Capital Power is a growth-oriented North American power producer headquartered in Edmonton, Alberta. Capital Power owns more than 6,400 megawatts (MW) of power generation across North America; in the United States, Capital Power currently owns and operates eight

facilities representing over 2000 MW of capacity in eight states, comprising two natural gas combined cycle facilities, five wind facilities, and one solar facility.

Capital Power also has a development portfolio of wind, solar, and battery storage sites in several U.S. states. In Oregon, this includes the 600 MW Nolin Hills Wind project under development in Umatilla County. Capital Power may submit a proposal in response to the captioned request for proposals (RFP) and may participate in future RFPs issued by utilities that are subject to the Commission's jurisdiction. Capital Power thus has a direct interest in this proceeding.

Capital Power's interest in this proceeding is not adequately represented by any other party. Nor would Capital Power's intervention burden the record, delay this proceeding, or unreasonably broaden the issues considered herein. Capital Power has participated in resource procurement solicitations in multiple U.S. states and may provide a unique perspective that would aid in resolving the issues related to this proceeding and future resource procurement proceedings.

Capital Power thus requests that the Commission grant its petition to intervene in this proceeding.

Dated this 18<sup>th</sup> day of May 2021.

Respectfully submitted,
