Program Summary

1. Describe your Division 24 inspection program

We visually inspect almost 100% of our plant every year to check for proper attachment, grounding, and clearances.

2. Describe how you prioritize repairs

Repairs are handled immediately if they are safety issues.

3. Describe how you address immediate hazards for both your conditions and any attacher's conditions

If a immediate hazard is found it is report to the pole owner or we will send out a crew to fix it immediately if it is our attachment.

4. Describe how you communicate non-immediate hazard conditions to attachers

We report them to the pole owner via phone call or email.

5. Describe the state of electronic record keeping you have had over the last five years

We currently track our pole contacts in our mapping system.

6. Outline your current plans for any automation of inspection, correction or asset information (i.e. GIS plans or changes to your asset management process)

We have a small service area and are actively removing our pole contacts and going buried. We currently do not have any plans for automating our inspection process.

If there are questions about the short form or its deadline, please reach out.
