

**PUBLIC UTILITY COMMISSION OF OREGON
STAFF REPORT**

PUBLIC MEETING DATE: November 21, 2019

REGULAR **CONSENT** **EFFECTIVE DATE** November 8, 2019

DATE: November 12, 2019

TO: Public Utility Commission

FROM: Mitchell Moore

THROUGH: Michael Dougherty and John Crider **SIGNED**

SUBJECT: PORTLAND GENERAL ELECTRIC:
(Docket No. UM 1977(1))
Requests reauthorization of deferred accounting for start-up costs associated with the Community Solar Program Implementation.

STAFF RECOMMENDATION:

Staff recommends that the Commission approve Portland General Electric's application to reauthorize deferred accounting of start-up expenses related to the Oregon Community Solar Program (CSP) for the 12-month period beginning November 8, 2019.

DISCUSSION:

Issue

Whether the Commission should approve Portland General Electric's application to defer for later rate-making treatment of O&M start-up costs related to the development of the CSP.

Applicable Rule or Law

Portland General Electric (PGE) submits this deferral application in accordance with ORS 757.259 and OAR 860-027-0300 seeking an order from the Oregon Public Utility Commission (OPUC) that authorizes the company to defer start-up costs related to the CSP in such a way that will support an automatic adjustment clause rate schedule with an associated balancing account mechanism to track the ongoing costs and recovery amounts for the O&M start-up costs of the program. ORS 757.259 authorizes the Commission to allow a utility to defer expenses or revenues for later recovery in rates in

order to minimize the frequency of rate changes or to appropriately match the costs and benefits to customers. OAR 860-027-0300 sets requirements for deferral applications for energy and large telecommunications utilities.

ORS 757.386 and OAR 860-088-0160 permit utilities to recover all start-up costs prudently incurred during the development or modification of the CSP in electric company rates. Further, the rules specify that these costs include both:

- Start-up Program Administrator (PA) and Low Income Facilitator (LIF) costs; and
- Utilities' prudently-incurred start-up costs.¹

Analysis

Background

The Community Solar Program, implemented in Senate Bill (SB) 1547 and codified at ORS 757.386, establishes a program for the procurement of electricity from community solar projects. The Commission's subsequent CSP rules required electric companies to conduct several activities in support of the program, such as entering into a 20-year power purchase agreement with a certified project.

The CSP framework established by the Commission provides for a program start-up phase for program development and an on-going phase that will start once the CSP is fully operational.

In accordance with SB 1547 Section 22(7)(c) and OAR 860-088-0160 regarding CSP funding, electric utilities can recover start-up costs prudently incurred during the development or modification of the program (start-up phase) through electric utility rates. On-going costs related to the program will be collected from program participants, and will not be deferred.

Description of Amounts

As defined in OAR 860-088-0160(1), start-up costs include costs associated with the Program Administrator (PA) and Low Income Facilitator (LIF), and each electric utility's prudently incurred start-up costs associated with implementing the CSP. These costs include, but are not limited to, costs associated with customer account information transfer and on-bill crediting and payment, but exclude any costs associated with the electric utility developing a CSP solar project. PGE's deferral application includes expected O&M start-up costs associated with the Program Administrator as selected through OPUC Staff's Request for Proposal, O&M costs related to the Low Income Facilitator, modifications to PGE's information technology/billing systems, legal and other professional fees, costs related to regulatory compliance, and any other

¹ OAR 860-088-0160(1).

incremental O&M start-up costs associated with the implementation of the CSP that PGE may incur.

Reason for Deferral

PGE seeks deferred accounting treatment of the O&M start-up costs associated with the PA, LIF, and the implementation of the CSP pursuant to ORS 757.259(2)(e). The deferral is necessary as SB 1547 requires the implementation of the program and allows utility recovery of all prudently-incurred CSP start-up costs. The associated O&M start-up costs are not currently in base rates and granting this application would minimize the frequency of rate changes and appropriately match the costs and benefits to customers.

Proposed Accounting

PGE proposes to continue recording O&M start-up costs associated with the CSP as a regulatory asset in FERC account 182.3 (Other Regulatory Assets), with a credit to FERC account 456 (Other Revenue). In the absence of a deferred accounting order from the Commission, PGE would record costs to various FERC expense accounts.

Estimate of Amounts

At this time, PGE cannot accurately estimate the total costs to be incurred for supporting the CSP because the processes and procedures for the implementation of the program continue to be under review and development.

Information Related to Future Amortization

- Earnings Review – PGE proposes that cost recovery associated with the CSP start-up not be subject to an earnings review as it would be subject to an automatic adjustment clause.
- Prudence Review –The prudence review should include verification of the accounting methodology used to determine the final amortization balance.
- Sharing Percentages – All prudently incurred costs are to be recoverable by PGE with no sharing mechanism.
- Rate Spread/Design – Applicable costs will be allocated to each schedule using the applicable schedule's forecasted energy on the basis of an equal percent generation revenue applied on a cents-per-kilowatt hour basis.
- Three Percent Test (ORS 757.259(7) and (8)) – The three percent test measures the annual overall average effect on customer rates resulting from deferral amortizations. This test limits the aggregated deferral amortizations during a 12-month period to no more than three percent of the utility's gross revenues for the preceding year. The amortization of the CSP start-up costs will be subject to the three percent test.

Docket No. UM 1977(1)

Conclusion

Staff concludes PGE's request to continue deferring the O&M start-up costs associated with the CSP meets the requirements of ORS 757.259 and OAR 860-027-0300, and should be approved by the Commission.

PROPOSED COMMISSION MOTION:

Approve PGE's application to reauthorize deferral of O&M start-up costs associated with the CSP start-up for the 12-month period beginning November 8, 2019.
