ADVICE NO. 22

ACCESS SERVICES

4. SWITCHED ACCESS SERVICE

4.1 General

Switched Access Service, which is available to customers for their use in furnishing their services to end users, provides a two-point communications path between a customer's premises and an end user's premises. It provides for the use of common terminating, switching, and trunking facilities, and common subscriber plant of the Company. Switched Access Service provides for the ability to originate calls from an end user's premises to a customer's premises, and to terminate calls from a customer's premises to an end user's premises in the LATA where it is provided.

4.2 Rate Categories

4.2.1 Two Categories

There are two rate categories which apply to Switched Access Service:

- Local Transport.
- End Office (Local Switching and Information Surcharge).

4.2.2 Description of the Rate Categories

(A) Local Transport

The Local Transport rate category* provides the transmission and tandem switching facilities between the customer's premises and the end office switch(es) where the customer's traffic is switched to originate or terminate the customer's communications. For purposes of determining Local Transport mileage, distance will be measured from the wire center that normally serves the customer's premises to the end office switch(es). Local Transport mileage measurement rules are set forth in 4.5.7 following and in this section.

(C)

* As of July 1, 2021, the originating Local Transport switching rates are not applied to originating toll free minutes.

ACCESS SERVICES

4. **SWITCHED ACCESS SERVICE** (Continued)

4.2 Rate Categories (Continued)

4.2.2 Description of the Rate Categories (Continued)

(A) Local Transport* (Continued)

(C)

Local Transport is a two-way voice frequency transmission path composed of facilities determined by the Telephone Company. The two-way voice frequency transmission path permits the transport of calls in the originating direction (from the end user end office switch to the customer's premises) and in the terminating direction (from the customer's premises to the end office switch), but not simultaneously. The voice frequency transmission path may be comprised of any form or configuration of plant capable of and typically used in the telecommunications industry for the transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz. The customer must specify the choice of facilities (i.e., Voice Grade 2 or 4 wire, High Capacity DS1 or DS3) to be used in the provision of the Direct Trunked Transport or Entrance Facility.

Local Transport is comprised of an Entrance Facility, Direct-Trunked Transport, Tandem-Switched Transport, and Multiplexing. Descriptions of the Local Transport components are provided in (1) through (4) following.

The Telephone Company will work cooperatively with the customer in determining (1) whether the service is to be routed directly to an end office switch or through an access tandem switch, and (2) the directionality of the service.

Local Transport is provided at the rates and charges as set forth in 4.8 following. The application of these rates with respect to individual Local Access Service arrangements is set forth in 4.7.1 following.

* As of July 1, 2021, the originating Local Transport switching rates are not applied to originating toll free minutes.

ACCESS SERVICES

4. **SWITCHED ACCESS SERVICE** (Continued)

4.2 Rate Categories (Continued)

4.2.2 Description of the Rate Categories (Continued)

(B) End Office

The End Office (Local Switching) provides the local end office switching and end user termination functions necessary to complete the transmission of Switched Access communications to and from the end users served by the local end office. The End Office Rate category includes the Local Switching and Information Surcharge rate elements.

(1) Local Switching

The End Office (Local Switching) rate element provides the local end office switching functions associated with Feature Groups A, B, C, and D and the transport termination for the trunk side arrangements which terminate the Local Transport facilities. There are four types of functions included in the Local Switching rate element: Common Switching, Transport Termination, Line Termination and Intercept. Rates for Local Switching are set forth in Section 12. For originating toll free minutes only, a different Local Switching rate applies.

(C)
(C)

(a) Common Switching

Common Switching provides the local end office switching functions associated with the various access (i.e., Feature Group) switching arrangements.

(b) Transport Termination

Transport Termination functions provide for the line or trunk side arrangements which terminate the Local Transport facilities.

The number of Transport Terminations provided will be determined by the Telephone Company.

(c) Line Termination

Line Termination provides for the terminations of end user lines in the local end office. There are two types of Line Terminations, i.e., Common Line Terminations and Special Access Service Terminations utilized in the provision of WATS or WATS-type services at Telephone Company designated WATS Service Offices.

ACCESS SERVICES

4. **SWITCHED ACCESS SERVICE** (Continued)

4.2 Rate Categories (Continued)

4.2.2 Description of the Rate Categories (Continued)

(B) End Office (Continued)

(1) Local Switching (Continued)

(c) Line Termination (Continued)

The Special Access Service Terminations are differentiated by line side vs. trunk side terminations. In addition, there are various types of originating and terminating line side terminations depending on the type of signaling associated with the Special Access Service. Line side terminations are available with either dial pulse or dual tone multi-frequency address signaling.

(d) Intercept

The Intercept function provides for the termination of a call at a Telephone Company Intercept operator or recording. The operator or recording tells a caller why a call, as dialed, could not be completed, and if possible, provides the correct number.

(2) Information Surcharge

Information Surcharge rates are assessed to a customer based on the total number of access minutes. Information Surcharge rates are as set forth in Section 12 for the Issuing Carriers. For originating toll free minutes only, a different Information Surcharge rate applies.

(C)
(C)

The Information Surcharge does not apply to Feature Groups B and D Switched Access Services associated with Wireless Switching Centers (WSCs) directly interconnected to a Telephone Company access tandem office.

The number of end office switching transmission paths will be determined as set forth in 4.5.5 following.

(3) Non-Chargeable Optional Features

Where facilities permit, the Company will, at the option of the customer, provide non-chargeable optional features which are listed under each Feature Group.
