RE: ADV 1539

Dear Members of the Oregon Public Utilities Commission,

With the cost of living skyrocketing for working Oregonians, state leaders should make rooftop solar and batteries more available to everyday people, not less.

Unfortunately, Idaho Power has proposed to go in the opposite direction with a drastic cut in the consumer solar credit

These changes would be retroactive on new solar users, reversing the deal the state made with these households.

Idaho Power's proposal will make rooftop solar and batteries more expensive for everyday people in Eastern Oregon. It will also undermine the public trust in the state's clean energy programs going forward.

This is the wrong direction for Oregon, working people, and the state's clean energy progress.

Sincerely,

Peter Greenberg, Albany
