Dear OPUC Commissioners,

The B2H Project will be a scar on our environment that will forever alter the landscape of this part of the state. It will potentially damage threatened and endangered anadromous fish habitat, and increase the risk of fire in an area that is already at extreme risk with climate change.

This Project is fiscally unsound, morally bankrupt and an overall bad idea. Please, show some forward thinking. Don't let the mistakes that allowed the I-84/Boardman morass of powerlines happen again on your watch.

Please, stop this project right now.

Thank you for your time and consideration,

Kevin March
