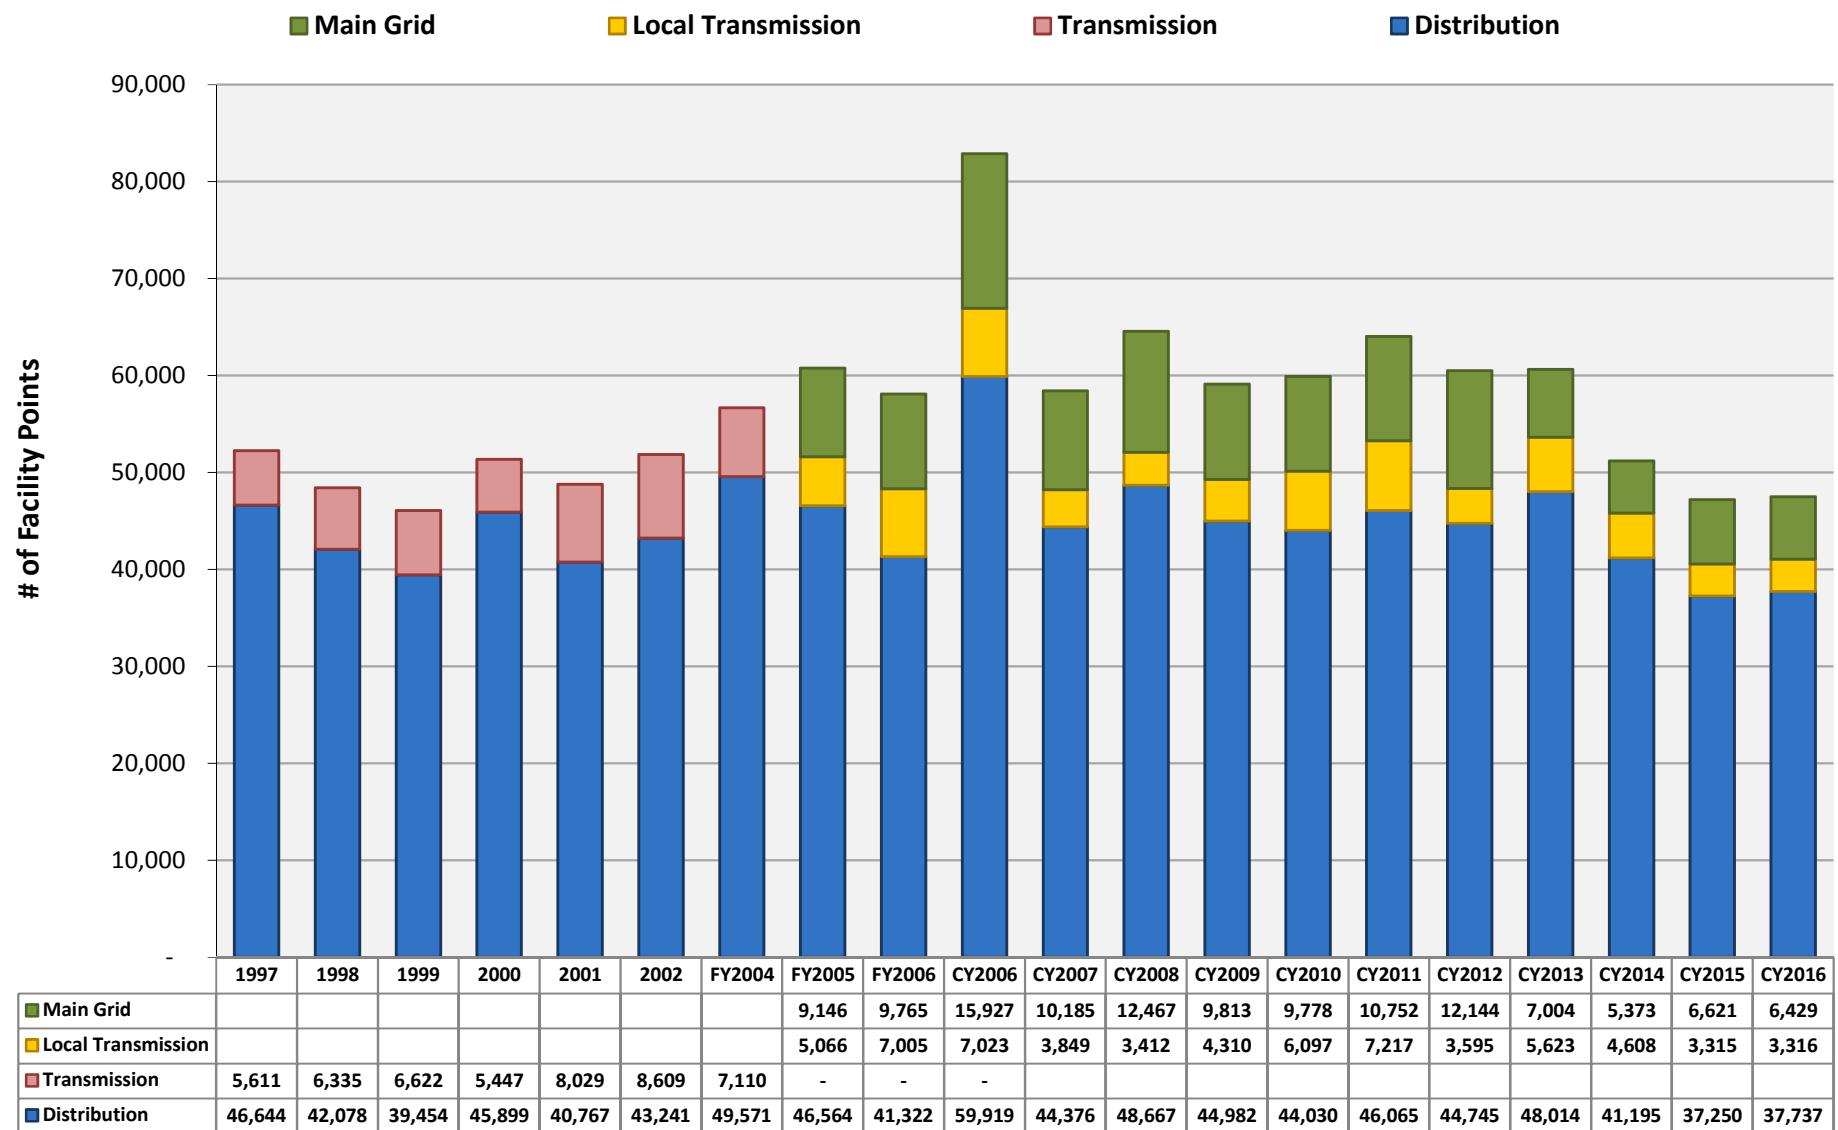

C. Substation Equipment Inspections

Batteries, Capacitor Banks, Circuit Breakers, Switches, LTC's, Regulators, Transformers, and protective relays are inspected on cycles based on policy. Inspections check pressure, temperature, voltage, LTC and regulator operation, cooling equipment, insulators, relay targets, etc.

Reference PacifiCorp Maintenance Policy 034 - Substation Inspection Policy and form 3274F-Substation Inspection.

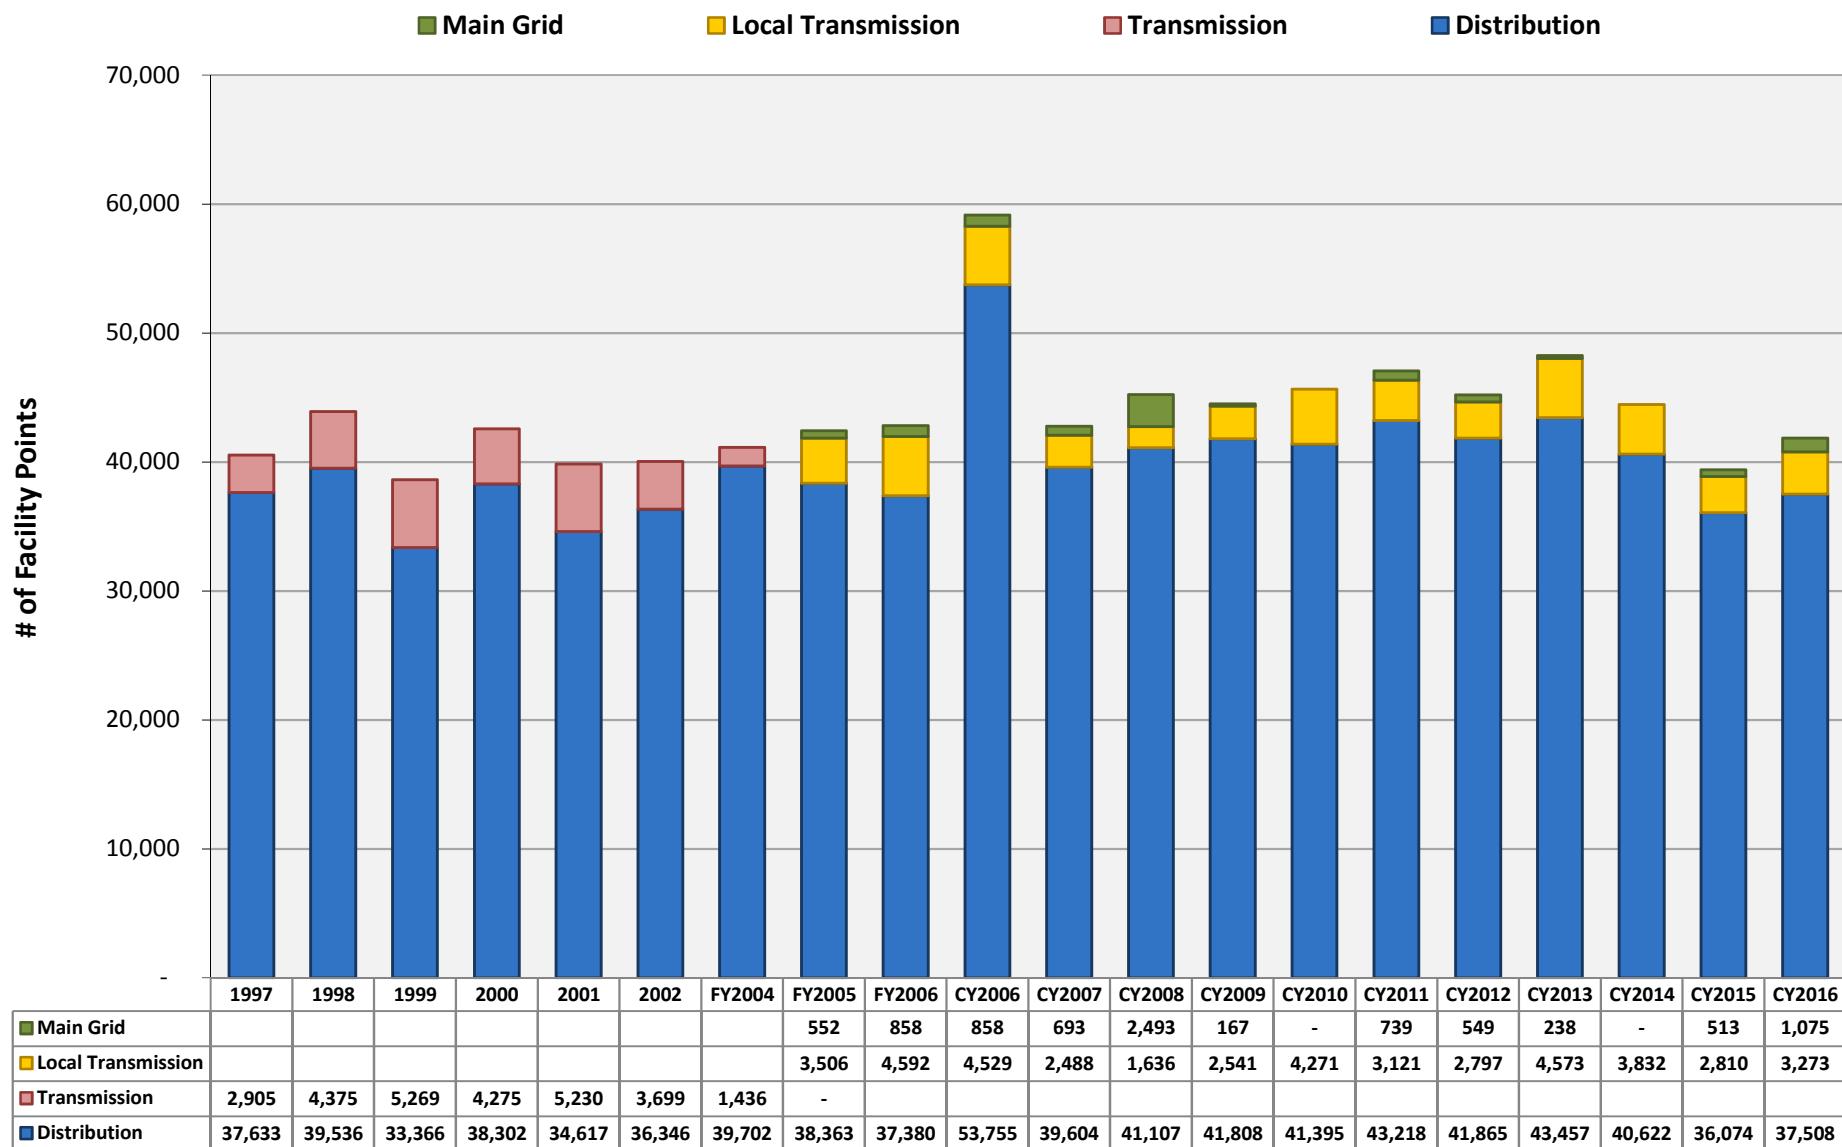

PacifiCorp performed 99% of the planned substation equipment inspections in Oregon in CY2016.

CY2016 Overhead Detail Inspection History

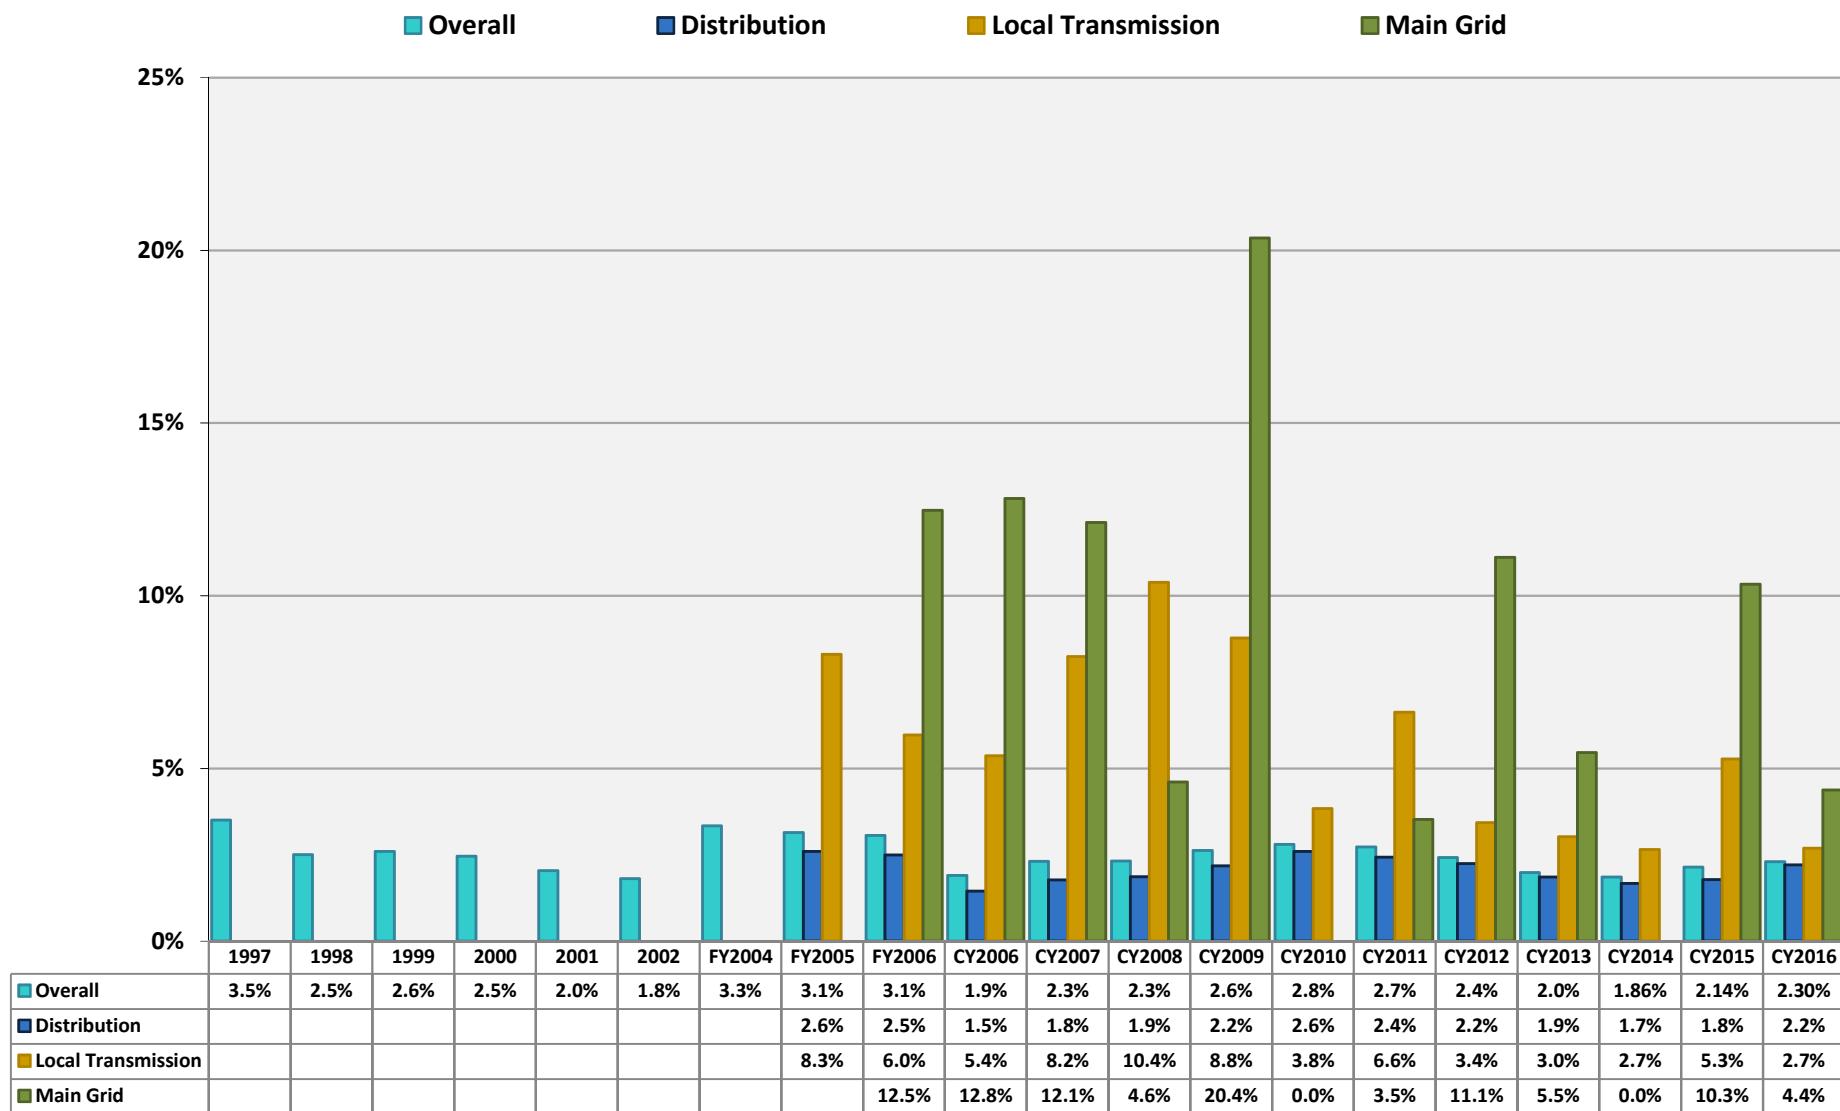

(Transmission breakout not available for years prior FY2005)

CY2016 Pole Test and Treat History

(Transmission breakout not available for years prior FY2005)

CY2016 Pole Reject Rate History

(Breakout not available for years prior FY2005; in FY2005, Distribution and blended Transmission breakout available; effective FY2006, full breakout views available.
Main Grid rates combine intrusive inspection rejects with detail inspection BOPOLE.)

Budget

Inspection and Maintenance Budget

Pole Inspect & Treat			ACTUALS	BUDGET
Distribution	T&T	515	\$1,943,516	\$2,087,469
	Detail	520	\$0	\$0
Transmission	T&T	843, 883	\$332,916	\$326,724
	Detail	840, 880	\$244,203	\$191,641
			Total	\$2,520,635
				\$2,605,834

Pole Replacements			ACTUALS	BUDGET
Distribution			\$4,162,663	\$3,772,456
Transmission			\$2,955,967	\$2,773,853
			Total	\$7,118,630
				\$6,546,309

Repair and Replace Facilities			ACTUALS	BUDGET
Distribution	500, 501, 502, 503, 504, 505, 509, 518, 526, 527, 595, 625, 626, 905		\$13,188,534	\$13,407,055
Transmission	845, 847, 846, 865, 884, 886, 848, 889		\$697,101	\$645,899
			Total	\$13,885,635
				\$14,052,954

Visual Inspections (Includes Equipment Inspections)			ACTUALS	BUDGET
Distribution	521		\$317,075	\$385,539
Transmission	841, 881		\$282,918	\$185,897
			Total	\$599,993
				\$571,436

Underground Inspections			ACTUALS	BUDGET
Distribution	508		\$893,948	\$921,159
			Total	\$893,948
				\$921,159

Substation Maintenance			ACTUALS	BUDGET
Distribution Preventative Maintenance			\$1,900,920	\$2,127,868
Distribution Corrective Maintenance			\$903,931	\$768,403
Transmission Preventative Maintenance			\$1,306,723	\$1,346,797
Transmission Corrective Maintenance			\$929,010	\$775,082
			Total	\$5,040,584
				\$5,018,150
