8.1.5.1.2	208 V, Single Phase	RC	\$26.83	\$32.44	\$27.95	\$30.15	\$31.09	\$ 29.69	\$34.63
8.1.5.1.3	208 V, Three Phase	RC	\$46.42	\$56.13	\$48.36	\$52.16	\$53.79	\$ 51.37	\$59.92
8.1.5.1.4	240 V, Single Phase	RC	\$30.96	\$37.43	\$32.25	\$34.79	\$35.88	\$ 34.26	\$39.96
8.1.5.1.5	240 V, Three Phase	RC	\$53.57	\$64.76	\$55.80	\$60.18	\$62.06	\$ 59.27	\$69.13
8.1.5.1.6	480 V, Three Phase	RC	\$107.13	\$129.51	\$111.60	\$120.36	\$124.13	\$ 118.55	\$138.27

For 8.1.4.1.1 and 8.1.4.1.2 the Qwest-Qwest interconnection agreement contains a rate of \$7.52.

For 8.1.4.1.2 there is only one rate in Oregon for "Equal to or Greater than 60 Amps," though other states have these broken into two separate rate elements. Eschelon's proposal is based on the higher average, \$7.32 for "Equal to 60 Amps" rather than \$7.05 for "Greater than 60 Amps."

22-90(e)	8.1.8.1.4.4	Fiber Terminations - Cable Racking, Dedicated	\$1.85	\$1,516.92	\$2.38	\$158.66

Qwest provided a cost study.

For Collocation Terminations for DS0, DS1 and DS3, Eschelon’s proposed rates are from the current Eschelon-Qwest interconnection agreement.

Also the Qwest-Qwest interconnection agreement contains rates for DS0, DS1 and DS3 collocation terminations. The rates in the Qwest-Qwest ICA are not broken out into the subcomponents as the rates listed above, but rather contain an aggregate rate for block termination for DS0 and DS1 terminations and an aggregate rate for DS3 terminations. The table below compares Eschelon’s proposed rates with Qwest’s proposed rates and the rates contained in the Qwest-Qwest ICA. As seen in the table, Eschelon’s proposals match the rates that Qwest offers to itself.

Issue #	Exhibit A Section	Rate Element	RATE COMPARISON					
			Eschelon		Qwest Proposed		Qwest-Qwest ICA	
			REC	NRC	REC	NRC	REC	NRC
22-90(e)	combination	Collocation Termination - Shared Access DS0, per 100 Pair Block	\$ 1.88	\$ 750.12	\$ 2.19	\$ 1,355.45	\$ 1.88	\$ 750.12
22-90(e)	combination	Collocation Termination - Shared Access DS1, per 28 DS1s	\$ 1.31	\$ 576.09	\$ 1.67	\$ 1,110.03	\$ 1.32	\$ 576.09
22-90(e)	combination	Collocation Termination - Shared Access DS3, per termination	\$0.74	\$323.34	\$0.98	\$653.11	\$0.7409	\$323.34

For Fiber Terminations, Eschelon’s proposal is based upon Qwest provided cost support. Qwest provided two sets of cost support for fiber terminations. Qwest is proposing the Fiber Termination rates that are proposed by Eschelon in other Qwest states, but proposes higher rates in Oregon.

**Issue 22-90(f)**

Issue #	Exhibit A Section	Rate Element	RATE PROPOSAL			
			Eschelon		Qwest	
			REC	NRC	REC	NRC
22-90(f)	8.1.9.2	Card Access, per Employee, per Central Office	\$6.20		\$8.40	

Qwest provided a cost study.

Eschelon’s proposed rates are from the current Eschelon-Qwest interconnection agreement.

The Qwest-Qwest interconnection agreement also has a rate of \$6.20, the rate proposed by Eschelon.

**Issue 22-90(g)**

Issue #	Exhibit A Section	Rate Element	RATE PROPOSAL			
			Eschelon		Qwest	
			REC	NRC	REC	NRC
22-90(g)	8.1.12	Space Availability Report		\$234.38		\$383.94

Qwest provided a cost study.

Eschelon averaged the approved rates in the other large Qwest states.

Section	Rate Element	RC/NRC	AZ	CO	MN	UT	WA	Average	OR Qwest Proposed
8.1.12	Space Availability Report	NRC	\$329.08	\$318.96	\$196.96	\$102.10	\$224.79	\$234.38	383.94

The rate in the Qwest-Qwest interconnection agreement is \$332.94, which is less than what Qwest proposes for its interim rate for Eschelon.

**Issue 22-90(h)**

Issue #	Exhibit A Section	Rate Element	RATE PROPOSAL			
			Eschelon		Qwest	
			REC	NRC	REC	NRC
22-90(h)	8.1.14	Collocation Space Option Administration Fee		\$1,029.40		\$1,308.22

Qwest provided a cost study.

			REC	NRC	REC	NRC
22-90(j)	8.1.16	Joint Inventory Visit Fee, per Visit		\$1,610.12		\$1,869.49

Qwest provided a cost study.

Eschelon’s proposed rate is the same as Qwest’s proposed rate in all other states except Oregon. Qwest proposes a higher rate in Oregon than it is proposing in its other states.

**Issues 22-90(k) and 22-90(l)**

Issue #	Exhibit A Section	Rate Element	RATE PROPOSAL			
			Eschelon		Qwest	
			REC	NRC	REC	NRC
22-90(k)	8.2.1.1	Virtual Collocation - Quote Preparation Fee		\$2,317.79		\$4,951.46
22-90(l)	8.3.1.1	Cageless Physical Collocation - Quote Preparation Fee		\$2,317.79		\$4,956.18
22-90(l)	8.4.1.1	Caged Physical Collocation - Quote Preparation Fee		\$2,317.79		\$5,403.92
22-90(l)	8.15.4.1	Collocation Available Inventory - Cageless - Quote Preparation Fee		\$2,317.79		\$4,956.18
22-90(l)	8.15.4.2	Collocation Available Inventory - Caged - Quote Preparation Fee		\$2,317.79		\$5,403.92

Qwest provided a cost study.

Eschelon’s proposed rates are from the current Eschelon-Qwest interconnection agreement.

The Qwest-Qwest interconnection agreement contains a Quote Preparation Fee rate of \$1,500. Qwest proposes to charge Eschelon three times the amount that it offers to its own CLEC.

Though Eschelon did not rely upon the average of approved rates for this rate element the average is similar to the Eschelon proposed rate.

Section	Rate Element	RC/NRC	AZ	CO	MN	UT	WA	Average	OR Qwest Proposed
8.2.1.1	Virtual Collocation - QPF	NRC	\$1,381.54	\$2,111.27	\$4,323.59	\$0.00	\$4,195.90	\$2,402.46	\$4,951.46
8.3.1.1	Cageless Collocation - QPF	NRC	\$1,381.54	\$2,111.27	\$4,323.59	\$0.00	\$4,561.19	\$2,475.52	\$4,956.18
8.4.1.1	Caged Physical Collocation - QPF	NRC	\$1,381.54	\$2,111.27	\$3,406.46	\$0.00	\$4,561.19	\$2,292.09	\$5,403.92

The Quote Preparation Fees for 8.15.4.1 and 8.15.4.2 are the same as the rates for caged and cageless collocation (8.3.1.1 and 8.4.1.1).

Eschelon’s proposed rates are on a per foot basis, as are the approved rates in the other large Qwest states. Qwest’s proposed rates are fixed and do not vary by foot. Qwest previously had per foot interim rates in Oregon of \$0.2096 for DS0, \$0.2223 for DS1 and \$0.19309 for DS3.

**Issue 22-90(p)**

Issue #	Exhibit A Section	Rate Element	RATE PROPOSAL			
			Eschelon		Qwest	
			REC	NRC	REC	NRC
22-90(p)	8.7.3.1	Virtual Connections - DS0, per 100 Connections		\$191.23		\$214.54
22-90(p)	8.7.3.2	Virtual Connections - DS1, per 28 Connections		\$89.56		\$101.03
22-90(p)	8.7.3.3	Virtual Connections - DS3, per Fiber Spliced		\$6.11		\$6.51

Qwest provided a cost study.

Eschelon’s proposed rates are from Qwest’s SGAT.

The Qwest-Qwest agreement also contains the rates from Qwest’s SGAT, the rates that Eschelon is proposing.

**Issue 22-90(q)**

Issue #	Exhibit A Section	Rate Element	RATE PROPOSAL			
			Eschelon		Qwest	
			REC	NRC	REC	NRC
22-90(q)	8.7.4	Cable Hole, If applicable		\$434.08		\$485.15

Qwest provided a cost study.

Eschelon averaged the approved rates in the other large Qwest states.

Section	Rate Element	RC/NRC	AZ	CO	MN	UT	WA	Average	OR Qwest Proposed
8.7.4	Cable Hole, if Applicable	NRC	\$355.71	\$447.70	\$441.82	\$469.75	\$455.44	\$434.08	\$485.15

The Qwest-Qwest interconnection agreement contains the same rates as Eschelon is proposing for this rate element. This rate is also in the Qwest SGAT.

**Issue 22-90(r) – partial**

Issue #	Exhibit A Section	Rate Element	RATE PROPOSAL			
			Eschelon		Qwest	
			REC	NRC	REC	NRC
22-90(r) - partial	8.8.3	ICDF Collocation - DS1 Circuit, per Two Legs		\$75.00		\$371.21
22-90(r) - partial	8.8.4	ICDF Collocation - DS3 Circuit, per Two Legs		\$612.89		\$1,225.77

Qwest **did not** provide any cost studies supporting these rates.

The Eschelon proposed rate for 8.8.3 is similar to the rate Qwest has been proposing in other states. For example, in the on going Minnesota UNE cost case Qwest proposed \$74.93.

The Eschelon proposed rate for 8.8.4 is half of the Qwest proposed rate.

**Issue 22-90(s) - partial**

8.16.1	Additional Labor Other - Basic	NRC	\$27.26	\$27.69	\$25.24	\$25.37	\$27.42	\$26.60	\$30.68
8.16.2	Additional Labor Other - Overtime	NRC	\$36.41	\$36.98	\$33.59	\$33.89	\$36.62	\$35.50	\$40.84
8.16.3	Additional Labor Other - Premium	NRC	\$45.57	\$46.29	\$41.96	\$42.42	\$45.84	\$44.42	\$51.01
8.16.4	Additional Dispatch	NRC	\$83.10	\$84.40	\$33.97	\$43.63	\$43.39	\$57.70	\$128.56

The rates proposals for 9.20.3.1, 9.20.3.2 and 9.20.3.3 are the same as the rate proposals for 8.16.1, 8.16.2, 8.16.3.

The rate proposal for 9.20.9 is the same as the rate proposal for 8.16.4.

**Issue 22-90(w)**

Issue #	Exhibit A Section	Rate Element	RATE PROPOSAL			
			Eschelon		Qwest	
			REC	NRC	REC	NRC
22-90(w)	8.17.1	Joint Testing - Set Up Fee (price contains a one hour set up fee)		\$40.96		\$65.20
22-90(w)	8.17.2	Joint Testing - Test Time Fee, per half hour		\$20.48		\$27.62

Qwest **did not** provide any cost studies supporting these rates.

Eschelon’s proposed rates are from Qwest’s Oregon Negotiations Template.

Eschelon’s proposed rates are also in the Qwest-Qwest interconnection agreement.

**Issue 22-90(x)**

Issue #	Exhibit A Section	Rate Element	RATE PROPOSAL			
			Eschelon		Qwest	
			REC	NRC	REC	NRC
22-90(x)	9.2.5.5.1.2	DS1 Loop Installation - Basic Installation with Cooperative Testing - Mechanized (first)		\$150.26		\$240.29
22-90(x)	9.2.5.5.2.2	DS1 Loop Installation - Basic Installation with Cooperative Testing - Mechanized (each add'l)		\$121.94		\$218.77
22-90(x)	9.2.6.5.1.2	DS3 Loop Installation - Basic Installation with Cooperative Testing - Mechanized (first)		\$150.26		\$239.67
22-90(x)	9.2.6.5.2.2	DS3 Loop Installation - Basic Installation with Cooperative Testing - Mechanized (each add'l)		\$121.94		\$218.17

Qwest provided a cost study. Qwest’s cost study did not incorporate the Commission’s order in UT 138/UT 139.

Eschelon averaged the approved rates in the other large Qwest states.

Section	Rate Element	RC/NRC	AZ	CO	MN	UT	WA	Average	OR Qwest Proposed
	Basic Installation with Cooperative Testing (DS1)								
9.2.5.5.1.2	Mechanized (first)	NRC	\$169.69	\$176.82	\$72.65	\$128.08	\$204.07	\$150.26	\$240.29

**Issue 22-90(y) and 22-90(aa) partial**

Issue #	Exhibit A Section	Rate Element	RATE PROPOSAL			
			Eschelon		Qwest	
			REC	NRC	REC	NRC
22-90(y)	9.2.8	Private Line / Special Access to Unbundled Loop Conversion		\$16.72		\$38.18
22-90(aa)	9.23.6.5	Private Line / Special Access to LMC Conversion		\$16.72		\$38.18
22-90(aa)	9.23.7.6	Private Line / Special Access to EEL Conversion		\$16.72		\$38.18

Qwest provided a cost study. Qwest's cost study did not incorporate the Commission's order in UT 138/UT 139.

Eschelon averaged the approved rates in the other large Qwest states.

Section	Rate Element	RC/NRC	AZ	CO	MN	UT	WA	Average	OR Qwest Proposed
9.2.8	PL / SA to Unbundled Loop Conversion	NRC	\$40.32		1.35	\$8.48		\$16.72	\$38.18

The rates for 9.2.8, 9.23.6.5 and 9.23.7.6 are from the same cost study and thus the proposals are the same for these three rate elements.

**Issue 22-90(aa)**

Issue #	Exhibit A Section	Rate Element	RATE PROPOSAL			
			Eschelon		Qwest	
			REC	NRC	REC	NRC
22-90(aa)	9.6.11.1	UDIT Rearrangement - DSO Single Office		\$122.25		\$171.64
22-90(aa)	9.6.11.2	UDIT Rearrangement - DSO Dual Office		\$127.98		\$215.90
22-90(aa)	9.6.11.3	UDIT Rearrangement - High Capacity Single Office		\$145.05		\$231.72
22-90(aa)	9.6.11.4	UDIT Rearrangement - High Capacity Dual Office		\$151.17		\$260.28
22-90(aa)	9.6.12	Private Line / Special Access to UDIT Conversion		\$70.91		\$123.96

Qwest provided a cost study. Qwest's cost study did not incorporate the Commission's order in UT 138/UT 139.

For 9.6.11.1, 9.6.11.2, 9.6.11.3 and 9.6.11.4 Eschelon averaged the approved rates in the other large Qwest states.

Section	Rate Element	RC/NRC	AZ	CO	MN	UT	WA	Average	OR Qwest Proposed
	UDIT Rearrangement								
9.6.11.1	DSO Single Office	NRC	\$215.19	\$135.07	\$45.54	\$72.57	\$142.88	\$122.25	\$171.64
9.6.11.2	DSO Dual Office	NRC	\$173.14	\$177.78	\$79.64	\$96.06	\$113.27	\$127.98	\$215.90
9.6.11.3	High Capacity, Single Office	NRC	\$261.31	\$135.83	\$46.10	\$106.66	\$175.35	\$145.05	\$231.72
9.6.11.4	High Capacity, Dual Office	NRC	\$234.17	\$163.40	\$80.20	\$121.82	\$156.24	\$151.17	\$260.28

For 9.6.12 there are no approved rates in other states. Eschelon made a few adjustments to Qwest's cost study in order to make it more consistent with UT 138/UT 139.

- Adjusted study to reflect mechanized order
- Adjusted study to reflect a 98% flow through
- Removed cost associated with the activity, "COORDINATE AS ICO, if co-provided with independent, ensure entries on asr and negotiate dates" as Eschelon is not an ICO

- Eschelon **did not** make changes to the labor time estimates and other probabilities as the information to make these changes is not in Eschelon’s possession

Note the Eschelon proposed rate has been corrected to show \$70.91.

**Issue 22-90(ab)**

Issue #	Exhibit A Section	Rate Element	RATE PROPOSAL			
			Eschelon		Qwest	
			REC	NRC	REC	NRC
22-90(ab)	9.7.1.1	UDF, Initial Records Inquiry, Simple		\$135.57		\$217.86
22-90(ab)	9.7.1.2	UDF, Initial Records Inquiry, Complex		\$169.70		\$258.56
22-90(ab)	9.7.4.1.1	UDF-IOF Single Strand Order Charge, per First Strand/Route/Order		\$373.22		\$513.92
22-90(ab)	9.7.4.1.2	UDF-IOF Single Strand Order Charge, per Add'l Strand/Route/Order		\$187.08		\$262.68
22-90(ab)	9.7.4.1.4	UDF-IOF Single Strand Termination, per Strand/Office	\$4.01		\$4.90	
22-90(ab)	9.7.4.1.5	UDF-IOF Single Strand Fiber Cross Connect, per Strand	\$1.84	\$11.65	\$2.63	\$19.93
22-90(ab)	9.7.5.1.1	UDF-IOF - per pair, Order Charge, per First pair/Route/Order		\$373.22		\$513.93
22-90(ab)	9.7.5.1.2	UDF-IOF - per pair, Order Charge, per Add'l pair/Route/Order		\$187.08		\$262.68
22-90(ab)	9.7.5.1.5	UDF-IOF - per pair, Fiber Cross Connect, per pair	\$3.55	\$11.65	\$5.26	\$19.93
22-90(ab)	9.7.6.	Dark Fiber Splice		\$565.67		\$668.61

Qwest provided a cost study, except for 9.7.4.1.4. Qwest’s cost study did not incorporate the Commission’s order in UT 138/UT 139.

Eschelon averaged the approved rates in the other large Qwest states.

Section	Rate Element	RC/NRC	AZ	CO	MN	UT	WA	Average	OR Qwest Proposed
	Initial Records Inquiry								
9.7.1.1	Simple	NRC	\$156.67	\$159.13	\$115.22	\$87.50	\$159.32	\$135.57	\$217.86
9.7.1.2	Complex	NRC	\$199.77	\$202.90	\$131.12	\$111.56	\$203.15	\$169.70	\$258.56
	IOF - Single Strand								
9.7.4.1.1	Order Charge, per First Strand / Route / Office	NRC	\$553.66	\$432.07		\$167.83	\$339.31	\$373.22	\$513.92
9.7.4.1.2	Order Charge, Each Additional Strand / Route / Office	NRC	\$267.08	\$172.68		\$107.59	\$200.96	\$187.08	\$262.68
9.7.4.1.4	Termination, per Strand / Office	RC	\$5.23	\$4.66		\$3.06	\$3.08	\$4.01	\$4.90
9.7.4.1.5	Fiber Cross-Connect, per Strand	RC	\$2.17	\$1.94		\$1.53	\$1.71	\$1.84	\$2.63
9.7.4.1.5	Fiber Cross-Connect, per Strand	NRC	\$8.64	\$19.93		6.39	\$11.63	\$11.65	\$19.93
9.7.6	Dark Fiber Splice			\$658.93			\$472.20	\$565.57	\$668.61

For 9.7.4.1.4 and 9.7.4.1.5 Eschelon averaged both the Commission approved rates and the Qwest proposed rates.

The rates for 9.7.5.1.1, 9.7.5.1.2 and 9.7.5.1.5 are the same as the rates for 9.7.4.1.1, 9.7.4.1.2 and 9.7.4.1.5.

Qwest provided a cost study. Qwest’s cost study did not incorporate the Commission’s order in UT 138/UT 139.

There are no approved rates in other states. Eschelon made a few adjustments to Qwest’s cost study in order to make it more consistent with UT 138/UT 139.

- Adjusted study to reflect a 98% flow through
- Eschelon **did not** make changes to the labor time estimates and other probabilities as the information to make these changes in not in Eschelon’s possession

Note the Eschelon proposed rates have been corrected to show \$107.93 and \$154.25.

The rates 9.23.7.7.1 and 9.23.7.7.2 are the same as the rates for 9.23.6.8.1 and 9.23.6.8.2.

**Issue 22-90(ae)**

Issue #	Exhibit A Section	Rate Element	RATE PROPOSAL			
			Eschelon		Qwest	
			REC	NRC	REC	NRC
22-90(ae)	10.7.12	Innerduct Occupancy Fee, per Linear Foot, per Year	\$0.31		\$0.41	
22-90(ae)	10.7.12.1	Microduct Occupancy Fee, per Microduct, per Foot, per Year	\$0.26		\$0.47	

Qwest **did not** provide cost studies in Oregon to support these rates. Qwest has provided cost studies in Arizona and Minnesota.

The rate for 10.7.12 is determined based on an FCC cost methodology. Qwest did not supply the cost support for its proposal, only the rate. Eschelon's proposed rate is based on the average of Qwest's proposed rate in four other states. In these four states, Eschelon is not challenging Qwest's proposed innerduct rate. Eschelon will agree to a rate based upon the FCC methodology, provided that rate is current and Eschelon is able to review the cost support.

Section	Rate Element	RC/NRC	AZ	CO	MN	UT	WA	Average	OR Qwest Proposed
10.7.12	Innerduct Occupancy Fee, per Linear Foot	RC		\$0.3390	\$0.1862	\$0.3455	\$0.3700	\$0.3102	\$0.4218

The rate for 10.7.12.1 depends upon the rate for 10.7.12. Eschelon took the cost study Qwest provided in Arizona as part of the arbitrations and updated its assumptions to be consistent with recent assumptions Qwest made in the Minnesota UNE case regarding the use of contract labor. Eschelon incorporated the rate form 10.7.12 to produce the rate for 10.7.12.1.

### CFA Change Chronology for Limit of One

- **9/11/06:** Qwest issues Level 3 CMP Notice (PROS.09.11.06.F.04161.P\_&\_I\_Overview\_V91) with an effective date of 10/26/06. This notice limited the CFA changes to one on the day of the cut.

Link to notice PROS.09.11.06.F.04161.P\_&\_I\_Overview\_V91 (also attached):  
[http://www.qwest.com/wholesale/cnla/uploads/PROS.09.11.06.F.04161.P\\_&\\_I\\_Overview\\_V91.doc](http://www.qwest.com/wholesale/cnla/uploads/PROS.09.11.06.F.04161.P_&_I_Overview_V91.doc)

- **10/18/2006** Change Disposition of P&I CFA Changes (PROS.09.11.06.F.0461.P\_&\_I\_Overview\_V91) was included as a Walk On Agenda Item for the October 18, 2006 Product and Process CMP Meeting. Eschelon's email objecting to the level of disposition of notice PROS.09.11.06.F.04161.P\_&\_I\_OverviewV91 as well as an excerpt from the 10/18/06 CMP Minutes discussing the request to change the level of the notice are attached.

[http://www.qwest.com/wholesale/calendar/attachments/NovemberProdProcDistributionPackage\\_34.pdf](http://www.qwest.com/wholesale/calendar/attachments/NovemberProdProcDistributionPackage_34.pdf)

- **10/20/06:** Qwest issues a Level 1 CMP notice (PROS.10.20.06.F.04281.Retract\_CFA\_P&I\_OvrwV91), effective immediately. This notice retracted the Level 3 notice issued on 9/11/06.

Link to Notice PROS.10.20.06.F.04281.Retract\_CFA\_P&I\_OvrwV91 (also attached):  
[http://www.qwest.com/wholesale/cnla/uploads/PROS.10.20.06.F.04281.Retract\\_CFA\\_P&I\\_OvrwV91.doc](http://www.qwest.com/wholesale/cnla/uploads/PROS.10.20.06.F.04281.Retract_CFA_P&I_OvrwV91.doc)

- **10/26/2006:** Qwest issues MCC Notice (PROS.10.26.06.F.04290.MCC\_Verbal\_SUPP\_CFA effective 11/1/2006), with an effective date of 11/1/06. This notice explained that Qwest is still intending to hold the CLEC to one CFA change on the due date, but directs Qwest's Testers to "remain flexible and use their best judgment to determine if it is reasonable to expect the next CFA change to resolve the issue" and if Qwest's personnel decide that this expectation is not reasonable, the "CFA change should be refused and the CLEC should be pointed to the supplemental process." Qwest's notice also states that "If Qwest receives frequent attempts from a CLEC to verbally request numerous changes on DD before a good CFA is found, the Tester should post a

Customer Jeopardy to the order and contact the CLEC's Service Manager to inform them of the situation.”

Link to Notice: PROS.10.26.06.F.04290.MCC\_Verbal\_SUPP\_CFA (also attached):

<http://www.qwest.com/wholesale/cnla/uploads/PROS%2E10%2E26%2E06%2EF%2E04290%2EMCC%5FVerbal%5FSUPP%5FCFA%2Edoc>

- **10/31/2006:** Eschelon sends email to Qwest asking Qwest to retract PROS.10.26.06.F.04290.MCC\_Verbal\_SUPP\_CFA (Email Attached). Eschelon explains that Qwest's 10/26/06 notice, which effectively limits CFA changes to one per circuit on the day of the cut, is a change in process and should be issued as a Level 4 CMP change request. Eschelon also explains that limiting CFA changes on the day of the cut to one per circuit was not Qwest's intent and that Qwest has been performing multiple CFA changes for four years. In Eschelon's response, Eschelon said:

“CR 5548229 was implemented and completed in August of 2002. Although Qwest is now claiming that Qwest had always intended to limit CFA changes to one per circuit, since the process was implemented *more than four years ago*, Qwest has been performing multiple CFA changes for CLECs. CR 5548229 and the Qwest PCAT do not limit verbal CFA changes on the due date to one per circuit. In fact, an example used for purposes of implementing the CR contains multiple changes to one CFA (See [http://www.qwest.com/wholesale/cmp/archive/CR\\_5548229.htm](http://www.qwest.com/wholesale/cmp/archive/CR_5548229.htm) ). Therefore it is clear from the face of the CR's status history that the intent was not to limit this to one.”

Eschelon's 10/31/06 email requesting retraction of Qwest's MCC notice is attached.

- **11/15/2006** MCC Retraction Request (PROS.10.26.06.F.04290.MCC\_Verbal\_SUPP\_CFA) is included as a Walk On Agenda Item for the November 15, 2006 Product and Process CMP Meeting.

Link to November 15, 2006 Product and Process CMP Meeting Minutes (excerpt from CMP Minutes discussing Eschelon's retraction request of this notice is attached):

[http://www.qwest.com/wholesale/calendar/attachments/CMPMeetingMinutesSystem2006-11-15\\_34.pdf](http://www.qwest.com/wholesale/calendar/attachments/CMPMeetingMinutesSystem2006-11-15_34.pdf)

**Announcement Date:** September 11, 2006  
**Proposed Effective Date:** October 26, 2006  
**Document Number:** PROS.09.11.06.F.04161.P\_&\_I\_Overview\_V91  
**Notification Category:** Process Notification  
**Target Audience:** CLECs, Resellers  
**Subject:** CMP - Provisioning and Installation Overview - V91.0  
**Level of Change:** Level 3

**Summary of Change:**

On September 11, 2006, Qwest will post planned updates to its Wholesale Product Catalog that include new/revised documentation for Provisioning and Installation Overview. These will be posted to the Qwest Wholesale Document Review Site located at <http://www.qwest.com/wholesale/cmp/review.html>

Updates are associated with a change to verbal supplement for CFA slot changed on the due date. In the Provisioning Points of Interface section under Provider Initiated Activity (PIA), Qwest will be providing additional language which describes the Qwest and CLEC responsibilities for CFA or slot changes.

Current operational documentation for this product or business procedure is found on the Qwest Wholesale Web Site at this URL:  
<http://www.qwest.com/wholesale/clecs/provisioning.html>

**Comment Cycle:**

CLEC customers are encouraged to review these proposed changes and provide comment at any time during the 15-day comment review period. Qwest will have up to 15 days following the close of the comment review to respond to any CLEC comments. This response will be included as part of the final notification. Qwest will not implement the change sooner than 15 days following the final notification.

Qwest provides an electronic means for CLEC customers to comment on proposed changes. The Document Review Web Site provides a list of all documents that are in the review stage, the process for CLECs to use to comment on documents, the submit comment link, and links to current documentation and past review documents. The Document Review Web Site is found at <http://www.qwest.com/wholesale/cmp/review.html>. Fill in all required fields and be sure to reference the Notification Number listed above.

**Timeline:**

Planned Updates Posted to Document Review Site	Available September 11, 2006
CLEC Comment Cycle on Documentation	Beginning September 12, 2006

Begins	
CLEC Comment Cycle Ends	5:00 PM, MT September 26, 2006
Qwest Response to CLEC Comments (if applicable)	Available October 11, 2006 <a href="http://www.qwest.com/wholesale/cmp/review_archive.html">http://www.qwest.com/wholesale/cmp/review_archive.html</a>
Proposed Effective Date	October 26, 2006

If you have any questions on this subject, please submit comments through the following link: <http://www.qwest.com/wholesale/cmp/comment.html>.

Sincerely

Qwest Corporation

Note: In cases of conflict between the changes implemented through this notification and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. All information provided on the site describes current activities and process. Prior to any modifications to existing activities or processes described on the web site, wholesale customers will receive written notification announcing the upcoming change.

**To:** Bonnie Johnson; [Qwest CMP email redacted]  
**Cc:** Isaacs, Kimberly D.; Johnson, Bonnie J.  
**Subject:** Request change to level/Change to CFA Change Process Process Notice:  
Interconnection: GN: CMP - Provisioning and Installation Overview V91: Effective 10-26-06  
**Importance:** High

Eschelon object to this notice. CFA issues have been part of ICA negotiations and are being arbitrated. Qwest is using CMP as a litigation tactic. If Qwest has a proposal, it should make it in negotiations.

If Qwest pursues this change and does so through CMP, please change the level designation to level 4. Qwest's proposed change, per 5.4.5 of the CMP document, is "Limiting the availability and applicability or functionality of an existing product or existing feature" and is a level 4 change. Qwest is limiting the use of a process which has a significant impact to CLECs.

Thanks,

Bonnie Johnson

Interconnection: GN: CMP - Provisioning and Installation Overview V91: Effective 10-26-06

Hi Bonnie,

Qwest has received your request on Process Notice: Interconnection: GN CMP - Provisioning and Installation Overview V91. We will be meeting internally to determine next steps.

Thanks,

Lynn Stecklein  
Qwest Wholesale CRPM

**The following is an excerpt from the the 10/18/06 CMP Minutes that discusses Eschelon's request to change the level of Qwest notice PROS.09.11.06.F.04161.P\_&\_I\_Overview\_V91.**

**Walk On Items**

**Change Disposition for P&I CFA Changes**

**(PROS.09.11.06.F.04161.P\_&I\_OverviewV91)**

Susan Lorence-Qwest stated that there was a request to change the disposition on a September 11th Level 3 Notice for an update to the Provisioning & Installation PCAT. Susan stated that Eschelon requested that the Notice be changed to a Level 4. Susan then noted that Qwest issued a delayed response, in order to allow discussion to take place at this CMP Meeting.

Cindy Buckmaster-Qwest stated that there was confusion surrounding this notice and stated that the intent is for when a change to a CFA needed and the request is verbal; when making one CFA change, verbally, on the due date. Cindy stated that the notice was not intended to change the process; it is only to limit a verbal CFA change to one. Cindy then noted that there are times when a CLEC guesses at a CFA that could work. Cindy stated that Qwest is trying to free-up CLECs and the testers and to make sure that the CFAs are working CFAs.

Kim Isaacs-Eschelon stated that she understood the intent of the notice and stated that Qwest believes that the process was set-up as 1 verbal CFA. Kim stated that in reality, that is not the process that Qwest and the CLECs are following. Kim noted that in practice, multiple CFA changes are allowed. Kim stated that this notice is limiting the existing process and believes that it should be a Level 4 change. [Comment received from Eschelon: Kim Isaacs-Eschelon stated that she understood the intent of the notice and stated that Qwest may believe that the process was set-up as 1 verbal CFA.]

Cindy Buckmaster-Qwest stated that it is only to clarify the limitation of a verbal CFA change.

Kim Isaacs-Eschelon said that she understood but the Qwest testers do not believe it is just one. Kim said that if this is a change, this needs to be a Level 4, as we are limiting the availability of a process. Kim stated that this is reality, even if it is not the intent. [Comment received from Eschelon: Kim Isaacs-Eschelon said that she understood that was Qwest intent with the notice but the Qwest testers do not believe it is just one. Kim said that this is a change, this needs to be a Level 4, as we are limiting the availability of a process. Kim stated that this is reality, even if it was not Qwest's intent.]

Cindy Buckmaster-Qwest stated that she would hate to get to the point of doing a Level 4 when folks are not following the process. Cindy noted that the PCAT states "a CFA change". Cindy stated that the testers probably stepped out of the process in order to satisfy the customer. Cindy stated that she did not want to take that away. Cindy then stated that she would follow CMP and do whatever needed to be done. Cindy stated that if the testers had to follow hard and fast rules, her concern was what that really meant as far as satisfying the customer.

Susan Lorence-Qwest asked if there was consensus that this is a Level 4 change via a CR. Susan then stated that this could go to a formal vote, if there is a general concern.

Laurie Fredricksen-Integra stated that she is in support of Eschelon. Laurie stated that the function is out there and stated that the CLECs are not randomly selecting CFAs; they assume that the next one is correct.

Cindy Buckmaster-Qwest stated that it is important to point out that most CLECs follow the 1 or 2 CFA. There are a few circumstances where have 5, 6, or 7 CFA changes on the due date. Cindy stated that this ties up the testers and the CLECs. Cindy said that this is where we struggled. Cindy stated that when this was implemented, it was a Level 2 clarification. Cindy noted that she understood that there are personnel out of process and noted that she wants to be flexible enough to satisfy the CLECs. Cindy stated that if this is a Level 4, will have to pull back and stick to one verbal CFA change.

Kim Isaacs-Eschelon asked if the proposed language allows the testers to vary.

Cindy Buckmaster-Qwest stated that we would clarify with the tester that a verbal CFA change can be done once. Cindy stated that there are many opportunities to determine if the CFA is working prior to the due date. Cindy noted that there are some CLECs that wait until the due date to worry about the CFA, find out that the CFA is not good, and then guess at CFAs that might work. Cindy stated that we would go to the testers and tell them that the rule is 1 verbal CFA change, and if the CLEC is desperate for a line and can guarantee that the CFA would work, the tester would help the customer. Cindy stated that Qwest does not want to be hard and tell the testers that only 1 verbal CFA change is allowed. Cindy stated that if that is the direction for Qwest, it would be a process change.

Kim Isaacs-Eschelon suggested that Qwest could pull the language and retract, and deal with the bad players individually. Kim stated that it could be a Level 4 or a retraction of the change. Kim stated that if Qwest feels that a Level 4 would be worse, then retract, and leave the language as is. [Comment received from Eschelon: Kim stated that if Qwest feels that a Level 4 would be would lead to less flexibility between the Qwest and CLEC testers, then retract, and leave the language as is.] Kim then stated that Qwest could deal with the bad players.

Laurie Fredricksen-Integra stated that she wants the testers to have leeway and that the language prohibits that.

Cindy Buckmaster-Qwest stated that the intent was to clarify with the CLECs, and internally, that the intent is 1 verbal CFA change. Cindy stated that Qwest could move forward however the CLECs feel this issue should move. Cindy stated that if this is a Level 4 and should have further discussion, she is okay with that.

Laurie Fredricksen-Integra asked if Qwest would withdraw the change if all understood that the intent is 1 verbal CFA change.

Susan Lorence-Qwest stated that Qwest could send an MCC to remind personnel of the process, and if find that Qwest is not able to handle the problem, Qwest would submit a Level 4 change. Susan stated that Qwest would retract the Level 3, issue an MCC, document externally stating the intent, and remind people to follow the process. Susan

then stated that Qwest would submit a Level 4 if this does not get in control. Susan then asked if everyone was agreeable to the approach.

Kim Isaacs-Eschelon said that it sounded good but that the MCC needed to be internal and external. Kim then stated that she was concerned about the intent and the CLECs responsibility to provide 1 good CFA. Kim stated that she would like it to say that best judgment should be used. Kim then stated that she did not want it to be too restricting. [Comment received from

Eschelon: Kim Isaacs-Eschelon said that it sounded good but that the MCC needed to be internal and external. Kim then stated that she was concerned about Qwest's believe that the of the original change request was based on the CLECs responsibility to provide 1 good CFA. Kim stated that she would like it to say that best judgment should be used. Kim then stated that she did not want the MCC to be too restricting and requested that Qwest communicate that there is flexibility in the process.]

Cindy Buckmaster-Qwest stated that she agreed with Eschelon.

Susan Lorence-Qwest asked if there were any other concerns on the approach. There were no other concerns brought forward.

**Announcement Date:** October 20, 2006  
**Effective Date:** Immediately  
**Document Number:** PROS.10.20.06.F.04281.Retract\_CFA\_P&I\_OvrvwV91  
**Notification Category:** Process Notification  
**Target Audience:** CLECs, Resellers  
**Subject:** CMP – Retract Provisioning and Installation Overview - V91.0  
**Level of Change:** Level 1

On October 20, 2006, Qwest is providing this notification to retract the Level 3 Notice PROS.09.11.06.F.04161.P\_and I\_Overview\_V91 which was announced on September 11, 2006. This proposed documentation update was to the Provisioning and Installation Overview PCAT. Qwest received a CLEC request to change the disposition of this notification to a higher level. To allow time to work on this issue, Qwest issued a Delayed Response to Comments via Notice PROS.10.11.06.F.04254.DelayResp\_Prov\_InstallV91 on October 11, 2006. After discussing the issues in the monthly CMP meeting on October 18, 2006, an agreement was reached between Qwest and the CLEC community to retract this proposed change and to send an internal and external MCC to reinforce the “Verbal supplement for CFA slot change on the Due Date” process.

The proposed updates were associated with a change to verbal supplement for CFA slot changed on the due date. In the Provisioning Points of Interface section under Provider Initiated Activity (PIA), Qwest was going to provide additional language which describes the Qwest and CLEC responsibilities for CFA or slot changes.

The current version of the Provisioning and Installation Overview will remain operational and the document can be found on the Qwest Wholesale Web Site at this URL:

<http://www.qwest.com/wholesale/clecs/provisioning.html>

**Comment Cycle:**

No formal comment cycle applies. CLECs who feel the change(s) described in this Level 1 notification alter(s) CLEC operating procedures should immediately contact the Qwest CMP Manager, by e-mail, at [cmpcr@qwest.com](mailto:cmpcr@qwest.com).

Sincerely

Qwest Corporation

Note: In cases of conflict between the changes implemented through this notification and any CLEC

interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. Bonnie Johnson  
Oregon Telecom Inc  
730 2nd Ave. South Suite 900  
Minneapolis, MN 55402  
bjjohnson@eschelon.com

TO:Bonnie Johnson

**Announcement Date:** October 26, 2006  
**Effective Date:** November 1, 2006  
**Document Number:** PROS.10.26.06.F.04290.MCC\_Verbal\_SUPP\_CFA  
**Notification Category:** Process Notification  
**Target Audience:** CLECs, Resellers,  
**Subject:** MCC - Verbal supplement for CFA slot change on the Due Date

**Summary of Change or Description of the Activity:**

On October 26, 2006, Qwest will send an MCC notice for Verbal supplement for CFA slot change on the Due Date. This MCC becomes effective on November 1, 2006.

Qwest recently proposed PCAT language to the Provisioning and Installation Overview which was intended to remind CLECs to check their CFAs before assigning them and to clarify that only one (1) verbal supplement for CFA slot change was to be accepted on Due Date (DD). However in discussion with the CLEC community at the Monthly CMP Meeting held on October 18, 2006, this language was not adopted. Instead it was agreed to retract and distribute a MCC both internally and externally to reiterate the current process. See PROS.10.20.06.F.04281.Retract\_CFA\_P&I\_OvrwV91 which was sent on October 20, 2006.

The "Verbal supplement for CFA process" is intended to allow one (1) verbal supplement on DD. However, as customer service is always Qwest priority, in order to maintain the best experience from a customer service perspective, Qwest Testers should remain flexible and use their best judgment to determine if it is reasonable to expect the next CFA change to resolve the issue. If not, the subsequent CFA change should be refused and the CLEC should be pointed to the supplemental process. If Qwest receives frequent attempts from a CLEC to verbally request numerous changes on DD before a good CFA is found, the Tester should post a Customer Jeopardy to the order and contact the CLEC's Service Manager to inform them of the situation.

Related information can be found on the Qwest Wholesale Web site at this URL:  
<http://www.qwest.com/wholesale/clecs/provisioning.html>

If you have any questions or would like to discuss this notice please contact your Qwest Service Manager, Mary Dobesh on (801) 239-5335. Qwest appreciates your business and we look forward to our continued relationship.

Sincerely,

Qwest Corporation

Note: In cases of conflict between the changes implemented through this notification and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of

Subject: FW: Process Notice: Interconnection: GN: CMP - MCC Verbal SUPP for CFA on DD: Effective 11-1-06

Sent: Tue 10/31/2006 3:53 PM

Eschelon asks Qwest to retract PROS.10.26.06.F.04290.MCC\_Verbal\_SUPP\_CFA Title: MCC - Verbal supplement for CFA slot change on the Due Date as an MCC type notice because this is a change in process. An MCC should not be used for changes in process. If Qwest desires a change in process, Qwest should submit a level 4 CR. Eschelon does not agree that the change should be made. Eschelon (Kim) said in the CMP meeting Eschelon would review. Eschelon has done so and this is Eschelon's response.

Qwest issued PROS.09.11.06.F.04161.P\_&I\_OverviewV91 (change to the provisioning and installation PCAT) limiting verbal CFA changes on the day of cut to one per circuit. Eschelon requested a change in disposition to a level four CR because Qwest was attempting to change an existing process. When Qwest and CLECs discussed Eschelon's request in the October CMP meeting, Qwest comments included "Cindy stated that the notice was not intended to change the process; it is only to limit a verbal CFA change to one." Limiting CFA changes to one per circuit on the due date is a change in a process, because Qwest has been providing multiple CFA changes.

CR 5548229 was implemented and completed in August of 2002. Although Qwest is now claiming that Qwest had always intended to limit CFA changes to one per circuit, since the process was implemented **more than four years ago**, Qwest has been performing multiple CFA changes for CLECs. CR 5548229 and the Qwest PCAT do not limit verbal CFA changes on the due date to one per circuit. In fact, an example used for purposes of implementing the CR contains multiple changes to one CFA. (See [http://www.qwest.com/wholesale/cmp/archive/CR\\_5548229.htm](http://www.qwest.com/wholesale/cmp/archive/CR_5548229.htm)). Therefore, it is clear from the face of the CR's status history that the intent was not to limit this to one. As stated in the Qwest October 18<sup>th</sup> CMP meeting minutes: Eschelon (Kim) "stated that she understood the intent of the notice and stated that Qwest may believe that the process was set-up as 1 verbal CFA. Kim stated that in reality, that is not the process that Qwest and the CLECs are following. Kim noted that in practice, multiple CFA changes are allowed. Kim stated that this notice is limiting the existing process and believes that it should be a Level 4 change." While Eschelon was willing to acknowledge that Qwest CMP representatives may now believe that was the intent, Eschelon was clear in saying it was not. Four years of experience and the multiple changes example in the status history shows that the limit is not current process. If Qwest's intention had been to limit CFA changes on the due date to one, Qwest would have issued its "clarification" immediately after the CR was implemented in August of 2002. It did not do so, because that was not the intent. The current process used by Qwest and the CLECs has been in place for over four years. If Qwest wants to change it, Qwest needs to follow the CMP Document and issue a level 4 CR, to which Eschelon will object.

Thanks,

Bonnie Johnson  
Director Carrier Relations  
Eschelon Telecom Inc.

**Subject:** Process Notice: Interconnection: GN: CMP - MCC Verbal SUPP for CFA on DD: Effective 11-1-06

**The following is an excerpt from the 11/15/06 CMP Minutes discussing Eschelon's retraction request for Qwest notice PROS.10.26.06.F.04290.MCC\_Verbal\_SUPP\_CFA:**

**MCC Retraction Request: PROS.10.26.06.F.04290.MCC\_Verbal\_SUPP\_CFA**

Mark Coyne-Qwest stated that Qwest and the CLECs reached an agreement during the October CMP Meeting to send out an internal and external MCC to reinforce the current process and to allow flexibility. He said that the MCC was issued and was effective on 11/1/06. Mark said that Eschelon then requested that the MCC be retracted and asked the CLEC Community what changed from the October CMP Meeting and now.

**(Comments to minutes received from Eschelon - Mark Coyne-Qwest stated that he was not at the October meeting but said Qwest and the CLECs reached an agreement during the October CMP Meeting to send out an internal and external MCC to reinforce the current process and to allow flexibility. He said that the MCC was issued and was effective on 11/1/06. Mark said that Eschelon then requested that the MCC be retracted and Mark asked the CLEC Community what changed from the October CMP Meeting and now.)**

Bonnie Johnson-Eschelon stated that she was not available during the October CMP Meeting. She said that Kim (Eschelon) agreed that she would review internally and that Eschelon does not agree that this change should be made. She said that they feel that limiting CFA changes to one per circuit on the due date is a change in process because Qwest has been providing multiple CFA changes for over 4 years. Bonnie said that if you look at the CR submitted in 2002 by Allegiance, it is clear that the intent was not to limit this to one CFA change and Qwest is now saying that what you have been doing is not appropriate and was not the intent of the CR. Bonnie said that there was never any discussion at CMP associated to the single CFA process and that leaving it up to the discretion of the tester is very concerning and not a good decision. She said that there isn't going to be parity. Bonnie said that this is a change in process and not just a clarification.

**(Comments to minutes received from Eschelon - Bonnie Johnson-Eschelon stated that she was not available during the October CMP Meeting. She said that Kim (Eschelon) said that Eschelon would review internally. Eschelon does not agree that this change should be made. Bonnie said that Eschelon feels that limiting CFA changes to one per circuit on the due date is a change in process because Qwest has been providing multiple CFA changes for over 4 years. Bonnie said that, if you look at the CR submitted in 2002 by Allegiance, there was an example of multiple CFA changes in one example and it is clear that the intent was not to limit this to one CFA change. Bonnie said Qwest is now saying that what you have been doing is not appropriate and was not the intent of the CR. Bonnie said that she was in CMP and there was never any discussion at CMP associated to the single CFA process. Bonnie said that leaving it up to the discretion of the tester is very concerning and not a good decision. She said that there isn't going to be parity because a tester may do it for one CLEC but not another. Bonnie said that this is a change in process and not just a clarification.)**

Mark Coyne-Qwest stated that during the October CMP Meeting there was good discussion in regard to this notification. Qwest had stated that the intent of the Level 2 notice was for clarification. He said that the possibility of a different type of notice was

also discussed but the CLECs agreed that the MCC was a better way to proceed and would provide more flexibility. Bonnie Johnson-Eschelon stated that a Level 3 would have allowed additional conversation on the matter.

**(Comments to minutes received from Eschelon - Bonnie Johnson-Eschelon stated that a Level 3 would at least have allowed additional conversation on the matter.)**

Vicki Dryden-Qwest stated that originally the SME team discussed submitting the notice as a Level 2 but did submit a Level 3 notice instead due to the fact that CLECs would likely see this as a change in process. She said that Eschelon requested a retraction stating that this process was “limiting availability” and requested a Level 4.

Bonnie Johnson-Eschelon stated that Eschelon is requesting a Level 4 because this is limiting availability. Mark Coyne-Qwest asked if the other CLECs who agreed with the recommendation in the October Meeting had any input. Laurie Fredricksen-Integra stated that she agreed with Eschelon’s recommendation leaving it up to the tester’s discretion was not a good idea.

**(Comments to minutes received from Eschelon - Mark Coyne – Qwest stated that the notes from the Oct CMP indicated that Qwest was willing to follow the recommendation of the CLECs.)**

Mark Coyne-Qwest said Qwest will meet internally to determine next steps.

Mark Coyne-Qwest asked if there were any additional walk-on items for discussion. There were none brought forward.

The November Product Process CMP Meeting was concluded.

**Change Management Process (CMP)**

**Open Product/Process CR PC013007-3 Detail**

**Title:** Verbal Supp for CFA Change on Due Date

CR Number	Current Status Date	Area Impacted	Products Impacted
PC013007-3	Submitted 1/30/2007	Prov & Installation PCAT	Unbundled Loop

**Originator:** Ocken, Kathy  
**Originator Company Name:** Qwest Corporation  
**Owner:** Buckmaster, Cindy  
**Director:** Coyne, Mark  
**CR PM:** Stecklein, Lynn

**Description Of Change**

Process Change to the Provisioning and Installation Overview PCAT language for the existing PIA value of 10 to add the following: Prior to placing a service request, it is the CLEC responsibility to ensure the CFA is working. If it is determined on Due Date that CFA does not work, Qwest will perform additional testing with the CLEC one time. If the CLEC requests the CFA be changed, it is the responsibility of the CLEC to make sure the new CFA works. Qwest will accept only one verbal CFA change on the Due Date. If the new CFA fails to work, Qwest will place the order in jeopardy status (customer jeopardy). No further action will be taken on Qwest's part until Qwest receives a valid supplemental request to change the Due Date and the CFA (if applicable). Additional charges may apply.

**Subject:** ACTION REQUIRED February Prod/Proc & Systems Meeting Minutes for Review & Feedback

Good Afternoon,

I have attached the minutes from the February Product/Process and Systems CMP Meetings. Please review the documents to ensure that your comments were captured accurately. Please provide your proposed changes no later than 5:00 p.m. MT, Tuesday, February 27, 2007. Please track your changes.

Thank you,  
Peggy Esquibel-Reed  
Qwest Wholesale CMP

**Qwest Wholesale Change Management Process (CMP) Meeting Minutes**

**DRAFT Change Management Process (CMP) Monthly Meeting  
Product - Process  
Wednesday, February 21, 2007**

**Introductions and Announcements**

Mark Coyne-Qwest began the meeting with introductions.

**Prior Monthly Meeting Minutes (Attachment A)**

Mark Coyne-Qwest asked if there were any questions or comments on the Prior Monthly Meeting Minutes. There were no comments or questions brought forward.

**Review Global Action Items (Attachment B)**

There were no Global Action Items for the February Product Process Meeting.

**Review Active CLEC Originated Change Requests (Attachment C)**

**PC010907-1 Changes To Scheduled Customer Due Dates**

Tim Kagele-Comcast presented the CR and stated that the Industry Process is that when a CLEC schedules a port, the interval is 4-days and noted that Comcast has issues when the customer cannot be home at the time of the appointment. Tim stated that Qwests current process is to leave the number in the switch up to 48-hours. Tim stated that Comcast would like the process revised for a next day assurance on a supp. Tim noted that he Comcast wants an FOC on a 1-day due date change, instead of waiting for the standard 4-day norm. Tim noted that a discussion with the CLECs has occurred.

Mark Coyne-Qwest asked if there were any questions regarding this request. There were none brought forward.

Mark Coyne-Qwest stated that Qwest will review and evaluate the request and would provide the response in March.

**Review Active Qwest Initiated Change Requests (Attachment D)**

**PC010307-1 Elimination of Future Delivery and Extended Prompts functions on Qwest Voice Messaging Platform**

Mark Coyne-Qwest stated that the targeted implementation date for this request is 4/10/07.

**PC013007-1 Grandparent CENTRAFLEX 2 in Oregon**

Peggy Esquibel Reed-Qwest stated that Qwest is grandparenting Centraflex System 2 in Oregon and noted that there are no customers utilizing this product. Peggy then noted that due to no customers, Qwest would like to implement this request with a Level 2 notice. Peggy then asked if there were any questions regarding this CR or if there were any objections to implementation via a Level 2 notice. There were no questions or objections brought forward.

This CR moves to Presented Status.

**PC013007-2 Automatic Call Distribution – Electronic Switching System Tariff Elimination**

Peggy Esquibel Reed-Qwest stated that Qwest is grandparenting Automatic Call Distribution-Electronic Switching System Tariff Elimination and noted that there are no customers utilizing this product. Peggy stated that Qwest would also like to implement this CR with a Level 2 notification and asked if there were any questions or objections to the Level 2.

**Qwest Wholesale Change Management Process (CMP) Meeting Minutes**

Bonnie Johnson-Eschelon stated that she had no objection to the Level 2 requests and noted that Eschelon may submit comments.

This CR moves to Presented Status.

**PC013007-3 Verbal Supp for CFA Change on Due Date**

Lynn Stecklein-Qwest stated in October of 2006, Qwest proposed language to the Provisioning and Installation Overview which was intended to remind CLECs to check their CFAs before assigning them and to clarify that only one verbal supplement for CFA slot change was to be accepted on the Due Date. She said that in discussion with the CLEC community at the October Monthly CMP Meeting, this language was not adopted. She said that instead it was agreed that a MCC would be distributed internally and externally to reiterate the current process. Lynn stated that Eschelon requested that Qwest retract the MCC because this was a change in process and that a Level 4 should be submitted. Lynn reviewed the description of change:

This CR is a process change to the Provisioning and Installation Overview PCAT language for the existing PIA value of 10 to add the following: Prior to placing a service request, it is the CLEC responsibility to ensure the CFA is working. If it is determined on the Due Date that the CFA does not work, Qwest will perform additional testing with the CLEC one time. If the CLEC requests the CFA be changed, it is the responsibility of the CLEC to make sure the new CFA works. Qwest will accept only one verbal CFA change on the Due Date. If the new CFA fails to work, Qwest will place the order in a customer jeopardy status. No further action will be taken on Qwest's part until Qwest receives a valid supplemental request to change the Due Date and the CFA (If applicable).

Bonnie Johnson-Eschelon asked for further definition around Qwest performing additional testing one time. She said that specifically her question is that the additional testing issue has been brought forward multiple times before. She said that in this instance it is not the CFA, but the problem is on the Qwest side. She asked if the additional testing means that it would not be a Qwest issue.

Lynn Stecklein-Qwest stated that she will contact the SME and provide the response to Bonnie and also include in the minutes.

**PC102704-1ES and PC102704-1ES2 New Revised title effective 1/11/05: Certain Unbundled Network Elements (UNE) Product Discontinuance (see Description of Change for previous title)**

Mark Coyne-Qwest stated that at the end of the last ad hoc call it was mentioned that Qwest would schedule additional calls in order to continue the discussions on this CR to categorize products on the TRRO Product matrix and try to move forward with a prioritization of products. The original Qwest plan to gain CLEC input on the priority of the various products has not been as successful as we planned or hoped. We heard all the comments on that call and considered all the feedback that another call would just be rehashing the same things again. We then took all that feedback and gave it some additional thought in order to determine what the most logical next step would be, to allow Qwest and the CLEC community to continue to move forward on this issue. What makes sense at this point, to Qwest, is that we issue individual CMP CRs for the products that need to be addressed in CMP and hold discussions for specific CRs or product groupings. That would allow those CLECs with impact on those specific products to have a CMP forum for input on the process related changes associated with these products. It should provide a more meaningful and valuable method for proceeding with this effort for Qwest and for those CLECs who are impacted by these changes. Some, if not all, of those CRs will be submitted for the March 21st CMP Meeting.

Bonnie Johnson-Eschelon stated that on the last call, Cindy Buckmaster (Qwest) committed to taking one of her products, due to Integra's concerns regarding the PCATs, and to re-do the PCAT and meet on those changes. Bonnie asked if Qwest is now not going to do that.

Mark Coyne-Qwest stated that we internally evaluated what would work best and determined that the next step should be to issue the CRs.

Bonnie Johnson-Eschelon stated that she had no comment at this time.

**Qwest Wholesale Change Management Process (CMP) Meeting Minutes  
PC121106-1 Grandfathering ADSL Compatible UBL**

Peggy Esquibel Reed-Qwest stated that the Level 4 re-notice had been sent on February 5<sup>th</sup> and that 2 comments had been received. Peggy noted that the Qwest Response to Comments would be available on March 2<sup>nd</sup> and that the proposed effective date is March 19<sup>th</sup>.

There were no questions or comments brought forward.

This CR is in Development Status.

**Discussion of CMP Operations and Proposed Modifications to CMP Framework**

**PC110906-1CM CMP Document Update – Remove WSD Tier 0 References**

Peggy Esquibel Reed-Qwest stated that this CR, requesting a CMP Document Update to Remove Tier 0 References, was presented in the November CMP Meeting and asked for changes to the CMP Document, to remove Wholesale Service Delivery (WSD) Tier 0 references, to synch-up with changes implemented via a process change early last year. Peggy stated that we also wanted to clarify some language surrounding call center DB tickets. A vote was conducted in December and a no vote was submitted due to concerns regarding proposed language for the call center database tickets. We then revised the language to remove the clarification to the “ticket” references and the revised proposed language is now to only remove Tier 0 from the CMP Document. Peggy asked if there were any questions. None were brought forward. Peggy then stated that the quorum for today’s vote is 5 and noted that that it had been achieved. Peggy then stated that a vote of ‘Yes’ would indicate a preference that updates be made to the CMP Document to remove Wholesale Service Delivery Tier 0 references to synch up with changes implemented via a process change in the 2<sup>nd</sup> quarter of 2006. A vote of ‘No’ would indicate a preference that updates not be made to the CMP Document to remove WSD Tier 0 references to synch up with changes implemented last year. Peggy then noted that unanimous agreement is required in order for the change to occur. Peggy asked if there were any questions regarding the vote. There were no questions. Peggy then stated that 5 emailed Yes votes had been received from Sprint Nextel, Covad, Qwest Corp., Eschelon, and Verizon Business. Peggy then asked if any other CLEC would like to submit a vote.

Integra voted Yes

XO voted Yes

McLeod voted Yes

Peggy Esquibel Reed-Qwest stated that this requested change has been granted by a vote of 8 Yes votes, 0 No votes, and 0 Abstain votes. Peggy then noted that the vote disposition would be sent and thanked the participants for their votes.

Peggy Esquibel Reed-Qwest then asked the call participants if there were any objections to this change being implemented with a Level 1 Notice. There were no objections to the Level 1 Notice request.

**PC110806-1CM CMP Document Update – Provide Meeting minutes associated with Special Ad Hoc meetings in conjunction with Section 5**

Mark Coyne-Qwest stated that we are currently reviewing on last iteration of the language and will send out for review. He said that we would try and conduct the vote in the March CMP Meeting.

**General CMP Comments:**

None.

**Walk On Items**

Mark Coyne-Qwest asked if there were any walk on items for the Product Process CMP Meeting. There were none brought forward.

The February Product Process CMP Meeting was concluded.

## **DRAFT Meeting Minutes**

**CMP Monthly Systems Meeting  
Wednesday, February 21, 2007  
Bridge Call open to all CLECs**

### **INTRODUCTIONS AND ANNOUNCEMENTS**

Mark Coyne-Qwest began the meeting by asking if there were any additional participants that had joined the call.

#### **PRIOR MONTHLY MEETING MINUTES (ATTACHMENT A)**

Mark Coyne-Qwest asked if there were any questions or comments on the Prior Monthly Meeting Minutes. There were no comments or questions brought forward.

#### **NEW CRs INITIATED BY CLECs (ATTACHMENT B)**

There were no New CLEC Change Requests for the February Systems CMP Meeting

#### **NEW CRs INITIATED BY QWEST (ATTACHMENT C)**

##### **SCR012407-01 Add new PIA Value - Verbal SUP To Add Cooperative Test On DD**

Denise Martinez-Qwest presented the CR and stated that a new PIA (Provider Initiated Activity) on FOCs would allow Qwest Network to accept a verbal SUP on the due date to change the installation/testing type from what was originally requested on Unbundled Loop and Loop with Number Portability LSRs. Denise noted that as with other PIA values, this would allow for immediate identification of the PIA by value entry and reduce lengthy remarks that would have to be read manually. Denise asked if there were any questions.

Bonnie Johnson-Eschelon stated that Steph (Prull-Eschelon) was not on the call and stated that if Steph had questions, she would send them or they could be discussed at the March CMP Meeting.

Denise Martinez-Qwest stated that everyone should benefit from this change and noted that all should be happy with it. Without this value, the new process cannot be implemented. Currently, a SUP is required including a due date change of 3 day or more interval.

Bonnie Johnson-Eschelon stated that it does appear that would be the case and that she would get with Steph.

Denise Martinez-Qwest stated that she looked forward to any questions that Steph may have.

There were no additional questions or comments.

This CR moves to Presented Status.

### **REGULATORY AND INDUSTRY GUIDELINE CHANGE REQUESTS (ATTACHMENT D)**

##### **SCR020207-01IG CABS BOS Version 47**

Peggy Esquibel Reed-Qwest stated that this CR is for the standard upgrade for bill and CSR output in IABS and noted that it is targeted for the November timeframe.

There were no questions or comments.

This CR moves to Presented Status.

## **CROSS OVER CRs (ATTACHMENT E)**

There were no Cross Over CRs for the February Systems CMP Meeting

## **WALK ON CHANGE REQUESTS (ATTACHMENT F)**

There were no Walk On Change Requests for the February Systems CMP Meeting

## **CRs TO CONSIDER FOR CLOSURE (ATTACHMENT G)**

### **SCR121305-01 Implement XML Interface for IMA EDI**

Mark Coyne-Qwest stated that this CR would remain in CLEC Test until the 1<sup>st</sup> CLEC goes into production.

Bonnie Johnson-Eschelon stated they are getting close.

Mark Coyne-Qwest stated that maybe we can close this action item next month.

## **REVIEW GLOBAL ACTION ITEMS (ATTACHMENT H)**

There are no Global Action Items for the February Systems CMP Meeting

## **REVIEW ACTION ITEMS ASSOCIATED WITH CRs (ATTACHMENT I)**

### **SCR010307-01 Provide Targeted Implementation Date of 4/1/07 on SCR010307-01 CEMR Voice Messaging Trouble Shooting Flows Update**

Mark Coyne-Qwest stated that the targeted implementation for this change is 4/01/07. He said that this CR is related to the Product Process CR mentioned earlier. Mark said that the Product Process CR is going in after this CR (4/10/07) so that additional testing can be done.

### **SCR082806-02 Provide Targeted Implementation Date of 4/1/07 on SCR082806-02 User Activity Report for CEMR**

Mark Coyne-Qwest stated that the implementation date of this Verizon Business CR is 4/01/07.

### **SCR122806-01 Provide Evaluation for SCR122606-01 Chng EUMI Field & EU Addrss Rqrmnts for Port Within Ordg Proc #1 to avoid LSR Submission Errors & Rejects in Error**

Venessa Heiland-Qwest stated that this CR is accepted and would be implemented.

Kim Isaacs-Eschelon stated that she was very happy to hear that.

Peggy Esquibel Reed-Qwest asked if this was being implemented as a Process change and not as a Systems change, and if the new address would be required on the EU Form.

Venessa Heiland-Qwest stated that the change would be done via an update to the PCAT. Venessa stated that the new address on the EU Form would be an option and not required.

Kim Isaacs-Eschelon stated that there could then be multiple processes and could be confusing.

Venessa Heiland-Qwest stated that the process would be to allow an EUMI of Y and to keep the current process of the new address being in Remarks. Venessa stated that the new address on the EU Form may be a later request.

Kim Isaacs-Eschelon stated that we would be half way there with the EUMI of Y and noted that the new address in Remarks would get errors. Kim asked if it was possible to do both pieces at once.

Venessa Heiland-Qwest asked if all CLECs would agree to that.

Bonnie Johnson-Eschelon stated that this change could be opposite of the process for a port within. Bonnie asked that all port processes be looked at for consistency.

Kim Isaacs-Eschelon noted that that would be the best way to go.

Bonnie Johnson-Eschelon asked if Qwest would consider their suggestion.

Mark Coyne-Qwest stated that we would look at it internally.

### **OUTSTANDING SYSTEMS CMP CHANGE REQUESTS (ATTACHMENT J)**

Mark Coyne-Qwest asked if there were any questions or comments on any of the open CRs. There were no questions or comments brought forward.

### **REVIEW DEPLOYING CHANGE REQUESTS (ATTACHMENT K)**

#### **SCR112806-01IG ASOG 34 Industry Release/QORA and ASR Gateway Enhancements**

Mark Coyne-Qwest stated that this CR will deploy on 3/12/07.

### **PRODUCTION SUPPORT TICKETS (ATTACHMENT L)**

Mark Coyne-Qwest stated that there are currently 12 tickets on the TBD report and noted that there were no updates for the tickets.

### **IMA AND SATE 21.0 COMMITMENTS (ATTACHMENT M)**

Mark Coyne-Qwest stated that this attachment contained the 5 candidates that are committed to the IMA & SATE 21.0 Release. Mark asked if there were any questions. There were none.

### **WALK ON ITEMS (ATTACHMENT N)**

Mark Coyne-Qwest stated that the March CMP Meeting is scheduled for Wednesday, March 21, 2007 at 9:00 a.m., via conference call, and that the CR cutoff date is March 7, 2007.

Mark Coyne-Qwest stated that the CR review for each companies top 2 pick, for the IMA 22.0 Prioritization, would also occur in the March CMP Meeting, with Prioritization to follow.

The February CMP Meeting adjourned at 9:40 a.m. MT.

**Qwest Wholesale Change Management Process (CMP) Meeting Minutes**

**DRAFT Change Management Process (CMP) Monthly Meeting  
Product - Process  
Wednesday, February 21, 2007**

**Introductions and Announcements**

Mark Coyne-Qwest began the meeting with introductions.

**Prior Monthly Meeting Minutes (Attachment A)**

Mark Coyne-Qwest asked if there were any questions or comments on the Prior Monthly Meeting Minutes. There were no comments or questions brought forward.

**Review Global Action Items (Attachment B)**

There were no Global Action Items for the February Product Process Meeting.

**Review Active CLEC Originated Change Requests (Attachment C)**

**PC010907-1 Changes To Scheduled Customer Due Dates**

Tim Kagele-Comcast presented the CR and stated that the Industry Process is that when a CLEC schedules a port, the interval is 4-days and noted that Comcast has issues when the customer cannot be home at the time of the appointment. Tim stated that Qwests current process is to leave the number in the switch up to 48-hours. Tim stated that Comcast would like the process revised for a next day assurance on a supp. Tim noted that he Comcast wants an FOC on a 1-day due date change, instead of waiting for the standard 4-day norm. Tim noted that a discussion with the CLECs has occurred.

Mark Coyne-Qwest asked if there were any questions regarding this request. There were none brought forward.

Mark Coyne-Qwest stated that Qwest will review and evaluate the request and would provide the response in March.

**Review Active Qwest Initiated Change Requests (Attachment D)**

**PC010307-1 Elimination of Future Delivery and Extended Prompts functions on Qwest Voice Messaging Platform**

Mark Coyne-Qwest stated that the targeted implementation date for this request is 4/10/07.

Bonnie Johnson-Eschelon stated that she had no objection to the Level 2 requests on all of the grandparenting CRs but noted that Eschelon may submit comments.

**PC013007-1 Grandparent CENTRAFLEX 2 in Oregon**

Peggy Esquibel Reed-Qwest stated that Qwest is grandparenting Centraflex System 2 in Oregon and noted that there are no customers utilizing this product. Peggy then noted that due to no customers, Qwest would like to implement this request with a Level 2 notice. Peggy then asked if there were any questions regarding this CR or if there were any objections to implementation via a Level 2 notice. There were no questions or objections brought forward.

This CR moves to Presented Status.

Bonnie Johnson-Eschelon stated that she had no objection to the Level 2 requests on all of the grandparenting CRs but noted that Eschelon may submit comments.

**Qwest Wholesale Change Management Process (CMP) Meeting Minutes  
PC013007-2 Automatic Call Distribution – Electronic Switching System Tariff Elimination**

Peggy Esquibel Reed-Qwest stated that Qwest is grandparenting Automatic Call Distribution-Electronic Switching System Tariff Elimination and noted that there are no customers utilizing this product. Peggy stated that Qwest would also like to implement this CR with a Level 2 notification and asked if there were any questions or objections to the Level 2.

Bonnie Johnson-Eschelon stated that she had no objection to the Level 2 requests on all of the grandparenting request but and noted that Eschelon may submit comments.

This CR moves to Presented Status.

**PC013007-3 Verbal Supp for CFA Change on Due Date**

Lynn Stecklein-Qwest stated in October of 2006, Qwest proposed language to the Provisioning and Installation Overview which was intended to remind CLECs to check their CFAs before assigning them and to clarify that only one verbal supplement for CFA slot change was to be accepted on the Due Date. She said that in discussion with the CLEC community at the October Monthly CMP Meeting, this language was not adopted. She said that instead it was agreed that a MCC would be distributed internally and externally to reiterate the current process. Lynn stated that Eschelon requested that Qwest retract the MCC because this was a change in process and that a Level 4 should be submitted. Lynn reviewed the description of change:

This CR is a process change to the Provisioning and Installation Overview PCAT language for the existing PIA value of 10 to add the following: Prior to placing a service request, it is the CLEC responsibility to ensure the CFA is working. If it is determined on the Due Date that the CFA does not work, Qwest will perform additional testing with the CLEC one time. If the CLEC requests the CFA be changed, it is the responsibility of the CLEC to make sure the new CFA works. Qwest will accept only one verbal CFA change on the Due Date. If the new CFA fails to work, Qwest will place the order in a customer jeopardy status. No further action will be taken on Qwest's part until Qwest receives a valid supplemental request to change the Due Date and the CFA (If applicable).

Bonnie Johnson-Eschelon asked for further definition around Qwest performing additional testing one time. She said that specifically her question is that the additional testing issue has been brought forward multiple times before. She said that in this-those instances it is not the CFA, but the problem is on the Qwest side. She asked if the additional testing means that it would not be a Qwest issue.

Lynn Stecklein-Qwest stated that she will contact the SME and provide the response to Bonnie and also include in the minutes.

**PC102704-1ES and PC102704-1ES2 New Revised title effective 1/11/05: Certain Unbundled Network Elements (UNE) Product Discontinuance (see Description of Change for previous title)**

Mark Coyne-Qwest stated that at the end of the last ad hoc call it was mentioned that Qwest would schedule additional calls in order to continue the discussions on this CR to categorize products on the TRRO Product matrix and try to move forward with a prioritization of products. The original Qwest plan to gain CLEC input on the priority of the various products has not been as successful as we planned or hoped. We heard all the comments on that call and considered all the feedback that another call would just be rehashing the same things again. We then took all that feedback and gave it some additional thought in order to determine what the most logical next step would be, to allow Qwest and the CLEC community to continue to move forward on this issue. What makes sense at this point, to Qwest, is that we issue individual CMP CRs for the products that need to be addressed in CMP and hold discussions for specific CRs or product groupings. That would allow those CLECs with impact on those specific products to have a CMP forum for input on the process related changes associated with these products. It should provide a more meaningful and valuable method for proceeding with this effort for Qwest and for those CLECs who are impacted by these changes. Some, if not all, of those CRs will be submitted for the March 21st CMP Meeting.

Bonnie Johnson-Eschelon stated that on the last call, Cindy Buckmaster (Qwest) committed to taking one of her products, due to Integra's concerns regarding Qwest cut an pasting information from the ICA into the PCATs, and to re-do the PCAT and meet on those changes. Bonnie asked if Qwest is now not going to do that follow through with that committment.

**Qwest Wholesale Change Management Process (CMP) Meeting Minutes**

Mark Coyne-Qwest stated that we internally evaluated what would work best and determined that the next step should be to issue the CRs.

Bonnie Johnson-Eschelon stated that she had no comment at this time.

**PC121106-1 Grandfathering ADSL Compatible UBL**

Peggy Esquibel Reed-Qwest stated that the Level 4 re-notice had been sent on February 5<sup>th</sup> and that 2 comments had been received. Peggy noted that the Qwest Response to Comments would be available on March 2<sup>nd</sup> and that the proposed effective date is March 19<sup>th</sup>.

There were no questions or comments brought forward.

This CR is in Development Status.

**Discussion of CMP Operations and Proposed Modifications to CMP Framework**

**PC110906-1CM CMP Document Update – Remove WSD Tier 0 References**

Peggy Esquibel Reed-Qwest stated that this CR, requesting a CMP Document Update to Remove Tier 0 References, was presented in the November CMP Meeting and asked for changes to the CMP Document, to remove Wholesale Service Delivery (WSD) Tier 0 references, to synch-up with changes implemented via a process change early last year. Peggy stated that we also wanted to clarify some language surrounding call center DB tickets. A vote was conducted in December and a no vote was submitted due to concerns regarding proposed language for the call center database tickets. We then revised the language to remove the clarification to the “ticket” references and the revised proposed language is now to only remove Tier 0 from the CMP Document. Peggy asked if there were any questions. None were brought forward. Peggy then stated that the quorum for today’s vote is 5 and noted that that it had been achieved. Peggy then stated that a vote of ‘Yes’ would indicate a preference that updates be made to the CMP Document to remove Wholesale Service Delivery Tier 0 references to synch up with changes implemented via a process change in the 2<sup>nd</sup> quarter of 2006. A vote of ‘No’ would indicate a preference that updates not be made to the CMP Document to remove WSD Tier 0 references to synch up with changes implemented last year. Peggy then noted that unanimous agreement is required in order for the change to occur. Peggy asked if there were any questions regarding the vote. There were no questions. Peggy then stated that 5 emailed Yes votes had been received from Sprint Nextel, Covad, Qwest Corp., Eschelon, and Verizon Business. Peggy then asked if any other CLEC would like to submit a vote.

Integra voted Yes

XO voted Yes

McLeod voted Yes

Peggy Esquibel Reed-Qwest stated that this requested change has been granted by a vote of 8 Yes votes, 0 No votes, and 0 Abstain votes. Peggy then noted that the vote disposition would be sent and thanked the participants for their votes.

Peggy Esquibel Reed-Qwest then asked the call participants if there were any objections to this change being implemented with a Level 1 Notice. There were no objections to the Level 1 Notice request.

**PC110806-1CM CMP Document Update – Provide Meeting minutes associated with Special Ad Hoc meetings in conjunction with Section 5**

Mark Coyne-Qwest stated that we are currently reviewing on last iteration of the language and will send out for review. He said that we would try and conduct the vote in the March CMP Meeting.

**General CMP Comments:**

None.

## Qwest Wholesale Change Management Process (CMP) Meeting Minutes

### Walk On Items

Mark Coyne-Qwest asked if there were any walk on items for the Product Process CMP Meeting. There were none brought forward.

The February Product Process CMP Meeting was concluded.

## **DRAFT Meeting Minutes**

**CMP Monthly Systems Meeting  
Wednesday, February 21, 2007  
Bridge Call open to all CLECs**

### **INTRODUCTIONS AND ANNOUNCEMENTS**

Mark Coyne-Qwest began the meeting by asking if there were any additional participants that had joined the call.

#### **PRIOR MONTHLY MEETING MINUTES (ATTACHMENT A)**

Mark Coyne-Qwest asked if there were any questions or comments on the Prior Monthly Meeting Minutes. There were no comments or questions brought forward.

#### **NEW CRs INITIATED BY CLECs (ATTACHMENT B)**

There were no New CLEC Change Requests for the February Systems CMP Meeting

#### **NEW CRs INITIATED BY QWEST (ATTACHMENT C)**

##### **SCR012407-01 Add new PIA Value - Verbal SUP To Add Cooperative Test On DD**

Denise Martinez-Qwest presented the CR and stated that a new PIA (Provider Initiated Activity) on FOCs would allow Qwest Network to accept a verbal SUP on the due date to change the installation/testing type from what was originally requested on Unbundled Loop and Loop with Number Portability LSRs. Denise noted that as with other PIA values, this would allow for immediate identification of the PIA by value entry and reduce lengthy remarks that would have to be read manually. Denise asked if there were any questions.

Bonnie Johnson-Eschelon stated that Steph (Prull-Eschelon) was not on the call and stated that if Steph had questions, she would send them or they could be discussed at the March CMP Meeting.

Denise Martinez-Qwest stated that everyone should benefit from this change and noted that all should be happy with it. Without this value, the new process cannot be implemented. Currently, a SUP is required including a due date change of 3 day or more interval.

Bonnie Johnson-Eschelon stated that it does appear on the surface at least, that would be the case and that she would get with Steph.

Denise Martinez-Qwest stated that she looked forward to any questions that Steph may have.

There were no additional questions or comments.

This CR moves to Presented Status.

### **REGULATORY AND INDUSTRY GUIDELINE CHANGE REQUESTS (ATTACHMENT D)**

##### **SCR020207-01IG CABS BOS Version 47**

Peggy Esquibel Reed-Qwest stated that this CR is for the standard upgrade for bill and CSR output in IABS and noted that it is targeted for the November timeframe.

There were no questions or comments.

This CR moves to Presented Status.

## **CROSS OVER CRs (ATTACHMENT E)**

There were no Cross Over CRs for the February Systems CMP Meeting

## **WALK ON CHANGE REQUESTS (ATTACHMENT F)**

There were no Walk On Change Requests for the February Systems CMP Meeting

## **CRs TO CONSIDER FOR CLOSURE (ATTACHMENT G)**

### **SCR121305-01 Implement XML Interface for IMA EDI**

Mark Coyne-Qwest stated that this CR would remain in CLEC Test until the 1<sup>st</sup> CLEC goes into production.

Bonnie Johnson-Eschelon stated they are getting close.

Mark Coyne-Qwest stated that maybe we can close this action item next month.

## **REVIEW GLOBAL ACTION ITEMS (ATTACHMENT H)**

There are no Global Action Items for the February Systems CMP Meeting

## **REVIEW ACTION ITEMS ASSOCIATED WITH CRs (ATTACHMENT I)**

### **SCR010307-01 Provide Targeted Implementation Date of 4/1/07 on SCR010307-01 CEMR Voice Messaging Trouble Shooting Flows Update**

Mark Coyne-Qwest stated that the targeted implementation for this change is 4/01/07. He said that this CR is related to the Product Process CR mentioned earlier. Mark said that the Product Process CR is going in after this CR (4/10/07) so that additional testing can be done.

### **SCR082806-02 Provide Targeted Implementation Date of 4/1/07 on SCR082806-02 User Activity Report for CEMR**

Mark Coyne-Qwest stated that the implementation date of this Verizon Business CR is 4/01/07.

### **SCR122806-01 Provide Evaluation for SCR122606-01 Chng EUMI Field & EU Addrss Rqrmnts for Port Within Ordg Proc #1 to avoid LSR Submission Errors & Rejects in Error**

Venessa Heiland-Qwest stated that this CR is accepted and would be implemented.

Kim Isaacs-Eschelon stated that she was very happy to hear that.

Peggy Esquibel Reed-Qwest asked if this was being implemented as a Process change and not as a Systems change, and if the new address would be required on the EU Form.

Venessa Heiland-Qwest stated that the change would be done via an update to the PCAT. Venessa stated that the new address on the EU Form instead of the remarks field would be an option and not required.

Kim Isaacs-Eschelon stated that there could then be multiple processes and could be confusing.

Venessa Heiland-Qwest stated that the process would be to allow an EUMI of Y and to keep the current process of the new address being in Remarks. Venessa stated that the new address on the EU Form may be a later request.

Kim Isaacs-Eschelon stated that we would be half way there with the EUMI of Y and noted that the new address in Remarks would get errors. Kim asked if it was possible to do both pieces at once.

Venessa Heiland-Qwest asked if all CLECs would agree to that.

Bonnie Johnson-Eschelon stated that this change could be opposite of the process for a port within. Bonnie asked that all port processes be looked at for consistency.

Kim Isaacs-Eschelon noted that that would be the best way to go.

Bonnie Johnson-Eschelon asked if Qwest would consider their suggestion.

[Vanessa Heiland – Qwest said yes.](#)

Mark Coyne-Qwest stated that we would look at it internally.

### **OUTSTANDING SYSTEMS CMP CHANGE REQUESTS (ATTACHMENT J)**

Mark Coyne-Qwest asked if there were any questions or comments on any of the open CRs. There were no questions or comments brought forward.

### **REVIEW DEPLOYING CHANGE REQUESTS (ATTACHMENT K)**

#### **SCR112806-01IG ASOG 34 Industry Release/QORA and ASR Gateway Enhancements**

Mark Coyne-Qwest stated that this CR will deploy on 3/12/07.

### **PRODUCTION SUPPORT TICKETS (ATTACHMENT L)**

Mark Coyne-Qwest stated that there are currently 12 tickets on the TBD report and noted that there were no updates for the tickets.

### **IMA AND SATE 21.0 COMMITMENTS (ATTACHMENT M)**

Mark Coyne-Qwest stated that this attachment contained the 5 candidates that are committed to the IMA & SATE 21.0 Release. Mark asked if there were any questions. There were none.

### **WALK ON ITEMS (ATTACHMENT N)**

Mark Coyne-Qwest stated that the March CMP Meeting is scheduled for Wednesday, March 21, 2007 at 9:00 a.m., via conference call, and that the CR cutoff date is March 7, 2007.

Mark Coyne-Qwest stated that the CR review for each companies top 2 pick, for the IMA 22.0 Prioritization, would also occur in the March CMP Meeting, with Prioritization to follow.

The February CMP Meeting adjourned at 9:40 a.m. MT.

**From:** Johnson, Bonnie J. [email redacted]  
**Sent:** Friday, February 23, 2007 4:25 PM  
**To:** Stecklein, Lynn  
**Cc:** New Cr, Cmp; Johnson, Bonnie J.  
**Subject:** RE: PC013007-3 Verbal Supp for CFA Change on the Due Date

Lynn,  
Eschelon disagrees. As I have said before, Eschelon should not have to pay additional installation costs so Qwest can find and fix their problems.

Please also include my response.

Thanks,

Bonnie Johnson

**Cc:** New Cr, Cmp  
**Subject:** PC013007-3 Verbal Supp for CFA Change on the Due Date

Hi Bonnie,

This is in response to your question on PC013007-3 -Verbal Supp for CFA Change on the Due Date (DD). The purpose of this CR is to identify that Qwest will not accept more than one verbal CFA change on the DD. Additional testing is always available to a CLEC as long as it is in their contract. Additional Testing will be available on an install if it is in their contract. That testing will occur each and every time it is requested. If it is determined during testing that the problem is on the Qwest side, additional testing would not apply.

I will include also include this response in the February Product/Process meeting minutes prior to posting.

Thanks,

Lynn Stecklein  
Qwest Wholesale CMP

---

#### **February CMP Monthly Meeting Minutes on PC0103007-3 Verbal Supp for CFA Change on Due Date**

Lynn Stecklein-Qwest stated in October of 2006, Qwest proposed language to the Provisioning and Installation Overview which was intended to remind CLECs to check their CFAs before assigning them and to clarify that only one verbal supplement for CFA slot change was to be accepted on the Due Date. She said that in discussion with the CLEC community at the October Monthly CMP Meeting, this language was not adopted. She said that instead it was agreed that a MCC would be distributed internally and externally to reiterate the current process. Lynn stated

that Eschelon requested that Qwest retract the MCC because this was a change in process and that a Level 4 should be submitted. Lynn reviewed the description of change:

This CR is a process change to the Provisioning and Installation Overview PCAT language for the existing PIA value of 10 to add the following: Prior to placing a service request, it is the CLEC responsibility to ensure the CFA is working. If it is determined on the Due Date that the CFA does not work, Qwest will perform additional testing with the CLEC one time. If the CLEC requests the CFA be changed, it is the responsibility of the CLEC to make sure the new CFA works. Qwest will accept only one verbal CFA change on the Due Date. If the new CFA fails to work, Qwest will place the order in a customer jeopardy status. No further action will be taken on Qwest's part until Qwest receives a valid supplemental request to change the Due Date and the CFA (If applicable).

Bonnie Johnson-Eschelon asked for further definition around Qwest performing additional testing one time. She said that specifically her question is that the additional testing issue has been brought forward multiple times before. She said that in those instances it is not the CFA, but the problem is on the Qwest side. She asked if the additional testing means that it would not be a Qwest issue.

Lynn Stecklein-Qwest stated that she will contact the SME and provide the response to Bonnie and also include in the minutes.

<b>Announcement Date:</b>	<b>August 31, 2006</b>
<b>Effective Date:</b>	<b>September 1, 2006</b>
<b>Document Number:</b>	<b>PROS.08.31.06.F.04159.Amendments.ComlAgree.SGAT</b>
<b>Notification Category:</b>	<b>Process Notification</b>
<b>Target Audience:</b>	<b>CLECs, Resellers</b>
<b>Subject:</b>	<b>Amendments - Commercial Agreements - SGATs</b>

**Summary of Change:**

On September 1, 2006, Qwest will post updates to its Wholesale Product Catalog that include new/revised documentation for Amendments, Commercial Agreements and SGATs. This material becomes effective on September 1, 2006.

Amendments:

- Added new Available Inventory Amendment 4<sup>th</sup> Quarter Promotion

Commercial Agreements:

- Add one new QDF Master Services Agreements dated 8-18-06

SGATs:

- The Negotiations Template Agreement is being replaced for the following:
  - 5.4 Update language to reflect current practices
  - 6.2.2.3 Tap Certification added
  - 6.2.2.7 Updated MN Specific language that was agreed to in the 271 Minnesota proceedings, based on the Minnesota DOC's suggestions to the ALJ
  - Added Bill and Keep Language
  - 7.3.5 Misc Charges changes reflect Qwest's position that certain miscellaneous charges are not provided with Section 251 services at TELRIC but are provided at market-based rates, including rates provided in Qwest's tariffs, catalogs, price lists, or other similar document.
  - 7.3.6.2 Clarify CO state specific language
    - Section 8 changes to clarify to what, and when, the rate elements in Exhibit A apply

- 8.2.1.22.3 Modify the language associated with notification and removal of abandoned equipment.
- 8.2.1.32.1 QPF is paid with the first 50% of the quoted charges, language being removed from section 8.2.1.32.1 as it is covered correctly in section 8.3.1.19.
- 8.2.4.9.2 Update language to allow CLEC to perform both the Line of Sight and/or the Structural Analysis for the Microwave Entrance Facility.  
Splitting out the current element- "8.10.1.2 Analysis Performed by Qwest, per site" to a 8.10.1.2.1 Line of Site performed by QWEST and 8.10.1.2.2 Structural Analysis Performed by Qwest.
- 8.3.1.19 Update rate element language
- 8.4.1.8.7.3.7 Modify current timeframe of 72 hours to 7 calendar days for reply to a first right of refusal of contiguous optioned space.
- Section 9 Correcting and clarifying language and rate elements.
- 9.2.2.8.1 Correction to refer to the tech pub for DSL-capable product
- 10.8.3 Allow annual changes to PDR rates annually based on FCC formulae. In those states where the commission set rates, those rates will be used rather than rates based on the FCC formulae.
- 10.7.2.8 correct interval noted
- Section 12 rewrite to accommodate new interface
- Exhibit F has been replaced per Change of Law (TRRO)
- Exhibit As for all 14 states are being replaced for additions, revisions, and corrections as follows:

MPUC No. P-5340,421/IC-06-768

STATE OF MINNESOTA  
OFFICE OF ADMINISTRATIVE HEARINGS  
FOR THE MINNESOTA PUBLIC UTILITIES COMMISSION

In the Matter of the Petition of Eschelon  
Telecom, Inc., for Arbitration of an  
Interconnection Agreement with Qwest  
Corporation Pursuant to  
47 U.S.C. § 252 (b) of the Federal  
Telecommunications Act of 1996

**ARBITRATORS' REPORT**

This matter was arbitrated by Administrative Law Judges Kathleen D. Sheehy and Steve M. Mihalchick on October 16-20, 2006, in the Small Hearing Room of the Public Utilities Commission in St. Paul, Minnesota. The record closed on November 17, 2006, upon receipt of post-hearing briefs.

Jason Topp, Esq., 200 South Fifth Street, Room 2200, Minneapolis, MN 55402; Melissa Thompson, Esq., 1801 California Street, 10<sup>th</sup> Floor, Denver, CO 80202; Philip J. Roselli, Esq., Kamlet, Shepherd & Reichert, LLP, 1515 Arapahoe Street, Tower 1, Suite 1600, Denver, CO 80202; and John Devaney, Esq., Perkins Coie, 607 14<sup>th</sup> Street NW, Washington, DC 20005, appeared for Qwest Corporation (Qwest).

Greg Merz, Esq., Gray, Plant, Mooty, 500 IDS Center, 80 South Eighth Street, Minneapolis, MN 55402, appeared for Eschelon Telecom, Inc. (Eschelon).

Julia Anderson, Assistant Attorney General, 1400 Bremer Tower, 445 Minnesota Street, St. Paul, MN 55101, appeared for the Department of Commerce (Department).

Kevin O'Grady appeared for the staff of the Public Utilities Commission.

**Procedural History**

1. Eschelon and Qwest began negotiating this interconnection agreement some time ago. For purposes of this arbitration they have agreed that the window for requesting arbitration was between May 9, 2006, and June 5,

2006. Based on the timelines in 47 U.S.C. § 252(b) and Minn. R. 7811.1700, subps. 19 & 21, all outstanding issues must be resolved by February 9, 2007.<sup>1</sup>

2. The Department intervened as a party. Based on the Department's recommendation, the parties reached agreement to stay certain issues pending the completion of other dockets: Issues 12-68, 12-69, A-96, and A-97 are stayed pending completion of the *UNE Cost Case*;<sup>2</sup> and Issues 9-37, 9-37(a), 9-37(b), 9-38, 9-39 (except caps), 9-40, 9-41, and 9-42 are stayed pending completion of the *Wire Center Proceeding*.<sup>3</sup>

3. To implement the agreement to stay certain issues pending completion of the *Wire Center Proceeding*, the Administrative Law Judges recommend that the Commission decide the issues presented in this Report, but hold this docket open until the *Wire Center Proceeding* is complete. If further proceedings in this matter are necessary at that time, the Commission could return the matter to OAH for arbitration of any specific language issues that remain.

4. During and after the hearing, the parties successfully resolved a number of issues. The issues remaining for decision are those identified in the Disputed Issues List and List of Issues by Subject Matter filed October 31, 2006.

5. After the hearing, Time Warner Telecom, Inc., and Integra Telecom of Minnesota, Inc. (CLEC Participants), filed comments on eight issues as participants under Minn. R. 7812.1700, subp. 10. Although they are not parties, their comments are noted in the sections of this Report discussion those issues.

### **Arbitrators' Authority**

6. The Commission has jurisdiction over this proceeding under § 252(b) of the Telecommunications Act of 1996 (Act) and Minn. Stat. §§ 237.16 and 216A.05. Section 252(b) of the Act provides for state commission arbitration of unresolved issues related to negotiations for interconnection, resale and access to unbundled network elements. Specifically, it authorizes the Commission to "resolve each issue set forth in [an arbitration] petition and the response, if any, by imposing appropriate conditions . . . ." <sup>4</sup> In resolving the open issues and imposing appropriate conditions, the Commission must ensure that the resolution meets the requirements of section 251, including the regulations adopted pursuant to section 251; must establish any rates for

---

<sup>1</sup> See Petition for Arbitration at 6. Eschelon indicated in an e-mail dated January 10, 2007, that it is willing to extend the Commission's deadline until a reasonable time after receipt of this Report.

<sup>2</sup> *In the Matter of Qwest's Application for Commission Review of TELRIC Rates Pursuant to 47 U.S.C. § 251*, Docket No. P421/AM-06-713.

<sup>3</sup> *In the Matter of CLECs' Request for Commission Approval of ILEC Wire Center Impairment Analysis*, Docket No. P-5692/M-06-211, and *In the Matter of a Commission Investigation Identifying Wire Centers in Which Qwest Must Offer High-Capacity Loop or Transport UNEs at Cost-Based Rates*, Docket No. P-999/CI-06-685.

<sup>4</sup> 47 U.S.C. § 252(b)(4)(C).

interconnection, services, or network elements according to subsection (d); and must provide a schedule for implementation of the terms and conditions by the parties to the agreement.

7. The Act specifically permits a state commission to establish or enforce other requirements of state law in its review of an agreement, including requiring compliance with intrastate telecommunications service quality standards or requirements,<sup>5</sup> as long as state requirements are consistent with the Act and the FCC's implementing rules.<sup>6</sup> State law similarly requires that issues submitted for arbitration be resolved in a manner that is consistent with the public interest, to ensure compliance with the requirements of sections 251 and 252(d) of the Act, applicable FCC regulations, and applicable state law, including rules and orders of the Commission.<sup>7</sup>

8. Many of the disputed issues in this arbitration do not hinge on a specific provision of federal or state telecommunications law, but are either more generic or involve the day-to-day mechanics of using the interconnection agreement (ICA).<sup>8</sup> Unless more specific authority is otherwise noted, the Arbitrators will make recommendations on these disputed provisions that the Arbitrators believe are consistent with the public interest, the requirements of sections 251 and 252(d) of the Act, applicable FCC regulations, and applicable state law, including rules and orders of the Commission.

### **Burden of Proof**

9. The burden of proof in this interconnection arbitration proceeding is on Qwest to prove all issues of material fact by a preponderance of the evidence.<sup>9</sup> In addition, the arbitrators may shift the burden of production as appropriate, based on which party has control of the critical information regarding the issue in dispute. The arbitrators may also shift the burden of proof as necessary to comply with applicable FCC regulations regarding burden of proof, such as rules placing the burden on the incumbent to demonstrate the technical infeasibility of a CLEC's request for interconnection or unbundled access and rules requiring an incumbent to prove by clear and convincing evidence any

<sup>9</sup> Minn. R. 7812.1700, subp. 23.

claim that it cannot satisfy such a request because of adverse network reliability impacts.<sup>10</sup>

## **I. GENERAL TERMS/INTERVAL CHANGES.**

### **Issue 1-1: Interval Changes and Placement**

#### **Issue 1-1(a)-(e)**

##### **A. The Dispute**

10. The parties dispute whether the ICA should include provisions addressing any changes in the intervals in which Qwest will provide products ordered by Eschelon. Eschelon wants the ICA to include the current intervals posted on Qwest's product catalog (PCAT) or Standard Interval Guide (SIG) web postings, so that any proposal by Qwest to lengthen an interval would have to be achieved by amending the agreement. Its second option would provide for amendment of the ICA and Commission approval of all interval changes, not just changes in which intervals are lengthened. Qwest proposes to use its Change Management Process (CMP) to announce changes in intervals, outside of the ICA. Eschelon agrees that the CMP may be used to shorten, but not lengthen, intervals outside of the ICA.

##### **B. Position of the Parties**

11. Eschelon proposes the following language for Sections 1.7.2 and 1.7.2.1 of the ICA:

If the Commission orders, or Qwest chooses to offer and CLEC desires to accept, intervals longer than those set forth in this Agreement, including Exhibit C, the Parties shall amend this Agreement under one (1) of the two (2) options set forth in Section 1.7.1 (an interval Advice Adoption Letter or interval interim Advice Adoption Letter terminating with approval of negotiated Amendment) pertaining to the new interval (rather than new product) (or as otherwise ordered by the Commission). The forms of such letters are attached hereto as Exhibits N -O).

Notwithstanding any other provision in this Agreement, the intervals in Exhibit C may be shortened pursuant to the Change Management Process (CMP) without requiring the execution or filing of any amendment to this Agreement.<sup>11</sup>

12. Qwest proposes the following language for Section 1.7.2:

---

<sup>10</sup> 47 C.F.R. §§ 51.5 & 51.321(d).

<sup>11</sup> Disputed Issues List at 1-2. The CLEC Participants support the use of Eschelon's language for this issue.

Notwithstanding any other provision in this agreement, the attached Exhibit C will be modified pursuant to the CMP process without requiring the execution of an amendment.<sup>12</sup>

13. Eschelon also proposes that intervals for the provision of interconnection trunks will be reflected in Section 7.4.7 and that any changes to those intervals will be made through the process described in Section 1.7.2 (Issue 1-1(a)). Qwest opposes including these intervals in the ICA and would add language permitting changes in the intervals to be made through the CMP.

14. In addition, Eschelon would include in Exhibit C to the agreement intervals for the provision of UDIT rearrangements (Issue 1-1(b)). Qwest disagrees that these intervals apply to UDIT rearrangements and would simply note in Exhibit C that the applicable intervals are available on its website.

15. Eschelon would also include in Section 9.0 of Exhibit C the intervals for LIS trunking (Issue 1-1(c)). Qwest would eliminate this section entirely.

16. Qwest currently has provisioning intervals for products that are provided on an individual case basis (ICB). Eschelon would incorporate those intervals into the ICA; Qwest instead proposes language providing that it shall make every attempt to provide a firm order confirmation (FOC) pursuant to the guidelines contained on its website (Issue 1-1(d)).

17. Finally, Eschelon would include service intervals for loop-mux combinations in Exhibit C; Qwest would simply reference the service interval guide available on its website (Issue 1-1(e)).

18. Eschelon argues that Qwest retains too much control over the CMP process to provide the business certainty regarding critical terms that CLECs need in order to compete meaningfully for customers. It contends that Qwest announces many unilateral changes through CMP that CLECs have had no chance to discuss or develop; that most product or process changes do not require Qwest to consider the comments of CLECs; that Qwest is free to implement noticed changes regardless of opposition by CLECs; and that Qwest has used the process as both a shield and a sword to suit its own purposes. Eschelon further argues that ICA amendments would not be necessary for the vast majority of interval changes because no intervals have been lengthened since 2002 and that Eschelon is only seeking to retain the intervals that Qwest provides today, without change.<sup>13</sup>

19. Qwest argues that its CMP process was developed with CLEC input and approved by the Commission, and the FCC, in connection with Qwest's

---

<sup>12</sup> Disputed Issues List at 1.

<sup>13</sup> Ex. 27 (Starkey Direct) at 11-75 (specific problems with CMP); *id.* at 76-92 (intervals); Ex. 28 (Starkey Rebuttal) at 3-34 (CMP); *id.* at 34-42 (intervals); Ex. 29 (Starkey Surrebuttal) at 3-65 (CMP); *id.* at 66-72 (intervals).

§ 271 Application. It argues that requiring intervals to be included in the ICA and changed through ICA amendment gives Eschelon too much control over service interval management and that it needs the flexibility of using the CMP to respond to industry changes. It also argues that using such specific language in Eschelon's ICA will "lock in" processes and prohibit Qwest or other CLECs from requesting changes and that any limitation on Qwest's ability to respond to changes in the industry that hinges on obtaining permission from a single CLEC is unacceptable. In surreply testimony, Qwest contended that if any of Eschelon's "CMP-related proposals" are adopted, it would force Qwest either to seek an ICA amendment from Eschelon before adopting any change request proposed by other CLECs or Qwest, or, in the alternative, to establish entirely separate systems, processes, or procedures for Eschelon at significant cost.<sup>14</sup>

20. The Department's position generally is that the CMP is a mechanism for addressing changes in pre-ordering, ordering/provisioning, maintenance/repair, and billing functions and associated support issues for local services provided by CLECs, but that it is not an exclusive mechanism for addressing these issues and that no legal authority would prohibit the inclusion of what Qwest calls "CMP issues" in an ICA. If the issue has been negotiated by the parties and relates to a term or condition of interconnection, it could potentially be addressed in the ICA. The Department recommends that each issue be decided on its individual merits and that the Commission should consider and balance Eschelon's need for contractual certainty with Qwest's need for uniformity in its systems, processes, and procedures in determining what is just, reasonable, non-discriminatory, and in the public interest. The Department has made no specific recommendation on how to resolve Issue 1-1 or its subparts.<sup>15</sup>

### C. Decision

21. The CMP document itself provides that in cases of conflict between changes implemented through the CMP and any CLEC ICA, the rates, terms and conditions of the ICA shall prevail. In addition, if changes implemented through CMP do not necessarily present a direct conflict with an ICA but would abridge or expand the rights of a party, the rates, terms, and conditions of the ICA shall prevail.<sup>16</sup> Clearly, the CMP process would permit the provisions of an ICA and the CMP to coexist, conflict, or potentially overlap. The Administrative Law Judges agree with the Department's analysis that any

<sup>14</sup> Ex. 1 (Albersheim Direct) at 3-29 (CMP); *id.* at 29-38 (intervals); Ex. 2 (Albersheim Rebuttal) at 2-31 (CMP); *id.* at 31-36 (intervals); Ex. 4 (Albersheim Surrebuttal) at 3-13 (CMP); *id.* at 13-15 (intervals).

<sup>15</sup> Ex. 48 (Doherty Reply) at 2-14); Ex. 49 (Doherty Surreply) at 2-4. See also Ex. 52 (Rebholz Reply) at 5 (Minn. R. 7812.0700, subp. 2(b), requires ILECs and CLECs to include quality standards in their ICAs for resale, purchase of network elements, or interconnection that must, at minimum, ensure the CLEC receives service, network elements, and interconnection at least at parity with the services, network elements, and interconnection the ILEC provides to itself or its subsidiaries or affiliates).

<sup>16</sup> Ex. 1 (Albersheim Direct) at RA-1, part 1.0, page 15.

negotiated issue that relates to a term and condition of interconnection may properly be included in an ICA, subject to a balancing of the parties' interests and a determination of what is reasonable, non-discriminatory, and in the public interest.

22. Eschelon has provided convincing evidence that the CMP process does not always provide CLECs with adequate protection from Qwest making important unilateral changes in the terms and conditions of interconnection. Service intervals are critically important to CLECs, and Qwest has only shortened them in the last four years. Qwest has identified no compelling reason why inclusion of the current intervals in the ICA would harm the effectiveness of the CMP process or impair Qwest's ability to respond to industry changes. The Administrative Law Judges recommend that Eschelon's first proposal for Issue 1-1 be adopted and that its language for Issues 1-1(a)-(e) also be adopted.

## **II. INTERPRETATION AND CONSTRUCTION/CHANGE IN LAW.**

### **Issue 2-3: Effective Date of Rate Changes**

#### **A. The Dispute**

23. The parties agreed on language in Section 22.4.1.2 providing that "Commission-approved rates shall be effective as of the date required by a legally binding order of the Commission." They disagree on whether there should be language in the ICA that establishes a default effective date of a Commission order that changes unbundled network element (UNE) prices, in the event the Commission fails to specify an effective date. They also originally disagreed about which section of the ICA should contain the language.

#### **B. Position of the Parties**

24. Qwest wants the language to read that "Rates in Exhibit A include legally binding decisions of the Commission and shall be applied on a prospective basis from the effective date of the legally binding Commission decision, unless otherwise ordered by the Commission."<sup>17</sup> Qwest originally wanted this language to appear in Section 2.2 of the ICA, but has agreed to include it in Section 22 instead.<sup>18</sup>

25. Eschelon objected to the presumption in this language that a change in rates, if no date were specified, would be applied prospectively.<sup>19</sup> Eschelon's first proposal for Section 2.2 would say simply "The rates in Exhibit A and when they apply are addressed in Section 22."<sup>20</sup> Eschelon's second

---

<sup>17</sup> Disputed Issues List (Oct. 31, 2006) at 6; Ex. 6 (Easton Direct) at 3-4; Ex. 7 (Easton Rebuttal) at 2-3. All subsequent references herein to the Disputed Issues List are to the version dated October 31, 2006.

<sup>18</sup> Qwest Post-Hearing Brief at 2; Ex. 9 (Easton Surrebuttal) at 7.

<sup>19</sup> Ex. 43 (Denny Rebuttal) at 4.

<sup>20</sup> Disputed Issues List at 11; Ex. 42 (Denny Direct) at 7-8; Ex. 44 at 5-8.

proposal for Section 2.2 offers language providing that Section 2.2 “addresses changes to rates that have been previously approved by the Commission, and Section 22 (Pricing) also addresses rates that have not been previously approved by the Commission (Unapproved Rates).” Eschelon’s proposed language also includes a lengthy statement concerning each party reserving its rights with respect to effective dates and the ability of a party to request that the Commission establish a specific date or provide other relief. The language also includes a statement that if the Commission enters an order that is silent with respect to effective date, “the order shall be implemented and applied on a prospective basis from the date that the order is effective either by operation of law or as otherwise stated in the order (such as ‘effective immediately’ or a specific date), unless subsequently otherwise ordered by the Commission or, if allowed by the order, agreed upon by the parties.”<sup>21</sup> Eschelon would add similar language to Section 22.1.4.2.

26. The Department supports the following language in Section 2.2: “The rates in Exhibit A and when they apply are further addressed in Section 22.” In Section 22.1.4.2, the Department recommends that the following language be used instead of the disputed language proposed by either Eschelon or Qwest: “If the Commission issues an order with respect to rates that is silent on the issue of the effective dates for the rates, the rates shall be implemented and applied on a prospective basis from the effective date of the legally binding Commission decision.”<sup>22</sup>

### **C. Decision**

27. This issue concerns only the unlikely scenario that the Commission would issue an order changing a UNE price but would fail to address in that order the effective date of the price change. There appears to be general agreement among the parties that in this scenario, the default effective date for such an order would be the date of the decision, and the new rate would apply from that date forward. The Department’s proposed language should be adopted because it is easier to understand than Eschelon’s, and it clarifies, in a way that Qwest’s proposal does not, that the issue is limited to the scenario described above.

## **Issue 2-4: Effective Date of a Legally Binding Change**

### **A. The Dispute**

28. The parties disagree on when an amendment to the ICA concerning any type of legally binding change would be implemented, if the order pronouncing the change does not include a specific implementation date. This scenario is much more likely to occur than the previous scenario concerning an order changing rates by the Commission that fails to specify an effective date.

---

<sup>21</sup> Disputed Issues List at 12-13.

<sup>22</sup> Department Post-Hearing Brief at 3-4.

## B. Position of the Parties

29. Qwest proposes language that any amendment to the ICA that incorporates a legally binding change would be effective on the date of the order pronouncing the change, but *only* if a party provides notice to the other party within 30 days of the effective date of that order. If neither party provides the notice within 30 days, the effective date would be the date of the amendment, unless the parties otherwise agree.<sup>23</sup>

30. Eschelon rejects the notice requirement and proposes language that any amendment to the ICA that incorporates a legally binding change would be deemed effective on the date of the order pronouncing the change.<sup>24</sup>

31. The Department supports the Qwest language, but would make the time for providing notice 90 days instead of 30 days.<sup>25</sup>

## C. Decision

32. Qwest characterizes its proposal as providing an incentive for parties to take action immediately if they want to ensure speedy implementation of a change in law. Qwest also argues that Eschelon's language would permit parties to take their time to develop intricate legal arguments interpreting changes in law, then present the other party with a huge bill dating back months or years to the date of the order (as in the recent *Level 3 Complaint Proceeding*). Eschelon characterizes Qwest's proposal as providing a party the opportunity to "game the system" by *not* giving notice of a decision that adversely affects the party, thereby possibly delaying when that decision will take effect.

33. What is important here is that the ICA contain a mechanism that will permit the parties to anticipate when and how amendments concerning a change in law without a specific effective date will affect their respective businesses. Qwest's proposal to use a notice provision is more likely to advance this goal than Eschelon's, which would permit a party to "sleep on" its rights indefinitely. "Gaming the system" is not a significant concern here, because both parties are similarly able to protect their rights. The Department's proposal to modify Qwest's language by extending the notice period to 90 days is reasonable and should be adopted.

<sup>24</sup> Disputed Issues List at 10; Ex. 42 (Denny Direct) at 9-15; Ex. 43 (Denny Rebuttal) at 5-7; Ex. 44 (Denny Surrebuttal) at 5-10.

<sup>25</sup> Department Post-Hearing Brief at 4-6.

### III. TERMS AND CONDITIONS/COLLECTION.

#### Issue 5-6: Discontinuation of Order Processing

##### A. The Dispute

34. Commission approval is required before Qwest may disconnect a CLEC for nonpayment or any other reason.<sup>26</sup> The parties dispute whether Commission approval should also be required before one party can discontinue processing orders from the other party for failure to make full payment (less any disputed amounts) within 30 days of the payment due date.

##### B. Position of the Parties

35. Qwest's language would permit Qwest to discontinue processing orders for relevant services if Eschelon fails to make full payment, less sums disputed under section 21.8, within 30 days of the payment due date. Qwest then would have to notify Eschelon, and the Commission, at least ten business days prior to discontinuing the processing of orders. Qwest's ICAs with Covad and AT&T contain a similar provision.<sup>27</sup>

36. Qwest rejects the notion that Commission approval should be required before it discontinues processing orders from Eschelon. Qwest contends it needs the ability to limit its financial exposure if Eschelon continues to place new orders for service but fails to timely and fully pay its bills. Qwest contends that Eschelon is a systematically slow payer and that Qwest has had to threaten to discontinue processing orders in the past in order to obtain partial payment of past due balances from Eschelon.<sup>28</sup>

37. Eschelon maintains that the Commission should limit Qwest's unilateral ability to discontinue processing new orders for nonpayment because of the significant consequences to Eschelon if that were to happen. Eschelon contends that it has had significant disputes with Qwest concerning the accuracy of Qwest's bills, the timeliness of Eschelon's payments, and determining amounts in dispute.<sup>29</sup> In addition, Eschelon has presented evidence that Qwest has threatened to discontinue processing orders based on amounts allegedly overdue in states other than Minnesota.<sup>30</sup>

38. Qwest maintains that at the time of the dispute referenced above, Eschelon had significant past due balances in all six states in which it does business with Qwest. It seems fairly clear that Eschelon owed substantially more

---

<sup>26</sup> See Minn. Stat. § 237.74, subd. 9 (2006).

<sup>27</sup> Disputed Issues List at 17-18; Ex. 6 (Easton Direct) at 8-11.

<sup>28</sup> Ex. 8 (Easton Rebuttal) at 5-6; Ex. 9 (Easton Surrebuttal) at 7-11.

<sup>29</sup> Ex. 45 (DD-3, Trade Secret Version).

<sup>30</sup> *Id.*

to Qwest than the amounts Eschelon maintained were in “disputed” status.<sup>31</sup> Qwest’s threat to discontinue processing orders was not without basis.

39. Eschelon has offered two proposals. First, it has proposed language that would require Commission approval before Qwest may discontinue order processing. Eschelon’s second proposal contains language that would allow Qwest to proceed with discontinuing order processing pursuant to the notice provisions in the contract, unless Eschelon seeks relief from the Commission.<sup>32</sup>

40. The Department has made no recommendation on this issue.

### **C. Decision**

41. The parties have demonstrated that they are unable to agree on when a late payment is properly classified as “disputed.”<sup>33</sup> There are, however, obvious problems with Eschelon’s proposal. What standard would the Commission use to determine whether Qwest could discontinue order processing? In what timeframe would the Commission have to make such a decision? Eschelon’s second proposal is even more ambiguous—if Eschelon seeks relief from the Commission, then what happens? It would appear that Qwest would have to wait for some sort of Commission decision, and in the meantime, keep accepting orders for service that could potentially increase its exposure to bad debt.

42. These parties have had protracted financial disputes. It is in the public interest to limit, in some reasonable way, Qwest’s ability to decide to discontinue processing orders, for the purpose of ensuring that customers are not adversely impacted while the parties’ financial disputes are resolved. Eschelon’s proposals requiring some type of Commission approval, however, are too ambiguous to implement. Qwest’s proposed language gives Eschelon 60 days to pay undisputed amounts (30 days to pay, plus 30 days from the payment due date) before Qwest can give notice of its intention to discontinue order processing; then ten business days (two calendar weeks) more would be required before Qwest could implement the decision.

43. If the decision were limited to the choices offered by the parties, the Administrative Law Judges would recommend that Qwest’s language be adopted. Although no party has proposed this, the Commission could require, based on the record, that Qwest shall only discontinue processing orders for service in Minnesota if Eschelon is more than 30 days past the payment due date for services provided in Minnesota. This may not be consistent with the way in which the parties process their bills and payments, but it would preclude Qwest

---

<sup>31</sup> *Id.*

<sup>32</sup> Disputed Issues List (Oct. 31, 2006) at 17-19. The CLEC Participants recommend the use of Eschelon’s language.

<sup>33</sup> Ex. 45 (DD-3, Trade Secret Version); Ex. 9 (Easton Surrebuttal) at 9-11.

from refusing to process orders in Minnesota based on alleged overdue balances in other states. In addition, if the Commission believed that additional time should be provided, it would be reasonable to extend the notice period to 15 business days (three calendar weeks), which should not significantly increase Qwest's financial exposure.

## **Issue 5-8: Definition of Repeated Delinquency**

### **A. The Dispute**

44. This issue, like several more that follow, relates to the circumstances under which Qwest may demand a deposit to secure future payment. The parties have agreed to language providing that if Eschelon is repeatedly delinquent in making its payments, Qwest may require a deposit to be held as security for the payment before orders will be provisioned and completed. They disagree on the definition of "repeatedly delinquent."

### **B. Position of the Parties**

45. Qwest would define "repeatedly delinquent" to mean payment of any undisputed amount received more than 30 days after the payment due date, three or more times during a 12-month period on the same billing account number.<sup>34</sup> Qwest considers Eschelon, at present, to be repeatedly delinquent.<sup>35</sup>

46. Eschelon would first modify the definition of "repeatedly delinquent" to mean payment of any undisputed "non-de minimus" or "material" amount more than 30 days after the payment due date.<sup>36</sup> Eschelon argues that the term "material" is used frequently throughout the ICA and is not unclear in this context. At the same time, and for the same reasons articulated above regarding discontinuance of order processing, Eschelon argues that because it is difficult to reach agreement with Qwest about what amounts are in disputed status, any use of the term "undisputed amounts" is unclear and ambiguous.

47. Qwest contends the meaning of "non-de minimus" or "material" amounts, as proposed by Eschelon, is unclear and that such unclear language is unnecessary since there is no evidence that Qwest has ever invoked collections or deposit requirements based on insignificant amounts.<sup>37</sup> Eschelon agrees that a \$3 million overdue balance, which is what Qwest claimed Eschelon owed when it threatened to discontinue order processing, would be material.<sup>38</sup>

48. The Department has made no recommendation on this issue.

---

<sup>34</sup> Disputed Issues List at 19-21; Ex. 6 (Easton Direct) at 12; Ex. 7 (Denney Rebuttal) at 12-14; Ex. 9 (Denney Surrebuttal) at 11-12.

<sup>35</sup> Tr. 1:116.

<sup>36</sup> Ex. 43 (Denney Rebuttal) at 43.

<sup>37</sup> Ex. 6 (Easton Direct) at 13; Ex. 7 (Easton Rebuttal) at 14; Ex. 9 (Easton Surrebuttal) at 11.

<sup>38</sup> Ex. 43 (Denney Rebuttal) at 25.

### **C. Decision**

49. The language proposed by both parties is subject the same criticism—that it is ambiguous either on its face or in its application. Qwest’s language will leave open the issue of whether it has properly determined “disputed” status; Eschelon’s language will leave room for argument about virtually any overdue sum under \$3 million, the only amount that Eschelon has agreed on the record would be material. When the remedy to be invoked for late payment—requiring a deposit to secure the debt—is so potentially significant, it would seem that both parties would benefit from a more clear definition of the triggering event.

50. Of the two proposals, Qwest’s language is less ambiguous; and although the parties’ recent financial dispute reflects the difficulty in agreeing on undisputed amounts, in the end Qwest did accept Eschelon’s calculation of this amount for the limited purpose of determining not to invoke further remedies for overdue payment. This is not a guarantee that Qwest will resolve future disputes in a similar manner; however, resolution of other related issues may provide additional security for Eschelon (see Issue 5-9). With regard to Issue 5-8, Qwest’s language should be used.

### **Issue 5-9: Definition of Repeated Delinquency**

#### **A. The Dispute**

51. This dispute concerning the same definition of “repeatedly delinquent,” concerns how often a party can be repeatedly delinquent before Qwest may require a deposit.

#### **B. Position of the Parties**

52. Qwest proposes language defining “repeatedly delinquent” as payment of undisputed amounts more than 30 days after the payment due date “three (3) or more times during a twelve (12) month period” on the same billing account number.<sup>39</sup> Qwest argues that Eschelon’s proposal fails to provide the proper incentive for timely payment and that its proposal is a reasonable business practice. In addition, Qwest’s language appears in the AT&T and Covad ICAs, and Eschelon’s language would therefore provide Eschelon with an unwarranted business advantage over other CLECs.

53. Eschelon proposes language defining “repeatedly delinquent” as payment of overdue amounts “for three consecutive months” on the same billing account number. In the alternative, Eschelon would define the term as payment of overdue amounts “three (3) or more times during a six (6) month period” on

---

<sup>39</sup> Disputed Issues List at 22-23; Ex. 6 (Easton Direct) at 13; Ex. 7 (Easton Rebuttal) at 12; Ex. 9 (Easton Surrebuttal) at 11.

the same billing account number.<sup>40</sup> Eschelon points out that many newer ICAs between Qwest and other CLECs contain the “three consecutive month” language.

54. The Department has made no recommendation on this issue.

### **C. Decision**

55. If incentive for timely payment is the concern, there are other remedies in the agreement that address this issue (e.g., penalties for late payment). The term at issue is a demand to make a security deposit, which is a serious step that could jeopardize Eschelon’s cash flow, depending on the amount of the deposit required. A remedy this dramatic should be reserved for more serious financial issues than late payment three times over the course of one year. Eschelon’s proposal, to define the term as payment of overdue amounts for three consecutive months, would adequately protect both parties when there is a legitimate concern about future payment. Eschelon’s language should be adopted.

## **Issue 5-11: Disputing Deposit Requirement**

### **A. The Dispute**

56. This issue concerns when deposits would be due and payable and whether the deposit requirement should be brought before the Commission for approval.

### **B. Position of the Parties**

57. Qwest proposes language providing that required deposits are due and payable within 30 days after demand and conditions being met.<sup>41</sup> Qwest opposes Eschelon’s proposal, which would permit Eschelon to bring such a dispute to the Commission and permit the Commission to set the date on which a deposit is due and payable. Qwest maintains this language is unnecessary because of Eschelon’s right to dispute Qwest’s billings and is inequitable because it might impair Qwest’s right to protect itself from the risk of nonpayment. Qwest argues that although Eschelon is at risk of having to pay a deposit, Qwest is at risk of nonpayment. Qwest maintains that its language balances the needs of the billing and billed parties.<sup>42</sup>

58. Eschelon proposes language providing that required deposits are due and payable with 30 days after demand and conditions being met:

---

<sup>40</sup> Disputed Issues List at 22-23; Ex. 42 (Denney Direct) at 57, 62-64; Ex. 43 (Denney Rebuttal) at 25-26; Ex. 44 (Denney Surrebuttal) at 52-53.

<sup>41</sup> Disputed Issues List at 23.

<sup>42</sup> Ex. 6 (Easton Direct) at 16; Ex. 7 (Easton Rebuttal) at 15-16; Ex. 9 (Easton Surrebuttal) at 13.

unless the billed Party challenges the amount of the deposit or deposit requirement (e.g., because delay in submitting disputes or making payment was reasonably justified due to inaccurate or incomplete billing) pursuant to Section 5.18. If such a Dispute is brought before the Commission, deposits are due and payable as of the date ordered by the Commission.<sup>43</sup>

59. If Eschelon's language is not included, Eschelon would be required to pay a deposit demanded by Qwest before it could seek recourse with the Commission. Eschelon maintains its language would allow the Commission to make the call on when a deposit is paid when there is a disagreement and that Eschelon would not expend or monopolize the resources of the Commission or Qwest by raising a baseless challenge.<sup>44</sup>

60. The Department has made no recommendation on this issue.

### **C. Decision**

61. Under Qwest's language, Eschelon would have the opportunity to challenge the deposit requirement by making the deposit and then potentially seeking relief from the Commission. Under Eschelon's language, Eschelon would have the opportunity to seek relief from the Commission before making the deposit. Commission oversight would be available in either case.

62. If the Commission feels it is necessary to become involved in sorting through the parties' billing and payment issues in the event Qwest demands a deposit, on what would probably be an expedited basis, then Eschelon's language would be appropriate. If the Commission believes these matters are better left to the parties to resolve and that Commission oversight would be sufficient protection to Eschelon after the deposit is made, then Qwest's language should be used. As there is no evidence in the record that Qwest has improperly demanded such a deposit in the past, or that "advance oversight" by the Commission has been necessary in the past, the Administrative Law Judges recommend that Qwest's language be used.

## **Issue 5-12: Alternative Approach to Deposits**

### **A. The Dispute**

63. This dispute concerns Eschelon's alternative language for all of Section 5.4.5, which would eliminate Qwest's ability to demand a deposit for payments that are "repeatedly delinquent" and would replace it with language that would permit Qwest to require a deposit for failure to make full payment of

---

<sup>43</sup> Disputed Issues List at 23-24.

<sup>44</sup> Ex. 42 (Denney Direct) at 65; Ex. 43 (Denney Rebuttal) at 27; Ex. 44 (Denney Surrebuttal) at 53.

undisputed amounts 90 days following the payment due date, if the Commission determines that “all relevant circumstances” warrant a deposit.

## **B. Position of the Parties**

64. Eschelon’s alternative language for section 5.4.5, which would replace its proposals for Issues 5-8, 5-9, and 5-11, is shown below:

If the Parties are doing business with each other for the first time, each Party will determine the other Party's credit status based on credit reports such as Dun and Bradstreet. If a Party that is doing business with the other Party for the first time has not established satisfactory credit with the other Party according to the previous sentence, or the Party is being reconnected after a disconnection of service or discontinuance of the processing of orders by the Billing Party due to a previous non-payment situation, the Billing Party may require a deposit to be held as security for the payment of charges before the orders from the billed Party will be provisioned and completed or before reconnection of service. The Billing Party may also require a deposit for the failure of the other Party to make full payment, less any disputed amount as provided for in Section 21 of this Agreement, for the relevant services provided under this Agreement within ninety (90) Days following the Payment Due Date, if the Commission determines that all relevant circumstances warrant a deposit.<sup>45</sup>

65. In Eschelon’s view, this option provides the Commission the ability to determine contested deposit requirements on a case-by-case basis.<sup>46</sup>

66. In Qwest’s view, this language would unfairly delay Qwest’s ability to require security when faced with increasing debt and would require the Commission to micromanage Eschelon’s account.<sup>47</sup>

67. The Department has made no recommendation on this issue.

## **C. Decision**

68. As the billing party, Qwest should have the contractual right to require security for repeated delinquency of three successive months. Eschelon’s alternative proposal should not be used in lieu of the recommendations made above for Issues 5-8, 5-9, and 5-11.

## **Issue 5-13: Increase in Deposit Based Upon Review of Credit Standing**

### **A. The Dispute**

69. The parties dispute whether Qwest should be permitted to increase the amount of any deposit based upon its review of Eschelon's credit standing.

### **B. Position of the Parties**

70. Qwest proposes language that would permit it to review Eschelon's credit standing and increase the amount of deposit required, but in no event would the maximum amount exceed the amount stated in Section 5.4.5 (the estimated total monthly charges for an average two-month period from the date of the triggering event).<sup>48</sup> Qwest argues that in light of the frequency of telecommunications carriers declaring bankruptcy or simply shutting their doors, Qwest needs to be able to conduct credit reviews of its customers. Qwest maintains that this is a reasonable business practice accepted by every other CLEC doing business with Qwest.<sup>49</sup>

71. Eschelon's first proposal is to delete this language entirely. Its second proposal is to limit the use of this provision to circumstances in which Qwest has already demanded and received a deposit. Eschelon's proposal would also require Commission approval:

If a Party has received a deposit pursuant to Section 5.4.5 but the amount of the deposit is less than the maximum deposit amount permitted by Section 5.4.5, the Billing Party may review the other Party's credit standing and increase the amount of deposit required, if approved by the Commission, but in no event will the maximum amount exceed the amount stated in Section 5.4.5. Section 5.4 is not intended to change the scope of any regulatory agency's or bankruptcy court's authority with regard to Qwest or CLECs.<sup>50</sup>

72. Eschelon argues that Qwest's proposal contains no criteria or standards defining when this provision might be invoked or the circumstances that would warrant modification. It would also nullify the limitations on deposit requirements established in Section 5.4.5 (failure to establish satisfactory credit, repeated delinquency in making payments, or reconnection after disconnection of service or discontinuance of order processing due to previous nonpayment). Under this language, Qwest would have the ability to require a deposit even when Eschelon is current in its payments. Eschelon also argues that there is no defined "triggering event" when Qwest makes a determination to increase a

---

<sup>48</sup> Disputed Issues List at 26.

<sup>49</sup> Ex. 6 (Easton Direct) at 18-19; Ex. 7 (Easton Rebuttal) at 16-18; Ex. 9 (Easton Surrebuttal) at 17.

<sup>50</sup> Disputed Issues List at 26-27. The CLEC Participants support the use of Eschelon's language.

deposit amount based on its review of credit standing, which makes the “maximum amount” language ambiguous.<sup>51</sup>

73. The Department has made no recommendation on this issue.

### **C. Decision**

74. Qwest’s language is essentially without a standard, and it would permit Qwest to demand a deposit at any time based on its own judgment about the significance of what is in a credit report. Eschelon’s language (in alternative 2) is reasonable in that it would permit Qwest to increase a deposit requirement if one is already in place pursuant to Section 5.4.5. Eschelon’s language would require Commission approval, however, which would arguably burden the Commission. The Administrative Law Judges recommend adoption of Eschelon’s language with deletion of the phrase “if approved by the Commission.”

## **Issue 5-16: Copy of Non-Disclosure Agreement**

### **A. The Dispute**

75. Under the ICA, Eschelon will provide forecasts related to interconnection trunks; future central office space collocation requirements; and demand for DS0, DS1, and DS3 capacities that will be terminated on the interconnection distribution frame (ICDF) by Qwest. The parties have agreed to language that would require certain Qwest personnel to execute a non-disclosure agreement with regard to confidential forecasting information. The non-disclosure agreement would preclude any person who receives the information from disclosing it to retail marketing, sales, or strategic planning personnel. The parties disagree about whether Qwest should be required to provide Eschelon with a signed copy of each non-disclosure agreement within ten days of execution.

### **B. Position of the Parties**

76. Eschelon proposes the following language: “Qwest shall provide CLEC with a signed copy of each non-disclosure agreement executed by Qwest personnel within ten (10) Days of execution.”<sup>52</sup> Eschelon contends this language is necessary because it will have insufficient information to object if sensitive information is provided to a Qwest employee not authorized to receive it, and it will have no way to confirm if its confidential information is being adequately protected. Eschelon argues that this requirement is similar to the requirements of protective orders routinely issued in contested case hearings.<sup>53</sup>

---

<sup>51</sup> Ex. 42 (Denney Direct) at 70-72;

<sup>52</sup> Disputed Issues List at 28;

<sup>53</sup> Ex. 42 (Denney Direct) at 74-77; (Ex. 43 (Denney Rebuttal) at 32-34.

77. Qwest would eliminate Eschelon's language. It contends the language places an unnecessary administrative burden on Qwest and that Eschelon already has the contractual right to request an audit of its compliance with this requirement no more than every three years, unless cause is shown to do it more frequently. It also argues that the burden of complying with such a requirement on an on-going basis, where employees change jobs and new employees take their place, is very different from complying with the obligations of a protective order in a contested case.<sup>54</sup>

78. The Department makes no recommendation on this issue.

### **C. Decision**

79. The agreements are to be signed by people who are authorized to receive the sensitive information. In the agreements, these authorized people agree in writing not to disclose the information to those who are not authorized. Requiring Qwest to provide a copy of the signed agreement will not, in and of itself, provide Eschelon with any information about whether the authorized persons are in compliance, unless Qwest asks an expressly unauthorized person to sign a non-disclosure agreement, which seems unlikely. Although the administrative burden involved in providing Eschelon with a copy of the document would appear to be minimal, Eschelon's language does not achieve the purpose for which it is offered, and it might generate insignificant disputes concerning what might happen if the ten-day deadline were breached. If Eschelon has a well-founded belief that sensitive information has been given to unauthorized personnel, the audit provision would permit it to request a compliance audit at any time. The Administrative Law Judges recommend adoption of Qwest's language.

## **IV. INTERCONNECTION.**

### **Issue 7-18: Transit Record Charge**

### **Issue 7-19: Transit Record Bill Validation**

#### **A. The Dispute**

80. Transit traffic is traffic that originates on one telecommunications carrier's network, transits a second carrier's network, and terminates on a third carrier's network. In Section 7.6.3 of the Agreement, the parties agreed that they will provide the requested records to each other, when the records are used to provide information necessary for each party to bill the originating carrier. In Minnesota, the rate for category 11 records is currently set at zero.<sup>55</sup> The dispute here is whether, when Eschelon is the originating carrier as opposed to the terminating carrier, and when it has requested the transit records not for the

---

<sup>54</sup> Ex. 6 (Easton Direct) at 20-22); Ex. 7 (Easton Rebuttal) at 18-19; Ex. 9 (Easton Rebuttal) at 17-18.

<sup>55</sup> Qwest has not proposed to change this rate in the *UNE Cost Case*.

purpose of billing another carrier but for the purpose of verifying Qwest's transit bills, Qwest should have to provide the records free of charge.

## **B. Position of the Parties**

81. Eschelon proposes the following language for Section 7.6.3.1:

In order to verify Qwest's bills to CLEC for Transit Traffic the billed party may request sample 11-01-XX records for specified offices. These records will be provided by the transit provider in EMI mechanized format to the billed party at no charge, because the records will not be used to bill a Carrier. The billed party will limit requests for sample 11-01-XX data to a maximum of once every six months, provided that Billing is accurate.<sup>56</sup>

82. Eschelon's proposal for Section 7.6.4 specifies the information Qwest would be obligated to provide for bill validation:

Qwest will provide the non-transit provider, upon request, bill validation detail including but not limited to: originating and terminating CLLI code, originating and terminating Operating Company Number, originating and terminating state jurisdiction, number of minutes being billed, rate elements being billed, and rates applied to each minute.<sup>57</sup>

83. Eschelon maintains this language is necessary because Qwest's bills do not contain call record detail, but simply contain the number of transit minutes and transit traffic rate. Although Eschelon can obtain information from its switch to identify the person called and the fact that the call is handed off to Qwest, it is not able to identify all the information needed to reconcile Qwest's bills. Eschelon argues that it needs occasional access to a limited number of call records so that it can verify the transit bills. In addition, for Eschelon customers served through Qwest Platform Plus (QPP, the UNE-P replacement product), Eschelon's switch would have no information because these calls go through Qwest's switch.<sup>58</sup>

84. Qwest opposes this language and would delete it from the ICA. Qwest argues that Eschelon's switch provides the best information about traffic it sends to Qwest and that Eschelon should be able to validate Qwest's bills by comparing Eschelon's own records with the bills from the terminating carrier. In addition, Qwest maintains that the Category 11 transit record product was designed to create records for terminating carriers, not originating carriers. To provide what Eschelon is requesting for originating carriers, Qwest would have to

---

<sup>56</sup> Disputed Issues List at 29-30.

<sup>57</sup> Disputed Issues List at 30.

<sup>58</sup> Ex. 42 (Denney Direct) at 79-82; Ex. 43 (Denney Rebuttal) at 34-36; Ex. 44 (Denney Surrebuttal) at 57-58.

undertake a significant amount of programming. No other originating carriers have requested this type of record.<sup>59</sup>

### **C. Decision**

85. If Qwest provides 11-01-XX records free of charge to CLECs for the purpose of billing originating carriers, it is hard to see why Qwest should not be required to provide sample records free of charge to Eschelon, once every six months, for the purpose of verifying Qwest's bills. Eschelon's language for Section 7.6.3.1 should be adopted.

86. Eschelon has not directly responded to Qwest's assertion that it would have to make programming changes to provide the information Eschelon is requesting for originating carriers in Section 7.6.4, beyond saying it wants the same "type" of information Qwest currently provides. It is not clear whether the 11-01-XX records referenced in Section 7.6.3.1 contain the same information as that required by Eschelon's proposed language for Section 7.6.4. Qwest should provide to Eschelon whatever records are referenced in 7.3.6.1 for the purpose of verifying bills. If something different would be required by Section 7.6.4, it should not be adopted.

## **V. COLLOCATION.**

### **Issue 8-20: Available Inventory/Posting of Price Quotes**

#### **A. The Dispute**

87. "Available inventory" is an available collocation site that has been returned to inventory. Qwest posts these sites on its website, with a list of all reusable and reimbursable elements, and provides a discount on the non-recurring costs for circuit terminations. If Qwest prepares a quote for a CLEC interested in a posted site, it charges a Planning and Engineering Fee to the CLEC. At issue is whether Qwest should also be required to post on its website prior quotes it has prepared for an available collocation space. Also at issue is the extent to which Qwest should be able to charge another Planning and Engineering Fee for later quotes prepared for the same space.

#### **B. Position of the Parties**

88. Eschelon proposes the following language:

if Qwest prepares a Planning and Engineering Fee for a posted Collocation site and for any reason the posted Collocation site is returned to Qwest inventory, Qwest will post the Planning and Engineering Fee quote (with the carrier's name redacted) on the inventory list for that site and, for future requests for that site, will

---

<sup>59</sup> Ex. 6 (Easton Direct) at 22-23; Ex. 7 (Easton Rebuttal) at 19-20;

waive the Planning and Engineering Fee, as the quote has already been prepared, unless Qwest establishes a change in circumstance affecting the quoted price.<sup>60</sup>

89. Eschelon's language would thus require that Qwest post any previously prepared quote and waive the Planning and Engineering Fee for a second quote, unless Qwest establishes a change in circumstance affecting the price. Eschelon argues that posting of prices that Qwest has already been paid to create will facilitate the review of used collocation space and aid Eschelon in making efficient decisions regarding the purchase of such space.<sup>61</sup>

90. Qwest's first proposal was to delete this section entirely, because Qwest maintains it is unlikely that a CLEC will ever order a collocation site exactly "as is." Qwest also argued that this is an issue that should be addressed in its Change Management Process (CMP). Since the time of the hearing Qwest has proposed alternative language, which provides as follows:

if Qwest prepares a quote for a posted Available Inventory collocation site and that quote is not accepted, and the site is returned to Qwest Available Inventory, if another CLEC places an order for that same site within one year of the date of that prior quote, Qwest will provide that prior quote to CLEC if requested by CLEC in that application. If CLEC does request that prior quote with their Available Inventory Application, Qwest shall be permitted to redact any information necessary to protect any confidential information of the carrier for whom the prior quote was prepared. If CLEC requests that the site be provisioned exactly as requested by the prior carrier, and if this results in the same quoted price, Qwest will waive the Planning and Engineering Fee related to preparation of CLEC's quote.<sup>62</sup>

91. Qwest's language would permit CLECs to request and receive prior quotes that are less than one year old, would permit Qwest to redact any information necessary to protect confidential information of the carrier for whom the prior quote was prepared, and would require Qwest to waive a subsequent Planning and Engineering fee only if the CLEC requests that the site be provisioned exactly as requested before and the same price is subsequently quoted.

92. The Department recommends adoption of Eschelon's proposed language. It maintains that, while in the past CLECs may not have ordered identical configurations, it is likely explained in part because Qwest has not

---

<sup>60</sup> Disputed Issues List at 30-31.

<sup>61</sup> Ex. 42 (Denney Direct) at 82-83; Ex. 43 (Denney Rebuttal) at 37-39; Ex. 44 (Denney Surrebuttal) at 58-59.

<sup>62</sup> Disputed Issues List at 31-32. See *also* Ex. 16 (Hubbard Direct) at 4-15; Ex. 17 (Hubbard Rebuttal) at 3-6; Ex. 18 (Hubbard Surrebuttal) at 2-6.

posted the price quotes, and there was no incentive for CLECs to take advantage of the available price quotes by ordering the same configurations. The Department recommends that Qwest be required to post prior quotes; if Qwest maintains there is a cost associated with the posting requirement, Qwest should be permitted to submit a cost study in the *UNE Cost Case* to establish the cost likely to be incurred, along with a proposed price.<sup>63</sup>

### **C. Decision**

93. Prior price quotes may be useful to CLECs in making efficient decisions about collocation space. Eschelon's language is reasonable in that it would permit Qwest to charge another Planning and Engineering Fee if the circumstances have changed since the prior quote was prepared. Qwest's language would make it more difficult for CLECs to obtain the prior quotes, would allow Qwest to use its own judgment about what information should be redacted from the prior quotes, and would permit Qwest to charge another Planning and Engineering Fee unless the "same quoted price" is given for the subsequent quote. The Administrative Law Judges recommend that Eschelon's proposed language be used because the information would be easier to access and evaluate. If there is a cost associated with posting this information on Qwest's website, Qwest should be permitted to submit a cost study in the *UNE Cost Case*.

### **Issue 8-20(a): Available Inventory/Space Augments**

#### **A. The Dispute**

94. This dispute concerns charges applicable to "special sites," which are collocation sites returned to Qwest through Chapter 7 bankruptcy or abandonment. These sites are not decommissioned and are offered with equipment, racks, cages, DC power, grounding, and terminations in place. They are posted on Qwest's available inventory website. The parties dispute whether Qwest may charge a Planning and Engineering fee instead of a "special site assessment fee" if Eschelon proposes modifications to the space.

#### **B. Position of the Parties**

95. The parties have agreed upon the following language:

CPMC will verify whether the requested site is still available for acquisition by conducting a feasibility study within ten (10) Days after receipt of the application. If the site is not available the CPMC will notify the CLEC in writing. If the site is available a site survey will be arranged with the CLEC and Qwest State Interconnect Manager (SICM). Upon completion of the survey Qwest will

---

<sup>63</sup> Department Post-Hearing Brief at 6-8; Ex. 52 (Rebholz Reply) at 2-4; Ex. 53 (Rebholz Surreply) at 1-3.

prepare a quote based on the site inventory and any requested modifications to the site. CLEC must pay in full one hundred percent (100%) of the quoted non-recurring charges to Qwest within thirty (30) Days of receipt of the quote. If Qwest does not receive the payment within such thirty (30) Day period, the quote will expire and the requested site will be returned to Qwest inventory. The CLEC will be charged a special site assessment fee for work performed up to the point of expiration or non-acceptance of the quote.<sup>64</sup>

96. Qwest would add the following sentence at the end of the above language: "If CLEC requests an augment application then CLEC will be charged a Planning and Engineering Fee instead of the special site assessment fee."<sup>65</sup> Qwest maintains that if a CLEC requests the collocation site "as is," Qwest will charge the "Special Site Assessment Fee." If a CLEC requests modifications, Qwest will charge the "higher" Planning and Engineering Fee.<sup>66</sup>

97. It is not clear from Qwest's prefiled testimony which Planning and Engineering Fee Qwest plans to charge, nor is it clear from the prefiled testimony what Qwest believes the "Special Site Assessment Fee" is. During the hearing, Qwest's position was clarified.<sup>67</sup> Exhibit A to the ICA contains several planning and engineering fees for collocation, including one for special sites (\$1,051.23) and one for caged collocations (\$3,406.46). Eschelon maintains, and Qwest agrees, that through its proposed language Qwest plans to charge the \$3,406.46 fee for standard caged collocations if modifications are requested for a special site.

98. Eschelon opposes the additional language, contending the agreed-upon language already specifies that the "special site assessment fee" covers all work performed, including any requested modifications, up to the point of expiration or non-acceptance of the quote. Eschelon asserts the "special site assessment fee" is the \$1,051.23 listed as a "planning and engineering fee" on Exhibit A.<sup>68</sup>

99. The Department has made no recommendation on this issue.

---

<sup>64</sup> Disputed Issues List at 32-33.

<sup>65</sup> *Id.*

<sup>66</sup> Ex. 16 (Hubbard Direct) at 15-19; Ex. 17 (Hubbard Rebuttal) at 6-8; Ex. 18 (Hubbard Surrebuttal) at 6-7.

<sup>67</sup> See Tr. 2:20-23 (special site assessment fee is the special site planning and engineering fee listed in 8.15.2.1 in Ex. A to the ICA); *id.* at 24 (Qwest would apply the planning and engineering fee for standard caged collocations at § 8.4.1 if modifications were requested for a special site).

<sup>68</sup> Ex. 42 (Denney Direct) at 87-89; Ex. 43 (Denney Rebuttal) at 39-41; Ex. 44 (Denney Surrebuttal) at 58-60, DD-24.

### C. Decision

100. In Minnesota, Qwest is currently permitted to charge the following rates for special sites: planning and engineering fee, \$1,051.23; network assessment fee, \$1,652.38; and survey fee \$163.65.<sup>69</sup> For standard caged collocations, the planning and engineering fee is \$3,406.46.<sup>70</sup> Until September 29, 2006, Qwest charged the special site planning and engineering fee; on that date, it announced it would charge the higher fee.<sup>71</sup>

101. The Commission approved the collocation rates for special sites based upon the agreement of the parties in Docket No. P-421/AM-03-1754 (October 2003 Rate Element Filing). Qwest did not present evidence of the cost model used to produce these rates. As there is a planning and engineering fee specifically for special sites, there appears to be no reason to use the planning and engineering fee for caged collocations for any activities concerning special sites.

102. The agreed-upon language provides that the CLEC will be charged a “special site assessment fee” for work performed up to the point of expiration or non-acceptance of the quote. In Docket No. P-421/AM-03-1754, the special site planning and engineering fee was described as a “Transfer of Responsibility Assessment Fee.”<sup>72</sup>

103. The planning and engineering fee contained in Section 8.15.2.1 of Ex. A appears to include the planning and engineering involved in transferring the collocation from one CLEC to another. The Administrative Law Judges conclude that Eschelon’s interpretation of this language is correct and that the planning process includes planning any requested modifications. The Administrative Law Judges recommend that the last sentence of the agreed-upon language be changed as follows to clarify: “The CLEC will be charged a special site assessment fee as specified in Section 8.15.2.1 of Ex. A for work performed up to the point of expiration or non-acceptance of the quote.”

---

<sup>69</sup> These charges were approved as interim rates not subject to true-up, based on the stipulation of the parties, in Docket No. P-421/AM-03-1754 (October 2003 Rate Element Filing).

<sup>70</sup> The caged collocation planning and engineering fee was approved in the *Generic Cost Docket*, Docket No. P-422, 5321, 3167, 466, 421/C-96-1540. See Ex. A to ICA, § 8.15.2, Available Inventory—Special Sites—Planning and Engineering Fee; § 8.4.1, Caged Physical Collocation—Planning and Engineering Fee).

<sup>71</sup> Ex. 44 at DD-24.

<sup>72</sup> *In the Matter of Qwest Corporation’s Request for Approval of SGAT Elements*, Docket No. P-421/AM-03-1754, Order Approving Stipulation (Aug. 20, 2004), Stipulation Ex. A.

## **Issue 8-21: DC Power/Usage Pricing**

### **Issue 8-21(b)**

### **Issue 8-21(c)**

### **Issue 8-21(d)**

#### **A. The Dispute**

104. Qwest currently provides -48 volt DC power to CLEC collocation equipment, and there are currently two separate rate elements: power plant, which is applied on a per-amp basis to the quantity of power ordered; and power usage, which is either applied to the quantity of power ordered, or through the DC power measurement option, to the quantity of power actually used, on feeds greater than 60 amps. The parties disagree about whether the power plant charge should be entirely based on power usage, rather than power requested. The current power pricing scheme is based on power requested, and Qwest advocates continued use of that method; Eschelon wants power to be priced based on the power used. The appropriate method of pricing DC Power is at issue in the *UNE Cost Case*.

#### **B. Position of the Parties**

105. Qwest's language in the sections at issue here provides for billing on a measured basis only for the DC power usage charge.<sup>73</sup> Qwest contends it engineers power plant in accordance with a CLEC's ordered amounts of power capacity, which is a fixed investment in the particular equipment needed to provide the ordered capacity. It contends that Eschelon can reduce its power plant charges through Qwest's "Power Reduction" product, which reduces the amps on a primary or secondary feed. Qwest's "Power Reduction with Reservation" product also reduces the amps but reserves the fuse position on the power board, which would permit "Power Restoration" in the future.<sup>74</sup>

106. Eschelon would delete the word "usage" from Qwest's language so that power measurement would apply to both power plant and power usage charges. Eschelon maintains that in designing power plant in a central office, Qwest engineers the plant to accommodate "peak drain," or "List 1 drain," which is the maximum drain required by the power plant at times of peak demand under normal operating conditions (including equipment of both Qwest and collocators). The power feeder cables ordered by CLECs are sized to accommodate "List 2 drain," which is the maximum current the equipment may draw when batteries providing DC power are approaching a condition of total failure. By assessing its power plant rate based upon the size of Eschelon's feeder cables, instead of

---

<sup>73</sup> Disputed Issues List at 34-38.

<sup>74</sup> Ex. 16 (Hubbard Direct) at 19-27, 32-37; Ex. 17 (Hubbard Rebuttal) at 11-19; Ex. 18 (Hubbard Surrebuttal) at 7-13.

assessing plant rate based on measured usage, Eschelon maintains it is forced to pay for substantially more capacity than it actually uses.<sup>75</sup>

107. The Department recommends that Qwest's language be used at this time and that any decision to change the pricing method should be made in the *UNE Cost Case*. The Department recommends that the following language be added to Section 8.3.1.6.1: "Any change in the application of the DC Power Plant Charge that is ordered in Docket No. P421/AM-06-713 will apply to the DC Power Plant ordered by the CLEC."<sup>76</sup>

### **C. Decision**

108. Qwest's language should be adopted for this ICA. Although it is theoretically possible that the current pricing scheme results in a discriminatory rate or over-recovers capacity costs from CLECs, there is no evidentiary basis for drawing such a conclusion here. These are issues that should be examined in the *UNE Cost Case*. The Department's recommended language could be added, but the Administrative Law Judges do not believe it is necessary. Any number of prices could change as a result of the *UNE Cost Case*; adding the Department's recommended reference to this portion of the ICA will not add any needed clarification.

## **Issue 8-21(a): Initial Power Measurement**

### **A. The Dispute**

109. In addition to the dispute identified above concerning the term "usage," this issue concerns the process that should apply when the CLEC first orders measured power.

### **B. Position of the Parties**

110. Qwest's language provides that it will bill Eschelon for the requested level of power until Eschelon notifies Qwest that Eschelon wants a measurement, and then Eschelon is responsible for notifying Qwest when the collocation is operating.<sup>77</sup>

111. Eschelon's language states that Qwest cannot bill at all until a measurement is taken, but that Eschelon is responsible for notifying Qwest of when to measure only if Qwest's first measurement is zero.<sup>78</sup>

---

<sup>75</sup> Ex. 27 (Starkey Direct) at 93-111; Ex. 28 (Starkey Rebuttal) at 42-54; Ex. 29 (Starkey Surrebuttal) at 72-91.

<sup>76</sup> Department Post-Hearing Brief at 9-10; Ex. 54 (Fagerlund Reply) at 11-13; Ex. 55 (Fagerlund Surreply) at 11. The CLEC Participants agree that this issue should be decided in the *UNE Cost Case*.

<sup>77</sup> Disputed Issues List at 34-35; Ex. 16 (Hubbard Direct) at 27-32.

<sup>78</sup> Disputed Issues List at 34-35; Ex. 27 (Starkey Direct) at 93; Ex. 28 (Starkey Rebuttal) at 52-53.

112. The Department agrees with Qwest that the CLEC should be required to notify Qwest when the equipment is in the space, so that Qwest does not waste resources measuring usage that does not yet exist. The Department disagrees, however, with the language in Qwest's proposal that would permit it to bill Eschelon based on requested power until Eschelon notifies it that the collocation is operating. The Department recommends that Qwest's language be adopted, with the following two sentences added to Section 8.2.1.29.2.2:

If the CLEC's order for DC Power to a collocation includes a request for measured usage, Qwest will only bill for DC Power Usage for this collocation on a measured basis. The CLEC is responsible for notifying Qwest immediately when DC Power begins to be used in the collocation.<sup>79</sup>

113. In the Department's view, this language will motivate Qwest and Eschelon to work out a process so that power is measured from the very first month that measured power is in place.<sup>80</sup>

### **C. Decision**

114. Qwest's language should be adopted, with the additional language recommended by the Department.

## **Issue 8-22: Quote Preparation Fee**

### **A. The Dispute**

115. The dispute here concerns the circumstances under which Qwest should be able to charge a Planning and Engineering fee (or Quote Preparation Fee) for reducing or restoring power. There are two methods of reducing power: with or without reservation. Power reduction with reservation requires the CLEC to reduce its ordered amperage to zero, while allowing it to reserve its existing fuse/breaker position on the BDFB or power board. Under this option, the CLEC power cables and fuses remain in place until the CLEC either asks for power again or discontinues the power arrangement. The CLEC pays a monthly rate of \$58.19 for reservation.<sup>81</sup> Power reduction without reservation permits a CLEC to reduce its ordered amps to a lower level. The same "with and without reservation" options are available for power restoration.

116. Qwest proposes to charge a quote preparation fee (QPF, or planning and engineering fee) of \$565.67 for these activities with or without a reservation of the fuse position on the power board; Eschelon will agree to pay it

---

<sup>79</sup> Department's Post-Hearing Brief at 11-12; Ex. 54 (Fagerlund Reply) at 13-14; Ex. 55 (Fagerlund Surreply) at 11.

<sup>80</sup> Ex. 55 at 11.

<sup>81</sup> The reservation charge is the "Power Maintenance Charge" at § 8.13.4 of Ex. A to the ICA; the power reduction charges depend on amperage and are contained in § 8.13.

only for power restoration if there has been no reservation of the fuse position on the power board.<sup>82</sup>

## **B. Position of the Parties**

117. Qwest maintains that it is entitled to recover the cost of performing a feasibility study and producing a quote concerning a CLEC request to reduce or restore power. It has proposed the same QPF charges in the *UNE Cost Case* and contends that issues concerning those charges should be addressed in the *UNE Cost Case*.<sup>83</sup>

118. Eschelon proposes to leave the section concerning a QPF for power reduction blank. Eschelon maintains that the only circumstance in which a QPF would be legitimate in connection with reducing power is when there is no reservation and cabling work is required to move from the power board to the BDFB; in this circumstance, Eschelon would agree to pay an individual case basis (ICB) charge. Eschelon would modify the section concerning power restoration to clarify that the QPF would be payable only for power restoration without reservation. Its position is that CLECs pay QPFs when power is originally requested; they pay for the work involved in power reduction and restoration through non-recurring charges (NRCs), and they pay a recurring maintenance fee when power is reduced or restored with reservation. It maintains another QPF is unnecessary, particularly when a CLEC is paying for reservation, because the originally-engineered facilities are left in place.<sup>84</sup>

119. The Department was initially concerned that Qwest proposed to charge an ICB price for the restoration of power and a QPF to prepare the ICB price for reducing or restoring power. It supported making the outcome of this dispute contingent on the outcome of the *UNE Cost Case*.<sup>85</sup> In its post-hearing brief, the Department stated it supports the Eschelon language because “this is a reprice from an initial price of zero and not a new price.”<sup>86</sup>

## **C. Decision**

120. Section 8.13 of Ex. A to the ICA reflects both QPFs (planning and engineering fees) and separate fees for the work involved in reducing and maintaining power. These are interim rates that were approved by agreement in Docket No. P-421/AM-03-1754. The cost model that generated these prices is not in evidence, so there is no model to look at for determining how the charges for reducing power and maintaining power were meant to relate to each other or

---

<sup>82</sup> Disputed Issues List at 39.

<sup>83</sup> Ex. 16 (Hubbard Direct) at 38-40; Ex. 17 (Hubbard Rebuttal) at 13; Ex. 18 (Hubbard Surrebuttal) at 9; Ex. 23 (Million Rebuttal) at 16-17.

<sup>84</sup> Ex. 42 (Denney Direct) at 91-99; Ex. 43 (Denney Rebuttal) at 42-43; Ex. 44 (Denney Surrebuttal) at 61-63.

<sup>85</sup> Ex. 54 at 14-15; Ex. 55 at 12.

<sup>86</sup> Department Post-Hearing Brief at 13.

when the QPF charge would appropriate. Qwest maintains that the QPF reflects the planning and engineering activities associated with determining the steps necessary to perform the work, whereas the separate charge is for the actual performance of the work. Qwest maintains the costs were split this way so that if the CLEC were to decide not to go through with the work, it could avoid the separate work charge, but Qwest would still be compensated for the planning.<sup>87</sup> This explanation is somewhat contradicted by Qwest's admission that no "quote" is ever generated or provided to a CLEC at the conclusion of this QPF process, so it is unclear how exactly a quote could affect a CLEC's decision not to proceed, or why a quote would ever be necessary when there is an approved fixed charge for performing the work.<sup>88</sup> In any event, Qwest would like to charge both the QPF and the work fee for every such change in power.

121. The proposed charges for power restoration do not appear at all on Ex. A to the ICA and have not yet been approved by the Commission. For these charges, the Department is correct that this is a "reprice" from an initial price of zero. Qwest has agreed that for power restoration, it will charge the NRC for power reduction as opposed to an ICB price. The parties still dispute when the QPF charge is appropriate.

122. The burden here is on Qwest to demonstrate that the QPF charge is appropriate, and it has failed to demonstrate that a QPF is necessary when CLECs wish to reduce or restore power and are paying or have paid for reservation of their facilities. Qwest may be able to show in the *UNE Cost Case* that a different result should follow, based on the cost studies filed in that case.

123. Eschelon has agreed that some work may be necessary to plan for power reduction without reservation, although it would prefer to pay an ICB price that includes the cost of planning. Eschelon has agreed to pay the QPF for power restoration without reservation. It would be inappropriate to recommend ICB pricing for power reduction without reservation, as urged by Eschelon, when a QPF and NRC were set by agreement of the parties in Docket No. P-421/AM-03-1754. Unless and until the Commission approves different charges in the *UNE Cost Case*, Qwest should be permitted to charge the QPF contained in Section 8.13 of Ex. 2 of the ICA for power reduction and restoration when there has been no reservation of facilities.

## **VI. UNBUNDLED NETWORK ELEMENTS (UNEs).**

### **Issue 9-31: Nondiscriminatory Access to UNEs**

#### **A. The Dispute**

124. The parties disagree about two phrases in Section 9.1.2 that concern whether certain activities related to UNEs will be provided at TELRIC-

---

<sup>87</sup> Tr. 2:112.

<sup>88</sup> Tr. 2:118-22.

based rates. Eschelon proposes language that it believes would make clear that these activities are to be TELRIC-priced; Qwest opposes this language, advocating instead that the question whether a change to a UNE is to be priced at TELRIC or otherwise be deferred to the future.

## **B. Position of the Parties**

125. Eschelon proposes the following language for Section 9.1.2:

Qwest shall provide non-discriminatory access to Unbundled Network Elements on rates, terms and conditions that are non-discriminatory, just and reasonable. The quality of an Unbundled Network Element Qwest provides, as well as the access provided to that element, will be equal between all Carriers requesting access to that element. Access to Unbundled Network Elements includes moving, adding to, repairing and changing the UNE (through, e.g., design changes, maintenance of service including trouble isolation, additional dispatches, and cancellation of orders).<sup>89</sup>

126. Eschelon maintains that in the last sentence, “access to” UNEs is necessary to clarify that the referenced activities are to be provided at TELRIC rates. In Eschelon’s view, Qwest has attempted improperly to limit the use a CLEC may make of a UNE through unilateral changes announced through the CMP and has recently signaled its intent to charge non-TELRIC rates for additional dispatch, trouble isolation, design change expedites, cancellation, and maintenance of service charges.<sup>90</sup>

127. Qwest would change the last sentence to read:

*Activities available* for Unbundled Network Elements includes moving, adding to, repairing and changing the UNE (through, e.g., design changes, maintenance of service including trouble isolation, additional dispatches, and cancellation of orders) *at the applicable rates*.<sup>91</sup>

128. Qwest maintains that the Eschelon language is ambiguous because it lists only a few of the obligations that would be imposed by the language. It further argues that, under Eschelon’s language, Qwest could be required to build new facilities and to provide access to a yet unbuilt, superior network. Qwest also contends that Eschelon’s language could be interpreted to mean that the price of leasing a UNE includes changes, additions, and

---

<sup>89</sup> Disputed Issues List at 44.

<sup>90</sup> Ex. 27 (Starkey Direct) at 122-31; Ex. 28 (Starkey Rebuttal) at 61-77; Ex. 29 (Starkey Surrebuttal) at 95-100.

<sup>91</sup> Disputed Issues List at 44-45 (emphasis added).

modifications without additional payment.<sup>92</sup> Although Qwest does not address directly whether it intends to charge tariff rates for these activities in the future, Qwest does admit, with regard to design changes specifically, that its position is that design changes are not a service required under Section 251 of the Act and are not governed by TELRIC pricing; Qwest maintains that it will raise that issue in a separate proceeding, at some future time, in a manner that would permit all interested parties to present their views.<sup>93</sup>

129. The Department supports Eschelon's proposed language. In the Department's view, Eschelon's language only commits Qwest to providing nondiscriminatory access to the types of routine modifications that are necessary to provide access to the functionality of the UNE.<sup>94</sup>

### C. Decision

130. It is difficult to understand Qwest's position that Eschelon's language might require Qwest to provide access to an "as yet unbuilt, superior network" or that it might mean Qwest would be unable to charge at all for making such changes. It is a real stretch to find this kind of ambiguity in Eschelon's language. Qwest has pointed to nothing in the language that would require it to perform an activity that is obviously outside of its existing § 251 obligations.

131. Qwest's proposed language is in fact more ambiguous than Eschelon's, because it would leave unanswered the question whether routine changes in the provision of a UNE would be priced at TELRIC or at some other "applicable rate."

132. Federal law requires that when a CLEC leases a UNE, the ILEC remains obligated to maintain, repair, or replace it.<sup>95</sup> Unless and until the Commission or other authority determines to the contrary, these types of routine changes to UNEs should be provided at TELRIC rates. Eschelon's language should be adopted for this section.

133. At the hearing, Eschelon and the Department expressed concern that, because Qwest has not submitted cost studies for these activities in the *UNE Cost Case*, Qwest intends to simply begin charging market or tariff prices at the conclusion of this case. On December 21, 2006, Qwest indicated in a filing in the *UNE Cost Case* that, upon further review, Qwest agreed that several of these elements should be included in the cost docket, and it provided proposed UNE prices and cost support for those prices.

---

<sup>92</sup> Ex. 19 (Stewart Direct) at 11-14; Ex. 20 (Stewart Rebuttal) at 9-15; Ex. 22 (Stewart Surrebuttal) at 4-6.

<sup>93</sup> Ex. 20 (Stewart Rebuttal) at 6.

<sup>94</sup> Ex. 54 (Fagerlund Reply) at 17-18; Ex. 55 (Fagerlund Surreply) at 13; Department's Post-Hearing Brief at 14-15.

<sup>95</sup> 47 C.F.R. § 51.309(c); see also *TRO* ¶ 639 (requiring a LEC to modify an existing transmission facility, in the same manner it does for its own customers, provides competitors access only to a functionally equivalent network, rather than one of superior quality).

134. The Commission could clarify that, if Qwest has not done so already, it should submit cost studies to justify development of TELRIC prices for these activities in the *UNE Cost Case*, if it intends to charge for them, without prejudice to any argument Qwest might make in a different proceeding that such activities are outside the scope of Qwest's § 251 obligations. Qwest should not be permitted to charge non-TELRIC rates for these activities without the express approval of the Commission.

### **Issue 9-33: Network Maintenance and Modernization/Adverse Effect**

#### **A. The Dispute**

135. Although the parties agree that Qwest must perform normal maintenance and modernization of its network, they dispute language concerning potential effects on end-user customers.

#### **B. Position of the Parties**

136. Qwest proposes the following language in Section 9.1.9:

In order to maintain and modernize the network properly, Qwest may make necessary modifications and changes to the UNEs in its network on an as needed basis. Such changes may result in minor changes to transmission parameters.<sup>96</sup>

137. Eschelon proposes two alternatives, contending it needs assurance that these minor changes to transmission parameters will not interfere with service to end user customers. Eschelon cites to a situation in which Qwest asserted it was meeting industry standards for decibel loss, but the circuit was not operational and Eschelon was unable to provide the service requested. Eschelon would add to the last sentence either of the following phrases:

- but will not adversely affect service to any End User Customers. (In the event of emergency, however, see Section 9.1.9.1).
- but will not adversely affect service to any End User Customers (other than a reasonably anticipated temporary service interruption, if any, needed to perform the work). (In addition, in the event of emergency, see Section 9.1.9.1.).<sup>97</sup>

138. Qwest objects to the Eschelon language, contending it is undefined both as to the obligation imposed and the consequences for potential violation.

---

<sup>96</sup> Disputed Issues List at 49; Ex. 19 (Stewart Direct) at 17-24; Ex. 20 (Stewart Rebuttal) at 18-21; Ex. 22 (Stewart Surrebuttal) at 8-9.

<sup>97</sup> Disputed Issues List at 49-50; Ex. 33 (Webber Direct) at 22-40; Ex. 34 (Webber Rebuttal) at 9-14; Ex. 35 (Webber Surrebuttal) at 5-15. The CLEC Participants recommend the use of Eschelon's language.

139. Eschelon further argues that its terminology is no different than the language of 47 C.F.R. § 51.316(b), which requires ILECs, when converting wholesale services to UNEs or to a combination of UNEs, to do so “without adversely affecting the service quality perceived by the requesting telecommunications carrier’s end-user customer.”

140. The Department agrees that the Eschelon language is vague and would create the potential for future litigation over whether a violation occurred, and if so, whether damages are warranted. The Department recommends the following language in lieu of Eschelon’s proposals:

If such changes result in the CLEC’s End User Customer experiencing unacceptable changes in the transmission of voice or data, Qwest will assist the CLEC in determining the source and will take the necessary corrective action to restore the transmission quality to an acceptable level if it was caused by the network changes.<sup>98</sup>

141. The Department contends that this language would not disadvantage either company and would assure Eschelon of being able to get its end user customer back in service, while focusing Qwest’s responsibilities on fixing any problems caused by necessary changes to its network.<sup>99</sup>

### **C. Decision**

142. The Department’s recommended language should be adopted. It appears to balance the reasonable needs of both parties in an even-handed manner. Contrary to Eschelon’s argument, the process of converting a service to a UNE is not necessarily the same as the process of modernizing or maintaining the network; accordingly, the “adversely affecting” language of 47 C.F.R. § 51.316(b) does not provide the guidance needed to make this section of the ICA free from ambiguity. The reference to correcting transmission quality to “an acceptable level” does not, as Qwest argues, make this language unacceptably vague. The language merely commits Qwest to taking action to restore transmission quality to that which existed before the network change.

## **Issue 9-33(a): Relationship Between Section 9.1.9 and Copper Retirement**

### **A. The Dispute**

143. The parties had previously agreed upon language in Section 9.1.9 that said “(for retirement of copper loops, see section 9.2.1.2.3).” Because of

---

<sup>98</sup> Department’s Post-Hearing Brief at 17; Ex. 50 (Schneider Reply) at 3-6; Ex. 51 (Schneider Surreply) at 3.

<sup>99</sup> By letter dated December 19, 2006, Qwest objected to the Department’s proposal, arguing that its language is just as undefined as Eschelon’s and that the Department’s suggestions are untimely. The Department has agreed that Qwest’s letter of objection should be included in the record.

wording changes in connection with Issue 9-33, they have now proposed different language to make this reference to copper retirement.

## **B. Position of the Parties**

144. Eschelon proposes the following language in Section 9.1.9, which generally addresses network maintenance and modernization:

This Section 9.1.9 does not address retirement of copper Loops or Subloops (as that phrase is defined in Section 9.2.1.2.3). See Section 9.2.1.2.3.<sup>100</sup>

145. After the hearing, Qwest proposed this language:

Because the retirement or replacement of copper loops may involve more than just minor changes to transmission parameters, terms and conditions relating to such retirements or replacements are set forth in Section 9.2.<sup>101</sup>

146. The Department has made no recommendation on this issue because it was not identified as an issue until after the hearing.

## **C. Decision**

147. There is little discernable difference between the proposed alternatives. Section 9.2.1.2.3 contains notice provisions for retirement of copper loops and subloops that are different and more specific than the notice provisions of Section 9.1.9. Because the parties previously agreed to language that takes retirement of copper loops and subloops entirely out of Section 9.1.9, and because Qwest's proposed language might be read to take it out of Section 9.1.9 only if such retirements involve more than minor changes to transmission parameters, the Administrative Law Judges recommend use of Eschelon's language to eliminate any ambiguity.

### **Issue 9-34: Location at Which Changes Occur**

#### **A. The Dispute**

148. Qwest has agreed to provide advance notice of network changes containing all information required by 47 U.S.C. § 251(c)(5) and FCC rules, 47 C.F.R. Parts 51 and 52. One of the rules, 47 C.F.R. § 51.327, requires public notice of the "location" at which changes will occur. The dispute concerns whether the "location" information in the notice must include the circuit identification and end user customer address information if changes are "specific to an end user customer."

---

<sup>100</sup> Disputed Issues List at 49

<sup>101</sup> Disputed Issues List at 49-50.

## B. Position of the Parties

149. Eschelon proposes modifying Qwest's language as follows:

Such notices will contain the location(s) at which the changes will occur *including, if the changes are specific to an End User Customer, the circuit identification and End User Customer address information*, and any other information required by applicable FCC rules.<sup>102</sup>

150. Eschelon maintains this information is necessary to enable it to determine if a network change will affect its end user customers. It argues that circuit ID is the generally accepted locator within the network, and the customer address is the locator within the CLEC's list of customers. If Eschelon has this information, it can cross-reference its own records to determine if its customers will be affected.<sup>103</sup>

151. Qwest objects, arguing that it is not clear what a change "specific to an end-user customer" would be and that this requirement "exceeds" the FCC's minimum requirement, is overly burdensome, and might require Qwest to conduct intensive manual searches of multiple databases. Qwest also argues that Eschelon can obtain the circuit ID of its customers from its own records based on the information provided by Qwest.<sup>104</sup>

152. The Department supports Eschelon's goal, but believes the record is lacking in terms of readily apparent solutions. The Department recommends modifying Eschelon's language as follows, in order to provide that when circuit identification is readily available to Qwest, then Qwest must provide it:

Such notices will contain the location(s) at which the changes will occur *including, if the changes are specific to an End User Customer, the circuit identification, if readily available*, and any other information required by applicable FCC rules.<sup>105</sup>

## C. Decision

153. It is difficult to determine from the record what exactly is available in Qwest's databases, what is available in Eschelon's databases, or whether in reality the requested information is available to both parties and the real issue is who has to do the work to identify the affected customers. The FCC rules do not set out "maximum" requirements that cannot be surpassed. If this information is

---

<sup>102</sup> Disputed Issues List at 50-51. The CLEC Participants also support this language.

<sup>103</sup> Ex. 33 (Webber Direct) at 32-33; Ex. 34 (Webber Rebuttal) at 14-15; Ex. 35 (Webber Surrebuttal) at 15-16.

<sup>104</sup> Ex. 19 (Stewart Direct) at 24-26; Ex. 20 (Stewart Rebuttal) at 22-23; Ex. 22 (Stewart Surrebuttal) at 9-11.

<sup>105</sup> Department's Post-Hearing Brief at 19; Ex. 50 (Schneider Reply) at 6; Ex. 51 (Schneider Surreply) at 3-4.

readily available, Qwest should provide it. The Department's recommended language should be adopted.

**Issue 9-43: Conversion of a UNE to a non-UNE**

**Issue 9-44**

**Issue 9-44(a)-(c)**

**A. The Dispute**

154. When Eschelon requests that a UNE be converted to a non-UNE (because, for example, the FCC or Commission has made a determination that CLEC access to a particular product is not impaired) there is generally no change to the physical facilities. Qwest, however, uses different provisioning, billing and inventory systems for UNEs and non-UNE products. Consequently, Qwest requires CLECs to "disconnect" the UNE product and "install" the retail product through numerous record-keeping changes that could potentially cause delay or disruption of service.<sup>106</sup> Eschelon has proposed, in this arbitration proceeding, to require Qwest to change its systems to be more accommodating of CLEC concerns regarding the "seamlessness" of such conversions.

**B. Position of the Parties**

155. Eschelon proposes to establish a set of conditions that would control Qwest's conversion process: no change in circuit ID (Issue 9-43); conversion carried out as a price change (Issue 9-44); Qwest may re-price through use of an adder or surcharge (Issue 9-44(a)); Qwest may create a new Universal Service Ordering Code (USOC) for purposes of charging an adder or surcharge (Issue 9-44(b)); and use of the same USOC for the converted product, so that negotiated volume discounts based on USOCs are not impacted (Issue 9-44(c)). Eschelon also recommends that the Commission order Qwest to change its conversion processes to be more efficient and cost-effective and of higher quality.<sup>107</sup>

156. Eschelon maintains that Qwest has recently issued what Eschelon describes as a "password-protected, non-CMP secret PCAT notice" providing that CLECs need to submit a collocation application to initiate the conversion process (with a service interval of somewhere between 15 and 45 days); that Qwest may stop accepting connect, change, or disconnect orders unless CLECs use this cumbersome conversion process; and that Qwest may be improperly planning to charge for such conversions.<sup>108</sup> Eschelon is concerned that if there is

---

<sup>106</sup> See, e.g., Tr. 2:72-82.

<sup>107</sup> Disputed Issues List at 58-59; Ex. 27 (Starkey Direct) at 132-55; Ex. 28 (Starkey Rebuttal) at 78-81; Ex. 29 (Starkey Surrebuttal) at 100-12.

<sup>108</sup> Pursuant to 47 C.F.R. § 51.316(c), except as agreed to by the parties, an ILEC shall not impose any untariffed termination charges, or any disconnect fees, re-connect fees, or charges associated with establishing a service for the first time, in connection with any conversion between a wholesale service or group of wholesale services and a UNE or combination of UNEs.

no language in the ICA addressing this issue, Qwest will attempt to apply this notice to Eschelon, and Eschelon will be at risk of service disruption to its end user customers if any errors take place.

157. Qwest opposes any language addressing changes to or requirements for its conversion process. It maintains that it is entitled to assess an “appropriate” (tariffed) charge for the activities involved in conversion, and it argues that the costs associated with changing its billing and inventory systems would place an unfair burden on Qwest.<sup>109</sup>

158. In the 2001-02 timeframe, when Qwest was converting private lines to UNEs, the Commission approved a TELRIC charge for the conversion process that did not include all the functions Qwest maintains are now necessary to reverse the process, because Qwest did not require a change to the circuit ID number until April 2005.<sup>110</sup>

159. The Department contends that there is insufficient record evidence to permit evaluation of Qwest’s conversion processes in this docket; it recommends that such an evaluation take place in a broader docket involving other CLECs. It recommends that the Commission open an investigation docket to determine (1) whether the charge for converting a UNE to a non-UNE should be a TELRIC-based charge; and (2) once the Commission has determined by what method this conversion charge should be priced, Qwest should file an appropriate cost study to determine the price to be used. At the same time, the Commission could consider the process Qwest uses to bill for converted elements and could potentially require Qwest to follow a different process, using forward-looking design and technology; follow its existing process, but charge a fee based on forward-looking design and technology; or use its current process without change. In the meantime, the Department recommends leaving the disputed sections of the ICA intentionally blank, as advocated by Qwest.<sup>111</sup>

### **C. Decision**

160. The Department’s recommendation to explore these issues in a generic docket makes sense, and its recommendation to leave the disputed sections of the ICA blank should be adopted. Although there are a number of related dockets pending, this issue is not squarely presented in any of them. Qwest has not proposed any cost studies for conversions in the *UNE Cost Case*. In the *Wire Center Case*, Qwest is maintaining that the Commission should approve its right to assess a charge for conversions, but that Commission approval of the amount of the charge is not required. The Department disagrees

---

<sup>109</sup> Disputed Issues List at 58-59; Ex. 23 (Million Rebuttal) at 5-16.

<sup>110</sup> Tr. 2:85-88.

<sup>111</sup> Department’s Post-Hearing Brief at 22-24; Ex. 54 (Fagerlund Reply) at 18-22; Ex. 55 (Fagerlund Surreply) at 14; Tr. 5:51-52.

with that position. The *Wholesale Rates Case*<sup>112</sup> includes proposed prices for the converted elements, but does not include the price of performing the conversion from a UNE to a non-UNE. If an investigation docket concerning the conversion process were opened, the Commission could address how such conversions should be priced (on an interim basis if necessary) pending completion of the docket.

**Issue 9-50: Cross Connect**

**Issue 9-53: UCCRE**

**A. Dispute**

161. At issue is how Qwest should go about phasing out the provision of a UNE that there is no demand for or that Qwest is no longer obligated to provide. Qwest wants to eliminate from this ICA its obligation to perform wiring changes when the demarcation point is moved in a multi-tenant building (Issue 9-50, Cross Connect) and the Unbundled Customer Controlled Rearrangement Element (Issue 9-53, UCCRE), a functionality that would allow Eschelon to control the configuration of UNEs or ancillary services through a digital cross connect device.

**B. Position of the Parties**

162. Qwest has never received a CLEC order for these products and wants to phase out these products over time by eliminating them from ICAs as the contracts expire and are replaced. With regard to Issue 9-50, it proposes language that would require Qwest to offer an amendment to Eschelon that would allow Eschelon to request that Qwest perform cross connect jumper work for intrabuilding cable, “[i]f during the term of this agreement a new negotiated ICA or negotiated amendment has been approved by the Commission” that contains this option. Qwest would leave the ICA section concerning Issue 9-53 intentionally blank.<sup>113</sup>

163. Eschelon objects to elimination of these products from its ICA if the products are still available in Qwest’s ICAs with other CLECs, contending it constitutes discrimination. Eschelon offers four alternative proposals. First, with regard to Issue 9-50, Eschelon proposes language providing that if Qwest performs cross connect for any other CLEC during the term of the ICA, Qwest will notify Eschelon and offer an amendment to permit Eschelon to request the service under the same terms and conditions. Second, Eschelon offers a detailed proposal for language in Section 1.7.3 outlining the process for obtaining a phase out order from the Commission. The third proposal is a revision of the

---

<sup>112</sup> *In the Matter of a Potential Proceeding to Investigate the Wholesale Rates Charged by Qwest*, OAH Docket No. 12-2500-17246-2, MPUC Docket No. P-421, C-05-1996.

<sup>113</sup> Disputed Issues List at 61, 71; Ex. 19 (Stewart Direct) at 37-39, 42-44; Ex. 20 (Stewart Rebuttal) at 33-45; Ex. 22 (Stewart Surrebuttal) at 16-25. See also Tr. 3:53.

second intended to address concerns raised by Qwest during the hearing. The fourth proposal only relates to the removal of section 251 UNEs.<sup>114</sup>

164. The Department proposes that a phase-out process be included in the ICA that would require Qwest to obtain Commission approval before eliminating a service; Commission approval would not be required, however, if Qwest were able to obtain, in relatively short order, ICA amendments from all affected CLECs removing the service.<sup>115</sup>

165. The Department recommends that the following language be inserted as Section 1.7.3:

**1.7.3 Phase out process.** If Qwest desires to phase-out the provision of an element, service, or functionality included in this agreement, it must first obtain an Order from the Commission approving its process for withdrawing the element, service or functionality. Obtaining such an Order will not be necessary if Qwest (1) promptly phases-out an element, service or functionality from the agreements of all CLECs in Minnesota within a three-month time period when the FCC has ordered that the element, service, or functionality does not have to be ordered, or (2) follows a phase-out process ordered by the FCC.<sup>116</sup>

166. With regard to Issue 9-50, the Department recommends that the service be left out of the ICA since Qwest seems committed to phasing the service out, and that Qwest be given four months to obtain a phase-out order from the Commission. The Department recommends that the following sentence be added to the end of the agreed-upon language of Section 9.3.3.8.3 to effectuate this recommendation:

Qwest has previously performed this service, and will either obtain a phase-out order (pursuant to Section 1.7.3) from the Commission within four months of the effective date of this Agreement or perform this service if CLEC requests.<sup>117</sup>

167. With regard to Issue 9-53, the Department recommends that Qwest obtain an order from the Commission approving its phase-out process. It recommends that the following language be added to Section 9.9.1 of Eschelon's Proposal #2:

Qwest shall provide Unbundled Customer Controlled Rearrangement Element (UCCRE) to CLEC in a non-discriminatory

<sup>117</sup> Department's Post-Hearing Brief at 28.

manner according to the terms and conditions of Section 9.9 and subparts of the Minnesota SGAT, *unless Qwest obtains a phase-out order (pursuant to Section 1.7.3) from the Commission within four months from the effective date of this Agreement.*<sup>118</sup>

### **C. Decision**

168. The Department's recommendations for Sections 1.7.3, 9.3.3.8.3, and 9.9.1 should be used in the ICA. These recommendations efficiently balance the concerns of both parties and would permit any interested CLEC to provide comment to the Commission if it had concerns about the elimination of a particular element, service, or functionality. The Department's language will be easier to implement than the lengthy procedures proposed by Eschelon.

169. Qwest expressed a lengthy objection to the Department's proposals on this issue, contending that the arbitration authority of state commissions is limited to the open or disputed issues that remain after 135 days of negotiations and that are set forth in the petition for arbitration and response. It contends that because neither Eschelon nor Qwest originally proposed the phase-out process recommended by the Department, the issue is not properly addressed in this arbitration.<sup>119</sup>

170. This argument is misplaced. Issues 9-50 and 9-53 are open and disputed issues that Qwest and Eschelon negotiated but were unable to resolve. Because they were unable to resolve these issues, and others, Eschelon petitioned for arbitration. The Department properly intervened as a party to this arbitration, and it is entitled to propose language that it believes is consistent with the law and will serve the public interest better than language offered by the other parties. Just because these specific words were not negotiated between Qwest and Eschelon does not mean that the Commission lacks authority to resolve the issues by incorporating the Department's proposed language into the disputed provisions of the ICA. Qwest and Eschelon have both had a meaningful opportunity to respond to the Department's proposals, and neither has been prejudiced in any way by the timing of the Department's suggestions.

### **Issue 9-55: "Loop-Transport Combinations"**

#### **A. The Dispute**

171. The parties disagree on language defining a commingled extended enhanced loop (EEL) as a "Loop-Transport Combination." Commingled EELs are partly a UNE and partly not.

---

<sup>118</sup> Department's Post-Hearing Brief at 29.

<sup>119</sup> Ex. 22 (Stewart Surrebuttal) at 19.

## B. Position of the Parties

172. Qwest would title Section 9.23.4 “Enhanced Extended Links (EELs), Commingled EELs, and High Capacity EELs.” It has proposed language for that section as follows:

When a UNE circuit is commingled with a non-UNE circuit, the rates, terms and conditions of the ICA will apply to the UNE circuit (including the Commission jurisdiction) and the non-UNE circuit will be governed by the rates, terms and conditions of the appropriate Tariff.<sup>120</sup>

173. Qwest objects to defining EELs as a “Loop-Transport Combination,” as proposed by Eschelon, because not all loop-transport combinations are UNEs. Qwest maintains that different rates and provisioning processes are required for a “loop-transport combination” that is composed entirely of UNEs than for a commingled UNE circuit that is partly a private line.<sup>121</sup>

174. Eschelon would add to the title of Section 9.23.4 “Loop-Transport Combinations: Enhanced Extended Links (EELs), Commingled EELs, and High Capacity EELs.” It would make similar references to EELs as being “Loop-Transport Combinations” in the rest of its proposed language for sections 9.23.4 through 9.23.4.6. A portion of Eschelon’s proposed language provides: “If no component of the Loop-Transport Combination is a UNE, however, the Loop-Transport Combination is not addressed in this Agreement. The UNE components of any Loop-Transport Combinations are governed by this Agreement.”<sup>122</sup>

175. The Department recommends that the term “loop-transport combination” not be used because it is more general than is needed and may cause confusion. The Department recommends that Qwest’s language be used.<sup>123</sup>

## C. Decision

176. Eschelon’s language states that if no component of a combination is a UNE, the combination is not covered by the ICA. This language would permit the inference that if any part of a combination *is* a UNE, the entire combination would be covered by the ICA. Eschelon’s following sentence, stating that “the UNE components of any Loop-Transport Combinations are governed by this agreement,” do not reflect Qwest’s position that the non-UNE

---

<sup>120</sup> Disputed Issues List at 74.

<sup>121</sup> Ex. 19 (Stewart Direct) at 49-53; Ex. 20 (Stewart Rebuttal) at 52-60; Ex. 22 (Stewart Surrebuttal) at 28-30.

<sup>122</sup> Disputed Issues List at 74-76; Ex. 27 (Starkey Direct) at 161-69; Ex. 28 (Starkey Rebuttal) at 83-86; Ex. 29 (Starkey Surrebuttal) at 112-19.

<sup>123</sup> Department’s Post-Hearing Brief at 29-30; Ex. 54 (Fagerlund Reply) at 29-31; Ex. 55 (Fagerlund Surrebuttal) at 17-18.

portions are *not* governed by this agreement. Qwest could agree to this, but it has not, and accordingly it is entitled to language making clear that the non-UNE portion of a commingled EEL is outside the scope of the ICA. Qwest's language should be used in the ICA.<sup>124</sup>

**Issue 9-56: Service Eligibility Criteria Audits**  
**Issue 9-56(a)**

**A. The Dispute**

177. Before accessing high-capacity EELs, the requesting carrier must certify to the service criteria set forth in the *TRO* to demonstrate it is a bona fide provider of a qualifying service. The parties dispute the language that would permit Qwest to conduct an audit of Eschelon's compliance with service eligibility criteria.

**B. Position of the Parties**

178. Qwest has proposed language providing as follows for Section 9.23.4.3.1.1:

After CLEC has obtained High Capacity EELs in accordance with Section 9.23.4.1.2, Qwest may conduct a Service Eligibility Audit to ascertain whether those High Capacity EELs comply with the Service Eligibility Criteria set forth in Section 9.23.4.1.2.<sup>125</sup>

179. Eschelon proposes adding the following phrase to the end of the above sentence: "when Qwest has a concern that CLEC has not met the Service Eligibility Criteria." Eschelon also proposes a written notice provision that would require Qwest to specify the cause "upon which Qwest has a concern that CLEC has not met the Service Eligibility criteria" and to provide, upon request, a list of circuits for which Qwest has compliance concerns Issue 9-56(a)).<sup>126</sup>

180. Qwest contends that the language it has proposed is consistent with the *TRO* and that the *TRO* does not limit its right to request an audit "for cause."<sup>127</sup>

---

<sup>124</sup> Eschelon points out that the non-UNE portion of a commingled EEL could be covered by a negotiated commercial agreement or some other document that is not specifically a tariff. Qwest could clarify this by adding the phrase "or other agreement outside of this ICA" to the end of its proposed language.

<sup>125</sup> Disputed Issues List at 76-77.

<sup>126</sup> Disputed Issues List at 77.

<sup>127</sup> See Report and Order and Order on Remand, *Review of the Section 251 Unbundling Obligations of Incumbent Local Exchange Carriers*, 18 FCC Rcd 16978 (2003) (*TRO*), *vacated in part and remanded*, *USTA v. FCC*, 359 F.3d 554 (D.C. Cir.), *cert. denied*, 125 S.Ct. 313, 316, 345 (2004); Ex. 19 (Stewart Direct) at 54-58; Ex. 20 (Stewart Rebuttal) at 60-63; Ex. 22 (Stewart Surrebuttal) at 30-31.

181. Eschelon argues, largely in reliance on an FCC order that preceded the *TRO*, that Qwest's right to request such audits must be limited to avoid undue burden on CLECs.<sup>128</sup>

182. The Department has made no recommendation on this issue.

### **C. Decision**

183. The *TRO* established certification and auditing procedures based on the general principles that requesting carriers are entitled to unimpeded UNE access based on self-certification, subject to later verification based upon cause.<sup>129</sup>

184. More specifically, the *TRO* provides that ILECs may obtain and pay for an independent auditor to audit, on an annual basis, compliance with the qualifying service eligibility criteria. The FCC concluded that an annual audit right strikes the appropriate balance between the ILEC's need for usage information and the risk of illegitimate audits that impose costs on qualifying carriers. To the extent the independent auditor's report concludes that a CLEC has failed to comply with the criteria, the CLEC must true-up any difference in payments, convert all noncompliant circuits to the appropriate service, and make the correct payments on a going-forward basis. In addition, if the independent auditor concludes that a CLEC has failed to comply in all material respects with service eligibility criteria, the CLEC must reimburse the ILEC for the cost of the independent auditor. Similarly, if the independent auditor concludes that the CLEC complied in all material respects with the eligibility criteria, the ILEC must reimburse the audited carrier for its costs associated with the audit. In adopting these procedures, the FCC expected that the reimbursement mechanism would provide incentive for CLECs to comply with eligibility criteria and for ILECs to avoid abusive or unfounded audits.<sup>130</sup>

185. The *TRO* clearly permits Qwest to request an independent audit on an annual basis and does not limit audit requests to situations in which Qwest would have articulable concerns about specific circuits. Eschelon's language is inconsistent with the mechanism outlined in the *TRO*. The undisputed portions of Section 9.23.4.3 incorporate the reimbursement mechanism and the annual limitation contained in the *TRO*. The Administrative Law Judges recommend using Qwest's language for Issue 9-56; for Issue 9-56(a), the Administrative Law Judges recommend adopting Qwest's proposal to delete this section.

<sup>130</sup> *TRO* ¶¶ 626-28.

**Issue 9-58: Arrangements for Commingled Elements**

**Issue 9-58(a)-(e)**

**Issue 9-59**

**A. The Dispute**

186. As with Issues 9-43 and 9-44 concerning the conversion process, Eschelon here proposes language that would require Qwest to change its ordering, tracking, repair, and billing systems for handling commingled EELs. Eschelon maintains its language would require Qwest to create more efficient processes that are less likely to cause problems for CLECs. Qwest objects to any suggestion that its systems be changed through provisions in the ICA.

**B. Position of the Parties**

187. Eschelon proposes changes that would require Qwest to allow the ordering of commingled EELs on a single LSR form (Issue 9-58); to assign a single circuit ID to a commingled EEL (Issue 9-58(a)); to permit CLECs to report trouble on a single trouble report and to process trouble reports using a single charge for both UNE and non-UNE circuits (Issue 9-59); to charge for all rate elements using a single billing account number (BAN) (Issue 9-58(b)); in the alternative, to identify on bills (among other things) the UNE element (by circuit ID) that is commingled with the non-UNE (Issues 9-58(c); to permit the option of a single LSR, circuit ID, and BAN for commingled arrangements other than EELs (Issue 9-58(d)); and to use the service interval of the longer of the two facilities being commingled (Issue 9-58(e)). Eschelon argues that Qwest's current practice, which requires separate ordering, tracking, repair, and billing systems for UNEs and non-UNEs, causes unreasonable delays, interferes with the usefulness of ordering a commingled product, and makes bill verification difficult.<sup>131</sup>

188. Qwest again maintains that its systems for UNEs and non-UNEs are different and that it is not obligated to change its procedures. It maintains that changing its procedures would be costly and that such issues should be raised in its CMP so that all CLECs have an opportunity to comment.<sup>132</sup>

189. The Department recommends that evaluation of Qwest's complex processes concerning the handling of commingled elements should take place in a broader docket. The Commission would then be able to evaluate the reasonableness of requiring Qwest to change its processes and the cost of making such changes. In addition, the Commission could evaluate the pricing issues associated with charges (recurring and nonrecurring) for commingling

---

<sup>131</sup> Disputed Issues List at 78-86; Ex. 42 (Denney Direct) at 133-64; Ex. 43 (Denney Rebuttal) at 63-73; Ex. 44 (Denney Surrebuttal) at 90-98. The CLEC Participants support this language.

<sup>132</sup> Ex. 19 (Stewart Direct) at 58-74; Ex. 20 (Stewart Rebuttal) at 63-93; Ex. 22 (Stewart Surrebuttal) at 32-38.

UNEs with non-UNEs. In the meantime, the Department recommends that Qwest's language be used in the ICA.<sup>133</sup>

### **C. Decision**

190. The Administrative Law Judges agree with the Department's recommendation to open a separate docket to consider these issues. The record is insufficient to evaluate Qwest's ability to change its processes and the costs of making such changes. For now, Qwest's language proposals should be incorporated into the ICA.

#### **Issue 9-61: Loop-Mux Combinations**

##### **Issue 9-61(a)**

##### **Issue 9-61(b)**

##### **Issue 9-61(c)**

### **A. The Dispute**

191. Multiplexing (or muxing) equipment allows multiple circuits to be combined into a single larger circuit; it also permits the reverse process (sometimes called de-muxing). A "loop-mux combination" is an arrangement that includes a loop and multiplexing, but no interoffice transport. For example, numerous UNE loops serving end-users might be muxed into a larger circuit in the end office, and the larger circuit would then be delivered to a CLEC collocation in the same end office. At issue here is whether the multiplexing function for a loop-mux combination must be provided at TELRIC rates (as proposed by Eschelon) or at tariffed rates (as proposed by Qwest).

### **B. Position of the Parties**

192. Qwest asserts that FCC rules do not require it to provide multiplexing at TELRIC-based rates unless the multiplexing is provided in conjunction with UNE transport (not a UNE loop). Qwest would move all references to the loop-mux combination to the section of the ICA dealing with commingled elements. Qwest contends that multiplexing is not a "stand-alone UNE" and that it is not obligated to offer it at a UNE price. Qwest also would omit placing references to service intervals in the ICA, contending any changes to service intervals should be made through its CMP as opposed to amending the ICA. Although Qwest previously provided all loop-multiplexing at UNE rates, and the Commission previously approved these rates, Qwest now views multiplexing within a central office as merely a method of connecting a UNE loop with tariffed transport. Qwest will provide multiplexing as a UNE, however, when a UNE loop is combined with UNE transport.<sup>134</sup> Qwest relies on an FCC decision for the

---

<sup>133</sup> Department's Post-Hearing Brief at 30-31; Ex. 54 (Fagerlund Reply) at 31-34; Ex. 55 (Fagerlund Surreply) at 18-19.

<sup>134</sup> Disputed Issues List at 88; Ex. 19 (Stewart Direct) at 75-81; Ex. 20 (Stewart Rebuttal) at 93-100; Ex. 22 (Stewart Surrebuttal) at 38-43. See also Ex. 32.

proposition that multiplexing is not a stand-alone network element.<sup>135</sup> It also relies on portions of the *TRO* concerning general principles of commingling.<sup>136</sup>

193. Eschelon relies on other language in the *TRO* in contending that multiplexing is also a function of a loop, not just transport, and that Qwest must make the loop-mux combination available at TELRIC rates when multiplexing is provided in connection with UNE loops or UNE transport. Its proposed language describes the loop-mux combination as a UNE combination (as opposed to a commingled arrangement of UNE and non-UNE) and states the appropriate rates are those TELRIC rates contained in Ex. A to the ICA. Other disputed provisions concern service intervals and rates for de-muxing. In addition, Eschelon argues that Qwest must make the loop-mux combination available at TELRIC rates because Qwest is obligated to do so in other ICAs with other CLECs, and Qwest cannot discriminate by refusing to do so for Eschelon.<sup>137</sup>

194. The Department argues that multiplexing in the central office should be provided at TELRIC rates because it is a function associated with the UNE loop and cross-connect elements. For the limited purpose of providing the loop-mux combination, the Department recommends that multiplexing should be provided at TELRIC rates because multiplexing between a UNE loop and a simple cross-connect to a CLEC collocation is appropriately provided at TELRIC rates. Because the Commission has approved UNE prices for multiplexing, and because multiplexing is contained in other ICAs as a UNE, the Department contends that if Qwest wants to “phase out” multiplexing as a UNE (unless, as Qwest concedes, it is provided in connection with UNE transport), Qwest should file a petition to obtain Commission approval for deleting these terms from other ICAs. In the meantime, it should be offered in this ICA at UNE terms and rates.<sup>138</sup> The Department recommends that Eschelon’s language be adopted, with three non-substantive corrections to sections 9.23.9.2, 9.23.9.2.1, and 9.23.9.3.2.2(b).<sup>139</sup>

<sup>138</sup> Department’s Post-Hearing Brief at 32-34; Ex. 54 (Fagerlund Reply) at 35-36; Ex. 55 (Fagerlund Surreply) at 19-20. See also Department Recommendations for Issues 9-50 and 9-53.

<sup>139</sup> Department’s Post-Hearing Brief at 34.

### C. Decision

195. The FCC has not spoken definitively on this issue. The local loop is defined as “a transmission facility between a distribution frame (or its equivalent) and an incumbent LEC central office and the loop demarcation point at an end-user customer premise.”<sup>140</sup> In general, ILECs must provide access to UNEs, along with all of the “features, functions, and capabilities” of the UNE, in a manner that allows a requesting carrier to provide service.<sup>141</sup>

196. In the *Verizon Virginia Arbitration Order*, the FCC rejected the notion that multiplexing is a stand-alone UNE, but required Verizon to offer multiplexing as a feature of UNE dedicated transport.<sup>142</sup> The FCC declined to address the issue whether multiplexing can also be a feature, function, or capability of a UNE loop in the circumstances at issue here:

[T]he parties appear to disagree over Verizon’s obligation to provide multiplexing associated with cross-connects between local loops and collocated equipment. This debate over Verizon’s obligations under the contract in particular circumstances relates to implementation of the agreement. While the parties apparently disagree on this implementation point, the specific question is not addressed by contract language proposed by either party for this issue and thus is not squarely presented. We emphasize that our adoption of Verizon’s proposed contract language on this issue should not be interpreted as an endorsement of Verizon’s substantive positions expressed in this proceeding regarding its multiplexing obligations under applicable law.<sup>143</sup>

197. In the *TRO*, the FCC stated that a loop “may include additional components (e.g. load coils, bridge taps, repeaters, multiplexing equipment) that are usually intended to facilitate the provision of narrowband voice service.”<sup>144</sup> It also required ILECs to make routine network modifications such as adding multiplexers to high-capacity loops.<sup>145</sup> The same requirement holds true for adding multiplexers to unbundled transport.<sup>146</sup> In another paragraph, the FCC described an EEL as a UNE combination consisting of an unbundled loop and dedicated transport sometimes including additional electronics (e.g., multiplexing equipment).<sup>147</sup> In requiring ILECs to “commingle” UNEs and tariffed services, however, the FCC gave as an example the attachment of a UNE or UNE

---

<sup>140</sup> 47 C.F.R. 51.319(a)(1).

<sup>141</sup> See 47 C.F.R. § 51.307(c).

<sup>142</sup> *Verizon Virginia Order* at ¶¶ 498-99.

<sup>143</sup> *Id.* at ¶ 490 (footnotes omitted).

<sup>144</sup> *TRO* at ¶214.

<sup>145</sup> *Id.* at ¶¶ 634-35, n. 1922; 47 C.F.R. § 51.319(a)(8)(ii).

<sup>146</sup> 47 C.F.R. § 51.319(e)(5).

<sup>147</sup> *TRO* at ¶ 571.

combination with an interstate access service “such as high-capacity multiplexing or transport services.”<sup>148</sup>

198. Although there may be some merit to Qwest’s contention that the multiplexing at issue here should not be considered a feature or function of a loop—because it would take place not between the customer premise and the distribution frame, but between the distribution frame or its equivalent and Eschelon’s collocation—neither the *Verizon Virginia Arbitration Order* nor the *TRO* expressly addresses the question whether multiplexing must be offered at UNE rates under this circumstance.

199. Qwest agrees that it must offer multiplexing at UNE rates when it connects two UNEs, or when it is a feature, function, or capability of UNE transport. Given that Qwest has previously provided multiplexing as a UNE when it is provided in conjunction with a UNE loop, as well as when it is provided in conjunction with UNE transport, the Administrative Law Judges agree with the Department’s recommendations that Eschelon’s language be adopted in the ICA. If Qwest wishes to withdraw or limit multiplexing in the manner it proposes here, it should file a petition with the Commission to obtain permission to modify all ICAs that currently provide for UNE pricing of the multiplexing of a UNE loop into non-UNE transport within a central office.<sup>149</sup>

## **VII. ACCESS TO OPERATIONAL SUPPORT SYSTEM (OSS).**

### **Issue 12-64: Acknowledgment of Mistakes**

#### **Issue 12-64(b)**

##### **A. The Dispute**

200. The parties disagree about whether and under what circumstances Qwest should be required to acknowledge or provide a root cause analysis of Qwest-caused errors to Eschelon (Issue 12-64) and to Eschelon’s end-user customers (Issue 12-64(b)). Eschelon bases its proposal on the Commission’s Order in the *Minnesota 616 Order*.<sup>150</sup> Eschelon and Qwest disagree on the scope of this decision, the level of detail that Qwest must provide in such an acknowledgment, and whether Qwest’s response may be disclosed to Eschelon end-user customers.

---

<sup>148</sup> TRO at ¶ 583.

<sup>149</sup> For Issue 9-61(b), which concerns whether service intervals should be placed in the ICA or should be changed through the CMP, see discussion of Issues 12-XXX.

<sup>150</sup> *In the Matter of a Request by EschelonTelecom for an Investigation Regarding Customer Conversion by Qwest and Regulatory Procedures*, Docket No. P421/C-03-616, Order Finding Service Inadequate and Requiring Compliance Filing (July 30, 2003) (*MN 616 Order*).

## B. Position of the Parties

201. Eschelon seeks to include language that would permit it to ask Qwest for root cause analysis and/or acknowledgment of a mistake relating to any products or services provided under the ICA. Eschelon also proposes language that would make any such acknowledgment be provided on a non-confidential basis and not include a confidentiality statement.<sup>151</sup>

202. Qwest agrees to language that would permit Eschelon to ask for acknowledgment of a mistake (but not for root cause analysis) made in the processing of an LSR/ASR under the agreement. Qwest maintains the Commission's order was limited to mistakes in processing the LSR/ASR<sup>152</sup> and should not be broadened to include other activities; the requirement to do a "root cause analysis" would be burdensome; the requirement that it provide "sufficient pertinent information to identify the issue" to be vague; and Qwest objects to language requiring its response to be provided on a non-confidential basis.<sup>153</sup>

203. The Department asserts that the Commission's language was intended to encompass errors that may occur in pre-ordering, ordering, provisioning, maintenance, and billing; it rejects Qwest's argument that the Commission limited its decision to errors in the processing of an LSR/ASR. In any event, the Department argues that nothing in the Commission's decision would preclude the ICA from containing language that would require acknowledgment of mistakes in other areas. The Department recommends adoption of the Commission's express terminology or, in the alternative, adoption of Eschelon's proposed language for Issue 12-64. The Department makes no recommendation as to Issue 12-64(b), which concerns the confidentiality or non-confidentiality of the response.<sup>154</sup>

## C. Decision

204. The basic facts underlying the *MN 616 Order* were not disputed. One of Qwest's large business customers decided to transfer its service from Qwest to Eschelon. Eschelon followed Qwest's procedures to complete the service transfer, electronically submitting a wholesale order form on March 27. The form listed April 9 as the date on which service should be transferred to Eschelon. A Qwest employee inadvertently entered the incorrect date on two of the five work orders, causing 80 of the customer's lines to go out of service two weeks before Eschelon was prepared to serve it, with no notice to Eschelon or the customer. By the time its service was restored, and after the customer had

<sup>152</sup> An LSR is a Local Service Request. An ASR is an Access Service Request.

<sup>153</sup> Disputed Issues List at 97-99; Ex. 1 (Albersheim Direct) at 39-46; Ex. 2 (Albersheim Reply) at 36-42; Ex. 4 (Albersheim Surrebuttal) at 16-19.

<sup>154</sup> Department's Post-Hearing Brief at 34-37; Ex. 48 (Doherty Reply) at 14-19 and KAD 001; Ex. (Doherty Surrebuttal) at 4.

contacted Qwest retail representatives, the customer had reversed its decision to transfer service to Eschelon. When the customer told Eschelon it no longer wished to transfer service, Eschelon submitted an electronic cancellation order, which Qwest's system rejected because two of the work orders had already been implemented. A Qwest retail representative communicated to the customer that Eschelon had to cancel the orders or the customer might lose service again. When Eschelon sought help from a Qwest wholesale service representative, it found that a Qwest retail employee had already canceled the three remaining work orders, in violation of Qwest policy. In addition, when Eschelon asked Qwest for a written statement to provide the customer to explain what had caused the outage, it took Qwest nearly three weeks to provide an explanation the customer could understand.

205. Based on these facts, the Commission found that Qwest had provided inadequate service in (1) failing to adopt operational procedures to ensure the seamless transfer of customers to competitive carriers; (2) failing to adopt operational procedures to prevent its retail division from interfering with Eschelon's ability to serve its customer and to prevent its retail division from providing misleading characterizations of Eschelon's conduct; and (3) failing to adopt operational procedures to prevent its retail service representatives from canceling or otherwise modifying wholesale orders.

206. On July 30, 2003, the Commission ordered Qwest to make a compliance filing detailing its proposals for remedying the service inadequacies identified in the Order, including (1) procedures for ensuring that retail service representatives are properly separated from wholesale operations; (2) procedures for promptly acknowledging and taking responsibility for mistakes in processing wholesale orders; and (3) procedures for reducing errors in processing wholesale orders.<sup>155</sup>

207. Qwest made three compliance filings, eventually agreeing, in response to increasingly specific direction from the Commission, to implement procedures for acknowledging mistakes in processing wholesale orders (not just typographical errors on the LSR/ASR); procedures for ensuring the acknowledgements appear on Qwest letterhead or other indicia to show Qwest is making the acknowledgement; and procedures for preventing the use of a confidentiality designation to ensure that the CLEC can provide the acknowledgement to its end user customer.<sup>156</sup>

208. Qwest's proposed language for the ICA is inconsistent with commitments it made in its compliance filings in the *MN 616* docket. Eschelon's language is not vague or burdensome (to acknowledge a mistake, Qwest has to determine that one was made and why) and it is more consistent with the Commission's order, but it does expand the scope from "mistakes in processing

---

<sup>155</sup> Ex. 5; Ex. 48 at KAD 001.

<sup>156</sup> Ex. 48 at KAD 001.

wholesale orders” to “mistake[s] relating to products and services provided under this Agreement.” To make Eschelon’s language more consistent with the Commission’s order, the Commission could change this phrase in Section 12.1.4.1 to “mistake[s] in processing wholesale orders.” In the alternative, the Commission could adopt Eschelon’s proposed language for Issues 12-64 and 12-64(b) as it stands. Either of these alternatives would be consistent with the record and in the public interest.

## **Issue 12-66: Communications with CLEC Customers**

### **A. The Dispute**

209. This dispute concerns communications between Qwest and Eschelon’s customer that arise from service outages or other service or billing problems that result from a Qwest-caused error. The parties have agreed to language providing that Qwest will not use the situation as a winback opportunity, but they disagree about language concerning Qwest technicians initiating discussion of Qwest products or services.<sup>157</sup>

### **B. Position of the Parties**

210. The parties have agreed to the following language for Section 12.1.5.5:

Notwithstanding any other provisions of this Agreement, when a CLEC End User Customer experiences an outage or other service affecting condition or Billing problem due to a known Qwest error or action, Qwest shall not use the situation (including any misdirected call) as a winback opportunity.<sup>158</sup>

211. Eschelon would add to the end of the sentence this phrase: “or otherwise initiate discussion of its products and services with CLEC’s End User Customer.” Based on the facts involved in the *MN 616* Docket, Eschelon argues that this language is necessary to preclude Qwest from using its own errors or mistakes as an opportunity to win back end user customers.<sup>159</sup>

212. Qwest initially objected, maintaining that no language was necessary and that Section 12.1.5.5 should be left blank because it would prevent Qwest from responding to customer-initiated requests for information. Qwest eventually agreed to the language quoted above, without the phrase at

---

<sup>157</sup> This issue may be closed. Eschelon has briefed it, and it still appears on the Disputed Issues List; Qwest’s brief, however, provides that Issue 12-66 is closed. See Qwest’s Post-Hearing Brief at 119. If it is closed, whatever language the parties have agreed to should be incorporated in the ICA.

<sup>158</sup> Disputed Issues List at 102.

<sup>159</sup> Ex. 33 (Webber Direct) at 66-79; Ex. 34 at 30–35; Ex. 35 at 30-35.

the end concerning Qwest initiation of discussion of its products and services. Qwest apparently believes this last phrase is unnecessary.<sup>160</sup>

213. The Department has made no recommendation on this issue.

### **C. Decision**

214. Qwest agreed to virtually identical language in Section 12.1.5.4.7, which addresses maintenance and repair and provides in relevant part that “the Qwest technician will not initiate any discussion regarding Qwest’s products and services with CLEC End User Customer and will not make disparaging remarks about CLEC.” It also provides “[n]otwithstanding the foregoing, if a CLEC End User Customer initiates a discussion with the Qwest technician about Qwest’s products or services and requests such information, nothing in this Agreement prohibits the Qwest technician from referring the CLEC End User Customer to the applicable Qwest retail office.” Eschelon’s proposed language merely extends the same treatment to contacts arising from Qwest-caused errors. Eschelon’s proposed language should be adopted.

## **Issue 12-67: Expedited Orders Issue 12-67 (a)-(g)**

### **A. The Dispute**

215. An expedited order or “expedite” is an order for which Qwest provides the requested service more quickly than it otherwise would under its normal service provisioning interval. Some arise in emergency situations, some do not. Expedites are necessary for Eschelon to respond to the unusual needs of customers and to compete effectively. The parties disagree as to whether the expedite charge charged in addition to the normal installation charges should be priced at a wholesale TELRIC rate or at “just and reasonable” retail rate. For expedites that arose in certain emergency situations, a practice developed where Qwest provided those “emergency expedites” to Eschelon and other CLECs without requiring the additional expedite charge. In 2006, Qwest completed a CMP and now limits no-charge emergency expedites to POTS-type services. Eschelon disagrees with that limitation.

### **B. Position of the Parties**

216. Eschelon proposes a provision restoring no-charge, emergency-based expedites for unexpected events such as natural disasters or critical deadlines such as grand openings, for all services. Eschelon disputes the reasons offered by Qwest for the CMP change. Eschelon alleges that Qwest provides free emergency expedites for its retail customers and selected CLECs and is therefore required to provide them to Eschelon. For non-emergency

---

<sup>160</sup> Ex. 1 (Albersheim Direct) at 46-52; Ex. 2 (Albersheim Reply) at 42-45; Ex. 4 (Albersheim Surreply) at 19-22.

expedite situations, Eschelon proposes that the ICA contain an option of requesting a fee-based expedite and language clarifying that installation Non-Recurring Charges and similar charges are still applicable. Eschelon proposes that the expedite option be available to UNE combinations. Eschelon proposes that the expedite charge for the non-emergency expedite be set at a TELRIC rate to be determined and that it be set at \$100 per day on an interim basis.<sup>161</sup>

217. Qwest notes a distinction between design service (unbundled loops) and non-design services (POTS-type services). It agrees that under the expedite process that preceded the current one, CLECs could obtain expedites for both non-design and design services under certain emergency conditions for free. In Qwest's view, CLECs abused that process and gamed Qwest's system, which placed an undue burden on Qwest and drove it to reconsider the products that it included in the expedite process. Based upon a Change Request submitted by Covad, Qwest implemented the current expedite process of providing free emergency expedites only for non-design services, but charging a per-day expedite charge for design services without regard to emergencies. Qwest argues that the distinction is reasonable and not discriminatory. It also argues that the expedites service is a "superior" service, and not a UNE pursuant to Section 251 of the Telecommunications Act of 1996, and therefore not required to be priced by TELRIC pricing. Thus, Qwest proposes that the expedite charge be set by inserting in Exhibit A to the ICA a reference to its interstate access tariff. The tariff rate is \$200.

218. The Department made no recommendations on this issue.

### **C. Decision**

219. The CMP process by which Qwest reached its current position is not the controlling factor on whether emergency situations should create an exception to charging an additional fee for expedited ordering. The more important question is whether Qwest's process is discriminatory. It appears that it is not.

220. First, an expedite for a non-design service is likely to be less involved than one for a design service, so the charge difference has some justification. Second, in addition to the "design" versus "non-design" services distinction, Qwest services may be classified as wholesale versus retail. Qwest proposes to offer expedites under certain emergency conditions for non-design services for free. This applies to both retail non-design services (POTS) and wholesale non-design services (Resale POTS, QPP). Similarly on the other hand, Qwest would charge the expedite fee, even for emergencies, for both retail design services (Private Lines) and wholesale design services (Unbundled Loops). Thus, for an Eschelon end user POTS customer, Eschelon can obtain an emergency expedite at no charge. And both Eschelon and a Qwest retail

---

<sup>161</sup> Ex. 34 (Webber Rebuttal) at 35-37.

customer will pay the expedite charge for any expedite request. There is no discrimination. On this point, Qwest's position and language should be adopted.

221. As to pricing, Eschelon's position should be adopted. When Eschelon requests an expedite, it will be for accessing a UNE. Under 47 C.F.R. §§ 51.307 and 51.313, it must be provided under Section 251 of the Act and, thus, at TELRIC rates.

222. A TELRIC study should be done. There would likely be some incremental cost to providing expedited service. It is presumably not just a matter of doing the provisioning sooner than the original due date. It would likely involve at least some scheduling changes and additional communications. In the case of natural disasters, there may be other complications that cause additional work just to do the provisioning earlier. The \$200 tariff rate seems unreasonable at first glance, particularly in light of the fact that historically in Minnesota TELRIC rates have been substantially less than Qwest's tariffed rates for similar services. Eschelon's proposal for an interim rate of \$100 is appropriate. Eschelon's proposal for TELRIC pricing for the expedite charge and an interim rate of \$100 should be adopted.

## **Issue 12-70: Pending Service Order Notification**

### **A. The Dispute**

223. When Qwest issues or changes service orders associated with a CLEC's LSR, Qwest notifies the CLEC by an electronic notice called pending service order notification (PSON). The parties disagree as to whether the ICA should specify a minimum level of detail that should be contained in the PSON.

### **B. Position of the Parties**

224. Qwest proposes the following language for Section 12.2.7.2.3:

Pending Service Order Notification. When Qwest issues or changes the Qwest service orders associated with the CLEC LSR, Qwest will issue a Pending Service Order Notification (PSON) to CLEC. Through the PSON, Qwest supplies CLEC with information that appears on the Qwest service order.<sup>162</sup>

225. Eschelon proposes adding either of the following two phrases to the end of the last sentence:

- providing at least the data in the service order's Service and Equipment (S&E) and listings sections.

---

<sup>162</sup> Disputed Issues List at 108.

- providing at least the data in the service order's Service and Equipment (S&E) and listings sections that Qwest provided to requesting CLECs as of IMA Release 13.0.<sup>163</sup>

226. Eschelon maintains that it needs the additional language so that it can cross-check its service requests against Qwest's PSON to identify any Qwest errors in processing Eschelon's orders before the due date. Today, Qwest provides five types of information in the PSON (listings, bill, control, traffic, and S&E). Eschelon has requested that only two of these five sections be addressed in the ICA.<sup>164</sup>

227. Qwest objects to the additional language, contending the CMP is the more effective method of dealing with this type of system notice and that it is not appropriate to include such language in an ICA.<sup>165</sup>

228. The Department recommends use of Eschelon's second option (data provided as of IMA Release 13.0).<sup>166</sup>

### **C. Decision**

229. The Administrative Law Judges agree with the Department that Qwest's opposition to including this language is overstated. It appears to be unlikely that the inclusion of this language will "freeze" CMP processes, create an administrative burden for Qwest, or cause Qwest to maintain separate systems, processes, and procedures for Eschelon versus other CLECs. The CMP document itself envisions that CMP processes may well differ from those in negotiated ICAs. Qwest has failed to show that maintaining the current level of information in the PSON will harm the CMP process or other CLECs or create a burden for Qwest. This language would not prevent Qwest from adding to the information made available to other CLECs, through the CMP, nor would it prevent Qwest from changing the format of the information. It does not appear that any systems modification would be necessary to comply with this provision. Eschelon credibly contends that this minimal amount of information is reasonable and necessary for it to accurately coordinate the provision of service to new customers. Eschelon's proposed language should be adopted.

<sup>165</sup> Ex. 1 (Albersheim Direct) at 61-66; Ex. 2 (Albersheim Rebuttal) at 47-50; Ex. 4 (Albersheim Surrebuttal) at 29-30.

<sup>166</sup> Department's Post-Hearing Brief at 37-39, 41-44.

**Issue 12-71: Jeopardies**

**Issue 12-72: Jeopardy Classification**

**Issue 12-73: Jeopardy Correction**

**A. The Dispute**

230. The parties dispute whether the ICA should contain any language regarding jeopardy notices or whether certain jeopardies should be classified as “Customer Not Ready” (CNR), which essentially assigns the fault for the jeopardy to Eschelon. Qwest opposes having any language on these issues other than a reference to its website.

**B. Position of the Parties**

231. The parties have agreed to language in another section of the ICA providing that when a CLEC places an order for an unbundled loop that is complete and accurate, Qwest will reply with a Firm Order Confirmation (FOC) within a specified time. The FOC will specify the date on which Qwest will provision the loop. Qwest will ensure the accuracy of the commitment date. If Qwest must make changes to the commitment date, Qwest will promptly issue a jeopardy notice that will clearly state the reason for the change. Qwest will also submit a new FOC that will clearly identify the new date.<sup>167</sup>

232. Qwest’s compliance with installation commitments and intervals is monitored through performance indicators (PIDs) developed in connection with Qwest’s § 271 application. The Commission has approved, for example, PIDs OP-3 (Installation Commitments Met), OP-4 (Installation Interval), and OP-5 (Firm Order Confirmations On Time), all of which distinguish between Qwest-caused delays and CLEC-caused delays. Qwest cannot change the PIDs without Commission approval. Failure to comply with PIDs can potentially subject Qwest to financial penalties.

233. Eschelon proposes a definition of Qwest-caused and CLEC-caused jeopardies (Issue 12-71), a provision that would preclude Qwest from defining a jeopardy as CLEC-caused unless it has sent a firm order confirmation (FOC) to Eschelon after a Qwest jeopardy occurs but at least a day (or the day) before Qwest attempts to deliver service (Issue 12-72); and a provision requiring Qwest to correct an erroneous jeopardy classification (Issue 12-73).

234. Eschelon argues that one important consequence of being assigned fault is the effect on the due date; if Eschelon is not ready, Qwest procedures require it to supplement its order to request a new due date, which must be at minimum three days from the date of the supplemental order. If Qwest is not ready, however, Qwest does not require a supplemental order. Eschelon maintains the following scenario has occurred and that Qwest has

---

<sup>167</sup> Ex. 25A, § 9.2.4.4.1.

failed to comply with its own procedures designed to prevent it: a Qwest-caused jeopardy is issued; Qwest fails to notify Eschelon that the jeopardy has cleared through an FOC that provides sufficient notice to Eschelon; and when Qwest attempts to deliver service (despite the earlier jeopardy notice), Eschelon is not ready, resulting in a subsequent jeopardy that Qwest then classifies as CNR. The subsequent CNR jeopardy means that Eschelon must supplement its order to request a new due date. Eschelon argues that Qwest should not be able to classify the subsequent jeopardy as CNR unless Qwest has issued a new FOC with a new date that gives Eschelon approximately one day of notice before it attempts to deliver service.<sup>168</sup>

235. Qwest proposes language providing that specific procedures regarding jeopardies are available on Qwest's wholesale website. Qwest contends it is more appropriate to address procedural issues concerning jeopardies in the CMP process in which all CLECs can participate. In addition, it argues that the requirement to provide an FOC at least a day before it attempts to deliver service is inconsistent with Qwest's current process, might cause extra delay in accomplishing delivery of the service, and would create different system requirements for Eschelon than for all other CLECs. In addition, Qwest maintains it rarely errs in assigning CNR status to a jeopardy.<sup>169</sup>

236. The Department has made no recommendation on this issue.

### **C. Decision**

237. Qwest has already agreed in the ICA to provide a new FOC after the jeopardy notice, regardless of which party caused the jeopardy, which is what Eschelon says it needs in order to ensure it has the resources available to accept service after a jeopardy notice. If Qwest fails to comply with this provision, Eschelon has contractual remedies available.

238. Eschelon's main goal appears to be ensuring both the accuracy of PID results and that Qwest faces the resulting financial consequences for failing to meet PID requirements. Eschelon's proposed language calls only for changes in the jeopardy classification, not the procedures for ordering or provisioning loops. Any changes to or refinements in the way jeopardies are classified should be addressed through a process outside of an individual ICA. Qwest's language should be adopted for this issue.

---

<sup>168</sup> Disputed Issues List at 109-111; Ex. 33 (Webber Direct) at 120-41; Ex. 34 (Webber Rebuttal) at 46-53; Ex. 35 (Webber Surrebuttal) at 57-63.

<sup>169</sup> Disputed Issues List at 109; Ex. 1 (Albersheim Direct) at 66-69; Ex. 2 (Albersheim Reply) at 52-54; Ex. 4 (Albersheim Surreply) at 32-34.

## Issue 12-74: Fatal Rejection Notices

### A. The Dispute

239. The parties dispute whether the ICA should include language requiring Qwest to continue processing a service request if it has erroneously rejected the request, instead of requiring the CLEC to resubmit the service order.

### B. Position of the Parties

240. The parties have agreed to the following language for Section 12.2.7.2.6.1:

If CLEC submits an LSR or ASR that contains a Fatal Error and receives a Fatal Reject notice, CLEC will need to resubmit the LSR or ASR to obtain processing of the service request.<sup>170</sup>

241. Eschelon would add the following phrase to the above sentence: "Except as provided in Section 12.2.7.2.6.2." In Section 12.2.7.2.6.2, Eschelon proposes the following language:

If Qwest rejects a service request in error, Qwest will resume processing the service request as soon as Qwest knows of the error. At CLEC's direction, Qwest will place the service request back into normal processing, without requiring a supplemental order from CLEC and will issue a subsequent FOC to CLEC.<sup>171</sup>

242. In lieu of the above language, Qwest would simply reference the specific procedures contained on its wholesale website.

243. Eschelon argues these provisions are necessary because Qwest sometimes does reject a service request in error, and the ICA should address that situation. It further contends that this language is virtually identical to Qwest's current process, as reflected in its PCAT, which provides that "[i]f Qwest rejects a service request in error, we will resume processing as soon as the error is brought to our attention. At your direction, Qwest will place the service request back into normal processing with or without a supplement and issue a subsequent FOC."<sup>172</sup>

244. Qwest contends its language is appropriate because the provision at issue concerns "process detail" that is more appropriately addressed in the

---

<sup>170</sup> Disputed Issues List at 111.

<sup>171</sup> Disputed Issues List at 111.

<sup>172</sup> Ex. 33 (Webber Direct) at 141-46; Ex. 34 (Webber Rebuttal) at 53-56; Ex. 35 (Webber Surrebuttal) at 63-64.

CMP. It repeats its arguments that including this provision in an ICA will “lock in” the language and preclude any discussion of it by other CLECs in the CMP.<sup>173</sup>

245. The Department has made no recommendation on this issue.

### **C. Decision**

246. Eschelon’s language would not require any changes to Qwest’s current process or systems, and Qwest has failed to identify any credibly adverse effect on CLECs, itself, or the public interest if this language were incorporated into the ICA. The proposed language exactly reflects Qwest’s current practice. The Administrative Law Judges recommend that Eschelon’s language be adopted.

## **Issue 12-76: Loss and Completion Reports**

### **Issue 12-76(a)**

### **Issue 12-86: Trouble Report Closure**

#### **A. The Dispute**

247. Qwest provides daily loss and completion reports (notifying Eschelon when an end user customer changes to a different local service provider and when other changes in service occur on an end-user’s account. Qwest makes trouble report closure information available upon request, and it also permits CLECs to access certain information on maintenance and repairs through an electronic interface. The parties disagree as to whether the information that Qwest currently provides to Eschelon and other CLECs on these reports should be specified in the ICA.

#### **B. Position of the Parties**

248. Eschelon has proposed language for the ICA that would specify the current information Qwest provides in loss reports (Issue 12-76) and completion reports (Issue 12-76(a)). In addition, Eschelon proposes language that would require Qwest to make available to CLECs, in the same form it is available today, information concerning the closure of trouble reports. Eschelon argues that it has worked extensively through the CMP to ensure that this information is provided, Qwest has finally agreed to provide it, and Eschelon now seeks to capture those results by specifying them in the ICA.<sup>174</sup>

249. Qwest would delete all of the disputed language. In the section concerning trouble report closure, it would simply reference the procedures available on its wholesale website. Qwest maintains inclusion of this language in

---

<sup>173</sup> Ex. 1 (Albersheim Direct) at 63-66; Ex. 2 (Albersheim Reply) at 50-51; Ex. 4 (Albersheim Surreply) at 30-32.

<sup>174</sup> Disputed Issues List at 113-14, 122-23; Ex. 33 (Webber Direct) at 153-60; *id.* at 192-99; Ex. 34 (Webber Rebuttal) at 68-75; *id.* at 119-22; Ex. 35 (Webber Surrebuttal) at 74-76; *id.* at 85-88.

Eschelon's ICA would "lock in" these processes, preclude future changes, and require Qwest to operate in one way for Eschelon and another way for all other CLECs.<sup>175</sup>

250. The Department recommends that Eschelon's language be adopted.<sup>176</sup>

### **C. Decision**

251. The disputed language exactly reflects Qwest's current practice. Inclusion of Eschelon's language in the ICA would not prohibit future changes, whether through the CMP or ICA amendment. Eschelon's language merely defines the minimum elements that make these resources useful to CLECs. Eschelon's language should be adopted for these issues.

## **Issue 12-87: Controlled Production Testing**

### **A. The Dispute**

252. There are several types of testing that take place when Qwest issues updated versions of its existing systems or implements new systems or processes in its Operations Support Systems (OSS). The parties have agreed to language in several sections of the ICA concerning the obligation to conduct mutual testing to ensure the interface systems are working properly. The dispute here is whether Eschelon should be able to choose not to perform "recertification" testing when Qwest upgrades its existing systems (as opposed to implementing new systems).

### **B. Position of the Parties**

253. Eschelon proposes two alternatives for Section 12.6.9.4 that would permit it to opt out of the testing process if it does not intend to use the new functionality on Qwest's system:

- Controlled production is not required for recertification, unless the Parties agree otherwise. Recertification does not include new implementations such as new products and/or activity types.
- Qwest and CLEC will perform controlled production *for new implementations, such as new products, and as otherwise mutually agreed by the Parties.*

254. Eschelon maintains its language captures Qwest's current practice and is based on language in Qwest's EDI Implementation Guidelines for

---

<sup>175</sup> Ex. 1 (Albersheim Direct) at 72-77; *id.* at 90-92; Ex. 2 (Albersheim Reply) at 56-57; *id.* at 59; Ex. 4 (Albersheim Surreply) at 35-39; *id.* at 41.

<sup>176</sup> Department's Post-Hearing Brief at 39-45; Ex. 48 (Doherty Reply) at 20-23; Ex. 49 (Doherty Surreply) at 9-12.

Interconnect Mediated Access (IMA), Version 19.2, page 48. Eschelon seeks to continue this practice in order to eliminate unnecessary time spent testing functionalities that Eschelon does not desire to use.<sup>177</sup>

255. Qwest would delete Eschelon's language entirely. Qwest agrees that Eschelon's language accurately depicts its current practice, which does not require CLECs to recertify if they have successfully completed testing of a previous release; in addition, Qwest admits that Qwest can control whether a CLEC can access its OSS. Qwest opposes Eschelon's proposal because it wants the authority and flexibility to require Eschelon to perform full-blown testing in the future when Qwest believes it is necessary.<sup>178</sup>

256. The Department generally supports Eschelon's first proposal, because Qwest controls whether CLECs have access to a particular application, and a CLEC that waives controlled production testing of that application would not be able to access it. Regardless of the language in this section, Qwest will continue to control access to the application and is free to make any changes or upgrades that it believes are necessary. The Department therefore believes it is unreasonable for a CLEC to be required to participate in testing for a product that it has no plans to use. The Department recommends a slight change to Eschelon's first alternative:

Controlled production is not required for recertification for features or products that the CLEC does not plan on ordering.<sup>179</sup>

### **C. Decision**

257. The Administrative Law Judges agree that as long as Qwest controls access to particular applications, Eschelon should have the right to determine for itself whether to invest the resources in controlled production testing. Both of Eschelon's proposals draw a distinction between recertification and new implementations, which the Department's proposed language does not. The Department's language, however, would expressly limit Eschelon's option to decline recertification testing to situations in which Eschelon does not plan to use the product.

258. The Administrative Law Judges recommend adoption of Eschelon's first proposal. There is no evidence that Eschelon has or would opt out of recertification testing for any improper purpose. In the alternative, a better blend of Eschelon's first proposal and the Department's language would read as

<sup>177</sup> Disputed Issues List at 124-25; Ex. 33 (Webber Direct) at 199-205; Ex. 34 (Webber Rebuttal) at 122-27; Ex. 35 (Webber Surrebuttal) at 88-89.

<sup>178</sup> Disputed Issues List at 124-25; Ex. 1 (Albersheim Direct) at 92-101; Ex. 2 (Albersheim Reply) at 59-62; Ex. 4 (Albersheim Surreply) at 42-47. See also Tr. 1:75 (Qwest systems control whether a CLEC is allowed to order a particular product).

<sup>179</sup> Department's Post-Hearing Brief at 45-48; Ex. 50 (Schneider Reply) at 14-15; Ex. 51 (Schneider Surreply) at 9.

follows: “Controlled production is not required for recertification for features or products that the CLEC does not plan to order. Recertification does not include new implementations such as new products and/or activity types.”

**Issue 12-88: Rates in Ex. A**

**Issue 12-88(a): IntraLATA Toll Traffic**

**A. The Dispute**

259. The parties dispute whether the ICA should include language stating that Ex. A controls rates for all services provided under the agreement (including those Eschelon provides to Qwest), or whether the ICA should state that Ex. A controls only rates for services Qwest provides to Eschelon. They have the same dispute with regard to Ex. A, Section 7.11, which references the Access Services Tariff.

**B. Position of the Parties**

260. Eschelon’s language for Section 22.1.1 provides:

The rates in Exhibit A apply to the services provided pursuant to this Agreement.<sup>180</sup>

261. Within Ex. A at Section 7.11, Eschelon would refer to the “Minnesota Access Service Tariff” as the source of rates for IntraLATA Toll Traffic.<sup>181</sup>

262. Qwest’s language for Section 22.1.1 provides:

The rates in Exhibit A apply to the services *by Qwest to CLEC* provided pursuant to this Agreement.<sup>182</sup>

263. Qwest would refer to “Qwest’s Minnesota Access Service Tariff” in Ex. A at Section 7.11 as the source of rates for IntraLATA Toll Traffic.

264. Eschelon points out that there are a number of sections of the ICA containing agreed-upon language that permits Eschelon to charge Qwest for certain products or services, and those sections reference Ex. A to the ICA as the source of the rate. For example, sections concerning trunk non-recurring charges (Section 7.3.3), transit traffic (Section 7.3.7), transit records (Section 7.6), labor charges for audits (Section 8.2.3), trouble isolation charges (Section 9.2.5.9), Qwest-requested managed cuts (Section 10.2.5.5.4), and daily usage files (Section 21.14.1) all reference rates that the CLEC may charge Qwest and most of these sections reference Ex. A as the source of the specific charge.

<sup>181</sup> Ex. 25B (Ex. A to ICA at 4 of 29).

<sup>182</sup> Disputed Issues List at 125-26.

Specifically with regard to intraLATA toll traffic, the parties agreed that each party's tariffed switched access tandem switching and tandem transmission rates apply, and the assumed mileage in Ex. A shall apply (in Section 7.3.7.2); and that where either party acts as an intraLATA toll provider, each party shall bill the other the appropriate charges pursuant to its respective tariff or price list (Section 7.3.10.1). Eschelon argues that it would therefore be confusing, inaccurate, and misleading to use Qwest's language, which suggests that Ex. A only applies to services by Qwest to CLEC and that the only "access service tariff" at issue is Qwest's.<sup>183</sup>

265. Qwest contends that it is unnecessary to use Eschelon's language because the ICA specifically spells out when Eschelon may charge Qwest. Qwest apparently prefers, for reasons of consistency, to keep the language of these sections the same in all ICAs.<sup>184</sup>

266. The Department has made no recommendation on this issue.

### **C. Decision**

267. This is an issue of very little consequence. Qwest is correct that the ICA is clear as to when Eschelon may charge Qwest. Qwest, however, has pointed to no downside of using Eschelon's language, except to say that it is not necessary. Eschelon is correct that its language would make the contract internally more consistent. The Administrative Law Judges recommend adoption of Eschelon's proposed language.

## **Issue 22-90: Unapproved Rates**

### **A. The Dispute**

268. The parties have agreed to language that would require Qwest to develop a TELRIC cost-based rate for new products, the rates for which have not been approved by the Commission, and to file the rate and related cost support with the Commission for review. The parties disagree whether Qwest should be required to provide a notice to the CLEC each time Qwest makes such a filing with the Commission.

### **B. Position of the Parties**

269. Eschelon has proposed two alternatives for Section 22.6.1:

---

<sup>183</sup> Ex. 42 (Denney Direct) at 168-79; Ex. 43 (Denney Rebuttal) at 73-76; Ex. 44 (Denney Surrebuttal) at 101-03.

<sup>184</sup> Ex. 6 (Easton Direct) at 24-25; Ex. 7 (Easton Rebuttal) at 21-22; Ex. 9 (Easton Surrebuttal) at 19-20.

- Qwest will provide notice to CLEC of such filing and the proposed rate and, upon request, will provide a copy of the related cost support to CLEC.

- [Qwest will file the rate and cost support] the later of (1) the Effective Date of this Agreement, or (2) Qwest offering the rate to CLEC, unless the Parties agree in writing upon a negotiated rate (*in which case Qwest shall file the negotiated rate with the Commission within 60 Days*). *Except for negotiated rates, Qwest will provide a copy of the related cost support to CLEC (subject to an applicable protective agreement, if the information is confidential) upon request or as otherwise ordered by the Commission.*<sup>185</sup>

270. Eschelon maintains this language is necessary so that it has adequate notice of any filing and time to consider whether to participate in a proceeding to challenge the rate.<sup>186</sup>

271. Qwest would delete the disputed language and argues that it is not necessary because Commission procedures ensure that all CLECs receive adequate notice of any proceeding concerning Qwest's rates.<sup>187</sup>

272. Although it initially recommended against adoption of Eschelon's language on the basis that it was not necessary, the Department now recommends adoption of Eschelon's second alternative, because it re-states the existing requirement that a negotiated rate must be filed within 60 days.<sup>188</sup> While the Department does not believe that the requirement that Qwest provide a copy of the filing and the cost support to Eschelon is strictly necessary in Minnesota because CLECs do not appear to have problems obtaining copies of cost studies filed with the Commission, it believes the language of Eschelon's second alternative is helpful.<sup>189</sup>

### **C. Decision**

273. Eschelon's first alternative would require Qwest to affirmatively provide notice to Eschelon of a filing with the Commission, and it would obligate Qwest to provide a copy of the cost support upon request. The notice of filing is unnecessary, because Eschelon can receive such a filing simply by being on a mailing list for Qwest filings in Minnesota.<sup>190</sup> Eschelon's second alternative

---

<sup>185</sup> Disputed Issues List at 126-28.

<sup>186</sup> Ex. 42 (Denney Direct) at 179-83; Ex. 43 (Denney Rebuttal) at 76-78; Ex. 45 (Denney Surrebuttal) at 103-08.

<sup>187</sup> Ex. 6 (Easton Direct) at 26; Ex. 7 (Easton Rebuttal) at 22-24; Ex. 9 (Easton Surrebuttal) at 20;

<sup>188</sup> P421/CI-01-1375, Order Approving Rates (October 2, 2002).

<sup>189</sup> Department's Post-Hearing Brief at 48-49; Ex. 54 (Fagerlund Reply) at 6-7; Ex. 55 (Fagerlund Surreply) at 21.

<sup>190</sup> Eschelon may have withdrawn its first proposal, but it still appears on the Disputed Issues List. See Ex. 45 (Denney Surrebuttal) at 103.

would eliminate the affirmative obligation to provide a notice of filing but would require Qwest to provide the cost support to Eschelon “upon request or as otherwise ordered by the Commission.” Because it would not be burdensome to Qwest, and because Eschelon would be entitled to the information anyway, the Administrative Law Judges recommend adoption of Eschelon’s second proposal.

**Issue A-95: Private Line/Special Access to Unbundled Loop Conversion**  
**Issue A-95(a): Private Line/Special Access to UDIT Conversion**

**A. The Dispute**

274. The parties disagree on the non-recurring prices to be charged for conversion of a private line or special access circuit to a UNE loop or UNE transport (UDIT).

**B. Position of the Parties**

275. Eschelon proposes to place in the ICA the Commission-approved rate (\$1.35) for conversion of a private line to a loop-mux combination (LMC) or to an EEL as the price for conversion of a private line or special access circuit to a UNE loop or UDIT. It maintains that the function and cost of these conversions is similar and that this conclusion is supported by Qwest’s use, in the *UNE Cost Case*, of the same cost study and proposal of the same rate (\$86.12) for converting private line to LMC or EEL as for conversion to UNE loop. Eschelon argues that until the completion of the *UNE Cost Case*, the currently-approved rate for a similar function should be used. In Eschelon’s words, Qwest should not be able to charge more by creating a new name for an existing service.<sup>191</sup>

276. Qwest maintains that these are new rate elements not previously approved by the Commission. It proposes to use the following rates in the ICA: \$39.02 for conversion to unbundled loop, and \$122.30 for conversion to UDIT. Qwest states that these are the rates it is offering other CLECs pending the outcome of the cost docket.<sup>192</sup> In the *UNE Cost Case*, Qwest has proposed rates of \$86.12 for private line conversion to UNE loop and \$113.86 for conversion to UDIT.<sup>193</sup>

277. The Department recommends Eschelon’s position with regard to conversion to UNE loop (\$1.35) based on its conclusion that the functions are similar to conversion to LMC or EEL and that an approved price accordingly should be used until the Commission approves a different one. The Department recommends that Qwest be permitted to charge \$113.86 for conversion to UDIT,

---

<sup>191</sup> Disputed Issues List at 130; Ex. 43 (Denney Direct) at 187-91; Ex. 44 (Denney Rebuttal) at 79-80; Ex. 45 (Denney Surrebuttal) at 109-111.

<sup>192</sup> Disputed Issues List at 130; Ex. 6 (Easton Direct) at 27-28; Ex. 7 (Easton Rebuttal) at 24-25.

<sup>193</sup> Ex. 42 (Denney Direct) at 189.

the price proposed in that case, because the cost studies in the *UNE Cost Case* show that conversion to UDIT is a different process with a higher cost.<sup>194</sup>

### C. Decision

278. The conversion to UNE loop is not a sufficiently “new” process to justify disregarding a previously approved rate. The previously approved rate, \$1.35, should be used in the ICA for conversion to UNE loop. The conversion to UDIT appears to involve something more, and Eschelon has not established that the functions are sufficiently similar to conversion to UNE loop. There is no legal authority to require use of the \$122.30 rate that Qwest has offered to other CLECs, as that rate has not been approved and is different from the rate proposed in the *UNE Cost Case* (\$113.86). The proposed rate for conversion to UDIT, \$113.86, should be used in the ICA.

### NOTICE

Because of the compressed timeframe for a Commission decision in this case, the time period for filing exceptions is limited. Any party wishing to file exceptions to the Arbitrators’ Report should do so by January 26, 2007. No replies to exceptions will be permitted.

ORDER RESOLVING ARBITRATION  
ISSUES, REQUIRING FILED  
INTERCONNECTION AGREEMENT,  
OPENING INVESTIGATIONS AND  
REFERRING ISSUE TO CONTESTED CASE  
PROCEEDING

**PROCEDURAL HISTORY**

Since 1999, Cady Telemanagement, Inc., and its successor Eschelon Telecom, Inc. (Eschelon), have operated in Minnesota pursuant to an interconnection agreement (ICA) with US WEST Communications, Inc., and its successor Qwest Corporation (Qwest).<sup>1</sup> The parties have been discussing revisions to their agreement since then.

On May 26, 2006, after the parties failed to reach agreement on various terms of a new interconnection agreement, Eschelon petitioned the Commission to arbitrate the dispute pursuant to Sections 251 and 252 of the federal Telecommunications Act of 1996 (the Act).<sup>2</sup>

---

<sup>1</sup> *In the Matter of a Request for Approval of the Interconnection Agreement and Amendment One to the Agreement Between US WEST Communications, Inc., and Cady Telemanagement, Inc.*, Docket No. P-5340, 421/M-99-1223.

<sup>2</sup> Pub.L.No. 104-104, 110 Stat. 56, codified in various sections of Title 47, United States Code.

On June 23, 2006, the Commission issued its ORDER REFERRING MATTER TO THE OFFICE OF ADMINISTRATIVE HEARINGS FOR ARBITRATION, ASSIGNING ARBITRATORS, AND GIVING NOTICE OF FIRST PREHEARING CONFERENCE.

On July 12, 2006, the Minnesota Department of Commerce (the Department) intervened in the case.<sup>3</sup> In addition, participants Time Warner Telecom, Inc. (Time Warner), and Integra Telecom of Minnesota, Inc. (Integra), filed comments in this case pursuant to Minnesota Rules part 7812.1700, subpart 10.

On October 16-20, 2006, Administrative Law Judges Kathleen D. Sheehy and Steve M. Mihalchick (the arbitrators) conducted arbitration hearings in St. Paul, Minnesota.

On January 9, 2007, the arbitrators issued their Arbitrators' Report recommending a basis for resolving the arbitrated issues.

On January 26, 2007, the Department, Eschelon and Qwest filed exceptions to the Arbitrators' Report.

The Commission met on March 6 to consider this matter.<sup>4</sup> The record of this case closed on that date.

## **FINDINGS AND CONCLUSIONS**

### **I. BACKGROUND**

#### **A. Procedure**

The federal Telecommunications Act of 1996 was designed to open telecommunications markets to competition, including the local exchange market.<sup>5</sup> To this end, the 1996 Act requires each incumbent local exchange carrier (incumbent LEC or ILEC) to enter into an interconnection agreement with any requesting competitive local exchange carrier (CLEC) establishing the terms under which they would connect their networks to permit each carrier's customers to call the other's. An ILEC must do the following:

- Permit CLECs to purchase its services at wholesale prices and resell them to retail customers ("end use customers").

---

<sup>3</sup> The Department's intervention is granted as a matter of right. Minn. Stat. § 216A.07, subd. 3; Minn. Rules part 7812.1700, subp. 10.

<sup>4</sup> The Commission originally scheduled to hear this matter on March 1, 2007, but rescheduled the meeting due to inclement weather.

<sup>5</sup> See conference report accompanying S. 652.

- Permit CLECs to interconnect with its network on just, reasonable and nondiscriminatory terms.
- Offer unbundled network elements (UNEs) – that is, offer to rent certain elements of its network to CLECs without requiring the CLEC to also rent unwanted elements – on just, reasonable, and nondiscriminatory terms,<sup>6</sup> including cost-based rates.<sup>7</sup>

In addition, § 271 of the Act requires Bell operating companies (BOCs) such as Qwest to provide access to certain elements<sup>8</sup> even if they do not qualify as UNEs.<sup>9</sup> BOCs must provide access to these § 271 elements on just, reasonable and nondiscriminatory terms<sup>10</sup> – but unlike UNEs, the Act does not require BOCs to provide § 271 elements at cost-based rates.

In determining whether an element qualifies as a UNE, the Federal Communications Commission (FCC) considers, among other things, whether “the failure to provide access to such network elements would impair the ability of the telecommunications carrier seeking access to provide the services that it seeks to offer.”<sup>11</sup> Because this determination is fact-specific and the telecommunications market is constantly evolving, an element’s status as a UNE may change over time.<sup>12</sup>

A CLEC desiring to provide local exchange service can seek agreements with an ILEC related to interconnection with the ILEC’s network, the purchase of finished services for resale, and the

<sup>12</sup> The FCC announced its most recent systematic analysis of UNEs in its *Unbundled Access to Network Elements, Review of the Section 251 Unbundling Obligations of Incumbent Local Exchange Carriers*, WC Docket No. 04-313, CC Docket No. 01-338, Order on Remand, 20 FCC Rcd 2533 (released February 4, 2005) (*Triennial Review Remand Order*, or TRRO).

purchase of the ILEC's UNEs and other elements.<sup>13</sup> If the ILEC and the CLEC cannot reach agreement, either party may ask the State commission to arbitrate unresolved issues and to order terms consistent with the 1996 Act.<sup>14</sup> In particular, parties may ask a state Commission to determine the total element long-run incremental cost (TELRIC) of UNEs, interconnection, and methods of obtaining access to UNEs.<sup>15</sup>

## **B. Decision Standard**

In resolving the issues in this arbitration and imposing conditions, the Commission must (1) ensure that the resolution meets the requirements of § 251 of the 1996 Act, including any legally enforceable regulations prescribed by the Federal Communications Commission (FCC) pursuant to § 251; (2) establish any rates for interconnection, services or network elements according to § 252(d) of the 1996 Act; and (3) provide a schedule for implementation by the parties.<sup>16</sup>

The Commission may also establish and enforce other requirements of state law when addressing issues related to intercompany agreements under § 252.<sup>17</sup> The Minnesota Legislature directs the Commission to encourage, among other things, economically efficient deployment of infrastructure for higher speed telecommunication services, fair and reasonable competition for local exchange telephone service, improved service quality, and customer choice.<sup>18</sup> In addition, the Commission must adopt policies "using any existing federal standards as minimum standards and incorporating any additional standards or requirements necessary to ensure the provision of high-quality telephone services throughout the state."<sup>19</sup> These policies must facilitate the kind of interconnection that "the commission considers necessary to promote fair and reasonable competition"<sup>20</sup> and, in particular, must "prescribe appropriate regulatory standards for new local telephone service providers that facilitate and support the development of competitive services...."<sup>21</sup>

---

<sup>13</sup> 47 U.S.C. §§ 251(c), 252(a).

<sup>14</sup> 47 U.S.C. § 252(b).

<sup>15</sup> 47 C.F.R. §§ 51.501, 51.505.

<sup>16</sup> 47 U.S.C. § 252(c).

<sup>17</sup> 47 U.S.C. §§ 251(d)(3), 252(e)(3), 253(b), 261 and 601(c)(1); *In the Matter of Implementation of the Local Competition Provisions of the Telecommunications Act of 1996*, First Report and Order, CC Docket No. 96-98, 11 FCC Rcd 13042 (1996) (*Local Competition First Report and Order*) at ¶¶ 233, 244.

<sup>18</sup> Minn. Stat. § 237.011.

<sup>19</sup> Minn. Stat. § 237.16, subd. 8(a).

<sup>20</sup> *Id.* at subd. 8(a)(2).

<sup>21</sup> *Id.* at subd. 8(a)(6).

To these ends, the Legislature authorizes the Commission to remedy unreasonable or insufficient services or omissions<sup>22</sup> by making any just and reasonable order necessary, up to and including revoking a carrier's authority to provide service.<sup>23</sup>

In short, the Commission must impose terms and conditions in this proceeding that are just, reasonable, nondiscriminatory and fair to both the new entrants and the incumbent, consistent with the requirements of federal and state law.

## II. FUTURE PROCEEDINGS

The 1996 Act requires parties to submit "any interconnection agreement adopted by negotiation or arbitration . . . for approval to the State commission."<sup>24</sup> The State commission must then approve or reject the agreement within 90 days as to a negotiated agreement and 30 days as to an arbitrated contract.<sup>25</sup> But the 1996 Act does not establish any deadline by which parties must submit a final interconnection agreement; the Act merely requires that arbitration decisions contain a schedule for implementation.<sup>26</sup>

In this case, the arbitrators recommend that the Commission refrain from establishing a specific date for parties to file their proposed interconnection agreements, and instead hold this docket open pending the outcome of a pending docket addressing the scope of Qwest's obligation to provide UNEs (the "*Wire Center Docket*").<sup>27</sup> The Department and Eschelon support this recommendation. But Qwest expresses concern that awaiting the resolution of other dockets will needlessly postpone the implementation of new interconnection terms.

The Commission appreciates the *Wire Center Docket's* relevance to the parties in this proceeding, and the parties' desire not to duplicate the work of implementing new interconnection terms. To this end, the Commission desires to provide all parties with enough time to analyze and incorporate changes arising from the *Wire Center Docket* into the interconnection agreement that is the focus of the current docket. At the same time, the Commission does not wish to needlessly delay the implementation of the most up-to-date interconnection terms.

---

<sup>22</sup> Minn. Stat. § 237.081.

<sup>23</sup> Minn. Stat. § 237.16, subd. 5.

<sup>24</sup> 47 U.S.C. § 252(e)(1).

<sup>25</sup> 47 U.S.C. § 252(e)(4).

<sup>26</sup> 47 U.S.C. § 252(c).

<sup>27</sup> Arbitrators' Report at ¶ 3, citing *In the Matter of CLECs' Request for Commission Approval of ILEC Wire Center Impairment Analysis*, Docket No. P-5692/M-06-211; *In the Matter of a Commission Investigation Identifying Wire Centers in Which Qwest Must Offer High-Capacity Loop or Transport UNEs at Cost-Based Rates*, Docket No. P-999/CI-06-685.

Given these competing concerns, the Commission will direct parties in this arbitration to submit their final ICAs, containing all arbitrated and negotiated terms, within 120 days of this Order. This should provide sufficient time for pending dockets to reach resolution before the parties would file their final agreement. But if the *Wire Center Docket* is not resolved in the next 100 days, the parties may petition to extend the deadline. The Commission will authorize its Executive Secretary to act on such petitions.

The parties shall put their entire ICAs together and craft any additional language that the Commission has not specifically ordered in this arbitration. The approval proceeding will enable the Commission to (1) review provisions arrived at through negotiations; (2) make any necessary adjustments to the arbitrated terms; and (3) ensure that the final ICA language comports with the Commission's decisions in this arbitration. The Commission will review the entire agreement for compliance with the relevant law and consistency with the public interest as required by the 1996 Act.<sup>28</sup>

## **SPECIFIC FINDINGS AND CONCLUSIONS**

### **I. CONTESTED ISSUES**

Eschelon and Qwest submitted 143 pages of contested issues for the arbitrators consideration,<sup>29</sup> addressing the following topics:

1. Interval Changes and Placement
2. Effective Date of Rate Changes
3. Effective Date of a Legally Binding Change
4. Suspension of Order Processing
5. Definition of Repeated Delinquency – Magnitude In Dispute
6. Definition of Repeated Delinquency – Frequency of Delinquency
7. Disputing Deposit Requirement
8. Alternative Approach to Deposits
9. Increase in Deposits Based Upon Review of Credit Standing
10. Copy of Non-Disclosure Agreement
11. Transit Record: Charge and Bill Validation
12. Available Inventory/Posting of Price Quotes
13. Available Inventory/Space Augments
14. Direct Current (DC) Power/Usage Pricing
15. Initial Power Management
16. Quote Preparation Fee
17. Non-Discriminatory Access to UNEs
18. Network Maintenance and Modernization/Adverse Effect

---

<sup>28</sup> See 47 U.S.C. § 252(e).

<sup>29</sup> Revised Minnesota Disputed Issues List (October 31, 2006).

19. Relationship Between Section 9.1.9 and Copper Retirement
20. Location at Which Changes Occur
21. Conversion of a UNE to a Non-UNE
22. Cross Connect/Unbundled Customer Controlled Rearrangement Element
23. Loop-Transport Combinations
24. Service Eligibility Criteria Audits
25. Arrangements for Commingled Elements
26. Loop-Multiplex Circuit Combinations
27. Acknowledgment of Mistakes
28. Communications with CLEC Customers
29. Expedited Orders
30. Pending Service Order Notification
31. Jeopardies, Classification, Correction
32. Fatal Rejection Notices
33. Loss, Completion and Trouble Reports
34. Controlled Production Testing
35. Rates and IntraLATA<sup>30</sup> (Local) Toll Traffic
36. Unapproved Rates
37. Private Line Special Access

The arbitrators addressed each of these topics in their report. Parties subsequently filed exceptions regarding collections issues (topics 4 through 9 above), transit records (topic 11), loop-transit combinations (topic 23), loop-multiplex circuit combinations (topic 26), acknowledgment of mistakes (topic 27), requests to expedite orders (topic 29), jeopardy notices (topic 31) and controlled production testing (topic 34).

## II. ARBITRATORS' REPORT

Having reviewed the full record of this proceeding and provided an opportunity for all parties to be heard, the Commission generally finds the recommendations of the Arbitrators' Report to be a thorough and reasonable analysis of the issues. The Commission generally concurs in the arbitrators' analyses, findings and recommendations, and will generally accept, adopt and incorporate them into this Order.

In particular, the Commission will adopt the arbitrators' recommendations regarding topics 5, 6, 7, 8, 9, 11, 26, 29 (with respect to the selection of ICA language) and 34. In addition, the Commission finds merit in the arbitrators' recommendations to open some new investigations involving Qwest and all interested CLECs:

- Regarding the terms under which Qwest converts from providing a network element that is deemed a UNE to providing the same element when it is no longer deemed a UNE (topic 21), the Commission will initiate an investigation *In the Matter of Qwest*

---

<sup>30</sup> "LATA" refers to a "local access and transport area." 47 U.S.C. §§ 151(25), 271. "IntraLATA traffic" refers to calls between parties within the same LATA, often referred to as "local calls."

*Corporation's Conversion of UNEs to Non-UNEs*, Docket No. P-421/CI-07-730. This investigation will establish appropriate terms for Qwest to convert UNEs to non-UNEs, including a determination of whether the charge for providing this service must be limited to Qwest's total element long run incremental cost.

- Regarding Qwest's procedures for providing CLECs with commingled enhanced extended loops (topic 25), the Commission adopts the arbitrators' recommendation and hereby initiates an investigation *In the Matter of Qwest Corporation's Arrangements for Commingled Elements*, Docket No. P-421/CI-07-731, for the purpose of determining appropriate procedures.

With respect to a few topics, however, the Commission is persuaded that a superior alternative exists to the one recommended by the arbitrators. These topics are addressed below:

### III. ISSUES

#### **Topic 4: May Qwest discontinue processing orders from Eschelon if Eschelon fails to make prompt payments? (ICA Section 5.4.2)**

##### **A. The Issue**

To introduce competition into the local telecommunications market, the 1996 Act compels ILECs to cooperate with their competitors in the use of telecommunications plant. This produces a dynamic whereby a CLEC is an ILEC's customer in the wholesale market but is the ILEC's competitor in the retail market.

As a result of this relationship, each party has both the opportunity and the incentive to act in anticompetitive ways toward the other. Because the ILEC controls much of the plant, the ILEC has the opportunity to harm a CLEC's business through various technical means that degrade the quality of the service that the CLEC can provide to its customers. The CLEC, in turn, can harm the ILEC's business by withholding payment for the ILEC's services. Much of the language in ICAs is designed to limit the discretion an ILEC has over the quality of service delivered to a CLEC's customer, and to limit the CLEC's discretion regarding the amount and timing of payments to the ILEC.

This issue addresses both concerns. To the extent that Eschelon relies on Qwest's plant to serve a customer, Eschelon places orders for service with Qwest's wholesale operations. Eschelon might, for example, ask Qwest to install a new line to a customer's premises, or repair an existing line. If Qwest were to stop processing orders for Eschelon, Eschelon's customers might not be able to receive new lines or to get existing lines repaired. This fact might prompt the customer to stop doing business with Eschelon. Eschelon expresses concern that Qwest might exercise any discretion to stop processing orders inappropriately, causing irreparable harm in the form of lost customers and damaged reputation for service quality. On the other hand, Qwest claims that Eschelon has a history of late payments, that large unpaid balances deprive Qwest of the time value of money and increase the risk Qwest faces of a possible default, and that threatening to stop processing orders is an effective mechanism for securing those payments.

Qwest proposes language that would permit Qwest to discontinue processing Eschelon's orders for certain services if Eschelon fails to make full payment (except for sums in dispute) within 30 days of the payment due date. Qwest proposes to give Eschelon and the Commission at least ten business days' notice of its intention to discontinue processing orders, but Qwest does not propose to await Commission action on that notice. Qwest's interconnection agreements with some other CLECs contain similar provisions.

Eschelon's proposed language would require Qwest to secure Commission approval before discontinuing order processing or, alternatively, would require Qwest to resume order processing during the pendency of any Eschelon complaint on the issue. Integra and Time Warner support Eschelon's language.

### **B. The Arbitrators' Recommendation**

Finding that Qwest had articulated legitimate grounds for concern about late payments, the arbitrators recommend adopting Qwest's proposed language. In an effort to better reconcile Qwest's proposal with Eschelon's concerns, the arbitrators suggest possible means to further limit Qwest's discretion to suspend order processing. If the Commission were concerned that a 10-day notice would not provide sufficient time to respond, the Commission could extend the notice period. Or if the Commission were concerned that an unpaid bill for service provided to Eschelon's operations in another state might prompt Qwest to withhold service processing in Minnesota, the Commission could declare that Qwest's authority to suspend order processing in Minnesota would be limited to circumstances in which Eschelon failed to pay for services rendered in Minnesota.

Eschelon continues to support its proposed language. In lieu of that, Eschelon supports the additional safeguards proposed by the arbitrators. In addition, Eschelon proposes another constraint on Qwest's discretion to suspend order processing: If at the end of the 10-day notice period Qwest does not exercise its right to suspend order processing, Eschelon asks that Qwest be required to give a five-day notice before subsequently exercising its right to suspend.

Finally, Eschelon notes that Qwest's language would permit Qwest to withhold processing a variety of orders, including orders to stop providing certain services to a customer and to limit a customer's access to toll services. This is an anomalous result. First, if Qwest is motivated by concern over a CLEC's accruing debt, Qwest should not object to processing orders that will tend to reduce a CLEC's future debt. Second, customers are legally entitled to decline telephone services which they did not request, and to block certain toll services. The Department shares this concern, and proposes the following language to address it:

- 5.4.2 . . . . Qwest may only discontinue order processing (as defined below) to CLEC under the following conditions:
- 1) if payment for services rendered in Minnesota are more than 30 days past due; and
  - 2) if such payment does not include amounts disputed under section 21.8;
- and
- 3) if Qwest has given CLEC and the Commission ten (10) business days prior written notice.

The term “order processing” does not include orders or requests by CLEC to drop or remove a feature or service for a given end user or end user account, and also does not include orders or requests by CLEC to add any blocking capabilities to an end user account. Qwest may not discontinue processing the removal of features or services, or the addition of blocking capabilities, under any circumstances.

Nothing in this section precludes CLEC from using any dispute resolution procedures to contest Qwest’s discontinuation of order processing, if CLEC believes Qwest has not met all three conditions listed above, or for any other reason.

### **C. Applicable Law**

Notwithstanding the 1996 Act, states retain jurisdiction over an ILEC’s operations.<sup>31</sup> The Commission is authorized to prescribe the terms and conditions of service delivery for the purpose of bringing about fair and reasonable competition for local exchange telephone services.<sup>32</sup> The Commission should exercise its authority to, among other objectives, encourage fair and reasonable competition for local exchange telephone service in a competitively neutral manner, maintain or improve service quality, promote customer choice, and ensure consumer protections.<sup>33</sup>

While statute bars Qwest from disconnecting service to a CLEC without prior Commission approval,<sup>34</sup> no party identifies a statute addressing Qwest’s duty to continue processing orders specifically. However, statute requires local service providers 1) to refrain from charging any customer for services the customer did not request, and 2) to permit the customer to forbid the use of (“block”) the customer’s line for certain toll and information services.<sup>35</sup>

<sup>31</sup> 47 U.S.C. § 251(d)(3); § 261(b), (c); 1996 Act § 601(c)(1). The Conference Committee Report for the 1996 Act expounds on the purpose of the uncodified language at § 601(c)(1) as follows: “The conference agreement adopts the House provision stating that the bill does not have any effect on any other ... State or local law unless the bill expressly so provides. This provision prevents affected parties from asserting that the bill impliedly preempts other laws.” H. Conf. Rep. No. 104-458, 104th Cong., 2d Sess. 201 (1996), reprinted in 1996 U.S.C.C.A.N. 215.

<sup>32</sup> Minn. Stat. § 237.16, subd. 1(a).

<sup>33</sup> Minn. Stat. § 237.011.

<sup>34</sup> See Minn. Stat. § 237.74, subd. 9 (2006).

<sup>35</sup> Minn. Stat. §§ 327.663, 327.665; Minn. Rules part 7811.0600, subp. 1(E) and 7812.0600, subp. 1(E).

#### **D. Commission Decision**

The Commission finds merit in the arbitrators' analysis, and will generally accept their recommendation to adopt Qwest's language. The Commission has approved language similar to Qwest's proposal in other Qwest interconnection agreements, and no party has alleged that Qwest has exploited these terms for anticompetitive purposes. Consequently the Commission finds insufficient reason to adopt additional safeguards to guard against Qwest abusing these terms.

Nevertheless, the Commission finds merit in Eschelon's and the Department's concerns about how Qwest's language might impinge upon retail customers' rights to remove services and block charges on their accounts. In defense of those rights, therefore, the Commission will modify Qwest's language to incorporate the Department's proposed language. With this addition, the Commission is persuaded that the new interconnection language will appropriately constrain each party for the benefit of the other, and for the benefit of Eschelon's customers.

#### **Topic 23: What terms should govern Qwest's duty to combine loops and transports at Eschelon's request? (ICA Section 9.23.4)**

##### **A. The Issue**

Providing UNEs to CLECs typically requires Qwest personnel to make adjustments to cables and computers within Qwest's central offices, often including the computer that the CLEC has installed (co-located) there. When a CLEC purchases the use of multiple elements, often Qwest personnel must combine them on behalf of the CLEC.<sup>36</sup> The parties disagree about the precise terms under which certain combinations will occur.

In particular, the parties disagreed about language concerning "enhanced extended loops." A loop refers to the circuit connecting a customer's premises to the ILEC's computers in its central office. CLECs competing with Qwest typically do not have computers in each of Qwest's central offices. In order to use Qwest's plant to serve a customer connected to a remote central office, therefore, a CLEC needs to use not only the loop but also a circuit connecting the customer's central office to the central office containing the CLEC's computer (or cable connecting to the CLEC's computer). This combination of a loop and a circuit dedicated to transporting a signal between central offices (dedicated interoffice transport) has come to be known as an enhanced extended loop (EEL).

EELs come in many varieties, including EELs incorporating standard voice circuits, EELs incorporating high-capacity circuits, and EELs incorporating elements that do not qualify as UNEs.

Eschelon proposed agreement language seeking to address all of these types of EELs collectively as "Loop-Transport Combinations." The Department and Qwest object to Eschelon's language in part because it obscures the difference between EELs that consist entirely of UNEs and "commingled EELs" – that is, EELs involving both UNE and non-UNE elements. Eschelon's

---

<sup>36</sup> See, for example, 47 U.S.C. § 251(c)(3); 47 C.F.R. § 51.315.

language stated that it would not apply to combinations that contained no UNEs, it did not specify how to treat combinations that contained both UNE and non-UNE elements.

On the other hand, Eschelon objects that Qwest's proposed language provides too much specificity. That is, Qwest's language stated that the non-UNE portion of any loop-transport combination would be governed by tariff. Eschelon argues that the non-UNE portion of the combination might be governed by terms other than those in Qwest's tariffs; for example, they could be governed by a commercial agreement.

### **B. The Arbitrators' Recommendation**

Given the ambiguity created by Eschelon's proposed language, the arbitrators recommend adopting Qwest's proposed language. In its exceptions, Eschelon renewed its objections to that language.

At the Commission hearing, however, Eschelon and Qwest acknowledged that they had already agreed to language at proposed Section 24.1.2.1 that appeared to address all of their concerns. It reads as follows:

The UNE component(s) of any Commingled arrangement is governed by the applicable terms of this Agreement. The other component(s) of any Commingled arrangement is governed by the terms of the alternative service arrangement, pursuant to which the component is offered (e.g., Qwest's applicable Tariffs, price list, catalogs, or commercial agreements).

They jointly ask the Commission to adopt this language in lieu of their initial positions and the arbitrators' recommendation. The Department supports this resolution as well.

### **C. Applicable Law**

While the Commission has broad discretion to rule on arbitrated terms, the Commission is compelled to approve negotiated terms unless they discriminate against telecommunications carriers who are not party to the agreement, or unless they are inconsistent with the public interest, convenience and necessity.<sup>37</sup>

### **D. Commission Decision**

While there may be merit in the arbitrators' recommendation, the fact that Eschelon and Qwest have reached agreement about this issue reduces the scope of the Commission's analysis. No

---

<sup>37</sup> 47 U.S.C. § 252(e)(2); see *In the Matter of the Petition of AT&T Communications of the Midwest, Inc. for Arbitration of an Interconnection Agreement with Qwest Corporation Pursuant to 47 U.S.C. § 252(b)*, Docket No. P-442, 421/IC-03-759, ORDER RESOLVING ARBITRATION ISSUES AND REQUIRING FILED INTERCONNECTION AGREEMENT (November 18, 2003) at 7.

party has alleged that the proposed language would discriminate against any other party, or that it conflicts with the public interest, convenience and necessity. Finding no such defects, the Commission will approve the language agreed to by the parties, and decline the arbitrators' recommendation on this topic.

**Topic 27: Under what circumstances should Qwest acknowledge to Eschelon's customer that a service quality problem resulted from Qwest's error? (ICA Section 12.1.4.1)**

**A. The Issue**

When Qwest's errors in processing a service request harmed an Eschelon customer, the Commission directed Qwest in the *MN 616 Case*<sup>38</sup> to acknowledge its responsibility in order to avoid anticompetitive effects to Eschelon. Now Eschelon and Qwest each propose language to articulate Qwest's duty to acknowledge mistakes, but the parties disagree about the extent of this duty.

In particular, Eschelon proposes that Qwest has a duty to acknowledge when it has made a mistake "relating to products and services provided under this Agreement." In contrast, Qwest proposes to acknowledge mistakes only if they arose from processing a local or access service request. Qwest's language would not require Qwest to acknowledge mistakes that harmed a customer's service after the initial request had been completed – for example, mistakes arising during a subsequent repair.

**B. The Arbitrators' Recommendation**

Finding various aspects of Qwest's proposed language to be inconsistent with the compliance filings Qwest made in the *MN 616 Case*, the arbitrators generally recommend adoption of Eschelon's language. However, the arbitrators share Qwest's view that Eschelon's language would expand the range of mistakes Qwest would be required to acknowledge beyond the scope of the *MN 616 Case* Orders. The arbitrators do not regard this expansion as contrary to the public interest, but merely wish to bring this fact to the Commission's attention in case the Commission would prefer to limit the scope of this provision to "mistake[s] in processing wholesale orders."

Qwest asks the Commission to adopt this more limited language in the interest of simplicity. Qwest questions the need for this ICA language at all. Given that Eschelon has never actually called upon Qwest to acknowledge any errors since the *MN 616 Case*, Qwest finds no basis for expanding its obligations to acknowledge errors.

---

<sup>38</sup> *In the Matter of a Request by Eschelon Telecom for an Investigation Regarding Customer Conversion by Qwest and Regulatory Procedures*, Docket No. P421/C-03-616, ORDER FINDING SERVICE INADEQUATE AND REQUIRING COMPLIANCE FILING (July 30, 2003); ORDER FINDING COMPLIANCE FILING INADEQUATE AND REQUIRING FURTHER FILINGS (November 12, 2003); ORDER ACCEPTING COMPLIANCE FILING IN PART AND REQUIRING FURTHER FILINGS (April 1, 2004).

The Department and Eschelon dispute the suggestion that Qwest's duties to acknowledge errors were ever so limited as Qwest's language suggests. According to these parties, the Commission's purpose in issuing increasingly detailed Orders in the *MN 616 Case* was broadly remedial. Moreover, regardless of the scope of the Orders that arose within the specific context of the *MN 616 Case*, the Department and Eschelon can find no policy reason why the Commission would want to guard against anticompetitive consequences of certain mistakes but not others.

Nevertheless, neither the Department nor Eschelon would object to the arbitrators' "mistake[s] in processing wholesale orders" language provided Qwest would interpret this language as broadly as they do. To that end, Eschelon proposes adopting the arbitrators' language but adding some elaboration as to what this language entails, as follows:

12.1.4.1 CLEC may make a written request to its Qwest Service Manager for root cause analysis and/or acknowledgment of mistake(s) in processing wholesale orders, including pre-ordering, ordering, provisioning, maintenance and repair, and billing. The written request should include the following information, when applicable and available: Purchase Order Number (PON), Service Order Number, billing telephone number, a description of the End User Customer impact and the ticket number associated with the repair of the impacting condition. It is expected that CLEC has followed usual procedures to correct a service impacting condition before beginning the process of requesting Qwest acknowledgment of error.

(Emphasis added.)

### C. Applicable Law

The Legislature directs the Commission to exercise its authority in a manner to promote certain goals, including encouraging fair and reasonable competition for local exchange telephone service, and guarding against unfair competition and other practices harmful to promoting fair and reasonable competition.<sup>39</sup>

Before ever hearing the *MN 616 Case*, the Commission had discussed the possible anticompetitive consequences of lapses in the quality of Qwest's wholesale services:

[To compete, a CLEC] must persuade customers to change their service provider. One aspect of that persuasion is building a public reputation that inspires confidence among potential customers. At this early stage of competition, however, a CLEC's reputation is quite fragile. [M]ost customers have had little experience with CLECs in general, let alone any specific CLEC in particular. A

---

<sup>39</sup> Minn. Stat. §§ 237.011; 237.16, subd. 8(7).

missed installation or a blocked line may create the critical first impression that a customer has of a new provider. According to the [CLECs], that often becomes the last impression as well.<sup>40</sup>

The *MN 616 Case* merely provided the Commission with another opportunity to emphasize the point.

Providing adequate wholesale service includes taking responsibility when the wholesale producer's actions harm [retail] customers who could reasonably conclude that a competing carrier was at fault. Without this kind of accountability and transparency, retail competition cannot thrive. Telecommunications service is an essential service, and few customers will transfer their service to a competitive carrier whose service quality appears to be inferior.<sup>41</sup>

#### **D. Commission Decision**

The Commission's concern for the anticompetitive consequences of service quality lapses has never been as narrow as Qwest's language would suggest. The Commission finds it reasonable for Qwest to acknowledge mistakes at any point in processing wholesale orders, including mistakes arising during pre-ordering, ordering, provisioning, maintenance and repair, and billing. In the interest of clarity, the Commission will adopt the arbitrators' language as modified by Eschelon.

**Topic 29: How much should Eschelon have to pay to expedite an order on behalf of its customer? (ICA Sections 7.3.5.2, 9.1.12.1)**

#### **A. The Issue**

The interconnection agreement sets forth cost-based prices for UNEs. Qwest has established a schedule for providing certain UNEs for both its own retail operations and for CLECs.<sup>42</sup> Qwest used to expedite its installations upon request but, Qwest alleges, CLECs abused this practice.

Even now, under certain circumstances Qwest will expedite the provision of traditional voice-grade local phone service ("plain old telephone service" or POTS) for both its own retail

---

<sup>40</sup> *In the Matter of Qwest's Wholesale Service Quality Standards*, Docket No. P-421/AM-00-849, ORDER ADOPTING WHOLESALE SERVICE QUALITY STANDARDS (July 3, 2003) at 19, reversed in part on other grounds, 702 N.W. 2d 246 (Minn 2005).

<sup>41</sup> MN 616 Case, ORDER FINDING SERVICE INADEQUATE AND REQUIRING COMPLIANCE FILING at 8.

<sup>42</sup> See Qwest's Service Interval Guide (SIG), Exhibit C or Individual Case Basis (ICB) Due Dates as applicable.

operations and for CLECs at no additional cost. But Qwest now demands \$200 per day to expedite the provision of “design” services, whether for its own customers or for CLECs. Is this an appropriate price?

### **B. The Arbitrators' Recommendation**

The arbitrators conclude that Qwest is prohibited from discriminating in the provision of expedited services, and thus the price Qwest charges to expedite a service should reflect Qwest's costs. However, the record is inadequate to establish what the cost is. Consequently the arbitrators recommend initiating a new docket to establish the total element long-run incremental cost of expediting orders. In the meantime, the arbitrators recommend limiting the price of expediting an order to \$100.

Eschelon supports this proposal, as well as the \$100 interim rate. Eschelon notes that this rate would be paid in addition to the cost of the underlying UNE, and actually exceeds the cost of the typical UNE. The cost of a DS1 local loop, for example, is only \$88.57. Eschelon reasons that, whatever the cost of expediting an installation, it probably won't be twice the cost of a standard installation.

Qwest opposes the arbitrators' recommendation. Qwest cites decisions by other state commissions for the proposition that ILECs have no obligation to provide expedited service, other industries charge a premium to provide expedited services, a \$200 premium to expedite an order simply reflects the value of service, and the Commission lacks the authority to require Qwest to offer expedited services on a non-discriminatory basis at cost-based rates. According to Qwest, a request to expedite the installation of a UNE is a “superior service” which an ILEC need not offer, and need not offer at cost.

Without conceding its obligation to do so, Qwest argues that it refrains from discriminating in the provision of expedited services to CLECs. Qwest notes that it offers to expedite orders for CLECs on the same terms that it expedites orders for its own retail customers.

Finally, Qwest argues that if it were required to provide expedites at a minor charge, then CLECs would have an incentive to submit more – or all – of their orders with requests to expedite. Qwest anticipates that this would burden its resources, cause Qwest to incur penalties for missing standard provisioning intervals, and cause Qwest to violate its obligation to provide nondiscriminatory access to UNEs.

### **C. Applicable Law**

Federal and state law prohibit Qwest from engaging in unreasonable discrimination.<sup>43</sup> The 1996 Act's § 251(c)(3) requires an ILEC to offer CLECs “nondiscriminatory access to network

---

<sup>43</sup> 47 U.S.C. §§ 160(a)(1); 202(a); 222(c)(3); 224; 251; 252; 254; 271(b); 272©; 276(a); 47 C.F.R. §§ 51.307, 51.311, 51.313; Minn. Stat. §§ 237.07, subd. 2; 237.081, subd. 4; 237.09, subd. 1; 237.121(a)(5); 237.14; 237.60, subd. 3.

elements on an unbundled basis ... on rates, terms, and conditions that are just, reasonable, and nondiscriminatory....” The FCC construes this language to mean that –

Where applicable, the terms and conditions pursuant to which an incumbent LEC offers to provide access to unbundled network elements, *including but not limited to, the time within which the incumbent LEC provisions such access to unbundled network elements*, shall, at a minimum, be no less favorable to the requesting carrier than the terms and conditions under which the incumbent LEC provides such elements to itself.<sup>44</sup>

(Emphasis added.) Similarly, Minnesota law states:

To the extent prohibited by the Federal Communications Commission or public utilities commission, a telephone company shall not give preference or discriminate in providing services, products, or facilities to an affiliate or to *its own* or an affiliate's *retail department* that sells to consumers.<sup>45</sup>

(Emphasis added).

But a LEC's obligation to provide UNEs for the benefit of CLECs is not open-ended. The 8<sup>th</sup> Circuit Court of Appeals has stated that “subsection 251(c)(3) implicitly requires unbundled access only to an incumbent LEC's *existing* network – not to a yet unbuilt superior one.”<sup>46</sup> On remand from that decision, the FCC stated that “we do not require incumbent LECs to construct new transport facilities to meet specific competitive LEC point-to-point demand requirements for facilities that the incumbent LEC has not deployed for its own use.”<sup>47</sup>

#### **D. Commission Decision**

Qwest raises both legal and practical challenges to implementing the arbitrators' recommendations.

Whatever the merits of the claim that ILECs have no obligation to provide expedited service, or that other industries charge a premium to provide expedited services, or that \$200 simply reflects the value of expediting an order, these claims are not at issue here. With respect to the claim that the Commission lacks authority to require Qwest to offer expedited services on a non-discriminatory basis at cost-based rates, the Commission is not convinced.

---

<sup>44</sup> 47 C.F.R. § 51.311.

<sup>45</sup> Minn. Stat. § 237.09, subd. 2(a).

<sup>46</sup> *Iowa Utils. Bd. v. FCC*, 120 F.3d 753, 813 (8<sup>th</sup> Cir. 1997) (emphasis in original).

<sup>47</sup> *In the Matter of Implementation of the Local Competition Provisions of the Telecommunications Act of 1996*, Third Report and Order and Fourth Further Notice of Proposed Rulemaking, CC Docket No. 96-98, 15 FCC Rcd 3696 (November 5, 1999) at ¶ 324.

Whether Qwest has an obligation to offer expedited access to UNEs or merely chooses to offer it, it is undisputed that Qwest does offer expedited access to its own retail operations. And if Qwest offers expedited access to UNEs for its own retail operations, Qwest has a duty to provide such access on a nondiscriminatory basis to CLECs as well.

Qwest argues that it refrains from discriminating in the provision of expedited access to CLECs. In support of this argument, Qwest invites the Commission to compare the price Qwest charges CLECs at *wholesale* to the \$200 retail price it charges its own customers at *retail*. But the law bars Qwest from discriminating in the wholesale market specifically – that is, from imposing different terms and conditions for expedited service on different telecommunications carriers,<sup>48</sup> including itself.<sup>49</sup> Qwest must provide UNEs to CLECs on the same terms and conditions that it provides them to its own retail operations,<sup>50</sup> regardless of what it charges its retail customers. And the cost Qwest bears to provide expedited access to UNEs for its retail customers is simply the cost of expediting the service. This is also the cost that CLECs should bear to expedite access for their customers.

In arguing that expediting a UNE is a “superior service” which Qwest is not obligated to provide – and certainly is not obligated to provide at cost – Qwest misapplies a term of art. As noted above, the 8<sup>th</sup> Circuit and the FCC concluded that the 1996 Act does not provide a basis for the FCC to require ILECs to offer “superior” service – that is, to build facilities for CLECs if the ILEC would not build comparable facilities for itself. In contrast to those circumstances, Qwest not only provides expedited service for itself, Qwest offers the service to others on its tariff. The concerns articulated by the 8<sup>th</sup> Circuit and the FCC regarding “superior service” have no relevance to this issue.

Based on the arguments of the arbitrators and Eschelon, the Commission finds no legal prohibition on directing Qwest to provide expedited services at cost-based rates. To the contrary, the Commission finds that it is compelled to do so.

However, while the Commission is not persuaded by Qwest’s legal objections, the Commission acknowledges the practical challenges Qwest identifies. Qwest speculates about the burdens it would bear if the Commission were to establish “a minor charge” that resulted in a glut of requests to expedite. Admittedly, establishing costs can be challenging; the cost Qwest bears to expedite an order may vary depending on the number of expedite requests Qwest receives, and the number of requests Qwest receives may vary with the cost to expedite an order. Fortunately, the arbitrators’ and Eschelon’s recommendations are designed to address these very concerns: a cost docket will provide Qwest with the forum it needs to demonstrate the burdens that expedited orders impose on Qwest’s operations. With an adequate record, the Commission will be able to establish a charge that permits Qwest to recover its costs, whether they be major or minor.

---

<sup>48</sup> See, for example, 47 C.F.R. §§ 51.311(a), 51.313(a) (requiring equal treatment among “telecommunications carriers”). Both Eschelon and Qwest are telecommunications carriers. 47 C.F.R. §§ 51.5.

<sup>49</sup> See, for example, 47 C.F.R. §§ 51.311(b), 51.313(b) (requiring each ILEC to provide CLECs with access to UNEs at least equal to the access it provides to “itself”).

<sup>50</sup> Minn. Stat. § 237.09, subd. 2(a).

That said, the Commission will decline the arbitrators' recommendation to initiate a new docket to establish the appropriate rate. Rather, in the interest of administrative efficiency the Commission will refer this matter to a proceeding already underway, Docket No. P-421/AM-06-713 *In the Matter of Qwest's Application for Commission Review of TELRIC Rates Pursuant to 47 U.S.C. § 251*. In the meantime, the Commission will adopt the interim rate recommended by the arbitrators and Eschelon.

**Topic 31: How should the parties allocate fault for a missed order for purposes of characterizing an order as "Customer Not Ready"? (ICA Section 12.2.7.2.4.4)**

**A. The Issue**

While Qwest confirms the dates upon which it plans to fulfill wholesale orders from each CLEC, occasionally an installation order cannot be completed on time. If Qwest accepts responsibility for having missed the deadline, Qwest may incur financial penalties for failure to meet performance indicator definitions (PIDs); PIDs are terms that are common to many ICAs.<sup>51</sup> On the other hand, if Qwest concludes that the responsibility for the failure lies with the CLEC or its customer ("Customer Not Ready"), Qwest avoids the risk of financial penalties. In addition, the order is re-scheduled with at least a three-day delay.<sup>52</sup>

This issue pertains to assigning fault when 1) Qwest issues a "jeopardy notice," informing Eschelon that it might not be able to perform the work as scheduled, 2) Qwest then provides Eschelon with less than a day's notice that Qwest will be able to perform the work as originally scheduled, and 3) the order cannot be completed because Eschelon or its customer are unprepared to work with Qwest.

Qwest acknowledges that it has a duty to give notice (called a firm order confirmation, or FOC) when scheduling an order due date, and when re-confirming an order that had previously been placed in jeopardy. Qwest acknowledges that the purpose of issuing a FOC on previously "jeopardized" orders is to enable a CLEC to make the appropriate arrangements to cooperate with Qwest in filling the order. And Qwest acknowledges that it has a duty to accurately differentiate between delays caused by Qwest and delays caused by a CLEC or its customers.

Eschelon objects to its customers enduring three-day delays due to circumstances beyond Eschelon's and the customer's control. Eschelon proposes language designed to characterize missed orders as Qwest's fault if Qwest fails to give a day's notice of its intention to complete a previously jeopardized order on time:

12.2.7.2.4.4 A jeopardy caused by Qwest will be classified as a Qwest jeopardy, and a jeopardy caused by CLEC will be classified as Customer Not Ready (CNR).

---

<sup>51</sup> See Exhibit B; Exhibit K, Appendices A and B.

<sup>52</sup> Proposed ICA § 9.2.4.4.1.

12.2.7.2.4.4.1 There are several types of jeopardies. Two of these types are: (1) CLEC or CLEC End User Customer is not ready or service order is not accepted by the CLEC (when Qwest has tested the service to meet all testing requirements.); and (2) End User Customer access was not provided. For these two types of jeopardies, Qwest will not characterize a jeopardy as CNR or send a CNR jeopardy to CLEC if a Qwest jeopardy exists, Qwest attempts to deliver the service, and Qwest has not sent an FOC notice to CLEC after the Qwest jeopardy occurs but at least a day before Qwest attempts to deliver the service. CLEC will nonetheless use its best efforts to accept the service. If needed, the Parties will attempt to set a new appointment time on the same day and, if unable to do so, Qwest will issue a Qwest Jeopardy notice and a FOC with a new Due Date.

12.2.7.2.4.4.2 If CLEC establishes to Qwest that a jeopardy was not caused by CLEC, Qwest will correct the erroneous CNR classification and treat the jeopardy as a Qwest jeopardy.

Qwest offers many objections to Eschelon's language. According to Qwest, the problem triggering Eschelon's concerns is too rare to warrant the procedures Eschelon proposes. Also, Qwest argues that Eschelon's language could have the effect of delaying service to Eschelon's customers.

Instead of adopting Eschelon's language, Qwest recommends that the Commission leave this matter be governed by the procedures Qwest provides at its wholesale site on the World Wide Web. To the extent that changes are warranted in Qwest's procedures for fulfilling wholesale orders, Qwest recommends that the Commission direct Eschelon to use the change management process in the parties' agreement; this process would provide a mechanism for balancing Eschelon's interests with the interests of other CLECs as well.

## **B. The Arbitrators' Recommendation**

The arbitrators recommend declining Eschelon's proposed language, leaving this matter to be governed by the terms of Qwest's website. Noting that Qwest has already committed to providing Eschelon with FOC notices before attempting to complete previously jeopardized orders, the arbitrators conclude that no additional language is necessary to provide Eschelon with adequate notice, and that the main goal of Eschelon's language must be to influence how the PID language is interpreted. The arbitrators reason that this is a matter that should be addressed outside the context of a single CLEC's interconnection agreement. Qwest supports this position.

Eschelon argues that the arbitrators misapprehended the point of Eschelon's concerns, and therefore its proposed language.

According to Eschelon, Qwest acknowledges that it would be unreasonable to blame Eschelon if an installation date is missed because Qwest neglected to give timely notice of the new date. But Eschelon argues that this acknowledgment is meaningless unless the parties agree what "timely" notice entails. Eschelon states that its language is designed to resolve this question, and establish the consequences for the failure to give timely notice. With the exception of establishing the one-day-notice policy, Eschelon alleges that its language merely reflects practices that Qwest professes to use today.

Moreover, whatever the merits of Qwest's current practices and website language, Eschelon states that these practices and terms are subject to change without Commission approval unless they are embedded in a Commission-approved interconnection agreement.

Finally, Eschelon denies the arbitrators' assertion that the main goal of Eschelon's assertion was to somehow modify the PIDs. To clarify this point, Eschelon offers the following amendment to its proposed language:

Nothing in this Section 12.2.7.2.4.4 modifies the Performance Indicator Definitions (PIDs) set forth in Exhibit B and Appendices A and B to Exhibit K of this Agreement.

### **C. Applicable Law**

The 1996 Act's § 251(c)(3) requires each ILEC to offer CLECs "nondiscriminatory access to network elements on an unbundled basis ... on rates, terms, and conditions that are just, reasonable, and nondiscriminatory...."

### **D. Commission Decision**

The Commission finds merit in Eschelon's concerns, and consequently in the language Eschelon proposes to address those concerns. Simply put, Eschelon should not be held responsible when it relies on Qwest's statement that Qwest will not be able to meet a deadline.

The Commission realizes that circumstances change and not every deadline will be met; the Commission also realizes that circumstances change and some previously unmeetable deadlines can in fact be met. The Commission cannot know when these circumstances will reflect some fault on the part of Qwest and when they simply reflect the challenges of managing a complex telecommunications system; for this reason the PIDs do not prescribe penalties for every instance of missing a deadline, but merely for cumulative instances. But where Eschelon had no role in causing Qwest to issue an initial jeopardy notice, and had no role in delaying Qwest's issuance of a subsequent FOC until less than a day before the deadline, the Commission cannot find the merit in holding Eschelon responsible when the deadline is missed.

Nothing in Eschelon's language requires Qwest to delay filling an order. To the contrary, Eschelon's language calls upon each party to use their best efforts to meet deadlines with or without a timely FOC. Eschelon's language merely specifies the consequences for failing to offer a timely FOC – specifically, Eschelon would not be held responsible for any failure to meet the installation deadline, and the new deadline need not be delayed a minimum of three days.

Nor does the Commission read Eschelon's language to alter the PIDs. Given the apparent confusion on that point, however, the Commission will approve Eschelon's language together with Eschelon's statement clarifying that this new language does not modify the PIDs.

The Commission will so order.

## ORDER

1. The Commission decides the arbitrated issues as discussed in the body of this Order. Except as otherwise specified, the Commission adopts the findings, conclusions and recommendations of the Arbitrators' Report. In particular, the Commission adopts the following recommendations:
  - A. *Topic 21:* Regarding the terms under which Qwest converts from providing a network element that is deemed a UNE to providing the same element when it is no longer deemed a UNE, the Commission adopts the arbitrators' recommendation and hereby initiates an investigation *In the Matter of Qwest Corporation's Conversion of UNEs to Non-UNEs*, Docket No. P-999/CI-07-730. This investigation shall establish appropriate terms for Qwest to convert UNEs to non-UNEs, including a determination of whether the charge for providing this service must be limited to Qwest's total element long run incremental cost.
  - B. *Topic 25:* Regarding Qwest's procedures for providing CLECs with commingled EELs, the Commission adopts the arbitrators' recommendation and hereby initiates an investigation *In the Matter of Qwest Corporation's Arrangements for Commingled Elements*, Docket No. P-999/CI-07-731, for the purpose of determining appropriate procedures.

The Commission's decisions differ from the arbitrators' recommendations, however, with respect to the following topics.

2. *Topic 4:* Regarding Qwest's discretion to discontinue processing Eschelon's orders if Eschelon fails to make timely payments, the parties shall adopt Qwest's proposed language as amended to incorporate the following:

*5.4.2 . . . . Qwest may only discontinue order processing (as defined below) to CLEC under the following conditions:*

- 1) if payment for services rendered in Minnesota are more than 30 days past due; and*
- 2) if such payment does not include amounts disputed under section 21.8;*  
*and*
- 3) if Qwest has given CLEC and the Commission ten (10) business days prior written notice.*

*The term "order processing" does not include orders or requests by CLEC to drop or remove a feature or service for a given end user or end user account, and also does not include orders or requests by CLEC to add any blocking capabilities to an end user account. Qwest may not discontinue processing the removal of features or services, or the addition of blocking capabilities, under any circumstances.*

*Nothing in this section precludes CLEC from using any dispute resolution procedures to contest Qwest's discontinuation of order processing, if CLEC believes Qwest has not met all three conditions listed above, or for any other reason.*

3. *Topic 23: Regarding the terms under which Qwest combines loops and transport at Eschelon's request, the parties shall adopt the following language:*

*9.23.4 The UNE component(s) of any Commingled arrangement is governed by the applicable terms of this Agreement. The other component(s) of any Commingled arrangement is governed by the terms of the alternative service arrangement, pursuant to which the component is offered (e.g., Qwest's applicable Tariffs, price list, catalogs, or commercial agreements).*

4. *Topic 27: Regarding Qwest's duty to acknowledge to Eschelon's customer that a service quality problem resulted from Qwest's error, the parties shall adopt the following language:*

*12.1.4.1 CLEC may make a written request to its Qwest Service Manager for root cause analysis and/or acknowledgment of mistake(s) in processing wholesale orders, including pre-ordering, ordering, provisioning, maintenance and repair, and billing. The written request should include the following information, when applicable and available: Purchase Order Number (PON), Service Order Number, billing telephone number, a description of the End User Customer impact and the ticket number associated with the repair of the impacting condition. It is expected that CLEC has followed usual procedures to correct a service impacting condition before beginning the process of requesting Qwest acknowledgment of error.*

5. *Topic 29: The task of developing a record for determining Qwest's total element long-run incremental cost to expedite an order is referred to Docket No. P-421/AM-06-713 In the Matter of Qwest's Application for Commission Review of TELRIC Rates Pursuant to 47 U.S.C. § 251, now pending before the Office of Administrative Hearings. On an interim basis, Qwest may charge Eschelon up to \$100 to expedite an order on behalf of an Eschelon customer.*

6. *Topic 31: In identifying the party at fault when a retail customer's order is missed, the parties shall adopt the following language:*

*12.2.7.2.4.4 A jeopardy caused by Qwest will be classified as a Qwest jeopardy, and a jeopardy caused by CLEC will be classified as Customer Not Ready (CNR). Nothing in this Section 12.2.7.2.4.4 modifies the Performance Indicator Definitions (PIDs) set forth in Exhibit B and Appendices A and B to Exhibit K of this Agreement.*

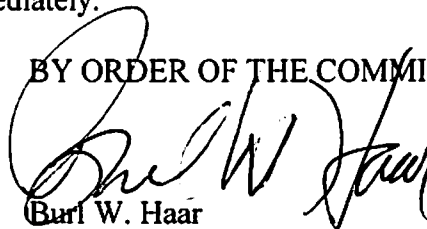

*12.2.7.2.4.4.1 There are several types of jeopardies. Two of these types are: (1) CLEC or CLEC End User Customer is not ready or service order is not accepted by the CLEC (when Qwest has tested the service to meet all testing requirements.); and (2) End User Customer access was not provided. For these two types of jeopardies, Qwest will not characterize a jeopardy as CNR or send a CNR jeopardy to CLEC if a Qwest jeopardy exists, Qwest attempts to deliver the service, and Qwest has not sent an FOC notice to CLEC after the Qwest jeopardy occurs*

*but at least a day before Qwest attempts to deliver the service. CLEC will nonetheless use its best efforts to accept the service. If needed, the Parties will attempt to set a new appointment time on the same day and, if unable to do so, Qwest will issue a Qwest Jeopardy notice and a FOC with a new Due Date.*

*12.2.7.2.4.4.2 If CLEC establishes to Qwest that a jeopardy was not caused by CLEC, Qwest will correct the erroneous CNR classification and treat the jeopardy as a Qwest jeopardy.*

7. The parties shall submit a final ICA containing all arbitrated and negotiated terms to the Commission for review pursuant to 47 U.S.C. § 252(e) within 120 days of this Order. If the Commission does not issue a final order in the *Wire Center Docket*<sup>53</sup> in the next 100 days, parties may petition to extend this deadline. The Commission delegates to its Executive Secretary the authority to grant such extensions.
8. This Order shall become effective immediately.

BY ORDER OF THE COMMISSION

Burl W. Haar  
Executive Secretary

EXHIBIT 33

**EXECUTIVE SUMMARY**  
**ESCHELON TELECOM OF ARIZONA, INC. FORMAL COMPLAINT**  
**AGAINST QWEST CORPORATION**  
**DOCKET NOS. T-01051BA-06-0257 AND T-03406A-06-0257**

Eschelon Telecom of Arizona, Inc. ("Eschelon"), a Competitive Local Exchange Carrier ("CLEC") authorized to provide facilities-based local telecommunications service in Arizona, filed a Complaint against Qwest Corporation ("Qwest"), an Incumbent Local Exchange Carrier ("ILEC"), on April 14, 2006 with the Arizona Corporation Commission ("ACC" or "Commission"). The Complaint addresses the alleged refusal by Qwest to provide repairs for disconnects in error and Qwest's alleged refusal to expedite orders for unbundled loops without Eschelon signing an amendment to the Qwest – Eschelon Interconnection Agreement imposing a \$200 per day expedite fee. This particular Complaint involves a disconnect-in-error for a DS1 loop serving a rehabilitation center in Arizona.

Staff's analysis indicates that the Commission approved Eschelon's opt-in to the AT&T Interconnection Agreement on April 28, 2000. Expedite Procedures were already in place at the time. The Expedite Process is a procedure that is followed when a CLEC requests an earlier due date than the standard interval from Qwest for the installation of wholesale products and services to meet customer service needs. The Qwest – Eschelon interconnection Agreement indicates that Qwest shall provide Eschelon the capability to expedite a service order. The Agreement also allows Qwest the ability to charge a fee for the Expedite. The Change Management Process ("CMP") is a significant factor in Staff's analysis of the Complaint because the CMP provides a means to address changes to the processes and procedures contained in Qwest's Product Catalog ("PCAT"). The processes and procedures are necessary to enable CLECs to obtain pre-ordering, ordering, provisioning, billing, maintenance and repair services from Qwest. The CMP indicates that the rates, terms, and conditions set forth in any CLEC Interconnection Agreement between the CLEC and Qwest shall prevail when there is a conflict with the changes implemented through CMP and the provisions of the Interconnection Agreement.

Staff concludes that:

- (1) Qwest did not adhere to the terms and conditions of the current Qwest – Eschelon Interconnection Agreement, which allows Eschelon the capability to expedite orders, when Qwest denied this option without Eschelon signing an amendment to the Agreement. Qwest should continue to support the same Expedite Process that has been used in the past for all products and services (including unbundled loops) if the order meets any of the Emergency criteria or conditions or where the customer's safety may be an issue if the Expedite is not processed. No additional charge should be applied beyond the standard installation charge.
- (2) Qwest should continue with the enhancement to the Expedites & Escalations Overview Process, as originally requested by Covad, offering an option to CLECs to expedite orders when the situation does not meet the emergency criteria or conditions. This option should be offered to all

CLECs via an amendment to the CLEC's current Interconnection Agreement and may involve a charge when the option is utilized by the CLEC.

- (3) The Qwest – Eschelon Interconnection Agreement does allow Qwest the ability to impose a fee on Eschelon for expediting orders. Until recently, common practice has been that Qwest has chosen not to charge an additional expedite fee for all products/services that met certain emergency conditions/criteria. Qwest should reimburse the additional \$1800 plus interest (if applicable) that was charged to Eschelon in this particular Complaint.
- (4) Due to the nature of this particular Complaint which stemmed from an Eschelon caused error in disconnection of an incorrect number, Eschelon should implement a training or refresher training program for its representatives stressing the importance of accuracy when ordering changes to their customer's service in order to try to avoid or minimize unnecessary customer service outages.
- (5) Qwest should include a definition of designed and non-designed services in its Arizona tariffs.
- (6) Qwest and the CLECs should include expedites of the installation of Unbundled Loops in their Interconnection Agreement negotiations.
- (7) Staff recommends that a performance measurement for expedites of Unbundled Loops be developed through CMP and that the rate(s) for expedites be considered as part of the next cost docket.

**Re: Qwest Cost Studies**

This response addresses Eschelon's request for additional cost studies beyond those Qwest has already produced. Qwest has already provided specific information as to why particular studies are not being produced. Despite these responses, Eschelon continues to belabor the issue and contend that Qwest is acting in bad faith. Eschelon, however, has provided no legal support for its contentions. In regard to Qwest's "duty" to provide cost studies for rates that have already been reviewed, and approved, by a state commission, Eschelon's position actually runs counter to approaches taken by numerous state commissions. By way of example:

- In a California arbitration, AT&T contended that a rate approved by the CA PUC in a generic cost proceeding was no longer TELRIC-compliant and therefore should be reevaluated in the arbitration. The CA PUC disagreed noting that it had established a process to address updating of rates via a generic cost docket, and that AT&T's position attempts to circumvent this process by seeking to update the rates in the context of an arbitration. The CA PUC said it preferred to "address the need to update cost studies in our generic proceeding where all interested parties can be represented, and not in the context of an arbitration between only two parties." Application by AT&T Communications of California, Inc., et al, (U 5002 C) for Arbitration of an Interconnection Agreement with Pacific Bell Telephone Company (U 1001 C) Pursuant to Section 252(b) of the Telecommunications Act of 1996, 2000 Cal. PUC LEXIS 564, 45-46 (Cal. PUC 2000)
- In Michigan, a CLEC attempted to re-litigate rates that the Commission established in a generic cost proceeding. The Arbitration Panel noted that an "a two-party arbitration is not an appropriate forum for setting rates that will affect all competitive local exchange carriers." The Panel found that the CLEC should abide by the rates set in the generic cost docket. In The Matter of Petition of Buytel Communications, Inc. For Arbitration Pursuant to Section 252(b) to Resolve Open Issues for an Interconnection Agreement with Ameritech Indiana, 2002 Ind. PUC LEXIS 277, 13-15 (Ind. PUC 2002)(citing Michigan proceeding).
- In another Michigan proceeding, an Arbitration Panel rejected Verizon Wireless' position that the underlying cost studies must be made a part of the record in the arbitration proceeding. The panel determined that the Commission may properly take official notice of cost studies that it has previously approved in a separate docket. In the matter of the petition of ACE TELEPHONE COMPANY, BARRY COUNTY TELEPHONE COMPANY, DEERFIELD FARMERS' TELEPHONE COMPANY, KALEVA TELEPHONE COMPANY, LENNON TELEPHONE COMPANY, OGDEN TELEPHONE COMPANY, PIGEON TELEPHONE COMPANY, the UPPER PENNINSULA TELEPHONE COMPANY, and WALDRON TELEPHONE COMPANY, for the arbitration of interconnection rates, terms, and conditions and related arrangements with VERIZON WIRELESS, pursuant to Section 252(b) of the federal Telecommunications Act of 1996; In the matter, on the Commission's own motion, to examine the total service long run incremental costs of the

MICHIGAN EXCHANGE CARRIERS ASSOCIATION COMPANIES, including ACE TELEPHONE COMPANY, BARRY COUNTY TELEPHONE COMPANY, DEERFIELD FARMERS' TELEPHONE COMPANY, KALEVA TELEPHONE COMPANY, LENNON TELEPHONE COMPANY, OGDEN TELEPHONE COMPANY, PIGEON TELEPHONE COMPANY, the UPPER PENNINSULA TELEPHONE COMPANY, and WALDRON TELEPHONE COMPANY, 2006 Mich. PSC LEXIS 51, 6-8 (Mich. PSC 2006)

- The Indiana Utilities and Regulatory Commission determined that rates “can and should” occur in a proceeding separate from the pending arbitration. The IURC made this determination even though there were no approved rates for the services in question, and that it would need to use interim proxies until rates were determined in the cost proceeding. In the Matter of Sprint Communications Company L.P.'s Petition for Arbitration of Interconnection Rates, Terms, Conditions and Related Arrangements with GTE of the North, Inc., 1997 Ind. PUC LEXIS 9, 21-22 (Ind. PUC 1997)
- In a Kansas arbitration, the KS PUC found Covad’s attempt to revisit certain approved rates an attempt to “pick and choose those rates from the UNE Generic Cost Docket that it finds acceptable and challenge those it deems excessive.” The KS PUC noted that its Orders made it abundantly clear that only if an ICA required “a special or unique arrangement” would a deviation from its approved rates be warranted. The PUC held that the “fact that an agreement is negotiated separately with each individual carrier does not make or qualify that agreement as “special or unique.” In the Matter of Complaint By Ionex Communications, Inc., Against Southwestern Bell Telephone Company For Charging Improper Rates for Unbundled Network Elements , 2000 Kan. PUC LEXIS 1133, 118-121 (Kan. PUC 2000)
- In Ohio, the PUCO found that “the best manner in which to fully examine Ameritech's TELRIC studies was to do so in a proceeding dedicated solely to those issues.” In the Matter of the Review of Ameritech Ohio's Economic Costs for Interconnection, Unbundled Network Elements, and Reciprocal Compensation for Transport and Termination of Local Telecommunications Traffic, 1998 Ohio PUC LEXIS 748 (Ohio PUC 1998)
- In Oregon, the Arbitrator noted that the “Commission has consistently chosen to base rates set in arbitrations on its own cost study docket (UM 773) and its pricing dockets (UM 351 and UM 844).” The Arbitrator also observed that the “Commission has spent years working out a methodology for costing and pricing, and the dockets named above are the result of that work.” The Arbitrator found the methodology to be established and reviewable and so he declined to revisit or reevaluate the methodology. In the Matter of the Petition of AT&T Wireless Services, Inc., for Arbitration of Interconnection Rates, Terms, and Conditions Pursuant to the Telecommunications Act of 1996., 1997 Ore. PUC LEXIS 183, 35-36 (Ore. PUC 1997)
- In Washington, the WUTC adopted a cost methodology and established for each of the two ILECs, prices or price ranges based upon that methodology and the record in its case. It noted its “expectation that those prices or price ranges will be applied in future arbitrations, and that parties will reform their contracts to adopt the Commission-approved prices.” In the Matter of the Pricing

Proceeding for Interconnection, Unbundled Elements, Transport and Termination, and Resale; In the Matter of the Pricing Proceeding for Interconnection, Unbundled Elements, Transport and Termination, and Resale for U S WEST COMMUNICATIONS, INC.; In the Matter of the Pricing Proceeding for Interconnection, Unbundled Elements, Transport and Termination, and Resale for GTE NORTHWEST INCORPORATED, 1996 Wash. UTC LEXIS 41, 4-6 (Wash. UTC 1996)

- In Washington, the WUTC granted motions for a separate proceeding to review the cost study. It entered an order that noted, "[t]he cost studies that are being proposed are voluminous and complex and are not susceptible of thorough review in the time frames, or with the resources, available for arbitration." It granted the motion and agreed to institute a proceeding that transcends individual arbitrations, in which to review the USWC cost study. In the Matter of the Pricing Proceeding for Interconnection, Unbundled Elements, Transport and Termination, and Resale; In the Matter of the Pricing Proceeding for Interconnection, Unbundled Elements, Transport and Termination, and Resale for U S WEST COMMUNICATIONS, INC.; In the Matter of the Pricing Proceeding for Interconnection, Unbundled Elements, Transport and Termination, and Resale for GTE NORTHWEST INCORPORATED, 1997 Wash. UTC LEXIS 9 (Wash. UTC 1997)

This long litany of cases reflects the state commissions' reluctance, if not outright refusal, to revisit rates they have already reviewed and approved, particularly in the context of a two party arbitration. Qwest has produced cost studies pertaining to rates that the state commission(s) has not approved. Cost studies for approved rates, however, presents a much different situation. Carriers, commission staffs, and the Commissioners themselves devoted much time and effort to review and approve these rates. As gleaned from the remarks above, state commissions are disinclined to reevaluate approved rates in a two party arbitration. Thus, there is simply no reason for Qwest to produce cost studies for already reviewed and approved rates in our negotiations. If Eschelon can demonstrate legal support for its contention that Qwest does have such a duty, Qwest would consider the issue further. Eschelon's failure, however, to provide such legal support, and then file a bad faith action, would render it the bad faith actor in this proceeding.

Subject: RE: Eschelon request for cost data

Harisha:

Your statement that Eschelon did not provide support for its position is not accurate. The cases that you cite are not on point relative to the reasons stated by Eschelon for its need for the particular cost study requested with respect to Eschelon's proposed language for the first paragraph of Section 9.2.2.9.

Eschelon had hoped that, by obtaining at least one such cost study, this issue could have been resolved. Eschelon has taken a very reasonable position, asking for a cost study for only one approved rate, and has done so not to challenge that rate but to further discussion of Eschelon's proposed language. Eschelon even reduced its request to start with just one state, in response to Qwest's comments. We are disappointed that Qwest is taking such a contentious approach to a reasonable request that, if honored, may resolve or narrow this issue.

Eschelon reserves the right to argue in arbitration that the Commission should preclude Qwest from presenting evidence based on its cost studies that it refused to provide here and rule in Eschelon's favor based on Qwest's failure to provide the requested cost data.

Qwest:

On November 14, 2005, Eschelon asked Qwest to provide Qwest's proposed Exhibit A for Arizona, Oregon, and Utah. We have not yet received those Exhibits As. Since the clock is ticking, we needed to proceed. Therefore, Eschelon went ahead and redlined Qwest's SGAT Exhibit As for Arizona, Oregon, and Utah to show Eschelon's proposals for Exhibit A for those states. Those redlines are enclosed (in an Excel document with tabs for the three states) and are OPEN for Qwest to review. To be sure we are working off the same page, please work from the enclosed Excel document when providing Qwest's reply.

Also enclosed is a Word document detailing the changes to Qwest's SGAT Exhibit A for AZ, OR, and UT. This is similar to the document that Eschelon sent to Qwest on November 15, 2005 for CO, MN, and WA.

For any rate with which Qwest disagrees in any of the states of AZ, CO, MN, OR, UT and/or WA, please provide Qwest's cost study(ies) for such rate(s).

The enclosed documents contain Eschelon's negotiation proposals based on Qwest's proposed or Commission approved rates. Eschelon reserves the right to propose different rates if the rates are litigated in arbitrations or cost cases.

In the document (entitled "ICA LANGUAGE -- CONSISTENCY WITH EXHIBIT A") that Eschelon provided to Qwest on November 8, 2005, Eschelon asked a number of questions, including requests for citations to Exhibit A. If the responses to those questions differ for AZ, OR, and/or UT, please respond as to the latter states as well, including citations to the AZ, OR, and/or UT Exhibit A provision(s).

Also enclosed is the Exhibit A matrix sent to Qwest on November 15, 2005, updated to include the information in this email.

Thanks,

**CONFIDENTIALITY AGREEMENT**  
**For**  
**MULTIPLE QWEST COST STUDIES**

This Confidentiality Agreement ("Agreement"), effective March 16, 2004, is made by and between Qwest Corporation ("Qwest"), a Colorado corporation, and its Affiliates, having its principal place of business at 1801 California Street, Suite 2410, Denver, Colorado, 80202, and Eschelon Telecom, Inc. ("Other Party"), a Delaware corporation, and its Affiliates, having its principal place of business at 730 2<sup>nd</sup> Avenue South, Minneapolis, Minnesota, 55402.

For purposes of this Agreement, "Affiliate" means any entity which, directly or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with Qwest or Other Party.

1. Qwest and Other Party are negotiating new Interconnection Agreements, including offerings for Collocation Available Inventory and Transfer of Responsibility. There are no agreements between the Parties making confidential their negotiations. To date, Other Party asked Qwest to provide cost studies for the rates set forth in Qwest's Collocation Available Inventory and Transfer of Responsibility proposals, and may, during the course of negotiations, request additional cost studies pursuant to this Agreement. This Agreement is made in order for Other Party, in the course of those otherwise non-confidential negotiations, to receive from Qwest that certain costing and business information ("Confidential Information" as defined below) related to the development of costs for Qwest's offerings for Collocation Available Inventory and Transfer of Responsibility as required by the Telecommunications Act of 1996 ("Act") and applicable regulations under terms that will protect the confidential and proprietary nature of such Confidential Information. If Other Party asks Qwest to provide additional cost studies for other rates proposed by Qwest, this Agreement will govern the confidentiality of such additional cost studies, provided that Qwest designates the information as Confidential (as provided in paragraph 2 of this Agreement).

2. As used herein, "Confidential Information" shall mean any and all proprietary or non-public costing, technical or business information, relating to the cost studies identified in paragraph 1 of this Agreement, including third party information, that is designated in writing (at the time or within twenty-four (24) hours of disclosure) as confidential and is furnished or disclosed in whatever tangible form or medium, orally, or by any other means by Qwest to Other Party including, but not limited to, product/service specifications, prototypes, computer programs, models, drawings, marketing plans, financial data, costing information, and personnel statistics. When practical, each page of written Confidential information shall contain confidential notices or legends. If not practical, Qwest may designate confidentiality in a reasonable manner such as a description of the Confidential material in a cover letter or e-mail.

3. This Agreement shall expire five (5) years from the effective date stated above. Notwithstanding the termination of this Agreement, Other Party agrees to treat such Confidential Information as confidential for a period of five (5) years from the date of receipt of same unless the Parties agree otherwise in writing. In handling the Confidential Information, Other Party agrees: (a) not to copy such Confidential Information unless specifically authorized; (b) not to make disclosure of any such Confidential Information to any person, corporation or entity,

except employees and subcontractors of Other Party to whom disclosure is necessary for the purposes set forth above; and (c) to appropriately notify such employees and subcontractors that the disclosure is made in confidence and shall be kept in confidence according to the terms of this Agreement. Other Party shall exercise at least the same degree of care used to restrict disclosure of its own information of like importance, and at a minimum shall exercise at least reasonable care.

4. Other Party agrees that, in the event permission is granted by Qwest to copy Confidential Information, or that copying is otherwise permitted hereunder, each such copy shall contain and state the same confidential or proprietary notices or legends, if any, which appear on the original. Nothing herein shall be construed as granting to Other Party any right or license under any copyrights, trademarks, inventions, patents or other form of intellectual property now or hereafter owned, created or controlled by Qwest.

5. Upon termination of this Agreement for any reason or upon request of Qwest, all documented Confidential Information, together with any copies of same as may be authorized herein, shall be returned to Qwest or destroyed upon Qwest's request.

6. Regardless of any designation of Confidentiality pursuant to paragraph 2 of this Agreement, the obligations imposed by this Agreement shall not apply to any information that: (a) is already in the possession of, is known to, or is independently developed by Other Party; or (b) is or becomes publicly available through no fault of Other Party; or (c) is obtained by Other Party from a third person without breach by such third person of an obligation of confidence with respect to the Confidential Information disclosed; or (d) is disclosed without restriction by Qwest; or (e) is required to be disclosed pursuant to the lawful order of a government agency or disclosure is required by operation of law. If Other Party receives any administrative or court request, subpoena or order commanding disclosure of Qwest's Confidential Information, Other Party shall immediately notify Qwest in writing, unless prohibited by law from doing so.

7. This Agreement shall not preclude either Party from exercising its rights to seek mediation or arbitration in accordance with Dispute Resolution provisions of the parties' Interconnection Agreement with respect to the subject matter of the Confidential Information provided hereunder; however, in the event of such mediations, arbitrations, or appeal from such proceedings, the Parties agree to request the tribunal to maintain the confidential and proprietary nature of Confidential Information as defined in this Agreement. Any claim, controversy or dispute between the Parties shall be resolved in accordance with Dispute Resolution provisions of the parties' Interconnection Agreement.

8. Except for the obligations of use and confidentiality imposed herein, no obligation of any kind is assumed or implied against either Party by virtue of Qwest's provision of the Confidential Information. Each Party further acknowledges that this Agreement and any meetings and communications of the Parties relating to the same subject matter, including the exchange of Confidential Information, shall not: (a) constitute an offer, request, or contract with the other to engage in any research, development or other work; (b) constitute an offer, request or contract involving a buyer-seller relationship, joint venture, teaming or partnership relationship between the Parties; or (c) impair or restrict either Party's right to make, procure or market any products or services, now or in the future, which may be similar to or competitive with those offered by the disclosing Party, or which are the subject matter of this Agreement, so long as that Party's obligations of confidentiality under this Agreement are not breached. The Parties shall pay their

own fees and expenses incurred in preparation for, or as a result of, this Agreement or the Parties' meetings and communications.

9. Neither Party shall assign, sublet, or transfer any interest in this Agreement without the prior written consent of the other party, which consent shall not be unreasonably withheld; provided, however, that Qwest may assign and transfer this Agreement to any parent, subsidiary, successor, affiliated company or other business entity without the prior written consent of Other Party.

10. Other Party shall adhere to the U.S. Export Administration Laws and Regulations and shall not export or re-export any Confidential Information, technical data, or products received from Qwest, or any direct product of such Confidential Information or technical data, to any person or company who is a legal resident of or is controlled by a legal resident of any proscribed country listed in Section 779.4(f) of the U.S. Export Administration Regulations (as the same may be amended from time to time), unless properly authorized by the U.S. Government. This requirement is not limited by the time period stated in this Agreement.

11. This Agreement, together with any and all incorporated exhibits, constitutes the entire Agreement between the Parties with respect to the subject matter of this Agreement. No provision of this Agreement shall be deemed waived, amended or modified by either Party, unless such waiver, amendment or modification is made in writing and signed by both Parties. There are not any previous Agreements between the Parties relating to the subject matter of this Agreement.

12. This Agreement is the joint work product of the Parties, has been negotiated by the Parties and their respective counsel and shall be interpreted fairly in accordance with its terms. In the event of any ambiguities, no inferences shall be drawn against either Party.

13. Any notice to be given pursuant to this Agreement by either Party to the other shall be in writing and shall be deemed given when sent either by mail to the address listed below or by facsimile with a confirmation copy sent by mail.

14. Notwithstanding anything to the contrary, neither Qwest nor Other Party may make any disclosure to any other person or any public announcement or press release regarding this Agreement or any relation between Other Party and Qwest, without the prior written consent, for Qwest, of the Qwest Senior Vice-President of Corporate Communications or for Other Party, the General Counsel of Other Party. Either Qwest or Other Party shall have the right to terminate this Agreement between the Parties if the other Party violates this provision.

IN WITNESS WHEREOF, the Parties have caused their duly authorized representatives to sign this Agreement as of the date first stated above.

*Part D*

**DIRECT TESTIMONY**

**OF**

**ROBERT F. KENNEDY**

**QWEST CORPORATION**

**NOVEMBER 7, 2001**

1 equipment for up to 1 year, circuit switched equipment for up to 3 years, or power plants  
2 for up to 5 years.

3 **Q. WHAT RATE ELEMENTS ARE BEING INTRODUCED FOR COLLOCATION**  
4 **SPACE OPTION?**

5 A. Two rates are being introduced. The first is a recurring rate known as Space Option Fee.  
6 The Space Option Fee is based on the amount of space being optioned on per-month and  
7 per-square foot basis. The Space Option Fee is a charge that was agreed to in the 271  
8 workshops. As such, there is no cost study that supports that charge. The second charge is a  
9 nonrecurring charge known as Space Option Administration Fee. The Space Option  
10 Administration Fee is intended to recover the cost of processing the application, feasibility,  
11 common space engineering, records management, and administration of the right of first  
12 refusal process.

13 **V. UNBUNDLED NETWORK ELEMENTS ("UNES")**

14 **A. UNBUNDLED LOOPS**

15 **Q. WHAT NONRECURRING INSTALLATION CHARGES ASSOCIATED WITH**  
16 **UNBUNDLED LOOPS ARE ADDRESSED IN YOUR TESTIMONY?**

17 A. Qwest is addressing two new nonrecurring loop installation charges for loops. The first  
18 charge applies only to DS0 loops and is known as Coordinated Installation without

1 **Q. PLEASE SUMMARIZE THE UDF CHARGES THAT QWEST IS INTRODUCING**  
2 **IN THIS COST PROCEEDING.**

3 A. Qwest is introducing charges for Single Strand Increments for all unbundled dark fiber rate  
4 elements filed on a per-pair basis in Part B of this docket (i.e. fiber loop, transport, cross  
5 connect and termination). Qwest is also introducing nonrecurring charges for field  
6 verification-engineering and dark fiber splice.

7 **Q. PLEASE DESCRIBE FIELD VERIFICATION - ENGINEERING.**

8 A. Field Verification – Engineering is a step in the Field Verification/Quote Preparation  
9 (FV/QP) process that identifies additional engineering record searches for splice locations  
10 and splicing availability. This rate is charged upfront but deducted from the FV/QP when a  
11 single splice is available and the CLEC requests Qwest to move forward with the process.

12 **Q. PLEASE DESCRIBE DARK FIBER SPLICE.**

13 A. Qwest will accommodate a CLEC's request for access to a Qwest fiber UNE-loop or  
14 subloop. In doing so, Qwest will provide a fiber stub from an accessible splice point when  
15 unspliced fiber (non-ribbon) is available. If space permits, the CLEC may use this fiber  
16 stub for making its fiber splice. A nonrecurring charge applies for Dark Fiber Splice.

17 **J. MISCELLANEOUS NONRECURRING CHARGES**

18 **Q. GENERALLY DESCRIBE THE NATURE OF THE ACTIVITIES FOR WHICH**  
19 **MISCELLANEOUS NONRECURRING CHARGES WOULD APPLY.**

1 A. Miscellaneous nonrecurring charges are intended to cover additional engineering, labor and  
2 testing when incurred by Qwest. Miscellaneous charges may be assessed when at the  
3 direction of a CLEC, work activity is requested that is not part of the nonrecurring charges  
4 normally associated with a product.

5 **Q. PLEASE PROVIDE A LIST OF THE MISCELLANEOUS NONRECURRING**  
6 **CHARGES?**

- 7 A. Additional Engineering - Basic (per 1/2 Hour)  
8 Additional Engineering - Overtime (per 1/2 Hour)  
9 Additional Labor Installation -Overtime (per 1/2 Hour)  
10 Additional Labor Installation - Premium (per 1/2 Hour)  
11 Additional Labor Other - Basic (per 1/2 Hour)  
12 Additional Labor Other - Overtime (per 1/2 Hour)  
13 Additional Labor Other - Premium (per 1/2 Hour)  
14 Testing and Maintenance - Basic (per 1/2 Hour)  
15 Testing and Maintenance - Overtime (per 1/2 Hour)  
16 Testing and Maintenance - Premium (per 1/2 Hour)  
17 Maintenance of Service - Basic (per 1/2 Hour)  
18 Maintenance of Service - Overtime (per 1/2 Hour)  
19 Maintenance of Service - Premium (per 1/2 Hour)  
20 Additional Coop Acceptance Test - Basic (per 1/2 Hour)  
21 Additional Coop Acceptance Test - Overtime (per 1/2 Hour)  
22 Additional Coop Acceptance Test - Premium (per 1/2 Hour)

- 1 Nonscheduled Coop Test - Basic (per 1/2 Hour)
- 2 Nonscheduled Coop Test - Overtime (per 1/2 Hour)
- 3 Nonscheduled Coop Test - Premium (per 1/2 Hour)
- 4 Nonscheduled Manual Test - Basic (per 1/2 Hour)
- 5 Nonscheduled Manual Test - Overtime (per 1/2 Hour)
- 6 Nonscheduled Manual Test - Premium (per 1/2 Hour)
- 7 Cooperative Scheduled Test - LOSS (per Month)
- 8 Coop Scheduled Test-C - Message Noise (per Month)
- 9 Coop Scheduled Test-Balance (per Month)
- 10 Coop Scheduled Test - Gain Slope (per Month)
- 11 Coop Scheduled Test-C - Notched Noise (per Month)
- 12 Manual Scheduled Test – Loss
- 13 Manual Scheduled Test-C - Message Noise (per Month)
- 14 Manual Scheduled Test-Balance (per Month)
- 15 Manual Scheduled Test-Gain Slope (per Month)
- 16 Manual Scheduled Test-C - Notched Noise (per Month)

17 **Q. UNDER WHAT CIRCUMSTANCES WOULD QWEST CHARGE THE**  
18 **OVERTIME AND PREMIUM CHARGES DESCRIBED ABOVE?**

19 A. Generally, overtime charges will apply when the CLEC requests that work be performed by  
20 Qwest technicians before 8:00 a.m., after 5:00 p.m., or on a Saturday. Generally, premium  
21 charges will apply when the CLEC requests that work be performed by Qwest technicians  
22 on a Sunday or Holidays. The application of Overtime and Premium charges may vary  
23 somewhat depending upon the terms of the particular interconnection agreement. Premium

1 charges also apply to the 50<sup>th</sup> or greater hour worked by a technician in a given work  
2 week.

3 **Q. DOES QWEST PROPOSE OTHER MISCELLANEOUS ELEMENTS IN**  
4 **ADDITION TO THOSE ADDRESSED IN THIS PROCEEDING?**

5 A. Yes. Qwest proposes to introduce an additional dispatch charge, date change and design  
6 change elements in this cost proceeding

7 **Q. PLEASE DESCRIBE WHEN A NONRECURRING CHARGE WOULD APPLY**  
8 **FOR ADDITIONAL DISPATCH.**

9 A. A nonrecurring charge would apply when, at the request of the CLEC, a Qwest technician  
10 is dispatched an additional time to a CLEC designated location.

11 **Q. PLEASE DESCRIBE WHEN A NONRECURRING CHARGE WOULD APPLY**  
12 **FOR A DATE CHANGE.**

13 A. A date change nonrecurring charge would apply when the CLEC changes a previously  
14 established due date for service. Such a change necessitates the issuance of a new service  
15 order.

16 **Q. PLEASE DESCRIBE WHEN AN INDIVIDUAL NONRECURRING CHARGE**  
17 **WOULD APPLY FOR DESIGN CHANGE.**

18 A. A nonrecurring charge would apply when a design change occurs that requires an  
19 engineer's review. Such design changes may include a change of end user premises, the

1 addition or deletion of optional features or functions, or a change in the type of transport  
2 termination.

3 **Q. PLEASE DESCRIBE WHEN A MISCELLANEOUS NONRECURRING CHARGE**  
4 **WOULD APPLY FOR TROUBLE ISOLATION.**

5 A. Qwest will bill appropriate Maintenance of Service charges as set forth in Exhibit TKM-28  
6 for dispatched work done by Qwest where the trouble is found to be on the end user's side  
7 of the NID or the trouble is found to be in the CLEC's portion of the network.

8 Miscellaneous charges may also be assessed when the CLEC authorizes Qwest to repair the  
9 trouble on the CLEC's behalf. Qwest will charge the CLEC the appropriate Additional  
10 Labor Charges from this list of miscellaneous charges in addition to the Maintenance of  
11 Service charge.

12 **Q. HOW DOES QWEST PROPOSE TO CHARGE FOR EXPEDITES AND**  
13 **CANCELLATIONS?**

14 A. Qwest proposes to develop charges for expedite and cancellations on an ICB. The ICB  
15 pricing process will be based upon the critical dates, with terms and conditions consistent  
16 with the Washington Access Tariff, Section 5.2.3, and the applicable nonrecurring charges  
17 referenced in the CLEC's agreement.

**Q. PLEASE DESCRIBE THE CHARGE THAT APPLIES WHEN A CLEC USES CLEC-TO-CLEC CROSS-CONNECTIONS TO CONNECT WITH ANOTHER CLEC'S COLLOCATION.**

A. A one-time CLEC-to-CLEC Cross-Connection charge is the only rate that applies when a CLECs' uses Connecting Facility Assignments (CFA) residing on an Interconnection Distribution Frame (ICDF). Both CLECs must terminate at the same service rate level (i.e. DS1, DS3). Termination cables must be in place to the ICDFs. The CLEC may obtain the termination cables through the standard collocation ordering process.

**VII. UNBUNDLED NETWORK ELEMENTS (UNES)**

**A. INTERCONNECTION TIE PAIRS (ITP)**

**Q. WHAT IS AN INTERCONNECTION TIE PAIR (ITP)?**

A. An interconnection tie pair (ITP) is a connection between UNES and a demarcation point at an ICDF.

**Q. WHAT RATE ELEMENTS ARE BEING PRESENTED FOR THE ITP?**

A. Recurring charges apply for DSO, DS1, and DS3 connections.

1 **Q. WHICH E-UDF RECURRING CHARGES DOES QWEST PROPOSE?**

2 A. Qwest proposes the following recurring charges for E-UDF:

3 (1) Termination at Wire Center, per pair

4 (2) Termination at Premises, per pair

5 (3) E-UDF-Loop Fiber, per pair

6 (4) Fiber Cross-Connect, per pair

7 **Q. WHICH E-UDF NONRECURRING CHARGES DOES QWEST PROPOSE?**

8 A. Qwest propose the following E-UDF nonrecurring charges:

9 (1) Order Charge, per pair, per route, per order

10

11

(2) Each Additional, per pair, same route

12

13

(3) Fiber Cross-Connect, per pair

14

15

16

**J. MISCELLANEOUS NONRECURRING CHARGES**

17 **Q. PLEASE GENERALLY DESCRIBE THE NATURE OF THE ACTIVITIES FOR**

18 **WHICH MISCELLANEOUS NONRECURRING CHARGES WOULD APPLY.**

19 A. Miscellaneous Nonrecurring Charges are intended to cover additional engineering,

20 labor and testing when incurred by Qwest. Miscellaneous charges may be

21 assessed when at the direction of a CLEC a work activity is requested that is not

22 part of the nonrecurring charges normally associated with a product. A CLEC may

1 also be charged a miscellaneous non recurring charge when a CLEC reports a  
2 trouble condition and through testing Qwest discovers the trouble in the network  
3 which the CLEC is responsible for.

4 **Q. PLEASE PROVIDE A LIST OF THE MISCELLANEOUS NONRECURRING**  
5 **CHARGES?**

- 6 A. Additional Engineering - Basic (Per 1/2 Hour)
- 7 Additional Engineering - Overtime (Per 1/2 Hour)
- 8 Additional Labor Installation-Overtime (Per 1/2 Hour)
- 9 Additional Labor Installation-Premium (Per 1/2 Hour)
- 10 Additional Labor Other-Basic (Per 1/2 Hour)
- 11 Additional Labor Other-Overtime (Per 1/2 Hour)
- 12 Additional Labor Other-Premium (Per 1/2 Hour)
- 13 Testing and Maintenance Basic (Per 1/2 Hour)
- 14 Testing and Maintenance Overtime (Per 1/2 Hour)
- 15 Testing and Maintenance Premium (Per 1/2 Hour)
- 16 Maintenance of Service-Basic (Per1/2 Hour)
- 17 Maintenance of Service-Overtime (Per1/2 Hour)
- 18 Maintenance of Service-Premium (Per1/2 Hour)
- 19 Additional Coop Acceptance Test-Basic (Per1/2 Hour)
- 20 Additional Coop Acceptance Test-Overtime (Per1/2 Hour)
- 21 Additional Coop Acceptance Test-Premium (Per1/2 Hour)
- 22 Nonscheduled Coop Test-Basic (Per 1/2 Hour)

- 1 Nonscheduled Coop Test-Overtime (Per 1/2 Hour)
- 2 Nonscheduled Coop Test-Premium (Per 1/2 Hour)
- 3 Nonscheduled Manual Test-Basic (Per 1/2 Hour)
- 4 Nonscheduled Manual Test-Overtime (Per 1/2 Hour)
- 5 Nonscheduled Manual Test-Premium (Per 1/2 Hour)
- 6 Cooperative Scheduled Test-LOSS (Per Month)
- 7 Coop Scheduled Test-C-Message Noise (Per Month)
- 8 Coop Scheduled Test-Balance (Per Month)
- 9 Coop Scheduled Test-Gain Slope (Per Month)
- 10 Coop Scheduled Test-C Notched Noise (Per Month)
- 11 Manual Scheduled Test – Loss
- 12 Manual Scheduled Test-C-Message Noise (Per Month)
- 13 Manual Scheduled Test-Balance (Per Month)
- 14 Manual Scheduled Test-Gain Slope (Per Month)
- 15 Manual Scheduled Test-C Notched Noise (Per Month)

16  
17 **Q. DOES QWEST PROPOSE OTHER MISCELLANEOUS ELEMENTS IN**  
18 **ADDITION TO THOSE ADDRESSED IN THIS PROCEEDING?**

19 **A.** Yes. Qwest proposes to introduce Additional Dispatch Charge, Date Change and  
20 Design Change elements in this cost proceeding.

21 **Q. PLEASE DESCRIBE WHEN A NONRECURRING CHARGE WOULD APPLY**  
22 **FOR ADDITIONAL DISPATCH.**

1 A. A nonrecurring charge would apply when, at the request of the CLEC, a Qwest  
2 technician is dispatched an additional time to a CLEC designated location.

3 **Q. PLEASE DESCRIBE WHEN A NONRECURRING CHARGE WOULD APPLY**  
4 **FOR DATE CHANGE.**

5 A. A Date Change nonrecurring charge would apply when the CLEC changes a  
6 previously established due date for service. Such a change necessitates the  
7 issuance of a new service order.

8 **Q. PLEASE DESCRIBE WHEN AN INDIVIDUAL NONRECURRING CHARGE**  
9 **WOULD APPLY FOR DESIGN CHANGE.**

10 A. A nonrecurring charge would apply when a design change occurs that requires an  
11 engineer's review. Such design changes may include a change of end user  
12 premises, the addition or deletion of optional features or functions, or a change in  
13 the type of transport termination.

14 **Q. HOW DOES QWEST PROPOSE TO CHARGE FOR EXPEDITES AND**  
15 **CANCELLATIONS?**

16 A. Qwest proposes to charge for Expedites and Cancellations on an ICB basis.

Marc Spitzer, Commissioner

APPEARANCES:

Mr. Timothy Berg, FENNEMORE CRAIG, and Mr. John M. Devaney and Mr. Norton Cutler, PERKINS, COIE, LLP, on behalf of Qwest Corporation;

Ms. Mary Steele, DAVIS, WRIGHT, TREMAINE, LLP, on behalf of AT&T Communications of the Mountain States, Inc. and XO Arizona, Inc.;

Mr. Thomas H. Campbell, LEWIS AND ROCA, LLP, and Mr. Thomas Dixon, Jr., on behalf of WorldCom, Inc.;

Mr. Michael W. Patten, ROSHKA, HEYMAN & DeWULF, PLC, on behalf of Cox Arizona Telecom, Inc., Z-Tel Communications and McLeodUSA Telecommunications Services, Inc.;

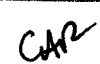

Mr. Eric Heath on behalf of Sprint Communications co., LP.;

Mr. Thomas H. Campbell, LEWIS & ROCA, LLP, on behalf of Time Warner Telecom of Arizona, LLC; and

Mr. Christopher C. Kempley, Chief Counsel and Ms. Maureen A. Scott, Staff Attorney, Legal Division, on behalf of the Utilities Division of the Arizona Corporation Commission.

Arizona Corporation Commission  
**DOCKETED**

**JUN 12 2002**

DOCKETED BY 

1 proportion of Qwest's power plant, and for their proportionate share of Qwest's land and building  
2 investment, through the space rental charge assessed to collocators (*Id.*). WorldCom claims that  
3 allowing Qwest to recover these general factors from collocators would result in double recovery of  
4 Qwest's costs.

5 We agree with Qwest that WorldCom's arguments are misplaced. As Qwest explained, the  
6 space within a CLEC collocation area is not assessed power and land and building factors under  
7 Qwest's cost study. However, outside the CLECs' collocation cages, where CLEC equipment runs  
8 through Qwest's central office space, it is appropriate for Qwest to assess these factors. We therefore  
9 reject WorldCom's position on this issue.

10 **M. HVAC and Electrical Costs**

11 WorldCom also alleges that Qwest double counts HVAC and electrical costs. According to  
12 Mr. Lathrop, this double counting results because Qwest adds HVAC and electrical costs as  
13 components of its "standard space construction" cost, while retaining HVAC and electrical costs in  
14 its per square foot floor space rental cost (*Id.* at 51-52).

15 Qwest contends that it specifically backed out \$23.51 per foot for mechanical and electrical  
16 delivery in its cost study. Qwest claims that Staff witness Dunkel verified that such costs were  
17 backed out of Qwest's study (See, Staff Ex. 30, at 23).

18 The record supports Qwest's contention that costs were backed out of Qwest's cost study in  
19 order to avoid the double recovery of HVAC and electrical costs for collocators (Qwest Ex. 8, at 73).  
20 In addition, we have adopted WorldCom's recommendation to reduce Qwest's proposed floor space  
21 rental charge by 10 percent, to no more than \$3.56 per square foot because it is not clear that all  
22 duplicative costs for HVAC, electrical, architectural fees, land costs, site work, landscaping, and  
23 Qwest project management were removed from Qwest's proposed charge. Based on the record  
24 evidence, we do not believe that any additional adjustments are appropriate.

25 **N. Individual Case Basis ("ICB") Pricing**

26 WorldCom opposes Qwest's proposal to price certain services on an ICB basis, such as for  
27 Construction, Adjacent Collocation, and Field Connection Point Construction (WorldCom Ex. 13, at  
28

1 32)<sup>35</sup>. WorldCom claims that such ICB charges are problematic because they can only be quantified  
2 after a request is made for the service by a CLEC. WorldCom contends that ICB pricing also puts  
3 CLECs at a competitive disadvantage because of delays in getting a confirmed price, as well as  
4 Qwest's superior negotiating position if a CLEC has a need for a specific collocation space.  
5 WorldCom also states that ICB pricing of services gives Qwest little incentive to pursue efficiencies  
6 and improve the collocation implementation process (*Id.* at 34).

7 Qwest contends that ICB pricing is sometimes necessary because, for certain services, the  
8 Company has no experience or history that allows it to develop a cost study (Tr. 302). As an  
9 example, Qwest witness Hubbard stated that the Company has no experience in pricing a service such  
10 as adjacent collocation (collocation space placed just outside a central office due to space limitations)  
11 because no CLEC has previously requested the service (Tr. 306).

12 Although ICB pricing is, for many reasons, less desirable than UNE prices supported by a  
13 cost study, for the few remaining services offered on an ICB basis there is currently no alternative. If  
14 CLECs wish to order services such as Adjacent Collocation it is better to have the service available,  
15 even at a negotiated price, than to not have the service available at all. However, Qwest is directed to  
16 develop cost studies for all services offered in this docket on an ICB price basis in Phase III. Qwest  
17 should make every effort to develop reasonable cost-based prices for such services even if it has little  
18 or no experience actually provisioning the services.

19 **O. Market Pricing for Information Services and Databases**

20 WorldCom claims that Qwest has proposed unsubstantiated market-based pricing for  
21 numerous information services and database elements. WorldCom contends that there is not  
22 sufficient evidence in the record to determine if these market-based prices are reasonable.  
23 WorldCom argues that Qwest's witnesses were unable to explain the basis for these prices, other than  
24 to observe that there is a "profit" factor built into the rates (Tr. 565, 572-573). WorldCom cites to  
25 Decision No. 63487 (March 30, 2001) wherein the Commission approved a settlement agreement in  
26 Qwest's retail rate case that provided, among other things, that "Basket 2 services (including  
27

28 <sup>35</sup> Qwest submitted a cost study for Remote Collocation in the Phase II A proceeding, thereby removing that ICB issue from  
proceeding.

**4. ORDER MODIFICATIONS AND MISCELLANEOUS CHARGES**

**4.1 GENERAL (CONT'D)**

**4.1.4 EXPEDITE**

- A. If a customer desires that service be provided on an earlier date than that which has been established for the order, the customer may request that service be provided on an expedited basis. If the Company agrees to provide the service on an expedited basis, an Expedite Charge will apply. The customer will be notified of the Expedite Charge prior to the order being issued.
- B. If the Company is subsequently unable to meet an agreed upon expedited service date, no Expedite Charge will apply unless the missed service date was caused by the customer.
- C. The Expedited Order Charge will be applied when the customer requests a service date that is prior to the standard interval service date as set for in the Qwest Corporation Service Interval Guide (SIG) on an order or when a customer requests an earlier service date on a pending standard or negotiated interval order.

The Expedited Order Charge, as set forth below, will apply on a per order basis for each day the service date is advanced.

	<b>USOC</b>	<b>NONRECURRING CHARGE</b>
• Per day advanced	EODDB	\$200.00

The Expedited Order Charges will be billed in addition to other applicable nonrecurring charges.

- D. If costs other than additional labor are to be incurred when an order is expedited, the Company will develop, determine and bill the customer such costs in accordance with the Special Construction terms and conditions as set forth in 4.1.6, following.

### **5. ORDERING OPTIONS FOR SWITCHED SERVICES**

#### **5.2 ACCESS ORDER**

##### **5.2.2 ACCESS ORDER MODIFICATIONS (CONT'D)**

###### **A. Service Date Change**

Access Order Service Dates for the installation of new services or rearrangements of existing services may be changed, but the new Service Date may not exceed the original Service Date by more than 30 business days. When, for any reason, the customer wishes to change the Service Date, the customer should notify the Company before the original Service Date to request a different service date. If the customer requested Service Date is more than 30 business days after the original Service Date, the order will be canceled by the Company and reissued with the appropriate cancellation charges applied, unless the customer indicates that billing for the service is to commence as set forth in 5.2.3, following.

A new Service Date may be established that is prior to the original Standard or Negotiated Interval service date if the Company determines it can accommodate the customer's request without delaying service dates for orders of other customers.

If the Service Date is changed to an earlier date, the customer will be notified by the Company that Expedited Order Charges as set forth in the Private Line Services Tariff, will apply.

###### **B. Partial Cancellation Charge**

Any decrease in the number of ordered Switched Access Service facilities, lines, trunks or EICTs will be treated as a partial cancellation and the charges as set forth in 5.2.3, following will apply.

### **5. ORDERING OPTIONS FOR SWITCHED SERVICES**

#### **5.2 ACCESS ORDER**

##### **5.2.2 ACCESS ORDER MODIFICATIONS (CONT'D)**

#### **D. Expedited Order Charge**

Expedited Order Charges for Access Orders are set forth in the Private Line Transport Services Tariff.

If costs other than additional labor are to be incurred when an Access Order is expedited, the Company will develop, determine and bill the customer such costs in accordance with the special construction terms and conditions as set forth in 5.1.3, preceding.

Effective: February 15, 2007

**3. ORDER AND SERVICE MODIFICATIONS AND MISCELLANEOUS CHARGES**

**3.1 ORDER MODIFICATION**

The customer may request a modification of an order at any time prior to notification by the Company that service is available for the customer's use. The Company will make every effort to accommodate a requested modification when it is able to do so with the normal work force assigned to complete such an order within the normal business hours of 8 a.m. to 5 p.m.

If the modification cannot be made with the normal work force during normal business hours, the Company will notify the customer. If the customer still desires the order modification, the Company will schedule a new service date. All charges for order modifications will apply on a per-occurrence basis.

The types of order modifications available are delineated in the following paragraphs. These order modifications apply to services that require network provisioning design.

**3.1.1 SERVICE DATE CHANGE**

Service dates for the installation of new services or rearrangements of existing services may be changed as follows:

If a customer's new requested service date is more than thirty business days after the original service date, the order will be cancelled by the Company and reissued with any appropriate cancellation charges applied, unless the customer indicates that billing for the service is to commence prior to installation. In such instances, the date billing is to commence shall be the thirty-first business day beyond the original service date of the order.

If a customer desires that service be provided on an earlier date than that which has been established for the order, the customer may request that service be provided on an expedited basis. If the Company agrees to provide the service on an expedited basis, an Expedite Charge will apply as set forth in the Private Line Transport Services Tariff. The customer will be notified of the Expedite Charge prior to the order being issued.

There may be occasions where due to limitations facilities are not available. In such cases where it is necessary to construct facilities then Special Construction will apply, as set forth as set forth in 3.6, following.

### 5. SERVICES

#### 5.2 SERVICE DESCRIPTIONS

##### 5.2.7 DS1 SERVICE

###### G. Rate Conditions

###### 2. Nonrecurring Charges (Cont'd)

###### f. Reestablishment of Service Following Fire, Flood or Other Occurrence

###### (1) Nonrecurring Charges do not Apply

Charges do not apply for the reestablishment of service following a fire, flood or other occurrence attributed to an Act of God provided that:

- The service is of the same type as was provided prior to the fire, flood or other occurrence,
- The service is for the same customer,
- The service is at the same location on the same premises,
- The reestablishment of service begins within 60 days after Company service is available. (The 60 day period may be extended a reasonable period if the renovation of the original location on the premises affected is not practical within the allotted time period.)

###### (2) Nonrecurring Charges Apply

Nonrecurring Charges apply for establishing service at a different location on the same premises or at a different premises pending reestablishment of service at the original location.

###### 3. Mileage Measurement

The mileage to be used to determine the monthly charge for the Transport Mileage is calculated using the airline distance between Serving Wire Centers. The Serving Wire Center associated with a customer designated premises is the Serving Wire Center from which the customer designated premises would normally obtain dial tone.

Transport Mileage is shown in terms of mileage bands. To determine the rate to be billed, first compute the mileage using the V&H coordinates method, as set forth in the National Exchange Carrier Association Tariff F.C.C. No. 4, then find the band into which the computed mileage falls and apply the rates shown for that band. When the calculation results in a fraction of a mile, always round up to the next whole mile before determining the mileage band and applying the rates.

### 2. GENERAL REGULATIONS

#### 2.4 PAYMENT ARRANGEMENTS AND CREDIT ALLOWANCES (CONT'D)

##### 2.4.5 REESTABLISHMENT OF SERVICE FOLLOWING FIRE, FLOOD OR OTHER OCCURRENCE

###### A. Nonrecurring Charges Do Not Apply

Charges do not apply for reestablishment of service following a fire, flood or other occurrences attributed to an Act of God provided that:

1. The service is of the same type as was provided prior to the fire, flood or other occurrence.
2. The service is for the same customer.
3. The service is at the location on the same premises.
4. The reestablishment of service begins within 60 days after Company service is available. (The 60 day period may be extended a reasonable period if the renovation of the original location on the premises affected is not practical within the allotted time period.)

###### B. Nonrecurring Charges Apply

Nonrecurring Charges apply for establishing service at a different customer Point of Termination (POT) on the same premises or at a different premises pending reestablishment of service at the original location.

##### 2.4.6 TITLE OR OWNERSHIP RIGHTS

The payment of rates and charges by customers for the services offered under the provisions of this Tariff does not assign, confer or transfer title or ownership rights to proposals or facilities developed or utilized, respectively, by the Company in the provision of such services.

Effective: February 15, 2007

**3. ORDER AND SERVICE MODIFICATIONS AND MISCELLANEOUS CHARGES**

**3.5 REESTABLISHMENT OF SERVICE FOLLOWING FIRE, FLOOD OR OTHER OCCURRENCE (N)**

**A. When Nonrecurring Charges Do Not Apply**

Charges do not apply for the reestablishment of service following a fire, flood or other occurrence attributed to an Act of God provided that:

- The service is of the same type as was provided prior to the fire, flood, or other occurrence.
- The service is for the same customer.
- The service is at the same location on the same premises.
- The reestablishment of service begins within sixty days after Company service is available. (The sixty day period may be extended a reasonable period if the renovation of the original location on the premises affected is not practical within the allotted time period).

**B. When Charges Apply**

Associated nonrecurring charges and monthly rates apply when service is established at a different location on the same premises, or at a different premises pending, reestablishment of service at the original location.

**3.6 SPECIAL CONSTRUCTION**

**A. General**

1. The terms and conditions, rates and charges for Special Construction are determined in accordance with Company practices.
2. All rates and charges quoted in other sections of this Catalog provide for the furnishing of service when suitable facilities are available or where the design or construction of the necessary facilities does not involve unusual costs.
3. Construction Charges will apply as set forth in the Exchange and Network Services Tariff, Section 4, Construction of Outside Plant Facilities.

**5.2.2 ACCESS ORDER MODIFICATIONS (CONT'D)**

**D. Expedited Order Charge**

When placing an Access order for service(s) for which standard intervals exist, a customer may request a service date that is prior to the standard interval service date. A customer may also request an earlier service date on a pending standard or negotiated interval Access Order. If the Company agrees to provide the service on an expedited basis, an Expedited Order Charge will apply.

A customer may request a change of end user premises within the same serving wire center. When this occurs, the service date is changed to reflect the standard interval. If the customer requests an earlier service date, an Expedited Order Charge will apply.

Expedited Order Charges will not apply if the revised interval to a pending order is equal to or longer than the standard interval for that service.

Expedited Order Charges will not apply to part-time audio or part-time video. (C)

When an expedited service date is missed, the Expedited Order Charge will apply unless the missed service date is caused by the Company.

### **5.2 ACCESS ORDER**

#### **5.2.2 ACCESS ORDER MODIFICATIONS**

##### **D. Expedited Order Charge (Cont'd)**

The Expedited Order Charge is based on the extent to which the Access Order has been processed at the time the Company agrees to the expedited Service Date. A table of these Service Date Intervals is found in the Qwest Corporation Service Interval Guide. The Expedited Order Charge is calculated as follows:

- Based on the Critical Dates associated with the Access Order, as defined in 5.2.3.C., following, the Company will determine the next Critical Date scheduled to be completed on the order.
- Using the table of 5.2.3.E., following, and the Critical Date as determined above, the Company will determine the percent of the provisioning interval not yet completed.
- The Company will apply this percentage to the sum of all the nonrecurring charges associated with the order<sup>[1]</sup> and divide this sum by the number of days remaining in the original service interval.
- The per day charges so developed will then be applied on a per-day-of-improvement basis, per order, but in no event shall the charge exceed fifty percent (50%) of the total nonrecurring charges associated with the Access Order.
- The Company will provide the customer with an estimate of the Expedited Order Charge before expediting an order.

[1] Nonrecurring charges associated with the order are used to calculate the Expedited Order Charge even if the nonrecurring charges are waived.

1. Introduction And Description

This filing is being made by Qwest Corporation (Qwest) in its Tariff F.C.C. No. 1, Access Services, Section 5, Ordering Options for Access Services, to revise the Expedited Order Charge application to a per day charge structure. This charge will be applied when the customer requests a service date that is prior to the standard interval service date or when a customer requests an earlier service date on a pending standard or negotiated interval Access Order. The Expedited Order Charge will apply on a per order basis for each day the service date is advanced.

This change is being made at the request of customers who want a simpler and easier to method to expedite their orders and calculate the cost of that expedite.

The Expedite Order Charges are as follows:

	Nonrecurring Charge
Per day advance	\$200.00
Per day advance	\$200.00

for Pricing Flexibility

This tariff will impact the Expedite Order Charge for Non price Cap, Price Cap and Price Flex Services.

## 2. Rate Development

The Expedite Order Charge was developed utilizing a market based pricing process including proper price positioning with other Qwest and competitors services.

## 3. Non Price Cap Demand And Revenue Impacts

### 3.1 Demand Impacts

Qwest projects that Non Price Cap services will experience 178 days that will be charged the Expedite Order Charge. The demand is for a 12 month period from the effective date of this filing.

There are no cross-elastic or complementary demand impacts expected as a result of this filing.

### 3.2 Revenue Impacts

As a result of this filing, Qwest expects a total interstate revenue increase to Non Price Cap Services of approximately \$35,600. There are no cross-elastic or complementary revenue impacts expected as a result of this filing.

## 4. Unit Costs

### 4.1 Overview

This section describes how Qwest developed regional unit costs in support of the Expedite Order Charge. This unit cost section describes the process used to develop the Nonrecurring unit costs and provides a description of the cost Workpaper.

The unit costs developed in this study reflect 2004 cost levels for the Expedite Order Charge. They were developed using an incremental or "bottoms-up" cost methodology. Under this methodology, costs are determined by adding together all of the necessary equipment and/or labor expenses associated with providing the service on a forward looking basis. These costs depict the economic unit cost of offering the service.

### 4.2 Development of Nonrecurring Unit Costs

When a customer requests the service a one-time cost to provision the service is incurred. The nonrecurring provisioning rate element recovers this cost.

The first step taken in developing the nonrecurring one time labor cost was to identify the various work groups and tasks required to install the service. Next, Qwest estimates were used to develop average labor times per task. Once identified, the average labor times were multiplied by the appropriate labor rates to produce the cost per work group. The sum of all the work group costs produces the total cost.

The labor rates used in this study were developed by applying additional factors to cover administrative expense and business fees that are incurred with the new offering. Administrative expenses include the costs associated with the line and staff operations, which support the new service. Business fees include state level franchise taxes, municipal license fees and occupation taxes.

The work groups involved in providing Expedite Service are listed below along with their associated work functions: (1) Order Processing Wholesale Service Delivery Coordinator – This group serves as the primary order provisioning contact for CLEC's, Interexchange Carriers and Wireless customers who purchase complex wholesale and retail products and services; (2) Order Processing Retail Service Delivery Coordinator – This center interfaces with the customer gathering and processing customer specific information for establishing or terminating products and services. They are responsible for initiating the service order process and negotiating service installation or service termination dates; (3) Loop Provisioning Center (LPC) – LPC ensures customer service order activity is provisioned with outside plant and central office facilities. A request for Manual Assistance is generated when all conditions for customer service cannot be met; (4) Design – Design has overall responsibility for the Record Issue Date completion and assigns interoffice facilities and equipment at the circuit level; (5) Central Office Resource Administration Center (CORAC) - CORAC utilizes "Work Force Administration/Dispatch In" to build installation daily service order logs. Monitors and logs service order progress and completion; (6) Central Office (CO) – CO is

responsible for service connection in the central office and associated testing and administration functions; (7) Load Resource Administration Center (LRAC) – LRAC utilizes “Work Force Administration/Dispatch Out” to build installation daily service order logs. Monitors and logs service order progress and completion; (8) Installation – Performs necessary field work on new orders and changes to existing service; (9) Implementer – The Implementer has overall control responsibility for provisioning, maintaining, coordinating and testing of design services; (10) Manager and Supervisor time is for the additional work and coordination between different organizations that is required to expedite an order.

#### 4.3 Description Of Nonrecurring Workpaper

The nonrecurring charge was developed at a regional level. Workpaper 1 provides a detailed summary of the work groups, work times in minutes, hourly labor rates for each work group and the calculated costs.

#### 5. Price Cap Analysis

Services subject to price cap regulation will also be impacted by this revision in the Expedite Order Charge. Section 61.46(c) of the Commission’s price cap rules requires that a filing proposing a rate restructure demonstrate the effect of converting existing rates to rates that will apply after the restructure takes effect. In order to meet the Commission’s requirements, the first step is to recast base period demand into the new rate structure. This step is discussed in Section 5.1. Next the recast base period demand is multiplied by proposed rates to derive the revenues

under the rate restructure. This step is discussed in Section 5.2. Section 5.2 also discusses rate adjustments that were made in order to bring the restructure within applicable price cap limits.

#### 5.1 Demand Analysis

The proposed rate will be charged on a per order basis for each day the service is advanced. Demand was determined by reviewing the orders that were expedited during the 2003 Price Cap filing period and totaling the number of days each order was advanced.

#### 5.2 Revenue Impact

The tariff revisions proposed in this filing will result in an increase in expedite revenues. In order to stay within the allowable price cap limits, selected Special Access service rates were reduced. These rate adjustments are displayed in Appendix A and Workpaper SP-1. Overall Special Access increased by \$208,026. However, exogenous increases allowed in the 2004 Annual Access Tariff Filing (Transmittal 198) in the amount of \$221,000 were allowed and Qwest chose not to increase rates at that time. Qwest is now using a portion of that amount in this filing.

#### 6. Price Flex

The revision of the Expedite Order Charges will also impact services associated with Pricing Flexibility. However, Section 69.727 eliminates the need to file supporting information discussed under price cap regulation.

7. Description of Workpapers

Workpaper 1 is the Nonrecurring Cost Study for the new Expedite Charge. Appendix A provides a summary of all price cap rate changes. With respect to price cap price changes, Workpapers (SP-1 provides Special Access Detail, and SP-2 provides the Special Access Consolidated Weightings) and the price Cap Tariff Review Plan demonstrate that the Commission's rules with regard to price cap indices have been satisfied.

**EXHIBIT 37**

## **Bridge Agreement Until New Interconnection Agreements Are Approved**

This Bridge Agreement is entered into between Qwest Corporation ("Qwest") and Eschelon Telecom, Inc., on behalf of itself and its affiliates ("CLEC"). Qwest and CLEC are referred to separately as a "Party" or collectively as the "Parties."

### **RECITALS**

WHEREAS, the Federal Communications Commission ("FCC") issued its Report and Order *In the Matter of Review of the Section 251 Unbundling Obligations of Incumbent Local Exchange Carriers; Implementation of the Local Competition Provisions of the Telecommunications Act of 1996; Deployment of Wireline Services Offering Advanced Telecommunications Capability*, CC Docket Nos. 01-338, 96-98 and 98-147, (effective October 2, 2003) ("TRO"); and

WHEREAS, on February 4, 2005, the FCC released the *Review of the Section 251 Unbundling Obligations of Incumbent Local Exchange Carriers, Order on Remand (Triennial Review Remand Order)*(FCC 04-290) ("TRRO"), effective March 11, 2005; and

WHEREAS, the Parties have been in negotiations for replacement interconnection agreements ("ICAs") since before the TRRO was issued; and

WHEREAS, the Parties elect to address the changes of law as part of their new ICAs for each state (Arizona, Colorado, Minnesota, Oregon, Utah, and Washington) ("new ICAs") and not as an amendment to the existing ICAs between Qwest and CLEC for each such state ("existing ICAs"); and

WHEREAS, the Parties have mutually agreed to extensions of time for negotiations and any arbitration of their new ICAs that extend beyond certain dates identified in the TRRO, such that the Parties desire an agreement to bridge the time period between such dates in those orders and approval of their new ICAs; and

WHEREAS, the Parties have agreed in negotiations to incorporate the terms of the Bill and Keep and LIS Trunking amendments into the new ICAs to allow the terms of those amendments to continue beyond December 31, 2005.

### **AGREEMENT**

NOW THEREFORE, in consideration of the mutual terms, covenants and conditions contained in this Agreement and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties agree as follows:

#### **1. Expeditious Implementation**

The Parties will work together upon Commission approvals of the new ICAs to expeditiously implement the provisions of the new ICAs, including provisions relating to transition periods described below in Sections 2.1.1 and 2.1.2 and conversion to alternative services.

## 2. Billing

2.1 Transitional periods for conversion of certain Unbundled Network Elements ("UNEs") and the rates applicable during those transitional periods will be set forth in the new ICAs and will be consistent with this Bridge Agreement and the TRRO. After commission approval of the new ICAs, Qwest shall back bill, and Eschelon shall pay, the rate increases set forth in the TRRO and described below retroactive to March 11, 2005 (or a later date, if a UNE became unavailable after that date), for existing non-impaired DS1 loop and transport, and DS3 loop and transport, including dark fiber, as described below and pursuant to the new ICAs. Such back billing shall not be subject to billing measurements and penalties (as may be identified in the new ICAs) on the grounds that such back billing was not implemented earlier than approval of the new ICAs. In the event of a conflict between the time period for back billing between the new ICAs and this Bridge Agreement, the time periods in Sections 2.1 and 2.2 apply. Specifically, the Parties agree to the following provisions:

2.1.1 For a 12-month period beginning on March 11, 2005, any DS1 loop UNEs, DS3 loop UNEs, DS1 dedicated transport UNEs, and DS3 dedicated transport UNEs that CLEC leases from Qwest as of that date, but which Qwest is not obligated to unbundle, shall be available for lease from Qwest at a rate equal to the higher of (1) 115% of the rate CLEC paid for the element on June 15, 2004, or (2) 115% of the rate the state commission has established or establishes, if any, between June 16, 2004, and March 11, 2005, for that element.

2.1.2 For an 18-month period beginning on March 11, 2005, any dark fiber loop UNEs and dark fiber dedicated transport UNEs that CLEC leases from Qwest as of that date shall be available for lease from Qwest at a rate equal to the higher of (1) 115% of the rate CLEC paid for the element on June 15, 2004, or (2) 115% of the rate the state commission has established or establishes, if any, between June 16, 2004, and March 11, 2005, for that element.

2.2 After commission approval of the new ICAs, Qwest shall back bill retroactive to March 11, 2006 (or a later date, if a UNE became unavailable after that date) and Eschelon agrees to pay Qwest pursuant to the new ICAs the difference between the UNE rate(s) and the applicable alternate service rate(s) (such as Special Access service rate(s)) on all loop and transport UNEs that were no longer required to be offered by Qwest as UNEs beginning March 11, 2006 (not including any period after CLEC has disconnected them, if disconnected). In the event of a conflict between the time period for back billing between the new ICAs and this Bridge Agreement, the time periods in Sections 2.1 and 2.2 apply.

**3. Bill and Keep and LIS Trunking**

3.1 The Parties entered into Bill and Keep and LIS Trunking amendments to their existing ICAs in 2001, and those amendments were filed with and approved by the applicable state commissions. The Bill and Keep and LIS Trunking amendments provided that such amendments were in effect from the effective date of the amendments until December 31, 2005. The Parties have agreed in negotiations to continue the terms of the Bill and Keep and LIS Trunking amendments through the new ICAs, so the terms of those amendments will continue beyond December 31, 2005. The Bill and Keep and LIS Trunking amendments, therefore, will not expire on December 31, 2005 but will remain effective until the new ICAs are approved and become effective.

**4. Effective Date**

This Bridge Agreement shall be deemed effective upon filing and approval by the appropriate state commissions

**5. Further Amendments**

Except as specified herein, the provisions of the existing ICAs shall remain in full force and effect (until such time as the new ICAs become effective). Except as provided in the existing ICAs, this Bridge Agreement may not be further amended or altered, and no waiver of any provision thereof shall be effective, except by written instrument executed by an authorized representative of both Parties.

**6. Entire Agreement**

Other than this Bridge Agreement, Qwest and Eschelon have no agreement or understanding, written or oral, relating to the subject matter of this Bridge Agreement. The Parties intending to be legally bound have executed this Bridge Agreement as of the dates set forth below.

**BEFORE THE WASHINGTON STATE  
UTILITIES AND TRANSPORTATION COMMISSION**

In the Matter of the Investigation	)	DOCKET UT-053025
Concerning the Status of Competition	)	
and Impact of the FCC's Triennial	)	ORDER 06
Review Remand Order on the	)	
Competitive Telecommunications	)	ORDER GRANTING IN PART JOINT
Environment in Washington State	)	CLECS' PETITION FOR
	)	RECONSIDERATION OF ORDER 04;
	)	GRANTING QWEST'S PETITION FOR
	)	RECONSIDERATION OF ORDER 04;
	)	MODIFYING INTERPRETIVE
	)	STATEMENT
.....	)	

1 **SYNOPSIS.** *In this Order, we reconsider our decision concerning the appropriate age of data to use in determining whether competing telecommunications companies have access to high-capacity loop and transport elements under the criteria in the FCC's Triennial Review Remand Order. We clarify that state commissions must resolve disputes about prospective wire center designations based on the most recent data available at the time an ILEC designates a wire center as non-impaired. We reverse our decision to use 2005 data and reinstate the finding in the initial order that 2003 ARMIS 43-08 data is the appropriate data to use in evaluating those wire centers Qwest and Verizon initially designated as non-impaired after the FCC released its Triennial Review Remand Order on February 4, 2005.*

2 *In addition to reconsidering and clarifying our decision on the age of data, we correct our discussion in Order 04 concerning the wire centers the Joint CLECs dispute. We correct the order to reflect that the Joint CLECs contest the designation of Qwest's Seattle Main/Mutual wire center as Tier 1 for high-capacity loops, and Qwest's Kent O'Brien as Tier 1, Qwest's Seattle Cherry as Tier 2 and Verizon's Bothell wire center as Tier 2 for high-capacity transport. After reviewing 2003 ARMIS 43-08 data for these wire centers, we find the designations appropriate.*

3 *We find that the effective date for the transition period and rates for three wire centers that Qwest later designated as non-impaired is July 8, 2005, the date of*

*Qwest's designation. Finally, we find that Qwest did not improperly modify its ARMIS 43-08 data in its filings with this Commission. We modify the Interpretive Statement in this docket to reflect our interpretation of the Triennial Review Remand Order and resolution of disputes over Qwest's and Verizon's non-impairment designations.*

### SUMMARY

- 4 **PROCEEDING.** In Docket UT-053025, the Washington Utilities and Transportation Commission (Commission) considers whether to issue an interpretive statement or policy statement addressing issues of competition in the telecommunications industry and challenges facing telecommunications carriers following the Federal Communication Commission's (FCC) Triennial Review Remand Order (TRRO).<sup>1</sup> We focus our inquiry on Qwest Corporation's (Qwest) and Verizon Northwest Inc.'s (Verizon) designation of wire centers as non-impaired, or ineligible for access to high-capacity loops and transport by competitors.
- 5 **INTERESTED PARTIES.** Lisa A. Anderl, Associate General Counsel, and Adam L. Sherr, Corporate Counsel, Seattle, Washington, represent Qwest. Timothy J. O'Connell and John H. Ridge, Stoel Rives LLP, Seattle, Washington, represent Verizon. Gregory J. Kopta and Sarah Wallace, Davis Wright Tremaine LLP, Seattle, Washington, represent Covad Communications Company (Covad), Eschelon Telecom of Washington, Inc. (Eschelon), Integra Telecom of Washington, Inc. (Integra), McLeodUSA Telecommunications Services, Inc., and XO Communications Services, Inc. (collectively Joint CLECs). Gregory Diamond, Denver, Colorado, represents Covad. Dennis Robins, Vancouver, Washington, represents Electric Lightwave, Inc. Karen Clausen, Minneapolis, Minnesota, represents Eschelon. <sup>1</sup> *In the Matter of Unbundled Access to Network Elements; Review of the Section 251 Unbundling Obligations of Incumbent Local Exchange Carriers*, WC Docket No. 04-313, CC Docket No. 01-338, Order on Remand, FCC 04-290 (rel. Feb. 4, 2005) [Hereinafter "*Triennial Review Remand Order*" or "*TRRO*"].

Assistant Attorneys General, Seattle, Washington, represent the Public Counsel Section of the Washington Office of the Attorney General (Public Counsel).

6 **BACKGROUND AND PROCEDURAL HISTORY.** The Commission opened this docket as a staff investigation in April 2005. After receiving comments from Qwest, Verizon and the Joint CLECs, the Commission held a workshop in this proceeding on February 1, 2006, concerning competition in the telecommunications industry and challenges facing competitive telecommunications carriers after the FCC adopted the TRRO. One of the primary issues identified in the workshop was the proper designation of wire centers in Washington meeting the FCC's non-impairment standards for unbundled network element (UNE) loops, high-capacity circuits and transport.<sup>2</sup> In particular, competitive local exchange carriers (CLECs) attending the workshop questioned whether Qwest and Verizon had correctly designated certain wire centers as non-impaired for purposes of unbundled access to high-capacity loops and transport.<sup>3</sup>

7 In the TRRO, the FCC determined that if a wire center met certain criteria, competing carriers would not be "impaired" in providing service without access to unbundled high-capacity loops and transport elements.<sup>4</sup> The FCC explained that these criteria are intended to "capture both actual and potential competition," but "are not, nor are they required to be, error proof."<sup>5</sup> The FCC classified ILEC wire centers into three "tiers," for purposes of determining CLEC unbundled access to high-capacity transport elements serving the wire center.<sup>6</sup>

8 The criteria for Tier 1, 2 and 3 wire center designation for high-capacity transport elements are based on the number of fiber-based collocators in a wire center or the number of business lines entering and leaving a wire center. A wire center must meet the criteria for both fiber-based collocators and business lines to be non-impaired for

---

<sup>2</sup> A glossary of terms used in this Order is attached as Appendix I to the order.

<sup>3</sup> The initial order, Order 03, summarizes the history and explanation of the FCC's TRRO as well as much of the procedural history in this docket. We do not repeat that history here.

<sup>4</sup> See Section 252(d)(2): "In determining what network elements should be made available for purposes of [Section 251(c)(3)], the Commission shall consider, at a minimum. Whether – (A) access to such network elements as are proprietary in nature is necessary; and (B) *the failure to provide access to such network elements would impair the ability of the telecommunications carrier seeking access to provide the services that it seeks to offer.*" (Emphasis added).

<sup>5</sup> TRRO, ¶ 88.

<sup>6</sup> TRRO, ¶ 111.

high-capacity loops, while a wire center may meet either criteria for non-impairment for high-capacity transport.<sup>7</sup> Tiers 1 and 2 indicate actual or potential competition such that the FCC determined that competitors are not impaired without unbundled access to high-capacity transport at that wire center at TELRIC<sup>8</sup> prices.<sup>9</sup> Wire centers meeting the FCC's criteria are referred to as "non-impaired" wire centers. Once a wire center meets the non-impairment criteria, the wire center cannot later be reclassified to a lower tier or found to be impaired.<sup>10</sup>

- 9 In Order 02, the Commission redefined the nature of the proceeding, stating that it would consider whether to issue an interpretive statement or policy statement in this proceeding to advise telecommunications carriers in Washington State of the Commission's interpretation of the wire center designation provisions of the TRRO and other matters. *See Order 02*, ¶ 6.
- 10 On April 20, 2006, Administrative Law Judge Ann E. Rendahl entered Order 03 resolving disputes over the appropriate data Qwest and Verizon must provide, and interpreting the TRRO and FCC rules.
- 11 On April 28 and May 5, Qwest and Verizon provided to the Commission and certain CLECs the additional data required by Order 03.
- 12 The Joint CLECs filed comments on the additional data on May 5, and continue to dispute the designation of four Qwest wire centers and one Verizon wire center. Verizon filed a response to the Joint CLECs' comments.

---

<sup>7</sup> Wire centers designated as Tier 1 for transport UNEs have four or more fiber-based collocations, or 38,000 or more business lines, (*Id.*, ¶¶ 111-12) whereas wire centers designated as Tier 2 for transport UNEs have three or more fiber-based collocations or 24,000 or more business lines. *Id.*, ¶ 118. *See also Id.*, ¶¶ 174, 178, in which the FCC classifies wire centers for purposes of access to DS3-capacity loops as having at least 38,000 business lines *and* four or more fiber-based collocators, and for DS1-capacity loops as having at least 60,000 business lines *and* four or more fiber-based collocators.

<sup>8</sup> TELRIC refers to Total Element Long Run Incremental Cost, a methodology based on forward-looking long run economic cost, which the FCC adopted for pricing unbundled network elements provided under Section 251. *In the Matter of Implementation of the Local Competition Provisions in the Telecommunications Act of 1996; Interconnection between Local Exchange Carrier and Commercial Mobil Radio Service Providers*, First Report and Order, CC Docket Nos. 96-98, 95-185, FCC 96-325, ¶ 672 (August. 8, 1996).

<sup>9</sup> *TRRO*, ¶¶ 111, 118, 174, 178.

<sup>10</sup> *See* 47 C.F.R. §§ 51.319 (a) (4) and (5), (e) (3) (i) and (ii).

- 13 After considering petitions for review of the initial order filed by the Joint CLECs and Qwest, the Commission entered Order 04 on October 4, 2006, reversing the decision in the initial order concerning the appropriate age of data to use in determining non-impairment designations, and addressing other issues.
- 14 On October 16, 2006, the Joint CLECs filed a petition for reconsideration, clarification and rehearing. Qwest also filed a petition for reconsideration of Order 04. By notice issued October 27, 2006, the Commission allowed parties to file answers to the petitions, indicating it would enter an order on the petitions by December 15.
- 15 The Joint CLECs, Qwest and Verizon filed responses to the petitions for reconsideration.

#### MEMORANDUM

- 16 In this Order, we resolve petitions for reconsideration and clarification of decisions in Order 04, our final order concerning the non-impairment designations of certain Qwest and Verizon wire centers. First, the Joint CLECs seek clarification of the discussion in Order 04 of Qwest and Verizon wire centers for which they dispute a non-impairment designation. Second, the Joint CLECs and Qwest request that we reconsider our decision in Order 04 to evaluate non-impairment designations for contested wire centers using 2005 data. Third, the Joint CLECs request clarification or reconsideration of the effective date of three wire centers Qwest designated as non-impaired on July 8, 2005. Finally, the Joint CLECs argue that Qwest improperly modified the data provided in response to Orders 03 and 04.
- 17 In addition to resolving these disputes, we modify the interpretive statement issued in this docket. We issue the interpretive statement as a separate document, Appendix 2 to this Order, to reflect our interpretation of the TRRO consistent with this Order, and to update the list of Qwest and Verizon wire centers that meet the FCC's non-impairment criteria. We issue the modified interpretive statement separately under RCW 34.05.230 and WAC 480-07-920 to comply with the requirement in the Administrative Procedure Act to publish such statements in the Washington State Register.

**A. Joint CLEC Position on Wire Center Designations**

- 18 Order 04 finds that the Joint CLECs agreed to certain wire center designations using 2003 data although they continued to argue for the use of 2004 data.<sup>11</sup> The Order also finds that the Joint CLECs “dispute only Qwest’s non-impairment designations of the Kent O’Brien, Olympia Whitehall and Seattle Cherry wire centers.”<sup>12</sup> Based on these findings, we accepted Qwest’s and Verizon’s wire center designations for all other wire centers, but required Qwest to file 2005 data for the remaining three wire centers.
- 19 The Joint CLECs assert that the Order does not correctly describe their position and that they did not concede the designation of all but three Qwest wire centers. The Joint CLECs assert their pleadings challenge Qwest’s designation of four wire centers based on the age of business line data: Seattle Main/Mutual wire center as Tier 1 for high capacity loops, Kent O’Brien as Tier 1, Seattle Cherry as Tier 2 and Verizon’s Bothell wire center as Tier 2 for transport.<sup>13</sup> The Joint CLECs also claim they dispute Qwest’s designation of the Olympia Whitehall wire center as Tier 1 for transport based on the number of fiber-based collocators, not business line data.<sup>14</sup> The Joint CLECs request the Commission clarify or reconsider its order to properly reflect the Joint CLECs’ position.<sup>15</sup>
- 20 Neither Qwest nor Verizon address this issue.
- 21 We grant the Joint CLECs’ request for reconsideration or clarification on this issue to clarify the facts in this proceeding. After reviewing the Joint CLECs’ pleadings, we agree that the Joint CLECs continue to dispute the use of 2003 data for initial wire center designations, but, that if 2003 data were used, they would dispute the non-impairment designation of four wire centers based on the age of business line data:

---

<sup>11</sup> Order 04, ¶ 22.

<sup>12</sup> *Id.*

<sup>13</sup> Joint CLEC Petition, ¶¶ 5-8.

<sup>14</sup> After further discussion, Joint CLECs and Qwest now agree that the Olympia Whitehall wire center is properly classified as Tier 1 for transport UNEs based on the number of fiber-based collocators in the wire center. See November 3, 2006, letter to Carole J. Washburn, Docket UT-053025, from Lisa A. Anderl; see also November 14, 2006, letter to Carole J. Washburn, Docket UT-053025, from Gregory J. Kopta. We therefore include the Olympia Whitehall wire center as Tier 1 for transport in the list of non-impaired wire centers attached to the modified interpretive statement.

<sup>15</sup> Joint CLEC Petition, ¶ 8.

Qwest's Seattle Main/Mutual wire center as Tier 1 for high-capacity loops, and Qwest's Kent O'Brien wire center as Tier 1, Qwest's Seattle Cherry wire center as Tier 2 and Verizon's Bothell wire center as Tier 2 for high-capacity transport.

- 22 The FCC's non-impairment criteria for high-capacity transport and loop elements differ. A wire center meets the non-impairment criteria for high-capacity loops based on the number of fiber-based collocators *and* the number of business lines serving the wire center. A wire center meets the non-impairment criteria for high-capacity transport elements based on the number of fiber-based collocators *or* the number of business lines. Order 04 does not clearly distinguish these different criteria, leading to confusion about the basis for the Joint CLEC's position.
- 23 The only wire center that Qwest has identified as non-impaired for high capacity loops is the Seattle Main/Mutual wire center. The remaining wire centers that Qwest and Verizon identify as non-impaired are for high-capacity transport elements. Qwest and Verizon identify these wire centers as Tier 1 or Tier 2 for high capacity transport elements based on the number of fiber-based collocators or business line counts, while Qwest designates the Seattle Main/Mutual wire center as non-impaired based on both sets of data.<sup>16</sup>
- 24 We modify paragraph 22 of Order 04 to correctly reflect the Joint CLECs' position, by adding to the list of disputed wire centers Qwest's Seattle Main/Mutual wire center and Verizon's Bothell wire center. While we modify Order 04 to reflect that the Joint CLECs once disputed the designation of Qwest's Olympia Whitehall wire center based on the number of fiber-based collocators, we note that the Joint CLECs now concur in the designation of the wire center.<sup>17</sup>

#### **B. Age of the Data**

---

<sup>16</sup> Qwest March 1, 2006, Response to Bench Request No. 1; Verizon's April 28, 2006, Supplemental Response to Bench Request No. 1.

<sup>17</sup> See November 3, 2006, letter to Carole J. Washburn, Docket UT-053025, from Lisa A Anderl; see also November 14, 2006, letter to Carole J. Washburn, Docket UT-053025, from Gregory J. Kopta.

- 25 The primary dispute in this proceeding concerns the age or timing of the data, in particular the business line data, used to calculate whether a wire center meets the FCC's non-impairment criteria. As we explained in Order 04, the FCC chose business line counts as one of the wire center criteria, as they "are an objective set of data that incumbent [local exchange carriers] LECs [ILECs] already have created for other regulatory purposes," specifically identifying ARMIS 43-08 data as the source of business line data.<sup>18</sup> Each year on April 1, ILECs file annual network, financial and service quality data with the FCC's Automated Reporting Management Information System (ARMIS). The number of access lines in service is one type of data ILECs provide annually for FCC Report 43-08 in the ARMIS Operating Data Report, which is referred to as ARMIS 43-08 data.
- 26 The FCC released the TRRO on February 4, 2005, with an effective date of March 11, 2005. The TRRO was released after ILECs had collected 2004 business line data, but before the April 1 filing deadline. After the FCC issued the TRRO, the FCC's Wireline Competition Bureau requested that ILECs submit to the FCC lists of wire centers meeting the non-impairment criteria. Qwest and Verizon did so, satisfying the TRRO's non-impairment criteria using ARMIS 43-08 data for the calendar year ending December, 2003.<sup>19</sup>
- 27 In response to the Commission's Order 02 in this proceeding, Qwest and Verizon submitted ARMIS 43-08 data showing the number of access lines in wire centers as of December 2003. From their first comments on this data, the Joint CLECs have argued that using December 2004 ARMIS data would provide a more accurate picture of competition at the time the FCC released the TRRO. Qwest and Verizon have insisted that 2003 data is appropriate, as the FCC based its decision on non-impairment of wire centers using 2003 ARMIS data.
- 28 The initial order, Order 03, determined that it was appropriate to evaluate the ILECs' wire center designations based on 2003 ARMIS data. After the Joint CLECs and Qwest filed petitions for review, we reversed the decision in the initial order. In Order 04, we required the use of the most recent data, i.e., 2005 ARMIS data, in resolving the remaining disputed wire centers and future wire center disputes:

---

<sup>18</sup> TRRO, ¶ 105.

<sup>19</sup> Qwest March 14, 2006, Responses to Joint CLEC Exceptions, ¶¶ 4-5.

We find nothing in the TRRO or FCC rules that precludes this Commission from deciding this issue in the interest of promoting competition in the local telecommunications market, pursuant to state law. [Footnote omitted] This Commission has authority under state law [footnote omitted] to take actions “permitted or contemplated for a state commission under the federal telecommunications act of 1996” (the Act) [footnote omitted] and authority (which the FCC expressly recognizes) to resolve disputes over whether certain wire centers meet the factual criteria for non-impairment. [TRRO, ¶¶ 100, 234] Given this authority, we may use data more recent than December 2003 data to inform our decision. We find the most recent data more persuasive than the stale information now in the record.

Because these designations are permanent [footnote omitted] and materially affect the development of competition in Washington, we determine that our designation decisions should be based on the most recent data available. In this instance, by applying the FCC’s criteria to the most recent data, we ensure that our decisions are based on the best information available reflecting the most recent state of competition between competitive and incumbent carriers at the wire center level. For the same reasons, we shall require the use of the most recent data at the time we resolve future disputes over wire center designations.<sup>20</sup>

- 29 Both Qwest and the Joint CLECs ask us to reconsider this decision. The Joint CLECs assert the Commission should modify the order to require Qwest and Verizon to provide 2004 business line data for *all* wire centers, not just a few wire centers. The Joint CLECs assert that ILECs should rely on data that is current as of the date they designate a wire center as non-impaired.<sup>21</sup> Specifically, the Joint CLECs assert that the ILECs should “provide business line counts consistent with ARMIS requirements as of March 11, 2005, or as close to that date as possible,” i.e., ARMIS data the ILECs have collected but not yet filed with the FCC.<sup>22</sup> The Joint CLECs assert the ILECs likely have the information on a monthly basis during a calendar year even though the information is not yet filed with the FCC.<sup>23</sup>

---

<sup>20</sup> Order 04, ¶¶ 20-21.

<sup>21</sup> Joint CLEC Petition, ¶ 4.

<sup>22</sup> Joint CLEC March 7, 2006, Exceptions, ¶ 5.

<sup>23</sup> *Id.*

30 Qwest and Verizon argue that the decision in the initial order to use December 2003 ARMIS data was correct. Qwest and Verizon assert the non-impairment designation should be based on the most recent data *available at the FCC* on the date the ILEC designates the wire center as non-impaired.<sup>24</sup> Qwest asserts that the Commission errs in applying data from a time period different than the date that Qwest designated the wire centers as non-impaired in its filing with the FCC. Qwest and Verizon assert the use of different data sets would run afoul of the FCC's decision that an impairment decision may not be changed.<sup>25</sup>

31 After reviewing the petitions and the TRRO, we find it necessary to clarify our understanding of the role of state commissions in implementing the FCC's rules on non-impaired wire centers. First, we find the FCC established a self-implementing process for determining which wire centers meet the non-impairment criteria. The TRRO does not identify who, or which entity, will designate a wire center as non-impaired.<sup>26</sup> In practice, the ILECs have "designated" certain wire centers as non-impaired by submitting lists to the FCC identifying which wire centers the ILECs believe meet the non-impairment criteria in the TRRO.<sup>27</sup> Both Qwest and the Joint CLECs agree that ILECs designate whether a wire center is non-impaired, not CLECs or state commissions.<sup>28</sup> We concur.

32 Second, the TRRO requires carriers to work out between themselves which wire centers are non-impaired, but if they cannot agree, the state commissions may resolve disputes among parties about whether a wire center is properly classified or designated as non-impaired.<sup>29</sup> The role of state commissions in implementing the FCC's wire center non-impairment criteria, thus, is to resolve disputes between the ILECs and their competitors, providing a check on the ILECs' designation.

33 Third, state commissions must determine whether the ILECs relied upon the correct set of data and properly classified or designated the wire center as non-impaired. In

---

<sup>24</sup> Qwest Petition, ¶ 1; Verizon Answer at 2, 3.

<sup>25</sup> Qwest Petition, ¶¶ 2-9; Verizon Answer at 1; *see also* 47 C.F.R. §§ 51.319 (a) (4) and (5), (e) (3) (i) and (ii).

<sup>26</sup> It is interesting to note that the word "designate" is used only twice in the TRRO, and not in the context of a wire center being designated as non-impaired.

<sup>27</sup> Qwest March 14, 2006, Responses to Joint CLEC Exceptions, ¶¶ 4-5.

<sup>28</sup> Qwest Petition, ¶ 1; Joint CLEC Petition, ¶ 4.

<sup>29</sup> TRRO, ¶ 234.

particular, this requires state commissions to interpret the TRRO to determine whether ILECs used the appropriate ARMIS data to calculate the number of business lines serving a wire center. The FCC identified in the TRRO only the type of data carriers should use in determining whether wire centers meet the non-impairment criteria. We continue to find that the FCC did not mandate or require the use of data from a particular year when applying the criteria to particular wire centers.

- 34 We are persuaded, however, that our decision to use 2005 data may run afoul of the FCC's requirement that wire center designations are permanent. If a wire center meets the FCC's criteria at the time an ILEC designates the wire center, but does not meet the criteria when applying data from a later period of time, the wire center designation would change, contrary to the FCC's rules. Thus, we find that state commissions must evaluate the most current data available when the ILECs designated the wire center as non-impaired. Specifically, state commissions must consider the number of fiber-based collocators in the particular wire center on the date the ILEC designates the wire center as non-impaired, and the annual ARMIS 43-08 business line data available on the designation date.
- 35 Given this clarification, we strike paragraphs 20-21 of Order 04. While we continue to believe those paragraphs describe the preferable public policy, we are constrained by the FCC's decision.<sup>30</sup>
- 36 We further clarify that we accept 2003 data as appropriate in evaluating the ILECs' initial wire center lists. After releasing the TRRO on February 4, 2005, the FCC asked Qwest and other ILECs to submit lists of wire centers meeting the FCC's criteria. The ILECs used the readily available 2003 ARMIS data in making their initial wire center list. While we recognize that the ILECs had presumably collected 2004 ARMIS data and were preparing the data for filing with the FCC by April 1, we find the ILECs reasonably relied on 2003 data given the circumstances at the time.
- 37 Going forward, however, we recognize that after December 31<sup>st</sup> of a given year, ILECs have annual ARMIS 43-08 available for that year. Therefore, to ensure that ILECs use the most recent available data when designating a wire center, we will

---

<sup>30</sup> Order 04, ¶¶ 20-21; *See supra*. ¶ 29.

evaluate wire centers designated as non-impaired between January 1 and April 1 using the ARMIS data to be filed on April 1. Applying such a standard will promote decisions based on the best information available, reflecting the most recent state of competition between competitive and incumbent carriers at the wire center level. Table 1, below, illustrates our decision:

**Table 1: Applicable ARMIS Data for Wire Center Designations**

<b>Date of Wire Center Designation</b>	<b>Applicable ARMIS 43-08 Data</b>
January 1, 2007 to April 1, 2007	ARMIS data to be filed on April 1, 2007, reflecting data collected through December 31, 2006.
April 1 to December 31, 2006	ARMIS data filed on April 1, 2006, reflecting data collected through December 31, 2005.

38 For the reasons discussed above, we grant both Qwest's and the Joint CLECs' petitions for reconsideration and reverse, in part, our decision in Order 04 on this issue. In addition, after reviewing the 2003 ARMIS data Qwest and Verizon filed in response to Order 02 and 03, we find Qwest's designation of the Seattle Main/Mutual wire center as Tier 1 for high-capacity loops, Kent O'Brien wire center as Tier 1 for high-capacity transport, and Seattle Cherry wire center as Tier 2 for high-capacity transport, and Verizon's designation of the Bothell wire center as Tier 2 for high-capacity transport to be correct. Accordingly, we modify the Interpretive Statement in this docket to reflect our understanding of the TRRO and these wire center designations.

**C. Effective Date**

39 The FCC established a one-year transition period in the TRRO for competitive carriers to transition from using UNEs to alternative facilities, beginning with March 11, 2005, the effective date of the TRRO.<sup>31</sup> The FCC also provided that ILECs could begin charging higher rates for UNEs during the transition period.<sup>32</sup> Where an ILEC designated wire centers as non-impaired in the future the FCC noted that ILECs and competing carriers would need to "negotiate appropriate transition mechanisms" through negotiation or arbitration under Section 252 of the Act.<sup>33</sup>

---

<sup>31</sup> *TRRO*, ¶¶ 141, 195.

<sup>32</sup> *Id.*, ¶¶ 145, 198.

- 40 The Joint CLECs assert that on July 8, 2005, Qwest designated three wire centers as non-impaired for high-capacity transport elements – Seattle Atwater (Tier 1), Seattle Campus (Tier 1) and Seattle Duwamish (Tier 2). The Joint CLECs concede that the three wire centers meet the non-impairment criteria as of March 11, 2005, and do not contest the non-impairment designation of these wire centers.<sup>34</sup> However, the Joint CLECs ask us to clarify that the effective date for the three wire centers is July 8, 2005, not March 11, 2005. Specifically, the Joint CLECs assert that the transition period and higher transition rates for high-capacity transport UNEs serving these three wire centers should not begin until July 8, 2005.<sup>35</sup> The Joint CLECs rely on a finding in a recent order by the Utah Commission that is consistent with their request in this proceeding.<sup>36</sup> The Joint CLECs assert they first made this request in comments filed on March 21, 2006, but the Commission has not yet addressed the issue.<sup>37</sup>
- 41 Qwest concedes that it designated the three wire centers as non-impaired on July 8, 2005.<sup>38</sup> Qwest argues, however, that the effective date for designating for these three wire centers should be March 11, 2005. Qwest asserts that “the facts supporting the wire center designations existed as of March 11, 2005, and the designations are appropriate as of that date.”<sup>39</sup> Qwest argues that delaying the effective date will penalize Qwest for taking the time to carefully evaluate whether its wire centers met the non-impairment criteria.<sup>40</sup>
- 42 We grant the Joint CLECs’ request for clarification on this issue. The issue is ripe for consideration in a petition seeking clarification under WAC 480-07-835. The Joint CLECs do not wish to change the outcome of the order, but obtain resolution of the issue. The Joint CLECs properly addressed the issue in their initial comments, yet we have not addressed the issue in our orders.
- 43 We find Qwest’s position inconsistent on this issue. Qwest argues that the data used to evaluate a wire center designation should be the most current as of the date the

<sup>33</sup> *Id.*, ¶ 142, n.199, ¶ 196, n.519.

<sup>34</sup> Joint CLEC Petition, ¶ 9.

<sup>35</sup> *Id.*

<sup>36</sup> *Id.*, ¶ 10, citing *In re Investigation into Qwest Wire Center Data*, Utah PSC, Docket No. 06-049-40, Report and Order at 22-23 (Sept. 11, 2006).

<sup>37</sup> *Id.*, ¶ 9.

<sup>38</sup> Qwest Answer, ¶ 9.

<sup>39</sup> *Id.*

<sup>40</sup> *Id.*, ¶ 10.

ILEC designates the wire center, but now seeks to establish an effective date prior to the designation date. We are persuaded that the effective date for these wire centers for transition under the TRRO should be July 8, 2005. Qwest designated these wire centers as non-impaired five months after the FCC released the TRRO. It is appropriate, therefore, to apply the FCC's treatment for wire centers designated in the future. We recognize that this proceeding is not an arbitration proceeding under Section 252, but note that in a recent arbitration proceeding, the Commission found a one-year transition period to be appropriate for future wire center designations.<sup>41</sup> We see no valid reason why the transition period for these three wire centers should begin prior to the date Qwest designated them as non-impaired.

**D. Qwest Data**

- 44 In response to Order 04, Qwest submitted 2005 business line data for three wire centers: Kent O'Brien, Seattle Cherry and Olympia Whitehall. The Joint CLECs object to this data, asserting Qwest did not provide ARMIS 43-08 data as required by the FCC and the Commission's orders, but instead provided modified data.<sup>42</sup> The Joint CLECs assert they recently discovered in a similar proceeding in Utah that Qwest modified ARMIS 43-08 data by providing ratios, based on proprietary statewide average data, of dedicated lines that originate in one wire center and provide service to another wire center.<sup>43</sup>
- 45 Qwest admits that it has modified the ARMIS 43-08 data, but asserts it used the same method in providing data to the Commission when providing data in April in response to Order 03 and in October in response to Order 04.<sup>44</sup> Qwest argues the modifications

<sup>42</sup> Joint CLEC's October 30, 2006, Objections to Qwest Response to Order 04, ¶¶ 3-4. The Joint CLECs also assert that Qwest did not demonstrate that there were four fiber-based collocators in the Olympia Whitehall wire center. *Id.*, ¶¶ 5-7. As we discuss above, this issue has now been resolved.

<sup>43</sup> *Id.*, ¶ 3.

<sup>44</sup> Qwest November 1, 2006, Answer to Joint CLEC Objections, ¶¶ 1, 5, 6.

are necessary to correlate the “raw” ARMIS 43-08 data to specific wire centers.<sup>45</sup> Qwest also asserts that it explained its methods and calculations in these same filings.<sup>46</sup>

- 46 In response to Order 03 and Order 04, Qwest provided ARMIS 43-08 data for certain wire centers by calculating a utilization or “fill-factor” to demonstrate actual usage of circuits or channels serving a wire center. Qwest provided the statewide average fill factors in its response to Bench Request No. 02.<sup>47</sup> In that response, Qwest explained:

[P]ursuant to FCC requirements for providing data for the ARMIS 43-08 report, Business Switched Access Line data is reported on a statewide level. Actual active channels on underlying DS1 facilities supporting products such as ISDN-PRI, Digital Switched Service (DSS) and UAS, which is a similar product to DSS, are known and reported by state.

When disaggregating the ARMIS 43-08 Business Switched Access Line data to the wire center level as required by the TRRO, average fill factors must be applied to the DS1 Facilities underlying ISDN-PRI, DSS and UAS services. As a result, to obtain active channel information at a wire center level, the statewide ARMIS quantities for those products are apportioned across the wire centers based on the underlying DS1s used to provide the ISDN-PRI, DSS and UAS services in each wire center. Once apportioned, Qwest applies a statewide average fill factor to those counts to derive the number of active channels by wire center.<sup>48</sup>

- 47 The FCC provided that business lines should be counted as actual circuits in use.<sup>49</sup> In deriving the business line counts in the three exchanges, Qwest calculated a ratio based on statewide data of DSO and DS1 circuits to figure out the equivalent number of DSO channels actually used in each wire center.<sup>50</sup> For each circuit that does not

---

<sup>45</sup> *Id.*, ¶ 4.

<sup>46</sup> *Id.*, ¶ 6.

<sup>47</sup> Qwest April 28, 2006 Response to Bench Request No. 02, Confidential Attachment A.

<sup>48</sup> *Id.*, Response to Bench Request No. 02.

<sup>49</sup> Qwest November 1, 2006, Answer to Joint CLEC Objections, ¶ 6.; *see also* 47 C.F.R. § 51.5.

<sup>50</sup> Qwest’s November 1, 2006, Answer to Joint CLEC Objections, ¶ 6. A DSO channel is the equivalent of one copper-pair line providing voice grade service for one telephone call. A DS1 circuit provides the equivalent of 24 DSOs, or 24 channels for 24 separate calls.

originate and terminate in the same exchange, Qwest applied the ratio to existing DS1 circuits to get the exact number of DSO channels that originate from these wire centers. Qwest's assumptions appear reasonable, as applying 24 channels to each DS1 would miscalculate the actual number of DSO channels in use. Qwest applies a fill-factor, or ratio of facilities actually in use that is less than the 24 channels in a DS1.<sup>51</sup> This method benefits, rather than harms the Joint CLECs by not overestimating the actual use of a circuit.

48 We deny the Joint CLECs' objection to Qwest's use of ARMIS data. We find it appropriate and not inconsistent with the TRRO for an ILEC to modify raw ARMIS data to provide information for a particular wire center. The Joint CLECs are correct that the FCC relies on ARMIS data because they are "an objective set of data that incumbent LECs already have created for other regulatory purposes."<sup>52</sup> However, ARMIS data is provided on a statewide basis, not by wire center. Given that, Qwest must manipulate or modify the raw ARMIS data to provide meaningful information concerning specific wire centers. This may require the use of ratios or fill-factors to extrapolate data referring to the specific wire centers and to reflect the circuits actually in use. Contrary to the Joint CLECs' suggestion, we do not find Qwest's modification of the data a reason to reject Qwest's designation of wire centers, or to reverse prior findings about non-impairment of wire centers in this proceeding.

#### **E. Interpretive Statement**

49 As we discussed in Order 04, the Commission may issue interpretive statements "to advise the public of its current opinions." RCW 34.05.320; *see also* RCW 34.05.010(8); WAC 480-07-920. The Commission is authorized under RCW 80.36.610 to take all actions, conduct proceedings and enter orders contemplated for a state commission under the Act. Under Section 251(d)(3) of the Act, state commissions may enforce regulations, orders or policies in implementing Section 251 if doing so:

- (A) establishes access and interconnection obligations of local exchange carriers;
- (B) is consistent with the requirements of this section; and

---

<sup>51</sup> Qwest's April 28, 2006 Response to Bench Request No. 02, Confidential Attachment A.

<sup>52</sup> TRRO, ¶ 105.

(C) does not substantially prevent implementation of the requirements of this section and the purposes of this part.

50 Issuing a statement interpreting the FCC's orders and rules governing wire center designations in a manner consistent with state policy is consistent with state commission authority under Section 251(d)(3). Our decisions in this Order further interpret the requirements for access and interconnection obligations for high-capacity loops and transport for local exchange carriers, are consistent with FCC orders and rules, and do not substantially prevent implementation of Section 251 or its purposes.

51 By this order, we modify the interpretive statement we issued on October 5, 2006, to reflect the interpretations in this Order of the FCC's decisions in the TRRO and FCC rules concerning non-impairment criteria for wire centers. We issue a modified interpretive statement incorporating the interpretations in orders of the TRRO and FCC rules concerning non-impairment criteria for wire centers, and modify the list of Qwest and Verizon wire centers that meet our interpretation of these criteria. The modified interpretive statement is attached to this Order as Appendix 2.

#### **FINDINGS OF FACT**

52 Having discussed above in detail the evidence received in this proceeding concerning all material matters, and having stated findings and conclusions upon issues in dispute among the parties and the reasons therefore, the Commission now makes and enters the following summary findings of fact, incorporating by reference pertinent portions of the preceding detailed findings:

53 (1) The Washington Utilities and Transportation Commission is an agency of the state of Washington vested by statute with the authority to regulate the rates and conditions of service of telecommunications companies within the state, and to take actions, conduct proceedings, and enter orders as permitted or contemplated for a state commission under the Telecommunications Act of 1996.

54 (2) Verizon Northwest Inc. and Qwest Corporation are incumbent Local Exchange Companies, or ILECs, providing local exchange telecommunications service to the public for compensation within the state of Washington.

- 55 (3) Covad Communications Company, Electric Lightwave, Inc., Eschelon Telecom of Washington, Inc., Integra Telecom of Washington, Inc., McLeodUSA Telecommunications Services, Inc., Tel West Communications, LLC, TSS Digital Services, Inc., and XO Communications Services, Inc., are local exchange carriers within the definition of 47 U.S.C. § 153(26), providing local exchange telecommunications service to the public for compensation within the state of Washington, or are classified as competitive telecommunications companies under RCW 80.36.310 - .330.
- 56 (4) The FCC released its Triennial Review Remand Order on February 4, 2005, with an effective date of March 11, 2005.
- 57 (5) In response to the FCC's order, Qwest and Verizon, as well as other ILECs across the nation, filed with the FCC in February 2005 lists of wire centers meeting the FCC's non-impairment criteria using 2003 ARMIS 43-08 data.
- 58 (6) Qwest identified three additional wire centers – Seattle Atwater, Seattle Campus and Seattle Duwamish—as meeting the FCC's non-impairment criteria on July 8, 2005.
- 59 (7) In response to Order 02 in this proceeding, Qwest and Verizon submitted to the Commission data based on 2003 ARMIS 43-08 data reported to the FCC.
- 60 (8) The Joint CLECs dispute the non-impairment designation of four wire centers based on 2003 ARMIS data: Qwest's Seattle Main/Mutual wire center as Tier 1 for high-capacity loops based on 2003 ARMIS data and fiber-based collocator data, and Qwest's Kent O'Brien wire center as Tier 1, Qwest's Seattle Cherry wire center as Tier 2 and Verizon's Bothell wire center as Tier 2 for high-capacity transport based on 2003 ARMIS data.
- 61 (9) The Joint CLECs concur in Qwest's designation of the Olympia Whitehall wire center as Tier 1 for transport elements based on the number of fiber-based collocators present in the wire center.
- 62 (10) In response to Orders 03 and 04, Qwest submitted ARMIS 43-08 data which Qwest modified by providing ratios or fill factors, based on proprietary

statewide average data, of dedicated lines that originate in one wire center and provide service to another wire center.

**CONCLUSIONS OF LAW**

- 63 Having discussed above all matters material to this decision, and having stated detailed findings, conclusions, and the reasons therefore, the Commission now makes the following summary conclusions of law incorporating by reference pertinent portions of the preceding detailed conclusions:
- 64 (1) The Washington Utilities and Transportation Commission has jurisdiction over the subject matter of, and parties to, these proceedings.
- 65 (2) The FCC's Triennial Review Remand Order, or TRRO, finds competitive local exchange carriers are not impaired under Section 251 of the Act without access to high-capacity loops and transport, if the wire centers serving the loops and transport meet certain criteria.
- 66 (3) The FCC established in the TRRO the number of "fiber-based collocators" in a wire center and the number of "business lines" serving a wire center as the criteria for determining whether a wire center is non-impaired for purposes of CLEC access to high-capacity loops and transport. A wire center must meet the criteria for both fiber-based collocators and business lines to be non-impaired for high-capacity loops, while a wire center may meet either criteria for non-impairment for high-capacity transport.
- 67 (4) The FCC identified in the TRRO only the type of data carriers should use in determining whether wire centers meet the non-impairment criteria. The FCC did not mandate or require the use of data from a particular year when applying the criteria to particular wire centers.
- 68 (5) The FCC established a one-year transition period, beginning March 11, 2005, the effective date of the TRRO, during which competitive carriers would transition from using UNEs to alternative facilities and ILECs could begin charging higher rates for UNEs. Where an ILEC designates wire centers as non-impaired in the future, ILECs and competing carriers must negotiate or arbitrate appropriate transition plans under Section 252 of the Act.

- 69 (6) In paragraphs 100 and 234 of the TRRO, the FCC recognized state commission authority to resolve disputes over whether certain wire centers meet the factual criteria for non-impairment.
- 70 (7) The TRRO does not identify who, or which entity, will designate a wire center as non-impaired. In practice, the ILECs designate certain wire centers as non-impaired by submitting lists to the FCC identifying which wire centers the ILECs believe meet the non-impairment criteria in the TRRO.
- 71 (8) The role of state commissions in implementing the FCC's wire center non-impairment criteria is to resolve disputes between the ILECs and their competitors, providing a check on the ILECs' designation of non-impaired wire centers.
- 72 (9) State commissions must evaluate the most current data available at the time an ILEC designates a wire center as non-impaired.
- 73 (10) Evaluating a wire center designation using data from a period of time after the ILEC designated the wire center may change the non-impairment status of the wire center, contrary to the FCC's rules.
- 74 (11) It is appropriate to use 2003 ARMIS data in evaluating the ILECs' initial wire center designations. The ILECs reasonably relied on the readily available 2003 ARMIS data in making their initial wire center lists. While 2004 ARMIS data had been collected and was soon to be filed with the FCC, 2003 ARMIS data was publicly available from the FCC.
- 75 (12) For wire center designations an ILEC makes after February 2005, the appropriate data to use is that most recently filed with the FCC. However, for wire center designations made between January 1 and April 1, the appropriate data is ARMIS data the ILEC will file on April 1. Using this data will ensure that ILECs use the most recent available data when designating a wire center, and that the designation reflects the most recent state of competition between competitive and incumbent carriers at the wire center level.

- 76 (13) Where Qwest designated wire centers as non-impaired on July 8, 2005, five months after the FCC released the TRRO, it is appropriate to apply the FCC's treatment for wire centers designated in the future.
- 77 (14) A one year transition period from July 8, 2005, for Qwest's Seattle Atwater, Seattle Campus and Seattle Duwamish wire centers is consistent with this Commission's recent decision in an arbitration proceeding in Docket UT-043013.
- 78 (15) Where the FCC requires that business lines be counted as actual circuits in use, and ARMIS 43-08 data is provided on a statewide basis, not by wire center, it is reasonable for an ILEC to modify ARMIS data to provide meaningful information about specific wire centers. It is appropriate and reasonable for an ILEC to modify raw ARMIS data by using ratios or fill-factors to extrapolate data referring to specific wire centers and to reflect the actual circuits in use.
- 79 (16) The Commission may issue interpretive statements "to advise the public of its current opinions." *RCW 34.05.320*.
- 80 (17) Issuing a statement interpreting the FCC's Triennial Review Remand Order and accompanying FCC rules concerning non-impairment criteria for wire centers is appropriate and authorized by state and federal law.

**ORDER**

**THE COMMISSION ORDERS:**

- 81 (1) The Joint CLECs' Petition for Reconsideration of Order 04 is granted, in part, consistent with this Order.
- 82 (2) Qwest Corporation's Petition for Reconsideration of Order 04 is granted, consistent with this Order.
- 83 (3) Paragraph 22 of Order 04 is modified to reflect that the Joint CLECs dispute the non-impairment designations of Qwest's Seattle Main/Mutual wire center as Tier 1 for high-capacity loops based on 2003 ARMIS data and the number

of fiber-based collocators, and Verizon's Bothell wire center as Tier 2 for high capacity transport elements based on 2003 ARMIS data.

- 84 (4) Paragraphs 20-21 of Order 04 are stricken.
- 85 (5) The Commission issues a modified interpretive statement concerning non-impairment criteria for wire centers under the Federal Communications Commission's Triennial Review Remand Order. The modified interpretive statement is attached as Appendix 2 to this Order and by this reference included herein.
- 86 (6) The Commission retains jurisdiction to effectuate the terms of this order.

DATED at Olympia, Washington, and effective December 15, 2006.

.....	)	

I. INTRODUCTION

1 This is an interpretive statement of the Washington Utilities and Transportation Commission (Commission) pursuant to RCW 34.05.010 (8), RCW 34.05.230, and WAC 480-07-920. The purpose of this statement is to advise the public of the Commission's interpretation of provisions of the Federal Communications Commission's (FCC) Triennial Review Remand Order, or TRRO<sup>1</sup> and accompanying FCC rules<sup>2</sup> governing access by competitive local exchange carriers (CLECs) to high capacity loops and transport in wire centers owned or controlled by incumbent local exchange carriers (ILECs). After interpreting the FCC's order and rules, this statement modifies the list of wire centers designated by Qwest Corporation (Qwest) and Verizon Northwest Inc. (Verizon) as non-impaired, or ineligible for unbundled access by competing local exchange carriers (CLECs).

II. BACKGROUND

2 On February 4, 2005, the FCC released its Order on Remand, also known as the Triennial Review Remand Order, or TRRO. In the TRRO, the FCC reexamined whether competitors were impaired without unbundled access to certain network elements, pursuant to Section 251(c)(3) of the federal Telecommunications Act of

---

<sup>1</sup> In the Matter of Unbundled Access to Network Elements; Review of the Section 251 Unbundling Obligations of Incumbent Local Exchange Carriers, WC Docket No. 04-313, CC Docket No. 01-338, Order on Remand, FCC 04-290 (rel. Feb. 4, 2005) [Hereinafter "Triennial Review Remand Order" or "TRRO"].

<sup>2</sup> 47 C.F.R. §§ 51.5, 319 (a) (4), (5) and (6).

1996 (the Act).<sup>3</sup> In determining whether competitors are impaired without unbundled access to high-capacity loops, the FCC looked to the number of fiber-based collocators<sup>4</sup> in a wire center and the number of business lines<sup>5</sup> terminating and leaving a wire center as indicia of competition. To find non-impairment, both criteria must be met. When determining whether a wire center is considered non-impaired for access by competitors to high-capacity interoffice transport, the FCC requires the wire center to meet either criteria.<sup>6</sup> The FCC classified ILEC wire centers into three tiers for determining non-impairment for transport UNEs “based on indicia of the potential revenues and suitability for competitive transport deployment.”<sup>7</sup>

- 3 Wire centers designated as Tier 1 for transport are considered the most competitive, requiring that there be four or more fiber-based collocations at the wire center, or serve 38,000 or more business lines.<sup>8</sup> Wire centers are designated as non-impaired for DS3-capacity loops if the wire center serves at least 38,000 business lines *and* four fiber-based collocators.<sup>9</sup> The FCC classifies wire centers as non-impaired for purposes of access to DS1-capacity loops if the wire center serves at least 60,000

<sup>3</sup> Pub. L. No. 104-104, 110 Stat. 56 (1996).

<sup>4</sup> The FCC defines fiber-based collocators as: [A]ny carrier, unaffiliated with the incumbent [local exchange carrier] LEC, that maintains a collocation arrangement in an incumbent LEC wire center, with active electrical power supply, and operates a fiber-optic cable or comparable transmission facility that (1) terminates at a collocation arrangement within the wire center; (2) leaves the incumbent LEC wire center premises; and (3) is owned by a party other than the incumbent LEC or any affiliate of the incumbent LEC, except as set forth in this paragraph. ... Two or more affiliated fiber-based collocators in a single wire center shall collectively be counted as a single fiber-based collocator. 47 C.F.R. § 51.5; *see also* TRRO, ¶ 102.

<sup>5</sup> The FCC defines a business line as: [A]n incumbent LEC-owned switched access line used to serve a business customer, whether by the incumbent LEC itself or by a competitive LEC that leases the line from the incumbent LEC. The number of business lines in a wire center shall equal the sum of all incumbent LEC business switched access lines, plus the sum of all [unbundled network element] UNE loops connected to that wire center, including UNE loops provisioned in combination with other unbundled elements. Among these requirements, business line tallies (1) shall include only those access lines connecting end-user customers with incumbent LEC end-offices for switched services, (2) shall not include non-switched special access lines, (3) shall account for ISDN and other digital access lines by counting each 64 kpbs-equivalent as one line. For example, a DS1 line corresponds to 24 kpbs-equivalents, and therefore to 24 “business lines.” 47 C.F.R. § 51.5.

<sup>6</sup> TRRO, ¶¶ 111-12, 118.

<sup>7</sup> *Id.*, ¶ 111.

<sup>8</sup> *Id.*, ¶¶ 111-12.

<sup>9</sup> *Id.*, ¶ 174.

business lines *and* four or more fiber-based collocators.<sup>10</sup> Tier 2 wire centers must have three or more fiber-based collocations or serve 24,000 or more business lines.<sup>11</sup> Tier 3 wire centers are those that are not Tier 1 or 2 wire centers.<sup>12</sup> Tier 1 and Tier 2 wire centers are considered “non-impaired,” such that competitive carriers do not have unbundled access to high-capacity loops and transport in these wire centers.<sup>13</sup> Competitors continue to have unbundled access to these network elements in Tier 3 wire centers.<sup>14</sup>

- 4 After the FCC issued the TRRO, the FCC’s Wireline Competition Bureau requested that ILECs, such as Verizon and Qwest, submit lists of wire centers satisfying the TRRO’s non-impairment criteria. Qwest and Verizon submitted lists in February 2005 using the most recent data filed with the FCC, reflecting data collected through December 2003.
- 5 The Commission opened this docket as a staff investigation in April 2005. After receiving comments from Qwest, Verizon and the Joint CLECs,<sup>15</sup> the Commission held a workshop in this proceeding on February 1, 2006, concerning competition in the telecommunications industry and challenges facing telecommunications carriers after the TRRO. One of the primary issues identified in the workshop was the proper designation of wire centers in Washington meeting the FCC’s non-impairment standards for UNE loops, high-capacity circuits and transport. In particular, competitive local exchange carriers (CLECs) attending the workshop questioned whether Qwest and Verizon had correctly designated certain wire centers as non-impaired for purposes of unbundled access to unbundled network element (UNE) loops, high-capacity circuits and transport.
- 6 Following the workshop, the Commission chose to change the nature of the proceeding to consider whether to issue an interpretive or policy statement. The

---

<sup>10</sup> *Id.*, ¶ 178.

<sup>11</sup> *Id.*, ¶ 118.

<sup>12</sup> *Id.*, ¶ 123.

<sup>13</sup> *Id.*, ¶¶ 111, 118.

<sup>14</sup> *Id.*, ¶ 123.

<sup>15</sup> Covad Communications Company (Covad), Eschelon Telecom of Washington, Inc. (Eschelon), Integra Telecom of Washington, Inc. (Integra), McLeodUSA Telecommunications Services, Inc., and XO Communications Services, Inc. submitted comments jointly, and are referred through this statement collectively as the “Joint CLECs.”

Commission held a conference on February 6, 2006, and established a schedule for obtaining information from Qwest and Verizon about the wire centers in question. The schedule provided an opportunity for interested parties to file exceptions to Qwest's and Verizon's data, for Qwest and Verizon to respond, and for interested parties to file final exceptions or state agreement with Qwest's and Verizon's designation of wire-centers.

- 7 At the request of the participating CLECs, Qwest and Verizon, the Commission entered Order 01 in this proceeding, a protective order, to allow interested persons who have filed appropriate exhibits to the protective order access to confidential and highly confidential information provided by Qwest and Verizon.
- 8 On February 21, the Commission entered Order 02, Order Requiring Disclosure of Information, requiring Qwest and Verizon to provide certain information to the Commission and interested persons.
- 9 After reviewing interested parties' comments about and exceptions to the data, Administrative Law Judge Ann E. Rendahl entered an initial order, Order 03, in this proceeding on April 20, 2006. The initial order resolved disputes about how to interpret and apply the FCC's order and rules. The order directed Qwest and Verizon to submit additional data concerning fiber-based collocators in the disputed wire centers. The order also required Verizon to submit, as confidential, data concerning fiber-based collocators and business lines, as required by the Commission's Order 02.
- 10 The Commission evaluated the additional data Qwest and Verizon provided to the Commission and reviewed comments and exceptions to this data, as well as certain CLECs' and Qwest's petitions for administrative review of the initial order.
- 11 On October 4, 2006, the Commission entered Order 04, resolving the remaining disputes about interpreting the FCC's TRRO and accompanying rules governing wire center designation, and adopting this interpretive statement. The Commission also directed Qwest to submit additional data to allow the Commission to evaluate the proper designation of the wire centers that remained in dispute.

- 12 After the Joint CLECs and Qwest sought reconsideration of Order 04, the Commission entered Order 06 on December 15, 2006, modifying in part and reversing in part Order 04.

### III. STATEMENT OF INTERPRETATION

- 13 This statement reflects the Commission's interpretation of the FCC's Triennial Review Remand Order and accompanying rules governing wire center designation, 47 C.F.R. §§ 51.5, 319 (a) (4), (5) and (6). A more detailed discussion of the Commission's interpretation is set forth in the initial order, Order 03, Order 04 and Order 06 in this docket. The Commission will use this statement when resolving disputes about competitive carriers' access to high capacity loops and transport in Qwest and Verizon wire centers in Washington.
- 14 As discussed above, the FCC looks to the number of fiber-based collocators and business lines serving a wire center to determine whether competitors are impaired without unbundled access to high-capacity loops and interoffice transport in a wire center.
- 15 The Commission has resolved disputes between certain CLECs, Qwest and Verizon concerning the type of data Qwest and Verizon must submit to demonstrate a wire center meets the FCC's criteria. The Commission interpreted the TRRO and FCC rules in resolving these disputes in Orders 03, 04, and 06 in this docket. The interpretations address the process of designating a wire center as non-impaired, the role of state commissions under the TRRO, the appropriate age or year of data to use in evaluating a wire center designation, the data necessary to verify the number of fiber-based collocators, the method for calculating business lines serving a wire center, and the effective date of wire center designations for determining a transition period. These interpretations are stated below to advise the public and interested parties of our current opinions concerning wire center designations.
- 16 **Process for designating a wire center.** The FCC established in the TRRO a self-implementing process for determining which wire centers meet the non-impairment criteria. The TRRO does not identify who, or which entity, will designate a wire

center as non-impaired.<sup>16</sup> In practice, the ILECs designate wire centers as non-impaired by submitting lists to the FCC identifying which wire centers the ILECs believe meet the non-impairment criteria in the TRRO.<sup>17</sup>

- 17 **Role of state commissions.** The role of state commissions in implementing the FCC's non-impairment criteria is to resolve disputes between the ILECs and their competitors, providing a check on the ILECs' designation. The FCC requires carriers to work out between themselves which wire centers are non-impaired, but if they cannot agree, the state commissions may resolve disputes among parties about whether a wire center is properly classified or designated as non-impaired.<sup>18</sup> In resolving the dispute, state commissions must evaluate the most current data available when the ILECs designated the wire center as non-impaired.
- 18 **Age of data.** ILECs must provide the most current data filed with the FCC or available to the ILEC identifying the number of fiber-based collocators and business lines serving a wire center when seeking to designate the wire center as non-impaired. The FCC identified in the TRRO only the type of data carriers should use in determining whether wire centers meet the non-impairment criteria. The FCC did not mandate or require the use of data from a particular year when applying the criteria to particular wire centers.
- 19 It is appropriate to use 2003 ARMIS 43-08 data in evaluating the ILECs' initial wire center designations.<sup>19</sup> The ILECs reasonably relied on the readily available 2003 ARMIS data in making their initial wire center lists. While 2004 ARMIS data had been collected and was soon to be filed with the FCC, 2003 ARMIS data was publicly available from the FCC.
- 20 For wire center designations an ILEC makes after February 2005, the appropriate data to use is that most recently filed with the FCC. However, for wire center designations

---

<sup>16</sup> The word "designate" is used only twice in the TRRO, and not in the context of a wire center being designated as non-impaired.

<sup>17</sup> Qwest March 14, 2006, Responses to Joint CLEC Exceptions, ¶¶ 4-5.

<sup>18</sup> TRRO, ¶ 234.

<sup>19</sup> Each year on April 1, ILECs file annual network, financial and service quality data with the FCC's Automated Reporting Management Information System (ARMIS). The number of access lines in service is one type of data ILECs provide annually for FCC Report 43-08 in the ARMIS Operating Data Report. This data is referred to as ARMIS 43-08 data.

made between January 1 and April 1, the appropriate data is ARMIS data the ILEC will file on April 1. Using this data will ensure that ILECs use the most recent available data when designating a wire center, and that the designation reflects the most recent state of competition between competitive and incumbent carriers at the wire center level. Table 1, below, illustrates our interpretation:

**Table 1: Applicable ARMIS Data for Wire Center Designations**

Date of Wire Center Designation	Applicable ARMIS 43-08 Data
January 1, 2007 to April 1, 2007	ARMIS data to be filed on April 1, 2007, reflecting data collected through December 31, 2006.
April 1 to December 31, 2006	ARMIS data filed on April 1, 2006, reflecting data collected through December 31, 2005.

- 21 **Verification of fiber-based collocators.** When seeking to designate a wire center as non-impaired, an ILEC must provide sufficient documents and explanation to allow the Commission and interested parties to verify the number of fiber-based collocators terminating a collocation arrangement in that wire center. The ILEC must demonstrate that the collocator “maintains a collocation arrangement in an incumbent LEC wire center, with active electrical power supply, and operates a fiber-optic cable or comparable transmission facility that (1) terminates at a collocation arrangement within the wire center; (2) leaves the incumbent LEC wire center premises; and (3) is owned by a party other than the incumbent LEC or any affiliate of the incumbent LEC.”<sup>20</sup>
- 22 **Calculation of business lines.** When seeking to designate a wire center as non-impaired, ILECs must calculate the number of business lines serving the wire center by including the actual circuits in use when calculating ILEC-owned business lines, and the total capacity of circuits, not actual circuits in use, when calculating business UNE-P lines and UNE loops.
- 23 The first two requirements for tallying business lines listed in the FCC’s definition of “business lines” (i.e., that the access lines connect only actual customers and the

---

<sup>20</sup> 47 C.F.R. § 51.5.

- number not include non-switched special access lines) are already applied in the switched access lines ILECs report to the FCC in ARMIS 43-08 data. The third requirement, that digital access lines be counted by voice-grade equivalents, should apply when ILECs count the number of business UNE-P lines and UNE loops served by a wire center. Like the number of business lines served “entirely over competitive loop facilities in particular wire centers,” the number of UNE-P lines and UNE loops in service “is extremely difficult to obtain and verify,” as only CLECs can identify which lines serve business or residential customers.
- 24 Where the FCC requires that business lines be counted as actual circuits in use,<sup>21</sup> and ARMIS 43-08 data is provided on a statewide basis, not by wire center, it is reasonable for an ILEC to modify ARMIS data to provide meaningful information about specific wire centers. It is appropriate and reasonable for an ILEC to modify raw ARMIS data by using ratios or fill-factors to extrapolate data referring to specific wire centers and to reflect the actual circuits in use.
- 25 ILECs must provide a clear explanation of how business and residential UNE-P lines are separately identified in its ARMIS 43-08 data.
- 26 ILECs must include all UNE loops when calculating the number of business lines. The clear language of the TRRO and the FCC’s definition of “business line” demonstrate the FCC’s intent to include all UNE loops in the business line calculation. The FCC did not qualify UNE loops as business UNE loops or non-switched UNE loops, but *all* UNE loops.<sup>22</sup> The FCC’s definition of business line provides: “The number of business lines in a wire center shall equal the sum of all incumbent LEC *business* switched access lines, plus the sum of *all UNE loops* connected to that wire center, including UNE loops provisioned in combination with other unbundled elements.”<sup>23</sup>
- 27 **Effective date of wire center designations.** The FCC established a one-year transition period in the TRRO for competitive carriers to transition from using UNEs to alternative facilities, beginning with March 11, 2005, the effective date of the

---

<sup>21</sup> See 47 C.F.R. § 51.5.

<sup>22</sup> TRRO, ¶ 105 (emphasis added).

<sup>23</sup> 47 C.F.R. § 51.5 (emphasis added).

TRRO.<sup>24</sup> The FCC also provided that ILECs could begin charging higher rates for UNEs during the transition period.<sup>25</sup> Where an ILEC designates wire centers as non-impaired in the future the FCC noted that ILECs and competing carriers would need to “negotiate appropriate transition mechanisms” through negotiation or arbitration under Section 252 of the Act.<sup>26</sup>

28 Where an ILEC designates a wire center as non-impaired a period of time after the FCC released the TRRO, it is appropriate to apply the FCC’s treatment for wire centers designated in the future. A one year transition period from the date the wire center is designated as non-impaired is consistent with this Commission’s recent decision in an arbitration proceeding in Docket UT-043013.<sup>27</sup>

29 **Additional designations of non-impaired wire centers.** If Qwest and Verizon seek to designate additional wire centers as non-impaired wire centers, the companies must notify the Commission of the proposed designation and submit data consistent with the interpretations in this statement. The Commission will open a docket to consider the data, and will notify interested parties of the opportunity to participate in the docket.

#### IV. NON-IMPAIRED WIRE CENTERS IN WASHINGTON

30 Table 2, attached to this statement, identifies the Qwest and Verizon wire centers in Washington that meet the FCC’s criteria for non-impairment, as interpreted in this statement, and their designation as Tier 1 or Tier 2 wire centers for high-capacity transport UNEs.

Denney/  
35

TERM	DESCRIPTION
<b>Access</b>	A local carrier must allow customers access to their preferred long-distance carrier. Customers pay an access charge to their local carrier for access to their long distance carrier and long distance carriers pay access charges to the local carrier to connect to the local carrier's network. <i>(From Newton's Telecom Dictionary, at pages 26-27.)</i>
<b>Access line</b>	A telephone line from a central office to the local premises. <i>See also local loop. (From Newton's Telecom Dictionary, at page 27.)</i>
<b>ARMIS</b>	Automated Reporting Management Information System. The FCC's database of telecommunication carriers' network, financial and service quality data. Carriers update the information annually on April 1.
<b>Business line</b>	A loop or line used for business purposes, i.e., not a residential line.
<b>Central Office</b>	A building where the local loops are connected to switches to allow connection to other customers; also referred to as a wire center where there are several switches functioning as a switch exchange. <i>(From Newton's Telecom Dictionary, at page 157.)</i>
<b>Circuit</b>	"The physical connection (or) path of channels, conductors and equipment between two given points through which an electric current may be established." <i>(From Newton's Telecom Dictionary, at page 167.)</i>
<b>CLEC</b>	Competitive local exchange company. A company competing with an incumbent local exchange company (ILEC) for local service customers; generally subject to limited regulation.
<b>Collocation/ Collocator</b>	<b>Collocation</b> occurs when a competing local carrier locates its switches within another local exchange carrier's central office. A <b>collocator</b> is a carrier that collocates its switches in another carrier's central office. <i>(From Newton's Telecom Dictionary, at page 182.)</i>
<b>Dedicated transport</b>	Facilities dedicated to a particular competitive carrier that the carrier uses for transmission between or among ILEC central offices and tandem switching offices, and to connect its local network to the ILEC's network. <i>(TRRO, ¶ 67)</i>
<b>DS0 / Voicegrade</b>	The digital representation of the capacity of an analog voice channel, i.e., the traditional copper pair loop, transmitting information at 64 kilobytes per second (kbps). <i>(TRO, n. 634)</i>

TERM	DESCRIPTION
<b>DS1</b>	The initial level of multiplexing in the time division hierarchy of the telephone network; a 1.544 megabytes per second (Mbps) signal that provides the equivalent of <b>24 64 kbps DSO channels</b> . The same as a T1 facility. <i>(TRO, n. 634)</i>
<b>DS3</b>	A digital local loop having a total digital signal speed of 44.736 Mbps provided over various transmission media, including, but not limited to fiber optics, coaxial cable, or radio. DS3 loops can be channelized into <b>28 DS1 channels</b> , or unchannelized to provide a continuous bit stream for data. <i>(TRO, n. 634)</i>
<b>High-capacity</b>	High-capacity refers to the ability of the facility to handle a large amount of traffic or information at a single time, e.g., DS1, DS3, OCn capacity.
<b>ILEC</b>	Incumbent local exchange company. A local exchange company in operation at the time the Act was enacted (August 1996).
<b>Interconnection</b>	Connection between facilities or equipment of a telecommunications carrier with a local exchange carrier's network under Section 251(c)(2).
<b>Interconnection Agreement</b>	An agreement between an ILEC and requesting telecommunications carrier (which may be a CLEC) addressing terms, conditions and prices for interconnection, services or network elements pursuant to Section 251.
<b>Local exchange</b>	A geographic area consisting of one or more central offices. <i>(From Newton's Telecom Dictionary, at page 301.)</i>
<b>Loop</b>	The local loop. The copper wire, fiber, or cable serving a particular customer, generally running from a central office to a residence or building.
<b>Network element</b>	A facility or equipment used in providing telecommunications services.
<b>Non-impaired</b>	A term relating to whether a competing carrier has access to unbundled network elements. Under Section 251(d)(2), an ILEC must provide unbundled access to an element if failure to provide the element would impair the carrier's ability to provide service. Under the TRRO, the FCC determined that competing carriers are not impaired under Section 251(d)(2) without unbundled access to high-capacity elements at a wire center if the wire center meets certain criteria. If a wire center meets the criteria, it is designated <b>non-impaired</b> , meaning competitors are not allowed unbundled access to high-capacity loops and transport in the wire center.

TERM	DESCRIPTION
<b>OCn</b>	OCn is an optical interface designed to work with a Synchronous Optical Network (SONET). OCn transmission facilities are deployed as SONET channels having a bandwidth of typically 155.52 Mbps (megabytes per second)(OC3) or higher. ( <i>TRO, n. 631</i> ).
<b>Residential line</b>	A loop or line connecting a residence; used generally for residential, rather than business, purposes.
<b>Section 251(c)(3)</b>	The section of the Act that requires ILECs to provide competing carriers with access to network elements on an unbundled or individual basis. The unbundled elements provided under this section are known as UNEs.
<b>Switched access</b>	The connection between a customer's phone and a long distance carrier's switch when making a local or long distance call over standard telephone lines. ( <i>From Newton's Telecom Dictionary, at page 756.</i> )
<b>TELRIC</b>	Total Element Long Run Incremental Cost. A method of determining the cost, and prices for network elements using a forward-looking process, rather than the existing network of a carrier. Generally, the pricing methodology for UNEs.
<b>TRO</b>	The FCC's Triennial Review Order. August 2003 order addressing UNEs and the impairment standard for UNEs, vacated in part and remanded in part by the D.C. Circuit Court of Appeals in <i>USTA II v. FCC</i> .
<b>TRRO</b>	The FCC's Triennial Review Remand Order. March 2005 order entered in response to D.C. Circuit's <i>USTA II</i> decision: Eliminates local switching as a UNE as of March 11, 2006, and limits unbundling of high-capacity transport and loops.
<b>Transport</b>	Lines or connections used to transmit voice or data through a carrier's network. Transport media include copper wire, fiber optics, microwave, or satellite. ( <i>From Newton's Telecom Dictionary, at page 815.</i> ) See dedicated transport.
<b>Trunk, Also trunked transport</b>	A communication line between two switching systems. A single trunk, capable of carrying a single conversation, is referred to DS0.
<b>Unbundled</b>	A network element that is provided by itself, not in connection with or "bundled" with another network element. A means for a carrier to request particular services from an ILEC to customize the service the carrier provides, without having to accept a package of elements and services that the carrier must take as an all or nothing option.

TERM	DESCRIPTION
UNE	Unbundled network element. Generally a network element an ILEC must make available under Section 251(c)(3) of the Act.
UNE-P, also UNE-P line	Unbundled Network Element Platform, or a combination of local loops, switching and transport offered by the ILEC.
UNE-loop, or UNE-L	Unbundled network element loop, or a stand-alone loop provided without the combination of switching and transport provided via UNE-P.
Wire center	The location where a telephone company terminates and switches local lines, or loops. A wire center may have one or more class 5 central offices or exchanges. <i>(From Newton's Telecom Dictionary, at page 884.)</i>

ISSUED: September 11, 2006

SYNOPSIS

The Commission determines Qwest Corporation's ("Qwest") use of data from its 2004 ARMIS 43-08 report to develop its initial list of non-impaired wire centers in February 2005 was appropriate. Because Qwest's Salt Lake City South and West wire centers first appeared on Qwest's July 8, 2005, update to its initial wire center list, the Commission concludes the effective date of non-impairment for these wire centers is July 8, 2005. Furthermore, the Commission concludes it is reasonable for Qwest to charge a non-recurring charge to competitive local exchange carriers when those carriers choose to convert their unbundled network element ("UNE") services and facilities to alternative Qwest facilities at non-impaired wire centers. However, the Commission seeks further information from the parties regarding the reasonableness of the respective charges proposed by the parties. Finally, the Commission adopts a process to guide future updates to the Qwest non-impaired wire center list.

-1-

By The Commission:

**I. PROCEDURAL HISTORY**

On February 16, 2006, Covad Communications Company; Eschelon Telecom of Utah, Inc.; Integra Telecom of Utah, Inc.; McLeodUSA Telecommunications Services, Inc.; and XO Communications Services, Inc. (hereinafter jointly referred to as “Joint CLECs”) filed a memorandum seeking Commission order: (1) requiring Qwest Corporation (“Qwest”) to provide the underlying data for its non-impaired wire center list submitted to the Federal Communications Commission (“FCC”) pursuant to the FCC’s Triennial Review Remand Order<sup>1</sup> (“TRRO”), (2) approving an initial list of non-impaired wire centers, and (3) implementing a process for updating and approving future lists.

On March 1, 2006, Qwest filed a Motion for an Order Compelling the Production of CLEC-Specific Wire Center Data (“Qwest Motion”) seeking Commission order directing Qwest to provide certain business line count and fiber collocator data essential to this proceeding in a disaggregated form that would permit parties to match specific data with specific competitive local exchange carriers (“CLECs”). Also on March 1, 2006, Qwest filed a Petition to Open a Commission Investigation and Adjudicatory Proceeding to Verify Qwest Wire Center Data and Resolve Related Issues (“Qwest Petition”) seeking not only a resolution of issues related to Qwest’s wire center data but also Commission confirmation of Qwest’s right to assess a nonrecurring charge at applicable tariffed rates when Qwest converts unbundled network

<sup>1</sup>*In the Matter of Review of Unbundled Access to Network Elements, Review of Section 251 Unbundling Obligations of Incumbent Local Exchange Carriers*, Order on Remand, CC Docket NO. 01-338, WC Docket No. 04-313, 20 FCC Rcd 2533 (rel. Feb. 4, 2005) (“TRRO”).

DOCKET NO. 06-049-40

-2-

element (“UNE”) transport or high-capacity loops to alternative facilities or arrangements. Qwest also requested the Commission issue an appropriate protective order to govern the handling of confidential information in this docket. Attached to this filing were two lists, Qwest’s Wire Center Classification for Dedicated Transport list and a Wire Centers That Satisfy the Nonimpairment Standards for DS1 and DS3 Loops list, identifying, respectively, six Qwest Utah wire centers as Tier 1 facilities for dedicated transport and Qwest’s Salt Lake City Main wire center as unimpaired for DS1 and DS3 loops, as defined in the *TRRO*.

On March 9, 2006, at a duly noticed Procedural Conference, the parties agreed to a procedural schedule for this docket, culminating in hearing convening on June 13, 2006. On March 14, 2006, the Commission issued a Protective Order to facilitate disclosure of, and provide adequate protection for, Confidential and Highly Confidential information in this docket.

On April 19, 2006, the Joint CLECs filed a memorandum requesting extension of the Commission-ordered deadlines for the filing of rebuttal, response, and surrebuttal testimony. On April 20, 2006, the Commission issued an Order Modifying Schedule approving said extensions.

On May 3, 2006, the Joint CLECs filed a Motion to Compel Qwest to Respond to Data Requests (“Motion to Compel Discovery”) seeking Commission order compelling Qwest to respond to data requests for wire center data as of the end of 2004. On May 12, 2006, Qwest filed its Response to the Joint CLECs’ Motion to Compel Qwest to Respond to Data Requests arguing the data requests to which Qwest objected did not seek data that is relevant to the issues in this case or that is reasonably calculated to lead to the discovery of admissible evidence and

DOCKET NO. 06-049-40

-3-

asking the Commission to deny the Joint CLECs' Motion. On May 19, 2006, the Administrative Law Judge issued an Order Granting Motion to Compel Discovery requiring Qwest to respond to the subject Joint CLEC data requests.

On June 8, 2006, the Joint CLECs filed a Motion to Strike Portions of Qwest Surrebuttal Testimony and Exhibits ("Motion to Strike") seeking Commission order striking lines 158 through 177 of the June 5, 2006, Surrebuttal Testimony of David L. Teitzel filed by Qwest, as well as Highly Confidential Exhibit DLT-2 accompanying said testimony. On June 9, 2006, Qwest filed its Response to the Joint CLECs' Motion arguing the Motion to Strike is without merit and should be denied. On June 9, 2006, the Administrative Law Judge issued an Order Denying Motion to Strike.

Also on June 9, 2006, the Division of Public Utilities ("Division") filed an Issues List for Docket No. 06-049-40 listing the parties' respective positions on four issues, including eighteen sub-issues, for Commission resolution in this docket.

Hearing convened as scheduled on June 13-14, 2006, before the Administrative Law Judge. The Joint CLECs were represented by Gregory J. Kopta of Davis, Wright, Tremaine, LLP and William A. Haas, McLeod Vice President and Deputy General Counsel. Tami Spocogee, McLeod's Director of Network Cost and Access Billing; Sidney L. Morrison, Senior Consultant and Chief Engineer for QSI Consulting, Inc. ("QSI"); and Michael Starkey, President of QSI testified on behalf of McLeod. Qwest was represented by Gregory B. Monson of Stoel Rives; and Alex M. Duarte, in-house counsel for Qwest. William R. Easton, Qwest's Director-Wholesale Advocacy; Robert J. Hubbard, a Director of Technical Support in Qwest's

DOCKET NO. 06-049-40

-4-

Network Public Policy Organization; and Curtis Ashton, Senior Staff Technical Support Power Maintenance Engineer in Qwest's Technical Support Group, Local Network Organization, testified on behalf of Qwest.<sup>2</sup>

At the conclusion of the hearing, the Administrative Law Judge ordered Qwest to provide additional information to the Joint CLECs that Qwest claimed to have used in evaluating the Provo and Ogden wire centers but had not been previously provided or offered into evidence. The Administrative Law Judge instructed parties that said information would be marked as Joint Hearing Exhibit 2 and, subject to objection, entered into evidence for consideration by the Commission. On June 16, 2006, Qwest provided this information and filed it with the Commission as Highly Confidential Joint Exhibit 2. No party having objected to this exhibit, the Commission hereby admits the same into evidence.

In addition, in response to additional rebuttal testimony provided by Qwest witness Rachel Torrence at hearing, as well as the post-hearing evidence to be provided by Qwest, the Joint CLECs requested their witness Douglas Denney have the opportunity to provide post-hearing supplemental surrebuttal testimony. The Administrative Law Judge granted this request, stating said testimony would be marked and admitted into evidence, subject to objection. On June 26, 2006, the Joint CLECs filed said testimony styled the Supplemental Surrebuttal Testimony of Douglas Denney. No objection having been raised, said testimony is hereby

---

<sup>2</sup>Portions of the hearing discussing Confidential and Highly Confidential information were closed to members of the public who had not previously signed the appropriate Protective Order exhibits. Portions of the transcript relating to closed hearing sessions have been sealed and stored separately. This Order may generally refer to Confidential and Highly Confidential information contained in witness testimony and exhibits, but does not disclose such information. The Commission has issued no separate Confidential or Highly Confidential order in this matter.

DOCKET NO. 06-049-40

-5-

admitted into evidence as Exhibit Eschelon 1SSR for consideration by the Commission.

On July 14, 2006, the parties filed post-hearing briefs. Qwest and the Joint CLECs filed reply briefs on July 28, 2006.

## **II. BACKGROUND, DISCUSSION, FINDINGS, AND CONCLUSIONS**

### **A. The *TRRO* and Applicable Regulatory Provisions**

The FCC undertook the process leading to release of the *TRRO* in response to the decision of the D.C. Circuit Court of Appeals in *United States Telecom Ass'n v. FCC*, 359 F.3d 554 (2004) (“*USTA II*”), vacating and remanding the FCC’s findings of nationwide impairment for mass market switching and dedicated transport in the Triennial Review Order (“*TRO*”).<sup>3</sup> The *TRRO* clarifies the obligations of incumbent local exchange carriers (“ILECs”) to provide unbundled access to dedicated interoffice transport and high-capacity loops, as well as clarifying the FCC’s “impairment” standard.

The *TRRO* establishes route-by-route unbundling requirements for dedicated interoffice transport depending on the number of “business lines” and “fiber-based collocators” in particular wire centers. The relevant *TRRO* language regarding business lines is as follows:

[B]usiness line counts are an objective set of data that incumbent LECs already have created for other regulatory purposes. The [Bell Operating Company or “BOC”] wire center data that we analyze in this Order is based on ARMIS 43-08 business lines, plus business UNE-P, plus UNE-loops. We adopt this definition of business lines because it fairly represents the business opportunities in a wire

---

<sup>3</sup>*Review of the Section 251 Unbundling Obligations of Incumbent Local Exchange Carriers, Implementation of the Local Competition Provisions for the Telecommunications Act of 1996, Deployment of Wireline Services Offering Advanced Telecommunications Capability*, CC Docket Nos. 01-338, 96-98, 98-147, Report and Order and Order on Remand and Further Notice of Proposed Rulemaking, 19 FCC Rcd 16978, 17145 (2003).

DOCKET NO. 06-049-40

-6-

center, including business opportunities already being captured by competing carriers through the use of UNEs. Although it may provide a more complete picture to measure the number of business lines served by competing carriers entirely over competitive loop facilities in particular wire centers, such information is extremely difficult to obtain and verify. Conversely, by basing our definition in an ARMIS filing required of incumbent LECs, and adding UNE figures, which must also be reported, we can be confident in the accuracy of the thresholds, and a simplified ability to obtain the necessary information.<sup>4</sup>

At *TRRO* paragraph 108, the FCC addresses the strengths and efficacy of this approach as follows:

we adopt a proxy approach that, unlike the *Triennial Review Order* triggers, relies on objective criteria to which the incumbent LECs have full access, is readily confirmable by competitors, and makes appropriate inferences regarding potential deployment. This approach will significantly reduce the burdens of implementing the standard in comparison with the extensive and litigious proceedings that followed the issuance of the *Triennial Review Order*.

The FCC's *TRRO* implementation rule, 47 C.F.R. § 51.5 ("Rule 51.5"), further defines a business line as

an incumbent LEC-owned switched access line used to serve a business customer, whether by the incumbent LEC itself or by a competitive LEC that leases the line from the incumbent LEC. The number of business lines in a wire center shall equal the sum of all incumbent LEC business switched access lines, plus the sum of all UNE loops connected to that wire center, including UNE loops provisioned in combination with other unbundled elements. Among these requirements, business line tallies:

- (1) shall include only those access lines connecting end-user customers with incumbent LEC end-offices for switched services,
- (2) shall not include non-switched special access lines,

---

<sup>4</sup>*TRRO*, ¶ 105.

DOCKET NO. 06-049-40

-7-

(3) shall account for ISDN and other digital access lines by counting each 64 kbps-equivalent as one line. For example, a DS1 line corresponds to 24 64 kbps-equivalents, and therefore to 24 “business lines.”

The FCC defines fiber-based collocation in the *TRRO* as “a competitive carrier collocation arrangement, with active power supply, that has a non-incumbent LEC fiber-optic cable that both terminates at the collocation facility and leaves the wire center.”<sup>5</sup>

The *TRRO* creates a three-tiered classification system for all ILEC wire centers “based on indicia of the potential revenues and suitability for competitive transport deployment.”<sup>6</sup> Tier 1 wire centers are those with the highest likelihood for actual and potential competitive deployment, including wholesale opportunities. To qualify for Tier 1 status, a wire center must contain four or more fiber-based collocations or 38,000 or more business lines.<sup>7</sup> Tier 2 wire centers, those with three or more fiber-based collocations or with 24,000 or more business lines, also show a very significant but lesser likelihood of actual and potential competitive

---

<sup>5</sup>*TRRO*, ¶ 102. Rule 51.5 provides the following definition:

A fiber-based collocator is any carrier unaffiliated with the incumbent LEC, that maintains a collocation arrangement in an incumbent LEC wire center, with active electrical power supply, and operates a fiber-optic cable or comparable transmission facility that (1) terminates at a collocation arrangement within the wire center; (2) leaves the incumbent LEC wire center premises; and (3) is owned by a party other than the incumbent LEC or any affiliate of the incumbent LEC, except as set forth in this paragraph.

<sup>6</sup>*TRRO*, ¶ 111.

<sup>7</sup>*Id.*, ¶ 112.

DOCKET NO. 06-049-40

-8-

deployment.<sup>8</sup> Finally, Tier 3 wire centers are those that do not qualify for Tier 1 or Tier 2 status<sup>9</sup> and generally exhibit a low likelihood of supporting actual or potential competitive transport deployment.<sup>10</sup>

The FCC determined competing carriers are impaired without access to DS1-capacity transport on all routes except those connecting two Tier 1 wire centers. Thus, ILECs are obligated to provide unbundled DS1 transport that originates or terminates in any Tier 2 or Tier 3 wire center, but are not obligated to provide unbundled DS1 transport on routes connecting two Tier 1 wire centers.<sup>11</sup> With respect to DS3 interoffice transport, the FCC concluded requesting carriers are not impaired without access to unbundled DS3 transport on routes connecting wire centers where both of the wire centers are either Tier 1 or Tier 2 wire centers. Thus, ILECs are obligated to provide unbundled DS3 transport that originates or terminates in any Tier 3 wire center, but are not obligated to provide unbundled DS3 transport on routes connecting any combination of Tier 1 and Tier 2 wire centers.<sup>12</sup> The FCC's impairment determinations regarding dark fiber mirror those for DS3 transport.<sup>13</sup>

---

<sup>8</sup>*Id.*, ¶ 118.

<sup>9</sup>*Id.*, ¶ 123.

<sup>10</sup>*Id.*

<sup>11</sup>*Id.*, ¶ 126.

<sup>12</sup>*Id.*, ¶ 129.

<sup>13</sup>*Id.*, ¶ 133. "Dark fiber" is fiber optic cable that has been deployed by a carrier but has not yet been activated through connections to optronics that "light" it, and thereby render it capable of carrying communications. *Id.* (citations omitted).

DOCKET NO. 06-049-40

-9-

Turning to high-capacity loops, the FCC determined there is no impairment in any location within the service area of a wire center that contains 60,000 or more business lines and four or more fiber-based collocators. Therefore, ILECs are not required to provide unbundled DS1 loops in these wire centers. Similarly, ILECs are not obligated to provide unbundled DS3 loops in wire centers containing 38,000 or more business lines and four or more fiber-based collocators. Finally, the FCC determined there is no impairment for dark fiber loops so ILECs are no longer obligated to provide unbundled dark fiber loops.<sup>14</sup>

Recognizing that the *TRRO* removed from ILECs significant dedicated transport and high-capacity loop unbundling obligations, the FCC established a 12-month deadline, from the effective date of the *TRRO*, for CLECs to transition to alternate DS1 and DS3 dedicated transport and high-capacity loops. The FCC set an 18-month transition for dark fiber transport and loops.<sup>15</sup> The FCC ordered that during the transition period any unbundled dedicated transport and high-capacity loops that a CLEC leases as of the effective date of the *TRRO*, but for which the FCC determines that no Section 251(c) unbundling requirement exists, shall be available for lease from the ILEC at a rate equal to the higher of 115% of the rate the CLEC paid for the UNE on June 15, 2004, or 115% of the rate the state commission has established, or establishes, if any, between June 16, 2004, and the effective date of the *TRRO*, for that UNE.<sup>16</sup>

---

<sup>14</sup>*Id.*, ¶ 146. *See also* 47 C.F.R. § 51.391(a).

<sup>15</sup>*Id.*, ¶¶ 142, 195.

<sup>16</sup>*Id.*, ¶¶ 145, 198.

DOCKET NO. 06-049-40

-10-

Regarding implementation procedures and future CLEC orders for UNEs, the

FCC stated the following:

We recognize that our rules governing access to dedicated transport and high-capacity loops evaluate impairment based upon objective and readily obtainable facts, such as the number of business lines or the number of facilities-based competitors in a particular market. We therefore hold that to submit an order to obtain a high-capacity loop or transport UNE, a requesting carrier must undertake a reasonably diligent inquiry and, based on that inquiry, self-certify that, to the best of its knowledge, its request is consistent with the requirements [of the *TRRO*] and that it is therefore entitled to unbundled access to the particular network elements sought pursuant to section 251(c)(3). Upon receiving a request for access to a dedicated transport or high-capacity loop UNE that indicates that the UNE meets the relevant factual criteria discussed in [the *TRRO*], the incumbent LEC must immediately process the request. To the extent that an incumbent LEC seeks to challenge any such UNEs, it subsequently can raise that issue through the dispute resolution procedures provided for in its interconnection agreements. In other words, the incumbent LEC must provision the UNE and subsequently bring any dispute regarding access to that UNE before a state commission or other appropriate authority.<sup>17</sup>

Concurrent with release of the *TRRO*, the FCC's Wireline Competition Bureau requested Qwest use the unbundling standards and impairment standards outlined above to produce and file a list of "non-impaired" wire centers, listing by Common Language Location Identifier ("CLLI") those Qwest wire centers that satisfy the Tier 1, Tier 2, and Tier 3 criteria for dedicated transport, as well as those that satisfy the non-impairment thresholds for DS1 and DS3 loops.

In February 2005, Qwest filed its initial list of wire centers developed using the December 2003 ARMIS 43-08 data then on file with the FCC. On July 8, 2005, having

---

<sup>17</sup>*Id.*, ¶ 234 (citations omitted).

DOCKET NO. 06-049-40

-11-

conducted a more thorough count of fiber-based collocators than that originally conducted in February 2005, Qwest revised this list, resulting in a change of tier designation for the Salt Lake City South wire center from Tier 3 to Tier 1, the Salt Lake City West wire center from Tier 2 to Tier 1, and the Midvale wire center from Tier 2 to Tier 3. Qwest therefore claims six Utah wire centers (Murray, Ogden Main, Provo, Salt Lake City Main, Salt Lake City South, and Salt Lake City West) satisfy the FCC's Tier 1 criteria while its Salt Lake City Main center is non-impaired with respect to Qwest's obligation to provide unbundled DS1 and DS3 loops.

All parties agree it is important to get non-impairment classifications right because the FCC's rules mandate that even if the number of business lines in a particular non-impaired wire center declines below the non-impairment thresholds for DS1 or DS3 loops, the non-impairment designation for that wire center remains unchanged.<sup>18</sup> In other words, once a wire center is approved for the non-impairment list, it will not thereafter be removed from that list due to a reduction in its business line or fiber-based collocator count.

**B. Issues Remaining for Commission Resolution**

The Joint CLECs, having reviewed Qwest's data and testimony filed in this matter, now agree with Qwest's Tier 1 designation for each of the six listed wire centers. The only remaining dispute regarding Tier 1 designation concerns the effective date for the Salt Lake City West and Salt Lake City South reclassifications. Qwest believes Tier 1 designations for all

---

<sup>18</sup>The parties apparently base this view on 47 C.F.R. § 51.319(e)(3)(i) which states "Once a wire center is determined to be a Tier 1 wire center, that wire center is not subject to later reclassification as a Tier 2 or Tier 3 wire center." Subsection (ii) of this rule likewise indicates that once a wire center is classified as Tier 2 it is not subject to later reclassification to Tier 3. While acknowledging the parties' agreement as to the effect of these provisions on non-impairment classifications, the Commission does not herein enter any conclusions regarding these provisions.

DOCKET NO. 06-049-40

-12-

six wire centers are effective as of March 11, 2005, while the Joint CLECs, and the Division, assert Salt Lake City West and Salt Lake City South should be treated as Tier 2 and Tier 3 wire centers, respectively, from March 11 through July 7, 2005, and Tier 1 effective July 8, 2005, based on the date Qwest filed its revised non-impaired list with the FCC.

In addition, the Joint CLECs dispute Qwest's use of 2004 ARMIS 43-08 report data to develop its initial wire center list in February 2005. The Joint CLECs and the Division also challenge Qwest's classification of the Salt Lake City Main wire center as non-impaired with respect to DS1 loops.

In all, the parties agree six issues remain for Commission resolution: (1) the proper vintage of ARMIS data used to develop Qwest's initial non-impairment list; (2) the appropriate method of counting business lines; (3) the effective date of the Tier 1 designation for the Salt Lake City West and Salt Lake City South wire centers; (4) the process for future Qwest updates to its non-impairment list; (5) non-recurring charges to convert UNEs; and (6) rejection of UNE orders. Development of a process to govern future updates itself raises several sub-issues, each of which we address below.

**1. The Appropriate Vintage of Data Used**

In developing wire center-specific counts of Qwest retail switched business lines in service in February 2005, Qwest used December 2003 ARMIS 43-08 data that was the most current ARMIS data then on file with the FCC. Qwest argues this is the appropriate data to be used in business line count calculations because the FCC intended Regional Bell Operating Companies ("RBOCs") like Qwest to utilize access line data that was finalized and readily

DOCKET NO. 06-049-40

-13-

available as of February 4, 2005, when the FCC directed the RBOCs to submit their lists of non-impaired wire centers. Qwest files its access line data with the FCC in April of each year so its calendar year 2004 ARMIS 43-08 report was not filed with the FCC until nearly two months after the FCC directed RBOCs to file their lists of non-impaired wire centers. Qwest argues the fact that time has intervened between Qwest's initial wire center non-impairment filing in February 2005 and proceedings in the current docket does not mean the December 2003 data is not the appropriate basis for Qwest's initial list.

Qwest also notes the FCC rules do not require that fiber-based collocation data and business line data be of the same vintage in determining wire center non-impairment.<sup>19</sup> In addition, Qwest points out only two of at least nine state commissions that have dealt with this issue have ordered the use of business line data other than December 2003 data. Furthermore, in Washington, the only state in the Qwest region which has addressed this issue to date, the Administrative Law Judge issued an order finding Qwest's use of the December 2003 data to be in full compliance with the *TRRO*.

The Joint CLECs counter that the *TRRO* became effective March 11, 2005, and determinations made pursuant to the *TRRO* should be based on data most close in time to its effective date. Since the RBOCs make their ARMIS filings on April 1 for the preceding calendar year, Qwest should be required to use the December 31, 2004, data it filed with the FCC in April 2005, a mere three weeks after the effective date of the *TRRO*, rather than the December 31, 2003, data that was already more than a year old when Qwest prepared its initial

---

<sup>19</sup>The Joint CLECs do not dispute this point.

DOCKET NO. 06-049-40

-14-

list. According to the Joint CLECs, the FCC plainly intended wire center designations be based on the most current data available, noting the *TRRO* expressly contemplates future non-impairment designations but that such designations would be meaningless if only 2003 data could be considered.

The Joint CLECs also point out Qwest used fiber-based collocater data from March 2005 in developing its initial non-impairment list even though such data was created almost a month after the Wireline Competition Bureau's letter requesting the filing of a non-impairment list. In support of their position, the Joint CLECs cite the decision of the Michigan Public Service Commission requiring an RBOC to use data that is as close as possible to the time at which the RBOC listed the wire center as non-impaired, even if that data had not yet been filed with the FCC. The Michigan commission based its decision on its conclusion that the FCC requires RBOCs to use the data gathered for ARMIS reporting, but does not require them to use the actual figures provided in the ARMIS report.

The Division does not take a firm position on this issue, believing the particular vintage of the data used does not have a significant impact on the classification of the wire centers at issue.

Having considered the parties' arguments, we conclude it is appropriate for Qwest to have used the December 2003 data contained in its 2004 ARMIS 43-08 report to compile its initial wire center non-impairment list. The Wireline Competition Bureau requested this list in early February 2005 and Qwest provided the list to the FCC in March 2005. Qwest's 2005 ARMIS 43-08 report was not filed with the FCC until April 2005. We note the FCC decided to

DOCKET NO. 06-049-40

-15-

require ILECs to base their business line counts on ARMIS information because that information has “already [been] created for other regulatory purposes”<sup>20</sup> and is “readily confirmable by competitors.”<sup>21</sup> Based on this guidance, it is reasonable that Qwest used its 2004 ARMIS 43-08 data to create its initial non-impairment list, and we see no reason to require Qwest to change that list simply because newer data has become available over the past eighteen months. We therefore deny the Joint CLECs’ request that we require Qwest to use data from its 2005 ARMIS 43-08 report as the basis for its initial wire center non-impairment list.<sup>22</sup>

**2. The Appropriate Method of Counting Business Lines**<sup>23</sup>

As provided above, the FCC intended that business line counts be “based on ARMIS 43-08 business lines, plus business UNE-P, plus UNE-loops.” Qwest therefore used its December 2003 ARMIS 43-08 data as a starting point in calculating the number of business lines at each wire center. However, pointing to the apparent mandate of Rule 51.5(3), Qwest multiplied its high-capacity digital business line count by the appropriate voice-grade equivalent (“VGE”) factor for each line to arrive at a total business line count for non-impairment

---

<sup>20</sup>*TRRO*, ¶ 105.

<sup>21</sup>*Id.*, ¶ 108.

<sup>22</sup>As noted by the Division, it appears, especially in light of our decision below regarding the appropriate method of counting business lines, the particular vintage of the data used to produce Qwest’s initial non-impairment list has little or no impact on the substance of that list. Finally, we note parties are in agreement that future updates to Qwest’s non-impairment list will be based on the most current data available; indeed, updates based on new business line counts will be filed, if at all, only after the filing of Qwest’s annual ARMIS 43-08 report, ensuring only the most current available business line count information will be used as a basis for such updates.

<sup>23</sup>The parties agree that, under Qwest’s proposed counting method, the Salt Lake City Main wire center exceeds the FCC’s 60,000 business line threshold for DS1 non-impairment, but, calculated using the Joint CLECs’ and Division’s proposals, the number of business lines at this wire center falls short of this threshold such that the Salt Lake Main wire center would be classified as non-impaired for DS3 loops but not for DS1 loops.

DOCKET NO. 06-049-40

-16-

purposes.<sup>24</sup> Qwest argues the FCC's intended use of ARMIS data implicitly includes some adjustment of that data since ARMIS data must be disaggregated from the state-wide level in which it is reported to the wire center level necessary to produce a wire center non-impairment list. In making this adjustment to both retail and wholesale loops, Qwest notes the FCC's rule does not say that only those 64 kbps-equivalents that are actually "in use" or "in service" should be counted, or that adding the full capacity of these digital lines is limited to only wholesale UNE loops.<sup>25</sup>

Because Qwest's wholesale UNE-P tracking systems could not distinguish between the residential and business UNE-P lines included in the December 2003 data, Qwest determined the number of business UNE-P lines at each wire center by subtracting the number of directory listings associated with residential UNE-P access lines listed in its white pages directory from the total number of UNE-P lines in service in the relevant wire center. Qwest notes it previously used a similar procedure in the Commission's Section 271 process and so it believes this procedure provides a reasonable proxy for the actual number of UNE-P lines. Finally, Qwest used the same approach for high-capacity UNE-P circuits as it used for high-capacity retail and UNE loop circuits, that is, multiplying the quantity of UNE-P circuits by a "VGE-equivalence" factor of 24 to reflect the number of 64kpbs channels associated with its UNE-P DS1 lines.

---

<sup>24</sup>For example, because there are 24 VGE channels in each DS1 circuit, Qwest multiplied the number of DS1 unbundled loops in Qwest's December 2003 wholesale database by 24.

<sup>25</sup>Qwest notes commissions in Washington, California, Texas, Florida, Georgia, and South Carolina have permitted ILECs to count the full capacity of CLEC (i.e., wholesale) high-capacity lines while three of these commissions have also permitted adjustments for the full capacity of ILEC (i.e., retail) digital facilities.

DOCKET NO. 06-049-40

-17-

To its VGE-adjusted ARMIS data and business UNE-P count, Qwest added the number of all UNE loops in a wire center to calculate its final business line count for that wire center. Qwest did not attempt to remove from this count UNE loops that may be used to serve residential customers or to provide “non-switched” services. Qwest argues the clear language of the *TRRO* and associated rules mandating the counting of all UNE loops does not distinguish between business and residential UNE loops.

In contrast, the Joint CLECs argue business line calculations should only include the business lines that Qwest actually has in service, noting paragraph 105 of the *TRRO* speaks to business line counts including the ILEC’s “ARMIS 43-08 business lines” without any reference to increasing those numbers to account for spare capacity. The Joint CLECs believe Qwest’s reliance on the VGE adjustment outlined in Rule 51.5(3) is misplaced, pointing out the first line of this rule defines a business line as a line “used to serve a business customer.” According to the Joint CLECs, this definition excludes the spare capacity on a digital circuit that Qwest has deployed to provide service to a business customer since that capacity is not being used to serve that customer. Furthermore, this rule includes in the number of business lines “all incumbent LEC business switched access lines”, a number reported to the FCC in Qwest’s ARMIS 43-08 report without any adjustment to account for spare capacity. The Joint CLECs do not dispute that Qwest must disaggregate its state-wide ARMIS data to the individual wire center level, but they do not agree this basic activity opens the door to Qwest otherwise manipulating the ARMIS data using non-ARMIS records. The Joint CLECs also note the North Carolina commission recently reached the same conclusion, as did the ALJ in Washington. In

DOCKET NO. 06-049-40

-18-

addition, the Joint CLECs point out that AT&T (formerly SBC) and Verizon do not make any adjustment to their ARMIS 43-08 business line counts in calculating the number of business lines at a particular wire center..

Should the Commission agree with the Joint CLECs and disallow Qwest's proposed VGE adjustments, Qwest proposes an alternative modification to its ARMIS 43-08 business line counts whereby it would increase those line counts to account for lines that are served out of the Salt Lake City Main wire center but are terminated in the service area of a different wire center. The Joint CLECs argue such an adjustment continues to miss the point that the FCC did not intend Qwest to make any adjustments to its ARMIS 43-08 business line counts for any reason. The Joint CLECs also point out that Qwest offered no evidence to support this alternate counting method.

While repeating their position that no adjustment to ARMIS 43-08 data should be permitted, the Joint CLECs offer their own alternative adjustments to be used if the Commission agrees with Qwest's augmentation of its ARMIS 43-08 business lines. Noting that Rule 51-5 defines business lines in terms of "switched" access lines serving "business" customers, the Joint CLECs testified Qwest's UNE loop count currently includes residential and non-switched lines and argue Qwest should be required to remove these lines in order to comply with the explicit terms of the rule. Qwest disagrees, arguing *TRRO* paragraph 105 prohibits any adjustment to UNE loop counts and notes the majority of state commissions that have dealt with this issue have disallowed such adjustments. The Joint CLECs conclude by testifying that under either of their

DOCKET NO. 06-049-40

-19-

proposed counting methods, the Salt Lake City Main wire center does not serve 60,000 or more business lines and therefore is not properly classified as non-impaired for DS1 loops.

The Division begins its analysis by pointing out that *Utah Code Ann.* § 54-8b-1.1 encourages the development of competition as a means of providing wider customer choice, allows flexible and reduced regulation as competition develops, and encourages competition by facilitating the sale of essential telecommunications facilities and services on a reasonably unbundled basis. The Division believes the method adopted by the vast majority of states that have addressed this issue to date is the position most consistent with the *TRRO* and the Utah policy objectives noted above. Therefore, the Division argues Qwest's ARMIS data should not be adjusted to reflect the full capacity of Qwest's DS1 and DS3 circuits, but should instead reflect the actual circuits in use. However, CLECs' DS1 and DS3 line counts should be adjusted to represent those circuits' full capacity. The Division draws this distinction between wholesale and retail lines because Qwest knows precisely the number of retail 64 kbps channels in use at one of its wire centers while it does not know the number of channels actually being used by the CLECs.<sup>26</sup> In addition, all UNE loops, whether residential or business, switched or non-switched, should be added to the ARMIS business line data.

The Division believes this method is consistent with the FCC's desire that the non-impairment analysis be easily understood and based on readily available information. In the Division's view, neither Qwest's nor the Joint CLECs' proposed method satisfies these

---

<sup>26</sup>Qwest does not agree with this approach, arguing the Rule 51.5 definition of a "business line" explicitly applies to both wholesale and retail services. Qwest also points out the Division testified the FCC's rule does not state that it applies only to wholesale lines.

DOCKET NO. 06-049-40

-20-

objectives. Qwest's proposal to count the full capacity of its retail DS1 and DS3 circuits rather than the known number of retail lines actually in use moves its process farther away from that envisioned by the FCC and opens the counting process to the potential for manipulation. However, accounting for the full capacity of the CLECs' DS1 and DS3 lines provides a transparent and reasonable measure of the competitive capacity available in a wire center since Qwest has no ability to readily determine the extent to which these lines are actually being used. Conducting this VGE adjustment for wholesale lines also satisfies the mandate of Rule 51.5(3) insofar as the actual number of wholesale lines in use can not be determined. Likewise, since Qwest has no way of determining whether a UNE is being used for residential or business purposes, it is reasonable that Qwest use the total number of UNE loops in its business line calculations.

In deciding this matter, we look first to the *TRRO* and then attempt to read the FCC's rules consistently with the FCC's guidance in the *TRRO*. All parties agree the basic intent of paragraph 105 of the *TRRO* is to provide an easily understood process for calculating business lines based on readily available information. We concur and conclude the Division's proposed method of determining the number of business lines at a given wire center best satisfies the FCC's intent by providing an easily calculated, reasonable representation of competition within that wire center. Using ARMIS 43-08 data, including Qwest's known retail DS1 and DS3 line counts, as a starting point for business line calculations provides "an objective set of data that incumbent LECs already have created." Likewise, adjusting wholesale DS1 and DS3 numbers to account for their total VGE capacity and counting all UNE loops accords with the

DOCKET NO. 06-049-40

-21-

FCC's view that the number of business lines fairly represents the business opportunities available in a given wire center.

We therefore adopt the Division's business line counting method as set forth above and, based upon this method and the evidence of record, find Qwest's Salt Lake City Main wire center does not meet the *TRRO*'s 60,000 business line threshold and does not qualify for non-impairment status with respect to DS1 loops.<sup>27</sup> Given the evidence before us and the stated agreement of the parties, we further find and conclude that the Salt Lake City Main wire center is non-impaired with respect to DS3 loops and that the six Qwest wire centers listed above are properly classified as Tier 1 facilities meeting the FCC's non-impairment criteria for interoffice transport.

**3. Effective Date of Salt Lake City West and South Tier 1 Designation**

While the parties agree concerning the Tier 1 status of these wire centers, they do not agree on the effective date of Tier 1 status for the Salt Lake City West and Salt Lake City South wire centers. Qwest believes the effective date for all such designations on its initial list to the FCC should be March 11, 2005, the *TRRO* effective date. The Joint CLECs, on the other hand, argue that because Qwest first listed these two wire centers as Tier 1 facilities in its July 8, 2005, update to the FCC, the effective date of non-impairment for these two wire centers should be July 8, 2005, rather than March 11, 2005.

Qwest argues the Joint CLECs' position ignores the fact that the fiber-based collocations for these two wire centers were all operational as of the March 11, 2005, *TRRO*

---

<sup>27</sup>We note this decision does not preclude Qwest's reclassification of the Salt Lake City Main wire center as non-impaired in future lists prepared in accordance with the update process set forth below.

DOCKET NO. 06-049-40

-22-

effective date, and that the FCC did not require that ILECs provide notice to CLECs or production of the non-impaired wire center list by this date. Qwest argues, given the short time period involved, it is reasonable that the notice of such non-impairment could follow at a later date, especially since RBOCs like Qwest were conducting thorough but cautious investigations to identify fiber-based collocators in their wire centers.

The Joint CLECs note that regardless of whether these two wire centers satisfied the Tier 1 criteria on March 11, 2005, Qwest did not notify CLECs, the FCC, or the Commission of this fact until almost four months later. The Joint CLECs point out that nowhere in the *TRRO* does the FCC establish any “grace period” for ILECs to update their initial non-impairment classifications after the *TRRO* effective date. According to the Joint CLECs, Qwest seeks to deprive CLECs of the full 12- and 18-month transition periods established by the FCC and to impose higher rates for DS1 and DS3 transport UNEs for the four months during which the CLECs had no notice of any rate increase. The Joint CLECs argue that, taken to its logical conclusion, Qwest’s position would enable it to decide today that, based on data that existed on March 11, 2005, one of its wire centers should be reclassified effective March 11, 2005, such that CLECs would be obligated to pay higher rates for affected UNEs in that wire center for the past seventeen months.

The Division supports the Joint CLECs’ position on this issue. We concur and conclude the effective date of non-impairment for the Salt Lake City West and Salt Lake City South wire centers is July 8, 2005. Qwest’s updated non-impairment list changing the status of these two wire centers from Tier 2 to Tier 1 was not filed until July 8, 2005. This is the date on

DOCKET NO. 06-049-40

-23-

which CLECs were effectively given notice that Qwest believed these two wire centers qualified for Tier 1 status. It makes no difference that Qwest now claims these wire centers actually qualified for Tier 1 status on March 11, 2005. The simple fact is on March 11, 2005, Qwest listed these wire centers as Tier 2 facilities, a designation that Qwest did not change until July 8, 2005. Our decision announced herein properly ensures that Qwest's charges for DS1 and DS3 transport and loops will be based on Qwest's non-impairment list as filed, not on Qwest's view of how that list might have been filed.

**4. The Wire Center Non-Impairment List Update Process**

Qwest and the Joint CLECs agree there should be a single, unified process going forward that includes Commission review and approval when CLECs contest Qwest's non-impairment designation of a wire center.<sup>28</sup> The Joint CLECs and Qwest also agree that a 30-day review period will provide the Joint CLECs sufficient time to review and object to, if appropriate, future updates to the Qwest non-impairment list.<sup>29</sup> However, the Joint CLECs and the Division seek to impose certain other filing requirements that Qwest challenges as unreasonable. The parties also disagree concerning the effective date of any reclassification of wire centers.

**a. Additional Threshold Reporting by Qwest**

---

<sup>28</sup>Qwest has testified that, when appropriate, Qwest intends to update the list of non-impaired wire centers using the same counting methods Qwest has used in this proceeding, or whatever alternate method is approved by the Commission in this proceeding.

<sup>29</sup>The Joint CLECs note that to make this 30-day review period workable Qwest must include with its initial filing for Commission approval of a new wire center classification "full" documentation similar to that produced via discovery and pre-filed testimony in this proceeding. Qwest has generally committed to providing such information with future filings of non-impairment list updates.

DOCKET NO. 06-049-40

-24-

The Joint CLECs and the Division propose that Qwest be required to notify the Commission and interested parties when a particular wire center is within 5,000 lines of satisfying the business line counts specified in the *TRRO* or when the number of fiber-based collocators is within one fiber-based collocator of meeting a particular FCC threshold.<sup>30</sup> The Joint CLECs note that such notice will enable CLECs to better prepare to find alternatives to UNEs in order to continue to serve existing customers and obtain new customers

Qwest opposes such notice, arguing the Commission should not impose an additional reporting threshold not required by the *TRRO* that would simply add to Qwest's administrative burden. Qwest notes it does not have a process in place to provide such notice. Qwest also testified the "advance notice" thresholds proposed by the Joint CLECs are not meaningful because a wire center's coming within 5,000 business lines or one fiber-based collocator of the FCC's thresholds does not mean that a change in the impairment classification of that wire center is imminent. Qwest notes that it can only propose updates to its non-impairment list based on ARMIS business line counts once per year since it files its ARMIS 43-08 report only once per year. Therefore, if the number of business lines in a wire center increases to within 5,000 of a non-impairment threshold in, for example, June, but subsequently declines by December to a number below the 5,000 threshold, advance notice like that proposed by the Joint CLECs could actually cause CLECs to take costly action to prepare for a wire center non-impairment reclassification that will not occur. Qwest also testified that such advance

---

<sup>30</sup>For example, a wire is eligible for Tier 2 status if it serves 24,000 or more business lines or contains three or more fiber-based collocators. As proposed by the Joint CLECs, Qwest would be required to notify the Commission when a wire center reaches 19,000 business lines or two fiber-based collocators.

DOCKET NO. 06-049-40

-25-

notification could allow CLECs to “game” the system by changing their business plans so that the wire center would be unlikely to meet the FCC threshold. Finally, Qwest points out that no state commission has imposed such an advance threshold reporting requirement.

In response, the Joint CLECs argue the *TRRO* does not preclude the Commission from establishing an additional reporting requirement. The Joint CLECs also dismiss Qwest’s assertion that such a requirement might enable CLECs to adjust their UNE ordering to keep a wire center from reaching the threshold. To do so, the CLECs argue, they would either have to deny service to new customers, order special access circuits from Qwest at a much higher rate, or build their own facilities or obtain them from another carrier. The Joint CLECs find no merit in Qwest’s argument that additional reporting would be an administrative burden. Likewise, when Qwest reviews the number of fiber-based collocators in its wire centers to determine for its own purposes whether the impairment status has changed, there would be no significant additional burden created by requiring Qwest to inform the Commission if any of those wire centers is approaching a relevant threshold.

The Division notes listing a wire center as non-impaired can have significant business impacts on CLECs. The Division believes all efforts should be made to assist CLECs in the transition from UNEs in order to maintain competition at a wire center once it has been determined to be non-impaired. For these reasons, the Division supports the 5,000 line threshold reporting proposed by the Joint CLECs. The Division notes no other state commission has yet addressed this issue and that the Commission should not be reluctant to add to the FCC’s process when it sees a need and is not otherwise prohibited from doing so.

DOCKET NO. 06-049-40

-26-

On this issue we agree with Qwest. The *TRRO* provides for no additional threshold reporting or notification and the Joint CLECs have failed to provide sufficient evidence to convince us that such a process is reasonable, necessary, or would enhance competition. The wire center non-impairment list updating process announced herein provides sufficient notice and transition protection to CLECs. We therefore decline to order the additional threshold notification requested by the Joint CLECs.

**b. Prior Notice of Future Wire Center Classifications**

The Joint CLECs propose Qwest provide notice to affected CLECs five days prior to making an initial filing with the Commission for approval of an updated wire center non-impairment list. Such notice would alert CLECs that Qwest will be providing confidential data on the number of UNEs those CLECs have in a given wire center so that they have the opportunity to object to disclosure of such data. The Joint CLECs testified such notice would be fully consistent with Qwest's prior practice regarding requests for CLEC-specific data, as well as its obligations under interconnection agreements to provide notice prior to disclosure of CLEC confidential information.

Qwest argues the Joint CLECs' concern about disclosure of confidential information is misplaced, rendering unnecessary the five days notice they seek. Qwest testified it intends to protect any confidential information just as it has in this proceeding via a standing non-disclosure agreement or protective order to protect sensitive CLEC-specific data. Qwest believes the Joint CLECs have not adequately explained why they need the additional time they

DOCKET NO. 06-049-40

-27-

seek and points out the Joint CLECs have not cited any “prior notice” requirement in the *TRRO* or any other state commission order.

However, the Joint CLECs argue Qwest misses the point, noting the Commission has issued no such standing order and, even if it did, a CLEC may nonetheless have an objection to disclosure for purposes other than administration of its interconnection agreement with Qwest. Accordingly, Qwest should be required to give CLECs on whose proprietary network information Qwest intends to rely the opportunity to object to disclosure before disclosure occurs.

The Division supports the Joint CLECs’ proposal.

We agree some form of advance notice would facilitate parties’ handling of confidential information and should expedite the wire center non-impairment list approval process. It would also expedite proceedings seeking approval of the proposed non-impairment list. At hearings, parties generally agreed that future proceedings would require a protective order. Likewise, Qwest has promised to adequately protect confidential information in future proceedings, perhaps on the basis of a standing protective order issued by the Commission. While we decline to issue such a standing order, we conclude an advance filing by Qwest requesting issuance of a protective order in anticipation of filing an updated wire center non-impairment list with supporting data will facilitate expedited processing of the updated list.<sup>31</sup> In order to provide all interested parties adequate notice of the scope of the requested protective

---

<sup>31</sup>We note this procedure is largely identical to that followed in the instant docket wherein Qwest sought Commission approval of its non-impairment list and issuance of a protective order prior to Qwest’s production of the CLEC-specific data used as the basis of its non-impairment list.

DOCKET NO. 06-049-40

-28-

order, as well as the anticipated wire center update proceedings, the request for protective order should specify those wire centers to be proposed for re-classification. The five-day period proposed by the Joint CLECs and supported by the Division would provide the Commission sufficient time to issue said protective order prior to Qwest's filing of the updated list and would also provide CLECs and the Division ample notice that the 30-day review clock for a proposed wire center re-classification is about to begin ticking. Therefore, we will require Qwest to file a request for protective order at least five days prior to its filing for approval of an updated wire center non-impairment list. Said request shall identify those wire centers that Qwest seeks to reclassify as non-impaired.

**c. Effective Date of Future Qwest Updates**

Qwest proposes the designation of new non-impaired wire centers be effective thirty days following the initial notification to CLECs that the impairment status for that wire center has changed. Qwest would file the updated non-impairment list with the Commission and notify all CLECs via its Change Management Process notification system. Qwest would provide to CLECs the same kind of supporting data that it used to support its initial list of non-impaired wire centers.<sup>32</sup> CLECs would then have 30 days to raise objections to the Commission. If no objections were raised, the wire center list would be deemed approved through operation of law. In the event a CLEC disputes Qwest's revised wire center designation, Qwest should have the

---

<sup>32</sup>It is not clear from the testimony presented whether Qwest intends to provide only the data that it provided initially for the list of non-impaired wire centers at issue in this docket, or whether Qwest intends to provide data akin to all of the supporting documentation it has provided throughout this proceeding, such as data request responses.

DOCKET NO. 06-049-40

-29-

right to back bill the CLEC to the above-specified effective date if the Commission subsequently approves the change in wire center status.

In support of this position, Qwest points to the true-up mechanism established by the FCC for applicable transition rates following amendment of interconnection agreements.<sup>33</sup> Qwest promises it would not block orders absent a final designation of non-impairment and notes that updates to the non-impaired list based on changed business line counts would only occur once a year in conjunction with the preparation of ARMIS data, but that updates to the list based on fiber-based collocators could occur throughout the year as the number of collocators changes since these numbers are not derived from the ARMIS process.

The Joint CLECs, on the other hand, propose the Commission, on a case-by-case basis, establish the date on which Qwest's reclassification of a wire center will be effective. According to the Joint CLECs, knowing the Commission can set the effective date will give Qwest an incentive to provide all information needed to review the classification as early in the process as possible so that interested parties can promptly confirm or raise issues with Qwest's reclassification. If Qwest fails to provide the necessary information, the Commission can delay the effective date of non-impairment accordingly. Likewise, if the Commission determines that CLECs have raised issues solely for the purposes of delay, the Commission could order an earlier effective date, such as thirty days after notice as proposed by Qwest. The Joint CLECs argue adoption of Qwest's proposed thirty-day effective period would provide Qwest no incentive to ensure its initial filing is sufficiently comprehensive. The Joint CLECs point to the

---

<sup>33</sup>Citing *TRRO*, fns. 408, 524, and 630.

DOCKET NO. 06-049-40

-30-

current proceedings as an example of the delay that can result from deficient disclosure of supporting information.

Qwest counters that it is the CLECs, not Qwest, that have an incentive in delaying the effective date of future reclassifications since, once effective, the CLECs are no longer entitled to UNE pricing at the reclassified wire centers. Qwest, on the other hand, is motivated to provide all necessary information to support its classification decisions since without such information approval of the reclassifications could be delayed, depriving Qwest of the opportunity to take advantage of a new competitive environment.

The Division did not directly address this issue in its pre-filed testimony or at hearing.

Having considered the parties' positions, we conclude Qwest's proposed thirty-day waiting period reasonably balances a desire to expedite the process with the necessity of ensuring CLECs adequate time to object. However, while updated non-impairment lists may, without objection, become effective thirty days after filing, we reserve the Commission's authority to establish an appropriate effective date for all such filings based on the facts and actions of the parties specific to that filing. Upon CLEC objection, or upon its own motion, the Commission may schedule proceedings and will ultimately set an effective date based on all circumstances surrounding those proceedings. Said effective date may be determined to be thirty days from the filing date, or any date thereafter, as determined by the Commission. If CLEC's objections are found to be without merit, Qwest will be entitled to back bill to the effective date for CLEC's use of facilities. We intend this process to provide parties a reasonable level of

DOCKET NO. 06-049-40

-31-

certainty regarding the effective date while ensuring against manipulation of the proceedings in an effort to influence that date.

**d. Length of Transition Period**

The Joint CLECs propose the Commission adopt the same 12- and 18-month transition periods and transition rates adopted by the FCC in the *TRRO* for wire centers reclassified as non-impaired. The Joint CLECs point out the FCC adopted these transition periods because it found they provide “adequate time for both competitive LECs and incumbent LECs to perform the tasks necessary to an orderly transition, including decisions concerning where to deploy, purchase, and or lease facilities.”<sup>34</sup>

Qwest, on the other hand, proposes a 90-day period for CLECs to transition existing DS1 and DS3 UNEs to an alternative service and has memorialized this time frame in its *TRO/TRRO* Amendment to its interconnection agreements. Qwest argues the *TRRO*'s 12- and 18-month transition periods applied only to the initial wire center list, starting with the March 11, 2005, effective date of the *TRRO*. Qwest proposes a shorter transition period for future updates because there will be fewer newly classified wire centers to deal with in future updates than there were on the initial non-impairment list.

The Joint CLECs point out Qwest's proposed transition period would not apply to the rates Qwest charges for its facilities but only to the network operations required to physically change circuit identifications. In contrast to the transition process laid out in the *TRRO*, Qwest would back bill CLECs the tariffed rate as of the effective date of the new wire center

---

<sup>34</sup>Citing *TRRO* at ¶¶ 143, 196.

DOCKET NO. 06-049-40

-32-

classification, even if a CLEC transitions to its own facilities or those of another carrier during the transition period. In reality, therefore, a CLEC would only have 30 days from the date that Qwest notifies the Commission of a wire center reclassification to obtain facilities from a source other than Qwest in order to avoid paying tariff rates for affected UNEs in that wire center. The Joint CLECs also point out that Qwest's own witness testified that from the network perspective the amount of time required to transition would depend on case-by-case factors.

Qwest counters that permitting CLECs to continue paying UNE rates during any transition period would improperly incentivize the CLECs to delay the transition of services until the end of the transition period while denying Qwest the benefits of reclassification intended by the FCC. Qwest claims the Joint CLECs have provided no support for their contention that the transition period for wire center list updates should be the same length as that for the initial list.

The Division did not take a position on this issue.

In establishing its 115% transition period rate cap, the FCC noted its conclusion such a rate would help to moderate the potential rate shock of an immediate elimination of TELRIC pricing while protecting the interests of ILECs where unbundling is no longer required.<sup>35</sup> The FCC also noted carriers remain free to negotiate alternative arrangements superseding its transition period and rates.<sup>36</sup> We concur and adopt these findings and conclusions as our own in deciding it is reasonable to impose the same rate for the transition period we announce herein for wire centers re-classified as non-impaired in the future.

---

<sup>35</sup> *TRRO*, ¶¶ 145, 198.

<sup>36</sup> *Id.*

DOCKET NO. 06-049-40

-33-

However, we agree with Qwest that the transition periods ordered by the FCC are rooted in the FCC's recognition that the initial list of non-impaired wire centers could be so large and constitute such a major change in the way CLECs procure necessary services and facilities that a lengthy transition was appropriate. Because future updates should impact fewer wire centers, we conclude the 90-day transition period proposed by Qwest will provide CLECs adequate opportunity to make business decisions regarding alternative facilities and services. Therefore, future updates to Qwest's non-impaired wire center list shall trigger a 90-day transition period commencing on the effective date of the updated list during which Qwest may charge effected CLECs 115% of the UNE rate for non-impaired UNE services and facilities.

**5. Nonrecurring Charges to Convert UNEs**

Qwest argues it is entitled to assess nonrecurring charges ("NRCs") when converting UNEs to alternative Qwest circuits, such as a private line or special access circuit, following classification of a particular wire center as non-impaired. Qwest notes the conversion process actually changes the fundamental nature of the CLEC-requested product from a wholesale UNE purchased only by CLECs in accordance with an interconnection agreement to a tariffed service purchased by CLECs, other interconnecting companies, and Qwest's retail customers through commercial contracts. These two different products are billed, inventoried, and maintained differently in Qwest's systems such that Qwest must process them as "order-out" and "order-in" requests and change circuit identifiers to move the service or facility from one product category to the other. Qwest notes conversion of a UNE circuit to a special private line circuit involves three different functional areas within its ordering and provisioning

DOCKET NO. 06-049-40

-34-

organizations and requires a variety of steps that it must undertake to ensure that the data for the converted circuit is accurately recorded in the appropriate systems within each of these functional areas. Qwest points out its current process was developed at a cost of hundreds of millions of dollars to avoid placing end-user customers' service at risk and it should not be required to spend millions more to further modify its systems to track facilities in another way.

Qwest believes that since CLECs are not required to request conversion (i.e., because they have other business alternatives), such a request is a voluntary business decision for which Qwest should be able to recover its tariffed Design Change charge as an NRC for the work it performs to effectuate the conversion. Qwest proposes to use the Design Change charge rather than a unique charge for the UNE-to-private line conversion since the Design Change charge involves functional areas and tasks similar to those associated with the conversion of a UNE to a private line service. Qwest notes the Design Change charge would provide a conservative proxy for the costs Qwest actually incurs in such conversions which are typically more costly to process than the typical design change, but that its use would avoid the complexity of adding a new charge to Qwest's billing systems. Qwest argues that but for a CLEC's conversion request, Qwest would not incur the costs of performing conversion-related tasks. Requiring Qwest to bear this expense would therefore disadvantage Qwest in a market the FCC has determined to be competitive.

The Joint CLECs argue any conversion charge would be inappropriate since it is Qwest who is seeking to change its own records when no such change is necessary. As the cost-causer, Qwest should bear financial responsibility for the administrative costs it incurs in what

DOCKET NO. 06-049-40

-35-

would amount to little more than checking to make sure that it did not make any mistakes when changing its own records. The Joint CLECs note Qwest does not charge its own retail customers a conversion charge and that imposing such a charge on CLECs would be discriminatory.<sup>37</sup> Furthermore, the Joint CLECs argue that, if the Commission determines some charge is appropriate to reimburse Qwest for the conversion costs it incurs, the Design Change charge is not the appropriate charge since Qwest's FCC Interstate Tariff #1 describes the design change for which the Design Change charge is billed as any change that requires engineering review. Since the UNE conversions at issue here require no physical change to the circuit, no engineering review is required and no Design Change charge should be imposed.

If the Commission wishes to permit a conversion charge, the Joint CLECs believe the appropriate charge would be the Total Element Long Run Incremental Cost ("TELRIC") UNE rate reflecting the record keeping nature of the conversion process. The Joint CLECs note the Commission-approved charge for converting Private Lines to UNEs is \$8.48 and argue the Commission could reasonably decide this rate should apply to conversions from UNEs to Private Lines.

Qwest disputes this alternative charge, arguing that requiring a TELRIC rate for an NRC for a tariffed interstate private line service would constitute an inappropriate application of TELRIC rates and fall outside the scope of the Commission's jurisdiction since nonrecurring TELRIC charges should only apply to UNEs, not to tariffed private line services.

The Division took no position on this issue.

---

<sup>37</sup>Citing, *TRO* at ¶ 587.

DOCKET NO. 06-049-40

-36-

Having reviewed the evidence and arguments presented, we conclude Qwest may levy a non-recurring charge to recoup its costs when a CLEC requests conversion of a UNE to a private service. However, we are not convinced by the available evidence that the amount of the charge proposed by either party reasonably reflects the costs incurred by Qwest to perform the requested conversion. Therefore, we invite parties to file additional evidence and argument regarding the costs incurred when converting a UNE to a private service. Qwest shall have thirty days from the date of issuance of this Order to file whatever cost information it deems appropriate to this issue. The Joint CLECs and the Division shall then have fifteen days from the date of filing of said information to file rebuttal testimony. It is likely that persons already sworn in this docket would be competent to provide said testimony for each party. Therefore, the Commission requests said testimony and rebuttal be filed under the signature of such persons so that, subject to objection, it may be entered into evidence and considered by the Commission in resolving this matter. The Commission may, on its own motion or that of either party, order additional evidentiary hearing on this issue as necessary.

**6. Rejection of UNE Orders**

The Joint CLECs note the parties agree CLECs are not entitled to order UNEs in wire centers that have been classified as non-impaired with respect to those UNEs. However, they disagree with Qwest regarding how Qwest may process UNE orders in the future. The Joint CLECs propose Qwest and CLECs work together to develop an ordering process that will ensure CLECs are able to obtain the facilities they need from Qwest at the proper rates, terms, and conditions. Pending development of such a process, the Joint CLECs believe the default process

DOCKET NO. 06-049-40

-37-

should be that outlined by the FCC in the *TRRO*; namely, that a CLEC may place a UNE order in any wire center as long as the CLEC self-certifies that it is entitled to order that UNE, and Qwest must provision the UNE, subject to later conversion to a tariffed service if the CLEC was not in fact entitled to order the subject facility as a UNE in that wire center.

In contrast, Qwest argues that once the Commission approves Qwest's certification of a wire center as non-impaired Qwest should be permitted to reject orders for any affected UNEs in that wire center. Qwest has committed to not block or reject orders unless and until the Commission has approved a wire center as non-impaired. Beyond that, Qwest argues it should not be the "guarantor" of any mistakes CLECs make in ordering services from a particular wire center.

The Joint CLECs argue Qwest's proposal to reject orders for prohibited UNEs would make the customers the ultimate loser since their ability to obtain desired services could be delayed while Qwest and the CLEC sort out the problem with the CLEC's order. However, under the Joint CLECs' proposal, the erroneous UNE order would be filled, the customer would be served, and Qwest would be made whole with a true-up to tariffed charges once the error has been corrected.

The Division did not take a firm position on this issue.

Having reviewed the parties' arguments and relevant portions of the *TRRO*, we conclude the process set forth by the FCC in paragraph 234 of the *TRRO* remains applicable to CLEC requests for UNEs and order Qwest and CLECs to follow that process in the procurement of UNEs in the future. Specifically, a CLEC must undertake a reasonable inquiry and self-

DOCKET NO. 06-049-40

-38-

certify, based on that inquiry, that, to the best of its knowledge, it is entitled to unbundled access to particular network elements at a given wire center. Qwest must then immediately process the CLEC's request for those elements and may subsequently challenge the CLEC's claim of entitlement to those elements through the dispute resolution procedures provided in its interconnection agreements.

In summary, the process for future wire center non-impairment list updates that we order herein shall follow the same basic pattern, though hopefully in a considerably expedited manner, as have proceedings in this docket. At least five days prior to its anticipated filing for approval of an updated wire center non-impairment list, Qwest shall file a request for a protective order to govern the handling of confidential information during the anticipated proceedings. This request shall also specify those wire centers for which Qwest intends to seek re-classification. Qwest's updated wire center filing shall substantially include all information provided by Qwest in discovery and testimony in the current proceeding and, with respect to wire center reclassifications based upon a change in business line counts, shall be based on actually filed ARMIS 43-08 data. Failure to provide the necessary supporting data may delay Commission action and the ultimate effective date of any Commission approval. In addition to its filing with the Commission, Qwest shall notify CLECs of the filing via its Change Management Process notification system. Absent CLEC objection or Commission action on its own motion, Qwest's updated wire center list shall become effective 30 days from the date of filing with the Commission. A 90-day transition period shall commence with the effective date of the approved wire center list, during which time CLECs may continue to lease those UNE

DOCKET NO. 06-049-40

-39-

dedicated transport and high-capacity loop facilities previously obtained at wire centers newly re-classified as non-impaired at a rate not to exceed 115% of the TELRIC rate paid for those elements prior to Commission approval of the updated wire center list. At the end of the transition period, Qwest will be no longer required to provide those elements at non-impaired wire centers, except as agreed between Qwest and individual CLECs. If a CLEC elects to obtain said elements from Qwest as tariffed facilities, Qwest may charge a non-recurring charge as noted above to complete the conversion of that facility. Once a wire center has been listed and approved as non-impaired, CLECs may not order affected UNEs at that wire center. However, so long as a CLEC abides by the self-certification process specified in the *TRRO*, Qwest must provide the requested UNEs. If Qwest subsequently desires to challenge these UNEs, it may do so as provided in the *TRRO*.

Wherefore, based upon the foregoing information, and for good cause appearing, the Administrative Law Judge enters the following proposed:

**III. ORDER**

NOW, THEREFORE, IT IS HEREBY ORDERED, that:

- The wire center business line counting method proposed herein by the Division of Public Utilities shall be, and is, adopted as the appropriate method for counting business lines to determine the impairment status of Qwest Corporation wire centers in Utah.
- The Qwest Corporation Wire Center Classification for Dedicated Transport list filed March 1, 2006, is approved.

DOCKET NO. 06-049-40

-40-

- The effective date of Tier 1 designation for Qwest Corporation's Salt Lake City West and Salt Lake City South wire centers is July 8, 2005.
- The Qwest Corporation Wire Centers That Satisfy the Nonimpairment Standards for DS1 and DS3 Loops list filed March 1, 2006, is approved only insofar as pertains to the classification of Qwest's Salt Lake City Main wire center as non-impaired for DS3 loops.
- The wire center non-impairment list update process specified above shall govern all future update filings initiated by Qwest Corporation in Utah.
- Qwest Corporation shall file within thirty days from the date of issuance of this Order, in the form of sworn written testimony and argument, additional information relating to the actual costs Qwest Corporation incurs, or will incur, when converting UNEs to private line services. Not later than fifteen days after said filing, the Joint CLECs and the Division of Public Utilities shall, if desired, file sworn rebuttal testimony and argument on this issue.
- This Order constitutes a final order of the Commission with respect to those issued decided herein. Pursuant to *Utah Code Annotated* §§ 63-46b-12 and 54-7-15, agency review or rehearing of this order may be obtained by filing a request for review or rehearing with the Commission within 30 days after the issuance of the order. Responses to a request for agency review or rehearing must be filed within 15 days of the filing of the request for review or rehearing. If the Commission fails to grant a request for review or rehearing within 20 days after the filing of a request for review or rehearing, it is deemed denied. Judicial review of the Commission's final agency action may be obtained by filing a Petition for Review with the Utah Supreme Court within 30 days after final agency action. Any Petition for Review must comply

DOCKET NO. 06-049-40

-41-

with the requirements of *Utah Code Annotated* §§ 63-46b-14, 63-46b-16 and the Utah Rules of Appellate Procedure.

Dated at Salt Lake City, Utah, this 11<sup>th</sup> day of September, 2006.

ISSUED: November 3, 2006

SYNOPSIS

The Commission denies motions for reconsideration filed by Qwest Corporation (“Qwest”) and Covad Communications Company; Eschelon Telecom of Utah, Inc.; Integra Telecom of Utah, Inc.; McLeodUSA Telecommunications Services, Inc.; and XO Communications Services, Inc. The Commission clarifies that its Report and Order of September 11, 2006, intended that Qwest may not reject unbundled network element (“UNE”) orders made by a competitive local exchange carrier (“CLEC”) for any wire center, including those previously approved as non-impaired for certain UNEs, so long as that CLEC has self-certified, based on reasonable inquiry, that, to the best of its knowledge, it is entitled to unbundled access to the requested network elements at the wire center in question.

-----

By The Commission:

On September 11, 2006, the Commission issued its Report and Order in this docket resolving various issues related to the designation of incumbent local exchange carrier (“ILEC”) wire centers as non-impaired for certain unbundled network elements (“UNEs”) in accordance with the Federal Communications Commission’s (“FCC”) Triennial Review Remand Order<sup>1</sup>.

---

<sup>1</sup>*In the Matter of Review of Unbundled Access to Network Elements, Review of Section 251 Unbundling Obligations of Incumbent Local Exchange Carriers*, Order on Remand, CC Docket NO. 01-338, WC Docket No. 04-313, 20 FCC Rcd 2533 (rel. Feb. 4, 2005) (“TRRO”).

DOCKET NO. 06-049-40

-2-

On October 11, 2006, Covad Communications Company; Eschelon Telecom of Utah, Inc.; Integra Telecom of Utah, Inc.; McLeodUSA Telecommunications Services, Inc.; and XO Communications Services, Inc. (hereinafter jointly referred to as “Joint CLECs”) filed a Petition for Review, Reconsideration, or Rehearing of Report and Order (“Joint CLEC Motion for Reconsideration”) seeking Commission reconsideration of its decision regarding the following issues: (1) the vintage of the ARMIS data used; (2) the length of the transition period for newly designated wire centers; and (3) whether Qwest Corporation (“Qwest”) should be authorized to charge for converting affected high capacity UNEs in the designated wire centers to Qwest special access services.

Also on October 11, 2006, Qwest filed its Motion for Review, Rehearing and/or Reconsideration and for Clarification, of Certain Portions of the Commission’s September 11, 2006, Report and Order (“Qwest Motion for Reconsideration” and “Qwest Motion for Clarification”, respectively). Qwest’s Motion for Reconsideration seeks reconsideration of the following issues: (1) the Commission’s decision regarding the appropriate method of counting business lines, and (2) if the Commission does not reconsider its decision regarding the first issue above, its decision not to count actual Qwest retail digital business lines based on the wire center from which they originate rather than on the ARMIS report filed by Qwest. Qwest’s Motion for Clarification seeks clarification of the Commission’s decision requiring the parties to follow the process laid out at paragraph 234 of the *TRRO* regarding future UNE requests and ILEC responses to such requests. Qwest’s interprets this decision as applying only to wire centers that have not yet been approved by the Commission as non-impaired for the requested UNEs.

DOCKET NO. 06-049-40

-3-

On October 26, 2006, the Joint CLECs filed their Response to Qwest Motion for Review, Rehearing and/or Reconsideration arguing the Commission had rightly decided those issues challenged by Qwest and should therefore deny Qwest's Motion for Reconsideration. In addition, the Joint CLECs challenged Qwest's interpretation of the Commission's Report and Order relating to rejection of CLEC requests for UNEs.

Also on October 26, 2006, Qwest filed its Response to the Joint CLEC's Motion for Review, Reconsideration, Rehearing of Report and Order arguing the Commission had rightly decided those issues challenged by the Joint CLECs and should therefore deny the Joint CLECs' Motion for Reconsideration.

Having reviewed the parties' filings, we are satisfied that our decisions regarding the issues submitted for reconsideration are reasonably based upon the evidence of record in accordance with applicable law and regulations. We therefore deny the Joint CLECs Motion for Reconsideration and the Qwest Motion for Reconsideration.

With respect to Qwest's Motion for Clarification, we clarify that, contrary to Qwest's interpretation, our Report and Order requires that the process set forth by the FCC in paragraph 234 of the *TRRO* be applied equally for UNE requests at all wire centers, including those that have previously been approved as non-impaired. In reaching our decision in the Report and Order, we found the FCC's approach to be reasonable and adopted it as our own. The *TRRO* does not limit the process specified in paragraph 234 to requests for UNEs at impaired wire centers, and we see no reason to add such a limitation in these proceedings.

DOCKET NO. 06-049-40

-4-

The FCC's ruling implicitly recognizes that good-faith mistakes may be made in requesting or provisioning certain UNEs. In order to minimize mistakes by CLECs, the FCC requires CLECs to undertake a reasonable inquiry to determine whether they are entitled to the UNEs they intend to request and then to self-certify their entitlement when requesting those UNEs. In requiring ILECs to immediately process such self-certified requests, the FCC recognized that the best way to deal with any CLEC self-certification errors was to first provision the UNE and then permit the ILEC to challenge the requirement for said provision after the fact.

Our Report and Order also implicitly recognized that adopting Qwest's position on this issue, or adopting Qwest's interpretation of our Report and Order, would open the UNE request process to the possibility that Qwest may mistakenly refuse to provision requested UNEs, thereby causing harm to the requesting CLEC and its customers pending resolution of the parties' dispute. By requiring Qwest to first provide the UNE upon self-certified request and then challenge said request, we ensure that customers are served pending resolution of the dispute.

Wherefore, based upon the foregoing information, and for good cause appearing, we enter this Order dismissing Qwest's Motion for Reconsideration and the Joint CLECs' Motion for Reconsideration and clarifying the applicability of the process we require parties to follow in requesting and provisioning UNEs.

**DISPOSITION: GRANTED IN PART AND DENIED IN PART  
CONSISTENT WITH ORDER**

**Introduction.** This case involves matters relating to future availability of certain Unbundled Network Elements (UNEs) in the provision of telecommunications services to the public and the interplay of federal and state regulation of telecommunications. For a number of years subsequent to the passage of the federal Telecommunications Act of 1996 (the Act), Incumbent Local Exchange Carriers (ILECs) were required to provide Competitive Local Exchange Carriers (CLECs) with access to certain of the ILECs' telecommunications facilities and services on an unbundled basis. The FCC deemed this necessary because alternative facilities from other providers were not sufficiently available within the service areas of wire centers where the CLECs operated to permit adequate competition to flourish. The FCC's expectation was that CLECs could use these UNEs in various combinations either in conjunction with their own facilities or on a resale basis, to offer telecommunications services to the public.

The common expression used to characterize these wire centers was that they constituted markets that were competitively "impaired." The following question then was raised: "when will there be a sufficient number of alternative providers of telecommunications facilities within the serving area of particular wire centers so that CLECs are not impaired in their ability to compete without access to those ILEC facilities as UNEs and thus, the ILECs' offering of ILEC facilities on an unbundled basis will no longer be mandated?"

On February 4, 2005, the Federal Communications Commission (FCC) released its Triennial Review Remand Order (*TRRO*),<sup>1</sup> which answered that question, at least in part. In that Order, the FCC established a default date of March 11, 2006, terminating ILECs' obligations to offer unbundled high-capacity (DS1/DS3/dark fiber) loops and unbundled high-capacity (DS1/DS3/dark fiber) interoffice transport in those wire centers certified by the ILECs to satisfy the *TRRO* impairment analysis criteria. The criteria were the number of business lines and the number of fiber-based collocators in each wire center.<sup>2</sup>

At the same time, CLECs were given the opportunity to challenge the designation of the wire centers. In so doing, a CLEC was required to "undertake a reasonably diligent inquiry into whether the wire centers in question meet the criteria and then self-certify to the ILEC that the CLEC was entitled to access to the aforementioned UNEs." Upon making that showing, the *TRRO* required that the ILEC must "immediately process" the UNE order and then may subsequently bring a dispute before a state commission or other authority if it contests the CLEC's access to the UNE. If the ILEC prevails, the CLEC may be back-billed for the time period when it should have paid the higher rate.<sup>3</sup>

This proceeding arises out of Qwest's submission of its list of non-impaired wire centers in Oregon and the objections to that list and to the procedures Qwest proposes to follow under the *TRRO*.

On February 15, 2006, Covad Communications Company; Eschelon Telecom of Oregon, Inc.; Integra Telecom of Oregon, Inc.; McLEODUSA Telecommunications Services, Inc.; and XO Communications Services, Inc. (Joint CLECs), filed a letter requesting that the Commission act to investigate the data being provided by ILECs Qwest Corporation (Qwest) and Verizon Corporation (Verizon) to the Commission in developing the Commission-approved list of non-impaired wire centers and to implement a process for reviewing and updating the lists. Verizon was subsequently dismissed from the case. The Commission issued Protective Orders 06-110 and 06-141. On April 7, 2006, Qwest submitted an issues list matrix prepared jointly by Qwest and the Joint CLECs.

On June 9, 2006, Joint CLECs filed a Motion to Compel Qwest to Respond to Data Requests (Motion). Joint CLECs asserted that the data sought "is reasonably calculated to lead to the discovery of admissible evidence."<sup>4</sup> The data in question was the subject matter of data request Nos. 33 and 34 of 49, seeking wire center data from Qwest's December 2004 ARMIS Report submitted to the FCC in April 2005.

---

<sup>1</sup> *In re Unbundled Access to Network Elements*, WC Docket No. 04-313, CC Docket No. 01-338, FCC No. 04-290, Order on Remand.

<sup>2</sup> *Id.*, ¶¶ 146, 155, 166, 174, 178, 182 and 195.

<sup>3</sup> *Id.*, ¶ 234.

<sup>4</sup> Motion, p. 1.

According to the Joint CLECs, on April 28, 2006, Joint CLECs propounded 49 data requests to Qwest, including Request Nos. 33 and 34. Request 33 sought information previously provided by Qwest in Highly Confidential Attachment C and Confidential Attachment D, except updated through March, 2005, or if that data was not available, updated through December 31, 2004. Highly Confidential Attachment C provided UNE-L/EEL loop counts for each CLEC, and Confidential Attachment D provided UNE-P loops by wire center. Request 34 sought information previously provided by Qwest in Confidential Attachments B, C and D, except updated through March 2005, or if that data was not available, updated through December 31, 2004. Confidential Attachment B contained all business line counts in non-impaired wire centers; Attachment C provided UNE-L loop counts for each CLEC and Attachment D provided the number of DS1 and DS3 circuits.<sup>5</sup>

Qwest declined to provide the data, citing paragraph 105 of the *TRRO* for the principle of using only data from the December 2003 ARMIS Report. Qwest also objected to Request 34 as “vague, ambiguous and unclear.”<sup>6</sup>

On June 26, 2006, Qwest Corporation filed its Response to the Joint CLEC’s Motion to Compel Qwest to Respond to Data Requests (Response). Qwest asserted that the requests sought data that was not relevant to the case because the data that the FCC intended to be utilized in this proceeding is the December 2003 ARMIS 43-08 data “that Qwest submitted to the FCC in February 2005 in support of its initial wire center list and is consistent with the data upon which the FCC relied in making its wire center non-impairment criteria determinations in its *TRRO* order.”<sup>7</sup>

The ALJ issued a Ruling on July 26, 2006, granting the Joint CLECs’ Motion, stating, in part: “While the Commission has yet to determine which (2003 or 2004 ARMIS) data shall be used as the basis for its findings and conclusions, by making the information available, the Commission will be better able to evaluate its impact and relevance to the proceedings.”<sup>8</sup>

By letter of June 30, 2006, Qwest Corporation, on behalf of all of the parties to the proceeding, filed a Joint Motion for Adoption of Proposed Procedural Schedule. The letter affirmed that the parties waived their right to a hearing and that they had agreed to dates for brief supplemental testimony in lieu of the evidentiary hearing. Supplemental testimony was filed on August 30, 2006.

<sup>7</sup> Response, p. 1.

<sup>8</sup> Ruling, p. 3.

Opening briefs were filed on September 21, 2006, and Reply Briefs were filed on October 17, 2006. On December 19, 2006, Qwest filed a Request for Official Notice and Submission of Supplemental Authority requesting that official notice be taken of the Washington Utilities and Transportation Commission's December 15, 2006, *TRRO* Order, Docket UT-053025, Order 06 and the accompanying Modified Interpretative Statement.

By the time the record was closed in the proceeding, the parties had reduced or consolidated the issues in the Joint Issues List and needed to brief the following six issues:

1. What time period is the proper data vintage for determining wire center non-impairment for the initial list of Oregon wire centers?
2. What is the proper means to calculate business line counts as proxies for the existence of competition when creating the initial list of non-impaired wire centers, and consequently do Qwest's business line counts in designated wire centers meet the *TRRO* non-impairment thresholds?
3. What is the proper means to calculate the number of fiber-based collocators as proxies for the existence of competition when creating the initial list of non-impaired wire centers, and consequently does Qwest's fiber-based collocator evidence in designated wire centers meet the *TRRO* non-impairment thresholds?
4. What procedures should be adopted for evaluation and implementation of future wire center classifications?
5. How should Qwest process orders submitted by CLECs for UNEs in non-impaired wire centers?
6. Should the Commission authorize Qwest to impose a charge for converting UNEs to tariffed services, and what should the appropriate charge be for conversions of tariffed services to UNEs?

**Issue 1: What time period is the proper data vintage for determining wire center non-impairment for the initial list of Oregon wire centers?**

**Background.** As noted in the ALJ's Ruling cited above, the FCC adopted fiber-based collocation and business line counts as the triggers for determining whether impairment exists in a particular wire center. In paragraph 105 of the *TRRO*, the FCC defines business lines as ILEC "ARMIS 43-08 business lines, plus business UNE-P, plus UNE-loops." The Commission must decide in the absence of an unambiguously categorical FCC statement what may reasonably be interpreted as the FCC's intentions with respect to which ARMIS data is to be utilized in state proceedings such as these; *i.e.*, should the Commission base its decision on the December 2003 ARMIS data or the more current ARMIS data available to Qwest at the time the wire center designations were

made, consistent with public interest in the promotion of full and fair competition for telecommunications services in Oregon? The *TRRO* became effective March 11, 2005.

**Positions of the Parties.** The Joint CLECs contend that determinations made pursuant to that order should therefore be based on data that is contemporaneous with that date.<sup>9</sup> Joint CLECs also cite a Michigan PSC case in which the ILEC, SBC, was found to be non-compliant with the 47 C.F.R. 51.319(a)(4) standards test because the data was not recent enough.

The age of the data must be close enough in time to reflect conditions at the time that SBC claims that the wire center is no longer impaired. In this case, the Commission finds that SBC should have used the 2004 ARMIS data, which was available, even if not fully edited and incorporated in a report to the FCC. The analysis requires using data gathered for ARMIS calculations, not the calculations themselves.<sup>10</sup>

Joint Parties also note that BellSouth has interpreted the FCC requirements the same way and relies on 2004 ARMIS data for the line count information.<sup>11</sup>

Qwest argues that the use of December 2003 data is consistent with the FCC's language and contends that the reference to ARMIS 43-08 data in paragraph 105 meant the data on file at the effective date of the order.<sup>12</sup>

Qwest asserts that the CLECs' arguments are without merit: the FCC would not have intended that the RBOCs use incomplete and unofficial data on which to make their non-impairment studies. The intervention of time does not mean that the earlier data was inappropriate for the preparation of the list. Furthermore, only two of at least nine state commissions have used data other than the December 2003 ARMIS data.<sup>13</sup>

In reply, the Joint CLECs note that case law is moving toward Joint CLECs' view and that the Washington Utilities and Transportation Commission (WUTC) reversed its Administrative Law Judge and ordered the use of the most recent data available. "Because these designations are permanent and materially affect the development of competition in Washington, we determine that our designation decision should be based on the most recent data available."<sup>14</sup>

<sup>9</sup> Joint CLEC Opening Brief, p. 8.

<sup>10</sup> *Id.*, p. 8, citing *In the matter, on the Commission's own motion, to commence a collaborative proceeding to monitor and facilitate implementation of Accessible Letters issued by SBC MICHIGAN and VERIZON*, Case No. U-14447, p. 5, Order issued September 20, 2005.

<sup>11</sup> *Id.*, citation omitted.

<sup>12</sup> Qwest Opening Brief, pp. 14-15.

<sup>13</sup> *Id.*, p. 15, fn. 19, and cases cited therein.

<sup>14</sup> Joint CLEC Reply Brief, pp. 4-5, and cases cited therein.

Qwest notes that the 2003 data set was called by the FCC “an objective set of data that incumbent LECs have already created for other regulatory purposes.” Therefore, the FCC intended that the parties use data that had already been collected.<sup>15</sup> In its Request to Consider Supplemental Authority (Request), filed December 19, 2006, Qwest notes that the WUTC had recently reversed its decision to use 2005 data and reverted to 2003 data because it felt that it was constrained to do so by the FCC’s decision.<sup>16</sup>

**Discussion.** In determining which data should be used, the Commission must look not only to what a reasonable interpretation of the FCC’s intent would be, but also one that is most consistent with the public interest in the promotion of robust competition in the marketplace for telecommunications services. In this instance, the FCC did not make unequivocally clear its intentions by specifying that the 2003 data were to be used; neither has it seen fit to issue a subsequent order clarifying the ambiguity surrounding the interpretation of its order. Rulings by state commissions around the country that venture an opinion as to the FCC’s intent have reached no clear consensus.

The WUTC Order upon which Qwest relies contains the following statements relevant to our analysis:

We continue to find that the FCC did not mandate or require the use of data from a particular year when applying the criteria to particular wire centers.

We are persuaded, however, that our decision to use 2005 data may run afoul of the FCC’s requirement that wire center designations are permanent. If a wire center meets the FCC’s criteria at the time an ILEC designates the wire center, but does not meet the criteria when applying data from a later period of time, the wire center designation would change, contrary to the FCC’s rules. Thus, we find that state commissions must evaluate the most current data available when the ILECs designated the wire center as non-impaired . . . .

Given this clarification, we strike paragraphs 20-21 of Order 04. While we continue to believe those paragraphs describe the preferable public policy, we are constrained by the FCC’s decision.

---

<sup>15</sup> Qwest Reply Brief, p. 12, citing *TRRO* ¶ 105.

<sup>16</sup> Request, p. 2, citing Docket UT-053025, Order 06, December 15, 2006, ¶¶ 33-34.

While we recognize that the ILECs had presumably collected 2004 ARMIS data and were preparing the data for filing with the FCC by April 1, we find the ILECs reasonably relied on 2003 data given the circumstances at the time.<sup>17</sup>

Unlike the Washington Commission, we are not facing the choice of 2003 versus 2005 data. We note that Qwest had the 2004 data readily available and could have used it in its wire center designations (as BellSouth had), but chose not to. WUTC notes that the FCC did not mandate the use of 2003 data and that using more recent data was “the preferable public policy.” Although the use of 2005 ARMIS data might run afoul of the *TRRO*, as WUTC suggests, we find that the use of 2004 data does not.

The availability to CLECs of alternative sources for telecommunications facilities has a real world impact on the state of competition in Oregon. We have had a consistent policy to encourage competition in the telecommunications marketplace, and it is therefore in the public interest to use the data that most closely reflects *current, real world* circumstances. The fact that Qwest’s choice of 2003 rather than 2004 ARMIS data might be considered one of two reasonable choices does not trump these important public policy concerns. The 2004 ARMIS data shall be used in this proceeding.

**Issue 2: What is the proper means to calculate business line counts as proxies for the existence of competition when creating the initial list of non-impaired wire centers, and consequently do Qwest’s business line counts in designated wire centers meet the *TRRO* non-impairment thresholds?**

The *TRRO* defines Tier 1 wire centers as those with four or more fiber-based collocations or with 38,000 or more business lines.<sup>18</sup> Tier 2 wire centers are defined as those with three or more fiber-based collocations or with 24,000 or greater business lines.<sup>19</sup> Tier 3 wire centers are all those that are not Tier 1 or Tier 2 wire centers.<sup>20</sup> For the purposes of the *TRRO*, “business lines” include (1) UNE-loop counts (including EELs), (2) business UNE-P counts and (3) Qwest business line counts.<sup>21</sup>

The FCC found that for Tier 2 and Tier 3 wire centers CLECs are impaired with respect to DS1 transport and, as a consequence, incumbent LECs are obligated to provide unbundled DS1 transport that originates or terminates in any Tier 2 or Tier 3 wire center.<sup>22</sup> The FCC concluded that CLECs were not impaired without access to unbundled DS3 transport on routes connecting wire centers where both are classified as either Tier 1 or Tier 2.<sup>23</sup> Similarly, CLEC access to unbundled dark fiber

---

<sup>17</sup> WUTC Order, ¶¶ 33-36.

<sup>18</sup> *TRRO*, ¶ 112.

<sup>19</sup> *Id.*, ¶ 118.

<sup>20</sup> *Id.*, ¶ 123.

<sup>21</sup> *Id.*, ¶ 105.

<sup>22</sup> *Id.*, ¶ 126.

<sup>23</sup> *Id.*, ¶ 129.

was found not to be impaired in Tier 1 and Tier 2 wire centers.<sup>24</sup> Thus, access to unbundled DS3 and dark fiber must be available to CLECs only in Tier 3 wire centers.

CLECs dispute Qwest's classification of three wire centers that Qwest has classified as non-impaired. Qwest designated Bend and Portland Alpine as Tier 2, based on the number of business lines.<sup>25</sup> Qwest designated Medford as Tier 1, based on the number of fiber-based collocators.<sup>26</sup> Joint CLECs dispute the methodology that Qwest has used to calculate both elements.

**Data Review.** Qwest provided confidential and highly confidential data in conjunction with Bench Requests BCH 01-002 and 01-003. BCH 01-002, Exhibits B and C, provided highly confidential information regarding the UNE-Ls and EELs of each CLEC by wire center, as well as the number of collocators in each wire center and the asserted tier classification of that wire center. BCH 01-002, Exhibit D, provided confidential information on the number of UNE-P Voice Grade Equivalent lines in each wire center. BCH 01-003, Exhibits C, D and E, provided a summary of 12/2003 TRRO Total Business Switched Access Lines by wire center, 12/2003 TRRO Business Switched Access Lines vs. ARMIS 43-08, Table III, and 12/2003 TRRO Quantities Summary-Total Switched Access Lines, including and excluding voice channels on DS1 pipes. BCH 01-003 highly confidential Exhibits A and B contained correspondence regarding the status of several fiber collocators in various wire centers.

**Positions of the Parties.** With respect to the calculation of line counts, Joint CLECs object to Qwest's inclusion of line equivalents for the spare capacity on digital circuits. "The FCC has never authorized such an adjustment, which is inconsistent with both the letter and the spirit of the TRRO." Joint CLECs contend the language of the TRRO demonstrates that the count should include only those lines actually "used to serve" the customer, rather than spare capacity. Joint CLECs contend that the only other Commissions in Qwest's territory to address the issue, Washington and Utah, reached that same conclusion. The North Carolina Commission stated specifically that "the FCC did not intend for the ILECs' ARMIS business line count to be altered in any way. Therefore . . . BellSouth has inappropriately adjusted the high capacity business lines represented in the ARMIS report to reflect the maximum potential use." Joint CLECs also argue that Qwest's proposed adjustment of its ARMIS 43-08 business line counts to account for lines that are served out of one wire center but terminated in another is an unauthorized adjustment and is followed by neither AT&T nor Verizon.<sup>27</sup>

Qwest notes the FCC TRRO definition of business lines and the rules embodied in 47 C.F.R. §51.5, stating "The FCC's directives are very clear: *all* ILEC lines that are used to serve business customers . . . should be included in the business line count."

<sup>24</sup> *Id.*, ¶ 133.

<sup>25</sup> Qwest Response to Bench Request BCH 01-002, Attachment A. Joint CLECs assert they are Tier 3. *See* Surrebuttal Testimony of Douglas Denney dated July 12, 2006, Joint CLECs/13, Denney/2.

<sup>26</sup> Qwest designated the Medford wire center as Tier 1. *See* BCH 01-002, Attachment A. Joint CLECs contend that the Medford wire center is Tier 3. Joint CLECs/13, Denney/2.

<sup>27</sup> Joint CLEC Opening Brief, pp. 3-6, and cases cited therein.

(Emphasis in text.)<sup>28</sup> Qwest contends that the FCC intended that the full capacity of high capacity digital business lines should be used in the calculation because the TRRO requires that an ILEC should count “each 64-kbps equivalent as one line.” Qwest also asserts that the Joint CLECs undercount lines because Qwest does not track lines by originating wire center. Similar principles apply with respect to Business UNE-P line counts, DS1 and DS3 loop counts.<sup>29</sup> The counting of full capacity for all digital channels satisfies the plain language of 47 C.F.R. §51.5. Qwest argues that Joint CLECs have parsed the language to mean that individual channels have to be in use in order to serve a business customer. “Indeed, the mere fact the FCC mandated this full 24-VGE channel requirement (for a DS1 line) can only lead to the conclusion that it did not ‘intend’ to count only actual channels ‘in use.’”<sup>30</sup> Qwest notes that the ARMIS Report includes only channels “in use,” but if the FCC intended only those lines to be counted, Subsection 3 of Rule 51.5 would have been unnecessary; the FCC intended that each 64-kbps channel equivalent “shall be counted as *one line*.”<sup>31</sup> Qwest also notes that a number of jurisdictions have accepted its interpretation of the FCC language and permitted counting of unused capacity equivalents.<sup>32</sup>

**Discussion.** With respect to whether lines “used to serve” should include spare capacity, including DS1 equivalents for the purpose of calculating line counts and consequent wire center eligibility, the Commission is again asked to divine the FCC’s intentions. The relevant language could reasonably be interpreted as either Qwest or the Joint CLECs propose. Although there is a lack of general consensus among the various state commissions, we agree with the comments of the North Carolina commission that a simple reading of the phrase “used to serve” precludes counting spare—i.e., unused—capacity either in individual lines or equivalents. This interpretation is not only reasonable; it most closely reflects current, real world circumstances and is most consistent with our policy of promoting robust competition in the offering of telecommunications services to the public.

Joint CLECs also have asked that, if Qwest is authorized to modify its ARMIS 43-08 line counts (i.e., include unused capacity as described by Qwest above), the Commission make certain additional adjustments, including using the most contemporaneous data for UNE-P and UNE-loops.<sup>33</sup> In light of our findings above, Joint CLECs’ request is moot.

We direct the parties to jointly submit new business line data for the Bend and Portland Alpine wire centers. The submission shall utilize business line counts, as defined in paragraph 105 of the TRRO, taken from the 2004 ARMIS 43-08 report. The line counts for each wire center shall include only lines actually used to serve customers and shall exclude spare capacity, as measured in voice grade equivalents.

<sup>30</sup> Qwest Reply Brief, pp. 5-6.

<sup>31</sup> *Id.*, p. 6, emphasis in text.

<sup>32</sup> *Id.*, pp. 7-8.

<sup>33</sup> Joint CLEC Opening Brief, pp. 7-8.

**Issue 3: What is the proper means to calculate the number of fiber-based collocators as proxies for the existence of competition when creating the initial list of non-impaired wire centers, and consequently does Qwest's fiber-based collocator evidence in designated wire centers meet the *TRRO* non-impairment thresholds?**

The Joint Issues List submitted by the parties originally identified the question as follows: Has Qwest justified that Portland Capitol and Medford wire centers have at least four fiber-based collocators as defined by the FCC in the *TRRO* and should thus be classified as Tier 1 by the Commission?<sup>34</sup>

**Positions of the Parties.** Only the Tier 1 classification of the Medford wire center, as determined by the number of fiber-based collocators, remains at issue. Joint CLECs contend that Qwest incorrectly counted one company (Company A) despite having been informed that Company A did not own or operate fiber in the Medford wire center. Joint CLECs assert Qwest misinterprets the *TRRO* by relying on the fact that Company A obtains transport from both Qwest and non-Qwest affiliated carriers.<sup>35</sup> Joint CLECs assert that merely obtaining transport does not mean that a company operates or has the right to use the fiber itself and does not meet the "indefeasible right of use" standard for the purpose of the *TRRO* analysis.<sup>36</sup> Joint CLECs also claim that a second company (Company B) should not have been counted because Company B: (1) had declared bankruptcy and was in the process of going out of business on the effective date of the *TRRO*, (2) served only a handful of customers and (3) was completely out of business six months later. Such a company would not demonstrate that, as the *TRRO* would have it, "significant revenue opportunities exist for competitive LECs."<sup>37</sup>

Qwest asserts that Medford is one of five wire centers that meet the FCC's threshold for Tier 1 non-impairment status for interoffice transport.<sup>38</sup> After describing its information gathering and analysis methods,<sup>39</sup> Qwest states that it properly designated Company A as a fiber-based collocator, because of its admitted use of both Qwest and non-affiliated CLEC fiber.<sup>40</sup> Although Company B may be out of business, Qwest claims that it, too, is rightly included in the determination calculation because it was operational on March 11, 2005, even though Qwest confirmed that the collocation was decommissioned in November 2005.<sup>41</sup>

---

<sup>34</sup> Qwest claimed four fiber-based collocators in Portland Capitol and Medford.

<sup>35</sup> Joint CLEC Opening Brief, p. 10, citing exhibit ref. in fn. 13.

<sup>36</sup> *Id.*, p. 11.

<sup>37</sup> *Id.*, pp. 11-13.

<sup>38</sup> Qwest Opening Brief, pp. 20-21.

<sup>39</sup> *Id.*, pp. 21-23.

<sup>40</sup> *Id.*, p. 24.

<sup>41</sup> *Id.*, p. 25.

**Discussion.** Here again we find it to be in the public interest to use data that most closely reflects current, real world circumstances. Wire center non-impaired status classification is a permanent, i.e., irreversible, act and should therefore be firmly based in fact. Company A was not shown to have either ownership or an indefeasible right of use of facilities from another carrier, the standard enunciated in paragraph 102, Note 292, of the *TRRO*.<sup>42</sup> Thus, Company A's leasing of fiber circuits without any ownership or operation of a fiber optic network does not fulfill the language of the *TRRO* for "fiber-based collocators." Company B is no longer a factor in the marketplace, and including it in this permanent calculation fails to reflect the true state of competition in the Medford wire center for the purposes of a non-impairment determination. However, we are constrained by the fact that, as of the effective date of the *TRRO*, Company B was providing service to customers, and Qwest's claim for its inclusion in the list of fiber-based collocators is supported by the record. We therefore conclude that, based on the number of fiber-based collocators, the Medford wire center should be classified as Tier 2.

**Issue 4. What procedures should be adopted for evaluation and implementation of future wire center classifications?**

The parties disagree with respect to four distinct areas: (1) whether Qwest should be required to provide advance warning that a wire center is approaching classification in a higher tier; (2) the amount of information Qwest should file and whether Qwest should provide prior notice of filing for Commission approval of a new wire center classification; (3) the effective date of a new classification; and (4) the length of the transition period for the affected UNEs.

**(1) Should Qwest be required to provide advance warning that a wire center is approaching classification in a higher tier?**

**Positions of the Parties.** Joint CLECs ask the Commission to require Qwest to notify affected CLECs when the number of business lines in a wire center is within 5,000 lines of meeting the *TRRO* threshold or the number of fiber-based collocators is within one fiber-based collocator of meeting the *TRRO* threshold. Such notification would enable CLECs to better prepare to find alternatives to UNEs and any impact or burden on Qwest would, in Joint CLECs' view, be minimal.<sup>43</sup>

---

<sup>42</sup> "We find that when a company has collocation facilities connected to fiber transmission facilities obtained on an indefeasible right of use (IRU) basis from another carrier, including the incumbent LEC, these facilities shall be counted for purposes of this analysis and shall be treated as non-incumbent LEC fiber facilities."

<sup>43</sup> Joint CLEC Opening Brief, pp. 14-15.

Qwest strongly objects to the Joint CLEC proposal, asserting that it would be an additional administrative burden for which Qwest has no administrative process in place. Furthermore, neither the *TRRO* nor any state Commission has imposed such a requirement.<sup>44</sup> Qwest also claims that 5,000 lines or one fiber collocator “does not mean that a change in the impairment classification for that wire center is imminent,” and that fluctuations in line counts “could actually cause CLECs to take costly action to prepare for a wire center non-impairment reclassification that would not occur.” Qwest also voices a concern that advance notice might encourage CLECs to “game the system.”<sup>45</sup> Finally, Qwest notes that no such requirements exist in the *TRRO* and that no state commission anywhere has imposed such requirements; the Utah Commission also rejected the proposal.<sup>46</sup>

**Discussion.** While we appreciate the uncertainty that the *TRRO* imposes upon CLECs, despite Joint CLECs’ contention that the more information they have, the better able they will be to make sound decisions,<sup>47</sup> we are not convinced that the proposed notification program will assist the CLECs in any meaningful way. Furthermore, we acknowledge the uniform rejection of the CLECs’ proposal throughout the Qwest region as an indication of other Commissions’ concurrence in our view.

Qwest has testified that the proposed notification mechanisms would be burdensome and could provide false signals, and Joint CLECs have not provided evidence to the contrary. We therefore accept that putting notification procedures in place (and raising the possibility of sanctions for their violation) may well be a significant burden, especially in light of the fact that such systems would be unique to Oregon. However, we find Qwest’s conjectures regarding CLECs’ “gaming the system” too remote and speculative to be worthy of consideration.

By adopting the Qwest position on this issue, we also ensure uniformity of treatment of CLECs throughout the Qwest region. Qwest shall not be required to provide notification of approaching wire center non-impairment threshold levels.

**(2) What information should Qwest file, including prior notice of filing for Commission approval of a new wire center?**

**Positions of the Parties.** Joint CLECs propose that Qwest be required to include all of its supporting documentation with its initial filing for Commission approval of a new wire center classification as a means of facilitating a 30-day review process. Joint CLECs also propose that Qwest provide five days’ advance notice to alert CLECs that Qwest will be providing confidential data on the number of UNEs those CLECs

---

<sup>44</sup> Qwest Opening Brief, pp. 26-27, citing, e.g., *In the Matter of the Investigation into Qwest Wire Center Data*, Public Service Commission of Utah, Docket No. 06-049-40, issued September 11, 2006 (Utah Order), pp. 24-26.

<sup>45</sup> *Id.*, p. 27, and Qwest Reply Brief, pp. 23-24.

<sup>46</sup> Qwest Reply Brief, pp. 24-25.

<sup>47</sup> Joint CLEC Reply Brief, pp. 6-7.

have in the wire center. This would give CLECs time to object to the disclosure of confidential information.<sup>48</sup>

Qwest responds by saying that Joint CLECs' concerns regarding disclosure of confidential information are overstated. Mechanisms for confidential treatment of CLEC data are readily available via standing non-disclosure agreements or protective orders such as those in this docket.<sup>49</sup> Furthermore, Qwest argues, neither the TRRO nor any other state commission has imposed such a requirement.<sup>50</sup> With respect to supporting documentation, Qwest contends that it is already committed to provide "substantive supporting documentation under a protective order similar to the data that Qwest has provided in this docket . . . . Qwest is certainly well aware that without support for such a filing, reclassification of a wire center could be delayed and that Qwest cannot take advantage of the new competitive environment until reclassification is effective."<sup>51</sup>

CLECs contend that the data Qwest proposes to provide "simply is not sufficient . . . . CLECs need the type of data that they requested in discovery in this case, including Qwest's supplemental [wire center-specific] responses to that discovery."<sup>52</sup>

**Discussion.** The Commission Staff has gone to great lengths in this and other dockets<sup>53</sup> to protect competitively sensitive CLEC information and has readily adapted protective orders to particular circumstances. Furthermore, it is in Qwest's own interests to be as thorough and forthcoming as possible with respect to the submission of supporting documentation. We are not persuaded that adopting the five-day advance notice which Joint CLECs propose will in any way improve upon the procedures already in place. However, we shall require Qwest to include detailed wire center-specific information in its initial filing for Commission approval of a new wire center classification equivalent in scope and particularity to that which was provided in this proceeding pursuant to CLEC data requests.

**(3) How should the effective date of a new classification be determined?**

**Positions of the Parties.** Joint CLECs propose that the Commission should have flexibility in setting the effective date of a new wire center classification. In Joint CLECs' view, this would provide Qwest with the incentive to submit data as quickly as possible so that parties can confirm or raise issues with Qwest's conclusions. This flexibility would also discourage CLECs from using procedural mechanisms to delay the effective dates because the Commission could move up the effective date if it concludes that a CLEC may have raised issues solely for the purposes of delay. The Utah

<sup>48</sup> Joint CLEC Opening Brief, pp. 15-16.

<sup>49</sup> Qwest Reply Brief, p. 25.

<sup>50</sup> *Id.*, p. 26.

<sup>51</sup> Qwest Reply Brief, pp. 26-27.

<sup>52</sup> Joint CLEC Reply Brief, pp. 7-8.

<sup>53</sup> See, e.g., Docket UX 29, Commission Request for Production of Information, March 16, 2005.

Commission reserved itself the authority to delay proceedings in the event of a CLEC objection.<sup>54</sup>

Qwest contends that the 30-day period should be adopted. CLECs would be provided with the same type of data that they received for the initial list of non-impaired wire centers at the time of the Qwest filing. If no objections were raised, the changes would go into effect by operation of law. In the event of CLEC objections, Qwest contends that if it ultimately prevailed on the merits, Qwest should be entitled to back-bill CLECs to the original effective date. The *TRRO*, Qwest notes, has provided for such a true-up procedure.<sup>55</sup> According to Qwest, it is the CLECs, not Qwest who are motivated to delay the process and prevent Qwest from taking advantage of the benefits of the *TRRO*.<sup>56</sup>

**Discussion.** The Utah Commission concluded that a 30-day period between the filing and the effective date struck a reasonable balance: it gave CLECs sufficient time to object while reserving Commission authority to change the effective date for all non-impairment filings if such a change was warranted by the facts and actions of the parties specific to that filing. The Utah Commission also concluded that if the CLECs' claims were without merit, Qwest would be entitled to back-bill to the effective date for the CLECs' use of Qwest's facilities.<sup>57</sup>

We believe that this is a reasonable compromise. We reject the CLEC five-day advance notice as unnecessary and adopt a 30-day effective date in the event that no CLEC interposes any objection to the Qwest filing. In the event that the designation is opposed, we reserve our authority to set another effective date either on our own or upon CLEC motion.

We also require that the initial filing seeking non-impaired status for a wire center contain more granular detail than Qwest has proposed, including Qwest and CLEC-specific business line count and facilities data by wire center, calculating the number of lines served as provided in the discussion of Issues 2 and 3, above. Such data shall be identified as "highly confidential" and subject to the standing special protective order used in this proceeding.

Finally, rather than allowing Qwest to automatically back-bill CLECs to the original effective date if it prevails on the designation generally, we shall only allow Qwest to back-bill to a date designated by the Commission in the event that we specifically find the CLECs' objections to have been without merit or primarily for the purpose of delaying implementation. To do otherwise would have an undue chilling effect on the exercise of the CLECs' rights to scrutinize Qwest's proposed wire center designation.

<sup>54</sup> Joint CLEC Opening Brief, pp. 17-18, citing Utah Order at 30.

<sup>55</sup> Qwest Opening Brief, pp. 28-29, citing *TRRO* fms. 408, 524 and 630.

<sup>56</sup> *Id.*, p. 29.

<sup>57</sup> Utah Order, pp. 30-31.

**(4) What is the appropriate transition period for the affected UNEs?**

**Positions of the Parties.** Joint CLECs note that the FCC provided for a one-year transition period for unbundled DS1 and DS3 transport and loops in affected wire centers and 18 months to transition off dark fiber. Joint CLECs believe these time frames should be applied to newly classified wire centers as well.<sup>58</sup> In Joint CLECs' view, the 90-day transition period proposed by Qwest is inadequate because it does not apply to the rates charged for use of its facilities but is limited to network operations required to change the circuit identifications. CLECs would be billed from the effective date, even if they changed facilities during the transition period. CLECs therefore have only 30 days from the date of notification to act to avoid the new charges for UNEs.<sup>59</sup>

Qwest notes that the 12- and 18-month transition periods in the *TRRO* applied only to the initial lists, and there will be fewer newly classified wire centers than the initial list. The Joint CLEC proposal provides incentives to delay implementation of the transition of services "thereby denying Qwest the benefits of wire center reclassification that the FCC intended."<sup>60</sup> Citing the Utah Order at page 33, Qwest proposes that it should be allowed to charge CLECs 115 percent of the UNE rate for non-impaired UNE services and facilities during the transition.<sup>61</sup> If CLECs receive the UNE rate during the transition period, they will have an incentive to delay their transition of services until the end of the transition period.<sup>62</sup>

Joint CLECs may have accepted Qwest's Opening Brief proposal to adopt the Utah Order formula; their Reply Brief does not mention the issue in its discussion captioned Filing for Future Wire Center Classification at page 7, *et seq.*

**Discussion.** The 12- and 18-month transition periods reflected the need to address the large number of wire centers that would be part of the original non-impairment filings. Additions to the non-impaired wire center lists would arrive at far larger intervals and require smaller scale CLEC responses. The 90-day transition period in the Utah Order provides a reasonable balance. The interim compensation plan—115 percent of the current UNE rates for non-impaired UNE services and facilities—is also a reasonable one; CLECs can plan for the future by knowing how to quantify their incremental costs to continue to use UNEs during the transition period, and Qwest will obtain at least some of the benefit the *TRRO* conferred. We adopt the directives set forth on page 33 of the Utah Order.

<sup>59</sup> *Id.*, pp. 18-19.

<sup>60</sup> Qwest Opening Brief, p. 30.

<sup>61</sup> *Id.*, p. 31.

<sup>62</sup> Qwest Reply Brief, p. 20.

**Issue 5. How should Qwest process orders submitted by CLECs for UNEs in non-impaired wire centers?**

**Positions of the Parties.** Joint CLECs acknowledge that CLECs are not entitled to order UNEs that have been classified as non-impaired in a particular wire center, but request that the Commission establish a policy regarding “how Qwest handles UNE orders in a new environment in which certain UNEs are unavailable in certain wire centers.”<sup>63</sup> Joint CLECs assert that the parties should:

be required to work together to develop an order process that will ensure that CLECs are able to obtain the facilities they need from Qwest at the applicable rates, terms, and conditions. Pending development of such a process, the default should be the process outlined in the TRRO—a CLEC may place a UNE order in any wire center as long as the CLEC self-certifies that it is entitled to order that UNE, and Qwest must provision that UNE, subject to a later conversion to a tariffed service if the CLEC was not entitled to order the facility as a UNE in that wire center.<sup>64</sup>

In reply, Qwest asserts that it has already committed not to reject or block orders “unless and until the Commission has approved a wire center as non-impaired . . . . [T]he Joint CLECs apparently want to be able to force Qwest to accept orders at wire centers that have *already been declared*, by *this Commission*, to be *non-impaired*, and thus for Qwest and the Joint CLECs to ‘work together to develop a process.’”<sup>65</sup> In Qwest’s view, the proposal would have Qwest be a guarantor for CLECs mistakes in placing orders in non-impaired wire centers, and neither the *TRRO* nor any state commission has required such a process.<sup>66</sup>

Joint CLECs contend that “Qwest’s disagreement is with the FCC, not the Joint CLECs. . . . The Utah Public Service Commission agreed with the Joint CLECs and concluded that Qwest is required to comply with the FCC process.”<sup>67</sup> Contrary to Qwest’s assertions in its Opening Brief, Joint CLECs claim that they do not seek separate proceedings before the Commission when a CLEC wishes to place a UNE order in a particular wire center that Qwest believes is non-impaired. They wish to establish procedures in lieu of unilaterally implemented order processing adjustments subsequent to a wire center reclassification because of a concern that Qwest may erroneously reject legitimate orders. Any error by a CLEC would give rise to back-billing for the difference between the UNE charges and the applicable tariff charges, and Qwest would be kept

<sup>63</sup> Joint CLEC Opening Brief, p. 20.

<sup>64</sup> *Id.*, citing the concurrence of the Utah Commission at p. 39 of the Utah Order.

<sup>65</sup> Qwest Reply Brief, p. 29, emphasis in text.

<sup>66</sup> *Id.*, pp. 29-30. Qwest also contends that the Utah Order is ambiguous and has filed a Motion for Clarification; it intends to seek reconsideration if it is dissatisfied with the outcome of its Motion, *fn.* 24.

<sup>67</sup> Joint CLEC Reply Brief, p. 9, citing *TRRO* ¶ 234 and Utah Order, pp. 37-38.

economically whole. The process would ensure timely provisioning of UNEs to enable CLECs to serve their customers.<sup>68</sup>

**Discussion.** Paragraph 234 of the *TRRO* reads as follows:

Upon receiving a request for access to a dedicated transport or high-capacity loop UNE that indicates that the UNE meets the relevant factual criteria discussed in sections V and VI above, the incumbent LEC must immediately process the request. To the extent that an incumbent LEC seeks to challenge any such UNEs, it subsequently can raise that issue through the dispute resolution procedures provided for in its interconnection agreements. In other words, the incumbent LEC must provision the UNE and subsequently bring any dispute regarding access to that UNE before a state commission or other appropriate authority.

The Utah Commission concluded that the process described in the above paragraph “remains applicable to CLEC requests for UNEs and order Qwest and CLECs to follow that process in the procurement of UNEs in the future.”<sup>69</sup> Although Qwest claims that “Joint CLECs cannot point to any *TRRO* requirement, or state commission order, requiring such a process,”<sup>70</sup> Qwest does not address the *TRRO* language directly and asserts that the Utah Commission may have meant for procedures to apply only in wire centers that had not yet been designated as non-impaired.

The Joint CLEC proposal seeks the development of a process wherein a CLEC request for a UNE in a non-impaired wire center, either made in error or in dispute, is dealt with by Qwest and the CLEC in such a way so that facilities are provided in a timely manner. This process should also ensure that the services are ultimately charged at the proper rate—UNE or tariffed service—and the CLEC back-billed for the difference, if the CLEC has erroneously placed a UNE order that Qwest was not required to provide. We find such an approach, which provides facilities to CLECs on a timely basis and keeps Qwest financially whole, to be a reasonable one and fully consistent with the *TRRO*. We therefore direct Qwest and Joint CLECs to develop such procedures reasonably consistent with the intentions we have set forth here.

<sup>69</sup> Utah Order, pp. 37-38.

<sup>70</sup> Qwest Reply Brief, p. 30.

**Issue 6. Should the Commission authorize Qwest to impose a charge for converting UNEs to tariffed services, and what should the appropriate charge be for conversions of tariffed services to UNEs?**

**Conversion of UNEs to Tariffed Services.** Qwest proposes a \$50 "Design Change Charge" on each UNE that it converts to a special access circuit after a wire center has been properly classified as non-impaired with respect to that particular UNE.

**Positions of the Parties.** Joint CLECs argue that the cost is inappropriate: Qwest was the party that sought the wire center designation change and the attendant administrative costs. Furthermore, Qwest benefits by being able to charge rates that are more than double the existing UNE rates for the same facilities. Joint CLECs also note Qwest does not charge its own retail customers under comparable circumstances. Joint CLECs reference an opinion of the California commission that concluded Qwest should not be authorized to impose such charges on CLECs.<sup>71</sup> Other state commissions have established much lower non-recurring charges for conversions of UNEs to special access and vice versa. If the Commission believes such charges are appropriate, they should be similarly cost-based.<sup>72</sup>

Qwest argues that a CLEC who chooses to convert a UNE to an alternative Qwest circuit does so voluntarily and in the face of other business alternatives; Qwest performs work activities in converting UNEs to private line circuits and is entitled to recover the Design Change Charge as a non-recurring cost. The cost is incurred at a CLEC's request, and it is therefore unfair to shift the cost to Qwest and its customers.<sup>73</sup> The conversion work involves three functional areas and a number of necessary tasks and must, at the same time, avoid interruptions of service to the CLEC's customers. Qwest has already gone to great expense to provide UNEs and should not be required to spend millions more to further modify its systems.<sup>74</sup>

In reply, Joint CLECs claim they do not benefit from what is essentially a billing record change "in conjunction with Qwest doubling or tripling the rate Qwest charges the CLEC for providing a particular circuit. Once the conversion takes place, moreover, the CLEC becomes one of Qwest's customers that pays retail rates and thus is already bearing the burden of whatever costs Qwest incurs to undertake this activity for its own benefit."<sup>75</sup> Joint CLECs also note that the staffs of the Arizona and Colorado Commissions share Joint CLECs' view that either no charge or a nominal charge (one dollar) would be appropriate.<sup>76</sup>

---

<sup>71</sup> Joint CLEC Opening Brief, p. 21.

<sup>72</sup> *Id.*, p. 22.

<sup>73</sup> Qwest Opening Brief, pp. 31-32, and fn. 35.

<sup>74</sup> *Id.*, pp. 32-33.

<sup>75</sup> Joint CLEC Reply Brief, p. 11.

<sup>76</sup> *Id.*, pp. 12-13.

Qwest responds that the conversion of a UNE circuit to a special access or private line circuit is a very involved and detailed process. Although transparent to the CLEC's end-user customer, it avoids placing the customer's service at risk and thus benefits the CLEC. Qwest contends that, because it has already had to spend millions of dollars to modify its systems to provide UNEs, it would not be fair to again require Qwest to bear the cost for further system modifications.<sup>77</sup> But for the conversion, Qwest would not have to bear the costs of performing the tasks; Qwest is thus disadvantaged in a market the FCC has determined to be competitive. Furthermore, the Utah Commission has agreed that Qwest may levy a non-recurring charge, if it is supported by appropriate cost information.<sup>78</sup>

In this case, Qwest argues that the use of Qwest's existing tariffed Design Change Charge is more appropriate than a cost study-developed unique charge for UNE-to-private line conversions or a charge to convert a special access circuit to a UNE. First, requiring a TELRIC rate for an NRC for a tariffed interstate private line service would be an inappropriate application of TELRIC beyond the Commission's jurisdiction; TELRIC should only apply to UNEs, not to tariffed private line services. Secondly, Qwest argues, the Design Change Charge involves functional areas and tasks similar to those associated with the conversion of a UNE to a private line service or facility. The proposed \$50 charge is a conservative estimate of the costs, because TELRIC-priced conversion rates from private line to UNE run between \$22 and \$42, and the added complexity for a billing system change of a UNE to private line should make the cost much higher.<sup>79</sup>

**Discussion.** The *TRRO* requires the Commission to make findings and take action with respect to certain wire center classification benchmarks. It is not appropriate for the Commission to look at the initiating cause of those classifications, i.e., the filing of a petition by an ILEC, to determine whether or not the costs associated with the outcome of those findings should be assessed. Simply put, once a wire center has been declared to be non-impaired, a CLEC utilizing UNEs is faced with a business decision as to whether to find another source for transport and loops or to purchase private line services from the ILEC. If it chooses to convert existing UNEs to private line services and notifies the ILEC of its intentions, the ILEC is required to perform at least *some* functions or actions that will cause it to incur costs on a one-time basis. Regardless of the benefit to be derived by the ILEC from the recurring charges that will follow, it has been our consistent policy to permit charges to recover these non-recurring costs.

We reject Qwest's assertion that we lack jurisdiction to apply TELRIC pricing to non-recurring charges for UNE to private line conversion. Qwest cites no jurisdiction that has mandated the Qwest-tariffed Design Change Charge for UNE conversions or denied that it has authority to examine the costs and set prices for the non-recurring charges associated with UNE conversions to private line.

---

<sup>77</sup> Qwest Reply Brief, p. 30.

<sup>78</sup> *Id.*, p. 31.

<sup>79</sup> *Id.*, pp. 32-33.

Furthermore, we are not convinced that Qwest's Design Change Charge is a reasonable proxy for the actual non-recurring costs involved in the conversion of UNEs to private line services; the differences between the two processes is too great. Like other state commissions, we will utilize cost-based evidence to set the rates charged for these non-recurring costs.

We therefore require that the non-recurring UNE-to-private-line service conversion charge shall be based on costs. We direct Qwest to propose a specific non-recurring rate for the UNE-to-private line conversions, and to submit a cost study in support of its proposed charge. Qwest's cost study must include calculations of TELRIC costs and justification for any variation of its proposed non-recurring rate from TELRIC costs.

### ORDER

IT IS ORDERED that:

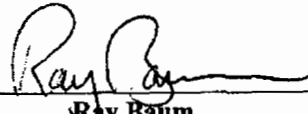

1. The request for an investigation contained in the February 15, 2006, letter filed by Covad Communications Company; Eschelon Telecom of Oregon, Inc.; Integra Telecom of Oregon, Inc.; McLEODUSA Telecommunications Services, Inc.; and XO Communications Services, Inc., regarding the data filed by Qwest Corporation to the Commission in developing the Commission-approved list of non-impaired wire centers and to implement a process for reviewing and updating the lists is **GRANTED IN PART AND DENIED IN PART**, consistent with this Order.
2. Within 30 (thirty) days of the effective date of this Order, Qwest shall submit a revised list of wire centers, indicating their classification and the bases therefor, supported by appropriate data, consistent with the findings and conclusions of this Order.
3. Within 30 (thirty) days of the effective date of this Order, Qwest shall submit a document setting forth the procedures for the evaluation and implementation of future wire center classifications consistent with the findings and conclusions of this Order.
4. Within 60 (sixty) days of the effective date of this Order, Qwest shall submit a cost study consistent with this Order to establish a non-recurring charge for the conversion of Unbundled Network Elements to tariffed special access services.

ORDER NO. 07-109

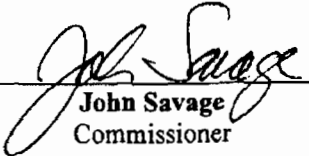

5. This docket shall remain open to review and assess compliance with this Order and to resolve any matters arising therefrom.

Made, entered and effective MAR 20 2007

PON # AZ657718T1FAC)

Dear Mr. Beck, Director of Interconnection, and General Counsel:

Eschelon asks Qwest to work with Eschelon to resolve the dispute described below both for this particular occurrence and on a going forward basis for the term of the interconnection agreements (“ICAs”) between the parties. This issue needs to be addressed promptly, before another such situation arises. Enclosed is a document, which is incorporated by reference, quoting Arizona ICA provisions relating to this dispute and citing similar provisions in Colorado, Minnesota, Oregon, Utah and Washington. If Eschelon and Qwest are unable to agree on a resolution, Eschelon reserves its right to ask the Arizona Commission to arbitrate the dispute pursuant to Section 27.2 of Part A of the Arizona ICA, as well as submit the dispute to the other state commissions pursuant to the dispute resolution provisions of the ICAs in our other states.

Last week, in violation of the ICA, Qwest refused Eschelon’s requests for both a repair and an expedite to restore service to an Arizona Eschelon End User Customer who was unexpectedly out of service, without dial tone. As a result of Qwest’s violation of the ICA, the End User Customer was out of service for a delayed period of time -- from Thursday of last week until Monday of this week. (The outage would have continued

even longer pursuant to Qwest's approach, if Eschelon had not ordered special access, instead of the unbundled product to which it was entitled, to ensure this customer received service.) The Eschelon End User Customer in this case is a private not-for-profit corporation that provides therapeutic, rehabilitation, and social services to children and adults with developmental, therapeutic, physical, and mental disabilities. Such an organization, in particular, needs telephone service, including the ability to dial 911 from each room, to serve its clientele. The center is open 24X7, 365 Days a year. Eschelon provided Qwest's escalations group with a letter from the End User Customer documenting that the customer provides critical health care services to individuals with high level and urgent care needs. Eschelon also informed Qwest's Regional Director of Service Management, Jean Novak (who is assigned at Qwest to handle Eschelon's service issues), of the letter and that Eschelon had provided it to that group. Qwest knew the importance of restoring dial tone. Nonetheless, Qwest both rejected the trouble report (refusing to open a ticket) and refused to expedite an order to restore service.

Eschelon's End User Customer contacted Eschelon repair to report a trouble when the End User Customer lost dial tone. Eschelon reported trouble to Qwest (both through CEMR and by phone). It was determined that the outage resulted from an Eschelon disconnect in error (i.e., due to a typo in the circuit ID number, a disconnect intended for a different line was completed instead for the facility serving the individual rooms). Eschelon accepted responsibility for that error and informed the customer that it was an Eschelon error. Regardless of who caused the error, a customer's service should be restored when an error occurs and a customer with medical and emergency needs loses dial tone. When Qwest retail disconnects its own End User Customer in error, Qwest restores service. In such a situation, the Qwest End User Customer calls Qwest retail repair. It is unlikely that Qwest retail requires its retail End User Customer to then call the Qwest retail business office to order new service and wait for the entire new service interval for service restoration. Even assuming a new order were required, the order would not be delayed for days while the Qwest retail End User Customer had no dial tone. Regardless of the service provider, the End User Customer's service should be promptly restored. (*See, e.g.*, 31.1 of Part A – "carrier-neutral" and "nondiscriminatory.")

Qwest's only stated basis for refusing to promptly restore dial tone to this organization for persons with disabilities is that Qwest requires an ICA amendment to do so. Qwest and Eschelon have discussed on previous occasions that Qwest needs to know and review the provisions of the existing ICA between the parties to ensure that the existing terms are not sufficient before indicating that an amendment is required and, in the meantime, Qwest should not withhold service. In this case, the existing amendment clearly required Qwest to restore service. (*See, e.g.*, Sections 3.3.4.4 & 6.2.1.1 of Attachment 5.) Although Qwest claimed it had no basis to obtain payment (even after Eschelon clearly stated it would pay), the ICA clearly provides that "expedite charges may apply" and authorizes Qwest to charge Eschelon. (*See, e.g.*, Sections 3.1 & 3.3.4.4 of Attachment 5 & Section 1.2 of Attachment 1.) In addition, there are Commission approved rates in Arizona, such as for installation. Therefore, no amendment was

required, and Qwest had no basis to refuse to promptly restore service under the existing ICA. These ICA provisions have been in place for a long time. Qwest has recently changed when it claims that CLEC expedite requests require approval (i.e., are “chargeable”) and did so over CLECs’ objections. No corresponding change in the ICA has occurred, and Qwest has no basis for unilaterally imposing such changes on Eschelon.<sup>1</sup>

Qwest provided no business, operational, or technical feasibility reason for refusing to help to promptly restore dial tone to this facility for persons with disabilities. ***To the contrary, Qwest confirmed that the same unbundled facilities (i.e., the facilities from the disconnect order) remained available.*** Although the facilities were available and the End User Customer had no dial tone, Qwest said it would not promptly restore service because of its unnecessary amendment issue. Qwest knew at the time, however, that Eschelon’s existing long-standing ICA allows Qwest to charge for expedite charges, without an amendment. Also, Eschelon (Rhonda Knudson) clearly told Qwest (Jean Novak) that Eschelon would pay expedite charges if that is what it took to get the customer in service. Qwest still refused to help restore service. Qwest said that it required Eschelon to sign an ICA amendment before Qwest would proceed with restoring service (e.g., expediting the order). Qwest said that, without an amendment, Qwest would not provide facilities until at least Thursday of this week (a full week after the End User Customer lost dial tone). Eschelon finally had to order a Qwest tariffed product to ensure its End User Customer’s service was restored earlier.<sup>2</sup>

Eschelon’s approach is consistent with the ICA’s provisions requiring the parties to process orders and repairs and leave billing disputes, if any, for later. Qwest’s approach was inconsistent with those provisions. Qwest held restoration of the End User Customer’s service hostage pending Eschelon’s meeting Qwest’s demand for an unnecessary amendment. The ICA, however, clearly provides that Qwest is to first perform the requested service (including expedites) and then, if there is a rate issue, address that issue through the billing and dispute resolution provisions of the ICA. (*See, e.g.,* Section 1.2 of Attachment 1; Section 4.1.18 of Attachment 5.) Qwest refused to proceed instead of pursuing any rate issue under the billing and dispute resolution provisions of the ICA. Qwest has not even established that there is a rate issue. The ICA allows Qwest to charge for installation and expedites, and Eschelon told Qwest at the time that it would pay to expedite the order.

---

<sup>1</sup> If Qwest desires a voluntary amendment, please negotiate with us and begin by providing cost studies supporting Qwest’s proposed rate for each state to Eschelon pursuant to Section 252(d) of the Act, 47 CRF § 51.301, and paragraph 155 of the FCC’s First Report and Order. Eschelon has signed a confidentiality agreement and requested cost studies for all unapproved rates in the new ICA negotiations, but Qwest has not yet provided a cost study for its proposed expedite rate. While Eschelon is reviewing those cost studies, however, Qwest needs to process expedites pursuant to the existing ICAs.

<sup>2</sup> The Qwest tariffed product has the same per day expedite NRCs as Qwest’s proposed expedite amendment. Qwest charged Eschelon approximately \$1,800 because the NRC of \$200 per day applies to the tariffed product’s 9-day interval. The unbundled interval is 5 days. Even assuming the \$200 per day rate applied, this NRC would have been approximately \$800 less if Qwest had proceeded with the unbundled product.

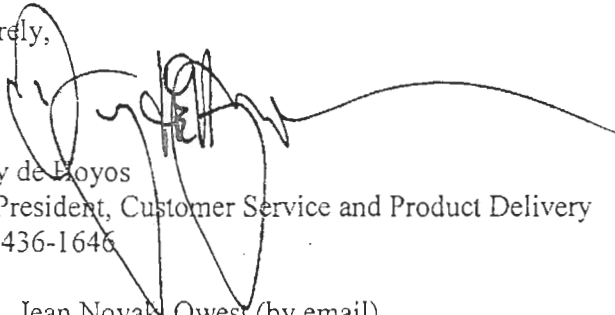

Qwest's Regional Director of Service Management is or should be familiar with the existing ICA provisions (particularly because Eschelon has asked her and Qwest on past occasions to review the ICA provisions before requesting an amendment), knew of the medical nature of the facility and its need for dial tone, and knew from her previous conversation with Ms. Knudson that Eschelon was willing to pay for the expedite. She nonetheless incorrectly indicated to the Qwest Senior Manager of the Minneapolis center that Eschelon was not willing to pay charges, and she told the Senior Manager of the Minneapolis center that it was ok to stop working toward restoring dial tone. The Qwest Regional Director of Service Management is supposed to be the advocate for this account at Qwest.

Qwest needs to remedy both the immediate situation and the issue on a going forward basis. With respect to the rehabilitation center in Arizona, Qwest needs to provide the facility on an unbundled basis (which may require a record work change) and credit Eschelon any difference in cost. With respect to future issues under the existing ICAs (until new ICAs are in place),<sup>3</sup> Qwest needs to confirm in writing that it will restore service in such situations (pursuant to the applicable repair and/or expedite provisions of the existing ICAs in each state) without requiring an amendment.

I suggest we have a conference call next week to negotiate these issues and attempt to resolve them pursuant to the dispute resolution provisions of our ICAs. Eschelon will have legal counsel for the negotiations and anticipates that Qwest will as well. Please let me know what dates and times next week work for Qwest.

Sincerely,

Danny de Hoyos  
Vice President, Customer Service and Product Delivery

<sup>3</sup> Negotiation of new ICAs is well underway and, if any issues need to be addressed in those negotiations, Eschelon will also work with Qwest in that context for events that will occur after the Effective Date of the new ICAs.

**ICA PROVISIONS - ARIZONA**  
**(See footnotes for CO/MN/OR/UT/WA)**

EXCERPTS FROM ATTACHMENT 5 (BUSINESS PROCESS REQUIREMENTS)

**3.2.2 Service Migrations and New Customer Additions<sup>1</sup>**

3.2.2.12 Expedite Process: U S WEST and CO-PROVIDER shall mutually develop expedite procedures to be followed when CO-PROVIDER determines an expedite is required to meet subscriber service needs.

3.2.2.13 Expedites: U S WEST shall provide CO-PROVIDER the capability to expedite a service order. Within two (2) business hours after a request from CO-PROVIDER for an expedited order, U S WEST shall notify COPROVIDER of U S WEST's confirmation to complete, or not complete, the order within the expedited interval.

**3.2.4 Due Date<sup>2</sup>**

3.2.4.2 For those services and circumstances that U S WEST and COPROVIDER agree shall be handled by the standard interval process, U S WEST shall supply CO-PROVIDER with standard due date intervals on a nondiscriminatory basis to be used by CO-PROVIDER personnel to determine service installation dates. Under those circumstances U S WEST shall complete the provisioning within the standard interval.

3.2.4.2.1 If CO-PROVIDER requests a due date earlier than the standard due date interval, then expedite charges may apply.

3.2.4.3 For those services and circumstances that U S WEST and COPROVIDER agree shall be handled by the requested/committed due date process, CO-PROVIDER may request a due date on each order. U S WEST will provide an offered due date on a nondiscriminatory basis. If CO-PROVIDER accepts the offered due date then such date shall become the committed due date. U S WEST will complete the order on the committed due date unless otherwise authorized by CO-PROVIDER.

3.2.4.3.1 If CO-PROVIDER requires a due date earlier than the U S WEST offered due date and U S WEST agrees to meet the COPROVIDER required due date, then that required due date becomes the committed due date and expedite charges may apply.

3.2.4.4 Subsequent to an initial order submission, CO-PROVIDER may request a new/revised due date that is earlier than the committed due date. If U S WEST agrees to meet that new/revised due date, then that new/revised due date becomes the committed due date and expedite charges may apply.

<sup>2</sup> See Colorado ICA Attachment 8 Business Processes Section: 2.2.2.1.6, Minnesota ICA Attachment 5 Section 9.1 and Section 9.3, Oregon ICA Attachment 5 Section 9.1 and Section 9.3, Utah ICA Attachment -5 Section 3.2.4, Washington ICA Attachment 5 Section 3.2.4

## 2.1 General Business Requirements<sup>3</sup>

2.1.4.7 U S WEST shall provide provisioning support outside of scheduled work hours on a nondiscriminatory exception basis as requested by COPROVIDER. Such support may be subject to a minimum labor charge.

## 4. Connectivity Billing and Recording<sup>4</sup>

This Section 4 describes the requirements for U S WEST to bill and record all charges CO-PROVIDER incurs for purchasing services under this Agreement.

4.1.2 U S WEST shall record and bill in accordance with this Agreement those charges COPROVIDER incurs as a result of CO-PROVIDER purchasing from U S WEST services, as set forth in this Agreement (hereinafter "Connectivity Charges").

### 4.1.18 Bill Reconciliation<sup>5</sup>

4.1.18.4 If the dispute is not resolved within the allotted time frame, the following resolution procedure shall begin:

4.1.18.4.1 If the dispute is not resolved within sixty (60) days of the Notice of Discrepancy, the dispute shall be escalated to the second level of management for resolution.

4.1.18.4.2 If the dispute is not resolved within ninety (90) days of Notice of Discrepancy, the dispute shall be escalated to the third level of management for resolution.

4.1.18.4.3 If the dispute is not resolved within one hundred and twenty (120) days of the Notice of Discrepancy, upon the written request of either Party within such one hundred and twenty (120) day period, the dispute may be resolved pursuant to the dispute resolution provision set forth in Part A of this Agreement.

## 6.2 General Requirements<sup>6</sup>

6.2.1 U S WEST shall provide repair, maintenance, testing, and surveillance for all Telecommunications Services and unbundled Network Elements and Combinations in accordance with the terms and conditions of this Agreement.

6.2.1.1 U S WEST shall provide CO-PROVIDER with the same level of maintenance support as U S WEST provides itself in accordance with standards and performance measurements that U S WEST uses and/or which are required by law, regulatory agency, or by U S WEST's own internal procedures, whichever are the most rigorous. These

standards shall apply to the quality of the technology, equipment, facilities, processes, and techniques (including, but not limited to, such new architecture, equipment, facilities, and interfaces as U S WEST may deploy) that U S WEST provides to CO-PROVIDER under this Agreement.

#### EXCERPTS FROM PART A (TERMS AND CONDITIONS)

### **3. Payment<sup>7</sup>**

3.1 In consideration of the services provided by U S WEST under this Agreement, COPROVIDER shall pay the charges set forth in Attachment 1 to this Agreement. The billing procedures for charges incurred by CO-PROVIDER hereunder are set forth in Attachment 5 to this Agreement.

3.2 Amounts payable under this Agreement, unless reasonably disputed, are due and payable within thirty (30) days after the date of U S WEST's invoice or within twenty (20) days after receipt of the invoice, whichever is later. If the payment due date is not a Business Day, the payment shall be made the next Business Day.

### **27. Dispute Resolution<sup>8</sup>**

27.2<sup>14</sup> In the event CO-PROVIDER and U S WEST are unable to agree on certain issues during the term of this Agreement, the Parties may identify such issues for arbitration before the Commission. Only those points identified by the Parties for arbitration will be submitted.

### **31. Warranties<sup>9</sup>**

31.1 U S WEST shall conduct all activities and interfaces which are provided for under this Agreement with CO-PROVIDER Customers in a carrier-neutral, nondiscriminatory manner.

#### EXCERPT FROM ATTACHMENT 1 (RATES AND CHARGES)

### **1. General Principles<sup>10</sup>**

1.2 Except as otherwise specified in this Agreement, as approved or ordered by the Commission, or as agreed to by the Parties through good faith negotiations, nothing in this Agreement shall prevent a Party through the dispute resolution process described in this Agreement from seeking to recover the costs and expenses, if any, it may incur in (a) complying with and implementing its obligations under this Agreement, the Act, and the rules, regulations and orders of the FCC and the Commission, and (b) the development, modification, technical installation and maintenance of any systems or other infrastructure which it requires to comply with and to continue complying with its responsibilities and obligations under this Agreement.

Re: Escalation and Request for Dispute Resolution pursuant to the Interconnection Agreements; LSR #17114755 (#D49232945); LSR #17192206 (#N49828418; PON #AZ657718T1FAC); ASR #0607700072 (#C50456587; PON # AZ657718T1FAC); Joint McLeod-Eschelon Escalation #39 Re. PROS.09.12.05.F.03242.Expedites\_Escalations\_V27 – Denied by Qwest 11/4/05; Eschelon 11/3/05 objections to PROS.10.19.05.F.03380.ExpeditesEscalationsV30

Dear Mr. Beck, Director of Interconnection, and General Counsel:

Attempts to resolve this issue have been unsuccessful. On the call on Friday, Qwest repeated its intent to continue to refuse to comply with the repair and expedite provisions of the current interconnection agreements between the parties for unbundled loops in these types of situations. (For further description of the facts, see my letter to Qwest dated March 21, 2006.)

Qwest also indicated that it had not received assurances that Eschelon is willing to pay charges to Qwest when this type of situation occurs. That is incorrect. Eschelon has previously made those assurances and makes them again in this letter. As we discussed on the call, from the end user customer's perspective, an out of service condition caused by a disconnect in error is a repair, as the end user customer did not request any change in service and yet is out of service. Eschelon said it was willing to pay maintenance and repair charges pursuant to the interconnection agreements (including those approved by the state commissions, which Qwest already routinely charges Eschelon for other types of repairs) to re-establish service. Qwest indicated that it disagrees that repair terms apply

and said that Eschelon must submit and expedite an order and pay associated charges to re-establish service.

Therefore, as indicated on Friday's call, whenever Eschelon requests an expedite for an unbundled loop order and Qwest grants the request, Eschelon will pay the charges pursuant to the current interconnection agreements associated with installation, dispatch, and expedites. Qwest will not deny the expedite requests for any product based on an alleged need for a contract amendment or other arbitrary or discriminatory reason. The charges Eschelon will pay includes the installation charge for the order requesting the expedite. Installation charges cover the costs of the work activities to process the order. (In an expedite situation, the same work activities take place; they simply occur earlier.) Although the installation charges generally also include the cost of a dispatch, if Qwest dispatches a technician to complete an expedite, Eschelon will also pay the dispatch charge. (When the dispatch cost is included in the installation charge, this is a double recovery by Qwest.) If Qwest spends additional time due to the expedite itself, Eschelon will also pay the half hourly labor rate (which in Arizona is the same rate whether billed as repair or additional labor, other) for that time. Payment of these charges is provided for under the current interconnection agreements, and no amendment is necessary.

Eschelon understands that Qwest reserves its rights to argue different terms should apply under the new interconnection agreements. (For example, by charging such terms under the current interconnection agreements, Qwest said it is not conceding that such charges are 251/252 charges, and Qwest may take a different position in arbitration of the new interconnection agreements.) Eschelon also reserves all of its rights with respect to negotiation and arbitration of the new interconnection agreements. Eschelon asks Qwest to proceed as described in this letter to allow all of the parties to focus on completing those new agreements, which will resolve this issue going forward under the new agreements.

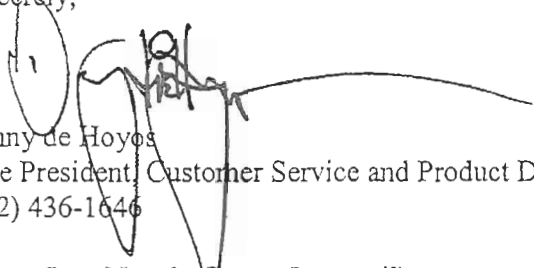

If, however, Qwest continues to refuse to provide expedites under the current interconnection agreements without amendment, Eschelon reserves its right to ask the commissions to find that it pay no charge pursuant to the nondiscrimination provisions of the interconnection agreements in those situations in which Qwest does not charge itself and its end user customers, including disconnects in error and conditions that Qwest has identified in its Expedites Requiring Approval process. This applies to unbundled loops as well as other products.

Eschelon is represented by counsel in this matter. Please direct all further communications regarding this matter to Jeff Oxley and Karen Clauson. They may also identify outside counsel.

Mr. Beck, Director of Interconnection, General Counsel

**2. TYPE OF FILING**      NOTE: Parties making multiple requests (such as seeking to adopt a previously approved agreement and Commission approval of new negotiated amendments to that agreement) should submit a separate checklist for each requested action.

**Adoption:** Adopts existing carrier-to-carrier agreement filed with Commission.

- Docket ARB
- Parties to prior agreement \_\_\_\_\_ & \_\_\_\_\_
- Check one:
  - Adopts base agreement only; or
  - Adopts base agreement and subsequent amendments approved in Order No(s).

**New Agreement:** Seeks approval of new negotiated agreement.

- Does filing replace an existing agreement between the parties?      • If filing involves Qwest Communications, does it utilize the terms of an SGAT?
- NO      •  NO
- YES, Docket ARB      •  YES, Revision

**Amendment:** Amends an existing carrier-to-carrier agreement.

Docket ARB 6

**Other:** Please explain.

**Expedites for Design Services Amendment  
to the Interconnection Agreement between  
Qwest Corporation and  
MCImetro Access Transmission Services, LLC  
for the State of Oregon**

This is an Amendment ("Amendment") to the Interconnection Agreement between Qwest Corporation ("Qwest"), a Colorado corporation, and MCImetro Access Transmission Services, LLC ("CLEC"). CLEC and Qwest shall be known jointly as the "Parties".

**RECITALS**

WHEREAS, CLEC and Qwest entered into an Interconnection Agreement ("Agreement") for service in the state of Oregon which was approved by the Commission; and

WHEREAS, the Parties wish to amend the Agreement further under the terms and conditions contained herein.

**AGREEMENT**

NOW THEREFORE, in consideration of the mutual terms, covenants and conditions contained in this Amendment and other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the Parties agree as follows:

**Amendment Terms**

The Agreement is hereby amended by adding terms, conditions and rates for Expedites for Design Services as set forth in Attachment 1 and Exhibit A, to this Amendment, attached hereto and incorporated herein by this reference.

Rates in Exhibit A that are "Under Development" shall be updated upon establishment of a rate. Rates in Exhibit A shall otherwise be updated to reflect legally binding decisions of the Commission and shall be applied on a prospective basis from the effective date of the legally binding Commission decision, unless otherwise ordered by the Commission.

**Effective Date**

This Amendment shall be deemed effective upon approval by the Commission; however, the Parties may agree to implement the provisions of this Amendment upon execution. To accommodate this need, CLEC must generate, if necessary, an updated Customer Questionnaire. In addition to the Questionnaire, all system updates will need to be completed by Qwest. CLEC will be notified when all system changes have been made. Actual order processing may begin once these requirements have been met. Additionally, Qwest shall implement any necessary billing changes within two (2) billing cycles after the latest execution date of this Amendment, with a true-up back to the latest execution date of this Amendment by the end of the second billing cycle. The Parties agree that so long as Qwest implements the billing changes and the true-up as set forth above, the CLEC's bills shall be deemed accurate and adjusted without error.

**Further Amendments**

MCI-m-OR  
Amendment to SEA-970918-0601/dhd  
Expedite Amendment

Except as modified herein, the provisions of the Agreement shall remain in full force and effect. The provisions of this Amendment, including the provisions of this sentence, may not be amended, modified or supplemented, and waivers or consents to departures from the provisions of this Amendment may not be given without the written consent thereto by both Parties' authorized representative. No waiver by any Party of any default, misrepresentation, or breach of warranty or covenant hereunder, whether intentional or not, will be deemed to extend to any prior or subsequent default, misrepresentation, or breach of warranty or covenant hereunder or affect in any way any rights arising by virtue of any prior or subsequent such occurrence.

**Entire Agreement**

The Agreement as amended (including the documents referred to herein) constitutes the full and entire understanding and agreement between the Parties with regard to the subjects of the Agreement as amended and supersedes any prior understandings, agreements, or representations by or between the Parties, written or oral, to the extent they relate in any way to the subjects of the Agreement as amended.

The Parties intending to be legally bound have executed this Amendment as of the dates set forth below, in multiple counterparts, each of which is deemed an original, but all of which shall constitute one and the same instrument.

## ATTACHMENT 1

### 1.0 Expedites for Design Services

#### 1.1 Description

1.1.1 Expedites are requests for an improved standard interval that is shorter than the interval defined in Qwest's Service Interval Guide (SIG) or CLEC's Interconnection Agreement (ICA), Individual Case Basis (ICB) or committed to ICB (Ready for Service (RFS) + Interval) date.

#### 1.2 Terms and Conditions

1.2.1 When Qwest receives an ASR or LSR with the EXP populated and the DDD is less than the standard interval, Qwest will determine if the request is eligible for an expedite without a call from you. If the request meets the criteria for the Pre-Approved Expedite process, Qwest will process the request and return a FOC acknowledging the expedited due date. The appropriate expedite charge will be added to your service order.

1.2.2 If the request does not meet the criteria for the Pre-Approved Expedite process, the ASR or LSR will be processed under the guidelines for Expedites Requiring Approval as described in the PCAT.

1.2.3 The Pre-Approved expedite process is available in all states except WA for the products listed in the PCAT. It is not necessary to call Qwest to have the expedite approved.

#### 1.3 Rate Elements

1.3.1 The expedite charge Identified in Exhibit A applies per order for every day that the due date interval is shortened, based on the standard interval in the SIG, ICA, or ICB criteria.

#### 1.4 Ordering Process

1.4.1 CLEC will request an expedite on a Local Service Request (LSR) or Access Service Request (ASR).

1.4.2 All requests must include an expedited Due Date, and Qwest will return an FOC acknowledging the expedited Due Date.

1 **I. INTRODUCTION**

2 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

3 A. My name is Bonnie Johnson and my business address is 730 2<sup>nd</sup> Avenue South,  
4 Suite 900, Minneapolis, Minnesota 55402.

5 **Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

6 A. I am employed by Eschelon Telecom, Inc., where I currently serve as Director -  
7 Carrier Relations. In that capacity, my responsibilities include managing relations  
8 between Eschelon and other telecommunications carriers, including Qwest and  
9 other Incumbent Local Exchange Carriers (“ILECs”) and Competitive Local  
10 Exchange Carriers (“CLECs”). For example, I have a scheduled weekly call with  
11 Qwest service management to discuss operational issues, including provisioning,  
12 network, and billing issues, between the companies. I also participate in  
13 scheduled monthly network and scheduled monthly service delivery meetings  
14 with Qwest service management. I am also involved in escalation of service  
15 delivery issues as needed and regularly communicate with Qwest service  
16 management on day-to-day issues. I regularly participate in Qwest’s Change  
17 Management Process meetings as Eschelon’s representative. For example, I was  
18 personally involved in the lengthy CMP development of the Qwest jeopardy  
19 process. I also participate in interconnection agreement (“ICA”) negotiations  
20 with Qwest for six states. I have served in this position since September 2003.

1 Since joining Eschelon, I have held four separate positions (including my current  
2 position), each with increasing responsibility. From July 2000 to November  
3 2001, I held the position of Manager - Network Provisioning where I was  
4 responsible for the direction of a Service Delivery team provisioning services to  
5 end user customers and handling customer escalations. I held the position of  
6 Senior Manager - Customer Operations Process from November 2001 to March  
7 2002, where I was responsible for developing and implementing ordering and  
8 provisioning processes. And from March 2002 until September 2003, I held the  
9 title of Senior Manager - ILEC Relations, where I was responsible for managing  
10 relations between Eschelon and other telecommunications carriers. I participated  
11 in CMP activities throughout these positions.

12 **Q. PLEASE DESCRIBE YOUR WORK EXPERIENCE BEFORE JOINING**  
13 **ESCHELON TELECOM, INC.**

14 A. I have more than 15 years of experience in the telecommunications industry.  
15 Prior to joining Eschelon Telecom, Inc., I was employed by US West/Qwest  
16 (“Qwest”) in a number of different capacities. For a brief time until I joined  
17 Eschelon in July of 2000, I worked in Qwest’s Wholesale Markets division as a  
18 Service Manager, responsible for organizing and facilitating CLEC collocation  
19 build-outs and Unbundled Network Element (“UNE”) facilities network  
20 implementation. From October 1998 until May 2000, I held the position of  
21 Process Analyst - Performance Measures, where I analyzed Qwest’s service  
22 delivery performance and performed root cause analyses.

1 I served as a Qwest Service Delivery Coordinator in Qwest wholesale service  
2 vendor services from August 1996 until October 1998, where I was responsible  
3 for implementing and delivering services ordered by vendors on behalf of Qwest  
4 retail end user customers and ordered by CLEC Centrex resellers. During that  
5 time, Qwest selected me for President's Club honors based on my performance.  
6 From January 1994 to May 1996, I was in the Qwest retail Home and Personal  
7 Services ("H&PS") organization, where I assisted H&PS residential customers  
8 with their service requests, including responding to ordering, billing, and other  
9 Qwest retail customer issues. Before that, I worked as a directory assistance  
10 operator in the Qwest Operator Services organization.

11 Prior to joining Qwest, I was employed for a number of years by Mountain Bell,  
12 where I held various positions including positions addressing retail customer  
13 service issues. While employed by Qwest, I participated in at least 20 separate  
14 seminars and other training sessions, many of which pertained to network  
15 facilities, operational processes and service delivery methods and procedures for  
16 both wholesale and retail customers.

17 **Q. WHEN DESCRIBING YOUR BACKGROUND, YOU INDICATED THAT**  
18 **YOU RAISE ISSUES WITH QWEST SERVICE MANAGEMENT IN**  
19 **SCHEDULED WEEKLY AND MONTHLY CALLS AND THAT YOU**  
20 **PARTICIPATE IN THE ICA NEGOTIATIONS WITH QWEST. IS**  
21 **ESCHELON RAISING ALL OF THE UNRESOLVED ISSUES FROM**  
22 **THOSE COMMUNICATIONS IN THIS ARBITRATION?**

1 A. No, not even close. I communicate regularly with Qwest service management on  
2 day-to-day issues and will continue to do so. Eschelon did not raise all of these  
3 types of issues in ICA negotiations, and we withdrew even some of the ones we  
4 did raise to limit the number of issues.

5 **Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE ANY REGULATORY**  
6 **AGENCY?**

7 A. The only Regulatory Proceedings I have testified in are the Qwest-Eschelon  
8 interconnection agreement arbitrations and one expedite-related complaint case. I  
9 provided verbal and written testimony in the arbitration proceedings.<sup>1</sup> I also  
10 provided written testimony before the Arizona Corporation Commission in  
11 Eschelon's pending complaint against Qwest regarding expedited orders, ACC  
12 Docket Nos. T-03406A-06-0257 and T-01051B-06-0257. I continue to maintain  
13 my full responsibilities at Eschelon, as described above, during the course of these  
14 proceedings.

15 **Q. ON WHOSE BEHALF WAS THIS TESTIMONY PREPARED?**

16 A. This testimony was prepared on behalf of Eschelon Telecom, Inc. ("Eschelon").

17 **Q. HOW IS YOUR TESTIMONY ORGANIZED?**

---

<sup>1</sup> The docket numbers for the Qwest-Eschelon ICA arbitrations are, for Arizona, T-03406A-06-0572; T-01051B-06-0572 ("Arizona arbitration"); for Colorado, 06B-497T ("Colorado arbitration"); for Minnesota, P-5340, 421/IC-06-768 ("Minnesota arbitration"); for Oregon, ARB 775 ("Oregon arbitration"); for Utah, 07-2263-03; petition filed but no testimony yet ("Utah arbitration"); and for Washington, UT-063061 ("Washington arbitration"). Transcript ("Tr.") pages from the arbitration hearings in Minnesota are included as Eschelon/6 and in Arizona as Eschelon/7 to the testimony of Mr. Starkey. Copies of the rulings of the Administrative Law Judges (ALJs) and the commission in Minnesota are included as Eschelon/29 and Eschelon/30 to the testimony of Mr. Denney.

1 A. First, I identify and describe the exhibits to my testimony. Second, I address the  
2 open language in Section 12 of the proposed ICA by subject matter number,<sup>2</sup>  
3 except for Issue 12-67 (Expedited Orders) which Mr. Denney addresses in his  
4 testimony. Section 12 is entitled “Access to Operational Support Systems  
5 (OSS).” It “describes Qwest’s OSS interfaces, as well as manual processes, that  
6 Qwest shall provide to CLEC to support Pre-Ordering, Ordering, Provisioning,  
7 Maintenance and Repair and Billing.”<sup>3</sup> Finally, I provide the agreed upon  
8 language for issues that have closed in Section 12 since filing of the Petition.

9 **II. EXHIBITS**

10 **Q. YOU SAID THAT YOU HAVE TESTIFIED IN QWEST-ESCHELON**  
11 **ARBITRATION PROCEEDINGS IN OTHER STATES. ARE THE**  
12 **EXHIBITS THAT YOU SUBMIT WITH THIS DIRECT TESTIMONY**  
13 **THE SAME DOCUMENTS AS USED IN EXHIBITS SUBMITTED IN**  
14 **THOSE PROCEEDINGS?**

15 A. With only a few exceptions, yes. With the exception of three exhibits containing  
16 additional documents (Eschelon/105, Eschelon/118, and Eschelon/122) (all of  
17 which contain Qwest-prepared documents or emails), all of the documents that are  
18 included in my Oregon direct testimony as exhibits were submitted in other states,  
19 with direct, rebuttal, or surrebuttal testimony or were introduced at a hearing. To

---

<sup>2</sup> The subject matter numbers correspond to those in the Issues by Subject Matter List that is attached to the testimony of Mr. Starkey as Eschelon/3.

<sup>3</sup> Section 12.1.1 of proposed ICA (closed language).

1 allow for additional grouping of documents by primary subject matter and  
2 consecutive numbering, I have included more exhibits in direct testimony (as  
3 opposed to rebuttal or surrebuttal) in Oregon. This also allows Qwest even more  
4 opportunity to respond to the information in these exhibits (with which Qwest is  
5 familiar such as because the exhibits have been used in other states and/or  
6 because they are Qwest-prepared documents).

7 **Q. PLEASE IDENTIFY THE EXHIBITS TO YOUR TESTIMONY.**

8 A. As part of my testimony, I have included the following exhibits:

- 9 • Eschelon/44: CMP/ICA: Different ICA Provisions - Terms Relating to  
10 Collocation Space Option Reservation
- 11 • Eschelon/45: CMP/ICA: Closed Language and Associated CMP Activity, if  
12 Any, Matrix
- 13 • Eschelon/46: CMP/ICA: Draft Eschelon Section 12 (March 18, 2004),  
14 Annotated
- 15 • Eschelon/47: CMP/ICA: Different ICA Provisions - Pages from Covad-Qwest  
16 ICA on Testing and Collocation
- 17 • Eschelon/48: CMP/ICA: Oversight Committee Meeting Minutes - List of  
18 Minutes Posted On Qwest's Wholesale Website
- 19 • Eschelon/49: CMP/ICA: Summary and excerpts from supporting documentation  
20 showing that contract language was discussed in prior CLEC Forum meetings &  
21 list of Forums from Qwest wholesale calendar
- 22 • Eschelon/50: CMP/ICA: Withdrawn Qwest Product and Process Change  
23 Requests
- 24 • Eschelon/51: CMP/ICA: Qwest Negotiations Template Input – Qwest/Eschelon  
25 Exchange
- 26 • Eschelon/52: CMP/ICA: Multiple CLEC Negotiations – Qwest/Eschelon  
27 Exchange
- 28 • Eschelon/53: CMP/ICA: CMP Document
- 29 • Eschelon/54: CMP/ICA/Scope: Excerpt from CMP Redesign Meeting Minutes  
30 (Jan 02 & Apr 02)
- 31 • Eschelon/55: CMP/ICA: Excerpt from CMP Redesign Meeting Minutes (Oct 01)

- 1 • Eschelon/56: CMP/CRUNEC: DS1 CRUNEC Chronology
- 2 • Eschelon/57: CMP/CRUNEC: CRUNEC Level 3 Notice
- 3 • Eschelon/58: CMP/CRUNEC: CRUNEC Qwest-Eschelon Email exchange
- 4 • Eschelon/59: CMP/TRRO: Secret TRRO PCAT Chronology
- 5 • Eschelon/60: CMP/TRRO: Covad Escalation of Qwest CR PC102704-1ES
- 6 • Eschelon/61: CMP/TRRO: Qwest Response to escalation of Qwest CR  
7 PC102704-1ES
- 8 • Eschelon/62: CMP/TRRO: Redline of CR Detail for PC10270401ES
- 9 • Eschelon/63: CMP/TRRO: Non-CMP TRRO Notices, Qwest/Eschelon  
10 Exchange
- 11 • Eschelon/64: CMP/TRRO: Non-CMP TRRO PCAT Reclassification of  
12 Terminations (APOT), Qwest/Eschelon Exchanges
- 13 • Eschelon/65: CMP/TRRO: SGAT Unavailability: Excerpt from Qwest  
14 Minnesota Testimony
- 15 • Eschelon/66: CMP/TRRO: SGAT Unavailability: Qwest Notices
- 16 • Eschelon/67: CMP/TRRO: SGAT Unavailability: Screen Shots of Qwest's  
17 Website
- 18 • Eschelon/68: CMP/TRRO: CR SCR102704-1RG
- 19 • Eschelon/69: CMP/TRRO: CR SCR083005-01
- 20 • Eschelon/70: CMP/TRRO: January 4th, 2005 Oversight meeting minutes
- 21 • Eschelon/71: CMP/TRRO: January 10th, 2005 oversight meeting minutes.
- 22 • Eschelon/72: CMP/TRRO: Qwest CR PC102704-1ES
- 23 • Eschelon/73: CMP/TRRO: Qwest CR PC102704-1ES2
- 24 • Eschelon/74: CMP/TRRO: Eschelon 2/5/07 Email on Qwest's "buckets" matrix
- 25 • Eschelon/75: CMP/TRRO: Eschelon response to Qwest's question as to which  
26 items on Qwest's chart are subject to litigation/arbitration February 5, 2007  
27 (enclosed in 2/5/07 Email to Qwest)
- 28 • Eschelon/76: CMP/TRRO: Qwest matrix (letters and numbers added for ease of  
29 reference)
- 30 • Eschelon/77: CMP/TRRO: Updated version TRRO PCAT URLs reflecting  
31 recent versions
- 32 • Eschelon/78: CMP/TRRO: Qwest letter regarding "policy" decision
- 33 • Eschelon/79: CMP/EXAMPLE: No Build Held Order (Delayed Order)  
34 Chronology

- 1 • Eschelon/80: CMP/EXAMPLE: Optional Testing - Qwest CR PC100101-5ES
- 2 • Eschelon/81: CMP/EXAMPLE: Optional Testing - CLECs' escalation
- 3 • Eschelon/82: CMP/EXAMPLE: Optional Testing - Qwest response to escalation
- 4 • Eschelon/83: CMP/EXAMPLE: Optional Testing - CLEC response to Qwest
- 5 *Note Qwest did not respond*
- 6 • Eschelon/84: CMP/EXAMPLE: Oversight Committee Meeting Request:
- 7 Meeting Minutes Example

18 **Q. DID YOU PREPARE THESE EXHIBITS OR HAVE THEM PREPARED**  
19 **UNDER YOUR DIRECTION?**

20 A. Yes, with respect to the chronologies and summaries in Eschelon/45,  
21 Eschelon/46, Eschelon/49, Eschelon/50, Eschelon/56, Eschelon/77 Eschelon/79,  
22 Eschelon/87, Eschelon/90, Eschelon/93, Eschelon/94, Eschelon/107,  
23 Eschelon/110, Eschelon/114, Eschelon/115 and Eschelon/116 I have personal  
24 knowledge of these facts. With respect to Eschelon/51, Eschelon/52,  
25 Eschelon/58, Eschelon/63, Eschelon/64, Eschelon/74, Eschelon/75, Eschelon/84  
26 (portions), Eschelon/85 (portions), Eschelon/86, Eschelon/89, Eschelon/91,  
27 Eschelon/99, Eschelon/105 (portions), Eschelon/117 and Eschelon/118 (email  
28 exchanges), as well as the email exchanges described or included in the  
29 chronologies, I was personally involved and in many cases copied on these

1 emails. The facts set forth in these Exhibits to my testimony are true to the best  
2 of my knowledge. The documents contained in Eschelon/48, Eschelon/53,  
3 Eschelon/54, Eschelon/55, Eschelon/57, Eschelon/60, Eschelon/61, Eschelon/62,  
4 Eschelon/66 through Eschelon/73, Eschelon/76, Eschelon/80, Eschelon/81,  
5 through Eschelon/83, Eschelon/84 (portions), Eschelon/85 (portions),  
6 Eschelon/88, Eschelon/92, Eschelon/95<sup>4</sup> through Eschelon/98, Eschelon/100  
7 through Eschelon/104, Eschelon/105 (portions), Eschelon/106, Eschelon/108<sup>5</sup>,  
8 Eschelon/111 through Eschelon/113 and Eschelon/119 through Eschelon/122  
9 were prepared by Qwest and all or part are posted on Qwest's web site.  
10 Eschelon/44 is a summary prepared under the direction of Mr. Denney. I  
11 participated in the preparation of this exhibit. Eschelon/47 contains pages from a  
12 publicly available interconnection agreement ("ICA"). These are true and correct  
13 copies. Eschelon/65 is an excerpt from the Rebuttal Testimony of Qwest witness  
14 Karen Stewart in the Minnesota Qwest-Eschelon arbitration (MN PUC Docket  
15 No. P-5340, 421/IC-06-768), p. 3. It is a true and correct copy. Eschelon/109 is a  
16 true and correct copy of an order issued by the Arizona Corporation commission.  
17 Eschelon/78 includes an exchange of letters between Qwest and Eschelon  
18 (Qwest's 10/16/06 letter and Eschelon's 10/17/06 response letter). These are true  
19 and correct copies.

---

<sup>4</sup> Qwest retired the RPD database in April of 2006. As a result, these excerpts may no longer be available on Qwest's web site.

<sup>5</sup> With respect to Eschelon/108, these CMP notifications (without the annotations) were prepared by Qwest and are posted on the Qwest web site. Eschelon annotated the notices by circling pertinent information related to whether the notice is associated with a change request ("CR") (*i.e.*, a Level 4 change).

1 **Q. MR. STARKEY REFERS IN HIS TESTIMONY TO YOUR TESTIMONY**  
2 **INCLUDING ITS EXHIBITS. HAVE YOU REVIEWED THAT**  
3 **TESTIMONY, AND IF SO, DID MR. STARKEY TAKE ANY**  
4 **STATEMENT OR EVENT OUT OF CONTEXT?**

5 A. I have reviewed that testimony and, no, Mr. Starkey did not take any statement or  
6 event out of context.

7 **Q. MR. DENNEY REFERS IN HIS TESTIMONY TO YOUR TESTIMONY**  
8 **INCLUDING ITS EXHIBITS. HAVE YOU REVIEWED THAT**  
9 **TESTIMONY, AND IF SO, DID MR. DENNEY TAKE ANY STATEMENT**  
10 **OR EVENT OUT OF CONTEXT?**

11 A. I have reviewed that testimony and, no, Mr. Denney did not take any statement or  
12 event out of context.

13 **Q. PLEASE DESCRIBE ESCHELON/44 RELATED TO COLLOCATION**  
14 **SPACE OPTION RESERVATION.**

15 A. My direct testimony is Eschelon/43, so Eschelon/44 is the first exhibit to my  
16 direct testimony. Eschelon/44 contains terms and conditions associated with  
17 collocation space reservations contained in different documents including Qwest's  
18 SGATs, Qwest's negotiation templates and Qwest's ICAs with various CLECs.  
19 This exhibit provides an example of contract provisions on the same subject with  
20 different terms that did not go through CMP but are part of interconnection  
21 agreements. Mr. Starkey refers to this Exhibit in his discussion of the ICA and  
22 the need for contractual certainty.

1 **Q. PLEASE DESCRIBE ESCHELON/45 RELATING TO CLOSED**  
2 **LANGUAGE AND CMP ACTIVITY, IF ANY.**

3 A. Eschelon/45 contains a matrix of some of the ICA language that has closed since  
4 the Qwest-Eschelon arbitrations began (with the filing of the Minnesota  
5 arbitration in May of 2006) for issues for which Qwest has argued at some point  
6 that the language is inappropriate for inclusion in an ICA and should be dealt with  
7 in CMP or elsewhere. The matrix contains the following columns: (1) Issue  
8 Number & Closed Language, (2) Qwest Argument; (3) PCAT language, if any?  
9 (4) Is the closed language substantively different from PCAT? and (5) Was there  
10 CMP activity near in time or after the closure? Mr. Starkey refers to Eschelon/45  
11 in his discussion of the ICA and need for contractual certainty (the first topic of  
12 his direct testimony).

13 **Q. PLEASE DESCRIBE ESCHELON/46 RELATING TO ESCHELON'S**  
14 **DRAFT OF SECTION 12 OF THE ICA AND ESCHELON/49**  
15 **REGARDING CLEC FORUMS.**

16 A. Eschelon/46 contains an annotated version of Eschelon's March 18, 2004 draft  
17 proposal for Section 12. The first page is a key to the annotations that Eschelon  
18 added to the March 18, 2004 proposal when preparing Eschelon/46; the key  
19 describes the various types of text that are used to show the source of the  
20 language. For example, if the source is the Qwest template, the language is in  
21 black text, and if the source is Qwest's wholesale web site, the language is in bold  
22 text. The black text indicates, for example, that Qwest template language was

1 used in Eschelon's negotiation proposal. For language derived from Qwest's  
2 wholesale web site, footnotes have also been added to the draft to indicate the  
3 location on the web site of the associated language. The document, without the  
4 described annotations, is the Section 12 proposal that Eschelon sent to Qwest on  
5 March 18, 2004. The second page of Eschelon/46 is the cover email that was sent  
6 with the draft on March 18, 2004.

7 In each Qwest-Eschelon arbitration to date, Qwest witness Ms. Albersheim, in  
8 Qwest's "Introduction to Section 12 Issues," has testified that "Qwest's standard  
9 negotiations template" was not used for the negotiation of Section 12 of the  
10 interconnection agreement.<sup>6</sup> She has attached a Qwest exhibit that she describes  
11 as "Eschelon's rewrite"<sup>7</sup> of Qwest's template language. As reflected in the  
12 different font styles in Eschelon/49, various sources were used in the negotiations.  
13 With respect to Qwest's template proposals, Qwest previously held collaborative  
14 sessions and CMP CLEC Forums during which some contract language changes  
15 were discussed with CLECs.<sup>8</sup> Eschelon/49 contains excerpts from meeting  
16 minutes documenting that contract language was discussed in these sessions.  
17 These minutes were prepared by Qwest and are posted on Qwest's own web site  
18 (*see* URLs provided in Eschelon/49). Qwest has not held any CLEC Forum since

---

<sup>6</sup> Albersheim Direct (Arizona arbitration, p. 45, lines 2-4), (Colorado arbitration, p. 36, lines 16-19), (Minnesota arbitration, p. 39, lines 7-10), and (Washington arbitration, p. 39, lines 18-21).

<sup>7</sup> Albersheim Direct (Arizona arbitration, p. 45, line 7), (Colorado arbitration, p. 36, line 22), (Minnesota arbitration, p. 39, line 13), and (Washington arbitration, p. 39, line 24).

<sup>8</sup> See, *e.g.*, Eschelon/49 (excerpts from CLEC Forum meeting minutes showing discussion of contract language changes).

1 June of 2003.<sup>9</sup> Eschelon/49 also contains a list of forums offered by Qwest, taken  
2 from the wholesale calendar on Qwest's website, that shows the last "CLEC  
3 Forum" as having been held in June of 2003. (*See*, Eschelon/49, pages 22-23).

4 Although the Qwest template was not the single base document for Qwest-  
5 Eschelon negotiations, language from the Qwest template (including some  
6 template language that is the same as SGAT), was used in negotiations proposals  
7 (and some appears now in closed ICA language). Although Eschelon had  
8 proposed using the existing Qwest-Eschelon ICA as a starting point,<sup>10</sup> Qwest did  
9 not agree to that approach. Mr. Starkey refers to Eschelon/46 and Eschelon/49 in  
10 his discussion of CMP and the need for contractual certainty (the first topic in his  
11 direct testimony).

12 **Q. PLEASE DESCRIBE ESCHELON/47 RELATED TO MR. STARKEY'S**

---

<sup>9</sup> *See* June 16, 2003 Forum

(<http://www.qwest.com/wholesale/calendar/eventDetails/1,1456,86,00.html>); *see also* Dec. 2003 CMP meeting minutes in which Eschelon asked when the next CLEC Forum would be (<http://www.qwest.com/wholesale/downloads/2004/040116/CMPDistPkg01-21-04.pdf>); Jan. 2003 CMP meeting minutes in which Qwest closed this action item without scheduling another CLEC Forum

(<http://www.qwest.com/wholesale/downloads/2004/040119/JanuaryCMPSysDistributionPackage.pdf>). Qwest held two identical telephone conference calls (whereas the CLEC Forums were in person) in the Summer of 2005 called "Qwest Wholesale Provisioning Forum." However, these sessions were "how to" training sessions designed to "convey information" from Qwest to CLECs. The 47-page Powerpoint tutorial entitled "CLEC Conference Call Series: Focusing on Calls to Qwest" included the following stated purpose (on page 1): "These calls are designed to convey information and insights related to the local service request provisioning process and the calls into the Qwest Call Handling Centers. They are intended for those who perform the work to assist them in their day-to-day work activities. Our hope is to share information that can be beneficial to your company." They were not the back and forth discussions of broader issues that were supposed to be collaborative in the CLEC Forums. Consistent with this, Qwest did not label the Provisioning training session as a "CLEC Forum" on its website. *See* Eschelon/49 (page 22). The only other more recent forums listed on the Qwest web page are inapplicable "wireless" forums. *See id.*

1           **DISCUSSION OF DIFFERENCES BETWEEN THE ICA PROVISIONS OF**  
2           **DIFFERENT CLECS.**

3       A.    Eschelon/47 contains pages from the Covad-Qwest ICA relating to charges for  
4           repeat troubles (12.3.4.4). I have compared these provisions to the Qwest-  
5           Eschelon proposed ICA, and there are differences in the language, but there are  
6           relatively few of them. I am familiar with these provisions through the ICA  
7           negotiations. There was no CMP activity associated with the Covad-Qwest  
8           agreement to that language. Eschelon's proposed modifications to the Covad-  
9           Qwest language for Issue 12-80 (now closed) reflected Eschelon's own product  
10          set and Eschelon's ability and desire to use remote testing in some cases when  
11          trouble can be isolated with such testing. Eschelon/47 also contains pages from  
12          the Covad-Qwest ICA relating to CLEC-to-CLEC connections (8.2.1.23 and  
13          subparts). I have compared these provisions to the Qwest-Eschelon proposed  
14          ICA, and there are differences in the language. I am also familiar with this  
15          language through the ICA negotiations. In the case of the CLEC-to-CLEC  
16          connections language, Qwest and Eschelon agreed upon modified language. This  
17          exhibit is referenced in Mr. Starkey's testimony regarding CMP/ICA.

18          The Covad provisions in Eschelon/47 are an example of ICA provisions that  
19          differ for different CLECs. Qwest provides notices of various amendment or  
20          agreement terms that it offers to CLECs and sometimes updates that language  
21          over time. They are available for some CLECs to sign or not (such as the

---

<sup>10</sup> See, e.g., Eschelon/51, p. 1 (Feb. 4, 2003 email) ["Early on, Eschelon had asked Qwest to use

1 expedite amendment that Qwest says other CLECs have signed, but Eschelon has  
2 not). Examples of different agreement or amendment terms that Qwest has  
3 offered to CLECs include collocation available inventory, collocation transfer of  
4 responsibility, CLEC Requested UNE Construction (“CRUNEC”) and  
5 TRO/TRRO terms.<sup>11</sup> A CLEC with the signed amendment would have different  
6 ICA terms from a CLEC without the signed amendment.

7 In addition, the Qwest amendment or agreement language may change over time,  
8 and different CLECs could then sign different versions of the language depending  
9 on when they signed them. Eschelon has received announcements of changes to  
10 Qwest’s TRO and TRRO language over time, for example. Qwest’s  
11 announcements suggest that some CLECs, unlike Eschelon, have signed the  
12 TRRO Amendment, and therefore have different terms from Eschelon.<sup>12</sup> There is  
13 closed language in Eschelon’s ICA different from the Qwest template  
14 TRO/TRRO agreement/amendment. Eschelon is also unaware of any other  
15 CLEC having the Bridge Agreement (Eschelon/37) that has been approved for  
16 Qwest-Eschelon.

---

Eschelon’s existing contract (the early AT&T contract) as a base for negotiations. . .”].

<sup>11</sup> These Qwest “products” are not identified in the SGAT, though they are in Qwest’s 14 state negotiations template. Qwest has its own ICA proposed language for these products. Not all CLECs sign Qwest’s proposed amendments for these products. Qwest representatives, therefore, must keep straight to which CLECs the terms apply or not.

<sup>12</sup> The recent APOT notice discussed by Mr. Starkey with respect to Issues 9-43 and 9-44, for example, states: “This document is provided for customers who *have signed* the Triennial Review Remand Order (TRRO) compliant agreement/amendment.” PROS.08.31.06.F.04152.TRRO\_Reclass\_UNE\_Conv\_V2; “TRRO Reclassification of Terminations; V2.0.” (emphasis added); <http://www.qwest.com/wholesale/cnla/uploads/PROS%2E08%2E31%2E06%2EF%2E04152%2ETRO%5FReclass%5FUNE%5FConv%5FV2%2Edoc>.

1 McLeodUSA commented in CMP that a change to Qwest PCAT language on the  
2 DC Power Application is different from the language in McLeodUSA's signed  
3 interconnection agreement with Qwest.<sup>13</sup> Qwest responded that:

4 The definition for DC Power Capacity has been documented in the  
5 PCATs since sometime in 2003. Your ICA is valid and will not be  
6 changed. If you have further questions, please contact your  
7 Collocation Service Manager.<sup>14</sup>

8 **Q. PLEASE DESCRIBE ESCHELON/48 AND ESCHELON/84 RELATING**  
9 **TO THE CMP OVERSIGHT REVIEW PROCESS.**

10 A. Section 18.0 of the CMP Document (Eschelon/53) describes the CMP Oversight  
11 Review Process.<sup>15</sup> Eschelon/48 contains a list of CMP Oversight Committee  
12 Meeting Minutes posted on Qwest's wholesale website along with URLs that can

---

<sup>13</sup> McLeodUSA's August 29, 2006 CMP Comment said: "Power Capacity and Usage Charges" changed from my ICA that was signed. The document we signed stated "DC Power Usage and AC Usage Charges" The Definition for "DC Power Usage" as now been replaced with "Capacity". This completely changes the interpretation of this section and the charge that are applied. Please explain when this section changed or if this section changed on this iteration. This change is not acceptable to McLeod."

[http://www.qwest.com/wholesale/downloads/2006/060920/1857\\_Qwest\\_Resp\\_to\\_Comment\\_PROS\\_09\\_20\\_06\\_F\\_04181\\_FNL\\_DC\\_Power\\_New\\_Applicat\\_.doc](http://www.qwest.com/wholesale/downloads/2006/060920/1857_Qwest_Resp_to_Comment_PROS_09_20_06_F_04181_FNL_DC_Power_New_Applicat_.doc).

<sup>14</sup> *See id.* (same URL).

<sup>15</sup> Section 18.0 of Eschelon/53, Johnson/111 provides: "Qwest or a CLEC may identify issues with this CMP using the Oversight Review Process. Issues submitted through this process may include:

- Improper notification under CMP
- No notification under CMP
- Issues regarding scope of CMP
- Failures to adhere to CMP
- Interpretations of CMP
- Gaps in CMP

This Oversight Review Process is optional. It will not be used when one or more processes documented in this CMP are available to obtain the resolution the submitter desires. The submitter is expected to use such available processes."

1 be used to access the meeting minutes. Eschelon/48 shows that several matters  
2 have been handled through Section 18.0 (“Oversight Review Process”) of the  
3 CMP Document.

4 Eschelon/84 includes excerpts from Qwest-prepared CMP Redesign Meeting  
5 Minutes, as well as excerpts from the CMP Document (Eschelon/53). It also  
6 includes URLs to the complete documents from which the excerpts were taken.  
7 Following the excerpts, there is an Eschelon-Qwest email exchange in which,  
8 despite Qwest’s documented July 2001 commitment in CMP Redesign “to  
9 provide minutes from each CICMP meeting and ad hoc meetings/calls,”<sup>16</sup> Qwest  
10 said in its later email “Qwest believes that minutes for ad hoc meetings associated  
11 with a change to disposition request are not required under the current CMP  
12 Document.”<sup>17</sup> The Eschelon-Qwest email exchange also includes Eschelon’s  
13 request for Oversight Committee review. Additional communications have taken  
14 place between Eschelon and Qwest since that email exchange, but the issue of  
15 Qwest providing minutes and allowing for review of minutes per the terms  
16 established in CMP Redesign (as reflected in the CMP Document and the CMP  
17 Redesign minutes) are not resolved. Therefore, Eschelon is continuing to pursue  
18 Oversight Committee review to obtain minutes and review of minutes consistent  
19 with the CMP Document’s requirements.

---

<sup>16</sup> Eschelon/84, Johnson/1.

<sup>17</sup> Eschelon/84, Johnson/6.

1 **Q. PLEASE DESCRIBE ESCHELON/50 RELATING TO WITHDRAWN**  
2 **QWEST PRODUCT AND PROCESS CHANGE REQUESTS.**

3 A. Eschelon/50 contains a description of the product and process change requests  
4 withdrawn by Qwest since at least 2001 (*i.e.*, all those posted in Qwest's CMP  
5 product and process archive on its web site).

6 **Q. PLEASE DESCRIBE ESCHELON/51 AND ESCHELON/52 RELATING**  
7 **TO ESCHELON'S REQUEST AND QWEST'S RESPONSE REGARDING**  
8 **AN OPPORTUNITY FOR INPUT FROM MULTIPLE CLECS.**

9 A. Eschelon/51 contains a 2003 email exchange between Qwest and Eschelon in  
10 which Eschelon asked Qwest to allow CLECs to have input into the development  
11 of Qwest's 14-state ICA negotiations template and for Qwest to provide status  
12 information to CLECs about Qwest's new template in CMP. Eschelon/51 shows  
13 that Qwest declined Eschelon's request. Likewise, Eschelon/52 contains a 2003  
14 letter exchange between Qwest and Eschelon in which Eschelon asked Qwest to  
15 involve other CLECs in the negotiations and implementation of *TRO* provisions,  
16 but Qwest declined to facilitate communications among multiple CLECs.

17 **Q. ESCHELON/53 IS THE CMP DOCUMENT. ARE YOU FAMILIAR WITH**  
18 **QWEST'S CMP, AND WHAT IS THE CMP DOCUMENT?**

19 A. Yes, I am familiar with CMP. Mr. Starkey describes CMP accurately in his  
20 testimony. As described with respect to my background above, I have  
21 participated in Qwest's CMP on behalf of Eschelon since at least 2001.  
22 Currently, I am the lead participant for Eschelon.

1 The “CMP Document” (Eschelon/53) outlines the rules and procedures governing  
2 conduct of Qwest’s CMP. It is available on Qwest’s website. It is also Exhibit G  
3 to the proposed ICA and to the SGAT (both of which provide that they include  
4 the most recent version of the CMP Document).<sup>18</sup> I have consulted the CMP  
5 Document in the course of my participation in CMP.

6 Qwest has described the CMP Document and the CMP development team (the  
7 CMP “Redesign” team) as follows:

8 Q. HOW WAS THE CMP CREATED?

9 A. The current CMP was designed by a joint group that included Qwest  
10 and a number of CLECs. Eschelon was an active participant in this  
11 process. Extensive negotiations took place in meetings from the fall of  
12 2001 to the fall of 2002. The end result was the Wholesale Change  
13 Management Process Document that governs the CMP today.<sup>19</sup>

14 **Q. PLEASE DESCRIBE ESCHELON/54 AND ESCHELON/55 RELATING**  
15 **TO CMP REDESIGN MEETING MINUTES.**

16 A. Eschelon/54 and Eschelon/55 contain excerpts from the meeting minutes of three  
17 CMP Redesign meetings held on January 22-24, 2002; April 2-4, 2002; and  
18 October 2-3, 2001, respectively. These Qwest-prepared minutes are posted on  
19 Qwest’s web site.

20 Eschelon/54 is an excerpt from the April 2002 CMP Redesign meetings. It states  
21 that the ICA information (Attachment 12) could be inserted into the Scope section  
22 of the CMP Document, and that Gap Analysis #150 and action item #227 were

---

<sup>18</sup> See Section 12.1.6.1.3 of the proposed ICA (closed language).

1 closed. Eschelon/54 includes an excerpt from the CMP Redesign “Gap Analysis  
2 Matrix” with respect to Gap Analysis #150. In this posted CMP Redesign  
3 document, Eschelon said, for example, that “Qwest needs to establish and  
4 document a process to account for individual interconnection agreements  
5 (“ICAs”) when implementing changes and using the Change Management  
6 Process (“CMP”).” Mr. Starkey discusses the scope of CMP in his testimony.

7 Eschelon/55 is an excerpt from the October 2001 CMP Redesign meeting minutes  
8 and lists (a) CMP Redesign Action Item #72 (stating that a CLEC is to use the  
9 escalation and dispute process if a CLEC does not agree with Qwest’s response or  
10 rejection of a CLEC-initiated Change Request); (b) Action Item # 83 (stating that  
11 an issue does not have to go through the CMP escalation process before it goes to  
12 dispute resolution); and (c) Action Item #86 (stating that Qwest “will probably  
13 never use” the CMP dispute resolution process). Mr. Starkey discusses the  
14 dispute resolution process in his testimony.

15 **Q. PLEASE DESCRIBE ESCHELON/56, ESCHELON/57 AND**  
16 **ESCHELON/58 RELATING TO CRUNEC.**

17 A. Eschelon/56 to my testimony is the DS1 CRUNEC Chronology. Eschelon/57 is  
18 the CRUNEC Level 3 notice. Eschelon/58 is a CRUNEC Qwest-Eschelon email  
19 exchange. Mr. Starkey summarizes these events in his testimony in his discussion

---

<sup>19</sup> Minnesota arbitration, Albersheim Direct, p. 5, lines 5-10; Washington arbitration Albersheim Direct, p. 4, lines 15-20 (same).

1 of the ICA and the need for contractual certainty. This is the first of the four  
2 examples he provides on that topic.

3 **Q. PLEASE DESCRIBE ESCHELON/59 THROUGH ESCHELON/78 ALL**  
4 **RELATING TO SECRET TRRO PCATS.**

5 A. Mr. Starkey summarized events relating to the Secret TRRO PCATs in his  
6 discussion of the ICA and the need for contractual certainty. This is the fourth of  
7 the four examples he provides on that topic.

8 Eschelon/59 to my testimony is the Secret PCAT TRRO Chronology and  
9 Exhibits.

10 Eschelon/60 and Eschelon/61 are Covad's escalation of Qwest Change Request  
11 PC102704-1ES and Qwest's response to Covad's escalation.

12 Eschelon/62 is a Redline of Change Request Detail for PC10270401ES.

13 . Eschelon/63 contains three examples of Qwest responses to Eschelon objections  
14 to non-CMP "TRRO" notices. The first example relates to a recent Enhanced  
15 Extended Link ("EEL") loop-multiplexing combination DS1 capable loop non-  
16 CMP "TRRO" notice, and Qwest's CMP response indicating that the issue would  
17 not be handled in CMP at this time. The second example relates to a non-CMP  
18 "TRRO" notice about a Qwest organizational change, and Qwest service  
19 management response indicating that the issue would not be handled in CMP at  
20 this time. The third example relates to Qwest's first password protected non-  
21 CMP "TRRO" PCATs (including for Commingled EELs), and Qwest's CMP

1 response that because this was a “non CMP notice,” Eschelon should contact  
2 Qwest service management with any questions.

3 Eschelon/64 contains two Qwest-Eschelon exchanges regarding Qwest’s non-  
4 CMP notices: one notice which was sent on 7/21/06<sup>20</sup> entitled “TRRO –  
5 Reclassification of Terminations for Unbundled Network Element (UNE)  
6 Conversions – V1.0,” with an effective date of 7/28/2006, and the other notice  
7 which was sent on August 31, 2006 with an effective date of September 7, 2006.<sup>21</sup>  
8 The first Qwest-Eschelon exchange is between Eschelon and Qwest ICA  
9 negotiations team, Qwest’s CMP manager (Mr. Coyne), and Qwest service  
10 management (Ms. Novak and Mr. Nielsen). The second Qwest-Eschelon  
11 exchange (the last page of Eschelon/64) is between Eschelon and CMP.

12 Eschelon/65 is an excerpt from Qwest’s Minnesota testimony (Ms. Karen  
13 Stewart) stating that Qwest stopped updating SGATs in 2003 and therefore  
14 considers SGATs as outdated documents.

15 Eschelon/66 are notices distributed by Qwest indicating SGATs are unavailable  
16 for opt in.

---

<sup>20</sup> Document No. PROS.07.21.06.F.04074.TRRO\_Reclass\_Termin\_V1 (Qwest Wholesale Notification – not CMP notice);

1 Eschelon/67 are screen shots taken from Qwest's website showing that Qwest has  
2 changed the link on its website to the SGATs so it takes the user to Qwest's  
3 Negotiation Template Agreements, where there is a separate link to the SGATs  
4 (in PDF), which Qwest indicates are for reference purposes only.<sup>22</sup>

5 Eschelon/68 is a Qwest-initiated change request SCR102704-1RG, in which  
6 Qwest provided a list of products that would no longer be available to CLECs.

7 Eschelon/69 is Qwest-initiated change request SCR83005-01, in which Qwest  
8 sought to implement an edit in IMA to block orders for central offices that Qwest  
9 unilaterally declared non impaired.

10 Eschelon/70 are Oversight Committee meeting minutes from January 4, 2005  
11 regarding a Covad request described in the minutes as "Qwest inappropriate use  
12 of CMP to drive legal interpretation of the Law, and the desired resolution; the  
13 proposed changes (PC102704-1ES) be withdrawn until Qwest can properly  
14 follow the CMP governing document."

15 Eschelon/71 includes the Oversight Committee meeting minutes from January 10,  
16 2005 regarding revisions to Change Request PC102704-1ES.

17 Eschelon/72 is the Change Request detail for PC102704-1ES.

18 Eschelon/73 is Qwest's additional change request (CR PC10274-1ES2). Although  
19 this should be part of the same change request (Eschelon/72), per Qwest, Qwest

---

<sup>22</sup> Compare to Eschelon/59 (containing excerpts from 6/30/05, 3/29/06, and 4/6/06 Qwest

1 created the new Change Request PC10274-1ES2 as a continuation of PC10274-  
2 1ES because the original Change Request reached its character limitation.

3 Eschelon/74, Eschelon/75 and Eschelon/76 contain documentation exchanged  
4 regarding issues identified by Qwest in CMP and whether those issues were  
5 subject to litigation.

6 Eschelon/77 is a list of Qwest Non-CMP "TRRO" PCATs and reflects the  
7 versions of the PCATs as of April 13, 2007.<sup>23</sup>

8 Eschelon/78 contains an exchange of correspondence between Qwest and  
9 Eschelon regarding what Qwest described as its policy decision to review issues  
10 in CMP that Qwest had previously handled through non-CMP TRRO PCATs.

11 **Q. PLEASE DESCRIBE ESCHELON/79 RELATING TO HELD ORDERS.**

12 A. Eschelon/79 to my testimony is the No Build Held Order (Delayed Order)  
13 Chronology. Mr. Starkey refers to this example in his testimony in his discussion  
14 of CMP and the need for contractual certainty.

15 **Q. PLEASE DESCRIBE ESCHELON/80 THROUGH ESCHELON/83**  
16 **RELATING TO CMP DOCUMENTATION REGARDING OPTIONAL**  
17 **TESTING CHARGES.**

---

communications in which Qwest committed to update and then file the updated SGATs).

<sup>23</sup> In this list, for each Qwest non-CMP TRRO PCAT, the first URL refers to the PCAT. The other URL is the link to the history log for the PCAT (which shows the number of versions/changes to the PCAT made by non-CMP notifications). As seen from this list, there are 12 Qwest non-CMP TRRO PCATs, and 99 versions of the PCATs (counting the number of versions issued per PCAT) made by non-CMP notifications.

1 A. Eschelon/80 through Eschelon/83 contains four documents that are posted on the  
2 Qwest CMP web site related to Qwest-initiated Change Request number  
3 PC100101-5 entitled "Clarification of Additional Testing Process." Eschelon/80  
4 is the Qwest Change Request "Detail," including Status History. Eschelon/81 is  
5 the joint escalation of Eschelon, Covad Communications, and Allegiance  
6 Telecom. Eschelon/82 is Qwest's Response to the joint CLEC CMP escalation  
7 and, Eschelon/83 is the joint CLEC reply to Qwest's response. Qwest did not  
8 respond. Mr. Starkey references this Exhibit in his testimony in his discussion of  
9 the ICA and the need for contractual certainty.

10 **Q. PLEASE DESCRIBE ESCHELON/85 RELATING TO QWEST**  
11 **MAINTENANCE AND REPAIR AND DISPATCH PCATS.**

12 A. Eschelon/85 contains the following documents:

13 CMP Ad Hoc Meeting Minutes (Oct. 10, 2006) (pages 1-7)  
14 Level 3 Notification (Dec. 1, 2006) (pages 8-10)  
15 Eschelon's Comments (Dec. 15, 2006) (pages 11-12)  
16 Level 3 Notification (Dec. 19, 2006) (pages 13-14)  
17 Eschelon-Qwest Email Exchange (Jan. 2007) (pages 15-16)  
18 Excerpt from Monthly CMP Meeting Minutes (Feb. 21, 2007) (pages 17-  
19 18)  
20 Wholesale Calendar Entry (showing ad hoc meeting on Feb. 19, 2007)  
21 (page 19)

22 **Q. PLEASE DESCRIBE ESCHELON/86 RELATED TO THE DB LOSS**  
23 **EXAMPLE DISCUSSED IN CONNECTION WITH ISSUES 9-33 AND 9-34**

1           **(NETWORK MAINTENANCE AND MODERNIZATION).**

2    A.    Eschelon/86 contains an email exchange between Eschelon and Qwest regarding a  
3           dB loss issue.  Though the particular problems Eschelon brought to Qwest's  
4           attention at that time concerned DS1s not working at the time of install, in the  
5           course of investigating the cause of this problem, Qwest revealed its maintenance  
6           and modernization plan to proactively reset dB levels at -7.5 during repairs in a  
7           September 29, 2004 letter from Qwest's VP Wholesale Markets to Eschelon about  
8           the dB loss issue, which is also part of Eschelon/86.  Mr. Starkey references  
9           Eschelon/86 in his testimony regarding Issues 9-33 and 9-34 (network  
10          maintenance and modernization).

11   **Q.    PLEASE DESCRIBE ESCHELON/87 THROUGH ESCHELON/92.**

12    A.    Eschelon/87 through Eschelon/92 relate to Subject Matter 29 (Root Cause and  
13          Acknowledgement of Mistakes).  I will discuss these exhibits in more detail  
14          below regarding Subject Matter 29 (Issues 12-64 through 12-66).

15   **Q.    PLEASE DESCRIBE ESCHELON/93 THROUGH ESCHELON/109 ALL**  
16          **RELATING TO EXPEDITED ORDERS.**

17    A.    Eschelon/93 through Eschelon/109 relate to Subject Matter 31 (Expedited  
18          Orders).  Mr. Denney discusses Subject Matter 31 and references these exhibits in  
19          his testimony.

20          Eschelon/93 to my testimony is the Chronology of Qwest CMP Changes.

1 Eschelon/94 is the Documented Facts Matrix. In Eschelon/94, facts outlined in  
2 the chronology in Eschelon/93 are listed in the “Fact” column and, in the  
3 corresponding “Documentation” column, documentation supporting that fact or  
4 event is identified. As an example, in Eschelon/93 (chronology), under the  
5 heading “7. CLEC Objections, Qwest Denials, and Dispute Resolution,” Eschelon  
6 states:

7 Although the CMP Document is not part of Eschelon’s ICA with  
8 Qwest, Eschelon voluntarily followed the CMP objection,  
9 escalation, and dispute resolution processes to attempt to resolve  
10 this matter. Eschelon also complied with the ICA’s dispute  
11 resolution provisions before bringing this matter to the  
12 Commission.”

13 Documents supporting this statement in Eschelon/93 are listed in rows 2-14 of  
14 Eschelon/94. For example, in support of the statement that Eschelon followed the  
15 “escalation” and “objection” CMP processes, the content of the escalation (by  
16 McLeodUSA) is quoted in row 2 of Eschelon/94, and an email from Qwest’s then  
17 CMP Process Manager indicating that Eschelon joined that McLeodUSA  
18 escalation is quoted in row 3 of Eschelon/94. Row 9 of Eschelon/94 contains a  
19 quotation from Eschelon’s objection in CMP stating that the “change Qwest is  
20 proposing is discriminatory to CLECs and their customers.” Eschelon provides  
21 the URL to Eschelon’s CMP comments in row 9, so the entire comments  
22 (including those of other CLECs) can be found as well.

23 Eschelon/95 includes excerpts from the Qwest Resale Product Database – or  
24 RPD.

1 Eschelon/96 is a 9/21/01 Qwest Product Notification.

2 Eschelon/97 is Qwest's Version 30 Announcement relating to changes to  
3 expedites.

4 Eschelon/98 is Qwest's 11/18/05 Response to CLEC Comments of the Version 30  
5 Announcement.

6 Together, Eschelon/93 through Eschelon/98 are intended to readily identify  
7 documents supporting facts in the chronology of events. For many of the facts,  
8 the supporting documentation is posted on Qwest's website and a URL is  
9 provided.

10 Eschelon/99 consists of a Qwest email dated June 27, 2001 regarding InfoBuddy.

11 Eschelon/100 is Qwest's March 29, 2006 Notice regarding RPD retirement,  
12 Eschelon's objection to the retirement of RPD and Qwest's response.

13 Eschelon/101 through Eschelon/104 are comprised of documentation relating to  
14 Qwest PCAT Expedites & Escalations Overview, Versions 6, 27, 30, and 44.

15 Eschelon/101, regarding Version 6 (effective May 27, 2003), contains the Qwest  
16 Level 2 CMP announcement in which Qwest states that Version 6 is  
17 "Documentation concerning existing process not previously documented: add  
18 Expedite reason – medical emergency." It also includes a page from the  
19 accompanying Qwest redline showing this change (adding the phrase "Medical  
20 emergency" to the documented list of "valid expedite" conditions). It also

1 includes the CLEC comments and Qwest's Response regarding Version 6. AT&T  
2 states: "We have had several meetings with Qwest to outline the specifics of the  
3 medical expedite process, and none of that information is contained in this PCAT,  
4 not the disclosure document for EDI, not other PCATs for ordering and  
5 provisioning. It has taken AT&T approximately 5 and a half months to get the  
6 information we have been requesting, and still it is not documented." Qwest's  
7 Version 6 Response confirms that, at this time, expedites were provided at no  
8 additional charge for medical emergencies, and Qwest was only documenting this  
9 fact:

10 The current process for Expedites will not change. "Medical  
11 emergency" is a valid Expedite reason that was not previously  
12 documented. The PCAT updates were clarifying updates only in  
13 order to provide an additional valid reason to request an expedite"  
14 and "Based on the comments received, the PCAT updates were  
15 clarifying updates only in order to provide additional information.  
16 The current process for Expedites will not change. "Medical  
17 emergency" is a valid Expedite reason that was not previously  
18 documented. The PCAT is being updated to clarify the actions for  
19 Expedite situations along with a link to the field entry requirements  
20 in the Local Service Ordering Guide (LSOG). Qwest accepts this  
21 comment.

22 Eschelon/102 is Version 27 of Qwest's Expedites & Escalations Overview PCAT  
23 (effective October 27, 2005), Eschelon/102 includes (1) the Qwest September 12,  
24 2005 Level 3 notification; (2) the pages of the accompanying redlines that refer to  
25 expedites (showing that Qwest deleted the phrase "all except 2w/4w analog" and  
26 inserted the phrase "Port In/Port Within associated with any of the applicable  
27 designed products listed above" in the list of products to which Qwest indicates

1 the fee-added Pre-Approved Expedite process applies);<sup>24</sup> (3) the October 12, 2005  
2 CLEC Comment and Qwest Response; (4) McLeodUSA's Escalation; (5)  
3 Qwest's November 4, 2005 Response to McLeodUSA's escalation; and (6) a  
4 March 28, 2006 Qwest-Eschelon email exchange in which Qwest confirms that  
5 "we do show that Eschelon did join the escalation."<sup>25</sup>

6 Eschelon/103 is Version 30 of Qwest's Expedites & Escalations Overview PCAT  
7 (effective January 3, 2006), Eschelon/103 includes (1) Qwest's October 19, 2005  
8 Level 3 notification; (2) the accompanying redline showing that Qwest made the  
9 following changes from the previous version to Version 30 of its PCAT to deny  
10 the capability to a CLEC with expedite "language in [its] Interconnection  
11 Agreement (ICA)" to expedite any product (including all loops) on Qwest's  
12 expanded Pre-Approved Expedite product list, even when the Original Conditions  
13 are met, and to instead require that the ICA "must contain" a "per day" expedite  
14 rate.<sup>26</sup>

15 Requesting an expedite follows one of two processes, depending  
16 on the product being requested. If the request being expedited is  
17 for a product contained in the "Pre-Approved Expedites" section  
18 below your ICA must contain language supporting expedited  
19 requests with a "per day" expedite rate. If the request being  
20 expedited is for a product that is not on the defined list, then the  
21 expedited request follows the process defined in the "Expedites  
22 Requiring Approval" section below.

---

<sup>24</sup> See, e.g., Eschelon/93, pp. 8 and 9.

<sup>25</sup> See, e.g., Eschelon/93, pp. 12 and 13.

<sup>26</sup> See, e.g., Eschelon/93, pp. 10-12 & 13-16.

1 and (3) Qwest November 18, 2005 Final Notice and accompanying Qwest  
2 Response to CLEC Comment (with CLEC comments and Qwest Response).

3 Eschelon/104 is Version 44 of Qwest's Expedites & Escalations Overview PCAT.

4 Eschelon/105 is documentation relating to Version 45 of Qwest's Expedites &  
5 Escalations Overview PCAT.

6 Eschelon/106 includes a copy of the CMP status history/detail for Covad's Level  
7 4 CLEC-initiated Change Request entitled "Enhancement to the existing Expedite  
8 Process for Provisioning." This is discussed in connection with Version 11 of  
9 Qwest's Expedites & Escalations Overview PCAT (effective July 31, 2004).<sup>27</sup>

10 Eschelon/107 contains a list of examples of expedite orders that were approved by  
11 Qwest for unbundled loop orders using the *emergency-based* expedite process and  
12 provided at no additional charge, including during the time period after Qwest  
13 implemented the additional, optional fee-added expedite process. None of these  
14 examples are expedites under the fee-added expedite process. These examples  
15 show that Qwest continued to approve expedites for unbundled loop orders using  
16 the emergency-based expedite process under the existing interconnection  
17 agreement without amendment after the date on which it implemented the fee-  
18 added Pre-approved Expedites process.

---

<sup>27</sup> See, e.g., Eschelon/93, Johnson/6-8.

1 Eschelon/108 contains annotated pages from Qwest Process Notifications for  
2 Versions 11, 22, 27 and 30 of the Qwest Expedites and Escalations Overview  
3 PCAT. Eschelon annotated the notices to circle pertinent information related to  
4 whether the notice is associated with a change request (“CR”) (*i.e.*, a Level 4  
5 change). There is a space on Qwest’s form where Qwest indicates whether a  
6 noticed change is “associated with” a change request or not. Eschelon/108 shows  
7 that Qwest indicated Versions 11 and 22 were associated with the Covad change  
8 request and Versions 27 and 30 were not associated with the Covad or any other  
9 change request.

10 Eschelon/109 consists of an Arizona Corporation Commission order dated June 6,  
11 2006 in Docket No. T-03406A-06-0257/T-04051B-06-0257, which adopted  
12 Eschelon’s proposed interim process that allows Eschelon to continue to have  
13 access to expedited orders for unbundled loops. The Order said on page two that  
14 Eschelon’s proposal for the interim process is a “good compromise, preserving  
15 Eschelon’s ability to obtain no-cost emergency expedites but providing for  
16 payment to Qwest for non-emergency expedites.”

17 **Q. PLEASE DESCRIBE ESCHELON/115 – ESCHELON/118 RELATING TO**  
18 **JEOPARDIES.**

19 A. Eschelon/115 through Eschelon/118 relate to Subject Matter 33 (Jeopardies). I  
20 will discuss these exhibits in more detail below regarding Subject Matter 33  
21 (Issues 12-71 through 12-73). One of these exhibits in particular (Eschelon/115)  
22 requires additional explanation because it includes several components requiring

1 explanation, so I will also describe Eschelon/115 further here.

2 Eschelon/115 to my testimony includes twenty-two examples of situations when  
3 Eschelon was unable to accept delivery of the circuit when Qwest tried to deliver  
4 the circuit because Qwest sent no FOC or an untimely FOC and yet Qwest  
5 erroneously classified this situation as “Customer Not Ready. Eschelon/115 has  
6 five components: (1) Data provided by Eschelon to Qwest to identify examples  
7 when no FOC or an untimely FOC was sent after a Qwest facility jeopardy;<sup>28</sup> (2)  
8 Qwest’s review (performed during the Minnesota Qwest-Eschelon ICA  
9 arbitration) of that data, in which Qwest provides its technicians’ notes associated  
10 with each example,<sup>29</sup> (3) Eschelon’s reply to Qwest’s review;<sup>30</sup> (4) Qwest’s  
11 Response to Eschelon’s review conducted in the Colorado arbitration  
12 proceeding;<sup>31</sup> and (5) Eschelon’s review of Qwest’s Colorado Exhibit RA-25.<sup>32</sup>

13 **Q. PLEASE ELABORATE ON THE KEY AND SUMMARY INFORMATION**  
14 **PROVIDED AT THE BEGINNING OF ESCHELON/115 REGARDING**  
15 **JEOPARDIES.**

16 A. The information in the key (pages i – ii of Eschelon/115) summarizes the  
17 examples by categories (“A” – “C”), with total numbers for each category, and it  
18 helps identify areas of agreement and disagreement between the companies. If

---

<sup>28</sup> See Eschelon/ 115 (first four columns – “Eschelon Data”).

<sup>29</sup> See Eschelon/115 (fifth and sixth columns – “Qwest Review”).

<sup>30</sup> See Eschelon/115 (column 7 – “Eschelon Review”).

<sup>31</sup> Eschelon/115 (columns 8 and 9 – “From RA-25”).

1 the disagreements are set aside, there is one fact on which the companies clearly  
2 agree: The companies agree that Qwest sent *no FOC* at all after the Qwest  
3 facility jeopardy was cleared but before delivery or attempted delivery of the  
4 circuit for twelve (12) of the examples. (These twelve examples are identified in  
5 the key and the pertinent rows as part of category “A.”)

6 When no FOC is sent (as in category “A”), the most recent information available  
7 to Eschelon from the jeopardy and FOC status notices is that Eschelon should not  
8 expect circuit delivery, because Qwest has a facility problem to resolve before it  
9 can deliver the circuit.<sup>33</sup>

10 **Q. PLEASE DESCRIBE CATEGORY “B” IN EXHIBIT ESCHELON/115.**

11 A. Category “B” identifies examples for which the companies agree that Qwest sent  
12 an FOC, but they disagree as to whether the FOC was sent sufficiently in advance  
13 of the due date to allow Eschelon to prepare to accept delivery of the circuit (such  
14 as by scheduling personnel and/or arranging premise access with the customer).  
15 For example, one of the examples in category “B” is the situation in which Qwest  
16 provided an FOC *nine minutes before* attempting to deliver the circuit.<sup>34</sup>  
17 Eschelon’s proposed ICA language states that Qwest will provide an FOC “at

---

<sup>32</sup> Eschelon/115 (final column – “Eschelon review of RA-25”).

<sup>33</sup> See footnote 5 to Eschelon/115. See my discussion below regarding Issue 1-72 and Qwest’s recent inaccurate claim that, despite this documented process, CLECs should prepare for delivery of the circuit even if no FOC is provided after the jeopardy notice but before attempted delivery of the circuit.

<sup>34</sup> Eschelon/115, Johnson/14, Row No. 11.

1 least the day before” Qwest attempts to deliver the circuit.<sup>35</sup> In Eschelon/115  
2 Eschelon identifies examples for which Qwest, after a facility jeopardy cleared,  
3 provided an FOC less than the day before delivery of the circuit as “invalid” CNR  
4 jeopardies. These are the Category “B” examples.

5 Qwest includes eight examples in Category “B,” while Eschelon agrees with only  
6 five of these. For the other two examples (Row Numbers 9 and 13), a pertinent  
7 FOC was not sent, as described above and in end note (i) to Eschelon/115 at  
8 Johnson/2, so Eschelon believes these two examples should be excluded from  
9 Category “B” (which is supposed to be examples when a pertinent FOC *was* sent).

10 Qwest now denies that its process is to provide the FOC at least the day before the  
11 due date.<sup>36</sup> Therefore, these examples are placed in a separate category (“B”)  
12 from the examples in which Qwest agrees that it is part of its process to send the  
13 FOC but Qwest failed to do so (“A”).

14 **Q. PLEASE DESCRIBE CATEGORY “C” IN EXHIBIT ESCHELON/115.**

15 A. Category “C” is the only one of the three categories for which Qwest agrees with  
16 the original purpose of the exhibit: to show examples of when Qwest incorrectly  
17 classified a jeopardy as Eschelon-caused (CNR). There are only three examples  
18 in Category C. For these three examples, the companies agree both that no FOC

---

<sup>35</sup> Eschelon proposal for ICA Section 12.2.7.2.4.4.1.

<sup>36</sup> Minnesota arbitration Transcript, Vol. 1, p. 37, lines 16-23 (testimony of Renee Albersheim) (discussed below regarding Issue 12-72). Qwest claims that Eschelon’s proposed phrase “at least the day before” is not part of Qwest’s current process. *See id.* p. 37, lines 11-19. Other than that phrase, however, Qwest admits that the remainder of Eschelon’s proposed language reflects Qwest’s current process. *See id.* p. 37, lines 16-23.

1 was sent and that Qwest's assignment of a jeopardy as Eschelon-caused (CNR)  
2 was inappropriate. Unlike Qwest, Eschelon considers the absence of the FOC  
3 sufficient reason to not assign CNR. It appears from the information provided by  
4 Qwest that Qwest has singled out these three examples because there was an  
5 additional Qwest facility jeopardy. So, Qwest should have sent another Qwest  
6 facility jeopardy notice instead of a CNR jeopardy. (In other words, there was an  
7 additional reason, besides Qwest's failure to send an FOC, upon which Qwest  
8 relies for agreeing that its classification was incorrect.) This could happen, for  
9 example, if Qwest clears a first Qwest jeopardy based on pairs that then turn out  
10 to be bad. Qwest's process is to send another Qwest facility jeopardy (for the bad  
11 pairs).

12 **Q. PLEASE DESCRIBE ESCHELON/119 THROUGH ESCHELON/122.**

13 A. Eschelon/119 through Eschelon/122 relate to Subject Matter 43 (Controlled  
14 Production). I will discuss these exhibits in more detail below regarding Subject  
15 Matter 43 (Issue 12-87).

16 **III. OPEN SECTION 12 ISSUES: SUBJECT MATTERS 29, 31, 33, AND 43**

17 **A. SUBJECT MATTER NO 29. ROOT CAUSE ANALYSIS AND**  
18 **ACKNOWLEDGEMENT OF MISTAKES**

19 *Issues Nos. 12-64, 12-64(a) and 12-64(b): ICA Section 12.1.4 and subparts*

20 **Q. PLEASE DESCRIBE ESCHELON'S BUSINESS NEED REGARDING**

1           **ROOT CAUSE AND ACKNOWLEDGEMENT OF MISTAKES**  
2           **REFLECTED IN ISSUE NUMBERS 12-64, 12-64(a) AND 12-64(b).**

3       A.     In its role as a wholesale provider to Eschelon, Qwest performs activities, such as  
4           installing and repairing unbundled loops on Eschelon’s behalf. Qwest’s role is  
5           unique in this respect, as Eschelon does not perform installation and repair  
6           activities on a wholesale basis on behalf of Qwest. If Qwest makes an error in the  
7           course of these activities that impacts Eschelon’s Customer, that Customer may  
8           attribute fault to Eschelon, rather than Qwest. Indeed, this may occur because the  
9           Customer does not fully understand the wholesale relationship between its  
10          provider (Eschelon) and Qwest. Or, Qwest may even tell the End User Customer  
11          that the error was caused by Eschelon despite the fact that Qwest caused the  
12          service impacting error.<sup>37</sup> In either situation, it is important that Qwest  
13          acknowledge its mistake in a form that allows Eschelon to pass this  
14          acknowledgement to the End User Customer, if necessary, so that Eschelon does  
15          not lose its Customers and suffer harm to its reputation in the marketplace.

16          Root-cause analyses are necessary to the correct attribution of mistakes and to  
17          developing procedures to attempt to avoid similar mistakes in the future. A  
18          requirement to perform a root cause analysis, when necessary to establish which  
19          carrier caused an error, is implicit in a requirement that Qwest acknowledge its  
20          mistakes. In other words, “to acknowledge a mistake, Qwest has to determine

---

<sup>37</sup> This happened in the Minnesota 616 case discussed below (and also discussed by Mr. Starkey in his testimony with respect to CMP). See Eschelon/5, Starkey 8 & 11.

1 that one was made and why.”<sup>38</sup> In many instances, a root cause analysis is  
2 essential to getting to the heart of the error, and hopefully preventing further  
3 similar mistakes.

4 **Q. HAS ANY STATE COMMISSION RECOGNIZED THESE NEEDS AND**  
5 **ORDERED INCLUSION OF LANGUAGE IN A QWEST ICA TO**  
6 **ADDRESS THESE NEEDS?**

7 A. Yes. In a case discussed further by Mr. Starkey (in the “Minnesota 616” example  
8 in his CMP discussion), the Minnesota Commission recognized this need and  
9 ordered Qwest to create procedures for acknowledging mistakes related to  
10 Qwest’s errors that affect CLEC’s End User Customers.<sup>39</sup> Since then, in the  
11 Minnesota Qwest-Eschelon arbitration, the Minnesota commission adopted  
12 Eschelon’s proposed language for Issue 12-64 and subparts (including alternative  
13 #2 for Section 12.1.4.1) regarding root cause and acknowledgement of mistakes.<sup>40</sup>

14 **Q. BRIEFLY DESCRIBE THE FACTS WHICH LED TO THE MINNESOTA**  
15 **616 ORDER REQUIRING QWEST’S ACKNOWLEDGEMENT OF**  
16 **MISTAKES.**

17 A. A large business End User Customer selected Eschelon as its carrier of choice,  
18 and Eschelon initiated the conversion process. Almost two weeks before the

---

<sup>38</sup> Eschelon/29, Denney/51 (Minnesota Arbitrators’ Report ¶208).

<sup>39</sup> Order Finding Service Inadequate and Requiring Compliance Filing, In the Matter of a Request by Eschelon Telecom for an Investigation Regarding Customer Conversion by Qwest and Regulatory Procedures, MN PUC Docket No. P-421/C-03-616. July 30, 2003, p. 9 [“MN 616 Order”], see Eschelon/5, Starkey/14.

<sup>40</sup> Eschelon/30, Denney/23 [MN PUC Arbitration Order, p. 23, ¶4 (Topic 27)].

1 requested due date (the date Eschelon requested that Qwest convert the service),  
2 many of the Customer's telephone numbers went out of service. Eschelon later  
3 learned that a Qwest employee made an error by typing an incorrect due date  
4 within its internal service order associated with this conversion – and the Qwest  
5 error brought down the Customer's service two weeks earlier than the conversion  
6 date. Naturally, the End User Customer was upset. Moreover, Qwest worsened  
7 the situation by actually telling Eschelon's Customer that the outage was  
8 Eschelon's fault. The End User Customer was so upset about the outage that the  
9 Customer asked Eschelon to cancel the order and stop the Customer's conversion  
10 to Eschelon. Qwest was successful, therefore, in preventing a Customer from  
11 switching to Eschelon.

12 The situation was further aggravated by the fact that, when Eschelon submitted its  
13 request to cancel the wholesale orders associated with Customer's conversion as  
14 the Customer had requested, Qwest rejected Eschelon's request to cancel the  
15 order.<sup>41</sup> After Eschelon's escalation, the order was eventually cancelled. Further,  
16 Eschelon learned that Qwest's *Wholesale* group alerted Qwest's *Retail* group of  
17 the situation with this End User Customer (an outage caused by Qwest's  
18 Wholesale group) so that Qwest's Retail group could turn its own company's

---

<sup>41</sup> The rejection was due to the way Qwest's systems treat an order for which some of Qwest's internal service orders have already been completed.

1 error into an opportunity to win back the unhappy Customer, even though  
2 Qwest's error made that Customer unhappy.<sup>42</sup>

3 Eschelon also learned that Qwest Retail's group e-mail to the End User Customer  
4 told the Customer in a "misleading" manner that it would lose service again  
5 unless Eschelon took specific action to cancel the service transfer order.<sup>43</sup> As  
6 may happen in such a "he said, she said" situation, *the End User Customer*  
7 *demanded that Eschelon provide a written statement from Qwest stating clearly*  
8 *that Qwest made the error causing the outage, and that Eschelon had complied*  
9 *with the Customer's wishes.* Because Qwest had created doubt about Eschelon's  
10 explanation of the problem, the Customer wanted confirmation from Qwest itself.  
11 Eschelon requested such a statement from Qwest. Qwest told Eschelon that  
12 Qwest's policy is that Qwest will not provide a written statement to be provided  
13 to the Customer, even when the purpose of the statement is to correct Qwest  
14 misinformation. Eschelon then turned to the Minnesota Commission for relief,  
15 and the Commission issued the Order cited above. The Minnesota 616 case is  
16 also summarized in the Minnesota Arbitrators' Report ¶¶204-208 (Eschelon/29,  
17 Denney 50-52).

18 **Q. HOW DOES ESCHELON'S PROPOSAL ADDRESS THESE ISSUES?**

---

<sup>42</sup> This conduct was captured in an e-mail that Qwest's *Retail* sent directly to Eschelon's Customer. In the e-mail, the Qwest Retail representative specifically said: "*I was contacted by our wholesale group. . . .*" See Eschelon/5, Starkey 8.

<sup>43</sup> Eschelon/5, Starkey/11. The Minnesota Commission specifically found that Qwest Retail's email to Eschelon's Customer "was misleading in at least two ways." See *id.*

1 A. Eschelon proposes that the ICA contain terms regarding root cause analyses and  
2 promptly acknowledging and taking responsibility for mistakes made in Qwest's  
3 role as a wholesale provider for Eschelon (when Qwest makes a mistake while  
4 acting on Eschelon's behalf). Eschelon proposes the following language:

5 **Issue 12-64:**

6 12.1.4 Root Cause Analysis and Acknowledgement of Mistakes

7 **Proposal #1 for 12.1.4.1:**

8 12.1.4.1 CLEC may make a written request to its Qwest Service  
9 Manager for root cause analysis and/or acknowledgement of a  
10 mistake relating to products and services under this Agreement.  
11 The written request should include the following information,  
12 when applicable and available: Purchase Order Number (PON),  
13 Service Order Number, billing telephone number, a description of  
14 the End User Customer impact and the ticket number associated  
15 with the repair of the impacting condition. It is expected that  
16 CLEC has followed usual procedures to correct a service  
17 impacting condition before beginning the process of requesting  
18 Qwest acknowledgement of error.

19  
20 **Proposal #2 for 12.1.4.1:**

21 12.1.4.1 CLEC may make a written request to its Qwest Service  
22 Manager for root cause analysis and/or acknowledgement of  
23 mistake(s) in processing wholesale orders, including pre-order,  
24 ordering, provisioning, maintenance and repair, and billing. The  
25 written request should include the following information, when  
26 applicable and available: Purchase Order Number (PON), Service  
27 Order Number, billing telephone number, a description of the End  
28 User Customer impact and the ticket number associated with the  
29 repair of the impacting condition. It is expected that CLEC has  
30 followed usual procedures to correct a service impacting condition  
31 before beginning the process of requesting Qwest  
32 acknowledgement of error.

33  
34 12.1.4.2 When the Qwest Service Manager receives a request for  
35 root cause analysis and/or acknowledgement from CLEC, an  
36 investigation process will begin. When this investigation results in  
37 agreement that Qwest erred, the Qwest Service Manager will  
38 provide written correspondence to CLEC.

1 12.1.4.2.1 The letter will include a recap of sufficient pertinent  
2 information to identify the issue, (e.g., PON, Service Order  
3 Number, order Due Date and billing telephone number, as  
4 provided in the CLEC request) and the following statement,  
5 “Qwest acknowledges its mistake. The error was not made by the  
6 other service provider.”

7 12.1.4.2.2 Qwest understands that time is of the essence in  
8 processing such a request and that a response should be provided  
9 as quickly as is possible given the particular issue raised by CLEC.

10 **Issue 12-64(a):**

11 12.1.4.2.3 Written responses acknowledging Qwest error will be  
12 provided with Qwest identification, such as Qwest letterhead, logo,  
13 or other indicia.

14 12.1.4.2.4 The Qwest Service Manager will provide the  
15 acknowledgement to CLEC.

16 **Issue 12-64(b):**

17 12.1.4.2.5 The acknowledgment response described in Section  
18 12.1.4.2.3 and provided by the Qwest Service Manager to CLEC  
19 will be provided on a non-confidential basis and will not include a  
20 confidentiality statement.

21 12.1.4.2.6 Qwest external documentation available to CLEC will  
22 instruct CLEC to make requests for acknowledgements directly to  
23 its Qwest Service Manager. Such external documentation will also  
24 include instruction for accessing the Qwest Customer Contact  
25 Information Tool to identify the assigned Qwest Service Manager  
26 if CLEC does not know to whom its request can be sent.

27 Although in Oregon Qwest *opposes* all of Eschelon’s proposed language for Issue  
28 12-64 and subparts, Qwest disputed only portions in Minnesota and eventually  
29 *agreed* in Minnesota to all of Eschelon’s proposed language (which is the same in  
30 both states), except the one phrase shaded in gray above for Section 12.1.4.1  
31 (Eschelon proposals #1 and #2). In Minnesota, the ALJs found that Eschelon’s  
32 proposal #1 for Section 12.1.4.1 was “consistent with the record and in the public

1 interest.”<sup>44</sup> The ALJs also observed that this single phrase could be modified  
2 further, and also be consistent with the public interest.<sup>45</sup> In response, Eschelon  
3 offered proposal #2 for Section 12.1.4.1 for all six states.<sup>46</sup> Eschelon’s Proposal  
4 #2 for Section 12.1.4.1 uses the following phrase: “mistake(s) in processing  
5 wholesale orders, including pre-order, ordering, provisioning, maintenance and  
6 repair, and billing.” When adopting Eschelon’s alternate proposal (Proposal #2),  
7 the Minnesota Commission said: “The Commission’s concern for the  
8 anticompetitive consequences of service quality lapses has never been as narrow  
9 as Qwest’s language would suggest. The Commission finds it reasonable for  
10 Qwest to acknowledge mistakes at any point in processing wholesale orders,  
11 including mistakes arising during pre-ordering, ordering, provisioning,  
12 maintenance and repair, and billing. In the interest of clarity, the Commission  
13 will adopt the arbitrator’s language as modified by Eschelon.”<sup>47</sup>

14 **Q. WHAT IS QWEST’S PROPOSAL ON THESE ISSUES?**

15 A. Qwest does not agree with any of Eschelon’s proposed language, and instead  
16 proposes that Section 12.1.4 and subparts be deleted and left intentionally blank.  
17 Qwest argues that this language is inappropriate for an ICA.<sup>48</sup> Inconsistencies in

---

<sup>44</sup> Eschelon/29, Denney 52 (¶208).

<sup>45</sup> See *id.*

<sup>46</sup> Proposal #2 is not shown in the Joint Disputed Issues Matrix filed with the Petition for Arbitration (Exhibit 3) but has been provided as an Eschelon proposal to Qwest since then.

<sup>47</sup> Eschelon/30, Denney 15; *see also* Eschelon/30, Denney 23 [MN PUC Arbitration Order, p. 15; *see also id.* p. 23, ¶4 (Topic 27)].

<sup>48</sup> See Qwest’s position statement on Issue 12-64 and subparts in the Joint Disputed Issues Matrix, Exhibit 3 to Petition (10/10/06), pp. 162-167.

1 Qwest's position are discussed in the testimony of Mr. Starkey, relating to CMP  
2 issues (and specifically his discussion of the "Minnesota 616" example).

3 **Q. GIVEN THAT QWEST PROPOSES TO EXCLUDE THE LANGUAGE**  
4 **FROM THE ICA, HAVE YOU PROVIDED ANY EXAMPLE THAT**  
5 **ILLUSTRATES ESCHELON'S BUSINESS NEED FOR AN ICA**  
6 **PROVISION THAT REQUIRES QWEST TO ACKNOWLEDGE ITS**  
7 **ERRORS (ISSUE 12-64 —THE FIRST OF THREE ISSUES RELATED TO**  
8 **SUBJECT MATTER 29)?**

9 A. Yes. I provide examples of errors committed by Qwest in connection with repair  
10 and installation situations that impacted Eschelon's End User Customers in  
11 Eschelon/87. In a particular situation involving a restaurant,<sup>49</sup> Eschelon's End  
12 User Customer, experienced trouble with its voice line. During the repair of this  
13 line, Qwest's technician erroneously disconnected the Customer's credit card line.  
14 The next day, Qwest's technician was again at the Eschelon End User Customer's  
15 location with Eschelon's technician.<sup>50</sup> The Customer told them that the restaurant  
16 had effectively given away "free food" worth \$110, because of the credit card line  
17 outage. Qwest's technician responded to the Eschelon End User Customer with  
18 profanity. Following the mistake resulting in the credit card line outage, this  
19 obviously upset the Customer even further. After Eschelon reported this incident

---

<sup>49</sup> Eschelon/87, Johnson/1 (first example).

<sup>50</sup> This is called a joint meet.

1 to Qwest, Qwest recognized that this was inappropriate and said it took  
2 disciplinary action against its technician.

3 In addition, with respect to this specific restaurant example, Eschelon later  
4 learned that Qwest management also visited Eschelon's End User Customer and  
5 communicated directly with the Customer, without Eschelon's knowledge or  
6 presence, about the incident. The current Qwest-Eschelon ICA, like the pending  
7 ICA, provides that Eschelon is the single point of contact with Eschelon's End  
8 User Customer.<sup>51</sup> Per this provision, Qwest should not have communicated with  
9 the Eschelon Customer instead of Eschelon.<sup>52</sup> This suggests that the ICA  
10 language needs to be more explicit on this point. If Eschelon's proposed language  
11 were adopted for Issues 12-64 and subparts, in conjunction with closed issues 12-  
12 65, and 12-66,<sup>53</sup> the ICA would be more clear in requiring that Qwest take the  
13 appropriate steps to provide a written acknowledgement of its error in causing the  
14 credit card line outage to Eschelon, allowing Eschelon to communicate with its  
15 own Customer and pass along Qwest's written acknowledgement to its Customer,  
16 if necessary.

17 **Q. ESCHELON'S PROPOSED LANGUAGE REFERS TO ROOT CAUSE**  
18 **ANALYSIS. PLEASE EXPLAIN.**

---

<sup>51</sup> Attachment 8, section 1.1.1.1 of the current Qwest-Eschelon ICA. This provision states "At all times, CO-PROVIDER shall be the primary (single and sole) contact and account control for all interactions with its subscribers, except as specified by CO-PROVIDER."

<sup>52</sup> Afterwards, Qwest claimed the purpose of its return visit was to apologize to Eschelon's customer. Any apology should have been provided to Eschelon, per the ICA language. *See id.*

1 A. As I indicated above, a root cause analysis can be essential to getting to the heart  
2 of errors, and hopefully preventing further similar mistakes made when Qwest in  
3 its role as a vendor is performing work for Eschelon. Eschelon expends resources  
4 researching examples (which Qwest asks Eschelon to provide when problems  
5 occur).<sup>54</sup> Qwest benefits from root cause of these examples because Qwest gains  
6 efficiencies when information learned from these mistakes is used to avoid  
7 mistakes going forward. In Qwest's PCAT, Qwest acknowledges that CLECs  
8 may submit requests for root cause analysis:

9 Your Qwest Service Team is prepared to assist you with:  
10 ...  
11 Handling maintenance and repair post mortems (root cause  
12 analysis) when you submit a specific request for a post mortem on  
13 an unusual repair event, e.g., event over eight hours. Your Qwest  
14 Service Manager will review the logged notes regarding the event  
15 and discuss the circumstances surrounding the event with the  
16 Qwest Repair Center to determine the cause, the process used to  
17 repair/restore service, and the process(es) implemented to prevent  
18 a reoccurrence of the event. Working with Qwest's Repair  
19 Center/Network Reliability Operations Center, as appropriate, your  
20 Qwest Service Manager will conduct the Root Cause Analysis  
21 (RCA) and provide you the complete analysis in writing.  
22 Investigation and preparation of a typical postmortem takes from  
23 2-10 business days depending on the complexity of the event.<sup>55</sup>

---

<sup>53</sup> Issues 12-65 and 12-66 deal with Qwest's communications with Eschelon's End User Customers, and are closed. The closed language is shown below.

<sup>54</sup> Eschelon/92, Johnson/2 (last paragraph) ("In all above instances the reporting CLEC should be prepared to discuss the specific details and examples of the issue and all informative documentation researched.").

<sup>55</sup> Qwest's PCAT, *Account Team / Sales Executives and Service Managers - V9.0* available at <http://www.qwest.com/wholesale/clecs/accountmanagers.html>.

1 Qwest provides Eschelon with root cause analysis.<sup>56</sup> Eschelon/87 includes a  
2 number of examples in which Qwest provided root cause analysis. The second,  
3 third, fourth, fifth, eighth, and ninth examples in that Exhibit describe situations  
4 for which Qwest provided root cause analysis to Eschelon. Qwest has the  
5 capability to conduct these root cause analyses and provide them to Eschelon. In  
6 fact, providing root cause analysis is a defined part of the Qwest's Service  
7 Manager's Role. Qwest's own documentation provides that, for "Requests for  
8 Information," "System Problems," "Service Order Problems," "Billing  
9 Problems," "Compliance Issues," "Network Repair Problems," "Product  
10 Information," "Chronic Performance Problems," and "Isolated Personnel  
11 Performance Issues," the CLEC ( in "*all*" of these instances) should be prepared  
12 to discuss examples and "*Qwest will conduct a root cause analysis* of the  
13 examples of the problem, and provide its analysis to the reporting CLEC in a  
14 timely manner."<sup>57</sup>

15 As the Qwest language discussed above shows, the process for obtaining a root  
16 cause analysis is to provide examples and request root cause from the Qwest  
17 Service Manager. As Qwest already assigns a Service Manager to Eschelon, and  
18 the Service Manager knows how to obtain root cause analyses (as shown by these

---

<sup>56</sup> Regarding Qwest's recent refusal to provide root cause analyses regarding problems with jeopardies and firm order confirmations that result in customer affecting delays, however, see my discussion below regarding Issues 12-71 through 12-73 and Eschelon/117.

<sup>57</sup> Eschelon/92, Johnson/2 (last paragraph). This is Qwest documentation posted on its website which, as discussed previously, Qwest may change unilaterally and, as discussed in Eschelon/117 (with respect to Qwest's refusal to provide root cause for jeopardy examples) Qwest is disregarding currently. These facts show that the commitment to perform root cause analysis needs to be in the interconnection agreement.

1 two quotations), no new procedures or costly changes are needed to provide the  
2 requested root cause analyses.

3 Repeat or systemic problems in Qwest's provisioning of wholesale services to  
4 Eschelon adversely affect Eschelon when they occur. Therefore, Eschelon should  
5 have a contract right to request root cause analyses for the purpose of helping to  
6 prevent similar mistakes in the future. By proposing to exclude the term from the  
7 contract, Qwest is attempting to reserve the right to stop providing root cause  
8 analyses during the contract term without amending the agreement. This would  
9 harm Eschelon's ability to protect itself from ongoing Qwest mistakes of the  
10 nature that harm Eschelon's end user customers. Including this term in the  
11 contract, in contrast, will help avoid disputes that would otherwise occur if  
12 troubles are not identified through root cause analyses and continue to re-occur.

13 **Q. ISSUE 12-64 INCLUDES SUBPARTS, EVEN THOUGH QWEST**  
14 **OPPOSES ALL OF ESCHELON'S LANGUAGE IN OREGON. PLEASE**  
15 **EXPLAIN.**

16 A. As indicated, Qwest ultimately agreed to all of Eschelon's proposed language for  
17 Issue 12-64 and subparts, except the single phrase in Section 12.1.4.1 described  
18 above, in Minnesota. Before that, Qwest also opposed the language dealt with in  
19 Issues 12-64(a) and 12-64(b). As Qwest has made particular claims with respect  
20 to Issues 12-64(a) and 12-64(b) (aside from its general argument that all of the

1 language is inappropriate for an ICA<sup>58</sup>), Eschelon separately addresses those  
2 claims with respect to Issues 12-64(a) and 12-64(b).

3 **Q. REGARDING ISSUE 12-64(a) (THE SECOND OF THE THREE ISSUES**  
4 **RELATING TO ACKNOWLEDGEMENT OF MISTAKES), PLEASE**  
5 **EXPLAIN ESCHELON'S POSITION REGARDING CARRIER**  
6 **IDENTIFICATION.**

7 A. Issue 12-64(a) deals with the proper identification of Qwest as the company  
8 issuing the letter of acknowledgment (in Section 12.1.4.2.3) and Eschelon as the  
9 company receiving the acknowledgment (in Section 12.1.4.2.4). Eschelon's  
10 proposal for the first paragraph (Section 12.1.4.2.3) requires that the written  
11 acknowledgement will be provided with Qwest identification "such as Qwest  
12 letterhead, logo, or other indicia."<sup>59</sup> Eschelon's proposal is driven by the  
13 business need to obtain these acknowledgements and share them with its end user  
14 customers to avoid losing customers in situations when Qwest's mistakes might  
15 be incorrectly attributed to Eschelon. Eschelon's language is a logical means of  
16 demonstrating to the end user customer that the acknowledgement of error was  
17 generated by Qwest. Similarly, Eschelon's proposal for 12.1.4.2.4 is a logical

---

<sup>58</sup> See Qwest's position statement on Issue 12-64 and subparts in the Joint Disputed Issues Matrix, Exhibit 3 to Petition (10/10/06), pp. 162-167. Cf. Mr. Starkey's discussion of the "Minnesota 616" example.

<sup>59</sup> In the November 12, 2003 Order in Minnesota Docket No. P-421/C-03-616, the commission required that Qwest provided the acknowledgement of mistakes on Qwest's letterhead or similar indicia. The Order stated that Qwest's compliance filing addressing the inadequacies found by the Commission's original July 2003 Order should include the following: "(h) Procedures for ensuring that acknowledgements appear on Qwest letterhead or other indicia to show that it is Qwest making the acknowledgement." Eschelon/5, Starkey 4.

1 means of clarifying that Eschelon is the carrier requesting and receiving the  
2 acknowledgement.

3 **Q. REGARDING ISSUE 12-64(b) (THE THIRD OF THE THREE ISSUES**  
4 **RELATING TO SUBJECT MATTER 29), PLEASE EXPLAIN**  
5 **ESCHELON'S POSITION REGARDING THE NON-CONFIDENTIAL**  
6 **STATUS OF THE ACKNOWLEDGEMENT.**

7 A. Issue 12-64(b) deals with whether a Qwest acknowledgment will be provided on a  
8 non-confidential basis to allow Eschelon to provide it to the end user customer.  
9 Eschelon's proposal requires that acknowledgements will be provided on a non-  
10 confidential basis *and* will not include a confidentiality statement. The choice of  
11 words in Eschelon's proposal is a safeguard against a situation in which the  
12 acknowledgement letter does not include a confidentiality statement, but is still  
13 provided on a confidential basis. For example, Qwest may provide the  
14 acknowledgement as an enclosure to a cover e-mail containing a confidentiality  
15 message.

16 **Q. DOES QWEST PROVIDE COVER E-MAILS CONTAINING**  
17 **CONFIDENTIALITY PROVISIONS?**

18 A. Yes. In fact, Qwest has begun to insert a confidentiality message on its e-mails as  
19 follow: "This communication is the property of Qwest and may contain  
20 confidential or privileged information. Unauthorized use of this communication is  
21 strictly prohibited and may be unlawful. If you have received this communication  
22 in error, please immediately notify the sender by reply e-mail and destroy all

1 copies of the communication and any attachments.” When Eschelon inquired  
2 about this message, Qwest’s service management personnel said that this message  
3 “is generated on all out going e-mails from Qwest. I do not control it.”<sup>60</sup> While  
4 somewhat non-committal (as it uses the term “may”), this message is likely to  
5 cause confusion about the non-confidential status of the requested information. It  
6 may deter using the information for its intended purposes – to explain the  
7 situation to the end user customer and to attempt to avoid similar problems in the  
8 future. Qwest’s apparently auto-generated confidentiality message will present  
9 practical obstacles to sharing with the End User Customer the acknowledgement  
10 of mistakes and root cause analysis (which is, of course, the primary purpose of  
11 requiring that Qwest acknowledge its mistakes), if this issue is not addressed in  
12 the interconnection agreement language. With such language in the  
13 interconnection agreement, if Qwest desires to continue to use such auto-  
14 generated messages, Qwest would need to clearly indicate that the  
15 acknowledgement is not confidential to counter the confusion caused by this  
16 message.

17 **Q. PLEASE SUMMARIZE ISSUES 12-64, 12-64(a) AND 12-64(b) RELATING**  
18 **TO ACKNOWLEDGEMENT OF MISTAKES.**

19 A. When Eschelon’s end user customer incorrectly attributes Qwest-caused errors to  
20 Eschelon, the business relationship between Eschelon and its customer is affected,  
21 which can be to Qwest’s advantage. Eschelon proposes to include, in its Oregon

---

<sup>60</sup> Qwest (Ms. Jean Novak) e-mail to Eschelon (Ms. Bonnie Johnson), May 15, 2006 (subject:

1 ICA with Qwest, provisions that address this business need. Eschelon proposal is  
2 not limited to a narrow set of issues regarding ordering wholesale activities (*i.e.*,  
3 LSR and ASR orders) because Qwest errors that harm Eschelon's customers can  
4 occur when Qwest is performing other wholesale activities in its role as a vendor  
5 to Eschelon as well. As root cause analyses can be essential to getting to the heart  
6 of these errors, Qwest should be required to provide these analyses to help prevent  
7 additional customer-affecting mistakes. Qwest's acknowledgement statement  
8 should clearly identify Qwest as the carrier generating the statement and Eschelon  
9 as the carrier receiving the statement to avoid customer confusion. The  
10 interconnection agreement should prevent Qwest from using a confidentiality  
11 designation in acknowledgements to ensure that Eschelon can provide the  
12 acknowledgement to its end user customer.

13 **B. SUBJECT MATTER NO. 31. EXPEDITED ORDERS**

14 *Issues Nos. 12-67 and 12-67(a)-(g)*

15 **Q. WHERE IS SUBJECT MATTER 31 DISCUSSED IN ESCHELON'S**  
16 **DIRECT TESTIMONY?**

17 **A.** Mr. Denney addresses Issue 12-67 and subparts in his direct testimony. As  
18 discussed above, expedited orders are also addressed in Eschelon/93 –  
19 Eschelon/109 to my testimony.

1 **C. SUBJECT MATTER NO. 33. JEOPARDIES**

2 Issues Nos. 12-71, 12-72, and 12-73: ICA Section 12.2.7.2.4.4 and subparts

3 **Q. WHAT IS A JEOPARDY AND A JEOPARDY NOTICE?**

4 A. When circumstances exist to suggest that a due date of service delivery will likely  
5 be missed, the due date is in *jeopardy* of being missed. A jeopardy condition  
6 affecting a due date may be caused by either company. A Qwest-caused jeopardy  
7 may result, for example, from a lack of facilities to fill the order. A CLEC-caused  
8 jeopardy may result, for example, if either the CLEC or the CLEC's customer  
9 should be but is not ready to accept delivery of the circuit/service on the due date.  
10 The term "Qwest jeopardy" refers to a jeopardy attributable to Qwest.<sup>61</sup> The term  
11 "Qwest *facility* jeopardy" refers generally to a problem attributable to Qwest  
12 relating to facilities in the Qwest network (such as lack of facilities, bad pairs,  
13 etc.).<sup>62</sup> A jeopardy that is attributable to the CLEC or the CLEC's customer is  
14 referred to as a "Customer Not Ready" or "CNR" jeopardy.

---

<sup>61</sup> See Qwest's Provisioning and Installation Overview PCAT, stating: "Qwest is responsible for resolving all Designed jeopardy codes starting with the letters "A" through "V", with the exception of all "C" jeopardy codes, K10, and K11. We are also responsible for resolution of Non-Designed jeopardy codes CF, CL, CO, and CS. Examples include:

V25 -Qwest Equipment Center has a Plug-in Inventory Control System (PICS) problem. We will escalate to obtain the PICS equipment for installation in the Central Office in time to meet the DD.

CF - Unavailability or lack of outside plant or buried service wire."

<http://www.qwest.com/wholesale/clecs/provisioning.html>

<sup>62</sup> See footnotes 5 and 6 to Eschelon/115, Johnson 3-4 regarding the different types of jeopardies and discussion of "K" jeopardies (Qwest-caused jeopardies).

1 A jeopardy *notice* is a notice that Qwest sends to inform a CLEC that a due date is  
2 in jeopardy of being missed.<sup>63</sup> Qwest, in its Product Catalog (“PCAT”),  
3 “differentiates” categories of jeopardies and provides different direction to  
4 CLECs as to whether to prepare to accept the circuit/service depending on the  
5 nature of the jeopardy notice received.<sup>64</sup> For one category of jeopardies that is not  
6 the subject of Eschelon’s language, Qwest tells CLECs to “disregard” the  
7 jeopardy notice (meaning to keep working and plan to prepare to accept delivery  
8 as though CLEC had not received a jeopardy notice).<sup>65</sup> For the category of  
9 jeopardies covered by Eschelon’s language,<sup>66</sup> however, Qwest’s PCAT does *not*  
10 indicate that the jeopardy notice should be disregarded and instead provides  
11 Qwest “will advise” CLEC of the new due date “when the jeopardy condition has  
12 been resolved.”<sup>67</sup> Qwest’s witness has testified the Firm Order Confirmation

---

<sup>63</sup> See Proposed ICA Sections 12.2.7.2.4.1 & 12.2.7.2.4.2 (closed language).

<sup>64</sup> Qwest’s Provisioning and Installation Overview PCAT (Qwest Minnesota arbitration Hrg. Ex. 1 (Albersheim Dir.), RA-10, p. 11), stating: “Qwest differentiates between DD jeopardies and Critical Date jeopardies. DD jeopardies indicate that your due date is in jeopardy; however, Critical Date jeopardies indicate that a critical date prior to the DD is in jeopardy. ***Critical Date jeopardies can be ignored by you.*** Critical Date jeopardies are identified in the Jeopardy Data document (see download in the following paragraph) in the column labeled “Is Due Date in Jeopardy?” ***If the DD is not in jeopardy, this column will contain “No” and you can disregard the jeopardy notice*** sent for this condition and continue your provisioning process with the scheduled DD. ***If the column contains “Yes” and Qwest has the responsibility to resolve the jeopardy condition, we will advise you of the new DD when the jeopardy condition has been resolved.*** This is usually within 72 hours.” (emphasis added). See <http://www.qwest.com/wholesale/clecs/provisioning.html>

<sup>65</sup> See id.

<sup>66</sup> The two types of potential customer (CNR) jeopardies described in Section 12.2.7.2.4.4.1 are coded in by Qwest as CO1 and CO2, and Eschelon’s ICA language mirrors Qwest’s PCAT “User Friendly Jeopardy Description” of these two jeopardies. See Qwest’s Provisioning and Installation Overview PCAT at “Jeopardy Data” download, available at [http://www.qwest.com/wholesale/downloads/2005/050812/Jeopardy\\_Data\\_Provisioning\\_August2005.doc](http://www.qwest.com/wholesale/downloads/2005/050812/Jeopardy_Data_Provisioning_August2005.doc)

<sup>67</sup> Qwest’s Provisioning and Installation Overview PCAT (quoted in above footnote).

1 (“FOC”) is “the agreed upon process by which Qwest” will advise Eschelon “of  
2 the due date for a circuit.”<sup>68</sup>

3 Qwest’s witness has also testified that the reason Qwest is supposed to send an  
4 FOC after a Qwest facility jeopardy is cleared is “to let the CLEC know that the  
5 CLEC should be expecting to receive the circuit” so the CLEC may have  
6 personnel available and may make arrangements with the customer if access to  
7 the customer premises is needed.<sup>69</sup> If Qwest provides an FOC but does so only a  
8 few minutes before attempting to deliver a loop, for example, Qwest cannot  
9 reasonably expect Eschelon to have resources available to accept that loop. Even  
10 if resources happen to be available, Eschelon may not be able to accept service,  
11 for example, if its End User Customer already closed its business for the day and  
12 Eschelon had no reason to make other arrangements with the Customer to access  
13 the Customer’s premise that day, because Qwest failed to provide an FOC  
14 identifying that day as the due date.

15 **Q. CAN JEOPARDY CLASSIFICATION AFFECT WHETHER SERVICE TO**  
16 **ESCHELON’S END USER CUSTOMER IS DELAYED?**

17 **A.** Yes. Perhaps the most important consequence of attributing a jeopardy to a  
18 carrier is the effect on the due date for providing service. Timely delivery of  
19 service on the requested due date is critical to meeting customer expectations and  
20 remaining competitive. Whether Qwest classifies a jeopardy as Qwest-caused (a

---

<sup>68</sup> Minnesota arbitration Tr., Vol. 1, p. 38, lines 17-19(Ms. Albersheim of Qwest). *See also* ICA/SGAT Section 9.2.4.4.1.

1 “Qwest jeopardy”) or Eschelon-caused (“Customer Not Ready” or “CNR”) may  
2 affect whether service to Eschelon’s customer is delayed. Jeopardy classification  
3 determines which company must take action to resolve the jeopardy.

4 In the case of an Eschelon (CNR) jeopardy, when Eschelon is not ready on the  
5 due date, or Qwest cannot gain access to deliver the circuit, Qwest requires  
6 Eschelon to supplement its order to request a later due date.<sup>70</sup> When a jeopardy is  
7 classified as a CLEC-caused (CNR) jeopardy for “designed” facilities including  
8 unbundled loop orders, the CLEC is required to supplement its order by  
9 requesting a new due date that is at least *three days after* the date of the  
10 supplemental order.<sup>71</sup> Eschelon then needs to inform its End User Customer that  
11 expected service based on the due date will be delayed at least three days.  
12 Therefore, if Eschelon is not ready when it should be, Eschelon suffers the  
13 consequences of its actions by having to supplement the order and request a three-  
14 day delay. In its proposed language (Section 12.2.7.2.4.4), Eschelon accepts this

---

<sup>69</sup> Minnesota arbitration Tr. Vol. I p. 37, line 16 – p. 38, line 6 (Ms. Albersheim).

<sup>70</sup> Minnesota arbitration Tr. (Ms. Albersheim, Vol. 1, p. 36, line 20 – p. 37, line 2 (Ms. Albersheim). *See also* Qwest Request for Reconsideration, Minnesota Arbitration (Apr. 9, 2007), p. 3 (“Eschelon accurately indicated to the Commission that, when Qwest classifies an order as customer not ready, Eschelon is required to supplement its order to reflect a new due date that at least three days out.”).

<sup>71</sup> *See id.*; Minnesota arbitration Tr. Vol. 1, p. 36, line 20 – p. 37, line 2 (Ms. Albersheim). While Qwest admits that the interval it requires CLECs to request is three days, Ms. Albersheim has quibbled with the description of this as a requirement and states that Qwest may attempt to deliver the circuit earlier than three days. *See* MN Hearing Exhibit Q-2 (Albersheim Reb.), p. 62, lines 5-9. There is no guarantee, however, that the timeframe will be shorter. Because three days is Qwest’s required interval, Qwest may apply it in each case; certainly Eschelon must anticipate that likely possibility. No supplemental order would be required, however, if Qwest sent an FOC after the facility jeopardy cleared and Eschelon accepted the circuit.

1 consequence when it is at fault and therefore the jeopardy is accurately classified  
2 as an Eschelon (CNR) jeopardy.

3 In the case of a Qwest-caused jeopardy, Qwest must take action to attempt to  
4 meet the due date or, if it cannot be met, continue to process the order (including  
5 sending Eschelon a jeopardy notice and issuing an FOC with a new date)<sup>72</sup> with  
6 no supplemental order from Eschelon.<sup>73</sup> A Qwest jeopardy properly classified as  
7 caused by Qwest *does not require Eschelon to supplement the due date and*  
8 *therefore does not build in the three day delay.* In contrast, an erroneous  
9 classification of a missed due date as caused by Eschelon, when in fact the delay  
10 was due to Qwest's failure to provide an FOC or a timely FOC, will build in this  
11 required request for a three-day delay and associated delay in delivery of the  
12 Customer's service. Eschelon should not have to delay service to its Customer  
13 because Qwest failed to properly notify Eschelon in sufficient time to schedule  
14 resources, make arrangements with the End User Customer for access to its  
15 premises, or take other steps necessary to prepare to accept delivery of service.

16 **Q. WHAT IS ESCHELON'S PROPOSAL FOR ISSUES 12-71 THROUGH 12-**  
17 **73 REGARDING JEOPARDIES?**

---

<sup>72</sup> Qwest's Provisioning and Installation Overview PCAT, stating: "If the column contains "Yes" and Qwest has the responsibility to resolve the jeopardy condition, we will advise you of the new DD when the jeopardy condition has been resolved. This is usually within 72 hours." (emphasis added). See <http://www.qwest.com/wholesale/clecs/provisioning.html>

<sup>73</sup> See *id.*; see also Qwest's Installation and Overview PCAT available at [http://www.qwest.com/wholesale/downloads/2005/050812/Jeopardy\\_Data\\_Provisioning\\_August2005.doc](http://www.qwest.com/wholesale/downloads/2005/050812/Jeopardy_Data_Provisioning_August2005.doc). According to this Qwest matrix, in case of Qwest-caused jeopardy "Qwest will work to solve the problem." See *id.*

1 A. Eschelon proposes the following three contract provisions:

2 **Issue 12-71 (Proposal #1):**

3 12.2.7.2.4.4 A jeopardy caused by Qwest will be classified as a  
4 Qwest jeopardy, and a jeopardy caused by CLEC will be classified  
5 as Customer Not Ready (CNR).

6 **Issue 12-71 (Proposal #2) (with difference from proposal #1 shaded in gray):**

7 12.2.7.2.4.4 A jeopardy caused by Qwest will be classified as a  
8 Qwest jeopardy, and a jeopardy caused by CLEC will be classified  
9 as Customer Not Ready (CNR). Nothing in this Section  
10 12.2.7.2.4.4 modifies the Performance Indicator Definitions (PIDs)  
11 set forth in Exhibit B and Appendices A and B to Exhibit K of this  
12 Agreement.

13  
14 **Issue 12-72:**

15 12.2.7.2.4.4.1 There are several types of jeopardies. Two of these  
16 types are: (1) CLEC or CLEC End User Customer is not ready or  
17 service order is not accepted by the CLEC (when Qwest has tested  
18 the service to meet all testing requirements.); and (2) End User  
19 Customer access was not provided. For these two types of  
20 jeopardies, Qwest will not characterize a jeopardy as CNR or send  
21 a CNR jeopardy to CLEC if a Qwest jeopardy exists, Qwest  
22 attempts to deliver the service, and Qwest has not sent an FOC  
23 notice to CLEC after the Qwest jeopardy occurs but at least the day  
24 before<sup>74</sup> Qwest attempts to deliver the service. CLEC will  
25 nonetheless use its best efforts to accept the service. If needed, the  
26 Parties will attempt to set a new appointment time on the same day  
27 and, if unable to do so, Qwest will issue a Qwest Jeopardy notice  
28 and a FOC with a new Due Date.

29 **Issue 12-73:**

30 12.2.7.2.4.4.2 If CLEC establishes to Qwest that a jeopardy was  
31 not caused by CLEC, Qwest will correct the erroneous CNR  
32 classification and treat the jeopardy as a Qwest jeopardy.

33 **Q. WHAT IS QWEST'S PROPOSAL FOR ISSUES 12-71 THROUGH 12-73?**

34 A. Qwest proposes to delete all of Eschelon's ICA language in Section 12.2.7.2.4.4

---

<sup>74</sup> Eschelon will accept either "at least a day before" or at least the day before."

1 and subparts and replace it with the following reference to its web site:

2 12.2.7.2.4.4 Specific procedures are contained in Qwest's  
3 documentation, available on Qwest's wholesale web site.

4 In support of this language, Qwest cites a generic argument that the issue belongs  
5 in CMP.<sup>75</sup> As I discuss further below, jeopardies has already been through CMP,  
6 and a decision is particularly needed in this arbitration as a result of Qwest's  
7 inconsistent and non-compliant conduct.

8 **Q. PLEASE EXPLAIN ESCHELON'S PROPOSAL.**

9 A. To help ensure timely service to Customers, Eschelon's proposed language  
10 regarding jeopardies requires Eschelon to use its best efforts to *accept delivery* of  
11 the circuit/service, even when Qwest fails to meet its obligation to send an FOC  
12 or a timely FOC. If, however, despite using best efforts Eschelon *cannot accept*  
13 the circuit/service when Qwest attempts delivery after Qwest fails to send an FOC  
14 or a timely FOC, Eschelon's proposed language provides that Qwest should not  
15 be able to attribute the fault to Eschelon (by coding it as Customer Not Ready  
16 (CNR)) and thus require Eschelon to submit a supplemental request for a new due  
17 date at least three days later. Below, I refer to these two situations covered by  
18 Eschelon's language (when Eschelon *can* accept delivery and when it *cannot*) as  
19 real life scenarios, as I provide examples of when both situations have occurred  
20 previously.<sup>76</sup> If the due date is missed despite best efforts to meet it and the

---

<sup>75</sup> Exhibit 2 to the Petition for Arbitration, Joint Disputed Issues Matrix, pp. 196-197, 199-200, 202-203 (Qwest position statements for Issues 12-71, 12-72 and 12-73).

<sup>76</sup> See Eschelon/114 and Eschelon/115.

1 jeopardy appropriately remains classified as a Qwest jeopardy (due to Qwest's  
2 failure to send an FOC or a timely FOC), Eschelon's proposed language provides  
3 that the companies may attempt delivery again as soon as later the same day,  
4 without Qwest imposing the three-day interval associated with a CNR jeopardy.

5 Specifically, Eschelon's proposal (Section 12.2.7.2.4.4) reasonably states that  
6 Qwest will classify a jeopardy caused by Qwest as a Qwest jeopardy and a  
7 jeopardy caused by CLEC as a CLEC jeopardy (Customer Not Ready or "CNR")  
8 (Issue 12-71). Similarly, Section 12.2.7.2.4.4.2 requires Qwest to reclassify  
9 jeopardies that it has incorrectly classified as CNR (Issue 12-73). Eschelon's  
10 proposal is very reasonable in providing that Eschelon must "establish" that  
11 Eschelon did not cause the jeopardy to obtain a correction of Qwest's erroneous  
12 classification. A correction is only fair, since Qwest should not have assigned a  
13 CNR jeopardy after the Qwest jeopardy in the first place. Qwest has testified:  
14 "We don't disagree with the notion that a CNR jeopardy should be assigned  
15 appropriately."<sup>77</sup> Eschelon's language capturing that "notion" should be adopted.

16 Eschelon has two alternative proposals for Issue 12-71. In Minnesota, a statement  
17 by the Administrative Law Judges (ALJs) that changes or refinements in the way  
18 jeopardies are classified under the Performance Indicator Definitions ("PIDs")  
19 may be addressed "through a process outside of an individual ICAs"<sup>78</sup> seemed to

---

<sup>77</sup> Minnesota arbitration Tr., Vol., 1, p. 94, lines 5-6 (Ms. Albersheim).

<sup>78</sup> Eschelon/29, Denney/58 [MN Arbitrators Report, ¶238]. The Minnesota ALJs recommendations on Issues 12-71 through 12-73 were overturned by the Minnesota Commission, who ruled to adopt

1 suggest a misimpression that the PIDs need to be changed.<sup>79</sup> That is not the case.  
2 Eschelon offered proposal number two for Issue 12-71 to demonstrate that  
3 Eschelon is not attempting to modify the PIDs through its proposed language  
4 relating to jeopardies. In Minnesota, the commission concluded that this modified  
5 language adequately addressed the concerns expressed by the ALJs and ordered  
6 use of Eschelon's language in the ICA for Issues 12-71 (alternative #2), 12-72,  
7 and 12-73.<sup>80</sup>

8 Eschelon's proposal for Issue 12-72 (Section 12.2.7.2.4.4.1) reflects Eschelon's  
9 experience with one particular recurring fact pattern, when Qwest may incorrectly  
10 classify Qwest-caused jeopardies as CNR jeopardies. Qwest providing an FOC at  
11 all (or a timely FOC) after a Qwest jeopardy is at the heart of this scenario. For  
12 this issue, Eschelon's proposal clarifies that if (a) a Qwest facility jeopardy  
13 already exists, (b) Qwest attempts to deliver service without timely notification  
14 via FOC of the due date, and (c) Eschelon is unable to accept service because of  
15 the absence of the timely notification via FOC, Qwest will not classify the  
16 jeopardy as caused by Eschelon (CNR). Eschelon's proposal for Issue 12-72 is  
17 narrowly limited to two types of CNR jeopardies. Of the many types of CNR  
18 jeopardies identified by Qwest, Eschelon's proposed language for Issue 12-72

---

Eschelon's proposed language on all three issues, including Eschelon's proposal #1 on Issue 12-71. Eschelon/30, Denney/23-24 [MN Order Resolving Arbitration, pp. 23-24, ¶6 (Topic 31)].

<sup>79</sup> Qwest testified that the PIDs currently require Qwest "to differentiate between Qwest caused and CLEC/customer caused delays." Minnesota arbitration Hrg. Ex. 1 (Albersheim Dir.), p. 69, lines 4-5. See Qwest Request for Reconsideration, Minnesota arbitration (April 9, 2007), p. 5 (regarding Qwest's Performance Assurance Plan (PAP): if "the Qwest technician classifies the order as customer not ready, it is excluded from the calculation entirely").

1 applies to only the following two: (1) CLEC or CLEC End User Customer is not  
2 ready or service order is not accepted by the CLEC (when Qwest has tested the  
3 service to meet all testing requirements.); and (2) End User Customer access was  
4 not provided.<sup>81</sup> For these two types of CNR jeopardies, if the FOC is timely,  
5 Eschelon has proper notice of the need to schedule resources and of when to  
6 arrange access to the End User Customer's premise to meet the due date.  
7 Eschelon's proposal is reasonable and does not attempt to address CNR jeopardy  
8 types for which the absence of a timely FOC is less likely to be a factor in the  
9 potential delay of service (even though Qwest is required to provide the FOC<sup>82</sup> in  
10 each case). For example, one specific CNR jeopardy (called "C24") refers to  
11 situations in which conduit needs to be installed. Eschelon's proposed language  
12 in Issue 12-72 does not address this type of CNR jeopardy, because even if Qwest  
13 failed to deliver a timely FOC, the conduit is unlikely to be installed in a day.

14 **Q. IS ESCHELON'S PROPOSED LANGUAGE FOR ISSUE 12-72**  
15 **CONSISTENT WITH ESCHELON'S GOAL OF PROVIDING TIMELY**  
16 **DELIVERY OF SERVICE TO CUSTOMERS?**

---

<sup>80</sup> Eschelon/30, Denney/23-24 [MN Order Resolving Arbitration, pp. 23-24, ¶6 (Topic 31)].

<sup>81</sup> The two types of potential customer (CNR) jeopardies described in Section 12.2.7.2.4.4.1 are coded in by Qwest as CO1 and CO2, and Eschelon's ICA language mirrors Qwest's PCAT "User Friendly Jeopardy Description" of these two jeopardies. See Qwest's Provisioning and Installation Overview PCAT at "Jeopardy Data" download, available at [http://www.qwest.com/wholesale/downloads/2005/050812/Jeopardy\\_Data\\_Provisioning\\_August2005.doc](http://www.qwest.com/wholesale/downloads/2005/050812/Jeopardy_Data_Provisioning_August2005.doc)

<sup>82</sup> See ICA Sections 12.2.7.2.1 & 9.2.4.4.1 (quoted in above footnote); see also ICA Sections 9.2.2.9.3 (quoted in above footnote), 9.2.2.9.4, 9.2.2.9.5.3.

1 A. Yes. The interconnection agreement needs to explicitly address the particular  
2 scenario described in Section 12.2.7.2.4.4.1 to avoid delays in providing service  
3 to the Customer. Eschelon's proposed language for Issue 12-72 covers both real  
4 life possibilities: (1) when, using best efforts, Eschelon is able to accept delivery  
5 of the circuit despite receiving no FOC or an untimely FOC after the Qwest  
6 facility problem is cleared; and (2) when, despite best efforts, Eschelon is unable  
7 to accept delivery of the circuit due to receiving no FOC or an untimely FOC after  
8 the Qwest facility problem is cleared. I provide examples of both of these real life  
9 scenarios with my testimony (examples of the first scenario in Eschelon/114 and  
10 the second scenario in Eschelon/115). Regarding the first scenario, Eschelon/114  
11 contains more than one hundred examples of orders for which Qwest did not send  
12 any FOC at all after a Qwest facility jeopardy to indicate the problem had cleared  
13 and Qwest would be delivering the circuit, and for which Eschelon nevertheless  
14 attempted to accept the circuit and succeeded in doing so. Consistent with these  
15 examples, Eschelon's proposed language for Issue 12-72 provides that -- even  
16 when Qwest does not send an FOC or a timely FOC after a Qwest facility  
17 jeopardy -- "CLEC will *nonetheless use its best efforts to accept* the service."<sup>83</sup>  
18 Eschelon has included this real life scenario in its language proposal and  
19 committed to using best efforts, even when it should receive an FOC but does not,  
20 because of the importance of providing timely service to the customer. In the  
21 examples in Eschelon/115, Eschelon *was* nonetheless able to accept the service  
22 *despite* Qwest's failure to provide an FOC.

---

<sup>83</sup> Proposed ICA Section 12.2.7.2.4.4.1 (emphasis added).

1 In contrast, in the second scenario, despite best efforts, Eschelon can *not* accept  
2 service due to Qwest’s failure to provide an FOC or a timely FOC. For example,  
3 if access to the customer premise is needed and Qwest does not provide notice via  
4 an FOC in sufficient time<sup>84</sup> to gain access to the customer premise, Eschelon  
5 cannot accept service due to Qwest’s failure to provide proper notice. Regarding  
6 this scenario, Eschelon/115 provides 22 examples of when Eschelon could not  
7 accept service due to Qwest’s failure to provide an FOC or a timely FOC,<sup>85</sup> and  
8 yet Qwest classified the jeopardy as Eschelon-caused (CNR).<sup>86</sup> In such situations,  
9 Eschelon’s proposed language for Issue 12-72 provides: “*If needed*, the Parties  
10 will attempt to set a new appointment time *on the same day* and, *if unable to do*  
11 *so*, Qwest will not issue a CNR jeopardy and will provide a FOC with a new Due  
12 Date.”<sup>87</sup> This proposed language also reflects Eschelon’s concern for the

---

<sup>84</sup> See, e.g., Eschelon/115, Johnson 14, Row No. 11 (FOC nine minutes before).

<sup>85</sup> Eschelon gathered these examples as these events were occurring and, at that time, Eschelon confirmed in Qwest’s own systems whether and when an FOC was sent.

<sup>86</sup> As further described in Eschelon/110 and Eschelon/117, these 22 examples are just a sub-set of the many examples that Eschelon has provided to Qwest over time (involving both examples of insufficient notice and examples of no FOC at all). Although Qwest has attempted to explain its refusal to continue to review and root cause these examples (see Eschelon/117) by indicating that it disagrees as to the examples involving insufficient notice (an FOC is provided but not the day before). Eschelon advised Qwest Service Management in October of 2005, that because Qwest did not agree the day before was non compliance to Qwest’s process, and Qwest said it would not review that part of the data, Eschelon would stop including that those in data Eschelon sent Qwest to review. Eschelon stopped including the no FOC the day before examples in September, 2005, so that argument does not explain why Qwest refuses to review and root cause the examples involving other jeopardy non compliance examples, including no FOC, which Eschelon continues to provide and which Qwest continues to refuse to review.

<sup>87</sup> Proposed ICA Section 12.2.7.2.4.4.1 (emphasis added).

1 customer because it provides that a new appointment time will be set the same  
2 day or as soon as possible afterward.<sup>88</sup>

3 Timely delivery of service to the customer is of the utmost importance to  
4 Eschelon. For Eschelon, failure to deliver working service on the due date can  
5 have major ramifications to a business Customer. It may actually harm a CLEC's  
6 relationship with its would-be Customer before it has begun. Therefore,  
7 Eschelon's proposals for Issues 12-71 – 12-73 require proper handling of  
8 jeopardies to help ensure timely delivery of service.

9 **Q. DOES QWEST RECOGNIZE THE IMPORTANCE OF NOTICE AND**  
10 **THE NEED FOR PREPARATION TIME *FOR ITSELF*?**

11 A. Yes. When discussing the three-day interval required by Qwest to reschedule the  
12 due date after Qwest has unexpectedly attempted to deliver a circuit but despite  
13 best efforts cannot do so, Ms. Albersheim has testified that the interval gives  
14 Qwest the notice that it needs to be prepared. Ms. Albersheim indicates that the  
15 three-day standard interval “is necessary to ensure that Qwest *technicians can be*  
16 *made* available to provision a designed circuit to the CLEC. Qwest must have  
17 *flexibility to manage the technicians work assignments* in order to ensure that  
18 other CLECs and other Qwest *customers are not negatively impacted* by the need  
19 to send a technician back to the CLEC a second time because the CLEC was not

---

<sup>88</sup> As indicated above, if instead Qwest assigns a CNR jeopardy, Qwest requires a supplemental order with a *three-day* interval for the due date. *A jeopardy properly classified as a Qwest jeopardy does not require the CLEC to supplement the due date and does not build in this Qwest-requirement to request a three day delay.*

1 ready to receive the circuit on the original due date.”<sup>89</sup> Ms. Albersheim does not  
2 explain why it is appropriate for Qwest to require a three-day interval so Qwest  
3 may be prepared but it is unreasonable for Eschelon to ask for notice the day  
4 before so that Eschelon may likewise prepare. After all, Eschelon also has to  
5 make technicians available, manage technicians work assignments, and coordinate  
6 with customers (including obtaining customer premise access).<sup>90</sup>

7 While Qwest allows itself preparation time by requiring CLECs to request a three-  
8 day interval, Qwest’s position is that Eschelon should inefficiently dedicate  
9 resources every single day (and presumably alert the customer each day when  
10 customer premise access is needed) after notice of a held order until the circuit is  
11 actually delivered.<sup>91</sup> Specifically, Ms. Albersheim testified that Eschelon should  
12 “always complete the work it needs to do in order to receive service on the  
13 original requested due date,”<sup>92</sup> even though Qwest has an unresolved facility  
14 problem and an obligation to first notify CLECs via an FOC that its problem is  
15 resolved before attempting to deliver the circuit. Qwest does not always clear the

---

<sup>89</sup> Colorado arbitration Albersheim Rebuttal, p. 62, lines 16-21 (emphasis added). She said Qwest needs “to ensure that other CLECs and other Qwest customers are not negatively impacted by the need to send a technician back to the CLEC a second time.” *Id.* Ms. Albersheim refers to sending a technician back a second time without recognizing that most likely (and perhaps only) reason that a Qwest technician would have to go back a second time is because the technician had no customer premise access. Again, the purpose of the FOC is provide notice to Eschelon so that Eschelon may, for example, *arrange customer premise access*. If, by not providing an FOC or providing one on very short notice, Qwest causes a situation that prevents Eschelon from having time to arrange customer premise access, Qwest seeks to give itself the time to prepare that it denied Eschelon (which caused the problem).

<sup>90</sup> See Minnesota arbitration Tr., Vol. 1, p. 37, line 24 – p. 38, line 6 (Ms. Albersheim); *see also* Eschelon/111, Johnson 5 (showing that on March 4, 2004, in CMP, Qwest confirmed that “Qwest cannot expect the CLEC to be ready for the service if we haven’t notified you.”).

<sup>91</sup> Colorado arbitration Albersheim Rebuttal, p. 58, line 16 – p. 59, line 5.

1 jeopardy on the CLECs desired due date. For example, Eschelon requested a due  
2 date of 1/23/07 for PON CO825795T1FAC. Qwest delivered the circuit on  
3 3/19/07. Under Qwest's new approach it proposes in arbitration, Eschelon would  
4 have staffed personnel for *forty business days* to accept a circuit that Qwest did  
5 not deliver. Ms. Albersheim's suggestion that Eschelon should as a matter of  
6 course dedicate resources to standing ready to accept delivery of the circuit under  
7 these circumstances (for forty business days in that example) would deny  
8 Eschelon the opportunity Qwest gives itself to more efficiently plan and use its  
9 resources.

10 **Q. DOES ESCHELON'S JEOPARDIES PROPOSAL REFLECT QWEST'S**  
11 **CURRENT PROCESS?**

12 A. Yes. I participated in development of the process, and Eschelon's language  
13 reflects Qwest's process. (As I explain below, Eschelon's language reflects how  
14 Qwest's current process should work, if Qwest were consistently complying with  
15 it.) Qwest's witness has testified that, with the exception of the single phrase "the  
16 day before" (which is otherwise documented by Qwest in its own CMP  
17 materials<sup>93</sup>), Eschelon's jeopardies language reflects Qwest's current process.<sup>94</sup>

---

<sup>92</sup> Colorado arbitration Albersheim Rebuttal, p. 59, lines 4-5.

<sup>93</sup> Eschelon/111, Johnson/5 (Qwest CMP minutes state: "Bonnie [Eschelon] confirmed that the CLEC should *always* receive the FOC *before the due date*. Phyllis [Qwest] agreed . . .") (emphasis added); *see also* Eschelon/113, Johnson 3 (February 26, 2004 CMP materials prepared and distributed by Qwest).

<sup>94</sup> Minnesota arbitration Hrg. Ex. 1 (Albersheim Dir.), p. 67, line 21 (referring to all of Eschelon's proposal, without the phrase "the day before," as Qwest's "current PCAT process"); Minnesota Tr., Vol. 1, p. 37, lines 16-23 (Ms. Albersheim). ("Q Other than that phrase, at least a day before, is

1 **Q. YOU INDICATE THAT THE PHRASE “THE DAY BEFORE” IS A PART**  
 2 **OF QWEST’S CURRENT PROCESS, EVEN THOUGH QWEST’S**  
 3 **WITNESS HAS DENIED IT. PLEASE EXPLAIN.**

4 A. Qwest confirmed its existing documented process in CMP and documented its  
 5 commitment and the process on its web site:

6 Action #1: As you can see receiving the FOC releasing the order  
 7 on the day the order is due does not provide sufficient time for  
 8 Eschelon to accept the circuit. Is this a compliance issue,  
 9 *shouldn't we have received the releasing FOC the day before the*  
 10 *order is due?* In this example, should we have received the  
 11 releasing FOC on 1-27-04?

12 Response #1 *This example is non-compliance to a documented*  
 13 *process. Yes an FOC should have been sent prior to the Due*  
 14 *Date.”<sup>95</sup>*

15 “Bonnie confirmed that the *CLEC should always receive the FOC*  
 16 *before the due date. Phyllis agreed,* and confirmed that Qwest  
 17 cannot expect the CLEC to be ready for the service if we haven't  
 18 notified you.”<sup>96</sup>

19 The first quotation reflects an example provided by Eschelon to confirm its  
 20 understanding of the jeopardies process, along with Qwest's response. As  
 21 Qwest's response shows, Eschelon correctly understands that Qwest's  
 22 documented process is that an FOC should be sent *prior to* the due date. This is

---

Eschelon's proposal consistent with Qwest's practice? A Current practice, yes, except for that sentence.”).

<sup>95</sup> Eschelon/113, Johnson/3 (February 26, 2004 CMP materials prepared and distributed by Qwest) (emphasis added).

<sup>96</sup> Eschelon 111/Johnson/5, March 4, 2004 CMP ad hoc call minutes prepared by Qwest (emphasis added). The Qwest-prepared minutes include a list of those “in attendance.” *See id.* The minutes confirm that I was in attendance and Ms. Albersheim was not. *See id.* Ms. Albersheim's name does not appear in the Qwest status history for either of the jeopardy Change Requests discussed by Ms. Albersheim in other states (see Eschelon/111 & Eschelon/112), nor do I recall her participating in jeopardy CMP discussions.

1 logical and consistent with our business need, because Eschelon needs sufficient  
2 time in advance of the due date to prepare for delivery of the circuit/service (to  
3 schedule resources and any needed access to the Customer premises). The quoted  
4 documentation shows that the failure to provide an FOC prior to the due date  
5 demonstrates Qwest non-compliance with its process. Qwest provided this  
6 written response to Eschelon's example in meeting materials prepared by Qwest  
7 and distributed to CLECs before a CMP call to discuss this issue. On the call to  
8 discuss these materials, Qwest confirmed more generally that its process is that  
9 "CLEC should *always* receive the FOC before the due date."<sup>97</sup>

10 Despite this clear Qwest documentation of the commitment that Qwest made to  
11 me and other CLECs to provide an FOC the day before the due date, Qwest's  
12 witness has testified that "Qwest never made such a commitment."<sup>98</sup> Qwest has  
13 not explained how it can make this statement when Qwest's commitment was  
14 documented by Qwest, as indicated in the above quoted language from Qwest's  
15 own documentation. Qwest's denial of a process that has been confirmed with  
16 Qwest's participation and documented on Qwest's web site supports the need for  
17 inclusion of Eschelon's proposed language in the ICA to provide terms that we  
18 can rely upon when conducting business with Qwest.

19 **Q. OTHER THAN QWEST'S ARBITRATION POSITION THAT THE**  
20 **PHRASE "THE DAY BEFORE" IS NOT PART OF QWEST'S CURRENT**

---

<sup>97</sup> Eschelon 111/Johnson/5, March 4, 2004 CMP ad hoc call minutes (emphasis added).

1           **PROCESS, ARE THE KEY FACTS RELATED TO ESCHELON'S**  
 2           **PROPOSAL UNDISPUTED?**

3    A.    Yes. To re-cap, the companies agree on at least the following points:

- 4           ▪    The FOC is the agreed upon process by which Qwest informs Eschelon of the  
 5           due date for a circuit;<sup>99</sup>
- 6           ▪    Qwest is required to send an FOC with the new due date after clearing a  
 7           Qwest facility jeopardy;<sup>100</sup>
- 8           ▪    The reason Qwest is required to send an FOC after a Qwest facility jeopardy  
 9           has been cleared is to let the CLEC know that it should be expecting to  
 10          receive the circuit so that the CLEC will have sufficient notice to make  
 11          personnel available and perhaps make arrangements with the customer to have  
 12          access to the premises available;<sup>101</sup>
- 13          ▪    A “CNR jeopardy should be assigned appropriately”;<sup>102</sup>
- 14          ▪    If the CLEC does not have adequate notice that the circuit is being delivered  
 15          (with the agreed upon process for adequate notice consisting of an FOC), then  
 16          it is “*not appropriate*” for Qwest to assign a CLEC-caused (CNR)  
 17          jeopardy;<sup>103</sup>

---

<sup>99</sup> Minnesota arbitration Tr., Vol. 1, p. 38, lines 17-19 (Ms. Albersheim) (“Q The FOC is the agreed upon process by which Qwest informs Eschelon of the due date for a circuit? A Yes.”).

<sup>100</sup> Minnesota arbitration Tr., Vol. 1, p. 37, lines 20-23 (Ms. Albersheim) (“Q So you agree with me that Qwest's current practice is to provide the CLEC with an FOC after a Qwest facilities jeopardy has been cleared; is that right? A Yes.”); *see also* ICA Section 9.2.4.4.1.

<sup>101</sup> Minnesota arbitration Tr. Vol. I p. 37, line 16 – p. 38, line 6 (Ms. Albersheim) (“Q And *the reason for that* is you want to let the CLEC know that the CLEC should be expecting to receive the circuit; right? A Yes. Q And the CLEC needs to have personnel available and it needs to also perhaps make arrangements with the customer to have the premises available; right? A Yes.”) (emphasis added). *See also* Eschelon/111, Johnson 5 (showing that on March 4, 2004, in CMP, Qwest confirmed that “Qwest cannot expect the CLEC to be ready for the service if we haven’t notified you.”).

<sup>102</sup> Minnesota arbitration Tr. Vol. I p. 94, lines 7-11 (Ms. Albersheim) (“Q And if the CLEC doesn't have adequate notice that the circuit is being delivered, adequate notice consisting of an FOC, then you would agree that a CNR jeopardy is not appropriate; correct? A Yes.”).

<sup>103</sup> Minnesota arbitration Tr., Vol. 1, p. 94, lines 4-11 (Ms. Albersheim) (emphasis added). *See also* Minnesota arbitration Tr., Vol. 1, p. 95, lines 19-24 (Ms. Albersheim) (“Q And you would agree that

1           ▪ When a jeopardy is classified as a CLEC-caused (CNR) jeopardy, the CLEC  
2           is required to supplement its order by requesting a new due date that is at least  
3           *three days after* the date of the supplemental order.<sup>104</sup>

4   **Q.    GIVEN THAT ALL OF THESE KEY FACTS ARE UNDISPUTED, WHAT**  
5           **BASIS HAS QWEST PROVIDED FOR OPPOSING ESCHELON’S**  
6           **LANGUAGE?**

7   A.    Eschelon demonstrates through its examples in Eschelon/115 that Qwest has  
8           classified jeopardies as CLEC-caused (CNR) even though Qwest has failed to  
9           send an FOC or a timely FOC per the agreed upon process meant to give  
10          Eschelon an opportunity to prepare to accept the circuit/service.<sup>105</sup> Qwest has  
11          made five claims, however, to attempt to defend this conduct: (1) Eschelon’s  
12          proposal “force[s] extra time”<sup>106</sup> in to the process and causes delay;<sup>107</sup> (2) process

---

that’s not proper, if the CLEC hasn’t received an FOC in adequate time to be able to act on it; correct? A According to procedure, yes. Q That’s Qwest’s procedure? A Yes.”).

<sup>104</sup> Minnesota arbitration Tr. Vol. 1, p. 36, line 20 – p. 37, line 2 (Ms. Albersheim). *See also* Qwest Request for Reconsideration, Minnesota Arbitration (Apr. 9, 2007), p. 3 (“Eschelon accurately indicated to the Commission that, when Qwest classifies an order as customer not ready, Eschelon is required to supplement its order to reflect a new due date that at least three days out.”).

<sup>105</sup> Arizona arbitration Hearing Exhibit Q-2 (Albersheim Reb.), p. 60, lines 8-16 (Qwest said that its classification of 12 jeopardies as Eschelon-caused (CNR) was appropriate, even though Qwest admitted that for all 12 of these examples, Qwest sent no FOC at all); Minnesota arbitration Tr. Vol. I p. 40, line 23 – p. 41, line 3 (Ms. Albersheim) (8 examples of no FOC); *see also* Eschelon/115 (Category A and Category B). When Qwest reviewed (see Eschelon/115, columns 5 & 6: “Qwest Review”) Eschelon’s data, Qwest did not confirm in its systems’ “FOC archives” whether and when an FOC was sent (Eschelon/6, MN Tr. Vol. I, p. 41, lines 10-22 (Ms. Albersheim)), even though those facts are key to this analysis. Qwest relied instead upon its technicians’ notes. (*Id.* Vol. I, p. 41, lines 10-22.) Based on those notes, Qwest admitted in Minnesota that it sent no FOC at all after the pertinent facility jeopardy in at least 8 (*Id.* Vol. I, p. 40, lines 5-14) of the examples. Yet, Qwest testified: “Qwest has determined that only 3 of the 23 orders demonstrate a situation in which Qwest incorrectly used the Customer Not Ready (“CNR”) status when placing the order in jeopardy.” *See* Albersheim MN Rebuttal, p. 55, lines 19-22. By the Arizona arbitration, Qwest admitted it sent no FOC at all in 12 of the examples. Arizona arbitration Hearing Exhibit Q-2 (Albersheim Reb.), p. 60, lines 8-16.

<sup>106</sup> Washington arbitration (Albersheim Responsive), p. 58, line 23.

1 details do not belong in an ICA so the issue should be returned to CMP;<sup>108</sup> (3) the  
2 phrase “at least the day before” is not documented in the PCAT, in addition to  
3 being documented in the CMP materials, so it may be disregarded<sup>109</sup>; (4)  
4 regardless of the type of jeopardy, CLECs should disregard the jeopardy notice  
5 and always take all steps to prepare to accept a circuit even when Qwest has told  
6 the CLEC (through a Qwest facility jeopardy) that Qwest has a facility problem in  
7 its network that needs to be resolved before the circuit can be delivered to CLEC  
8 and Qwest sends no FOC to indicate the facility problem has been cleared;<sup>110</sup> and  
9 (5) the FOC status notices required by the contract, SGAT and Qwest’s own  
10 procedures are a “formality” that Qwest can disregard<sup>111</sup> because in “some”  
11 examples informal “communication was happening between Qwest and the CLEC  
12 technicians.”<sup>112</sup>

---

<sup>107</sup> Arizona arbitration Hearing Exhibit Q-2 (Albersheim Reb.), p. 58, line 16 - p. 59, line 8. Qwest refers to “‘at least a day’ or 24 hours notice in advance of a new due date.” See *id.* p. 22, line 1.

<sup>108</sup> Arizona arbitration Hearing Exhibit Q-1 (Albersheim Dir.), p. 74, lines 3-4. See also Exhibit 2 to the Oregon Petition for Arbitration, Joint Disputed Issues Matrix, pp. 196-197, 199-200, 202-203 (Qwest position statements for Issues 12-71, 12-72 and 12-73).

<sup>109</sup> Arizona arbitration Tr., Vol. 2, Q-22 & Q-23 & pp. 340-341; see *id.* p. 340 lines 18-19 (Mr. Topp: “no language whatsoever” referring to at least the day before in the PCAT) & see *id.* p. 34, lines 1-18 (my response that Qwest confirmed in CMP that Qwest would give CLECs an FOC the day before and my references on the stand to pages 37 and 21 of Exhibit BJJ-5 to my Arizona direct testimony).

<sup>110</sup> Arizona arbitration Tr., AZ Vol. 1, pp. 67-69 (Ms. Albersheim); Colorado arbitration Albersheim Rebuttal, p. 59, lines 4-5.

<sup>111</sup> Arizona arbitration Tr., Vol. I, p. 70, lines 4-9 (Ms. Albersheim) (“Q. Does that assume this Qwest has sent the FOC with a new due date or that it hasn’t? A. Qwest is supposed to. Q. And let’s assume that it doesn’t. A. The formality is that Qwest is supposed to, but the technicians are in touch with each other.”).

<sup>112</sup> Minnesota arbitration Tr. Vol. I, p. 94, lines 19-20 & p. 96, lines 8-10.

1 **Q. WHAT IS ESCHELON’S RESPONSE TO QWEST’S FIRST CLAIM**  
2 **REGARDING DELAY AND FORCING EXTRA TIME<sup>113</sup> INTO THE**  
3 **PROCESS?<sup>114</sup>**

4 A. There is no request for, or requirement of, a time delay in Eschelon’s proposed  
5 language. Eschelon’s proposed language does not require Qwest to send an FOC  
6 before it attempts to deliver the circuit, so it does not force extra time into the  
7 process. Eschelon’s proposed language provides for *advance* notice before the  
8 due date to help ensure *timely* delivery of the circuit on the due date. Eschelon’s  
9 language in Section 12.2.7.2.4.4.1 provides that, even when Qwest provides no  
10 FOC, Eschelon “will nonetheless use its best efforts to accept the service” when  
11 delivered. It specifically states that, if needed, the companies will attempt to set a  
12 new appointment time “*on the same day.*”<sup>115</sup> This language (like the examples in  
13 Eschelon/114) shows Eschelon will use its best efforts to accept the service and  
14 will scramble and try to staff the unexpected delivery and coordinate Customer  
15 access if possible to avoid delay.

16 **Q. WHAT IS ESCHELON’S RESPONSE TO QWEST’S SECOND CLAIM**  
17 **REGARDING PROCESS DETAILS AND CMP<sup>116</sup>?**

---

<sup>113</sup> Washington arbitration (Albersheim Responsive), p. 58, line 23.

<sup>114</sup> Arizona arbitration Hearing Exhibit Q-2 (Albersheim Reb.), p. 58, line 16 - p. 59, line 8. Qwest refers to “at least a day’ or 24 hours notice in advance of a new due date.” See id. p. 22, line 1.

<sup>115</sup> Proposed ICA Section 12.2.7.2.4.4.1 (emphasis added).

<sup>116</sup> Arizona arbitration Hearing Exhibit Q-1 (Albersheim Dir.), p. 74, lines 3-4. See also Exhibit 2 to the Oregon Petition for Arbitration, Joint Disputed Issues Matrix, pp. 196-197, 199-200, 202-203 (Qwest position statements for Issues 12-71, 12-72 and 12-73).

1 A. There is nothing left to do in CMP with respect to every provision of Eschelon's  
2 proposal for which Qwest has testified Eschelon's language reflects Qwest's  
3 current process. No change is needed. Qwest has admitted with respect to key  
4 aspects of Eschelon's proposal that it cannot "imagine any circumstances under  
5 which a CLEC might want something different."<sup>117</sup>

6 With respect to the single phrase Qwest disputes ("the day before"), earlier I  
7 quoted the CMP documentation that supports this phrase and shows it is part of  
8 Qwest's process, despite Qwest's denials in these arbitrations. Jeopardies have a  
9 long history in CMP, and this history and later events (which are summarized  
10 primarily in Eschelon/110 and Eschelon/117) provide ample evidence that  
11 sending this issue back to CMP will not resolve the problem. Specifically:

12 (1) In CMP, Qwest agreed to provide an FOC the day before the due date  
13 as part of a Change Request in which Eschelon requested a designated  
14 time frame for receiving the FOC after a jeopardy cleared.<sup>118</sup> Consistent  
15 with this resolution in CMP, Qwest provided FOCs the day before the due  
16 date and treated instances when it did not as non-compliance with its  
17 process;<sup>119</sup>

18 (2) Qwest then changed its policy and began to deny that providing FOCs  
19 the day before the due date was part of its process; Qwest took no action  
20 in CMP, however, to change the designated time frame or otherwise

---

<sup>117</sup> Arizona arbitration Tr., Vol. 1, p. 64, lines 5-14 (Ms. Albershiem); see also Arizona arbitration Tr. at Vol. 1, p. 64, line 19 – p. 65, line 3 (Ms. Albersheim).

<sup>118</sup> Eschelon/111, Johnson/2 (Change Request PC081403-1 – title, description of change and expected deliverable in CMP quoted below with respect to Qwest's third claim); *see also* Eschelon/111, Johnson/5 (Qwest CMP minutes state: "Bonnie [Eschelon] confirmed that the CLEC should *always* receive the FOC *before the due date*. Phyllis [Qwest] agreed . . .") (emphasis added); *see also* Eschelon/113, Johnson 3 (February 26, 2004 CMP materials prepared and distributed by Qwest).

<sup>119</sup> *See, e.g.*, Eschelon/110, Johnson/5-6 (Chronology entries for 2/18/04 and 3/4/04).

1 change the process developed in CMP to reflect Qwest's unilateral change  
2 in policy;<sup>120</sup>

3 (3) Qwest's CMP Manager even denied that providing the FOC at all was  
4 a requirement or part of Qwest's process and instead characterized it as a  
5 "goal";<sup>121</sup>

6 (4) Qwest then admitted in arbitration that providing an FOC after a Qwest  
7 facility jeopardy has cleared is part of Qwest's process, to let Eschelon  
8 know to have personnel available and make any arrangements with the  
9 customer so as to be prepared to accept the circuit;<sup>122</sup>

10 (5) Qwest then said that when there is *no FOC at all* in violation of  
11 Qwest's process, even though Qwest agrees that Eschelon needs advance  
12 notice and an FOC is the agreed upon process to provide that notice,<sup>123</sup> it  
13 is appropriate to classify the jeopardy when Eschelon cannot be ready due  
14 to lack of the required notice as "CNR" (Eschelon-caused);<sup>124</sup> and

15 (6) Despite its own classification of several jeopardies with no FOC at all  
16 as CNR (Eschelon-caused) in its own Review,<sup>125</sup> Qwest testified that it is  
17 improper, under Qwest's current process, to categorize the CLEC's  
18 inability to take the circuit as a CNR jeopardy when Qwest did not provide  
19 an FOC after the jeopardy cleared.<sup>126</sup>

20 Qwest's statements contradict each other, and its conduct contradicts its  
21 statements. And, the jeopardies history does not end there. Eschelon continues to  
22 provide jeopardies data (including examples of no FOC after a Qwest jeopardy is  
23 cleared) to Qwest as it committed in CMP to do when Eschelon agreed to close its

<sup>123</sup> Minnesota arbitration Tr., Vol. 1, p. 38, lines 17-19 (Ms. Albersheim); *see also id.* p. 37, line 20 – p. 38, line 6.

<sup>124</sup> Minnesota arbitration Tr., Vol. 1, p. 40, lines 5-14 (Ms. Albersheim) (8 examples clearly had no FOC). *Compare id.* p. 98, lines 23-25.

<sup>125</sup> *See* Eschelon/115 (column labeled "Qwest Review").

<sup>126</sup> Minnesota arbitration Tr., Vol. 1, p. 95, lines 6-24.

1 Change Request. But, Qwest has recently refused to review and root cause  
2 Eschelon's examples. Since August of 2004, Eschelon has provided data relating  
3 to DS1 capable loop jeopardies to Qwest's service management team on an  
4 approximately weekly basis as part of Eschelon's tracking and obtaining root  
5 cause of this important issue. Eschelon and Qwest then discussed the data after  
6 Qwest had an opportunity to review it. In some cases, Qwest disputed Eschelon's  
7 data and in others it acknowledged its errors and, in the latter cases, described  
8 steps it had taken (such as training of Qwest's employees) to attempt to gain  
9 compliance with its delayed order process and avoid Qwest-caused delays for  
10 Eschelon customers. This data exchange, therefore, has led to needed remedial  
11 action to try to address this problem.

12 Recently, however, Qwest has changed its position regarding jeopardy examples.  
13 After Eschelon sent its regular weekly data to Qwest, Qwest responded after the  
14 Minnesota arbitration hearing (on November 7, 2006) that "Qwest has determined  
15 that due to resources Qwest will not be reviewing this report any longer. Qwest  
16 through self reporting internally will manage the process and compliance of the  
17 delayed order process."<sup>127</sup> It is difficult to accept Qwest's claim that this Qwest  
18 decision is "due to resources" because obtaining compliance saves both  
19 companies resources that would otherwise be expended when the process breaks  
20 down and both companies have to scramble to correct the problem and re-do the

---

<sup>127</sup> See Eschelon/117. Since then, Eschelon has continued to send the data (including examples of no FOC after a Qwest facility jeopardy clears) with a request for Qwest to review it, but Qwest continues to decline to review and root cause Eschelon's data.

1 work on another day when delivery has to be rescheduled. In addition, Eschelon  
2 expends its own resources on researching the data for Qwest to point Qwest to the  
3 problem areas, and this saves Qwest time that it would have to expend on finding  
4 these issues for itself. If Qwest were able to identify all of these problems by  
5 itself based on “self reporting internally,” presumably Qwest would have  
6 corrected the problems and they would not re-occur.<sup>128</sup> The fact that they  
7 continue to occur until Eschelon raises them through its examples shows that the  
8 examples have an added benefit beyond any internal Qwest efforts.

9 Particularly in light of the most recent development – Qwest’s refusal to review  
10 and root cause Eschelon’s data<sup>129</sup> – these facts show that contractual certainty is  
11 needed. Qwest’s ICA proposal, stating only that “procedures are contained in  
12 Qwest’s documentation,” will ensure that Eschelon’s business need remains  
13 unresolved for its Customers.

14 **Q. WHAT IS ESCHELON’S RESPONSE TO QWEST’S THIRD CLAIM**  
15 **THAT ITS PROCESS TO PROVIDE AND FOC AT LEAST THE DAY**

---

<sup>128</sup> As I discussed above, when Qwest reviewed Eschelon’s data for purposes of arbitration, Qwest relied upon its technicians’ notes and did not confirm in its systems’ FOC archives whether and when an FOC was sent. This is at least some evidence that Qwest’s internal review is inadequate, because whether and when an FOC was sent is key to this analysis.

<sup>129</sup> Qwest’s refusal is contrary to the documented role of the Qwest CMP Service Manager’s Role, which includes providing root cause analysis when CLEC provides examples. *See* Eschelon/92, Johnson 2 (last paragraph).

1           **BEFORE THE DUE DATE MUST ALSO BE DOCUMENTED IN THE**  
2           **PCAT?**<sup>130</sup>

3       A.     Qwest cannot deny that the above-quoted language is part of the CMP  
4           documentation posted on its website, now that Eschelon has provided it in the  
5           record.<sup>131</sup> Instead, Qwest has recently suggested that Qwest’s statements reflected  
6           in the CMP minutes are for some reason not applicable because Qwest has not  
7           *also* documented them in its PCAT. In other words, Qwest is pointing to the  
8           absence of similar language in its PCAT as alleged support for its position.  
9           Qwest has provided no basis for suddenly favoring the PCAT over CMP minutes  
10          as documentation of its CMP commitments and its procedures. Qwest routinely  
11          relies upon processes documented in CMP materials, internally, or not at all,  
12          regardless of whether they are also in the PCAT.<sup>132</sup> With respect to jeopardies  
13          specifically, as indicated above, Qwest for a time recognized its documented  
14          commitment in CMP to provide the FOC the day before<sup>133</sup> and treated its own

---

<sup>130</sup> Arizona arbitration Tr., Vol. 2, Q-22 & Q-23 & pp. 340-341; *see id.* p. 340 lines 18-19 (Mr. Topp: “no language whatsoever” referring to at least the day before in the PCAT) & *see id.* p. 34, lines 1-18 (my response that Qwest confirmed in CMP that Qwest would give CLECs an FOC the day before and my references on the stand to pages 37 and 21 of Exhibit BJJ-5 to my Arizona direct testimony).

<sup>131</sup> Eschelon/113, Johnson 3 (February 26, 2004 CMP materials) & Eschelon 111/Johnson 5, March 4, 2004 CMP ad hoc call minutes (both quoted above regarding the phrase “the day before”).

<sup>132</sup> *See, e.g.*, Arizona arbitration Hearing Exhibit Q-2 (Albersheim Reb.), p. 21, lines 15-17 (“In order to present a more complete record of the activities that took place regarding the Change Requests in question, I have attached the actual Change Requests, which include the minutes from the Project meeting.”); *see id.* pp. 22 & 24 (relying upon CMP meeting minutes). *See also, e.g.*, Eschelon/100, Johnson/1 (showing Qwest took away CLEC access to Qwest internal documentation and said it would make “efforts” to provide external documentation -- not of all process information -- but only that which Qwest found “critical”; and defining external documentation beyond the PCAT to include “business procedures” and other information).

<sup>133</sup> Eschelon/113, Johnson/3 (February 26, 2004 CMP materials prepared and distributed by Qwest) (emphasis added); Eschelon/11, Johnson 5, March 4, 2004 CMP ad hoc call minutes (emphasis added).

1 failure to do so as non-compliance with its process, before changing its position  
2 without going back to CMP.<sup>134</sup>

3 In the particular PCAT version referenced by Qwest in support of its position,<sup>135</sup>  
4 Qwest documented in its PCAT some *changes* that were developed in CMP to its  
5 jeopardies process.<sup>136</sup> Qwest took the position in CMP, however, that providing  
6 an FOC at least the day before the due date was already part of its *current*  
7 internally documented process. In other words, as an *existing* process, it did not  
8 need to be documented through a PCAT *change*. Specifically, Qwest said at the  
9 time: “This example is non-compliance to a *documented process*. Yes an FOC  
10 should have been sent prior to the Due Date.”<sup>137</sup> Qwest was referring to an  
11 internally documented process, as it is not documented in the PCAT. Additional  
12 documentation is not needed to demonstrate Qwest’s commitment in this case,  
13 because Qwest documented its commitment in written and posted CMP materials.

14 The absence of additional documentation in the PCAT is not evidence that  
15 Eschelon gave up its Change Request regarding jeopardies or associated expected  
16 deliverables in CMP, despite any suggestions by Qwest to the contrary. In fact,  
17 Qwest *expanded* the deliverable of Eschelon’s Change Request in CMP to

---

<sup>134</sup> See, e.g., Eschelon/110, Johnson/1 &4-6.

<sup>135</sup> Eschelon/7, Starkey 47 (AZ Transcript, in which Mr. Topp of Qwest references the announcement and associated redlined PCAT for Version 42 of the Provisioning and Installation Overview PCAT). It appears that Qwest is suggesting that, because this particular PCAT update does not include a redlined change inserting a designated time frame of the day before, there was no change in CMP to that effect. *See id.*

<sup>136</sup> Eschelon/7, Arizona arbitration Tr., Vol. 2, Q-22 & Q-23.

<sup>137</sup> Eschelon/113, Johnson 3 (February 26, 2004 CMP materials prepared and distributed by Qwest)

1 include more issues. This is shown by the new title of the Change Request, which  
2 is more general in scope and thus broader and more inclusive than the original  
3 title, while still including Eschelon's original request:

4 "Title: Jeopardy Notification Process Changes (new title). Delayed  
5 order process modified to allow the CLEC a designated time frame  
6 to respond to a released delayed order after Qwest sends an  
7 updated FOC (old title)."<sup>138</sup>

8 The description of change (the first paragraph in the Change Request) makes it  
9 clear that Qwest updated the Change Request with Qwest's new, *additional*  
10 description of change and expected deliverable. The description of this change  
11 states:

12 "Changed the description of this CR as a result of synergies with  
13 PC072303-1. During the October 15 CMP meeting we discussed  
14 whether we should close/leave open/ or update CR PC081403-1  
15 'Delayed order process modified to allow the CLEC a designated  
16 time frame to respond to a released delayed order'. The reason we  
17 wanted to close/leave open or update PC081403-1 is because  
18 PC072303-1 is meeting many of the needs. Bonnie Johnson agreed  
19 to change this CR, *as long as we retained the original CR*  
20 *description.*"<sup>139</sup>

21 I asked that Eschelon's description of change remain as a part of the Change  
22 Request so it would be clear that Eschelon's request would be included and to  
23 avoid any confusion. There are two expected deliverables in this Change  
24 Request. Qwest added the later expected deliverable and asked more generally to  
25 "change the jeopardy notification process to reduce unnecessary jeopardy notices  
26 being sent to the CLEC when the Due Date is not in jeopardy *and* to improve the

---

<sup>138</sup> Eschelon/111, Johnson/1.

1 *overall* jeopardy notification process.”<sup>140</sup> This description is very broad,  
2 referring generally to improving the overall process (including Eschelon’s  
3 request). Eschelon’s initial description of change and expected deliverable, which  
4 remained a part of the Charge Request, stated:

5 “Qwest will contact the CLEC to test and accept only after the  
6 updated FOC has been sent and *a designated time frame* has  
7 passed. *Qwest will not put the order in a CNR (customer not*  
8 *ready) jeopardy status* until this time frame has passed and the  
9 CLEC is not ready. When Qwest puts a CLECs request in delayed  
10 for facilities jeopardy status, Qwest should be *required to send the*  
11 *CLEC an updated FOC when the delayed order is released* and  
12 *allow the CLEC a reasonable time frame to prepare* to accept the  
13 circuit. Qwest releases orders form a held status (in some cases the  
14 CLEC has not even received an updated FOC) and immediately  
15 contacts the CLEC to accept the circuit. Because Qwest does not  
16 allow the CLEC a reasonable amount of time to prepare for the  
17 release of the delayed order, the CLEC may not be ready when  
18 Qwest calls to test with the CLEC. Qwest then places the request  
19 in a CNR jeopardy status. Qwest should modify the Delayed order  
20 process, to require *Qwest to send an updated FOC and then allow*  
21 *a reasonable amount of time for the CLEC to react and prepare*  
22 *to accept the circuit before contacting the CLEC for testing.*

23 Expected Deliverable:  
24 *Qwest will modify, document and train a process, that requires*  
25 *Qwest to send an updated FOC and allow a CLEC a reasonable*  
26 *amount of time (from the time the updated FOC is sent) to*  
27 *prepare for testing before Qwest contacts the CLEC to test and*  
28 *accept the circuit.*<sup>141</sup>

29 This shows that Eschelon clearly made these requests as part of this Change  
30 Request, which was completed in CMP on July 21, 2004.<sup>142</sup> The description of

---

<sup>139</sup> Eschelon/111, Johnson/1.

<sup>140</sup> Eschelon/111, Johnson/2.

<sup>141</sup> Eschelon/111, Johnson/2(emphasis added).

<sup>142</sup> Eschelon/111, Johnson/1.

1 change quoted above shows I took steps to ensure that, when Qwest expanded the  
2 scope of the Change Request, Eschelon's request (including this expected  
3 deliverable) remained a part of the Change Request.<sup>143</sup> Eschelon specifically  
4 requested a documented<sup>144</sup> "designated time frame" to "allow CLEC a reasonable  
5 amount of time (from the time the updated FOC is sent)" and, as the Qwest CMP  
6 documentation shows, Qwest committed in writing in posted minutes (*i.e.*,  
7 documented) that it had an internally documented process to provide the FOC the  
8 day before delivering the circuit.<sup>145</sup> The "day before" is the designated time  
9 frame documented at Qwest and which Qwest verified in CMP, and Qwest  
10 initiated no change request to alter that time frame. When Qwest does not  
11 provide the FOC the day before (such as in the example when Qwest provided the  
12 FOC nine minutes before delivering the circuit<sup>146</sup>) Qwest's conduct remains "non-  
13 compliance to a *documented process*."<sup>147</sup> That the internal Qwest documentation  
14 is confirmed in CMP minutes and not the PCAT is inconsequential. Qwest's  
15 denial of this documented fact, after all of Eschelon's efforts in CMP,  
16 demonstrates the need for language in the interconnection agreement establishing

---

<sup>143</sup> Eschelon/111, Johnson/1 ("as long as we retained the original CR description").

<sup>144</sup> Note, the above-quoted reference is for a "documented" process, which did not specify and was not limited to documentation in the PCAT, as Qwest also provides documentation in other ways, such as CMP minutes.

<sup>145</sup> "This example is non-compliance to a *documented process*. Yes an FOC should have been sent prior to the Due Date." Eschelon/113, Johnson 3 (February 26, 2004 CMP materials prepared and distributed by Qwest) (emphasis added).

<sup>146</sup> Eschelon/115, Johnson/14 (Row 11).

<sup>147</sup> Eschelon/113, Johnson/3 (February 26, 2004 CMP materials prepared and distributed by Qwest)

1 the designated time frame. Any proposal to refer to the PCAT, which Qwest  
2 admits contains no time frame at all,<sup>148</sup> should be rejected.

3 Ironically, despite Qwest's current claims about the PCAT, Qwest's proposed  
4 language (consistent with Eschelon's position that relevant Qwest documentation  
5 is broader than the PCAT) does not refer specifically to the PCAT but rather  
6 provides: "12.2.7.2.4.4 Specific procedures are contained in Qwest's  
7 documentation, available on Qwest's wholesale web site." Qwest's  
8 documentation on its wholesale web site (*i.e.*, CMP materials) provides the  
9 "CLEC should *always* receive the FOC *before the due date*."<sup>149</sup> Because Qwest  
10 denies this documented commitment, however, its proposed language does  
11 nothing to resolve the dispute.

12 **Q. WHAT IS ESCHELON'S RESPONSE TO QWEST'S FOURTH CLAIM**  
13 **THAT ESCHELON MUST ALWAYS PREPARE TO ACCEPT SERVICE**  
14 **REGARDLESS OF THE TYPE OF JEOPARDY?**<sup>150</sup>

15 A. This very recent claim, which Qwest made at the Arizona hearing, is not the  
16 process reflected in Qwest's own documentation. The documented process in  
17 Qwest's Provisioning and Installation Overview PCAT states (with emphasis  
18 added) with respect to Qwest facility jeopardies: "*we will advise you of the new*

---

<sup>148</sup> Arizona arbitration Tr., Vol. 2, Q-22 & Q-23 & pp. 340-341; *see id.* p. 340 lines 18-19 (Mr. Topp: "no language whatsoever" referring to at least the day before *in the PCAT*).

<sup>149</sup> Eschelon 111/Johnson/5, March 4, 2004 CMP ad hoc call minutes prepared by Qwest (emphasis added).

<sup>150</sup> Eschelon/7, Arizona arbitration Tr., AZ Vol. 1, pp. 67-69 (Ms. Albersheim); *see also* Colorado arbitration Albersheim Rebuttal, p. 59, lines 4-5.

1        ***DD when the jeopardy condition has been resolved.***<sup>151</sup> In other words, for this  
2 type of jeopardy (when Qwest has insufficient facilities or a problem with the  
3 facilities), the CLEC is told to do nothing to prepare unless Qwest sends a notice  
4 advising the condition has been resolved. To ignore or disregard a jeopardy  
5 notice means to plan to prepare to accept delivery as though you had not received  
6 a notice. Qwest's PCAT states:

7                "Qwest differentiates between DD jeopardies and Critical Date  
8 jeopardies. DD jeopardies indicate that your due date is in  
9 jeopardy; however, Critical Date jeopardies indicate that a critical  
10 date prior to the DD is in jeopardy. ***Critical Date jeopardies can be  
11 ignored by you.*** Critical Date jeopardies are identified in the  
12 Jeopardy Data document (see download in the following  
13 paragraph) in the column labeled "Is Due Date in Jeopardy?" ***If the  
14 DD is not in jeopardy, this column will contain "No" and you  
15 can disregard the jeopardy notice*** sent for this condition and  
16 continue your provisioning process with the scheduled DD. ***If the  
17 column contains "Yes" and Qwest has the responsibility to  
18 resolve the jeopardy condition, we will advise you of the new DD  
19 when the jeopardy condition has been resolved.*** This is usually  
20 within 72 hours."<sup>152</sup>

21        As Qwest's own PCAT language shows, Qwest differentiates by type of jeopardy  
22 notice and tells CLECs to plan to prepare to accept the circuit (*i.e.*, disregard the  
23 jeopardy notice) even if the CLEC is not advised of a new due date for one type  
24 (Critical Date jeopardies) and not to prepare to accept the circuit (*i.e.*, do not  
25 disregard the jeopardy notice) unless Qwest advises CLEC of a new due date for  
26 the other type (DD jeopardies). The Qwest facility jeopardies that are the subject

---

<sup>151</sup> Qwest's Provisioning and Installation Overview PCAT (quoted above).

<sup>152</sup> See Qwest Provisioning and Installation Overview PCAT.

1 of Issue 12-72 (Proposed ICA Section 12.2.7.2.4.4.1)<sup>153</sup> fall within the “DD  
2 jeopardy” category.<sup>154</sup>

3 As discussed above regarding the time Qwest allows itself to prepare, it would not  
4 be reasonable to require CLECs for every single day of the held order period to  
5 schedule personnel to handle additional circuit deliveries – and bother the  
6 customer to request access to the customer’s premises – on the chance that Qwest  
7 may deliver the circuit when Qwest has a known problem in its network with its  
8 facilities.

9 **Q. WHAT IS ESCHELON’S RESPONSE TO QWEST’S FIFTH CLAIM**  
10 **THAT THE FOC IS A MERE FORMALITY THAT QWEST MAY**  
11 **REPLACE WITH POTENTIAL INFORMAL COMMUNICATIONS?**<sup>155</sup>

12 A. Providing an FOC after a Qwest facility jeopardy has cleared is not a mere  
13 formality; it is a contractual requirement (see closed language in Section  
14 9.2.4.4.1). The contractual requirement is also part of the SGAT that the  
15 Commission and companies spent a significant amount of time reviewing in 271

---

<sup>153</sup> The two types of potential customer (CNR) jeopardies described in Section 12.2.7.2.4.4.1 are coded in Eschelon/113, Johnson 7 and 8 as CO1 and CO2, and Eschelon’s ICA language mirrors Qwest’s PCAT “User Friendly Jeopardy Description” of these two jeopardies.

<sup>154</sup> See Qwest Provisioning and Installation Overview PCAT (“If the column contains “Yes” and Qwest has the responsibility to resolve the jeopardy condition, we will advise you of the new DD when the jeopardy condition has been resolved.”).

<sup>155</sup> Arizona arbitration Tr., Vol. I, p. 70, lines 4-9 (Ms. Albersheim) (“Q. Does that assume this Qwest has sent the FOC with a new due date or that it hasn’t? A. Qwest is supposed to. Q. And let’s assume that it doesn’t. A. The formality is that Qwest is supposed to, but the technicians are in touch with each other.”); see also Minnesota arbitration Tr. Vol. I, p. 94, lines 19-20 & p. 96, lines 8-10.

1 workshops, as well as in Qwest's own proposed template interconnection  
2 agreement.<sup>156</sup> Regarding FOCs and jeopardy notices, the FCC said:

3 [W]e address the OSS ordering issues that the Commission  
4 previously has found *relevant and probative for analyzing a*  
5 *BOC's ability to provide access to its ordering functions in a*  
6 *nondiscriminatory manner*: a BOC's ability to return *timely status*  
7 *notices* such as *firm order confirmation*, reject, *jeopardy*, and  
8 service order completion notices, to process manually handled  
9 orders accurately, and to scale its system.<sup>157</sup>

10 Despite recognition by the FCC and in the contract of the importance of the FOC,  
11 Qwest claims that the FOC can be disregarded because informal "communication  
12 was happening between Qwest and the CLEC technicians" in the examples  
13 provided by Eschelon in Eschelon/115.<sup>158</sup>

14 Qwest admitted that communication with the technician(s), "was the case" in only  
15 "some" of these examples.<sup>159</sup> In addition, Qwest has provided no evidence that  
16 the CLEC technicians (rather than, for example, CLEC service delivery  
17 personnel) are the appropriate contacts with respect to FOCs and scheduling. At  
18 both Qwest and Eschelon, a service delivery type organization sends/receives the  
19 jeopardy and FOC notices,<sup>160</sup> and that organization is different in both companies

---

<sup>156</sup> Eschelon/115 note 4.

<sup>157</sup> Memorandum Opinion and Order, In the Matter of Application by Qwest Communications International, Inc. for Authorization To Provide In-Region, InterLATA Services in the States of Colorado, Idaho, Iowa, Montana, Nebraska, North Dakota, Utah, Washington and Wyoming, WC Docket No. 02-314, Decision No. 02-332 (Dec. 23, 2002), ¶85 (emphasis added).

<sup>158</sup> Minnesota arbitration Tr. Vol. I, pp. 94-96. This particular sentence regarding communication is found *id.*, p. 94, lines 19-20.

<sup>159</sup> Minnesota arbitration, Tr. Vol. I p. 96, lines 8-10 (Ms. Albersheim).

<sup>160</sup> See Qwest's Provisioning and Installation Overview PCAT, stating "If a LSR goes into a jeopardy condition and it is detected: . . . On the DD/ Once the Qwest CSIE is advised of the condition (if the

1 from the network type of organization in which the technicians work. Eschelon  
2 cannot rely upon informal communications that are outside the agreed upon  
3 process to plan its business and ensure timely delivery of service necessary to  
4 meet its end user customers' expectations.

5 The Qwest technician notes provided in the "Qwest Review" column of  
6 Eschelon/115 show that, when communication was "happening between Qwest  
7 and the CLEC technicians,"<sup>161</sup> it was associated with attempted delivery of the  
8 circuit and was not for the purpose of advance notice (to allow Eschelon time to  
9 schedule resources and arrange any customer premise access in advance of  
10 delivery). This is clear on the face of the technician notes provided by Qwest.  
11 For example, Qwest technicians' notes expressly state that the purpose of the  
12 noted communications was to "test" or to "turn up" the circuit/service.<sup>162</sup> If  
13 Qwest is calling about test and turn up, it is part of attempted service delivery.<sup>163</sup>

---

RFS Date is known)/ Qwest sends a jeopardy notice. A FOC is subsequently sent advising you of the new DD that Qwest can meet." The Qwest "CSIE" is its Customer Service Inquiry and Education center, which may also be referred to as the Interconnect Service Center (ISC), as in Section 12.1.3.3.2.1 of the proposed ICA. (See, e.g., reference to "ISC/CSIE" in Qwest CMP documentation at [http://www.qwest.com/wholesale/cmp/archive/CR\\_PC101001-1.htm](http://www.qwest.com/wholesale/cmp/archive/CR_PC101001-1.htm).)

<sup>161</sup> Minnesota arbitration, Tr. Vol. I, p. 94, lines 19-20 (Ms. Albersheim).

<sup>162</sup> See, e.g., Eschelon/115 (Qwest technician notes in column entitled "Qwest Review From MN RA-30") at Johnson/6 ("Contacted Eschelon to attempt to turn up the circuit"); Johnson/8-9 ("Contacted [ER] at Eschelon at 16:58 he said he would test and call back. [ER] called back at 17:23 can't see signal. Problem originally thought to be on CLEC side. 4/15 found trbl to be in Qwest wiring"); Johnson/16 ("referred order to CLEC to test"); Johnson/21 ("called [ER] at Eschelon, talked to [ER] advised ready to test and accept").

<sup>163</sup> Qwest's Provisioning and Installation Overview PCAT discusses communications that occur at the time of delivery (under the heading of "Delivering UNE, Resale, and Interconnection Services"). That technicians may need to communicate at the time of delivery does not obviate the need for notice in advance through the proper channels/departments to schedule resources, including the availability of those very technicians who may be needed for the test and turn up communications and activities that are part of delivering the service.

1 Obviously, communications during attempted delivery of the circuit/service are  
2 not advance notice of when Qwest is going to attempt delivery. The attempt is  
3 already in progress, so under Qwest's approach Eschelon is left to scramble and  
4 staff the unexpected delivery rather than have an opportunity to efficiently  
5 prepare in advance. Eschelon's ICA language provides that Eschelon will attempt  
6 to overcome these obstacles because delivery of service to its end user customer is  
7 so important to Eschelon.<sup>164</sup> Thus, any further disruption or delay in service is  
8 clearly a direct product of Qwest's jeopardy and failure to send an FOC after the  
9 jeopardy cleared, not of any unwillingness on Eschelon's part to lessen the  
10 consequences of Qwest's issue. Qwest created the situation that lead to the  
11 inability to complete delivery. If the obstacles are too great because of Qwest's  
12 failure to provide proper timely notice to Eschelon of service delivery, and  
13 Eschelon cannot accept delivery at the time, Qwest should not classify this as a  
14 CLEC (CNR) jeopardy

15 To help ensure timely service to Customers, the Commission should adopt  
16 Eschelon's proposed language for Issues 12-71, 12-72, and 12-73.

---

<sup>164</sup> ICA Section 12.2.7.2.4.4.1.

1 **D. SUBJECT MATTER NO. ISSUE 43. CONTROLLED PRODUCTION**

2 *Issue No. 12-87: ICA Section 12.6.9.4*<sup>165</sup>

3 **Q. PLEASE DESCRIBE CONTROLLED PRODUCTION, NEW**  
 4 **IMPLEMENTATION, AND RECERTIFICATION.**

5 A. Section 12.6 of the proposed interconnection agreement is entitled “On-Going  
 6 Support for OSS” (Operations Support Systems). It addresses several types of  
 7 systems testing including, in Section 12.6.9.4, controlled production testing.  
 8 *Controlled production* testing consists of controlled submission of CLEC real  
 9 product orders to the production environment.<sup>166</sup> The submission is “controlled”  
 10 (as opposed to ordinary submission of orders) in the sense that the number of  
 11 orders is limited and both Qwest and Eschelon are monitoring the limited orders  
 12 for testing purposes. Qwest and CLECs “use Controlled Production results to  
 13 determine operational readiness for full Production<sup>167</sup> turn-up.”<sup>168</sup> This test

---

<sup>165</sup> Throughout discussion of Issue 12-87 there are references to the Implementation Guidelines. Excerpts are included with my testimony as Eschelon/122. The full Implementation Guidelines are posted on the Qwest web site. For Version 21, the URL is

[http://www.qwest.com/wholesale/downloads/2007/070406/IMAXMLImplementationGuidelines21\\_040607.doc](http://www.qwest.com/wholesale/downloads/2007/070406/IMAXMLImplementationGuidelines21_040607.doc) ; For Version 20, the URL is [http://www.qwest.com/wholesale/downloads/2006/061030/IMA\\_XML\\_Implementation\\_Guidelines\\_20\\_0\\_10\\_30\\_06.pdf](http://www.qwest.com/wholesale/downloads/2006/061030/IMA_XML_Implementation_Guidelines_20_0_10_30_06.pdf); For Version 19.2, the URL is [http://www.qwest.com/wholesale/downloads/2006/060425/IMA\\_EDI\\_Implementation\\_Guidelines\\_19\\_2\\_042406.pdf](http://www.qwest.com/wholesale/downloads/2006/060425/IMA_EDI_Implementation_Guidelines_19_2_042406.pdf)

<sup>166</sup> Eschelon/122, Johnson/3 (Version 21, p. 13 ¶(6); *id.* Johnson/9 (Version 20, p. 13 ¶(6); *id.* Johnson/17 (Version 19.2, p. 9, ¶(6)).

<sup>167</sup> “Production” is defined as “The CLEC is certified and able to submit full volumes of production LSRs and pre-order transactions to Qwest.” Eschelon/122, Johnson/3 (Version 21, p. 13 ¶(7); *id.* Johnson/9 (Version 20, p. 13 ¶(7); *id.* Johnson/17 (Version 19.2, p. 9, ¶(7)).

<sup>168</sup> Eschelon/122, Johnson/3 (Version 21, p. 13 ¶(6); *id.* Johnson/9 (Version 20, p. 13 ¶(6); *id.* Johnson/17 (Version 19.2, p. 9, ¶(6) (footnote added)).

1 verifies that the data exchange between Qwest and CLEC is done according to the  
2 industry standard.<sup>169</sup>

3 *A new implementation* effort involves transactions that CLEC does not yet have in  
4 production using a current Interconnect Mediated Access (“IMA”) version.

5 About “new implementation,” the Implementation Guidelines state: “At the time  
6 a CLEC migrates to a new release, any transaction(s) that the CLEC does not yet  
7 have in production using a current IMA version is considered to be a new  
8 implementation effort.”<sup>170</sup>

9 *Re-certification* is defined in agreed-upon language of the proposed contract as  
10 “the process by which CLECs demonstrate the ability to generate correct  
11 functional transactions for enhancements not previously certified.”<sup>171</sup> Similarly,  
12 the Implementation Guidelines state: “Recertification is the process by which

---

<sup>169</sup> The industry standard is currently called X12. It is an ANSI standard for syntax that governs electronic data transfers. Some CLECs are on IMA Release 19. Eschelon has recently started to use to IMA Release 20, for which the applicable standard is XML. Eschelon currently uses both Release 19 and 20, with retirement of its EDI gateway scheduled for June of 2007. Qwest has multiple releases available at any given time, and the CMP Document allows different carriers to be on different releases. See Exhibit Eschelon/53 §§ 6.0-9.0. For example, the Implementation Guidelines state that: “Qwest supports a multi-release strategy” for its interface. See Eschelon/122, Johnson/4 (Version 21, p. 40); *id.* Johnson/10 (Version 20, p. 40); *id.* Johnson/18 (Version 19.2, p. 47). IMA Release 19 is available until October 27, 2007. IMA Release 21 became available on May 14, 2007. Therefore, a CLEC could move from Release 19 to Release 21 without ever being on Release 20. See Qwest OSS Calendar at [http://www.qwest.com/wholesale/downloads/2006/061011/OSS\\_Calendar\\_Version\\_84.pdf](http://www.qwest.com/wholesale/downloads/2006/061011/OSS_Calendar_Version_84.pdf)

<sup>170</sup> See Eschelon/122, Johnson/5 (Version 21, p. 41); *id.* Johnson/11 (Version 20, p. 41); *id.* Johnson/19 (Version 19.2, p. 48) (The sentence is the same in the different versions of the Guidelines, except that the acronym “EDI” is inserted before “IMA” for Version 19.2.).

<sup>171</sup> Section 12.6.4 of the proposed ICA (closed language).

1 CLECs demonstrate the ability to correctly generate and accept transactions that  
2 were updated for the new release.”<sup>172</sup>

3 **Q. PLEASE DESCRIBE ESCHELON’S BUSINESS NEEDS REGARDING**  
4 **CONTROLLED PRODUCTION.**

5 A. Eschelon needs certainty in the contract language that *controlled production*  
6 *testing*, consistent with current practice, will continue to be necessary for a *new*  
7 *implementation* effort and unnecessary for *re-certification*. Eschelon’s business  
8 need is to avoid costly and/or time consuming controlled production testing that is  
9 unnecessary because, for recertifications, the transaction has previously been in  
10 production and is simply being enhanced. Under Eschelon’s proposal, testing will  
11 be conducted for both new implementations and recertifications. Eschelon  
12 supports necessary testing. In fact, Eschelon volunteered to be one of the first  
13 CLECs to move from EDI to XML (a new implementation that required  
14 controlled production testing) and acted as one of the beta testers with Qwest for  
15 XML, even though this is a significant commitment of time and resources.  
16 Nothing about Eschelon’s proposal is inconsistent with the use of controlled  
17 production when applicable or the importance of testing, or Eschelon would not  
18 be proposing it. Eschelon’s proposal simply reflects the status today, and Qwest  
19 would not say that its testing today is inadequate. Under Eschelon’s proposal, the  
20 testing -- like that done today -- will be appropriate for the type of change being

---

<sup>172</sup> See Eschelon/122, Johnson/5 (Version 21, p. 41); *id.* Johnson/11 (Version 20, p. 41); *id.* Johnson/19 (Version 19.2, p. 48).

1 made (with a re-certification logically requiring less testing than an initial  
2 certification).

3 **Q. WHAT IS ESCHELON'S PROPOSAL FOR ISSUE 12-87?**

4 A. Eschelon proposes controlled production testing, consistent with current practice,  
5 will continue to be necessary for a new implementation effort and unnecessary for  
6 re-certification (unless the companies agree otherwise). Eschelon proposes  
7 adoption of one of the two following proposals for Section 12.6.9.4 (Issue 12-87):

8 **Proposal 1**

9 12.6.9.4 Controlled Production – Qwest and CLEC will perform  
10 controlled production. The controlled production process is  
11 designed to validate the ability of CLEC to transmit EDI data that  
12 completely meets X12 (or mutually agreed upon substitute)  
13 standards definitions and complies with all Qwest business rules.  
14 Controlled production consists of the controlled submission of  
15 actual CLEC production requests to the Qwest production  
16 environment. Qwest treats these pre-order queries and orders as  
17 production pre-order and order transactions. Qwest and CLEC use  
18 controlled production results to determine operational readiness.  
19 Controlled production requires the use of valid account and order  
20 data. All certification orders are considered to be live orders and  
21 will be provisioned. Controlled production is not required for  
22 recertification, unless the Parties agree otherwise. ~~for features or~~  
23 ~~products that the CLEC does not plan on ordering~~ Recertification  
24 does not include new implementations such as new products and/or  
25 activity types.

26 **Proposal 2**<sup>173</sup>

27 12.6.9.4 Controlled Production – Qwest and CLEC will perform  
28 controlled production for new implementations, such as new  
29 products, and as otherwise mutually agreed by the Parties. The  
30 controlled production process is designed to validate the ability of  
31 CLEC to transmit EDI data that completely meets X12 (or  
32 mutually agreed upon substitute) standards definitions and

---

<sup>173</sup> The ICA and the Joint Disputed Issues Matrix filed as Exhibits 3 and 5 to Eschelon's Petition do not include the second proposal as it was offered to Qwest in negotiations after the Petition date.

1           complies with all Qwest business rules. Controlled production  
2           consists of the controlled submission of actual CLEC production  
3           requests to the Qwest production environment. Qwest treats these  
4           pre-order queries and orders as production pre-order and order  
5           transactions. Qwest and CLEC use controlled production results to  
6           determine operational readiness. Controlled production requires  
7           the use of valid account and order data. All certification orders are  
8           considered to be live orders and will be provisioned.

9   **Q.    WHAT IS QWEST’S PROPOSAL ON ISSUE 12-87?**

10  A.    Qwest originally proposed to omit both of Eschelon’s language modifications. In  
11       other words, Qwest’s original proposal was to delete Eschelon’s proposal (the  
12       underlined sentences in the above cited language of section 12.6.9.4). Qwest has  
13       since modified its proposal as follows:

14               All certification orders are considered to be live orders and will be  
15               provisioned. Controlled production is not required for  
16               ~~recertification, unless the Parties agree otherwise.~~ for features or  
17               products that the CLEC does not plan on ordering. Recertification  
18               does not include new implementations such as new products and/or  
19               activity types.

20       Qwest asserts that Eschelon should not be able to make unilateral decisions such  
21       as refusing controlled production testing “when it may be necessary to protect the  
22       industry at large.”<sup>174</sup> Qwest argues that controlled testing protects not only  
23       against system down time, but also potential negative impact on other CLECs.<sup>175</sup>  
24       I address these claims below.

25  **Q.    DOES ESCHELON’S PROPOSAL REFLECT QWEST’S CURRENT**  
26  **DOCUMENTED PRACTICE?**

---

<sup>174</sup> Qwest Response, p. 47, line 15.

1 A. Yes. Eschelon’s proposal reflects Qwest’s current practice of not requiring  
2 controlled production for enhancements to the existing system releases (as  
3 opposed to new implementations), so no change is required. Qwest’s current  
4 terms allow a CLEC to forego controlled production for recertification, including  
5 as an example, if the CLEC does not plan to use the new functionality of the  
6 updated existing system. This principle accurately reflects that, if Eschelon does  
7 not plan to use the new functionality, it should not have to expend resources on  
8 unnecessary controlled production. Eschelon proposes that this be captured in the  
9 ICA language. More broadly, if Eschelon has been certified (so this is not a “new  
10 implementation”), Qwest does not require controlled production for  
11 recertification.<sup>176</sup> This fact is documented in Qwest’s Implementation Guidelines,  
12 which state consistently across releases:

13 **IMA Release 21 and IMA Release 20 (same language in both):**

14 Migration Activities. CLECs will be reminded in writing of their need to  
15 migrate to a new release prior to the next release being implemented. For  
16 migration, the CLEC will follow the same process as an initial  
17 implementation *except that Controlled Production is not required on any*  
18 *XML transaction that successfully completed Controlled Production*  
19 *testing in a prior release.* Any product not successfully tested in

---

<sup>175</sup> Qwest Response, p. 47, lines 11-12. See also Joint Disputed Issues Matrix, Exhibit 3 to Petition (10/10/06), Qwest’s position, p. 238.

<sup>176</sup> For example, Eschelon was already certified and in production for Facility Based Directory Listings (“FBDL”) when Release 19.0 was issued and included two additional fields for the existing FBDL product, so Eschelon did not have to do controlled production testing when Eschelon re-certified its functionality for FBDL for Release 19.0. The fact that controlled production was not required does *not* mean the two additional fields were not tested. The two fields were tested using progression testing in the Stand Alone Test Environment (SATE) (*see* closed language in proposed ICA Section 12.6.9.2). Eschelon’s proposed language for Issue 12-87 is, on its face, specific to one type of testing (controlled production) and does not affect the other testing to which Eschelon has agreed. Although this example occurred with Release 19.0, Qwest’s own documentation for Release 20.0 provides that the same terms apply. *See* Eschelon/122, Johnson/6 (Version 21, p. 42); *id.* Johnson/12 (Version 20, p. 42) [quoted below].

1 Controlled Production in a prior release will not be migrated under this  
2 exemption.<sup>177</sup>

3 **IMA Release 19.2:**

4 Migration Activities. CLECs will be reminded in writing of their  
5 need to migrate to a new release prior to the next release being  
6 implemented. For migration, the CLEC will follow the same  
7 process as an initial implementation *except that Controlled*  
8 *Production is not required on any EDI transaction that*  
9 *successfully completed Controlled Production testing in a prior*  
10 *release.* Any product not successfully tested in Controlled  
11 Production in a prior release will not be migrated under this  
12 exemption.<sup>178</sup>

13 **Q. WHAT IS QWEST'S ARBITRATION POSITION REGARDING**  
14 **WHETHER ESCHELON'S PROPOSED LANGUAGE REFLECTS**  
15 **QWEST'S CURRENT PRACTICE?**<sup>179</sup>

16 A. Qwest has provided conflicting testimony as to whether Eschelon's proposed  
17 language reflects Qwest's current practice. In the Arizona Qwest-Eschelon  
18 arbitration proceeding, in her direct testimony on November 8, 2006, Ms.  
19 Albersheim of Qwest testified as follows:

20 Q. ADDRESSING THE SECOND ISSUE, IS ESCHELON'S  
21 LANGUAGE ACCURATE WITH REGARD TO  
22 RECERTIFICATION?

23 A. Yes.

24 Q. IF ESCHELON'S LANGUAGE IS ACCURATE, WHY DOES  
25 QWEST OBJECT TO THE ADDITION OF THIS LANGUAGE IN  
26 THE CONTRACT?

27 A. While the language may be accurate today, it may not be accurate  
28 tomorrow.<sup>180</sup>

---

<sup>177</sup> Eschelon/122, Johnson/6 (Version 21, p. 42); *id.* Johnson/12 (Version 20, p. 42) (emphasis added).

<sup>178</sup> Eschelon/122, Johnson/20 (Version 19.2, p. 50) (emphasis added).

<sup>179</sup> Albersheim Rebuttal, p. 65, lines 10-13.

1 Ms. Albersheim provided almost identical testimony in the Minnesota  
2 arbitration.<sup>181</sup> In Minnesota, in their January 16, 2007 report, the ALJs found:  
3 “Qwest agrees that Eschelon’s language accurately depicts its current practice,  
4 which does not require CLECs to recertify if they have successfully completed  
5 testing of a previous release; in addition, Qwest admits that Qwest can control  
6 whether a CLEC can access its OSS.”<sup>182</sup> The ALJs recommended adoption of  
7 Eschelon’s first proposal for Issue 12-87.<sup>183</sup>

8 In Qwest’s February 9, 2007 rebuttal testimony in Arizona, Ms. Albersheim of  
9 Qwest provided the following testimony:

10 Q. MR. WEBBER ALLEGES ON PAGE 169 OF HIS DIRECT  
11 TESTIMONY THAT ESCHELON’S PROPOSED LANGUAGE FOR  
12 ISSUE 12-87 REFLECTS QWEST’S CURRENT PRACTICE. IS THAT  
13 TRUE?

14 A. No.<sup>184</sup>

15 Ms. Albersheim indicated that Eschelon had cited documentation for Release  
16 19.2,<sup>185</sup> without mentioning that the more recent documentation contains the same  
17 language (as shown in the above quotations).<sup>186</sup> Ms. Albersheim said: “The issue

---

<sup>180</sup> Arizona arbitration, Albersheim Direct, p. 99, line 24 – p. 100, line 4.

<sup>181</sup> Minnesota Arbitration, Albersheim MN Direct, p. 99, line 24 – p. 100, line 4.

<sup>182</sup> Eschelon/29, Denney/62 (MN Arbitrators’ Report, ¶255).

<sup>183</sup> *Id.* ¶258.

<sup>184</sup> Arizona arbitration, Albersheim Rebuttal, p. 65, lines 10-13.

<sup>185</sup> Arizona arbitration, Albersheim Rebuttal, p. 66, lines 1-2.

<sup>186</sup> To the extent that, by referring to Release 19.2, Ms. Albersheim was attempting to suggest that some change occurred from Version 19.2 to Version 20.0 (or Version 21), the Implementation Guidelines show that this is not the case. Each one contains a change log (entitled “Document

1 here is with new releases, such as IMA Release 20.0, that require controlled  
2 production testing.”<sup>187</sup> Under either of Eschelon’s language proposals, controlled  
3 production testing is required for IMA Release 20.0, as shown above.<sup>188</sup> Ms.  
4 Albersheim did not mention in her testimony that, by the date of her testimony  
5 (February 9, 2007), Eschelon had already indicated -- consistent with Eschelon’s  
6 proposed language -- it would participate in controlled production testing for  
7 IMA Release 20.0.<sup>189</sup> The issue is whether, for a transaction that has already been  
8 through controlled production testing (*e.g.*, in a prior release) and thus is certified,  
9 controlled production testing must be conducted again for recertification. Despite  
10 Ms. Albersheim’s more recent testimony to the contrary,<sup>190</sup> Qwest’s current,  
11 documented practice is that controlled production testing is not required for  
12 recertification.<sup>191</sup>

13 **Q. IF ESCHELON’S PROPOSAL REFLECTS QWEST’S CURRENT**  
14 **PRACTICE, WHY IS IT NECESSARY TO INCLUDE IT IN THE**  
15 **CONTRACT?**

---

History”) identifying the changes made in that Version, and none lists such a change. *See* Eschelon/122, Johnson/2 (Version 21, p. 2); *id.* Johnson/8 (Version 20, p. 2); *id.* Johnson/14-16 (Version 19.2, pp. 2-4).

<sup>187</sup> Arizona arbitration, Albersheim Rebuttal, p. 66, lines 5-6.

<sup>188</sup> *See, e.g.*, Eschelon Proposal #1, which creates an exception to performing controlled production testing for recertification but specifically states: “Recertification does not include new implementations.”

<sup>189</sup> Eschelon was previously scheduled to move to IMA Release 20.0 in approximately February of 2007, though that date was later pushed out. Because of the anticipated February 2007 date, discussions with Qwest regarding controlled production testing for IMA Release 20.0 had taken place before February of 2007.

<sup>190</sup> Arizona arbitration, Albersheim Rebuttal, p. 65, lines 10-13 (quoted above).

1 A. Qwest's inconsistency on this point (which I discussed in my previous answer)  
2 supports the need to include Eschelon's proposed language in the interconnection  
3 agreement to provide contractual certainty to allow Eschelon to plan its business.  
4 It is also necessary to include Eschelon's proposed language modification in the  
5 ICA because, without it, the broader language in the remainder of the paragraph  
6 (Section 12.6.9.4) may suggest that controlled production is required for re-  
7 certification, when it is not. The first sentence, for example, broadly states:  
8 "Qwest and CLEC will perform controlled production." That is not always the  
9 case under current practice, and the ICA should be clear on this point when  
10 outlining the terms of controlled production. Eschelon made its second proposal  
11 as an alternative way of dealing with the broad statement in this sentence.

12 Further, Qwest is violating its previously agreed upon policy of bringing its IMA  
13 implementation guidelines through CMP, which is another reason for Eschelon to  
14 seek contractual certainty and include its proposed language (reflecting status  
15 quo) into the ICA. Qwest's *Change Management Process Document*  
16 (Eschelon/53) describes the scope of CMP as including OSS implementations. It  
17 states:

18 Qwest will track changes to OSS Interfaces, products and  
19 processes. This CMP includes the identification of changes and  
20 encompasses, as applicable, Design, Development, Notification,  
21 Testing, **Implementation**, Disposition of changes, etc. (See Change

---

<sup>191</sup> Eschelon/122, Johnson/6 (Version 21, p. 42); *id.* Johnson/12 (Version 20, p. 42) (quoted above).

1 Request Status Codes, Section 5.8). *Qwest will process any such*  
2 *changes in accordance with this CMP.*<sup>192</sup>

3 This language was specifically added to the Scope section of the CMP Document  
4 to ensure that the Implementation Guidelines would be within the scope of  
5 CMP.<sup>193</sup> The CMP Document was created by a Redesign team. The Redesign  
6 team maintained a list of action items and then noted when they were closed. The  
7 minutes of the CMP Redesign meetings are posted on the Qwest web site. The  
8 action item log was attached to the minutes as an attachment. Attachment 5 (the  
9 action item log) to the March 5 through March 7, 2002 CMP Redesign meeting  
10 minutes shows that Action Item Number 143 (“Is the EDI Implementation  
11 Guideline under the scope of CMP?”; “Does Scope include documentation?”) was  
12 closed in the affirmative in “Master Redline Section 1.0.”<sup>194</sup> Specifically, the  
13 team closed with the resolution: “The EDI Implementation Guideline will follow  
14 the CMP guidelines and timeframes.”<sup>195</sup> Therefore, as shown in the above-quoted  
15 language, the Implementation Guideline is supposed to be within the scope of  
16 CMP. Qwest obtained 271 approvals after completing these action items and  
17 providing assurances such as this one about CMP to CLECs, including Eschelon  
18 (which was a member of the CMP Redesign Core Team).

---

<sup>192</sup> Exhibit Eschelon/53, Johnson/15, Section 1.0 (emphasis added).

<sup>193</sup> See Eschelon/119 to my testimony containing Excerpts from Final Meeting Minutes of CLEC-Qwest Change Management Process Re-design meeting dated March 5-March 7, 2002 (Att. 5, Action Item 143).

<sup>194</sup> *Id.*

<sup>195</sup> *Id.* (final column for Action Item 143).

1 Despite Qwest's assurances to the CMP Redesign team and the language of the  
2 governing CMP Document, Qwest does not submit changes to the EDI  
3 Implementation Guidelines through CMP. An example is the way Qwest treated  
4 its IMA Release 20.0 Implementation Guidelines, which was announced via a  
5 non-CMP notice and was effective immediately.<sup>196</sup> In the Minnesota Arbitration  
6 regarding the same contract language, Qwest testified that the IMA  
7 Implementation Guideline documents are not and should not be under the CMP  
8 control<sup>197</sup> -- without citing any documentation in Qwest's posted CMP Redesign  
9 materials to support this statement, which is contrary to the closure of Action Item  
10 143 and the language of Section 1.0 of the CMP Document (both quoted above).

11 The fact that Qwest is violating its previously agreed upon policy of bringing its  
12 IMA implementation guidelines through CMP is another reason for Eschelon to  
13 seek contractual certainty and include its proposed language (reflecting status  
14 quo) into the ICA. If Qwest's proposal is adopted, Qwest could just as easily –  
15 with same day notice and no CMP activity, much less any amendment to the ICA  
16 – impose the costs of unnecessary controlled production testing upon Eschelon.  
17 This is an important issue that Eschelon has properly raised under Section 252,  
18 and Qwest should not be able to impose such costs on Eschelon without  
19 Eschelon's agreement.

20 **Q. DOES ESCHELON'S PROPOSAL REPRESENT A "THREAT TO**

---

<sup>196</sup> This notice is contained in exhibit Eschelon/121.

1           **INDUSTRY AT LARGE,” AS CLAIMED BY QWEST?<sup>198</sup>**

2    A.    No. As I explained above, Qwest’s current practice allows CLECs to forego  
3           controlled production testing during recertification. (It is worth noting again that  
4           under Eschelon’s proposal recertification does not include new implementations,  
5           such as Release 20.) As stated in Qwest’s own implementation guidelines quoted  
6           above, controlled production testing is not required for any transaction that  
7           successfully completed controlled production testing in a prior release.  
8           Obviously, Qwest does not consider the fact that some CLECs will forego the test  
9           in this situation as being a threat to the “industry at large.” Eschelon’s language  
10          modification does not prohibit CLECs from undergoing controlled production  
11          testing. It only states that such testing is optional in this particular scenario –  
12          which is in full accord with Qwest’s current practice. This clarification is  
13          necessary because the remainder of the language of section 12.6.9.4 without  
14          modification may suggest that controlled production is required under all  
15          circumstances when it is not. Eschelon’s proposed language does not state that  
16          Eschelon would never participate in controlled production for recertification, as  
17          the companies may agree to it if it is needed. Qwest and Eschelon may discuss  
18          what Qwest perceives as potential harm in any particular case. Eschelon has an  
19          incentive to avoid harm as well. In Minnesota, the ALJs specifically found that:

---

<sup>197</sup> Minnesota arbitration, MN PUC Docket No. P-5340, 421/IC-06-768, Surrebuttal Testimony of Renee Albersheim, p. 44 lines 4-10.

<sup>198</sup> Qwest Response, p. 47, line 15.

1 “There is no evidence that Eschelon has or would opt out of recertification testing  
2 for any improper purpose.”<sup>199</sup>

3 **Q. YOU STATE ABOVE THAT QWEST MODIFIED ITS PROPOSAL ON**  
4 **ISSUE 12-87. PLEASE RESPOND TO QWEST’S PROPOSAL.**

5 A. In Minnesota, as in Oregon, Eschelon offered two proposals on the issue of  
6 Controlled Production (see quoted language above). The ALJs in the Minnesota  
7 said that they “recommend adoption of Eschelon’s first proposal.”<sup>200</sup> The  
8 Minnesota commission affirmed the ALJs’ recommendation.<sup>201</sup>

9 In the alternative, the Minnesota ALJs had also indicated that the Commission  
10 could adopt the phrase “for features or products that the CLEC does not plan on  
11 ordering,” which Qwest later offered as a counter proposal for other states (as  
12 shown above in Qwest’s proposed language). The alternative, however, covers  
13 only a subset of the recertifications for which Qwest currently does not require  
14 controlled production. Controlled production is not required currently for  
15 recertification (regardless of whether the CLEC intends or does not intend to  
16 order the products/features). There is no need to adopt this lesser alternative,  
17 which does not fully capture Qwest’s current process. Despite the ALJs having  
18 mentioned this alternative, the Minnesota commission did not adopt it. As

---

<sup>199</sup> Eschelon/29, Denney/62 (MN Arbitrators’ Report, ¶258).

<sup>200</sup> Eschelon/29, Denney/62 (MN Arbitrators’ Report, ¶258).

<sup>201</sup> Eschelon/30, Denney/22 (MN Order Resolving Arbitration Issues ¶1).

1 pointed out by the ALJs in Minnesota, in a ruling that has now been affirmed by  
2 the Minnesota commission:

3 Qwest agrees that Eschelon's language accurately depicts its  
4 current practice, which does not require CLEC's to recertify if they  
5 have successfully completed testing of a previous release.<sup>202</sup>

6 Qwest wants to maintain the flexibility to unilaterally change its practices,  
7 claiming that it should not be locked in to the current practices.<sup>203</sup> When Qwest  
8 made a similar argument with respect to Issue 12-74, the ALJs in Minnesota  
9 rejected it, saying: "Eschelon's language would not require any changes to  
10 Qwest's current process or systems, and Qwest has failed to identify any credibly  
11 adverse effect on CLECs, itself, or the public interest if this language were  
12 incorporated into the ICA. The proposed language exactly reflects Qwest's  
13 current practice."<sup>204</sup> The same is true for controlled production.

14 **Q. PLEASE SUMMARIZE ISSUE 12-87.**

15 A. A requirement that CLECs go through testing that uses actual order data  
16 (Controlled Production) for enhancements to transactions that have already been  
17 in production (recertifications) would cause unnecessary waste of resources and  
18 could potentially cause delay. Qwest's current practices allow a CLEC to forego  
19 Controlled Production in the same manner as Eschelon's proposed language. This  
20 does not mean that recertifications will be untested. Although controlled

---

<sup>202</sup> Eschelon/29, Denney/62 (MN Arbitrators' Report ¶255).

<sup>203</sup> See, e.g., Colorado arbitration, Albersheim Colorado Direct Testimony, p. 75, lines 4-14; see also Minnesota arbitration Hearing Ex. 1 (Albersheim Dir.) at p. 9, line 4.

<sup>204</sup> Eschelon/29, Denney/60 (MN Arbitrators' Report, ¶246).

1 production testing is not required for recertifications currently, other testing<sup>205</sup>  
2 occurs for recertifications and Eschelon proposes to maintain the status quo.

3 Consistent with the status quo, Eschelon's proposed language requires additional  
4 testing for new implementations that have not been in production. An example of  
5 a new implementation effort was the change from EDI to XML. Because Release  
6 20.0 is a new implementation,<sup>206</sup> no CLEC had used it in production. Therefore,  
7 no CLEC was certified to use it before testing. Under both the current practice  
8 today and Eschelon's proposed language, CLECs will need to go through  
9 controlled production testing and become certified for Release 20.0, just as  
10 Eschelon has recently done. No CLEC will go through *re*-certification, because  
11 they were not initially certified. Eschelon's proposed language in Section  
12 12.6.9.4 is very clear that controlled production testing is required for such new  
13 implementations. Therefore, it addresses any concerns expressed by Qwest that  
14 relate to new implementations.

15 **IV. CLOSED SECTION 12 ISSUES: SUBJECT MATTERS 30, 31A, 32, 34, 35,**  
16 **36, 37, 38, 39, 40, AND 42 (ISSUES 12-65, 12-66, 12-68, 12-70, 12-74, 12-75**  
17 **AND SUBPART, 12-76 AND SUBPART, 12-77, 12-78, 12-80 AND**  
18 **SUBPARTS, 12-81, AND 12-86)**

19 **Q. HAVE ANY OF THE SECTION 12 ISSUES CLOSED SINCE ESCHELON**

---

<sup>205</sup> See the remaining paragraphs of Section 12.6 (closed language regarding other forms of testing).

<sup>206</sup> Ms. Albersheim has admitted that Release 20.0 is a "new implementation" (*i.e.*, the term used in Eschelon's proposed language). *See* Minnesota arbitration, Albersheim MN Surrebuttal, p. 43, lines

1           **FILED ITS PETITION FOR ARBITRATION IN THIS CASE?**

2    A.    Yes. Eleven subject matters identified as “Section 12 issues” have been closed  
3           since the filing of Eschelon’s Petition. Below is the closed language for each  
4           closed Section 12 issue:

5           **SUBJECT MATTER NO. 30. COMMUNICATIONS WITH CUSTOMERS**

6           *Issue No. 12-65 (ICA Section 12.1.5.4.7) & 12-66 (ICA Section 12.1.5.5)*

7           **Issue 12-65 (Closed)**

8                   12.1.5.4.7 The Qwest technician will limit any communication  
9                   with CLEC End User Customer to that necessary to gain access to  
10                  premises and perform the work. Specifically, the Qwest technician  
11                  will not initiate any discussion regarding Qwest’s products and  
12                  services with CLEC End User Customer and will not make  
13                  disparaging remarks about CLEC and will refer any CLEC End  
14                  User Customer questions other than those related to the Qwest  
15                  technician's gaining access to the premises and performing the  
16                  work to CLEC. If the Qwest Technician has questions or concerns  
17                  other than those necessary to gain access to premises and perform  
18                  the work, the Qwest technician will discuss with CLEC and not  
19                  CLEC End User Customer. Notwithstanding the foregoing, if a  
20                  CLEC End User Customer initiates a discussion with the Qwest  
21                  technician about Qwest’s products or services and requests such  
22                  information, nothing in this Agreement prohibits the Qwest  
23                  technician from referring the CLEC End User Customer to the  
24                  applicable Qwest retail office and providing the telephone number  
25                  and/or web site address for that office to the CLEC End User  
26                  Customer.

27           **Issue 12-66 (Closed)**

28                   12.1.5.5 Notwithstanding any other provision of this Agreement,  
29                   when a CLEC End User Customer experiences an outage or other  
30                   service affecting condition or Billing problem due to a known  
31                   Qwest error or action, Qwest shall not use the situation (including  
32                   any misdirected call) as a win back opportunity or otherwise to

---

13-15 (“The underlying architecture of IMA Release 20.0 is changing from EDI to XML. This is such a significant change that Qwest is treating this as a new implementation”).

1 initiate discussion of its products and services with CLEC's End  
2 User Customer.

3 **SUBJECT MATTER NO. 31A. SUPPLEMENTAL ORDERS**

4 Issue No. 12-68 (ICA Section 12.2.3.2 and associated Section 12.7.1)

5 12.2.3.2 There is no charge for CLEC submitting a supplement or  
6 cancelling or re-submitting a service request. Nothing in this  
7 provision is intended to prohibit Qwest from billing OSS-related  
8 costs pursuant to Section 12.7 of this Agreement or non-recurring  
9 or recurring charges for products or services applicable pursuant to  
10 other provisions of this Agreement.

11  
12 12.7 OSS Rate Elements

13 **STATE SPECIFIC – COLORADO**

14  
15  
16 12.7.1 OSS charges, as applicable, will be billed at rates set forth  
17 in Exhibit A. Any such rates will be consistent with Existing  
18 Rules. Qwest shall not impose any recurring or nonrecurring OSS  
19 charges unless and until the Commission approves such rates or  
20 until such rates go into effect by operation of law.

21  
22 **STATE SPECIFIC – ARIZONA, OREGON, UTAH,**  
23 **WASHINGTON**

24  
25 12.7.1 OSS charges, as applicable, will be billed at rates set forth  
26 in Exhibit A. Any such rates will be consistent with Existing  
27 Rules. Qwest shall not impose any recurring or nonrecurring OSS  
28 charges unless and until the Commission authorizes Qwest to  
29 impose such charges and/or approves applicable rates at the  
30 completion of appropriate cost docket proceedings.

31  
32 **STATE SPECIFIC – MINNESOTA**

33  
34 12.7.1 OSS charges, as applicable, will be billed at rates  
35 set forth in Exhibit A. Any such rates will be consistent with  
36 Existing Rules. Qwest shall not impose any recurring or  
37 nonrecurring OSS charges unless and until the Commission  
38 authorizes Qwest to impose such charges and/or approves  
39 applicable rates at the completion of appropriate cost docket

1 proceedings.

2 **SUBJECT MATTER NO. 32. PENDING SERVICE ORDER NOTIFICATIONS**  
3 **(“PSONS”)**

4 *Issue No. 12-70: ICA Section 12.2.7.2.3*

5 12.2.7.2.3 Pending Service Order Notification. When Qwest  
6 issues or changes the Qwest service orders associated with the  
7 CLEC LSR, Qwest will issue a Pending Service Order Notification  
8 (PSON) to CLEC. Through the PSON, Qwest supplies CLEC with  
9 information that appears on the Qwest service order, providing at  
10 least the data in the service order’s Service and Equipment (S&E)  
11 and listings sections that Qwest provided to requesting CLECs as  
12 of IMA Release 13.0.

13 **SUBJECT MATTER NO. 34. FATAL REJECTION NOTICES**

14 *Issue No. 12-74: ICA Sections 12.2.7.2.6.1 and 12.2.7.2.6.2*

15 12.2.7.2.6 Fatal Rejection Notices

16 12.2.7.2.6.1 If CLEC submits an LSR or ASR that  
17 contains a Fatal Error and receives a Fatal Reject notice,  
18 CLEC will need to resubmit the LSR or ASR to obtain  
19 processing of the service request, except as provided in  
20 Section 12.2.7.2.6.2.

21 12.2.7.2.6.2 If Qwest rejects a service request in error,  
22 Qwest will resume processing the service request as soon  
23 as Qwest knows of the error. At CLEC’s direction, Qwest  
24 will place the service request back into normal processing,  
25 without requiring a supplemental order from CLEC and  
26 will issue a subsequent FOC to CLEC.

1 **SUBJECT MATTER NO. 35. TAG AT DEMARCATION POINT**

2 *Issues Nos. 12-75 and 12-75(a): ICA Sections 12.3.1 and subpart; 12.4.3.6.3*

3 **Issue 12-75**

4 12.3.1 Demarcation Point.

5 12.3.1.1 If CLEC requires information identifying the Demarcation Point  
6 to complete installation, Qwest will provide to CLEC information  
7 identifying the location of the Demarcation Point (e.g., accurate binding  
8 post or Building terminal binding post information). If Qwest is unable to  
9 provide such information, the Demarcation Point is not tagged, and CLEC  
10 has dispatched personnel to find the Demarcation Point and is unable to  
11 locate it, Qwest will dispatch a technician and tag the line or circuit at the  
12 Demarcation Point at no charge to CLEC, if CLEC informs Qwest within  
13 30 Days of service order completion.  
14

15 **Issue 12-75(a)**

16 12.4.3.6.3 Whenever a Qwest technician is dispatched to an End User  
17 Customer premises other than for the sole purpose of tagging at the  
18 Demarcation Point, CLEC may request Qwest to place a tag accurately  
19 identifying the line or circuit, including the telephone number or Qwest  
20 Circuit ID, at the Demarcation Point if such a tag is not present. Qwest  
21 will perform such tagging at no charge to CLEC. If CLEC is requesting  
22 the dispatch solely for purposes of having Qwest tag the Demarcation  
23 Point, see Section 12.3.1.1.

24 **SUBJECT MATTER NO. 36. LOSS AND COMPLETION REPORTS**

25 *Issues Nos. 12-76 and 12-76(a): ICA Sections 12.3.7.1.1, 12.3.7.1.2*

26 12.3.7.1.1 The daily loss report will contain a list of accounts  
27 that have had lines disconnected because of a change in the End  
28 User Customer's local service provider. Qwest will issue a loss  
29 report when a service order Due Dated for the previous business  
30 day, is completed or canceled in Qwest's service order processor  
31 (SOP). The losses on the report will be for the previous day's  
32 activity. This report will include detailed information consistent  
33 with OBF guidelines, but no less than the BTN, service order  
34 number, PON, service name and address, the WTN the activity took  
35 place on and date the service order completed (the date the change

1 was completed). Individual reports will be provided for at least the  
2 following list of products:

- 3 a) Resale; and  
4 b) Unbundled Loop.

5 12.3.7.1.2 Completion Report provides CLEC with a daily report.  
6 This report is used to advise CLEC that the order(s) for the previous day's  
7 activity for the service(s) requested is complete. This includes service  
8 orders Qwest generates without an LSR (for example, records correction  
9 work, PIC or Maintenance and Repair charges). This report will include  
10 detailed information consistent with OBF guidelines, but no less than the  
11 BTN, service order number, PON, service name and address, the WTN the  
12 activity took place on and date the service order completed (the date the  
13 change was completed). Individual reports will be provided for Resale  
14 and Unbundled Loop.

15 **SUBJECT MATTER NO. 37. TESTING CHARGES WHEN CIRCUIT IS ON**  
16 **PAIR GAIN**

17 *Issue No. 12-77: ICA Section 12.4.1.5*

18 12.4.1.5.1 If the circuit is on Pair Gain, or like equipment that  
19 CLEC or Qwest cannot test through, and CLEC advises Qwest of  
20 this, Qwest will not assess testing charges. Whether other charges  
21 (including charges that may have a testing component), such as  
22 dispatch charges, Maintenance of Service charges or Trouble  
23 Isolation Charges, apply will be governed by the provisions of this  
24 Agreement associated with such charges. See, e.g., Sections 6.6.4  
25 & 9.2.5.2.

26 **SUBJECT MATTER NO. 38. DEFINITION OF TROUBLE REPORT**

27 *Issue No. 12-78: ICA Section 12.4.1.7*

28 12.4.1.7 For the purposes of Section 12.4.1.8, "Trouble Report" means  
29 trouble reports received via MEDIACC, CEMR, or successor systems, if  
30 any, or reported to one of Qwest's call or repair centers, and managed and  
31 tracked within Qwest's call center databases and Qwest's WFA (Work

1 Force Administration) and MTAS (Maintenance Tracking Administration  
2 System), and successor systems, if any.

3 **SUBJECT MATTER NO. 39. CHARGES FOR REPEATS**

4 Issues Nos. 12-80, 12-80(a), 12-80(b) and 12-80(c): ICA Sections 12.4.1.8,  
5 12.4.1.8.1, 6.6.4, and 9.2.5.2

6 **Issues 12-80 and 12-80(a)<sup>207</sup>**

7 12.4.1.8 Where Qwest has billed CLEC for Maintenance of  
8 Services or Trouble Isolation (“TIC”) charges for a CLEC trouble  
9 report, Qwest will remove such Maintenance of Services or TIC  
10 charge from CLEC’s account and CLEC may bill Qwest for its  
11 dispatch(es) on Repeat Troubles(s) to recover a Maintenance of  
12 Services or TIC charge or CLEC’s actual costs, whichever is less,  
13 if all of the following conditions are met:

14 ....  
15 e) CLEC’s demonstration of its technician dispatch on the Repeat  
16 Trouble; provided that such demonstration is sufficient when  
17 documented by CLEC’s records that are generated and maintained  
18 in the ordinary course of CLEC’s business.

19  
20 (i) If, however, CLEC does not use remote testing capability, a  
21 technician dispatch is required for both the prior and Repeat  
22 Trouble. Where CLEC uses remote testing capability and  
23 provides the test results described in subsection (d) of Section  
24 12.4.1.8, CLEC must demonstrate the technician dispatch  
25 pursuant to subsection (e) of Section 12.4.1.8 only for the  
26 Repeat Trouble.

27 **Issue 12-80(b)**

28 6.6.4 When CLEC requests that Qwest perform trouble isolation  
29 with CLEC, a trouble isolation charge (TIC) charge will apply  
30 when Qwest dispatches a technician and the trouble is found to be  
31 on the End User Customer’s side of the Demarcation Point. If the  
32 trouble is on the End User Customer’s side of the Demarcation  
33 Point, and CLEC authorizes Qwest to repair the trouble on CLEC’s  
34 behalf, Qwest will charge CLEC the appropriate Additional Labor

---

<sup>207</sup> Issue 12-80(a) concerned language is Section 12.4.1.8.1. Section 12.4.1.8.1 was deleted as a separate section, and the content was moved to paragraph (i).

1 Charges set forth in Exhibit A in addition to the TIC charge. No  
2 charges shall apply if CLEC indicates trouble in Qwest's network  
3 and Qwest confirms that such trouble is in Qwest's network. In  
4 the event that Qwest reports no trouble found in its network on a  
5 trouble ticket and it is subsequently determined that the reported  
6 trouble is in Qwest's network, then Qwest will waive or refund to  
7 CLEC any TIC charges assessed to CLEC for that same trouble  
8 ticket. If Qwest reported no trouble found in its network but, as a  
9 result of a repeat trouble, CLEC demonstrates that the trouble is in  
10 Qwest's network, CLEC will charge Qwest a trouble isolation  
11 charge as described in Section 12.4.1.8.

12 **Issue 12-80(c)**

13 9.2.5.2 When CLEC requests that Qwest perform trouble isolation  
14 with CLEC, a Maintenance of Service Charge will apply when  
15 Qwest dispatches a technician and the trouble is found to be on the  
16 End User Customer's side of the Loop Demarcation Point. If the  
17 trouble is on the End User Customer's side of the Loop  
18 Demarcation Point, and CLEC authorizes Qwest to repair the  
19 trouble on CLEC's behalf, Qwest will charge CLEC the  
20 appropriate Additional Labor Charges and Maintenance of Service  
21 Charge, if any, as set forth in Exhibit A at 9.20. No charges shall  
22 apply if CLEC provides Qwest with test results indicating trouble  
23 in Qwest's network and Qwest confirms that such trouble is in  
24 Qwest's network. In the event that Qwest reports no trouble found  
25 in its network on a trouble ticket and it is subsequently determined  
26 that the reported trouble is in Qwest's network, then Qwest will  
27 waive or refund to CLEC any Maintenance of Service Charges  
28 assessed to CLEC for that same trouble ticket. If Qwest reported  
29 no trouble found in its network but, as a result of a repeat trouble,  
30 CLEC demonstrates that the trouble is in Qwest's network, CLEC  
31 will charge Qwest a trouble isolation charge as described in  
32 Section 12.4.1.8.

33 **SUBJECT MATTER NO. 40. TEST PARAMETERS**

34 *Issue No. 12-81: ICA Section 12.4.3.5*

35 12.4.3.5 Qwest Maintenance and Repair and routine test parameters and  
36 levels will be in compliance with Qwest's Technical Publications, which  
37 will be consistent with Telecordia's General Requirement Standards for

1 Network Elements, Operations, Administration, Maintenance and  
2 Reliability and/or the applicable ANSI standard.

3 **SUBJECT MATTER NO. 42. TROUBLE REPORT CLOSURE**

4 Issue No. 12-86: ICA Sections 12.4.4.1; 12.4.4.2; 12.4.4.3

5 12.4.4 Trouble Report Closure

6 12.4.4.1 When Qwest closes a trouble report, Qwest will  
7 assign a code accurately identifying the reason or cause for service  
8 problems and the action taken (i.e., a “disposition code”).

9 12.4.4.2 Qwest will notify CLEC of the disposition code  
10 upon request. For Maintenance and Repair trouble reports, the  
11 disposition code and any remarks will also be available through  
12 electronic interface (e.g., Customer Electronic Maintenance and  
13 Repair (CEMR)). CLEC closed trouble reports will be available to  
14 CLEC via the history function in the electronic interface (e.g.,  
15 CEMR).

16 12.4.4.3 Qwest will provide a web based tool (currently  
17 known as Maintenance and Repair Invoice Tool) that allows CLEC  
18 to access electronic copies of Qwest repair invoice information.  
19 The repair invoice information will include the time and material  
20 information that Qwest provides to its retail End User Customers  
21 on their time and material invoices. Qwest, through this tool, will  
22 provide access to at least the telephone number or circuit  
23 identification, CLEC ticket number, Qwest ticket number, End  
24 User Customer Address, End User Customer Name, USOC,  
25 Quantity, Start Date, End Date, Disposition Code, and any related  
26 remarks (comments by repair technician). Such invoice  
27 information will be available to CLEC within two (2) business  
28 days of ticket closure for POTS services and sixteen (16) business  
29 days for non-POTS services. Invoice information will be retained  
30 and available to CLEC via this tool for at least twelve (12) months.

31 **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

32 A. Yes.

## Section 12 Eschelon Proposed Language March 18, 2004

The attached Section 12 March 18, 2004 is as it was presented by Eschelon to Qwest on March 18, 2004 with the following changes:

- Regular Text indicates the language is the same or substantially similar to the Qwest's Template Interconnection Agreement V1.10 2/02/04 language
- ***Bold Italics Text*** indicates language is the same or substantially similar to the Qwest/AT&T Interconnection Agreement language and the language was not contained in Qwest's Template Interconnection Agreement V1.10 2/02/04
- **Bold Text** indicates the language is the same or substantially similar to the Qwest Wholesale Website documentation.
- Underlined Text indicates Eschelon's proposed language
- Footnotes have been added to site sources documentation for language that is the same or substantially similar to the Qwest Wholesale Website documentation. Note: To the extent that the language was from the Qwest Wholesale Website documentation, it was based on the documentation posted on the Qwest Wholesale Website at the time the section was present to Qwest. (2004). Therefore the version number (if applicable) of the Qwest document has been provided.
- **Gray Text** indicates those items Eschelon conceded during the negotiations process.

**From:** Clauson, Karen L.  
**Sent:** Thursday, March 18, 2004 6:35 PM  
**To:** 'Miles, Linda'  
**Cc:** Sullivan, Mary; Houston, Neil; Cameron, Kelly-WDC; Kennedy, Robert.F; Olson, Joan M.; Markert, William D.; Johnson, Bonnie J.; Goldberg, Tobe L.  
**Subject:** Business Processes - Section 12 - Eschelon Proposal

Linda:

Enclosed is Eschelon's proposed language for Section 12, Business Processes. Also enclosed are Eschelon's proposed Exhibits M and N, which are referenced in Section 12. Exhibit M is the Qwest's Manual Steps Required for Copper Facility Assignment Process, and Exhibit N is Qwest's Fiber Facility Assignment Process for DS1 and above (both taken from Qwest's web site and moved to Word documents).

Eschelon's proposed language in Section 12 and the Exhibits is the same for all of our states (except language in Section 12 recognizing different time zones, as noted in the document).

If language in Eschelon's proposal is either the same or similar to language in the Qwest-AT&T ICA, Eschelon has generally indicated the paragraph number from the Qwest-AT&T ICA in yellow shading as a "former" paragraph number. There are also some Eschelon notes at the end of the document with respect to definitions and other sections of the ICA, etc. Eschelon's proposals generally reflect current Qwest processes, consistent with Qwest's own documentation of those processes.

As indicated in Issues 44 and 46 in Eschelon's 11/26/03 Matrix, and as we have mentioned since then, Eschelon has reviewed the various process requirements in the ICA together. Rather than either not dealing with some process requirements or doing so sporadically throughout the ICA, Eschelon has tried for the most part to bring together processes used by Eschelon in one "Business Processes" section. To our business folks, this is a more user-friendly approach and more in line with how they will use the ICAs. Eschelon's proposed approach is similar to the approach taken in the existing ICAs between the Parties (generally based on the former AT&T ICAs). Attachment 5 in WA and Attachment 8 in CO of our existing ICAs, for example, are also entitled "Business Processes" and deal with such processes. In MN, Attachments 5 and 6 of our existing ICA deal with Provisioning and Ordering and Maintenance. Eschelon's approach is also similar to, or an extension of, the approach taken in the new Qwest-AT&T ICAs in which Qwest and AT&T centralized and expanded much of the billing and recording processes into Section 21. Just as it makes sense to do so for billing in Section 21, it makes sense to do so for the other processes (pre-ordering, ordering, provisioning, maintenance and repair) in Section 12.

Please review the enclosed proposed language and provide us with Qwest's responses. If Qwest continues to decline participation in formulating an issues matrix at this time, perhaps Qwest could provide Eschelon with its responses to Section 12 language in a format similar to Qwest's Dec. 22, 2003 "Section 8 Responses" document, before we arrange calls to discuss Section 12.

#### **Proposed Section 12:**

#### **Proposed Exhibits M and N:**

Karen L. Clauson  
Senior Director of Interconnection  
Eschelon Telecom, Inc.  
730 2nd Ave. South, Suite 1200  
Minneapolis, MN 55402  
Phone: 612-436-6026  
Fax: 612-436-6126

**NOTE:** Regarding additional/modified defined terms and other issues affecting other Sections of the ICA, or notes generally, see “NOTES” section at the end of this document. If language in Eschelon's proposal is either the same or similar to language in the Qwest-AT&T ICA, Eschelon has generally indicated the paragraph number from the Qwest-AT&T ICA in yellow shading as a "former" paragraph number.

## Section 12.0 – BUSINESS PROCESSES

### 12.1 General Terms (former 12.1)

**12.1.1 (former 12.1.1)** Qwest has developed and shall continue to provide Operational Support System (OSS) interfaces using electronic gateways and manual processes. (Qwest and CLEC responsibilities for on-going support of OSS are set forth in Section 12.1.1.1 below.) These gateways act as a mediation or control point between CLEC's and Qwest's OSS. These gateways provide security for the interfaces, protecting the integrity of the Qwest OSS and databases. This Section describes Qwest's OSS interfaces, as well as manual processes, that Qwest shall provide to CLEC to support Pre-ordering, Ordering, Provisioning, Maintenance and Repair and Billing. (For additional Billing information, see Section 21.)

12.1.1.1 (former 12.1.1) Qwest will continue to make improvements to the electronic OSS interfaces as technology evolves, Qwest's legacy systems improve, or CLEC needs require. Qwest shall submit change requests<sup>1</sup> and provide notification to CLEC consistent with the provisions of the Change Management Process (CMP) set forth in Section 12.1.6.

12.1.1.2 (former 6.4.3) The Pre-ordering, Ordering, Provisioning, installation, Maintenance and Repair processes for CLEC's service requests are applicable whether CLEC's service requests are submitted via OSS or by manual process (e.g., facsimile).

12.1.1.3 Qwest will provide output information to CLEC in the form of bills, files, and reports, as set forth below in Section 12.1.3.2.3, Section 12.1.3.2.3.1, and Section 21 (Billing) and will also provide access to information through databases and documentation on Qwest's web site, as set forth below in Section 12.1.3.2.

### 12.1.2 Nondiscrimination

12.1.2.1 (former 12.1.2) Through its electronic gateways and manual processes, Qwest shall provide CLEC non-discriminatory access to Qwest's OSS for Pre-ordering, Ordering and Provisioning, Maintenance and Repair, and Billing functions. For those functions with a retail analogue, such as Pre-ordering, Ordering and Provisioning of resold services, Qwest shall provide CLEC access to its OSS in substantially the same time and manner as it provides to itself, its End User Customers, its Affiliates or any other Party. For those functions with no retail analogue, such as Pre-ordering and Ordering and Provisioning of

---

<sup>1</sup> Qwest Wholesale Website: Qwest CMP Document 12/11/2003

Unbundled Elements, Qwest shall provide CLEC access to Qwest's OSS sufficient to allow an efficient competitor a meaningful opportunity to compete. Qwest will comply with the standards for access to OSS set forth in Section 20, Exhibit B and Exhibit K. Qwest shall deploy the necessary systems and personnel to provide sufficient access to each of the necessary OSS functions. Qwest shall provide OSS designed to accommodate both current demand and reasonably foreseeable demand. Services that Qwest shall provide in substantially the same time and manner (e.g., substantially the same in timeliness and quality) to that which Qwest provides to itself, its End User Customers, its Affiliates or any other Party, include (former 12.3.1.1 and former 12.3.6.4):

12.1.2.1.1 Business process support, including escalations (former 12.3.12.1);

12.1.2.1.2 CLEC's access to Due Dates, including on-time Firm Order Confirmations (FOCs), so that CLEC does not appear to be less efficient and responsive to its potential End User Customer's than Qwest.

12.1.2.1.3 (former 12.3.24.9) Service order processing capabilities and best efforts to minimize CLEC service order impacts during Switch hardware additions and modifications;

12.1.2.1.4 (former 12.3.23.2) Notification of any and all Maintenance and Repair activities that may impact CLEC Ordering practices such as embargoes, moratoriums, and quiet periods.

12.1.2.1.5 (former 12.2.1.9.1) Provisioning services during at least the same business hours, including out-of-hours services.

12.1.2.1.6 (former 6.4.8) Intervals provided to CLEC. (Intervals are those set forth in Exhibit C or those provided by Qwest to itself, its End User Customers, its Affiliates or any other Party, whichever is shorter, unless CLEC requests otherwise.)

12.1.2.1.7 (former 12.3.15.1) Trouble report processing, status information (including repair completion), and commitment intervals for similar trouble conditions;

12.1.2.1.8 (former 12.3.1.3) Response time priority for trouble reports from CLEC;

12.1.2.1.9 (former 12.3.24.7.8) Restoration of service to End User Customers, including restoration of service in the event that CLEC End User Customer service is disconnected in error during switch and frame conversion activity;

12.1.2.1.10 (former 12.3.20.1) Answer time and quality for manually-reported Maintenance and Repair calls by CLEC to Qwest;

- 12.1.2.1.11 (former 12.3.6.1) Testing and access to testing results, including that Qwest will conduct testing, to the extent testing capabilities are available to Qwest, to diagnose and isolate a trouble where CLEC does not have the ability to diagnose and isolate trouble on a Qwest line, circuit, or service provided in this Agreement that CLEC is utilizing to serve an End User Customer;
- 12.1.2.1.12 (former 12.3.16.1) Notice that a trouble report commitment (appointment or interval) has been or is likely to be missed;
- 12.1.2.1.13 (former 12.3.13.1) Maintenance and Repair dispatch personnel availability;
- 12.1.2.1.14 (former 12.3.9.1) Notice of Major Network Outages;
- 12.1.2.1.15 (former 12.3.10.1) Scheduled Maintenance and Repair;
- 12.1.2.1.16 (former 12.3.10.2) Notice of potentially CLEC End User Customer impacting Maintenance and Repair activity, to the extent Qwest can determine such impact; and negotiation of mutually agreeable dates with CLEC;
- 12.1.2.1.17 (former 12.3.24.5) Identification and notification of the particular dates and locations for frame conversion embargo periods prior to instituting an embargo period;
- 12.1.2.1.18 (former 12.3.24.6) Identification and notification of the particular dates and locations for Switch conversion embargo periods prior to instituting an embargo period;
- 12.1.2.1.19 (former 12.3.24.7.1) Use of best efforts to avoid loss of End User Customer service associated with LSRs of any kind issued during Switch or frame conversion quiet periods;
- 12.1.2.1.20 (former 12.3.24.8) Implementation of service order embargoes and/or quiet periods during Switch upgrades; and
- 12.1.2.1.21 (former 12.3.22.4) Information contained in, and updates to, the ICONN database, which is described in Section 12.1.3.2.5 below, and any other databases with a retail analogue.
- 12.1.2.2 (former 12.3.19.2) All Qwest employees who perform services pursuant to this Agreement or who have any interaction with CLEC and CLEC End User Customers will be trained in non-discriminatory behavior. When discriminatory behavior is identified, Qwest shall take appropriate disciplinary action. Nothing in this Section shall limit or alter CLEC's ability to seek additional relief for discriminatory behavior. See also Section 12.1.5 below (Responsibilities Relating to End User Customers)

### 12.1.3 Documentation, Questions, Escalations, and Disputes

12.1.3.1 (former 12.2.10.1) Qwest shall provide complete and accurate documentation and assistance for CLEC to understand how to implement and use all of the available OSS functions and Qwest's manual processes. As described in this Section 12.1.3, this assistance will include documentation, training, a Qwest account team for CLEC, and help desk support.

#### 12.1.3.2 Documented Processes and Information

12.1.3.2.1 (former 12.1.2 and former 12.2.1.10.1) Qwest shall provide assistance for CLEC to understand how to implement and use all of the available OSS functions. Qwest shall provide CLEC sufficient electronic and manual interfaces to allow CLEC equivalent access to all of the necessary OSS functions. Through its website, training, disclosure documentation and development assistance, Qwest shall disclose to CLEC any internal business rules, specifications, test cases, mapping examples and other formatting information necessary to ensure that CLEC's requests and orders are processed efficiently and to enable CLEC to design its own systems. Qwest will provide information to CLEC in writing. (former 12.2.1.9.1) Qwest will post such information, including business rules regarding out-of-hours Provisioning, on Qwest's web site. If Qwest fails to provide such information or provides inaccurate information, Qwest will remedy the situation and such remedy shall not include requiring CLEC to perform coding changes outside of major releases. Qwest shall provide training to enable CLEC to devise its own course work for its own employees. Through its documentation available to CLEC, Qwest will identify how its interface differs from national guidelines or standards.

12.1.3.2.2 (former 12.1.1) Additional technical information and details about Qwest's OSS shall be provided by Qwest to CLEC in training sessions and documentation and support, such as Qwest's "Interconnect Mediated Access User's Guide." Qwest shall maintain its Interconnect Mediated Access User's Guide on Qwest's wholesale web site. (former 6.2.1) Qwest shall offer introductory training on procedures that CLEC must use to access Qwest's OSS at no cost to CLEC. If CLEC asks Qwest personnel to travel to CLEC's location to deliver training, CLEC will pay Qwest's reasonable travel related expenses unless the Parties agree otherwise.

12.1.3.2.3 Qwest provides output information to CLEC in the form of bills, files, and reports (former 12.2.5), including:

12.1.3.2.3.1 (former 12.2.5.2.8) The Qwest Street Address Guide (SAG) provides Address and Serving Central Office Information. Qwest will make this file available via a download process. CLEC may retrieve it by File Transfer Protocol (FTP), Network Data Mover (NDM) connectivity, or a Web browser.

12.1.3.2.3.2 (former 12.2.5.2.8) The Qwest Features Availability Matrix (FAM) provides USOCs and descriptions by state, and USOC availability by NPA-NXX with the exception of Centrex and provides InterLATA/IntraLATA Carriers by NPA-NXX. Qwest will make this file available via a download process. CLEC may retrieve it by File Transfer Protocol (FTP), Network Data Mover (NDM) connectivity, or a Web browser.

12.1.3.2.3.3 Bills and Daily Usage Files (DUF), which are described in Section 21.

12.1.3.2.3.4 Loss and completion reports, which are described below in Section 12.3.7.

12.1.3.2.4 (former 9.2.4.1 and 12.2.10.3) Qwest will provide and maintain detailed Pre-ordering, Ordering, Provisioning and installation, Maintenance and Repair and Billing processes on the Qwest wholesale web sites. These web sites will also include electronic interface training information and user documentation.

12.1.3.2.5 (former 12.3.22.1-4) Qwest will maintain and update an information database, available to CLEC for the purpose of allowing CLEC to obtain information about Qwest's NPAs, LATAs, Access Tandems and Central Offices. This data base will also include CPNI information, **NXX activity reports, switch features, switch conversions and upgrades, switch replacements, switch generic changes, embargo dates, loop data, usage data, Digital Loop Carrier (DLC) Remote Terminal (RT) equipment cabinets by Distribution Area (DA), outside plant and interoffice facility jobs (at least those greater than \$100,000), Universal Digital Carrier (UDC) information., and DA maps<sup>2</sup>.** This database is known as the ICONN database, available to CLEC via Qwest's Web site.

12.1.3.2.6 Qwest will maintain and update information databases, available to CLEC via Qwest's Web site, for the purpose of allowing CLEC to obtain information about the following:

12.1.3.2.6.1 **Resale voice messaging (known as the BVMS database);<sup>3</sup>**

12.1.3.2.6.2 **Current status on ASRs for at least 56k, 64k, 9.6k, DSO, DS1, DS3, Feature Group, LIS and wireless services that have been delayed due to facility shortages,**

<sup>2</sup> Qwest Wholesale Website: ICONN Database

<sup>3</sup> Qwest Wholesale Website: Network Database Tools

**equipment shortages or other issues (known as Held, Escalated, Expedite (HEET) tool);<sup>4</sup>**

**12.1.3.2.6.3 Qwest will maintain and update additional information databases, available to CLEC via Qwest's Web site, for the purpose of allowing CLEC to obtain accurate information about Resale voice messaging (known as the BVMS database)<sup>5</sup>, allowing CLEC to obtain current status on service orders that have been delayed due to facility shortages, equipment shortages or other issues (known as the Held, Escalated & Expedited Tool (HEET)),<sup>6</sup> allowing CLEC to obtain information about Resale Products (known as the Resale Product Database (RPD))<sup>7</sup>, allowing CLEC to obtain detailed information on USOCs and FIDs (known as the USOC and FID finder)<sup>8</sup>, allowing CLEC to access information for all Network Disclosures, allowing CLEC to obtain information regarding Qwest feature availability (known as the Feature Availability Matrix (FAM)), allowing CLEC access to Qwest's Street Address Guide Area (SAGA), allowing CLEC to obtain technical information and publications, allowing CLEC to obtain information about trouble reporting codes and trouble disposition codes,<sup>9</sup> allowing CLEC to obtain information about training courses and training, and allowing CLEC to obtain information on forums and meetings.<sup>10</sup>**

**12.1.3.2.7 When information about an existing Qwest process is missing or requires clarification in Qwest documentation available to CLEC, Qwest will develop new or clarify existing documentation about that process and post it to Qwest's web site. Pursuant to Qwest's External Documentation Request Process, CLEC may also request that Qwest so document or clarify language about an existing process. To do so, CLEC will submit an External Documentation Request Form (available on Qwest's web site) to Qwest.<sup>11</sup>**

<sup>8</sup> Qwest Wholesale Website: USOC and FID Finder

<sup>9</sup> Qwest Wholesale Website: Network General Information.

<sup>10</sup> Qwest Wholesale Website: Training

<sup>11</sup> Qwest Wholesale Website: External Documentation Requests Process & CLEC External Process Clarification Request

**12.1.3.2.7.1** Within two (2) business days from receipt of the request, Qwest will notify CLEC if the request is incomplete and identify the additional information needed or, if an initial determination has been made, notify CLEC that the request is out of the scope for such a documentation request. If the request is complete and appears to be within the scope, Qwest will send an acknowledgement of receipt to CLEC. This establishes the Acknowledgement Date. *Id.*

**12.1.3.2.7.2** Within ten (10) business days after the Acknowledgement Date, Qwest will determine if it believes the request is in scope. If so, Qwest will determine a Target Completion Date. If not, Qwest and CLEC will attempt to resolve the issue. If no resolution is reached, either Party may escalate. *Id.*

**12.1.3.2.7.3** Within fourteen (14) business days, Qwest will notify CLEC if the request has been accepted or denied. If denied, CLEC may escalate. If accepted, Qwest will complete the request and publish notice to CLECs within ten (10) business days. Qwest will provide documentation, including at least a Level 2 notice, pursuant to CMP guidelines in Exhibit G, unless the parties to CMP agree to a different level of notice or request. Qwest will notify CLEC when the request is complete and will close the request ten (10) Days after the effective date. *Id.*

**12.1.3.2.8** All applications and forms that are referred to in this Agreement or are used to implement any of its provisions shall comply with the terms and conditions set forth in this Agreement. Such applications and forms are for administrative purposes only and, notwithstanding any language in an application or form to the contrary, nothing in the applications or forms alters or amends the terms of this Agreement.

**12.1.3.2.9** (former 12.1.8.1) Qwest will establish interface contingency plans and disaster recovery plans for the interfaces described in this Section 12. Qwest will document such plans and post the documentation on Qwest's website. For requests that are not CLEC-specific, Qwest will work cooperatively with CLECs through the Change Management Process (CMP) to consider any suggestions made by CLECs to improve or modify such plans. CLEC specific requests for modifications to such plans will be negotiated and mutually agreed upon between Qwest and CLEC.

### 12.1.3.3 Points of Contact for Assistance and Hours of Availability

**12.1.3.3.1** Contact Lists: (former 6.4.6) CLEC shall provide Qwest, and Qwest shall provide CLEC, with written points of contact information (including names, titles, telephone numbers, email addresses, and other

pertinent information, such as pager numbers, if applicable) for inquiries and problem resolution arising when conducting business under this Agreement, including Pre-ordering, Ordering, Provisioning, Maintenance and Repair, and Billing issues. The Parties are both responsible for reviewing and providing updates to such information to ensure it is current and accurate.

**12.1.3.3.2 Account Team: A Qwest Account Team will assist CLEC in conducting business with Qwest. The Qwest Account Team will consist of a Sales Team and a Service Team or, if both Parties agree, all members of the Account Team may be devoted to service issues. The Sales Team responds to inquiries relating to products and generates sales proposals. The Service Team responds to inquiries relating to Pre-ordering, Ordering, Provisioning, Maintenance and Repair, and Billing issues. The Qwest Service Manager is one of the points of escalation<sup>12</sup> in the escalation process described below.**

**12.1.3.3.2.1 A detailed description of the roles and responsibilities of the Sales Team and Service Team will be maintained on the Qwest wholesale web site. Such roles and responsibilities will include at least the following: *Id.***

**12.1.3.3.2.1.1 The Qwest Service Team will respond to CLEC inquiries in various ways, including pager, voicemail, written correspondence (including email), conference calls, and face-to-face meetings. When the Qwest Service Manager is in the office during normal business hours, CLEC may expect a telephone call in response to a page within 15-30 minutes. When the Qwest Service Manager is out of the office, the Qwest Service Manager will assign a Qwest representative to respond to such calls. For voicemail, when the Qwest Service Manager is in the office during normal business hours, CLEC may expect a response within four (4) hours. When the Qwest Service Manager is out of the office, the Qwest Service Manager's voicemail greeting will advise CLEC of the Service Manager's availability and contact information for an alternate representative who is in the office. *Id.***

**12.1.3.3.2.1.2 When issues arise, the Qwest Service Team will handle post mortems (root cause analysis) when CLEC submits a request for a post mortem. A Qwest Service Manager will review the logged notes, if any, regarding the event and determine the cause, the process used to repair/restore service, if applicable, and the process(es) implemented to prevent a**

---

<sup>12</sup> Qwest Wholesale Website: Account Team / Sales Executives and Service Managers V7.0.

reoccurrence of the event. Working with Qwest's support centers and Network Reliability Operations Center, as applicable, a Qwest Service Manager will conduct the Root Cause Analysis (RCA) and provide CLEC the complete analysis in writing as soon as it is available. Investigation and preparation of a typical post mortem takes from 2-10 business days depending on the complexity of the event. *Id.*

12.1.3.3.2.1.3 Qwest will provide project coordination for projects. Depending upon CLEC's request, the Sales Team or the Service Team will assist with Project Management/Coordination. Qwest's Sales Team will assist in obtaining project management for the installation of services such as new Optical Carrier (OC) systems, e.g., OC48, OC 12, etc. Qwest's Service Team will assist with project management for existing services, such as a grooming request, e.g., moving existing trunks to CLEC's new switch or grooming existing Digital Signal Level 1 (DS1) to new Digital Signal Level 3 (DS3) hubs. CLEC may request project coordination from the Sales Team or Service Team and Qwest will determine which team will handle the project coordination. *Id.*

12.1.3.3.2.2 In the event that a different Qwest Sales Executive or Service Manager is assigned to CLEC, the former Qwest Sales Executive or Service Manager will be responsible for familiarizing the new Qwest Sales Executive or Service Manager with CLEC's corporate profile and all contact information, CLEC's sales and/or service objectives, CLEC's network, this Agreement and any pending amendments to this Agreement, and CLEC's meeting schedules. The former Qwest Sales Executive or Service Manager will also: (a) transition all current open issues/sales proposals to the new Qwest Sales Executive and/or Service Manager along with all background information, parties involved, commitments and timelines; (b) establish a conference call or meeting with CLEC to introduce CLEC to the new Qwest Sales Executive or Service Manager; and (c) provide CLEC's files to the new Qwest Sales Executive and/or Service Manager including emails and any pertinent documentation. *Id.*

12.1.3.3.3 Support Centers/Help Desks: Qwest shall also provide support centers (sometimes referred to as “help desks”) for CLEC to gain assistance with inquiries and to submit trouble reports.

12.1.3.3.3.1 (former 12.3.7.1) Qwest and CLEC shall work cooperatively to develop positive, close working relationships among corresponding work centers and representatives involved in the trouble resolution processes.

12.1.3.3.3.1.1 The first time a trouble is reported, Qwest will assign a trouble report tracking number. (Depending on the circumstances, such trouble report tickets are sometimes referred to by various names, such as “Trouble Ticket,” “Escalation Ticket” or “Chronic Ticket.”) Qwest will communicate the trouble report tracking number (i.e., the “ticket” number) to CLEC at the time the trouble is reported. Closing of trouble reports is addressed in Section 12.4.4 below.

12.1.3.3.3.2 Qwest shall provide at least five types of support center assistance:

12.1.3.3.3.2.1 Interconnect Service Center Help Desk: (former 12.2.10.3) Qwest will provide Interconnect Service Center (ISC) Help Desks which will provide a point of entry for CLEC to gain assistance in areas involving order submission and manual processes and to report troubles. The ISC provides assistance regarding Interconnect Resale Services, Asynchronous Transfer Mode (ATM) Services, Resale Frame Relay, Complex Resale, Centrex, Local Number Portability (LNP), Interim Number Portability (INP), Unbundled Network Elements. If additional assistance is required, Qwest will transfer CLEC to the Qwest Customer Service Inquiry and Education (CSIE) Center. The CSIE will research such issues and contact CLEC regarding resolution of the issues.<sup>13</sup>

12.1.3.3.3.2.1.1 CLEC may report troubles at any time to the ISC, and the ISC will open a trouble report ticket. Although CLEC generally may report network troubles to the Maintenance and Repair support centers, Qwest’s systems do not allow CLEC to do so before the service order completes in Qwest’s systems. Often CLEC does not know when the service order completes. CLEC may contact the ISC to report network trouble if the

---

<sup>13</sup> Qwest Wholesale Website: Wholesale Customer Contact V20.0 PCAT.

**service request was completed within the past 72 business hours.** <sup>14</sup> If the service order completes before a trouble report ticket is opened and the issue is typically handled by the Maintenance and Repair support centers, the ISC may inform CLEC that the service order has completed and offer the option to CLEC of being transferred to the applicable Maintenance and Repair center to open a ticket. If the ISC/CSIE opens a trouble report ticket, the ISC/CSIE will complete the work on that trouble report until it is resolved and the ticket closed and will not refer or transfer CLEC to another support center, unless CLEC requests otherwise.

**12.1.3.3.3.2.1.2 For LNP issues, CLEC may call the ISC if the issue arises either 48 hours before or after the due date. More than 48 hours before the due date, CLEC may call the Maintenance and Repair support center. More than 48 hours after the due date, CLEC may call the AMSC. During LNP activities, CLEC may contact the Qwest ISC to request a manual concurrence for failed LNP subscription activity or if CLEC experiences problems during CLEC port activity that require restoration to Qwest facilities.**<sup>15</sup>

**12.1.3.3.3.2.1.2.1 Failed Subscription Activity. Occasionally, during the port process, the New Service Provider (NSP) may experience a problem with the Number Portability Administration Center (NPAC) subscription that will require a manual concurrence from the Old Service Provider (OSP). The NSP should verify that there is no pending subscription activity at the NPAC before contacting the ISC for assistance. If a pending subscription from the OSP is found at the NPAC, then CLEC may submit the matching subscription activity and complete the port activation on the Due Date (DD). If after verifying that there is not a pending port out subscription at the NPAC and CLEC is**

---

<sup>14</sup> Qwest Wholesale Website: Wholesale Customer Contact V20.0 PCAT.

<sup>15</sup> Qwest Wholesale Website. LNP PCAT V25.0

less than 48 hours from the DD/Frame Due Time (FDT), CLEC may contact the ISC to request a manual concurrence. At any time on the DD, if CLEC experiences a problem and requires manual concurrence, CLEC may contact the ISC for assistance. *Id.*

**12.1.3.3.3.2.1.2.2 Failed Port Activities.** If CLEC experiences problems during CLEC port activity and determines that the End User Customer service needs to be restored on Qwest facilities, CLEC may contact the Qwest ISC and open a trouble report ticket. The NSP controls the port activation. Once the broadcast has been sent from the NPAC to all service providers and the subscription is “active,” the TN has been ported to the NSP. At this point, Qwest, as the OSP, does not have control of the ported TN and cannot change any part of the subscription in the NPAC. If CLEC is experiencing problems with the broadcast, Qwest will work cooperatively to assure the routing information is correct. *Id.*

**12.1.3.3.3.2.1.2.3 CO:** The ISC Help desk will be available at least Monday through Friday 6:00 AM - 10:00 PM Mountain time and Saturday 7:00 AM - 6:00 PM Mountain time. The ISC CSR hotline for LSRs will be available at least Monday through Friday from 6:00 AM to 6:00 PM Mountain Time. The Qwest support centers providing assistance regarding ASRs will be available at least Monday through Friday from 6:00 AM to 6:00 PM Mountain Time. If CLEC’s service request was completed within the past 72 hours, see Section 12.1.3.3.3.2.1.1. <sup>16</sup>

**12.1.3.3.3.2.1.2.3 MN:** The ISC Help desk will be available at least Monday through Friday 7:00 AM - 11:00 PM Central time and Saturday 8:00 AM - 7:00 PM Central time. The ISC CSR hotline for LSRs will be available at least

---

<sup>16</sup> Qwest Wholesale Website, Wholesale Customer Contacts V20.0

**Monday through Friday from 7:00 AM to 7:00 PM Central Time. The Qwest support centers providing assistance regarding ASRs will be available at least Monday through Friday from 7:00 AM to 7:00 PM Central Time. If CLEC's service request was completed within the past 72 hours, see Section 12.1.3.3.3.2.1.1. *Id.***

**12.1.3.3.3.2.1.2.3 WA: The ISC Help desk will be available at least Monday through Friday 5:00 AM - 9:00 PM Pacific time and Saturday 6:00 AM - 5:00 PM Pacific time. The ISC CSR hotline for LSRs will be available at least Monday through Friday from 5:00 AM to 5:00 PM Pacific Time. The Qwest support centers providing assistance regarding ASRs will be available at least Monday through Friday from 5:00 AM to 5:00 PM Pacific Time. If CLEC's service request was completed within the past 72 hours, see Section 12.1.3.3.3.2.1.1. *Id.***

12.1.3.3.3.2.2 Systems Help Desk: (former 12.2.10.2.1 The CLEC Systems Help Desk (also known as the IT Help Desk) will provide a point of entry for CLEC to gain assistance with systems issues. System issues include those involving connectivity, system availability, and file outputs:

12.1.3.3.3.2.2.1 Connectivity covers trouble with CLEC's access to the Qwest system for hardware configuration requirements with relevance to EDI and GUI interfaces; software configuration requirements with relevance to EDI and GUI interfaces; modem configuration requirements, T1 configuration and dial-in string requirements, firewall access configuration, SecurID configuration, Profile Setup, dedicated web site access, and password verification.

12.1.3.3.3.2.2.2 System Availability covers system errors generated during an attempt by CLEC to place orders or open trouble reports through EDI and GUI interfaces. These system errors include Resale/POTS; UNE POTS; non-POTS services and Maintenance and Repair.

**12.1.3.3.3.2.2.3** File Outputs covers CLEC's output files and reports produced from its usage and order activity. File outputs system errors

include any output files that Qwest provides to CLEC via File Transfer Protocol (FTP), Network Data Mover (NDM) connectivity, or web browser, such as Daily Usage File; Loss/ Completion File, IABS Bill, CRIS Summary Bill, Category 11 Report and SAG/FAM Reports.

**12.1.3.3.3.2.2.4 CO: The Systems Help Desk will be available at least Monday through Friday 6:00 AM - 8:00 PM Mountain Time and Saturday 7:00 AM - 3:00 PM Mountain Time.<sup>17</sup>**

**12.1.3.3.3.2.2.4 MN: The Systems Help Desk will be available at least Monday through Friday 7:00 AM - 9:00 PM Central Time and Saturday 8:00 AM - 4:00 PM Central Time. *Id.***

**12.1.3.3.3.2.2.4 WA: The Systems Help Desk will be available at least Monday through Friday 5:00 AM - 7:00 PM Pacific Time and Saturday 6:00 AM - 2:00 PM Pacific Time. *Id.***

12.1.3.3.3.2.2.5 Additional information regarding the Systems/IT Help Desk is set forth in Section 12.0 of Exhibit G to this Agreement.

**12.1.3.3.3.2.3 Maintenance and Repair Support Centers: Qwest Maintenance and Repair support center services include at least ensuring trouble isolation procedures are immediately initiated for reported trouble; provide CLEC with a trouble report tracking number for reference; coordinate among Qwest departments to resolve wholesale product and service related troubles; monitor open trouble reports; communicate status to CLEC; accept CLEC requests for escalation and cooperatively manage them within Qwest when CLEC deems necessary; provide CLEC with support when an electronic interface (e.g., CEMR) is unavailable, and answer questions regarding trouble reports or processes.<sup>18</sup>**

**12.1.3.3.3.2.3.1 The Repair Call Handling Center (RCHC) will provide a point of entry for CLEC to gain assistance for Maintenance and Repair**

---

<sup>17</sup> Qwest Wholesale Website Wholesale Customer Contacts V20.0

<sup>18</sup> Qwest Wholesale Website Maintenance and Repair Overview V26.0

**calls involving Plain Old Telephone Service (POTS), and Non-Complex Products and Services. CLEC may initiate a trouble report through electronic interface (e.g., CEMR) or by calling either RCHC for POTS and Non-Complex services or the Account Maintenance Support Center (AMSC) for Unbundled Network Elements (UNEs).<sup>19</sup>**

**12.1.3.3.3.2.3.2 The Account Maintenance Support Center (AMSC) will provide a point of entry for CLEC to gain assistance for Maintenance and Repair calls involving Unbundled Network Elements (UNEs) and Complex services. *Id.***

**12.1.3.3.3.2.3.3 The Enhanced Services Center (ESC) will provide a point of entry for CLEC to gain assistance with Voice Messaging or Advanced Intelligent Network (AIN) call features, security code (password) resets. *Id.***

12.1.3.3.3.2.3.4 The RCHC, AMSC and ESC will be available at least seven (7) Days a week, twenty-four (24) hours a day (“7X24”). Not all functions or locations are covered with scheduled employees on a 7X24 basis. Where such 7X24 coverage is not available, Qwest’s RCHC and AMSC (always available 7X24) can call-out technicians or other personnel required for the identified situation (**former 12.3.11.1**).

**The Qwest technicians who provisioned the circuit will provide their name, direct call back number, and normal work schedule. CLEC may call the technician directly within 30 Days of installation completion to report trouble and open a trouble report ticket. During this 30-Day timeframe, CLEC may also elect to report trouble via electronic interface (e.g., CEMR) or to the applicable support center (e.g., AMSC) as described above.<sup>20</sup>**

---

<sup>19</sup> Qwest Wholesale Website Wholesale Customer Contact V20.0

<sup>20</sup> Qwest Wholesale Website Maintenance and Repair Overview V26.0

The Maintenance and Repair window for major Switch Maintenance and Repair activities off hours is set forth below in Section 12.4.3.13.1.

**12.1.3.3.3.2.4 Qwest CLEC Coordination Center: The Qwest CLEC Coordination Center (QCCC) will provide a point of entry for CLEC to gain assistance with all coordinated Unbundled Loop product installations. The QCCC Coordinators are responsible for ensuring the successful completion of the coordinated installation. The QCCC also provides a warranty service where Qwest technicians will work to resolve any Maintenance and Repair issues for 30 days after installation.<sup>21</sup>**

**12.1.3.3.3.2.4.1 CO: The QCCC will be available at least Monday through Friday 6:00 AM to 8:00 PM Mountain Time. The QCCC's warranty service will be available seven (7) Days a week, twenty-four (24) hours a day. *Id.***

**12.1.3.3.3.2.4.1 MN: The QCCC will be available at least Monday through Friday 7:00 AM to 9:00 PM Central Time. The QCCC's warranty service will be available seven (7) Days a week, twenty-four (24) hours a day. *Id.***

**12.1.3.3.3.2.4.1 WA: The QCCC will be available at least Monday through Friday 5:00 AM to 7:00 PM Pacific Time. The QCCC's warranty service will be available seven (7) Days a week, twenty-four (24) hours a day. *Id.***

**12.1.3.3.3.2.4.2 For UNEs, CLEC may call the QCCC for its warranty service within 30 Days of service order completion to report trouble. The QCCC will follow the trouble reporting procedures set forth in Section 12.1.3.3.3.1.1. During this 30-Day timeframe, CLEC may also elect to report trouble via electronic interface (e.g., CEMR) or to the applicable support center (e.g., AMSC) as described above.<sup>22</sup>**

<sup>21</sup> Qwest Wholesale Website: Wholesale Customer Contacts V20.0

<sup>22</sup> Qwest Wholesale Website: Maintenance and Repair Overview V26.0

#### **12.1.3.3.3.2.5 Listings Operations Customer Service Center**

**12.1.3.3.3.2.5.1 Listings Operations Customer Service (LOCS) center will provide a point of entry for CLEC to gain assistance for listing and confirmation services, including Directory Service Confirmation and Error Detail (DSRED) report Firm Order Confirmation (FOC), verification proofs and Directory Listing Inquiry System (DLIS).<sup>23</sup>**

#### **12.1.3.3.4 OSS Interfaces: Qwest will make OSS interfaces available at least as follows:**

12.1.3.3.4.1 (former 12.2.1.1) Qwest shall provide electronic interface gateways for submission of LSRs, ASRs, and trouble reports, including both an Electronic Data Interchange (EDI) interface and a Graphical User Interface (GUI).

12.1.3.3.4.2 (former 12.2.1.7) Qwest shall provide Facility Based EDI and GUI Listing interfaces to enable CLEC listing data to be translated and passed into the Qwest listing database. These interfaces are based upon OBF LSOG and ANSI ASC X12 standards. Qwest shall supply exceptions to these guidelines/standards in writing in sufficient time for CLEC to adjust system requirements.

12.1.3.3.4.3 (former 12.2.3.1) Qwest shall make its OSS interfaces available to CLECs during the hours listed in the Gateway Availability PIDs in Section 20, Exhibit B and/or Exhibit K.

12.1.3.3.4.4 (former 12.2.3.2) Qwest shall notify CLECs in a timely manner regarding system downtime through mass email distribution and pop-up windows as applicable. Information regarding planned outages and production support is contained in 12.0 of Exhibit G.

#### **12.1.3.3.5 Escalations: CLEC may initiate an escalation for any issue, at any time, and at any escalation point.<sup>24</sup>**

12.1.3.3.5.1 CLEC may initiate an escalation by calling the applicable support center or, for maintenance and repair issues, submitting a trouble report electronically (GUI). If a Qwest representative is unable to resolve a problem or provide the

<sup>23</sup> Qwest Wholesale Website: Wholesale Customer Contacts V20.0

<sup>24</sup> Qwest Wholesale Website: Expedites and Escalations Overview V7.0

requested information to the CLEC's satisfaction, CLEC may escalate through each level of the applicable Qwest organization (e.g, for Maintenance and Repair: testers, duty supervisor, manager, director, vice president) (former 12.3.12.2). Qwest will supply CLEC with a written escalation level contact list (former 12.2.1.10.1). CLEC may escalate to any level desired in its sole discretion. CLEC is not required to wait any length of time to escalate to the next tier and may move to any tier when using the escalation process.

**12.1.3.3.5.2 CLEC may obtain escalation status from Qwest by telephone. For Maintenance and Repair, CLEC may obtain escalation status from Qwest by telephone and electronic interface. Qwest's Account Team may also provide status information by email.**<sup>25</sup>

12.1.3.3.5.3 If a trouble report tracking number has been assigned, the same number will be used throughout the process until closure pursuant to Section 12.4.4 (e.g., the ticket will not be closed, and a new ticket with a new number opened, when escalating to other tiers or departments).

12.1.3.3.6 Disputes: If the Parties are unable to resolve issues, the dispute will be resolved in accordance with the procedures set forth in Section 5.18 of this Agreement.

12.1.3.3.7 Billing: For questions, escalations and disputes regarding Connectivity Billing, Recording, and Exchange of Information, see Section 21.

#### **12.1.4 Acknowledgement of Mistakes**

12.1.4.1 For reported troubles, Major Network Outages, and alleged behavior that is discriminatory or otherwise violates policy, Qwest will, upon request, provide to CLEC written information that will contain a root cause analysis of the issue.<sup>26</sup>

12.1.4.2 When a Qwest error or policy non-compliance occurs, Qwest will provide to CLEC a written acknowledgement of such mistakes and non-compliance with policy. Upon CLEC request, Qwest shall: *Id.*

12.1.4.2.1 Provide to CLEC a non-confidential written acknowledgment and explanation which CLEC may, if it desires, share with the affected End User Customer. If the error occurred during processing of an order, Qwest's written acknowledgement will use the following language, in

<sup>25</sup> Qwest Wholesale Website: Maintenance and Repair Overview V26.0

<sup>26</sup> Minnesota Docket P-421/C-03-616 "Order Finding Service Inadequate and Requiring Compliance Filing.

addition to any explanation, in the acknowledgement: “Qwest acknowledges its mistake in processing this wholesale order. The error was not made by the new service provider.” *Id.*

12.1.4.2.2 Apply the procedures in Section 12.1.4.2.1 to all errors in processing wholesale orders made by Qwest (not limited to service order typing errors).

12.1.4.2.3 Communicate to line staff that time is of the essence for both identifying the error and providing the acknowledgement in Section 12.1.4.2.1; and, require such acknowledgment as soon as practicable after the cause of the error is identified. *Id.*

12.1.4.2.4 Use Qwest letterhead or other indicia to show that Qwest is making the acknowledgement. *Id.*

12.1.4.2.5 Provide the acknowledgement to CLEC, who in turn may provide it to the End User Customer (so Qwest does not deal directly with CLEC’s End User Customer). *Id.*

12.1.4.2.6 Prevent use of a confidentiality designation (to ensure CLEC may provide the acknowledgement to its End User Customer). *Id.*

12.1.4.2.7 Identify clearly for CLEC to whom requests for acknowledgements should be directed at Qwest and ensure the Qwest individual(s) receiving such requests have authority to provide the acknowledgment without delay and are trained on the process. *Id.*

## **12.1.5 Responsibilities Relating to End User Customers**

12.1.5.1 (former 6.4.1) CLEC, or CLEC’s agent, shall act as the single point of contact for its End User Customers’ service needs, including without limitation, sales, service design, order taking, Provisioning, change orders, training, trouble reports, Maintenance and Repair, post-sale servicing, Billing, collection and inquiry. (former 12.3.19.1) CLEC will be responsible for all interactions with its End User Customers including service call handling and notifying its End User Customers of trouble status and resolution.

12.1.5.2 (former 12.3.19.3) Qwest will recognize CLEC as the Customer of Record for all services ordered by CLEC and will send all notices, invoices and pertinent information directly to CLEC. Except as otherwise specifically provided in this Agreement, Customer of Record shall be Qwest’s single and sole point of contact for all CLEC End User Customers.

12.1.5.3 (former 6.4.1) CLEC’s End User Customers contacting Qwest in error will be instructed to contact CLEC; and Qwest’s End User Customers

contacting CLEC in error will be instructed to contact Qwest. In responding to calls, neither Party shall make disparaging remarks about each other. To the extent the correct provider can be determined, misdirected calls received by either Party will be referred to the proper provider of local Exchange Service. Neither Party shall initiate discussion of its products and services with the other Party's End User Customer during a misdirected call.

12.1.5.4 Specifically with respect to Maintenance and Repair, CLEC and Qwest will employ the following procedures with respect to the other Party's End User Customers:

12.1.5.4.1 (former 12.3.8.1.1) CLEC and Qwest will provide their respective End User Customers with the correct telephone numbers to call for access to their respective Maintenance and Repair bureaus.

12.1.5.4.2 (former 12.3.8.1.2) End User Customers of CLEC shall be instructed to report all cases of trouble to CLEC. End User Customers of Qwest shall be instructed to report all cases of trouble to Qwest.

12.1.5.4.3 (former 12.3.8.1.3) CLEC and Qwest will provide their respective Maintenance and Repair contact numbers to one another on a reciprocal basis and will provide End User Customers with their service provider's name, if available.

12.1.5.4.4 (former 12.3.2.1) Qwest shall use unbranded Maintenance and Repair forms while interfacing with CLEC End User Customers. Upon request, Qwest shall use CLEC provided and branded Maintenance and Repair forms. Qwest may not unreasonably interfere with branding by CLEC.

12.1.5.4.5 (former 12.3.2.3) This Section shall confer on Qwest no rights to the service marks, trademarks and trade names owned by or used in connection with services offered by CLEC or its Affiliates, except as expressly permitted by CLEC.

12.1.5.4.6 (former 12.3.2.2) Except as specifically permitted by CLEC, in no event shall Qwest provide information to CLEC subscribers about CLEC or CLEC product or services.

12.1.5.4.7 The Qwest technician will limit any communication with CLEC End User Customer to that necessary to gain access to premises and perform the work. Specifically, the Qwest technician will not discuss Qwest's products and services with CLEC End User Customer<sup>27</sup> and will not make disparaging remarks about CLEC and will refer any CLEC End User Customer questions to CLEC. If the Qwest Technician has questions or concerns, the Qwest technician will discuss with CLEC and not CLEC End User Customer.

---

<sup>27</sup> Qwest Wholesale Website: Maintenance and Repair Overview V26.0

## 12.1.6 Change Management (former 12.2.6)

12.1.6.1 Qwest agrees to maintain a change management process, known as the Change Management Process (CMP), that is consistent with or exceeds industry guidelines, standards and practices to address Qwest's OSS, products and processes. The CMP shall include the following: (i) provide a forum for CLEC and Qwest to discuss CLEC and Qwest change requests (CR), CMP notifications, systems release life cycles, and communications; (ii) provide a forum for CLECs and Qwest to discuss and prioritize CRs, where applicable pursuant to Exhibit G; (iii) develop a mechanism to track and monitor CRs and CMP notifications; (iv) establish intervals where appropriate in the process; (v) processes by which CLEC impacts that result from changes to Qwest's OSS, products or processes can be promptly and effectively resolved; (vi) processes that are effective in maintaining the shortest timeline practicable for the receipt, development and implementation of all CRs; (vii) sufficient dedicated Qwest processes to address and resolve in a timely manner CRs and other issues that come before the CMP body; (viii) processes for OSS Interface testing; (ix) information that is clearly organized and readily accessible to CLECs, including the availability of web-based tools; (x) documentation provided by Qwest that is effective in enabling CLECs to build an electronic gateway; and (xi) a process for changing CMP that calls for collaboration among CLECs and Qwest and requires agreement by the CMP participants. Pursuant to the scope and procedures set forth in Exhibit G, Qwest will submit to CLECs through the CMP, among other things, modifications to existing products and product and technical documentation available to CLECs, introduction of new products available to CLECs, discontinuance of products available to CLECs, modifications to Pre-ordering, Ordering/Provisioning, Maintenance and Repair or Billing processes, introduction of Pre-ordering, Ordering, Provisioning, Maintenance and Repair or Billing processes, discontinuance of Pre-ordering, Ordering/Provisioning, Maintenance and Repair or Billing processes, modifications to existing OSS interfaces, introduction of new OSS interfaces, and retirement of existing OSS interfaces. Qwest will maintain as part of CMP an escalation process so that CMP issues can be escalated to a Qwest representative authorized to make a final decision and a process for the timely resolution of disputes. The governing document for CMP is attached as Exhibit G (the "CMP Document").

12.1.6.1 In the course of establishing operational ready system interfaces between Qwest and CLEC to support local service delivery, CLEC and Qwest may need to define and implement system interface specifications that are supplemental to existing standards. CLEC and Qwest will submit such specifications to the appropriate industry standards committee and will work towards their acceptance as standards.

12.1.6.2 Release updates will be implemented pursuant to the CMP set forth in Exhibit G.

12.1.6.3 Qwest will maintain the most current version of the CMP Document on its wholesale website. In CMP, incorporating a change into

the CMP Document requires unanimous agreement using the Voting Process currently set forth in Section 17.0 of Exhibit G. Modifications to the CMP Document will be incorporated as part of this Agreement, and will not require the execution or filing of any Amendment to this Agreement, only if the vote to change the CMP Document is unanimous and CLEC both participates in the vote and votes "Yes" to all aspects of the modification(s).

12.1.6.4 **In cases of conflict between changes implemented through CMP and this Agreement, the rates, terms and conditions of this Agreement shall prevail as between Qwest and CLEC.**<sup>28</sup> In addition, if changes implemented through CMP do not necessarily present a direct conflict with this Agreement, but would abridge or expand the rights of a Party to this Agreement, the rates, terms and conditions of this Agreement shall prevail as between Qwest and CLEC. Nothing in Exhibit G alters this Section 12.

## 12.2 Pre-Ordering, Ordering, and Provisioning

12.2.1 **(former 12.2.1.9)** Qwest will provide access to **Pre-Ordering**<sup>29</sup>, Ordering and **post-ordering functions**<sup>30</sup>, **including order status**<sup>31</sup>. CLEC will populate the service request (e.g., Local Service Request or Access Service Request) to identify what features, services, or elements it wishes Qwest to provision in accordance with this Agreement and, to the extent not inconsistent with this Agreement, Qwest's published business rules.

12.2.2 **Service Requests: Qwest offers various ordering methods to submit service requests for products and services under this Agreement. Before submitting such requests, the Parties will follow the procedures set forth in Section 3. Electronic access can be accomplished using Dial-up capability using CLEC's local computer, direct connection via a dedicated circuit (EDI or EXACT), or web access (GUI). Products and services may be ordered using Local Service Requests (LSRs), Access Service Requests (ASRs), or other forms, as described below.**<sup>32</sup>

12.2.2.1 Local Service Requests **(former 12.2.1.1 – 12.2.1.3)**: CLEC may choose to submit Local Service Requests (LSRs) manually or electronically, via Qwest's Electronic Data Interchange (EDI) tool or Qwest's web based Graphical User Interface (GUI).

12.2.2.1.1 **(former 12.2.1.2)** The interface guidelines for EDI are based upon the Order & Billing Forum (OBF) Local Service Order

<sup>28</sup> Qwest Wholesale Website: Qwest CMP Document 12/11/2003

Guidelines (LSOG), the Telecommunication Industry Forum (TCIF) Customer Service Guidelines; and the American National Standards Institute/Accredited Standards Committee (ANSI ASC) X12 protocols. Exceptions to the above guidelines/standards shall be specified in the disclosure documentation.

12.2.2.1.2 (former 12.2.1.3) The GUI shall provide a single interface for Pre-Order, Order and **Post-Order**<sup>33</sup> transactions from CLEC to Qwest and is browser based. The GUI interface shall be based on the LSOG and utilizes a WEB standard technology, Hyper Text Markup Language (HTML), JAVA and the Transmission Control Protocol/Internet Protocol (TCP/IP) to transmit messages. Exceptions to the above guidelines/standards shall be specified in the disclosure documentation.

**12.2.2.1.3 Relating Service Requests and Managed Projects: Related service requests and/or projects include any request for service by a single CLEC resulting in the issuance of multiple service requests that must be worked simultaneously for the request to be completed. If the related service requests constitute a project, each service request must have an assigned Project ID on the LSR form, and a Qwest Project Manager/Coordinator will monitor the project. A Qwest Service Manager will work with CLEC to negotiate projects on an individual case basis. If the related service requests do not constitute a project, the Qwest support center (e.g., ISC) will coordinate processing of the requests. Related requests may be assigned a Related Purchase Order Number (RPON) or Related Order (RORD) number.**<sup>34</sup>

**12.2.2.1.4 Consolidation, Deconsolidation, and Rearrangement of LSRs *Id.***

**12.2.2.1.4.1 CLEC may convert or consolidate multiple existing accounts residing on separate Qwest Customer Service Records (CSRs) on a single LSR if all accounts will be converted to, or added to, the same account for the same End User Customer at the same address. Qwest will accept one LSR with up to 20 account numbers that may currently reside on separate CSRs. The process to consolidate or convert multiple accounts onto a single account using one LSR will be available at least when consolidating or converting from Qwest Retail, Resale, Unbundled Network Elements-Platform (UNE-P) POTS, or UNE-P Centrex 21 to Resale POTS, UNE-P POTS, Resale Centrex 21, or UNE-P Centrex 21. CLEC may request both the Qwest Voice and Qwest Data services at the same time on one LSR. This**

<sup>33</sup> Qwest Wholesale Website: IMA User Guide.

<sup>34</sup> Qwest Wholesale Website: Ordering Overview V44.0

**request will be provided to the CLEC at no additional charge.**  
*Id.*

**12.2.2.1.4.2 The process to deconsolidate a single account into multiple accounts using one LSR will be available at least if the end result involves like products and services and the End User Customer's address is not changing. If deconsolidation of an account involves splitting an existing account into more than one account with different product types, CLEC must issue a separate LSR for each additional new account established. In such cases, the LSRs may be related via a RPON. *Id.***

12.2.2.1.5 Additional terms regarding LSRs are set forth below and, for Unbundled Network Elements (UNEs), in Section 9.

12.2.2.2 **Access Service Requests: Wholesale Interconnection products and services, such as Local Interconnect Services (LIS)<sup>35</sup>, Unbundled Dark Fiber (UDF)<sup>36</sup>, Unbundled Dedicated Interoffice Transport (UDIT)<sup>37</sup>, and private line transport service are ordered using Access Service Request (ASR) forms.**

12.2.2.2.1 **CLEC may choose to submit ASRs manually or electronically.**<sup>38</sup>

12.2.2.2.2 **(former 12.2.1.6.1) Qwest shall provide a GUI and computer-to-computer batch file interface for submission of Access Service Request (ASRs) based upon the OBF Access Service Order Guidelines (ASOG). Qwest shall supply exceptions to these guidelines in writing in sufficient time for CLEC to adjust system requirements. The GUI shall provide a single interface for Pre-Order and Order transactions from CLEC to Qwest and is browser based.**<sup>39</sup>

12.2.2.2.2.1 **Qwest's Telecommunications Information Access Ordering Systems (TELEcommunication Information System (TELIS) - UNIX) will allow CLEC to electronically submit ASRs at least to request trunking and facilities between CLEC and Qwest for LIS.**<sup>40</sup>

12.2.2.2.2.2 **Qwest's Online Request Application (QORA)**

<sup>39</sup> Qwest Wholesale Website: QORA User Guide 1.01

<sup>40</sup> Qwest Wholesale Website: Qwest Interconnect OSS Electronic Access V19.0

**will allow CLEC to use a Graphical User Interface (GUI) to electronically submit ASRs at least to request trunking and facilities between CLEC and Qwest for LIS. *Id.***

12.2.2.2.3 Additional terms regarding ASRs are set forth below and, for Interconnection, in Section 7.4 and, for UNEs, in Section 9.

#### 12.2.2.3 Other Requests

12.2.2.3.1 Collocation and Poles, Ducts and Right of Way are not ordered using LSRs or ASRs. Ordering of these products and services is described in Sections 8 and 10, respectively.

### 12.2.3 Supplements and Canceled Service Requests <sup>41</sup>

12.2.3.1 CLEC may submit a supplement to a LSR or ASR (known as a “supplement” or “supplemental order”) that serves as a request to cancel or to add or change an already existing, previously submitted LSR or ASR. *Id.*

12.2.3.2 Qwest will not charge CLEC for submitting a supplement or canceling or resubmitting a service request. *Id.*

12.2.3.3 Qwest will accept a verbal supplement change request to LSRs for one of the following reasons: Connecting Facility Assignment (CFA) or slot change on the due date; due date change on the due date (except for LNP); system outages for CLEC or Qwest when the supplement could not be electronically submitted; when any of the service orders related to an LSR are completed; and cancel on a due date or cancellations pertaining to the work back process. For Unbundled Loop, verbal CFA or slot changes may be made up to three days prior to the due date. *Id.*

12.2.3.3.1 When a Due Date (DD) supplement or cancel cannot be submitted due to a system outage, Qwest will accept verbal requests submitted to the applicable support center. After restoration of the system, CLEC will submit an LSR supplement for the DD change or cancel that was processed verbally. *Id.*

#### 12.2.4 Pre-Ordering Real Time Functions (former 12.2.1.4)

12.2.4.1 (former 12.2.1.4) Qwest will provide real time, electronic access to pre-order functions to support CLEC’s Ordering via the electronic interfaces described herein. Qwest will make at least the following real time pre-order functions available to CLEC:

12.2.4.1.1 (former 12.2.1.4.1) For LSRs, features, services and Primary Interexchange Carrier (PIC) options for IntraLATA toll and InterLATA toll available at a valid service address;

---

<sup>41</sup> Qwest Wholesale Website: Ordering Overview V44.0

12.2.4.1.1.1 **Service availability functionality will allow CLEC to confirm the products, services, and/or long distance carriers offered in a specific Qwest Central Office (CO).**<sup>42</sup> If Qwest or CLEC identifies an error in the verification of CLEC's information, Qwest will correct the CLEC's service availability information within 48 hours.

12.2.4.1.2 (former 12.2.1.4.2) For LSRs, access to Customer Service Records (CSRs) for End User Customers on Qwest's network (e.g., resale, UNE-P, or Qwest retail customers). The information will include Billing name, service address, Billing address, service and feature subscription, Directory Listing information, and long distance Carrier identity;

12.2.4.1.2.1 **Qwest will update a CSR and make it available to CLEC within three (3) to five (5) business days of date service order activity completed in Qwest's systems.**<sup>43</sup> To ensure Qwest meets this interval, Qwest will complete error resolution activities on the first day that the error occurs.

12.2.4.1.2.2 **If CLEC identifies incorrect information on the Qwest CSR, Qwest will correct the information in the CSR at CLEC's request.**<sup>44</sup>

12.2.4.1.2.3 **For Qwest CSRs that contain multiple telephone lines, the Qwest CSR will identify which line each Universal Service Order Code (USOC) is associated with by listing the TN as Field Identifier (FID) detail following the individual USOC. CSRs that contain only one line generally do not contain the TN FID detail following the individual USOC. All USOCs in the single line account are associated with the TN contained in the account number.**<sup>45</sup>

12.2.4.1.2.4 **CLEC may choose to request a CSR from the ISC. If so, Qwest will provide the requested CSR within 3 business days of CLEC's request to Qwest.** *Id.*

12.2.4.1.3 (former 12.2.1.4.3) For LSRs, Telephone Number (TN) request and selection;

<sup>42</sup> Qwest Wholesale Website: Pre-Ordering Overview V27.0

<sup>43</sup> Qwest Wholesale Website: Billing Information – Customer Records and Information System (CRIS) V23.0

<sup>44</sup> Qwest Wholesale Website: Ordering Overview V45.0

<sup>45</sup> Qwest Wholesale Website: Pre-Ordering Overview V27.0

**12.2.4.1.3.1 CLEC may request TNs real time for at least the following: new service; a new line on existing service; change of a telephone number; and custom (also known as vanity) telephone numbers. Qwest will provide TNs that are available to CLEC. *Id.***

**12.2.4.1.3.2 TNs the CLEC accepts, including custom numbers, must be submitted to Qwest on an LSR within 30 calendar days from acceptance or the TNs will be returned to the TN database. *Id.***

12.2.4.1.4 (former 12.2.1.4.4) For LSRs, information regarding whether dispatch is required for service installation and available installation appointments;

**12.2.4.1.4.1 A dispatch appointment is required when the real-time facility availability response indicates a technician dispatch is needed for a new line installation or other physical work at the wire center or the End User Customer's premises.<sup>46</sup>**

12.2.4.1.5 (former 12.2.1.4.5) For LSRs, reservation of appointments for service installations requiring the dispatch of a Qwest technician on a non-discriminatory basis;

**12.2.4.1.5.1 CLEC can select the date and time of the first available appointment or the appointment the CLEC would like to have (if available) when Qwest requires a Qwest technician be dispatched for premises or non-premises work.<sup>47</sup>**

**12.2.4.1.5.2 CLEC can override an appointment for a coordinated hot cut in the Qwest appointment scheduling tool when the date and time desired for the coordinated hot cut is not available and the requested date and time is within the interval in Exhibit C and not outside Qwest's business hours.<sup>48</sup>**

**12.2.4.1.5.3 Appointments reserved via the Qwest appointment scheduling tool will remain in effect for 24 business hours.<sup>49</sup>**

12.2.4.1.6 (former 12.2.1.4.6) For LSRs and ASRs, service

<sup>46</sup> Qwest Wholesale Website: Pre-Ordering Overview V27.0

<sup>49</sup> Qwest Wholesale Website: Pre-Ordering Overview V27.0

address verification;

**12.2.4.1.6.1 Validating the End User Customer's address confirms that the service address is serviced by Qwest and is valid in Qwest's databases. Service address information includes street number prefix; street number; street number suffix; street directional prefix (e.g., North, South, etc.); street name; street thoroughfare designation (e.g., St., Ave., Hwy, etc.); street directional suffix (e.g., North, South, etc.); descriptive or unnumbered addresses such as route numbers, Unit or Apartment number, Room, Floor, or Building; city (e.g., village, township, etc.); state; and ZIP/Postal Code.**<sup>50</sup>

**12.2.4.1.6.2 If, while performing an address validation, CLEC identifies that the End User Customer's address is invalid, CLEC will notify Qwest and Qwest will correct or add the address information within its system(s). Qwest will request the service address information to process an address correction and, if applicable, will provide at least the following information to CLEC: Numbering Plan Area/Numeric Numbering Plan (NPA/NXX) of the serving wire center; correct spelling of the street address; service availability (e.g., call waiting); Primary Interexchange Carrier (PIC) availability.**<sup>51</sup>

**12.2.4.1.7 (former 12.2.1.4.7) For LSRs, facility availability; Loop qualification to verify if the facility can handle the type and volume of the line requested, including resale-DSL, Integrated Service Digital Network-Basic Rate Interface (ISDN-BRI); and and Unbundled ADSL Compatible Loop; and Loop make-up information, including Loop length, presence of Bridged Taps, repeaters, and loading coils.**

**12.2.4.1.7.1 Facility availability functionality is available when the service request involves new line(s), loop(s) or circuit(s) for at least the following services:**<sup>52</sup>

**12.2.4.1.7.1.1 Non-POTS services (e.g., Centrex services, Private Lines, etc.) and High Capacity Signal (HICAP): Display the number of circuits and lines, class of service, assignable USOCs, appropriate service code, and location of any Multiplexers (MUXs).**

**12.2.4.1.7.1.3 Plain Old Telephone Service (POTS) Facility Availability: Show the number and status of working lines at a location. *Id.***

**12.2.4.1.7.1.4 Raw Loop Data: Retrieve Raw Loop Data by segments and sub-segments. *Id.***

**12.2.4.1.7.1.5 Integrated Digital Services Network (ISDN). *Id.***

12.2.4.1.7.2 Terms relating to Qwest's Loop qualification tools are set forth in Section 9.2.2.8.

12.2.4.1.8 (former 12.2.1.4.8) For LSRs and ASRs, a list of valid available Connecting Facility Assignments (CFAs), including both available and assigned connecting facilities.<sup>53</sup>

12.2.4.1.9 (former 12.2.1.4.9) For LSRs, a list of one to five (1-5) individual Meet Points or a range of Meet Points for shared Loops; and

12.2.4.1.10 (former 12.2.1.4.10) Feature availability information.

## **12.2.5 Migration/Conversion Ordering Activity on New or Existing Accounts**

**12.2.5.1 Migrations and conversions are terms used interchangeably when an End User Customer moves from one Local Service Provider (LSP) to another. The term LSP describes the company that provides local services to the End User Customer. CLEC or Qwest may be an End User Customer's LSP in a migration or conversion scenario. Full Migration occurs when all services/lines contained on the Customer Service Record (CSR) and billed to the Old LSP (OLSP) under a primary telephone number or account telephone number are migrating to the New LSP (NLSP) and no services/lines remain on the OLSP account under that account telephone number. Partial Migration occurs when a portion of the End User Customer's services/lines billed to the OLSP under a single account telephone number are being migrated and one or more services/lines remain with the OLSP under that account telephone number.**<sup>54</sup>

<sup>53</sup> Qwest Wholesale Website: Pre-Ordering Overview V27.0

<sup>54</sup> Qwest Wholesale Website: Migrations and Conversion Overview V14.0

**12.2.5.2 CLEC may order, and Qwest will process, at least the following types of migrations:**

**12.2.5.2.1 Bundled to bundled conversions, including Qwest Retail to Resale or UNE Combination; Resale to Resale; Resale to UNE-P; UNE-P to Resale; and UNE Combination to UNE Combination.**<sup>55</sup>

**12.2.5.2.2 Bundled to Unbundled conversions, including: Qwest Retail, Resale, or UNE-P to Unbundled Local Loop (with or without LNP). This involves reusing the loop facility and retaining the End User Customer's telephone number via LNP, if applicable.** *Id.*

**12.2.5.2.3 Unbundled to Bundled, including Unbundled Local Loop to Resale or UNE-P (with or without LNP); and Unbundled Local Loop to Qwest Retail (with LNP). This involves reusing the loop facilities and retaining the End User Customer's telephone number via LNP, if applicable.** *Id.*

**12.2.5.2.4 Unbundled to Unbundled, including Unbundled Local Loop to Unbundled Local Loop. Unbundled Local Loop to Unbundled Local Loop migration refers to the change of responsibility or coordination of loop reuse for unbundled local Loops from the OLSP to a NLSP.** *Id.*

**12.2.5.2.5 Port In, including same location/End User Customer not moving, new location/End User Customer moving, End User Customer moving to new location served by existing provider, and End User Customer moving to new location served by existing provider with new facilities.** *Id.*

**12.2.5.2.5.1 A wholesale "Port In" is when a Resale, UNE-P or Public Access Line (PAL) provider requests that its End User Customer's Telephone Numbers (TNs) be ported from any CLEC switch into a Resale, UNE-P or PAL provider service to be served by a Qwest switch. The Resale or UNE-P provider can request re-use of facilities on Port In activity.**<sup>56</sup>

**12.2.5.2.6 Port With In, including transfer of service within a Rate Center (i.e. To & From (T&F)); moving Telephone Numbers TN(s) from one switch to another, within the same Central Office (This is often done when moving DID TN(s) from one trunk group to another when established on different switches.); conversion to Resale/UNE-P and a move request via a single Local Service Request (LSR); changing from RSID to ZCID with Port Within to a new address outside the existing switch but within the same Rate Center. This**

<sup>55</sup> Qwest Wholesale Website: Migrations and Conversion Overview V14.0

<sup>56</sup> Qwest Wholesale Website: Port In V3.0

also includes conversion or transfer of service (change, new activity or T&F) on existing accounts with previously ported TNs and Port FIDs, including conversion (change or new activity) requests from Retail to Resale or UNE-P, Resale to UNE-P, UNE-P to Resale and Resale or UNE-P conversions to different products if out/in activity is created on the previously ported TN and results in a change to another existing account or creates a new separate CSR.<sup>57</sup>

12.2.5.2.6.1 There are two types of Port Within services: (a) Port Within (Service Type Portability), which is the ability to retain the same telephone number(s) when changing from one local service to another, such as from Plain Old Telephone Numbers (POTS) to Integrated Services Digital Network (ISDN) (The service address is not changing and is within the same Rate Center.); and (b) Port Within (Location Portability), which is the ability to retain the same telephone number(s) when moving from one service location to another. *Id.*

12.2.5.3 Qwest allows End User Customers to migrate their service from one LSP to another, regardless of their credit status with the current LSP. This means that Qwest does not prevent an End User Customer with an unpaid bill or credit problem with one provider (including Qwest) from migrating their service to another provider. The previous provider is responsible for collecting any balance due them.<sup>58</sup>

12.2.5.4 A Courtesy Disconnect is a request by a CLEC to disconnect an account that does not belong to it, as part of a migration scenario. Typically, the CLEC has already provisioned new service for the End User Customer and is now requesting a disconnect for the End User Customer's old service with another provider. The account may be Retail, Resale, or UNE-P. The LSP for the service to be disconnected may be another CLEC or Qwest. Qwest will accept Courtesy Disconnects for the following telephone number based products: (a) Plain Old Telephone Service (POTS); (b) Centrex; and (c) Integrated Services Digital Network (ISDN). Qwest will also accept Courtesy Disconnects on a T1 (Digital Signal level 1 (DS1)) for Digital Switched Services (DSS), Primary Rate Service (PRS), Uniform Access Solution (UAS) Service, and integrated T1 products when a Related Purchase Order Number (RPON) is submitted to disconnect all associated trunks and Direct Inward Dialing (DID) station numbers. *Id.*

12.2.5.5 When possible, Qwest will re-use facilities for an Unbundled Local Loop associated with migration/conversion activity. *Id.* See Section 12.3.5.)

---

<sup>57</sup> Qwest Wholesale Website Port Within V3.0

<sup>58</sup> Qwest Wholesale Website: Migrations and Conversions Overview V14.0

**12.2.5.6 Qwest will provide a Port In and Port Within pre-completion call process. This process will provide advanced notice to CLEC when Qwest dispatches a technician on such an order. Qwest will place the call notification to CLEC, at a telephone number provided by CLEC, upon dispatch to the premise.<sup>59</sup>**

## **12.2.6 Application Date<sup>60</sup>**

**12.2.6.1 The date on which a Party receives a complete and accurate service request from the other Party is known as the Application Date. *Id.***

**12.2.6.2 CO: For applicable products, if a complete and accurate request is received before 3:00 p.m. Mountain Time (MT), the Application Date is the same day as the request is received. Anything received after 3:00 p.m. MT utilizes an APP of the next business day. *Id.***

**12.2.6.3 CO: For applicable products, if a complete and accurate request is received before 7:00 p.m. Mountain Time (MT), the APP Date is the same day as the request is received. Anything received after 7:00 p.m. MT utilizes an APP of the next business day. *Id.***

**12.2.6.4 CO: Certain requests may be eligible for a same-day due date. To be eligible for a same day due date a complete and accurate request must be received before 12p.m. Mountain Time. *Id.***

**12.2.6.2 MN: For applicable products, if a complete and accurate request is received before 4:00 p.m. Central Time (CT), the Application Date is the same day as the request is received. Anything received after 4:00 p.m. CT utilizes an APP of the next business day. *Id.***

**12.2.6.3 MN: For applicable products, if a complete and accurate request is received before 8:00 p.m. Central (CT), the APP Date is the same day as the request is received. Anything received after 8:00 p.m. CT utilizes an APP of the next business day. *Id.***

**12.2.6.4 MN: Certain requests may be eligible for a same-day due date. To be eligible for a same day due date a complete and accurate request must be received before 1p.m. Central Time. *Id.***

**12.2.6.2 WA: For applicable products, if a complete and accurate request is received before 2:00 p.m. Pacific Time (PT), the Application Date is the same day as the request is received. Anything received after 2:00 p.m. PT utilizes an APP of the next business day. *Id.***

---

<sup>59</sup> Qwest Wholesale Website: Port In V3.0 and Port Within V3.0

**12.2.6.3 WA: For applicable products , if a complete and accurate request is received before 6:00 p.m. Pacific Time (PT), the APP Date is the same day as the request is received. Anything received after 6:00 p.m. PT utilizes an APP of the next business day. *Id.***

**12.2.6.4 WA: Certain requests may be eligible for a same-day due date. To be eligible for a same day due date a complete and accurate request must be received before 11a.m. Pacific Time. *Id.***

## 12.2.7 Order Status Notices

**12.2.7.1 Qwest will provide order status notices to CLEC. Qwest will send CLEC such notices via the same method CLEC used to submit the service request. If CLEC used a mechanized tool, CLEC may refer to that tool to receive, access, or view jeopardy notices, FOCs, PSONs, rejects, LSR status and status updates.**<sup>61</sup>

**12.2.7.2 Qwest will provide at least the following order status notices on a non-discriminatory basis:**

**12.2.7.2.1 Firm Order Confirmations.** When CLEC places an electronic order (LSR, ASR, or supplemental order), Qwest will provide CLEC with an electronic Firm Order Confirmation (FOC) notice. The FOC will follow industry-standard formats and contain the Qwest Due Date for order completion. Intervals for FOCs are set forth in Exhibit C.

**12.2.7.2.2 Provider Initiated Activity Notice.** Qwest will send CLEC a Provider Initiated Activity (PIA) notice (the predecessor of which was known as the Change Flag (CFLAG)), to communicate agreed upon changes in limited circumstances when Qwest makes changes on the service order that are different from what CLEC requested on the original service request or supplement.<sup>62</sup>

**12.2.7.2.2.1 When the PIA/CFLAG field is marked on the confirmation notice, Qwest will populate the Remarks section of that notice with text indicating any deviations from the original CLEC request. *Id.***

**12.2.7.2.3 Pending Service Order Notification.** At the time that Qwest issues or changes the service orders associated with the CLEC LSR, Qwest will issue a Pending Service Order Notification (PSON) to CLEC. The PSON will provide CLEC with information that appears on the Qwest service order, including the USOCs and FIDs in the service order's Service and Equipment (S&E) and listings sections. If any of that service order information is omitted from the PSON, Qwest will return a message on the PSON indicating service order

<sup>61</sup> Qwest Wholesale Website: Interconnect Mediated Access V15.0 User Guide

<sup>62</sup> Qwest Wholesale Website: Provisioning and Installation Overview V34.0

information is not available via PSON. CLEC may call the Qwest support center to obtain that information. The PSON will be available via GUI (Graphical User Interface) and EDI (Electronic Data Interchange). *Id.*

**12.2.7.2.4 Jeopardy Notices. A jeopardy, caused by either CLEC or Qwest, endangers completing provisioning and/or installation processes and impacts meeting the scheduled due date of CLEC service request. The purpose of the jeopardy notification process is to identify jeopardy conditions to CLEC that impact meeting the scheduled due date of CLEC service requests. The sequence of sending a jeopardy notification and/or a FOC may change depending on when a jeopardy condition is identified. *Id.***

12.2.7.2.4.1 (former 12.2.1.9.4) When CLEC places an electronic order, Qwest shall provide notification electronically of any instances when Qwest's Committed Due Dates are in jeopardy of not being met by Qwest on any service. The standards for returning such notices are set forth in Section 20, Exhibit B and/or Exhibit K.

12.2.7.2.4.2 (former 12.2.1.9.5) When CLEC places a manual order, Qwest shall provide notification of any instances when Qwest's Committed Due Dates are in jeopardy of not being met by Qwest on any service. The standards for returning such notices are set forth in Section 20, Exhibit B and/or Exhibit K.

12.2.7.2.4.3 (former 12.3.16.1) CLEC may telephone Qwest Maintenance and Repair support centers or use the electronic interfaces to obtain jeopardy status.

**12.2.7.2.4.4 A jeopardy caused by Qwest will be classified as a Qwest jeopardy, and a jeopardy caused by CLEC will be classified as Customer Not Ready (CNR).<sup>63</sup>**

12.2.7.2.4.4.1 Qwest will not characterize a jeopardy as CNR or send a CNR jeopardy to CLEC if a Qwest jeopardy exists and Qwest has not sent an FOC notice to CLEC after the Qwest jeopardy occurs but before the CNR situation arises (i.e., a subsequent FOC). If Qwest does jeopardize the service request with a CNR jeopardy in error before sending CLEC a subsequent FOC, Qwest will remove the CNR jeopardy from the service request, work with CLEC to complete the order, and re-classify the jeopardy as a Qwest (not CNR) jeopardy.

---

<sup>63</sup> Qwest Wholesale Website: Provisioning and Installation Overview V34.0

12.2.7.2.4.4.2 If CLEC establishes to Qwest that a jeopardy was not caused by CLEC, Qwest will correct the erroneous CNR classification and treat the jeopardy as a Qwest jeopardy.

**12.2.7.2.5 Non-Fatal Error Notices. Non-Fatal Errors are error conditions identified on a LSR form that the Qwest ISC Agent may be able to correct, with CLEC approval, to allow the order to proceed without rejection. When a Non-Fatal Error is identified, Qwest will send CLEC an error notice (unless CLEC indicates otherwise) advising CLEC that action is required to correct the condition. Examples of Non-Fatal Errors include near match of Centrex information (e.g., Common Block), missing fields (except those which result in a rejection without a call), initiator telephone or fax number missing.<sup>64</sup>**

**12.2.7.2.5.1 To resolve the error condition, CLEC must submit a supplemental order correcting the missing or incorrect information within 4-business hours of receipt of the Non-Fatal Error notice or Qwest will reject the LSR. *Id.***

**12.2.7.2.5.2 If Qwest's systems do not allow CLEC to supplement order within the 4-business hour period, Qwest will accept a verbal supplement. *Id.***

**12.2.7.2.6 Fatal Rejection Notices. Qwest will send CLEC notices of Fatal Rejections, also known as Fatal Errors, when Qwest does not have enough data, or the correct data, to accurately process the CLEC service request. In some cases, Qwest's systems will not allow CLEC to submit a service request if data is missing (such as through use of up-front edits). If Qwest's systems allow CLEC to submit the service request without sufficient or correct data necessary to accurately process the CLEC service request, however, Qwest will send CLEC a Fatal Reject notice. The Fatal Reject notice will include the action CLEC was requesting, the problem(s) encountered, and a description of the next steps that CLEC may take to address those problems.<sup>65</sup> If a problem is not apparent at the time Qwest sends the Fatal Reject notice, Qwest will send an additional Fatal Reject notice regarding that problem.**

**12.2.7.2.6.1 If CLEC submits an LSR or ASR that contains a Fatal Error and receives a Fatal Reject notice, CLEC will need to resubmit the LSR or ASR to obtain processing of the service request.<sup>66</sup>**

---

<sup>64</sup> Qwest Wholesale Website: Ordering Overview V45.0

<sup>65</sup> Qwest Wholesale Website: Ordering Overview V45.0

<sup>66</sup> Qwest Wholesale Website: Ordering Overview V45.0

**12.2.7.2.6.2 If Qwest rejects a service request in error, Qwest will resume processing the service request as soon as Qwest knows of the error. At CLEC's discretion, Qwest will place the service request back into normal processing, without requiring a supplemental order from CLEC and will issue a subsequent FOC to CLEC. The due date will be the original desired due date requested by CLEC on the LSR. *Id***

**12.2.7.2.7 Qwest Rejection Notices Due to Central Office Embargo**

**12.2.7.2.7.1 Qwest may declare a Central Office embargo on certain ordering activity when Qwest must perform switch work that will preclude the processing of service requests while the work is conducted as set forth in Section 12.4.3.12.4. The embargo period will be no longer than necessary to perform such work. For Maintenance and Repair hours for scheduled switch work of this type, see Section 12.4.3.12.8 below.**

**12.2.7.2.7.2 Qwest will notify CLECs, using its event notification process, at least thirty (30) Days in advance of such an embargo. The notice will provide at least the reason for the embargo, the affected Central Office/Switch, and the date(s) of the embargo. If an unplanned equipment failure causes an unanticipated embargo, Qwest will provide notice when it learns of the need for an embargo.**

**12.2.7.2.7.3 Qwest will validate by NPA-NXX or CLLI code that the desired due date (DDD) of service requests does not fall within an embargo period for the specified Central Office/Switch. If DDD falls within an embargo period, Qwest will send a Fatal Reject notice to CLEC. The notice will state that the CLEC DDD is during an embargo period for the Central Office, provide the date on which the embargo ends, and indicate that CLEC may select a due date on or after that date.<sup>67</sup>**

**12.2.7.2.7.3.1 The following products will be excluded from such a rejection: Unbundled Loop, Unbundled Feeder Loop, Unbundled Distributed Loop, Loop/Number Portability, Unbundled Distributed Loop with Number Portability, LNP, and INP. *Id.***

**12.2.7.2.7.3.2 There will be no Fatal Rejects for Central Office Embargoes for the following types of activities: Disconnects, Line Activity, Outside Moves, Change Order to Remove Record Activity Order, and Change Order to Deny or Restore Service. *Id.***

---

<sup>67</sup> Qwest Wholesale Website Ordering Overview V45.0

#### 12.2.7.2.8 Completion Notices

12.2.7.2.8.1 (former 12.2.1.9.3) Upon completion of the order, Qwest will provide CLEC with a Completion Notice (CN), also referred to as "Completion Response," that follows industry-standard formats and which states when the order was completed. Qwest will provide CLEC with two (2) separate completion notices: 1) service order completion (SOC), which notifies CLEC that the service order record has been completed, and 2) Billing completion, which notifies CLEC that the service order has posted to the Billing system.

12.2.7.2.8.2 **A completion notice is meant to indicate that Qwest has completed the work requested by CLEC.**<sup>68</sup>

12.2.7.2.8.3 If an error occurs and a completion notice has been sent and work has not been completed, the Party discovering the error will notify the other Party and work cooperatively to correct the error.

#### 12.2.8 Additional Status Information

12.2.8.1 **In addition to the order status notices identified above which are sent to CLEC, CLEC may view those notices electronically via GUI, if CLEC submitted the LSR electronically.**<sup>69</sup>

12.2.8.2 **During processing of a service request submitted electronically, Qwest will maintain and make available to CLEC a status indicator stating the status of the service request. The status indicators for LSRs include at least the statuses, when applicable, of submitted, in review (for manually processed orders), errored, partial, issued, rejected, completed, canceled, jeopardy, and posted to be billed.**<sup>70</sup> **The status indicators for ASRs include at least the statuses, when applicable, of submitted, accepted, confirmed, rejected, acknowledged, and canceled.**<sup>71</sup>

12.2.8.3 **Qwest will also provide to CLEC, for LSRs submitted electronically, status update functionality that displays status messages for LSRs and related service orders. The status messages are provided in**

**addition to LSR notices. The display will represent a snapshot of statuses at a particular moment and may change rapidly.**<sup>72</sup>

### 12.2.9 Design Layout Record

12.2.9.1 **(former 9.13.4.2)** Qwest will provide Design Layout Reports (DLR) in a non-discriminatory manner.

12.2.9.2 **(former 12.2.1.4.10)** Design Layout Record (DLR) provides the layout for the local portion of a circuit at a particular location where applicable. **Qwest shall provide real time, electronic access to DLR query functions to CLEC. Qwest provides this access at least via EDI, GUI, CEMR, and the Qwest Design Service Order Status (DSOS) web-based application for LSRs and CEMR and DSOS for ASRs. CLEC will be able to view, retrieve and print DLRs at CLEC desktop.**<sup>73</sup>

12.2.9.3 **The DLR will provide the technical details of the circuit's facilities and termination provided by Qwest. CLEC can use this technical information describing the facilities, such as cable make-up, carrier channel bank type and system mileage, and signaling termination compatibility (along with CLEC's own termination details), to design and connect CLECs End User Customer's service.** *Id.*

### 12.3 Ordering, Provisioning and Installation

12.3.1 **Qwest will provision UNEs, UNE Combinations, Resale, and Interconnection products and services in compliance with industry standard Performance and Acceptance Testing and in accordance with industry specifications, interfaces and parameters.**<sup>74</sup>

12.3.2 Qwest will install CLEC's services up to the Demarcation Point.

12.3.2.1 If Qwest fails to tag the line or circuit at the Demarcation Point (see Section 12.4.3.6.3), **Qwest will provide information indicating the location of the line or circuit to CLEC, in sufficient detail that CLEC may reasonably locate the line or circuit at the Demarcation Point (e.g., accurate binding post information). If Qwest is unable to provide such information or Qwest provides it and CLEC is unable to locate the line or circuit at the Demarcation Point and CLEC notifies Qwest of this fact within 30 Days of service order completion, Qwest will dispatch a technician and tag circuit or line at no charge to CLEC.**<sup>75</sup>

---

<sup>72</sup> Qwest Wholesale Website: Interconnect Mediated Access V15.0 User Guide

<sup>73</sup> Qwest Wholesale Website: Provisioning and Installation Overview V32.0

<sup>74</sup> Qwest Wholesale Website: Provisioning and Installation Overview V32.0

<sup>75</sup> Qwest Wholesale Website: Maintenance and Repair Overview V26.0

12.3.2.2 **If Qwest fails to tag the Demarcation Point, is unable to provide such information to CLEC, and a condition affecting the End User Customer's service exists, Qwest will tag the line or circuit at the Demarcation Point *Id.* within 24 hours of CLEC request for Non-POTS services and within 4 hours of CLEC request for POTS services.**

**12.3.3 Unbundled Loop Elements. (Provisioning options for Unbundled Loop elements are set forth in Section 9.2.2.9.)**

12.3.3.1 **For Coordinated Installation requests on a 2-Wire or 4-Wire Analog (Voice Grade) Loop, Qwest will verify dial tone at CLEC Connecting Facility Assignment (CFA) 48 hours after the Application Date. If Qwest finds No Dial Tone (NDT), Qwest will retest 48 hours prior to Due Date. If dial tone is still not present, Qwest will email the NDT results to CLEC through Qwest's Provider Test Access (PTA) email system. Qwest will include the CLEC CFA information with the No Dial Tone (NDT) email notification.<sup>76</sup>**

12.3.3.2 **If Qwest fails to email the NDT notification to CLEC 24 hours before the due date, Qwest will not require a supplement to the service request with a new Due Date. Qwest will reschedule at a mutually agreed upon time for the same day with CLEC. If rescheduling for the same day is not possible, this will result in a Qwest Jeopardy. *Id.***

12.3.3.3 **CLEC may change the CLEC CFA on the Due Date during a Coordinated Installation when Qwest and CLEC have determined there is an issue with the CLEC CFA (known as "same day pair changes"). CLEC will assign a new CFA and communicate the new CFA to the Qwest tester. Qwest will confirm the CFA is valid and indicate the new CFA on the Qwest service order. Qwest will send CLEC an updated FOC with the new CFA.<sup>77</sup>**

12.3.3.4 **When CLEC requests a Coordinated Installation and the CLEC End User Customer has Qwest Retail, Resale, UNE-P or Volume Provider DSL, Qwest will not disconnect the End User Customer's DSL service until the Frame Due Time requested by CLEC on the LSR.<sup>78</sup>**

**12.3.4 Qwest Resale and UNE-P Digital Subscriber Line**

12.3.4.1 **Qwest will perform line moves, Universal Digital Carrier (UDC) removal and line conditioning for Qwest Resale DSL services. If a line move or UDC removal is required, no authorization is required by CLEC, and Qwest will perform the line move or UDC removal within the interval in Exhibit C. Qwest will use line move or UDC removal before using line conditioning as an option to provide Qwest DSL to CLEC.<sup>79</sup>**

<sup>76</sup> Qwest Wholesale Website: Unbundled Local Loop – 2 Wire or 4 Wire Analog (Voice Grade) Loop V19.0

<sup>78</sup> Qwest Wholesale Website: Resale Qwest Digital Subscriber Line (Qwest DSL) V21.0

<sup>79</sup> Qwest Wholesale Website: Resale Qwest Digital Subscriber Line (Qwest DSL) V21.0

**12.3.4.2 If line conditioning is required for Qwest Resale or UNE-P DSL services, CLEC may authorize Qwest to perform such line conditioning on the LSR. If conditioning is necessary, and CLEC authorizes Qwest to perform the conditioning, Qwest will perform the line conditioning required to provide the Loop and may send CLEC an FOC with up to a fifteen (15) business day interval. Qwest will provide loop conditioning for Qwest Resale and UNE-P DSL services at no additional charge. *Id.***

### **12.3.5 Reuse of Facilities/Loop Reclamation**

**12.3.5.1 Except as provided in Section 9.2.2.15 with respect to Loop facilities, Qwest will re-use facilities for migration/conversion activity, including migrations to and from Qwest Retail, Resale, or UNE-P.**<sup>80</sup>

### **12.3.6 Held/Delayed Orders Due to Lack of Facilities**

**12.3.6.1 A service request will be delayed when Qwest cannot process a service request by the Due Date due to lack of facilities**<sup>81</sup> as defined in Section X.

**12.3.6.2 If CLEC submits a service request and no facilities are available, as defined in this Agreement, Qwest will send CLEC a jeopardy notice for LSRs and notify CLEC of the jeopardy condition for ASRs. If CLEC submits the ASR electronically and jeopardy notices are available, Qwest will also send a jeopardy notice to CLEC. Qwest will provide detailed information outlining the reason for the jeopardy at the time that Qwest becomes aware of the facilities issue. If Qwest is unable to provide such detailed information in the initial notice to CLEC, Qwest will provide to CLEC, within 72 hours of the initial notice to CLEC, either (1) an FOC with a Due Date, or (2) a subsequent jeopardy notification that contains such detailed information.**<sup>82</sup> The jeopardy is a Qwest jeopardy, and Qwest will indicate on its new service order the Application Date and Due Date from the original CLEC service request for tracking purposes, as well as identify the new Due Date when available. Qwest will track all delayed service requests, communicate all statuses to CLEC, and facilitate closure of delayed orders.<sup>83</sup> Jeopardy and status notices generally are described above in Section 12.2.7. When Qwest sends CLEC a jeopardy notice due to lack of facilities, the following will apply, depending on when the jeopardy notice is sent:

---

<sup>80</sup> Qwest Wholesale Website: Migrations and Conversions Overview V14.0

<sup>81</sup> Qwest Wholesale Website: Ordering Overview V45.0

<sup>82</sup> Qwest Wholesale Website: Qwest CMP Change Request PC081403-1 Detail

<sup>83</sup> Qwest Wholesale Website: Ordering Overview V45.0

**12.3.6.2.1 If Qwest sends the jeopardy notice before the Due Date, Qwest will send CLEC an FOC. If Qwest knows the Ready for Service (RFS) date, the FOC will advise CLEC of the Due Date.<sup>84</sup>**

**12.3.6.2.2 If Qwest sends the jeopardy notice on the Due Date, Qwest will call CLEC on the Due Date to notify CLEC of the jeopardy and send CLEC an FOC. If Qwest knows the Ready for Service (RFS) date, the FOC will advise CLEC of the Due Date. *Id.***

**12.3.6.3 Before Qwest sends a jeopardy notice to CLEC due to lack of facilities, Qwest will take steps to investigate potential solution(s) and or option(s) to assign facilities. Qwest will use a mechanized assignment process whenever available.**

**12.3.6.3.1 When facilities cannot be assigned via a mechanized process for copper facilities, Qwest will perform at least the manual steps for assignment of copper facilities set forth in Exhibit M.**

**12.3.6.3.2 For requests that are provisioned over fiber, Qwest will perform at least the steps for assignment of fiber facilities (for DS1 and above) set forth in Exhibit N.**

**12.3.6.4 Multiple Line Service Requests for Which Facilities are Available for Only a Portion of the Lines<sup>85</sup>**

**12.3.6.4.1 If CLEC submits a service request for multiple lines or Loops and, Qwest cannot provision a portion of the lines or Loops due to lack of facilities, as defined in this Agreement, by the Due Date, Qwest will send CLEC a Jeopardy notice as set forth above. *Id.***

**12.3.6.4.1.1 For non-POTS services and Unbundled Local Loop, if CLEC does not respond to the jeopardy notice, all the lines or Loops associated with the service order will be delayed, even though facilities were available for some of them. If CLEC submits a supplemental service request, Qwest will install the lines or Loops that can be provisioned (i.e., for which there are facilities) and the remaining lines or Loops (i.e., for which there are no facilities) will be delayed. *Id.***

**12.3.6.4.1.2 For Analog Switched Services, Qwest will install the lines that can be provisioned (i.e., for which there no facilities) will be delayed. Qwest will also create a new service order for the lines for which there are no facilities.**

---

<sup>84</sup> Qwest Wholesale Website Provisioning and Installation Overview V32.0

<sup>85</sup> Qwest Wholesale Website: Provisioning and Installation Overview V32.0

**Qwest will send CLEC a new FOC, PSON Notice, and Jeopardy Notice reflecting the new Qwest service order. *Id.***

12.3.6.5 Qwest will maintain delayed service requests as pending and notify CLEC when facilities become available, as set forth in Section X.

### 12.3.7 Loss and Completion Reports

12.3.7.1 **Loss and Completion Reports provide notice to CLEC when work-order activity impacting CLEC or CLEC End User Customer accounts are completed.**<sup>86</sup>

12.3.7.2 **Qwest will generate Loss and Completion Reports and will send them to CLEC via the CLEC's selected transport medium on a daily basis (e.g., NDM (Direct or Dial-In), Electronic Fax, or by WEB).**<sup>87</sup>

12.3.7.3 Qwest will notify CLEC by Operational Support System interface or by other agreed-upon processes when an End User Customer moves from one CLEC to a different local service provider. As part of such processes, Qwest will provide CLEC each day with accurate and complete Loss and Completion reports showing the previous days loss and completion activity. Qwest will not provide CLEC with the name of the other local service provider selected by the End User Customer. (former 6.4.5).

12.3.7.3.1 (former 12.2.5.2.4) The daily loss report will contain a list of accounts that have had lines and/or services disconnected because of a change in the End User Customers local service provider. **Qwest will issue a loss report when a service order due dated for the previous business day, is completed or canceled in Qwest's service order processor (SOP).**<sup>88</sup> This report will detail the **BTN**, service order number, **PON**, service name and address, the **WTN the activity took place** on and date the service order completed (the date the change was completed). Individual reports will be provided for at least the following list of products:

- a) Resale;
- b) Unbundled Loop;
- c) Unbundled Line-side Switch Port; and
- d) UNE-P (former 12.2.5.2.4)

12.3.7.3.2 (former 12.2.5.2.5) The daily completion report will notify CLEC that the order(s) for the service(s) requested is complete.

<sup>86</sup> Qwest Wholesale Website: Provisioning and Installation Overview V32.0

<sup>87</sup> Qwest Wholesale Website: Loss/Completion Sample Reports Job Aid V4.0

<sup>88</sup> Qwest Wholesale Website: Loss/Completion Sample Reports Job Aid V4.0

**Qwest will issue a completion report when any service order placed on CLEC's account, dated for the previous business day, is completed or canceled in Qwest's service order processor (SOP).<sup>89</sup>**

This includes service orders Qwest generates without an LSR (for example records correction work, TIC or M&R charges). It will detail the **BTN**, service order number, **PON**, service name and address, **the WTN the activity took place on** and date the service order completed (the date the change was completed). Individual reports will be provided for at least the following list of products:

- a) Resale;
- b) Unbundled Loop;
- c) Unbundled Line-side Switch; and
- d) UNE-P (former 12.2.5.2.5)

**12.4 Maintenance and Repair.** Maintenance and Repair processes include trouble screening, isolation, and testing; trouble reporting and trouble status; activities to resolve troubles or perform maintenance work; and trouble closure.

#### **12.4.1 Trouble Screening, Isolation and Testing**

12.4.1.1 (former 12.3.3.5) Before either Party reports a trouble condition, it shall use its best efforts to isolate the trouble to the other Party's facilities. The Parties shall cooperate in isolating trouble conditions.

12.4.1.2 (former 12.3.17.2) Qwest will cooperate with CLEC to show CLEC how Qwest screens trouble conditions in its own centers, so that CLEC may choose to employ similar techniques in its centers.

12.4.1.3 (former 12.3.4.1) CLEC is responsible for its own End User Customer base and will have the responsibility for resolution of any service trouble report(s) from its End User Customers. CLEC will perform trouble isolation on services it provides to its End User Customers to the extent the capability to perform such trouble isolation is available to CLEC, prior to reporting trouble to Qwest. For services and facilities where the capability to test all or portions of the Qwest network service or facility rest with Qwest, Qwest will make such capability available to CLEC to perform appropriate trouble isolation and screening. (former 12.3.1.7) CLEC shall have access for testing purposes at the Demarcation Point, NID, or Point of Interface. Qwest will work cooperatively with CLEC to resolve trouble reports when the trouble condition has been isolated and found to be within a portion of Qwest's network. Qwest and CLEC will report test results to the other. Each Party shall be responsible for the costs of performing trouble isolation on its facilities, subject to Sections 12.4.1.5 and 12.4.1.6.

---

<sup>89</sup> Qwest Wholesale Website: Loss/Completion Sample Reports Job Aid V4.0

**12.4.1.3.1 If CLEC so requests when reporting trouble, Qwest will call CLEC with the test results upon completion of the test.<sup>90</sup>**

12.4.1.4 (former 12.3.6.1) Notwithstanding any other provision of this Section 12.4.1, when CLEC does not have the ability to diagnose and isolate trouble on a Qwest line, circuit, or service provided in this Agreement that CLEC is utilizing to serve an End User Customer, Qwest will conduct testing, to the extent testing capabilities are available to Qwest, to diagnose and isolate a trouble. See Section 12.1.2 (nondiscrimination).

12.4.1.5 (former 12.3.4.2) When a Party requests that the other Party perform trouble isolation, the Party may charge the other Party a Maintenance of Service Charge if the trouble is found to be on the other Party's side of the Demarcation Point. If the trouble is on the other Party's side of the Demarcation Point, and the other Party authorizes the Party to repair trouble on the other Party's behalf, the Party may charge the other Party the appropriate Additional Labor Charge set forth in Exhibit A in addition to the Maintenance of Service Charge.

12.4.1.6 (former 12.3.4.3) When CLEC elects not to perform trouble isolation and Qwest performs tests at CLEC request, a Maintenance of Service Charge shall apply if the trouble is not in Qwest's facilities, including Qwest's facilities leased by CLEC. Maintenance of Service Charges are set forth in Exhibit A. When trouble is found on Qwest's side of the Demarcation Point, or Point of Interface during the investigation of the initial or repeat trouble report for the same line or circuit within thirty (30) Days, Maintenance of Service Charges shall not apply.

**12.4.1.6.1 If CLEC elects not to perform trouble isolation and Qwest performs tests at CLEC request, Qwest will conduct the test and assess the results. Qwest will provide the results to CLEC and indicate whether the trouble is in CLEC network or in the Qwest network. If the trouble is in CLEC network and CLEC authorizes a dispatch, a charge will apply for both the optional testing and the dispatch. However, if the circuit is on Pair Gain, Qwest will not assess optional testing charges. If the trouble is in the Qwest network, Qwest will dispatch a technician to conduct the Maintenance and Repair work to resolve the trouble and then close the ticket with CLEC. No Maintenance of Service charges will apply for repair of the trouble on Qwest's side of the network; however, a charge will be assessed for the optional testing requested by CLEC.<sup>91</sup>**

12.4.1.6.2 (former 12.3.6.2) Prior to Qwest conducting a test on a line, circuit, or service provided in this Agreement that CLEC is using to

<sup>90</sup> Qwest Wholesale Website: Unbundled Local Loop General Information V40.0

<sup>91</sup> Qwest Wholesale Website: Maintenance & Repair Overview V24.0

serve an End User Customer, Qwest must receive a trouble report from CLEC.

## 12.4.2 Trouble Reports and Trouble Status

12.4.2.1 The first time a trouble is reported, Qwest will assign a trouble report tracking number, as described in Section 12.1.3.3.1.1.

12.4.2.2 (former 12.3.14.1) CLEC may report trouble to Qwest through the Electronic Bonding or GUI interfaces provided by Qwest or manually through the support centers described above in Section 12.1.3.3.3.

12.4.2.2.1 (former 12.2.2.1) Qwest shall provide electronic interface gateways, including an Electronic Bonding interface and a GUI interface, for reviewing a End User Customer's trouble history at a specific location, conducting testing of a End User Customer's service where applicable, reporting trouble to facilitate the exchange of updated information and progress reports between Qwest and CLEC while the trouble report is open and a Qwest technician is working on the resolution.

**12.4.2.2.1.1 Qwest's graphical user interface (known as Customer Electronic Maintenance and Repair (CEMR)) will enable a real-time exchange of information between CLEC and Qwest for performing trouble administration activities, such as creating and editing trouble reports; monitoring status and reviewing transaction, circuit, and trouble report history; verifying features, viewing line records, and performing MLT request for POTS services; and pre-validation of service requests, such as searching and verifying cross-connect assignment data, viewing access service information, and performing service address validation.<sup>92</sup>**

**12.4.2.2.1.2 Qwest's electronic bonding interface (known as Mediated Access Electronic Bonding Trouble Administration (MEDIACC-EBTA)) will enable CLEC and Qwest to mechanically process telephone circuit repair activities with Qwest's Work Force Administration/Control (WFA/C) and Loop Maintenance Operating System (LMOS). MEDIACC-EBTA will enable a real-time exchange of information between CLEC and Qwest for performing trouble administration activities, such as creating and editing trouble reports; monitoring status and reviewing transaction, circuit, and trouble report history; verifying features, viewing line records, and performing MLT request for POTS services; and**

---

<sup>92</sup> Qwest Wholesale Website: Customer Electronic Maintenance and Repair (CEMR) & Repair Expert (RCE)

**pre-validation of service requests, such as searching and verifying cross-connect assignment data, viewing access service information, and performing service address validation.**<sup>93</sup>

12.4.2.2.2 (former 12.3.14.2) CLEC may access the status of manually reported trouble through the electronic interfaces described in Section 12.4.2.2.1.

12.4.2.3 **CLEC may review the status of trouble reports and messages posted by Qwest technicians through the Electronic Bonding or GUI interfaces provided by Qwest or manually by contacting the support centers**<sup>94</sup> described above in Section 12.1.3.3.3.

12.4.2.3.1 (former 12.3.18.2) On electronically reported trouble reports the electronic system will automatically update status information, including trouble report ticket closure with CLEC concurrence, across the joint electronic gateway as the status changes.

12.4.2.4 (former 12.3.16.1) Qwest will notify CLEC that a trouble report commitment (appointment or interval) has been or is likely to be missed. At CLEC option, notification may be sent by email or through the electronic interface.

#### **12.4.3 Activities to Resolve Troubles or Perform Maintenance Work**

12.4.3.1 **A CLEC trouble report is prioritized based on service without regard to the service provider, including Qwest.**<sup>95</sup>

12.4.3.2 Qwest will efficiently resolve CLEC reported trouble. Qwest will cooperate with CLEC to meet the Maintenance and Repair standards outlined in this Agreement. (former 12.3.18.1)

**12.4.3.3 When CLEC initiates a trouble report, Qwest technicians will manage the issue through resolution. Responsibilities of Qwest Maintenance and Repair technicians include:**<sup>96</sup>

12.4.3.3.1 **Assigning a Qwest technician responsible for initial testing on circuits identified in CLEC trouble report and isolating trouble** *Id.* (as described in Section X above)

<sup>93</sup> Qwest Wholesale Website: Mediated Access Electronic Bonding Trouble Administration (MEDIACC-EBTA)

<sup>94</sup> Qwest Wholesale Website: Maintenance and Repair Overview V24.0

<sup>95</sup> Qwest Wholesale Website: Maintenance and Repair Overview V24.0

<sup>96</sup> Qwest Wholesale Website Maintenance and Repair Overview V24.0

**12.4.3.3.2 Routing CLEC reports for dispatch to Qwest Central Office, Qwest Translations, and/or Qwest Field Technicians as applicable**<sup>97</sup>

**12.4.3.3.3 Escalating CLEC reports internally until a resource is assigned or progress made** *Id.*

**12.4.3.3.4 Performing tests in cooperation with CLEC to verify service restoration** *Id.*

**12.4.3.3.5 Coordinating cooperative testing** *Id.*

**12.4.3.3.6 Facilitating test result handoff activity and restoration concurrence; and** *Id.*

**12.4.3.3.7 Assigning accurate resolution or disposition codes when closing CLEC report.** *Id.*

12.4.3.4 (former 12.3.6.5) Qwest shall test to ensure electrical continuity of all UNEs, including Central Office Demarcation Point, and services it provides to CLEC prior to closing a trouble report.

**12.4.3.5 Qwest Maintenance and Repair and routine test parameters and levels will be in compliance with Telcordia's General Requirement Standards for Network Elements, Operations, Administration, Maintenance and Reliability and, to the extent not inconsistent with the foregoing, Qwest's Technical Publications.**<sup>98</sup>

12.4.3.6 Dispatch

12.4.3.6.1 (former 12.3.13.2) Upon the receipt of a trouble report from CLEC, Qwest will follow documented processes and industry standards to resolve the repair condition. Qwest will dispatch Maintenance and Repair personnel when needed to repair the condition. Initially, it will be Qwest's decision whether or not to send a technician out on a dispatch. Qwest will make this dispatch decision based on the best information available to it in the trouble resolution process. It is not always necessary to dispatch to resolve trouble. Should CLEC request a dispatch when Qwest believes the dispatch is not necessary, appropriate charges will be billed by Qwest to CLEC for those dispatch-related costs in accordance with Exhibit A if Qwest can demonstrate that the dispatch was in fact unnecessary to the clearance of trouble or the trouble is identified to be caused by CLEC facilities or equipment. Such dispatch-related charges will not apply if, although the dispatch was in fact unnecessary to the clearance of trouble, Qwest failed to perform the non-dispatch activities that would have cleared the trouble without a dispatch.

<sup>97</sup> Qwest Wholesale Website Maintenance and Repair Overview V24.0

<sup>98</sup> Qwest Wholesale Website Maintenance and Repair Overview V24.0

12.4.3.6.1.1 (former 12.3.13.2.1) The need for access to the customer premises when such access is unavailable shall not be the basis for deciding not to dispatch, unless Qwest has tested to the last point in its network before the customer premises (e.g., fiber hut, cross-box) and the testing indicates the trouble is at the customer premises.

12.4.3.6.2 (former 12.3.13.3) For lines and service circuits, Qwest is responsible for all Maintenance and Repair of the line or circuit and will make the determination to dispatch to locations other than the CLEC End User Customer Premises without prior CLEC authorization. For dispatch to the CLEC End User Customer Premises, Qwest shall obtain prior CLEC authorization with the exception of Major Network Outage restoration, cable rearrangements, and MTE terminal Maintenance and Repair or replacement.

12.4.3.6.2.1 For POTS services, the Qwest technician will call CLEC before the technician leaves CLEC's End User Customer's premises, upon request. CLEC may request such a courtesy pre-dispatch call by calling the RCHC or AMSC or via electronic interface (e.g., CEMR or MEDIACC-EBTA).<sup>99</sup>

12.4.3.6.3 Whenever a Qwest technician is dispatched to an End User Customer premise, Qwest will place a tag accurately identifying the line or circuit, including the Qwest Circuit ID, at the Demarcation Point if such a tag is not present.<sup>100</sup> See also Section 12.3.2.

12.4.3.6.3.1 If Qwest finds that the installation is not correct per the service order and the service is not working appropriately at the expected location, Qwest will make any changes necessary to make the installation correct per the original order and will notify CLEC of such activity.<sup>101</sup>

12.4.3.6.3.2 To correct an incorrect address on the original service request or request that a correctly installed Demarcation Point be moved, CLEC may submit a service request. *Id.* See Section 12.2.2.

#### 12.4.3.7 Chronic Service Problems

---

<sup>99</sup> Qwest Wholesale Website Maintenance and Repair Overview V24.0

<sup>100</sup> Qwest Wholesale Website Dispatch V1.0

<sup>101</sup> Qwest Wholesale Website Maintenance and Repair Overview V24.0

**12.4.3.7.1 Qwest will designate services having repeated, unresolved service issues as a chronic service problem if the following conditions occur:**<sup>102</sup>

**12.4.3.7.1.1 The circuit has had at least three trouble reports in a rolling 30 days *Id.***

**12.4.3.7.1.2 The circuit has similar, repeated test results on two or more trouble reports *Id.***

**12.4.3.7.1.3 Trouble on the circuit often clears during testing *Id.***

**12.4.3.7.1.4 CLEC reports trouble on the circuit as chronic when submitting a trouble report. *Id.***

**12.4.3.7.2 For troubles that often clear during testing (e.g., No Trouble Found), when the same trouble occurs on the same circuit two or more times within 30 Days, Qwest will perform a Class A inspection as defined by industry standards to isolate and resolve the trouble. Before doing so, Qwest will coordinate activities and scheduling with CLEC. Unless the Parties agree otherwise, the Class A inspection will occur during the Maintenance and Repair window described in Section 12.4.3.13.**

**12.4.3.7.3 Qwest's Maintenance and Repair technicians will focus on resolving chronic service problems by analyzing chronic reports for trends, determining root causes, taking ownership of the trouble report until service is restored, and assisting or calling upon internal and/or external experts. When trends or root causes are identified, Qwest will inform CLEC of the result of Qwest's analysis.**<sup>103</sup>

**12.4.3.7.4 If a trouble is chronic and has been unresolved for at least 30 Days, Qwest will redesign the circuit and replace the facility as needed to resolve the chronic trouble. Once Qwest's Maintenance and Repair technicians complete the repair and clear the chronic trouble, Qwest will maintain the trouble report ticket (also referred to as Chronic Ticket) in pending close status until CLEC accepts the trouble as resolved.**

#### **12.4.3.8 Connecting Facility Assignment Changes**

**12.4.3.8.1 The Connecting Facility Assignment (CFA) is a facility from a Qwest Central Office that terminates at a CLEC location (e.g., central office). If CLEC reports trouble on a CFA and it has been isolated to the Qwest portion of the CFA, the system or individual**

<sup>102</sup> Qwest Wholesale Website Maintenance and Repair Overview V24.0

<sup>103</sup> Qwest Wholesale Website Maintenance and Repair Overview V24.0

channel (time slot) will be repaired or temporarily re-routed to a different channel bank/facility until the original facility can be repaired. CLEC will not need to submit a service request to repair the CFA.<sup>104</sup>

12.4.3.8.2 If CLEC requests a permanent CFA move when CLEC reports trouble, Qwest will make the permanent move and then CLEC will need to submit a service request. Qwest Maintenance and Repair will work the redesign (i.e., permanent move) as they do other circuit redesigns. *Id.*

12.4.3.8.3 If CLEC is able to obtain an order number or Purchase Order Number (PON) during the permanent move, CLEC will provide it to Qwest. If CLEC is unable to obtain an order number or PON at that time, Qwest will proceed with making the permanent move and hold the trouble report ticket as No Access (NA) until CLEC can obtain an order number or PON. If CLEC cannot obtain an order number or PON until the next working day and CLEC wants the new CFA cut prior to obtaining an order number or PON, Qwest will make the cut and place the trouble report ticket in NA status for 24 hours. Qwest will track the trouble report ticket and follow up on a daily basis to ensure that an order has been issued. *Id.*

#### 12.4.3.9 Emergency and Courtesy Call Forwarding

12.4.3.9.1 When submitting a trouble report for POTS service, CLEC may request Emergency Call Forwarding (ECF) if CLEC has an out of service condition regardless of whether or not Call Forwarding is on the account. Emergency Call Forwarding allows the End User Customer to forward its telephone number to a working number while Qwest works to clear the problem. If the account has Call Forwarding, CLEC may also call the RCHC to have call forwarding (Courtesy Call Forwarding) activated with or without a Maintenance and Repair condition. *Id.*

#### 12.4.3.10 Major Outages/Restoral/Notification

12.4.3.10.1 Major Network Outages are Qwest-caused service affecting events with a common cause that disrupts service to 25 or more lines (or 64kbps line equivalents) (e.g., DS3 or multiple DS1 failure), impacts the functionality of 25 or more customers (e.g., Voicemail MDSI link) and/or has broad scale network impact (e.g. Tandem switch or trunking failures). *Id.*

---

<sup>104</sup> Qwest Wholesale Website Maintenance and Repair Overview V24.0

12.4.3.10.2 (former 12.3.9.1) Qwest will notify CLEC of Major Network Outages via e-mail to CLEC's identified contact. With the minor exception of certain Proprietary Information such as End User Customer information, Qwest will utilize the same thresholds and processes for external notification as it does for internal purposes. Information will be sent via e-mail on the same schedule as is provided internally within Qwest. The email notification schedule shall consist of initial report of abnormal condition and estimated restoration time/date, abnormal condition updates, and final disposition. Service restoration will be non-discriminatory, and will be accomplished as quickly as possible according to Qwest and/or industry standards.

**12.4.3.10.2.1 Qwest will send Major Network Outage notifications simultaneously with Qwest internal event notification, usually within 30 minutes after Qwest determines a Major Network Outage has occurred, even if the service problem is already resolved.**<sup>105</sup>

12.4.3.10.2.2 Qwest will provide CLEC with root cause analysis of Major Network Outages. Qwest will provide such information on a non-confidential basis. CLEC may choose to share such information with End User Customers to explain the cause of Major Network Outages they experienced.

12.4.3.10.3 (former 12.3.9.2) Qwest will meet with associated personnel from CLEC to share contact information and review Qwest's outage restoral processes and notification processes.

12.4.3.10.4 (former 12.3.9.3) Qwest's emergency restoration process operates on a 7X24 basis.

12.4.3.10.5 (former 12.3.9.4) ***Qwest may have an obligation to report network outages or other network troubles to the Commission in accordance with Applicable Law. In the event CLEC provides services to one or more End User Customers though the use of Resale or Unbundled Network Elements and there is a network outage or service trouble that Qwest must report to the Commission, Qwest shall make such reports on behalf of itself and CLEC.***

#### 12.4.3.11 Protective Maintenance and Repair

12.4.3.11.1 (former 12.3.10.2) Qwest shall provide notice to CLEC of potentially CLEC End User Customer impacting Maintenance and Repair activity, to the extent Qwest can determine such impact, and negotiate mutually agreeable dates and times with CLEC for performing such activity. Qwest will work cooperatively with CLEC to develop

---

<sup>105</sup> Qwest Wholesale Website Maintenance and Repair V24.0

industry-wide processes to provide CLEC with as much notice as possible of scheduled Maintenance and Repair activity.

12.4.3.11.2 (former 12.3.10.3) Qwest shall advise CLEC of non-scheduled Maintenance and Repair, testing, monitoring, and surveillance activity to be performed by Qwest on any Services, including, to the extent Qwest can determine, any hardware, equipment, software, or system providing service functionality which may potentially impact CLEC and/or CLEC End User Customers. Qwest shall provide the maximum advance notice of such non-scheduled Maintenance and Repair and testing activity possible, under the circumstances; provided, however, that Qwest shall provide emergency Maintenance and Repair as promptly as possible to maintain or restore service and shall advise CLEC promptly of any such actions it takes.

#### 12.4.3.12 Switch and Frame Conversion Service Order Practices

12.4.3.12.1 (former 12.3.24.1) Switch Conversions. Switch conversion activity generally consists of the removal of one Switch and its replacement with another. Generic Switch software or hardware upgrades, the addition of Switch line and trunk connection hardware and the addition of capacity to a Switch do not constitute Switch conversions.

12.4.3.12.2 (former 12.3.24.2) Frame Conversions. Frame conversions are generally the removal and replacement of one or more frames, upon which the Switch Ports terminate.

12.4.3.12.3 (former 12.3.24.3) Conversion Date. The "Conversion Date" is a Switch or frame conversion planned day of cut-over to the replacement frame(s) or Switch. The actual conversion time typically is set for midnight of the Conversion Date. This may cause the actual Conversion Date to migrate into the early hours of the day after the planned Conversion Date.

12.4.3.12.4 (former 12.3.24.4) Conversion Embargoes. A Switch or frame conversion embargo is the time period that the Switch or frame Trunk Side facility connections are frozen to facilitate conversion from one Switch or frame to another with minimal disruption to the End User Customer or CLEC services. During the embargo period, Qwest will reject orders for Trunk Side facilities (see Section 12.4.3.12.9) other than conversion orders described in Section 12.4.3.12.10. Notwithstanding the foregoing and to the extent Qwest provisions trunk or trunk facility related service orders for itself, its End User Customers, its Affiliates, or any other party during embargoes, Qwest shall provide CLEC the same capabilities.

12.4.3.12.5 (former 12.3.24.4.1) ASRs for Switch or frame Trunk Side facility augments to capacity or changes to Switch or frame Trunk Side facilities must be issued by CLEC with a Due Date prior to or after the

appropriate embargo interval as identified in the ICONN database. Qwest shall reject Switch or frame Trunk Side ASRs to augment capacity or change facilities issued by CLEC or Qwest, its End User Customers, its Affiliates or any other party during the embargo period, regardless of the order's Due Date except for conversion ASRs described in Section 12.4.3.12.

12.4.3.12.6 (former 12.3.24.4.2) For Switch and Trunk Side frame conversions, Qwest shall provide CLEC with conversion trunk group service requests (TGSR) no less than ninety (90) Days before the Conversion Date.

12.4.3.12.7 (former 12.3.24.4.3) For Switch and Trunk Side frame conversions, CLEC shall issue facility conversion ASRs to Qwest no later than thirty (30) Days before the Conversion Date for like-for-like, where CLEC mirrors their existing circuit design from the old Switch or frame to the new Switch or frame, and sixty (60) Days before the Conversion Date for addition of trunk capacity or modification of circuit characteristics (i.e., change of AMI to B8ZS).

12.4.3.12.8 (former 12.3.24.5) Frame Embargo Period. During frame conversions, service orders and ASRs shall be subject to an embargo period for services and facilities connected to the affected frame. For conversion of trunks where CLEC mirrors their existing circuit design from the old frame to the new frame on a like-for-like basis, such embargo period shall extend from thirty (30) Days prior to the Conversion Date until 5 Days after the Conversion Date. If CLEC requests the addition of trunk capacity or modification of circuit characteristics (i.e., change of AMI to B8ZS) to the new frame, new facility ASRs shall be placed, and the embargo period shall extend from 60 Days prior to the Conversion Date until 5 Days after the Conversion Date. Prior to instituting an embargo period, Qwest shall identify the particular dates and locations for frame conversion embargo periods on its web site in the ICONN database described in Section 12.1.3.2.5 above.

12.4.3.12.9 (former 12.3.24.6) Switch Embargo Period. During Switch conversions, service orders and ASRs shall be subject to an embargo period for services and facilities associated with the Trunk Side of the Switch. For conversion of trunks where CLEC mirrors their existing circuit design from the old Switch to the new Switch on a like-for-like basis, such embargo period shall extend from thirty (30) Days prior to the Conversion Date until five (5) Days after the Conversion Date. If CLEC requests the addition of trunk capacity or modification of circuit characteristics to the new Switch, new facility ASRs shall be placed, and the embargo period shall extend from sixty (60) Days prior to the Conversion Date until five (5) Days after the Conversion Date. Prior to instituting an embargo period, Qwest shall identify the particular dates and locations for Switch conversion embargo periods on its web site in the ICONN database described in Section X above.

12.4.3.12.10 (former 12.3.24.7) Switch and Frame Conversion Quiet Periods for LSRs. Switch and frame conversion quiet periods are the time period within which LSRs may not contain Due Dates, with the exception of LSRs that result in disconnect orders, including those related to LNP orders, record orders, Billing change orders for non-switched products, and emergency orders.

12.4.3.12.10.1 (former 12.3.24.7.1) LSRs of any kind issued during Switch or frame conversion quiet periods create the potential for loss of End User Customer service due to manual operational processes caused by the Switch or frame conversion. LSRs of any kind issued during the Switch or frame conversion quiet periods will be handled as set forth below, with the understanding that Qwest shall use its best efforts to avoid the loss of End User Customer service. In the event that CLEC End User Customer service is disconnected in error, Qwest will restore CLEC End User Customer service through the process described in Sections 12.1.3.3.

12.4.3.12.10.2 (former 12.3.24.7.2) The quiet period for Switch conversions, where no LSRs except those requesting order activity described in Section 12.4.2.12.10 are processed for the affected location, extends from five (5) Days prior to conversion until two (2) Days after the conversion and is identified in the ICONN database.

12.4.3.12.10.3 (former 12.3.24.7.3) The quiet period for frame conversions, where no LSRs except those requesting order activity described in Section 12.4.2.12.10 are processed or the affected location, extends from five (5) Days prior to conversion until two (2) Days after the conversion.

12.4.3.12.10.4 (former 12.3.24.7.4) LSRs, except those requesting order activity described in Section 12.4.2.12.10, (i) must be issued with a Due Date prior to or after the conversion quiet period and (ii) may not be issued during the quiet period. LSRs that do not meet these requirements will be rejected by Qwest.

12.4.3.12.10.5 (former 12.3.24.7.5) LSRs requesting disconnect activity issued during the quiet period, regardless of requested Due Date, will be processed after the quiet period expires.

12.4.3.12.10.6 CO-- (former 12.3.24.7.6) CLEC may request a Due Date change to a LNP related disconnect scheduled during quiet periods up to 12:00 noon Mountain Time the day prior to the scheduled LSR Due Date. Such changes shall be requested by issuing a supplemental LSR requesting a Due Date change. Such

changes shall be handled as emergency orders by Qwest.

12.4.3.12.10.6 **MN** – (former 12.3.24.7.6) CLEC may request a Due Date change to a LNP related disconnect scheduled during quiet periods up to 1:00 P.M. Central Time the day prior to the scheduled LSR Due Date. Such changes shall be requested by issuing a supplemental LSR requesting a Due Date change. Such changes shall be handled as emergency orders by Qwest.

12.4.3.12.10.6 **WA** – (former 12.3.24.7.6) CLEC may request a Due Date change to a LNP related disconnect scheduled during quiet periods up to 11:00 A.M. Pacific Time the day prior to the scheduled LSR Due Date. Such changes shall be requested by issuing a supplemental LSR requesting a Due Date change. Such changes shall be handled as emergency orders by Qwest.

12.4.3.12.10.7 **CO** -- (former 12.3.24.7.7) CLEC may request a Due Date change to a LNP related disconnect order scheduled during quiet periods after 12:00 noon Mountain Time the day prior to the scheduled LSR Due Date until 12 noon Mountain Time the day after the scheduled LSR Due Date. Such changes shall be requested by issuing a supplemental LSR requesting a Due Date change and contacting the Interconnect Service Center. Such changes shall be handled as emergency orders by Qwest.

12.4.3.12.10.7 **MN**: (former 12.3.24.7.7) CLEC may request a Due Date change to a LNP related disconnect order scheduled during quiet periods after 1:00 P.M. Central Time the day prior to the scheduled LSR Due Date until 1:00 P.M. Central Time the day after the scheduled LSR Due Date. Such changes shall be requested by issuing a supplemental LSR requesting a Due Date change and contacting the Interconnect Service Center. Such changes shall be handled as emergency orders by Qwest.

12.4.3.12.10.7 **WA**: (former 12.3.24.7.7) CLEC may request a Due Date change to a LNP related disconnect order scheduled during quiet periods after 11:00 A.M. Pacific Time the day prior to the scheduled LSR Due Date until 11:00 A.M. Pacific Time the day after the scheduled LSR Due Date. Such changes shall be requested by issuing a supplemental LSR requesting a Due Date change and contacting the Interconnect Service Center. Such changes shall be handled as emergency orders by Qwest.

12.4.3.12.11 (former 12.3.24.8) Switch Upgrades. Generic Switch software and hardware upgrades are not subject to the Switch conversion embargoes or quiet periods described above. If such generic Switch or software upgrades require significant activity related to translations, an abbreviated embargo and/or quiet period may be required.

12.4.3.12.12 (former 12.3.24.9) Switch Line and Trunk Hardware Additions. Qwest shall use its best efforts to minimize CLEC service

order impacts due to hardware additions and modifications to Qwest's existing Switches.

#### 12.4.3.13 Major Switch Maintenance and Repair Hours and Notices

12.4.3.13.1 (former 12.3.23.1) Generally, Qwest performs major Switch Maintenance and Repair activities off-hours, during certain "Maintenance and Repair windows." Major Switch Maintenance and Repair activities include Switch conversions, Switch generic upgrades and Switch equipment additions.

12.4.3.13.2 CO Language: (former 12.3.23.2) Generally, the Maintenance and Repair window is between 10:00 p.m. through 6:00 a.m. Monday through Friday, and Saturday 10:00 p.m. through Monday 6:00 a.m., Mountain Time. Although Qwest normally does major Switch Maintenance and Repair during the above Maintenance and Repair window, there will be occasions where this will not be possible. Qwest will provide notification of any and all Maintenance and Repair activities that may impact CLEC Ordering practices such as embargoes, moratoriums, and quiet periods.

12.4.3.13.2 MN Language: (former 12.3.23.2) Generally, the Maintenance and Repair window is between 11:00 p.m. through 7:00 a.m. Monday through Friday, and Saturday 11:00 p.m. through Monday 7:00 a.m., Central Time. Although Qwest normally does major Switch Maintenance and Repair during the above Maintenance and Repair window, there will be occasions where this will not be possible. Qwest will provide notification of any and all Maintenance and Repair activities that may impact CLEC Ordering practices such as embargoes, moratoriums, and quiet periods.

12.4.3.13.2 WA Language: (former 12.3.23.2) Generally, the Maintenance and Repair window is between 9:00 p.m. through 5:00 a.m. Monday through Friday, and Saturday 9:00 p.m. through Monday 5:00 a.m., Pacific Time. Although Qwest normally does major Switch Maintenance and Repair during the above Maintenance and Repair window, there will be occasions where this will not be possible. Qwest will provide notification of any and all Maintenance and Repair activities that may impact CLEC Ordering practices such as embargoes, moratoriums, and quiet periods.

12.4.3.13.3 (former 12.3.23.4) Planned generic upgrades to Qwest Switches will be available to CLEC via Qwest's Web site in the ICONN database, which is described in Section 12.1.3.2.5 above.

#### 12.4.3.14 Impairment of Service

12.4.3.14.1 (former 12.3.3.1) The characteristics and methods of operation of any circuits, facilities or equipment of either Party connected

with the services, facilities or equipment of the other Party pursuant to this Agreement shall not: 1) interfere with or impair service over any facilities of the other Party, its affiliated companies, or its connecting and concurring Carriers involved in its services; 2) cause damage to the plant of the other Party, its affiliated companies, or its connecting concurring Carriers involved in its services; 3) violate any Applicable Law or regulation regarding the invasion of privacy of any communications carried over the Party's facilities; or 4) create hazards to the employees of either Party or to the public. Each of these requirements is referred to as an "Impairment of Service."

12.4.3.14.2 (former 12.3.3.2) If it is confirmed that either Party is causing an Impairment of Service, as set forth in this Section, the Party whose network or service is being impaired (the Impaired Party) shall promptly notify the Party causing the Impairment of Service (the Impairing Party) of the nature and location of the problem. The Impairing Party and the Impaired Party agree to work together to attempt to promptly resolve the Impairment of Service.

#### 12.4.4 Trouble Report Closure

12.4.4.1 After a trouble report ticket has been opened, as described in Section 12.1.3.3.3.1.1, CLEC and Qwest will attempt to reach agreement on resolution of the problem and closing of the ticket. If no agreement is reached, any Party may use the applicable escalation and dispute resolution process described in Section 12.1.3.3.3 above. When the Parties agree, or a determination has been made pursuant to that process, that the trouble report ticket may be closed, Qwest will assign a code accurately describing the disposition of the trouble report (i.e., a "disposition code") and close the ticket. Qwest will not close a trouble report ticket without CLEC concurrence.<sup>106</sup>

12.4.4.2 **Qwest will notify CLEC of the disposition code upon request. For Maintenance and Repair trouble reports, the disposition code and any remarks will also be available through electronic interface (e.g., Customer Electronic Maintenance and Repair (CEMR)). CLEC closed trouble reports will be available to CLEC via the history function in the electronic interface (e.g., CEMR). *Id.***

12.4.4.3 **Qwest will provide a web based tool (known as Maintenance and Repair Invoice Tool) to CLEC that allows CLEC to access electronic copies of Qwest repair invoice information. The repair invoice information will include the time and material information that Qwest provides to its retail End User Customers on their time and material invoices. Qwest, through this tool, will provide access to at least Telephone Number or Circuit identification, CLEC ticket number, Qwest ticket number, End User Customer Address, End User Customer Name, USOC, Quantity, Start Date,**

---

<sup>106</sup> Qwest Wholesale Website Maintenance and Repair Overview v26.

**End Date, Disposition Code, and Remarks (comments by repair technician). Such invoice information will be available to CLEC<sup>107</sup>. within two (2) business days of ticket closure for POTS services and ten (10) business days for non-POTS services. Invoice information will be retained and available to CLEC via this tool for at least twelve (12) months.**

## 12.5 Billing

12.5.1 For Connectivity Billing, Recording, and Exchange of Information, see Section 21.

## 12.6 On-Going Support for OSS

12.6.1 (former 12.2.8) Qwest will support previous EDI releases for six (6) months after the next subsequent EDI release has been deployed. **Exceptions to these guidelines, if any, will be considered in accordance with the CMP procedures.**<sup>108</sup> Qwest will use all reasonable efforts to provide sufficient support to ensure that issues that arise in migrating to the new release are handled in a timely manner.

12.6.2 (former 12.2.8.1) Qwest will provide written notice to CLEC of the need to migrate to a new release no later than five (5) months prior to sunset of CLEC's current EDI version.

12.6.3 (former 12.2.8.2) Qwest will provide an EDI Implementation Coordinator to work with CLEC for business scenario re-certification, migration and data conversion strategy definition.

12.6.4 (former 12.2.8.3) Re-certification is the process by which CLECs demonstrate the ability to generate correct functional transactions for enhancements to a previously certified system. Qwest will provide the suite of tests for re-certification to CLEC with the issuance of the disclosure document.

12.6.5 (former 12.2.8.4) Qwest shall provide training mechanisms for CLEC to pursue in educating its internal personnel. Qwest shall provide training necessary for CLEC to use Qwest's OSS interfaces and to understand Qwest's documentation, including Qwest's business rules.

12.6.6 (former 12.2.1.5) When CLEC requests from Qwest more than fifty (50) SecurIDs for use by CLEC Customer service representatives at a single CLEC location, CLEC shall use a T1 line instead of dial-up access at that location. If CLEC is obtaining the line from Qwest, then CLEC shall be able to use SecurIDs until such time as Qwest provisions the T1 line and the line permits pre-order and order information to be exchanged between Qwest and CLEC.

---

<sup>107</sup> Qwest Wholesale Website: Qwest Maintenance and Repair Invoice Tool User Guide.

<sup>108</sup> Qwest Wholesale Website: CMP Document

12.6.7 (former 12.2.9.1) If using the GUI interface, CLEC will take reasonable efforts to train CLEC personnel on the GUI functions that CLEC will be using. Qwest shall provide training mechanisms for CLEC to pursue in educating its internal personnel. Qwest shall provide training necessary for CLEC to use Qwest's OSS interfaces and to understand Qwest's documentation, including Qwest's business rules. See Section 12.1.3.2 above.

12.6.8 (former 12.2.9.2) An exchange protocol will be used to transport EDI formatted content. CLEC must perform certification testing of exchange protocol prior to using the EDI interface.

12.6.9 (former 12.2.9.3) Qwest will provide CLEC with access to a stable testing environment that mirrors production to certify that its OSS will be capable of interacting smoothly and efficiently with Qwest's OSS. Qwest has established the following test processes to assure the implementation of a solid interface between Qwest and CLEC:

12.6.9.1 (former 12.2.9.3.1) Connectivity Testing – CLEC and Qwest will conduct connectivity testing. This test will establish the ability of the trading partners to send and receive EDI messages effectively. This test verifies the communications between the trading partners. Connectivity is established during each phase of the implementation cycle. This test is also conducted prior to Controlled Production and before going live in the production environment if CLEC or Qwest has implemented environment changes when moving into production.

12.6.9.2 (former 12.2.9.3.2) Stand-Alone Testing Environment ("SATE") – Qwest shall provide a stable, Stand-alone Testing Environment that, during a CLEC's development and implementation of EDI, will take pre-order and order requests, pass them to the stand-alone database, and return responses to CLEC that mirror the responses that would be obtained in the production environment. The SATE provides CLEC the opportunity to validate its technical development efforts built via Qwest documentation without the need to schedule test times. This testing verifies CLEC's ability to send correctly formatted EDI transactions through the EDI system edits successfully for both new and existing releases. Qwest will provide documentation for use with SATE that provides the CLEC information required to successfully use SATE and be certified to move into controlled production. SATE uses test account data supplied by Qwest. Qwest will provide a stable SATE no less than thirty (30) Days prior to Qwest's introduction of new OSS electronic interface capabilities to the production environment, unless otherwise agreed to pursuant to Section 16.0 of the CMP Document, including support of new test accounts, new test beds, new products and services, new interface features, and functionalities. All SATE pre-order queries and orders are subjected to the same edits as production pre-order and order transactions. This testing phase is optional when CLEC has performed Interoperability testing successfully.

12.6.9.2.1 (former 12.2.9.3.2.1) As of the Effective Date, the SATE does not include all of the Qwest products and services

CLEC may order in Qwest's production environment. In this context products and services are those items that may be ordered via EDI from Qwest on an LSR. Qwest shall incorporate each such product or service into SATE once the aggregate number of transactions for all CLECs in the production environment for such product or service reaches 100 or more during a twelve-month period. Once these conditions are met, Qwest shall incorporate such product or service into the upcoming major SATE release, if feasible. If not feasible for that release, Qwest shall incorporate such product or service into the SATE by no later than the next major SATE release. A Party may submit a request through CMP to add products to SATE that do not meet the above criteria.

12.6.9.3 (former 12.2.9.3.3) Interoperability Testing – CLEC has the option of participating with Qwest in Interoperability testing to provide CLEC with the opportunity to validate technical development efforts and to quantify processing results. Interoperability testing verifies CLEC's ability to send correct EDI transactions through the EDI system edits successfully. Interoperability testing requires the use of account information valid in Qwest production systems. All Interoperability pre-order queries and order transactions are subjected to the same edits as production orders. This testing phase is optional when CLEC has conducted Stand-Alone Testing successfully. Qwest shall process pre-order transactions in Qwest's production OSS and order transactions through the business processing layer of the EDI interfaces.

12.6.9.4 (former 12.2.9.3.4) Controlled Production – Qwest and CLEC will perform controlled production for new implementations. The controlled production process is designed to validate the ability of CLEC to transmit EDI data that completely meets X12 standards definitions and complies with all Qwest business rules. Controlled production consists of the controlled submission of actual CLEC production requests to the Qwest production environment. Qwest treats these pre-order queries and orders as production pre-order and order transactions. Qwest and CLEC use controlled production results to determine operational readiness. Controlled production requires the use of valid account and order data. All certification orders are considered to be live orders and will be provisioned.

12.6.9.5 (former 12.2.9.3.5) If CLEC is using EDI, Qwest and CLEC shall negotiate an amount of time to complete certification of CLEC's business scenarios. Qwest will allow CLEC a reasonably sufficient amount of time negotiated by Qwest and CLEC during the day and a reasonably sufficient number of days during the week to complete certification of its business scenarios consistent with the CLEC's business plan. It is the sole responsibility of CLEC to schedule an appointment with Qwest for certification of its business scenarios. Qwest and CLEC must make every effort to comply with the agreed upon dates and times scheduled for the certification of CLEC's business scenarios. If the certification of business scenarios is delayed due to CLEC, it is the sole

responsibility of CLEC to schedule new appointments for certification of its business scenarios. Qwest will make reasonable efforts to accommodate CLEC schedule. Conflicts in the schedule could result in certification being delayed. If a delay is due to Qwest, Qwest will honor CLEC's schedule through the use of alternative hours.

12.6.9.6 (former 12.2.9.3.6) Comprehensive Production Testing — Comprehensive Production Testing permits a comprehensive test of the totality of Qwest's operational interfaces and processes in conjunction with the actual Pre-ordering, Ordering, provisioning, billing and Maintenance and Repair of Network Elements, Ancillary Services, and UNE Combinations, including, without limitation, UNE-P, prior to or contemporaneously with the offering by CLEC of any CLEC product or service incorporating Qwest's Network Elements, UNE Combinations or Ancillary Services. Such Comprehensive Production Testing shall be designed to permit an individual CLEC to test its own operational interfaces and processes in conjunction with Qwest's and shall be in addition to any testing processes offered or required for interface development, version changes and/or certification (.e.g. Interoperability testing). The testing described in this Section is not conditional on CLEC's commitment to enter a market with any services but is conditional on any certification on operational interfaces or processes required under this Agreement.

12.6.9.6.1 (former 12.2.9.3.6.1) Qwest shall participate in Comprehensive Production Testing upon CLEC's request. CLEC shall notify Qwest in writing of CLEC's intent to participate in Comprehensive Production Testing. Such notice shall include a statement describing the scope of the test. CLEC and Qwest shall commence and complete Comprehensive Production Testing promptly.

12.6.9.6.2 (former 12.2.9.3.6.2) Within ten (10) business days after CLEC's written notice to Qwest of CLEC's intent to conduct Comprehensive Production Testing, CLEC and Qwest shall meet and continue meeting no less frequently than once per week, unless otherwise agreed by Qwest and CLEC, to agree upon a process to resolve technical issues relating to Comprehensive Production Testing. Unless otherwise agreed, within ten (10) business days after CLEC's first meeting with Qwest, CLEC shall provide Qwest with a firm definition of the scope of the comprehensive testing. Within a mutually agreed period of time, which shall not exceed forty-five (45) business days after CLEC defines the scope of the comprehensive testing, Qwest and CLEC will reach agreement on the terms, guidelines and processes for executing the comprehensive testing and meeting CLEC's objectives. The agreed upon process shall include procedures for escalating disputes and unresolved issues up through higher levels of each company's management. If (a) CLEC and Qwest do not reach agreement on such a process

within forty-five (45) business days after CLEC provides Qwest with the firm scope, or (b) Qwest or CLEC has failed to meet or continue meeting regarding, or Qwest or CLEC has otherwise indicated its intention not to conduct, Comprehensive Production Testing, or (c) Qwest and CLEC cannot agree upon whether or how much of the cost of such testing is to be allocated to CLEC or (d) during any Comprehensive Production Testing either Party fails to satisfy any of the requirements set forth in this Section 12.2.9.3.6, any issues that have not been resolved by the Parties with respect to such process or either Party's failure to satisfy any of the requirements of this Section 12.2.9.3.6 shall be submitted, at the sole discretion of either Party, to either (i) the Dispute Resolution procedures set forth in Section 5.18 of this Agreement or (ii) any dispute resolution or complaint process available or permitted by or before the Commission. In any expedited dispute resolution or complaint process, the Parties shall jointly request that the decision-maker render a decision within ninety (90) Days after submission of the dispute or complaint.

12.6.9.6.2.1 The intervals for comprehensive testing apply to one comprehensive test. One comprehensive test may include overlapping testing by CLEC in more than one state within a single comprehensive testing request. If Qwest has multiple requests for comprehensive testing then the intervals for each request will be separately negotiated. Multiple requests are CLEC requests for comprehensive production testing received within the same 45 business day interval referenced above. If the CLEC is not in agreement with the given intervals and the disagreement is not resolved within ten (10) business days, the requesting CLEC may submit the matter to the dispute resolution process.

12.6.9.6.3 (former 12.2.9.3.6.3) For the purposes of Comprehensive Production Testing, Qwest shall temporarily provision selected local Switching features for testing pursuant to the terms and conditions of this Agreement. CLEC will bear the cost of such provisioning as called for by this Agreement.

12.6.9.6.4 (former 12.2.9.3.6.4) For the purposes of Comprehensive Production Testing, Qwest shall provision pursuant to the terms and conditions of this Agreement or pursuant to a Qwest retail Tariff, whether singly or as part of a UNE Combination, any kind of Unbundled Loop, Resale or retail services designated by CLEC in such quantities and to any location or locations reasonably requested by CLEC. For example, Qwest shall provision, either singly or as part of a UNE Combination, a residential Loop or retail service to a commercial facility, such as an office building. In such cases, if a Commission waiver is not required, Qwest shall not assert that Tariff limitations restrict such Provisioning, or if a Commission waiver is required, the Parties will expeditiously seek such a

waiver.

12.6.9.6.5 (former 12.2.9.3.6.5) The Parties shall provide technical staff to meet to provide required support for Comprehensive Production Testing. Qwest and CLEC shall exchange contact information, including name, title, and email address, for such technical staff during the initial phase of that process.

12.6.9.6.6 (former 12.2.9.3.6.6) During Comprehensive Production Testing, the Parties shall provide a single point of contact that is available during business hours Monday through Friday for trouble status, sectionalization, resolution, escalation and closure of comprehensive testing issues. Comprehensive testing issues are those test issues which are outside the scope of routine Pre-ordering, Ordering, provisioning, billing, Maintenance and Repair of the services being tested. Such staff shall be adequately skilled to facilitate expeditious problem resolution.

12.6.9.6.7 (former 12.2.9.3.6.7) Either Party may supply information about the Comprehensive Production Testing conducted pursuant to this section to regulatory agencies including the Federal Communications Commission and the Commission so long as any confidential obligation is protected pursuant to the terms of Section 5.16.

12.6.9.6.8 (former 12.2.9.3.6.8) The costs of testing shall be assigned to the CLEC requesting the test procedures, but only to the extent that such costs exceed the costs Qwest would otherwise incur administering CLEC's pre-order, order, Billing, Maintenance and Repair activities in the production (non-test) environment or the costs Qwest would otherwise incur in provisioning retail lines for test purposes. Prior to execution of Comprehensive Production Testing, Qwest shall provide to CLEC an itemized quotation of all costs Qwest believes it is entitled to recover from CLEC pursuant to this Section 12.2.9.3.6.8, including a detailed description of each activity including the Qwest underlying assumptions for which Qwest seeks recovery. CLEC shall be permitted to challenge the necessity of Qwest's activities that cause extraordinary costs to be incurred. Challenges made by CLEC that cannot be resolved by the Parties shall be resolved through the dispute resolution process outlined in this agreement at Section 5.18. At the point that the expenses of the testing reach eighty percent (80%) of the quoted amount, Qwest will notify CLEC and provide a modified quotation, at which point, CLEC can choose whether or not to continue testing. CLEC shall have 30 business days to notify Qwest if CLEC wishes to continue the comprehensive testing. If CLEC elects to discontinue the comprehensive testing, then testing will cease at the end of the thirty (30) business days, provided it does not exceed the initial agreed upon costs. CLEC shall pay the amount due. If CLEC wishes to continue the testing it will accept the modifications to the quotation, or inform Qwest that CLEC disputes the modifications to the quotation but still wants the test to proceed, in writing within 30 business days and billing will continue as agreed. Qwest shall

provide to CLEC with such modified quote a detailed explanation of each change in cost and why Qwest believes CLEC is responsible for such changes in cost. This section is in addition to CLEC's responsibility to pay normal recurring and non-recurring charges (retail and wholesale) for the facilities and services identified in this Agreement and reflected in Exhibit A or a Qwest retail Tariff, if applicable, ordered during the testing. If construction is requested for the purpose of comprehensive testing, the Parties will adhere to the applicable terms and conditions relating to construction contained in this Agreement or the Qwest retail Tariff, depending on the services CLEC ordered. The parties will agree to reasonable timeframes for construction performed for comprehensive testing. If at any time the Parties are in dispute over the allocation of cost associated with testing, CLEC may request in writing that the testing proceed while the Parties work to resolve such a dispute. If CLEC agrees to pay 50% of the actual charges Qwest incurs in accordance with the agreed terms as if no dispute existed, then Qwest will proceed with the testing. If, after the dispute is resolved, CLEC has paid to Qwest any amount that exceeds the amount it owes pursuant to the resolution, Qwest agrees to credit CLEC for that excess amount. However, if the CLEC owes monies to Qwest, CLEC agrees to pay the remaining balance pursuant to the resolution.

12.6.9.7 (former 12.2.9.4) If CLEC is using the EDI interface, CLEC must work with Qwest to certify the business scenarios that CLEC will be using in order to ensure successful transaction processing. Qwest and CLEC shall mutually agree to the business scenarios for which CLEC requires certification. Certification will be granted for the specified release of the EDI interface. If a CLEC is certifying multiple products or services, CLEC has the option of certifying those products or services serially or in parallel where Technically Feasible.

12.6.9.7.1 (former 12.2.9.4.1) For a new software release or upgrade, Qwest will provide CLEC a stable testing environment that mirrors the production environment in order for CLEC to test the new release. For software releases and upgrades, Qwest has implemented the testing processes set forth in Section 12.2.9.3.2, 12.2.9.3.3 and 12.2.9.3.4.

12.6.9.8 (former 12.2.9.5) New releases of the EDI interface may require re-certification of some or all business scenarios. A determination as to the need for re-certification will be made by the Qwest coordinator in conjunction with the release manager of each EDI release. Qwest will provide notice of the need for re-certification to CLEC at least 15 Days prior to release of the disclosure document for the release being implemented. The suite of re-certification test scenarios will be provided to CLEC with the disclosure document. If a CLEC is certifying multiple products or services, CLEC has the option of certifying those products or services serially or in parallel, where Technically Feasible.

12.6.9.9 (former 12.2.9.6) CLEC will contact the Qwest EDI

Implementation Coordinator to initiate the migration process. CLEC may not need to certify to every new EDI release, however, CLEC must complete the re-certification and migration to a new EDI release within six (6) months of the deployment of the new release and prior to the sunset date for CLEC's current version. CLEC will use reasonable efforts to provide sufficient support and personnel to ensure that issues that arise in migrating to the new release are handled in a timely manner.

12.6.9.9.1 (former 12.2.9.6.1) The following rules apply to initial development and certification of EDI interface versions and migration to subsequent EDI interface versions:

12.6.9.9.1.1 (former 12.2.9.6.1.1) Stand Alone and/or Interoperability testing must begin on the prior release before the next release is implemented. Otherwise, CLEC will be required to move their implementation plan to the next release.

12.6.9.9.1.2 (former 12.2.9.6.1.2) New EDI users must be certified and in production with at least one product and one order activity type on a prior release two months after the implementation of the next release. Otherwise, CLEC will be required to move their implementation plan to the next release.

12.6.9.9.1.3 (former 12.2.9.6.1.3) Any EDI user that has been placed into production on a release not later than two months after the newest release implementation may continue certifying additional products and activities until two months prior to the retirement of the current release that CLEC is using. To be placed into production, the products/order activities must have been tested in the SATE or Interoperability environment at least four months prior to the retirement of the prior release.

12.6.9.10 (former 12.2.9.7) CLEC will be expected to execute the re-certification test cases in the stand alone and/or Interoperability test environments. CLEC will provide Purchase Order Numbers (PONs) of the successful test cases to Qwest.

## 12.7 Rate Elements

12.7.1 (former 12.2.11) Recurring and non-recurring OSS startup charges, as applicable, will be billed at rates set forth in Exhibit A. Qwest shall not impose any recurring or nonrecurring OSS startup charges unless and until the Commission approves such rates or until such rates go into effect by operation of law.

12.7.2 When Qwest OSS are not available and CLEC manually submits service requests to Qwest, Qwest will bill rates, if any, for mechanized functions, even though CLEC submitted the requests manually.

**NOTES:**

Eschelon proposes adding and modifying definitions that are in, or should be included in, Qwest's proposed Section 4, such as:

**Add to Definitions (Section 4):** "Include" or "including" means to have as part of a whole. The terms "include" and "including" mean "includes but is not limited to," regardless of whether the latter phrase is used.

**Add to Definitions (Section 4):** "Pre-ordering" includes gathering and verifying the necessary information to formulate an accurate order for an End User Customer and includes the following types of information: Customer Service Record (CSR), address validation, telephone number, due date, and services and features.

**Add to Definitions (Section 4):** Parties to discuss whether to add a Definition of Ordering, as other such terms (e.g., Pre-Ordering) will be defined.

**Modify Definition in Definitions (Section 4):**

"Provisioning" involves the exchange of information between Telecommunications Carriers where one executes a request for a set of products and services or Unbundled Network Elements or UNE Combinations from the other with attendant acknowledgments and status reports and the other provides the requested products or services. Provisioning includes implementing the requested service or feature, which may involve functions such as assigning facilities, updating translations in a switch, dispatching technicians and installation.

**Maintenance and Repair definition should be similarly modified.**

**Major Network Outages:** The information in the first paragraph of Section 12.4.3.10.1 could possibly be moved to Definitions. The Parties to discuss.

Eschelon proposes deleting Section 6.4 of the Resale Section of the Qwest-AT&T ICA and substituting a cross reference to Section 12. Information previously contained in Section 6.4 is covered by the provisions of this Section 12.

Eschelon proposes deleting Sections 9.2.2.15 and 9.2.4.10 of the Qwest-AT&T ICA and substituting a cross reference to Section 12. Information previously contained in that Section is covered by the provisions of this Section 12.

Eschelon proposes a review of the document before finalization for conforming changes to determine whether additional information in other Sections of the Agreement can be deleted, modified, or replaced with cross references to Section 12 to further consolidate the business processes into Section 12.

The UNE-E Amendment language will need to be added to the ICA. The Parties need to discuss whether the term “UNE-P” as used in the ICA is to include “UNE-E,” and where the term(s) are/will be defined. If “UNE-P” is not defined in the ICA to include “UNE-E,” then references to UNE-E will need to be added to Section 12 where applicable (such as 12.2.4.1.2).

## Responsibility Application.

8.2.1.22.3.14.6 Once Collocation site transfer is complete the vacating CLEC, assuming CLEC, and Qwest are all required to sign the Qwest Services Transfer Agreement.

8.2.1.23 Qwest shall design and engineer the most efficient route and cable racking for the connection between CLEC's equipment in its collocated spaces to the collocated equipment of another CLEC located in the same Qwest Premises; or to CLEC's own contiguous and non-contiguous Collocation space. The most efficient route generally will be over existing cable racking, to the extent Technically Feasible, but to determine the most efficient route and cable racking, Qwest shall consider all information provided by CLEC in the Application form, including but not limited to, distance limitations of the facilities CLEC intends to use for the connection. CLEC shall have access to the designated route and construct such connection, using copper, coax, optical fiber facilities, or any other Technically Feasible method utilizing a vendor of CLEC's own choosing. CLEC may place its own fiber, coax, copper cable, or any other Technically Feasible connecting facilities outside of the actual Physical Collocation space, subject only to reasonable NEBS Level 1 safety limitations using the route specified by Qwest. CLEC may perform such Interconnections at the ICDF, if desired. CLEC may interconnect its network as described herein to any other collocating Carrier, to any collocated Affiliate of CLEC, to any end users premises, and may interconnect CLEC's own collocated space and/or equipment (e.g., CLEC's Physical Collocation and CLEC's Virtual Collocation on the same Premises). CLEC-to-CLEC Connections shall be ordered either as part of an Application for Collocation under Section 8.4, or separately from a Collocation Application in accordance with Section 8.4.7. CLEC-to-CLEC Cross Connections at an ICDF are available, as follows:

### 8.2.1.23.1 CLEC-to-CLEC Cross Connections at the ICDF:

8.2.1.23.1.1 CLEC-to-CLEC Cross Connection (COCC-X) is defined as CLEC's capability to order a Cross Connection from its Collocation in a Qwest Premises to its non-adjacent Collocation space or to another CLEC's Collocation within the same Qwest Premises at the ICDF.

8.2.1.23.1.2 Qwest will provide the capability to combine these separate Collocations through an Interconnection Distribution Frame (ICDF). This is accomplished by the use of CLECs' Connecting Facility Assignment (CFA) terminations residing at an ICDF. Also, ICDF Cross Connections must terminate on the same ICDF at the same service rate level.

8.2.1.23.1.3 If CLEC has its own Dedicated ICDF, CLEC is responsible for ordering tie cables to the common ICDF frame/bay where the other CLEC resides. These tie cables would be ordered through the existing Collocation Application form.

**8.2.1.23.1.4 CLEC is responsible for the end-to-end service design that uses ICDF Cross Connection to ensure that the resulting service meets its Customer's needs. This is accomplished by CLEC**

**using the Design Layout Record (DLR) for the service connection.<sup>7</sup>**

8.2.1.23.1.5 If two (2) CLECs are involved, one CLEC acts as the "ordering" CLEC. The ordering CLEC identifies both connection CFA's on the ASR. CLEC requests service order activity by using the standard ASR forms. These forms are agreed upon nationally at the OBF (Ordering and Billing Forum). Refer to the DMP (Document Management Platform)/Carrier/Carrier Centers/"A"/"ASOG" for copies of all forms including definitions of the fields. CLEC is responsible for obtaining these forms. Qwest must not reproduce copies for its Customers, as this is a copyright violation. The standard industry forms for CLEC-to-CLEC Cross Connections (COCC-X) are: Access Service Request (ASR), Special Access (SPE) and Additional Circuit Information (ACI).

8.2.1.24 Qwest will provide CLEC the same connection to the network as Qwest uses for provision of services to Qwest end users. The direct connection to Qwest's network is provided to CLEC through direct use of Qwest's existing Cross Connection network. CLEC and Qwest will share the same distributing frames for similar types and speeds of equipment, where Technically Feasible and space permitting.

8.2.1.25 CLEC terminations will be placed on the appropriate Qwest Cross Connection frames using standard engineering principles. CLEC terminations will share frame space with Qwest terminations on Qwest frames without a requirement for an intermediate device.

8.2.1.26 If CLEC disagrees with the selection of the Qwest Cross Connection frame, CLEC may request a tour of the Qwest Premises to determine if Cross Connection frame alternatives exist, and may request use of an alternative frame or an alternative arrangement, such as direct connections from CLEC's Collocation space to the MDF or COSMIC™ frame.

8.2.1.27 Conversions of the various Collocation arrangements (e.g., Virtual to Physical) will be considered on an Individual Case Basis. However, conversions from Virtual Collocation to Cageless Physical Collocation, where the conversion only involves an administrative and Billing change, and the virtually collocated equipment is located in a space where Cageless Physical Collocation is available, shall be completed in thirty (30) calendar Days. CLEC must pay all associated conversion charges.

8.2.1.27.1 Qwest will maintain and repair the POTS splitter shelf assembly. If CLEC has Physical Caged or Cageless collocation, CLEC will have the option to perform maintenance and repair of the POTS splitter cards. Election of this option requires CLEC to perform all maintenance associated with the splitter cards including troubleshooting, repair and replacement of cards. CLEC will also be responsible to supply and inventory spare cards including adding new cards to provision un-carded splitter shelf slots. Election of splitter cards maintenance requires CLEC to maintain the splitter cards in all of its common area splitter collocation sites in Qwest's 14 state operating territory. If Qwest maintains the splitter cards, CLEC will not be permitted to remove or replace splitter cards and

---

<sup>7</sup> Arbitrator's Decision in ARB 584, Issued Aug. 11, 2005, at page 19.

"Impairing Party) of the nature and location of the problem. The Impaired Party shall advise the Impairing Party that, unless promptly rectified, a temporary discontinuance of the use of any circuit, facility or equipment may be required. The Impairing Party and the Impaired Party agree to work together to attempt to promptly resolve the Impairment of Service. If the Impairing Party is unable to promptly remedy the Impairment of Service, the Impaired Party may temporarily discontinue use of the affected circuit, facility or equipment.

12.3.3.2 If it is confirmed that either Party is causing an Impairment of Service, as set forth in this Section, the Party whose network or service is being impaired (the Impaired Party) shall promptly notify the Party causing the Impairment of Service (the Impairing Party) of the nature and location of the problem. The Impairing Party and the Impaired Party agree to work together to attempt to promptly resolve the Impairment of Service.

12.3.3.3 To facilitate trouble reporting and to coordinate the repair of the service provided by each Party to the other under this Agreement, each Party shall designate a repair center for such service.

12.3.3.4 Each Party shall furnish a trouble reporting telephone number for the designated repair center. This number shall give access to the location where records are normally located and where current status reports on any trouble reports are readily available. If necessary, alternative out-of-hours procedures shall be established to ensure access to a location that is staffed and has the authority to initiate corrective action.

12.3.3.5 Before either Party reports a trouble condition, it shall use its best efforts to isolate the trouble to the other's facilities.

12.3.3.5.1 In cases where a trouble condition affects a significant portion of the other's service, the Parties shall assign the same priority provided to CLEC as itself, its End User Customers, its Affiliates, or any other party.

12.3.3.5.2 The Parties shall cooperate in isolating trouble conditions.

#### **12.3.4 Trouble Isolation**

12.3.4.1 CLEC is responsible for its own End User Customer base and will have the responsibility for resolution of any service trouble report(s) from its End User Customers. CLEC will perform trouble isolation on services it provides to its End User Customers to the extent the capability to perform such trouble isolation is available to CLEC, prior to reporting trouble to Qwest. CLEC shall have access for testing purposes at the Demarcation Point, NID, Point of Interface or such other test points as are identified in this Agreement or applicable Qwest publications. Qwest will work cooperatively with CLEC to resolve trouble reports when the trouble condition has been isolated and found to be within a portion of Qwest's network. Qwest and CLEC will report trouble isolation test results to the other. Each Party shall be responsible for the costs of performing trouble isolation on its facilities, subject to Sections 12.3.4.2 and 12.3.4.3.

12.3.4.2 When CLEC requests that Qwest perform trouble isolation with CLEC, a

Maintenance of Service charge will apply if the trouble is found to be on the End User Customer's side of the Demarcation Point. If the trouble is found to be on Qwest's side of the Demarcation Point, Qwest will credit CLEC a Maintenance of Service charge or CLEC's actual costs, whichever is less, pursuant to Section 12.3.4.4. If the trouble is on the End User Customer's side of the Demarcation Point, and the CLEC authorizes Qwest to repair trouble on CLEC's behalf, Qwest will charge CLEC the appropriate Additional Labor Charge set forth in Exhibit A in addition to the Maintenance of Service charge.

12.3.4.3 When CLEC elects not to perform trouble isolation and Qwest performs tests at CLEC's request, a Maintenance of Service Charge shall apply if the trouble is not in Qwest's facilities, including Qwest's facilities leased by CLEC. Maintenance of Service charges are set forth in Exhibit A. When trouble is found on Qwest's side of the Demarcation Point, or Point of Interface during the investigation of the repeat Trouble Report submitted within the time frame as set forth in Section 12.3.4.4 for the same line or circuit, Maintenance of Service charges shall not apply.

12.3.4.4 Where Qwest has billed CLEC for Maintenance of Service charges for a CLEC Trouble Report, Qwest will remove such Maintenance of Service charge from CLEC's account and CLEC may bill Qwest for its repeat dispatch(es) to recover a Maintenance of Service charge or CLEC's actual costs, whichever is less, if all of the following conditions are met:

- the repeat Trouble Report(s) is the same trouble as the prior Trouble Report (Repeat Trouble) as is demonstrated by CLEC's test results isolated between consecutive CLEC access test points; and
- the Repeat Trouble is reported within three (3) business days of the prior trouble ticket closure; and
- the Repeat Trouble has been found to be in facilities owned or maintained by Qwest or Qwest facilities leased by CLEC; and
- CLEC has provided the circuit specific test results on the prior and Repeat Trouble that indicates there is trouble in Qwest's network, consistent with the CLEC efficient use of space available for the purposes of providing test results on the Qwest standard trouble ticket form (If CLEC does not provide test results, Qwest will bill and CLEC will pay for optional testing where applicable); and
- CLEC's demonstration of its technician dispatch on the prior and Repeat Trouble; provided that such demonstration is sufficient when documented by CLEC's records that are generated and maintained in the ordinary course of CLEC's business.

### 12.3.5 Inside Wire Maintenance

Except where specifically required by state or federal regulatory mandates, Qwest will not perform any maintenance of inside wire (premises wiring beyond the End User Customer's Demarcation Point) for CLEC or its End User Customers.

**EXHIBIT 49**

## CONTRACT LANGUAGE DISCUSSED IN COLLABORATIVES / CLEC FORUMS

*COMPARE:*

Albersheim Minnesota Surrebuttal Testimony, p. 9, lines 6-12:

**“Q. ARE THERE ANY FACTUAL ERRORS IN ESCHELON'S DISCUSSION OF NEGOTIATION LANGUAGE?”**

A. Yes. While the errors are not relevant to the issues at hand, it is important that the factual record be correct. First, Ms. Johnson claims that CLEC forums used to be held in which Qwest discussed contract language changes.<sup>1</sup> I have confirmed with Qwest participants in those forums, including the manager of contract negotiations, that contract language was not discussed at CLEC forums. . . “

*WITH:*

**1. CMP Redesign Final Meeting Minutes at which contract language was discussed, Nov. 27-29, 2001 (excerpt)**

[http://www.qwest.com/wholesale/downloads/2002/020110/CMP\\_Redesign\\_Meeting\\_Nov\\_27-29\\_Final\\_Minutes-01-08-02.doc](http://www.qwest.com/wholesale/downloads/2002/020110/CMP_Redesign_Meeting_Nov_27-29_Final_Minutes-01-08-02.doc), p. 14 (emphasis added).<sup>2</sup>

“After a short break the meeting resumed with Schultz-Qwest requested the CLECs to explain why the interim process was for only changes which result from the workshops or OSS testing. She continued that if this were the case, all other issues would be handled under the existing CMP, and why, if that were the case did the “CLEC altering” list contain TN changes, for example, which clearly were not workshop related. Menezes-AT&T stated that he was not satisfied with the way the current CMP forced CLECs to dispute resolution if their CRs were denied. ***Zulevic-Covad asked why the additional testing CR wasn't managed through the same collaborative process as the collocation decommissioning CR was. He explained that the collocation CR had been submitted by AT&T in response to a Qwest notification. Steve Nelson-Qwest had met with the CLECs to discuss the CR, and asked them for ideas to handle the decommissioning. A collaborative proposal was developed and managed through CMP as a CR. He further explained that if any CLEC was not satisfied with the agreement, they were allowed to negotiate a separate agreement to their contract.*** Clauson-Eschelon stated that this is not a good model because it began with Qwest issuing a notice, when Qwest should have issued a CR. Clauson-Eschelon stated that Qwest should bring each product change it wishes to make to the CLECs as a CR for

---

<sup>1</sup> Qwest provides no cite. In Ms. Johnson's Rebuttal testimony, p. 6, lines 13-15, Ms. Johnson said: “With respect to Qwest's template proposals, Qwest previously held collaborative sessions and CMP CLEC Forums to discuss some contract language changes with CLECs.”

<sup>2</sup> BJJ-26 (27<sup>th</sup> page in PDF):

Reply of Allegiance, Covad, and Eschelon to Qwest's response to their escalation of cr # pc100101-5 regarding Additional testing and related issues, 12/21/01: “Allegiance, Covad, and Eschelon have made a reasonable request to Qwest to consider a collaborative effort, modeled after successful aspects of the one ultimately used to address collocation decommissioning, to address all of the issues raised in this escalation.” <http://www.qwest.com/wholesale/downloads/2001/011221/122101email.pdf>

their comment. She stated that Qwest should have to request a change, rather than making an announcement. She stated that CLECs should have the option of denying Qwest CRs. Quintana-PUC asked how this was different from the current CR process. Clauson-Eschelon stated that under the current process CLECs couldn't veto Qwest CRs. Schultz-Qwest stated that the difference is that systems CRs are prioritized and product/process CRs are not. She explained that Qwest has never committed to stop doing business or allow CLECs to reject or deny Qwest CRs. Clauson-Eschelon stated that once Qwest agreed to submit CRs for product/process changes it was a fair assumption that Qwest would allow CLECs to accept or deny them. Quintana-PUC asked what the difference was between a notice and a CR. Schultz-Qwest stated that a CR gives CLECs 45 days advance notice of a pending change and solicited their comments. Clauson-Eschelon stated that CLECs believed they would have denial privileges. Wicks-Allegiance stated that the CLECs also want dialogue to modify the elements of a Qwest CR. Menezes-AT&T stated that he felt Qwest and CLEC CRs were handled differently, because Qwest can deny CLEC CRs in both the product/process and systems arenas and CLECs cannot deny a Qwest CR. Schultz-Qwest stated that she wanted to see some definition around what was not CLEC altering. Clauson-Eschelon suggested that all Qwest changes become CRs.. Schultz-Qwest asked the Team to come up with a list of those changes that would require notification only. Quintana-PUC stated that she thought the Team could close the process and list today. Schultz-Qwest stated that Qwest had issues with CLEC denial of product/process CRs and suggested that the Team work to get more clarity around the notification list. Clauson-Eschelon stated that she wanted to see the redlining expanded. She asked if she could get a commitment from Qwest to the current interim process. Schultz-Qwest stated that the Team had identified gaps in their collective understanding. She stated it would take some time to clarify within Qwest what would get redlined. McNa-Qwest stated that anything that Qwest is adding is going on the notification form. She stated it would be confusing with multiple versions of a document in the holding tank. Clauson-Eschelon stated that she wanted the process to be easy for CLECs to use and asked that a definition of the specific changes be included in the notice. Schultz-Qwest explained the versioning process and the time intervals involved. She stated that Qwest was looking to CLECs for a list of changes Qwest could just send a notice on without redlining. Clauson-Eschelon asked if all substantive changes would be redlined in the future. Schultz-Qwest stated that she would discuss the issue with Sue McNa over lunch and bring an answer back. The meeting broke for lunch."

## **2. AT&T CR 5582318 (Decommission Process) (excerpt)**

[http://www.qwest.com/wholesale/cmp/archive/CR\\_5582318.htm](http://www.qwest.com/wholesale/cmp/archive/CR_5582318.htm)

### "Status History:

07/27/01 - 90 day review process for Joint Planning process for Cancel ,Decom and change of Responsibility Offering letter distributed.

08/09/01 - Proposed meetings for a collaborative re-design of the Collocation Cancellation, Decommission, and Change of Responsibility product offerings began. Meeting notice sent on July 27th with a reminder sent August 6th.

09/12/01 - Joint planning meeting held, chaired by Steve Nelson. . .

10/10/01 - Template agreement to be finalized with AT&T, chaired by Steve Nelson."

Project Meetings: (p. 4)

"Interconnection Agreements. Please join Qwest in participating in the following calendar of meetings. These meetings will be chaired by Steve Nelson, Group Product Manager Collocation. He can be reached on 303-896-6357. Interested CLECs are encouraged to participate."

**Collocation – Decommission and Cancellation, Change of Responsibility (excerpts)**

[http://www.qwest.com/wholesale/downloads/2001/011113/October\\_17\\_2001\\_Meeting.doc](http://www.qwest.com/wholesale/downloads/2001/011113/October_17_2001_Meeting.doc)

p.1:

**“Where:** Qwest, 1801 California, 23rd Floor

**When:** October 17, 2001

**Purpose:** The agenda included the following:

- ✓ Roll call.
- ✓ Review the minutes from the 10/10 meeting.
  - ✓ Review updated draft version of the Cancellation procedure document.
  - ✓ Review updated draft version of the Decommission procedure document.
  - ✓ Review Decommission Reimbursable Element calculation.
  - ✓ Review of the Cancellation and Decommission Amendments
  - ✓ Other minutes”

pp. 1-2:

**“1. Housekeeping -**

- ✓ Jane, Qwest, updated everyone on the process regarding the Amendments:
  - ✓ Once the product is announced there will be a 30 day grace period in which to sign and return the Cancellation and Decommission Amendments to Qwest.
  - ✓ If a CLEC would like to negotiate specific terms related to the Cancellation and Decommission Amendments they will need to Amend the 1.7 SGAT language to their contract. This will give them the ability to continue to place Cancel and Decommission Request while negotiating the specific Terms and Conditions.
- ✓ Based on group consensus on the Cancellation and Decommission Procedure documents the following is a tentative schedule:
  - ✓ Recommended changes discussed in the 10/17 meeting will be completed by Jane on 10/17 and forward to Legal for final review.
  - ✓ Once Legal has approved the documents will be put into the Amendment format week of 10/29.
  - ✓ CMP Notification will occur on 11/15.
- ✓ CLEC Review period between 11/16-12/01.
- ✓ Final Cancellation and Decommission procedures for review available on 12/15/01.
- ✓ Effective date for the final Cancellation and Decommission procedures to be posted on the Collocation PCAT on 1/1/02. “

**Attendees:**

**[attendee list and contact information omitted]**

**Notes from the Meeting:**

**1. Housekeeping -**

- ✓ Jane, Qwest, updated everyone on the process regarding the Amendments:
  - ✓ Once the product is announced there will be a 30 day grace period in which to sign and return the Cancellation and Decommission Amendments to Qwest.
  - ✓ If a CLEC would like to negotiate specific terms related to the Cancellation and Decommission Amendments they will need to Amend the 1.7 SGAT language to their contract. This will give them the ability to continue to place Cancel and Decommission Request while negotiating the specific Terms and Conditions.
- ✓ Based on group consensus on the Cancellation and Decommission Procedure documents the following is a tentative schedule:
  - ✓ Recommended changes discussed in the 10/17 meeting will be completed by Jane on 10/17 and forward to Legal for final review.
  - ✓ Once Legal has approved the documents will be put into the Amendment format week of 10/29.
  - ✓ CMP Notification will occur on 11/15.
- ✓ CLEC Review period between 11/16-12/01.
- ✓ Final Cancellation and Decommission procedures for review available on 12/15/01.
- ✓ Effective date for the final Cancellation and Decommission procedures to be posted on the Collocation PCAT on 1/1/02.

**2. Steve, Qwest, reviewed the meeting minutes from the 10/10 meeting and agenda for the 10/17 meeting.**

**3. Reviewed the Procedures document for Collocation Cancellation –**

- ✓ Jane, Qwest, reviewed the document.

- ✓ Only requested correction was 4.1.3 “Order Validation” should not be capitalize.
- ✓ **CLECs and Qwest were in agreement that the Cancellation Procedures document is approved once the above mentioned change was made to the document.**

#### **4. Review the Procedures Document for Collocation Decommission –**

- ✓ Jane, Qwest, reviewed the document.
- ✓ Recommended removing the second sentence in section 1.1.
- ✓ Bob, MCI Worldcom recommended that in section 2.5 “CLEC-to-CLEC Cross Connects” needs to be removed.
- ✓ Talia, Sprint, also asked that the following sentence be added to section 2.5: “services should be disconnected via ASR/LSR process”.
- ✓ It was agreed that item 2.9 (Splitter Collocation) should be removed.
- ✓ Mike, Covad, requested that in item 5.2 mention that the appropriate documentation is covered in 2.0 and 5.0.
- ✓ Requested in item 6.2 that the credit could possibly be in the form of a check.
- ✓ Talia, Sprint, asked the time frame to process ASRs/LSRs? Peggy said that intervals could be found in the Service Guide.
- ✓ Talia asked why the ASR/LSR could not be done with the Decommission Application? Peggy said that they must be done in order to process the Decommission request.
- ✓ Sharon, AT&T asked what the time frame for a MOP? Kay said that the MOP would need to be in place prior to taking out the equipment.

#### **5. Next Steps –**

On November 14<sup>th</sup> will be the next Qwest/CLEC meeting to review the Change of Responsibility procedure document. The meeting will be from 1:00 – 4:30. Jane will distribute the draft document prior to the meeting.

## **Qwest/CLEC Forum on Procedures for Cancellation, Decommission, Change of Responsibility for Collocation Sites**

**Where:** Qwest, 1801 California, 23rd Floor

**When:** November 14, 2001

**Purpose:** The agenda included the following:

- ✓ Roll call.
- ✓ Review status for launching the revised procedures for Collocation Cancellation and Collocation Decommission.
- ✓ Review 1<sup>st</sup> draft version of the Change of Responsibility procedure document.
- ✓ Review updated draft version of the Decommission procedure document.

**Chair:** Steve Nelson

**Minutes provided by:** Jane Lacy

**Next Meeting:** Wednesday, December 14<sup>th</sup>, Qwest, 1:00-3:30 MT, 1801 California, 23<sup>rd</sup> Floor, Call in phone number: 1-877-561-8688, pass code: 2924070# (NOTE NEW CONFERENCE BRIDGE PHONE NUMBER AND PASS CODE).

### **Attendees:**

[attendee list and contact information omitted]

### **Notes from the Meeting:**

#### **1. Housekeeping -**

- ✓ The revised procedures for Collocation Cancellation and Decommission will be launched on 12/21/01. Amendments for both Cancellation and Decommission will be available 11/21/01. Customers will be required to sign and date by 12/21 in order for Qwest to accept an application for Collocation Cancellation and Decommission after December 21<sup>st</sup>.
- ✓ Next meeting to discuss Change of Responsibility will be on 12/14 from 1:00 – 3:30.

#### **2. Reviewed the Procedures document for Collocation Change of Responsibility –**

- ✓ Jane, Qwest, reviewed the document.
- ✓ Due to new participants on the call and the unfamiliarity of who was speaking, I may not identify the person that asked a question in the meeting minutes.
- ✓ **Description section:**
  - ✓ Item 1.5:
    - ✓ It was suggested that the “R” in request be changed to lower case.
    - ✓ It was requested that I include “or Qwest” after “CLECs”.

- ✓ It was asked that Qwest get clarity from Legal as to what conditions would Qwest check the queue, i.e. buyout of a company, bankruptcy, etc. Also if it mattered if the request was for working circuits or non-working circuits. **ACTION ITEM:** Jane to verify with legal and public commission.
- ✓ Jennifer, Fairpoint, asked if CLECs could check themselves to determine if anyone is in the queue. Mike, Qwest, said that we post on the web a space denial list, which contains the office and number of CLECs in the queue.
- ✓ Sharon, AT&T, asked for the web site address. **ACTION ITEM:** Jane to provide the Qwest web site address for the Space Denial report. **ANSWER:** the web site for the Space Denial and Space Exhaust report is – <http://www.qwest.com/wholesale/notices/collo/spaceAvail.html>.
- ✓ Item 1.6, Bob, Worldcom, asked why we have to have different CLLI codes. Reason was due to system limitations, but Qwest to revisit and determine if the initial CLLI code can remain. **ACTION ITEM:** Jane to research and report back at our next meeting.
- ✓ Item 1.7, requested that we re-word this item so that the Change of Responsibility request would be irrevocable upon 100% payment of the NRC on the quote.
- ✓ **Terms and Conditions section:**
  - ✓ Item 2.2, requested that “pertaining” be switched to “referenced in”.
  - ✓ Item 2.3, Sharon, AT&T, asked if we could reconsider since the vacating maybe in trouble and the assuming is willing to accept financial responsibility for the vacating. **ACTION ITEM:** Jane to check with Legal.
  - ✓ Item 2.6, CLECs asked why Qwest needs to know that they have notified their customers of the transfer. Someone also mentioned that they may have a waiver from the FCC. Sharon asked if in ICA would Qwest not be liable? **ACTION ITEM:** Jane to check with Legal and also find out if the notification needs to be done at a certain point in time in the process.
  - ✓ Item 2.8.1, Kay, Qwest, asked if I could add “all” before “BAN”.
  - ✓ Item 2.8.3, much discussion regarding the need of CLECs to submit ASRs/LSRs if the COR request is with working circuits. **ACTION ITEM:** Jane to verify if ASRs/LSRs will be required.
  - ✓ Item 2.10, requested that I add “or Qwest” after “CLECs”.
  - ✓ Item 2.11, requested that the second sentence be re-worded to say “Qwest will manage the database and records transfer”.
  - ✓ Item 2.12, need to re-word to say that Qwest is not responsible for the physical condition of the CLECs equipment.
  - ✓ Item 2.14, need to re-word.
  - ✓ Item 2.15, change out “altering” with “augmenting” and add “to Qwest” at the end of the sentence.
  - ✓ Item 2.17 re-word to vacating existing site.
- ✓ **Rate Elements section:**
  - ✓ Item 3.2.1, requested that I break out what the charges are.
  - ✓ Item 3.2.2, requested that I add “for ASR/LSR activity”.
- ✓ **Ordering section:**

- ✓ Item 4.1.2 change the “R” in request to lower case.
- ✓ **Procedures section:**
  - ✓ Item 5.2 add “or Qwest”.
  - ✓ Item 5.3 requested that I add “recommended time frames”.
  - ✓ Item 5.4.4 correct “CLLI”.
  - ✓ Item 5.8 modified to say “...ASR/LSR orders have been submitted and scheduled completion date”.
  - ✓ Item 5.9 need to re-word.
  - ✓ Add an item 5.10 to say “Walkthrough acceptance of the site with assuming CLEC will occur 100% of the NRC have been paid or notified for the schedule walkthrough after the RFS date”.
- ✓ **Billing section:**
  - ✓ Item 6.1 change the “R” in request to lower case.

**Notification Category: Product Notification**  
**Target Audience: CLECS, Resellers**  
**Subject: Collocation Decommissioning Update: Action Required by December 21, 2001**

Beginning December 21, 2001, Qwest will issue updates to its Wholesale Product Catalog that include new/revised documentation on Collocation.

Procedures regarding Collocation Cancellation and Decommission have been modified. You will be required to sign, date and return the Collocation Cancellation and/or the Collocation Decommission Amendments by **December 21, 2001** in order to submit a Collocation Cancellation or Decommission request.

The amendments can be viewed at the following web site:

<<http://www.qwest.com/wholesale/clecs/negotiations.html>>. Please call your Qwest Sales Executive to request the formal Collocation Cancellation Amendment and the Collocation Decommission Amendment.

Information on collocation can be found on the Qwest Wholesale Web site at URL:

<<http://www.qwest.com/wholesale/pcat/collocation.html>>

You are encouraged to provide feedback to this notice through our web site. We provide an easy to use feedback form at <<http://www.qwest.com/wholesale/feedback.html>>. A Qwest representative will contact you shortly to discuss your suggestion.

If you have any questions or would like to discuss this notice please contact your Qwest Service Manager, Pat Levene on 6126636265. Qwest appreciates your business and we look forward to our continued relationship.

Sincerely,  
Qwest

Note: While these updates reflect current practice, it is important to note that there are additional changes that will be forthcoming as a result of ongoing regulatory activities e.g., collaborative workshops, and state commission orders. As these changes are defined and implementation dates are determined, notice of additional updates will be provided accordingly.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. All information provided on the site describes current activities and process.

Prior to any modifications to existing activities or processes described on the web site, wholesale customers will receive written notification announcing the upcoming change.

#### Description Of Change

Qwest has recently changed their Collocation Decommission Policy. AT&T objects to the fact that Qwest made this process change unilaterally – without the input of AT&T. Objections that AT&T has regarding the new policy are:

·1: A certified letter - stating that either no customers were ever installed in the collo or if customers were installed, AT&T has notified them their service will be disconnected or moved - and a copy of the decommission application must to be sent to the Account Team Representative. Prior to this process change, AT&T was not required to do this. We have processed approximately 10 decommission applications so far this year and have not sent a certified letter for any of them.

Resolution: AT&T wants to send the application via email only as before.

2. The decommission process reads "The completion of a decommission request and 100% payment of any outstanding financial obligation, will terminate the billing of recurring charges for the site." What this means to AT&T is that we should be current on any bills for the collocation we are decommissioning. What this means to Qwest is that if there is any outstanding bills - either non recurring or recurring - due for any collocation in Qwest territory, they will NOT process the decommission application until all bills for all sites are paid. AT&T may incur additional monthly charges for the collocation being decommissioned since the application is on hold.

Resolution: It is AT&T's request that only the non recurring and recurring bills for the collocation being decommissioned be subject to scrutiny.

3. Since Qwest charges AT&T a flat fee to decommission a site, AT&T has inquired about the possibility of conducting a site visit to ensure that Qwest has completed the decommissioning of the site. Qwest has denied AT&T this final site visit. Although Qwest may disconnect power cables, conduct a site visit and complete database work, they do not actually tear down the actual site. Qwest is hoping to lease the space to another CLEC and will not have to rebuild the space. Qwest assures AT&T that if the space is leased within a year of the decommissioning, AT&T will be reimbursed some monies for the collocation space.

Resolution: AT&T would like proof that the work has been completed.

---

#### Status History

06/06/01 - CR received by Donna Osborne Miller of AT&T

06/07/01 - Status changed to New – to be evaluated

06/25/01 - Status changed to Reviewed – Under consideration

06/25/01 - Revised CR submitted by AT&T

07/09/01 - Completed Draft Response

07/12/01 - Drafted Response sent to CICMP team via email (MR)

07/27/01 - 90 day review process for Joint Planning process for Cancel, Decom and change of Responsibility Offering letter distributed.

08/09/01 - Proposed meetings for a collaborative re-design of the Collocation Cancellation, Decommission, and Change of Responsibility product offerings began. Meeting notice sent on July 27th with a reminder sent August 6th.

09/12/01 - Joint planning meeting held, chaired by Steve Nelson

09/14/01 - AT&T verbal notice received from Sharon Van Meter to not close this CR as the Decommission process is still being worked on.

09/19/01 - CMP Meeting - Qwest provided status of CLEC meetings to develop the process.

10/10/01 - Template agreement to be finalized with AT&T, chaired by Steve Nelson.

10/17/01 - CMP Meeting: Steve Nelson to finalize decommission policies and procedures with CLEC community. No status change.

10/31/01 - Qwest response submitted to database CLEC Community.

11/14/01 - CMP Meeting - AT&T moved to "Close" CR.

-----  
**Project Meetings**

**New Interim Procedures to Terminate or Decommission An Existing Collocation Site**

As a result of your feedback concerning Qwest's recently issued Decommission procedures for existing Collocation sites, Qwest is adopting an interim plan for 90 days. During this interim 90-day period, Qwest will hold a series of meetings and conference calls with the industry to develop mutually acceptable procedures to follow concerning this issue. Please review the interim changes and the calendar of meetings below. We sincerely hope that you will participate.

**Interim Changes Effective August 9, 2001** • Qwest will no longer issue a Quote of \$3455 for each decommission before monthly recurring billing stops.

Qwest is waiving the Decommission Quote charges effective immediately with issuance of this announcement. Future pricing will be reviewed as part of the "Future Procedures Modifications Process" as described below.

- Qwest will credit past decommission quotes paid and any monthly charges paid past the date of acceptance of the valid application. CLECs can contact their Wholesale Project Manager regarding past decommissions processed or currently being processed.
- The vacating CLEC submitting the "Collocation Application for Cancel, Decommission, or Change of Responsibility" will no longer be required to be current on all billing for all collocation sites, including both monthly and non-recurring quotes before Qwest will process a decommission request.
- The interim requirement will state that a CLEC must be current on "all billing for the specific site for which the decommission application is submitted" for Qwest to decommission a site.

- Qwest will no longer require receipt of the quote charges to stop billing. Monthly billing will stop effective with the valid receipt of a decommission application.
- Applications will no longer need to be sent via certified mail for processing. "Electronic submission of requests to decommission a site can be sent to colo@qwest.com"

Future Procedures Modifications Process Qwest intends to issue future procedures that are acceptable to those parties concerned. For Qwest to implement satisfactory procedures, CLEC feedback is needed and valued. At the completion of this joint 90-day effort, the revised product procedures will be priced, and if appropriate, a template offered by Qwest for an amendment to the CLEC/Qwest

Interconnection Agreements. Please join Qwest in participating in the following calendar of meetings. These meetings will be chaired by Steve Nelson, Group Product Manager Collocation. He can be reached on 303-896-6357. Interested CLECs are encouraged to participate.

#### Kick-off meeting

August 9th, from 9am to 3pm, 1801 California, Executive Conference room, 23rd floor. Conference bridge: 877-542-1778, pass code 6904985.

1. Review existing product offerings and proposed changes, gather information on additional proposed changes, understand all concerns. Here is a brief outline of the discussion:
2. Agree to as many items as possible initially, table for future review those items requiring detailed response, and respond to disputed items by next meeting for resolution.
3. Capture voting record of participants on each issue, and dissenting opinion as agreed to by the team.
4. Prioritization of changes and timelines.
5. Review costing of current products. Items included in the costing model.
6. Discuss how other ILECs handle cancellation, decommission, change of responsibility or network transfer.

---

#### QWEST Response

"The below response does not include the attachments referenced in the response. Please see the CMP Web Site for complete response to include Cancellation and Decommissioning Procedures"

October 31, 2001 Sharon Van Meter Manager, AT&T 1875 Lawrence St., 10th floor  
Denver, Colorado 80202

CC: William Campbell Steve Nelson Jane Lacy

This letter is in response to CLEC Change Request Form #5582318, dated June 25, 2001. This Change Request pertains to several issues regarding the Decommission product

offering. On July 9th Qwest committed to partnering with the CLEC industry to resolve the issues identified in the Change Request Form specifically referring to decommission procedures. In addition, Qwest expanded this effort to review the product offerings for Cancellation, and Change of Responsibility. Throughout the month of August, September and October representatives from Qwest and the CLEC industry met to review the procedures for administering a Cancellation and Decommission request. The Qwest/CLEC Forum meetings will continue as we work together to revamp the Change of Responsibility product offering procedures. Successful resolution was achieved for those items addressed in the Decommission Change Request Form. Your efforts were instrumental in this partnership effort.

The following is a summary of the issues identified in the Decommission Change Request Form and the resolution for each: AT&T objected to process changes unilaterally without input from AT&T. Qwest committed to participate in a joint effort to review the Cancel, Decommission, and Change of Responsibility product offerings with CLEC industry and met that commitment. AT&T objected to the requirement to submit a certified letter stating that AT&T customers were notified of the disconnect or move. Qwest agreed to modify the process and allow both the application and confirmation notice to be sent electronically to the rfsmet@qwest.com mailbox. AT&T objected to the requirement that 100% payment of any outstanding financial obligation must be met in order to terminate billing of recurring charges. Qwest modified the procedures to state that financial obligations must be met with respect to the collocation site that is being decommissioned only. We further defined the financial obligations to include all non-recurring and monthly recurring charges must not be greater than thirty (30) days past due. AT&T objected to when the monthly recurring charges would cease. Qwest agreed that the billing end date will coincide with the date of a valid Decommission Application submit date. AT&T felt that they should be entitled to some monies for reimbursable elements at the Decommission site. Qwest agreed that a CLEC would be eligible for reimbursement on the re-usable elements for up to one (1) year from the Decommission Application submit date.

The following is the implementation schedule for the revised Cancellation and Decommission procedures: 11/15/01 - CMP Notification 12/01/01 - CLEC Review Period 12/15/01 - Revised Cancellation and Decommission procedures posted on the Collocation PCAT 01/01/02 - Effective date for the revised Cancellation and Decommission procedures

In summary, Qwest believes that we have satisfied your concerns regarding the Decommission and Cancellation procedures and therefore are considering this Change Request closed.

Sincerely,

Steve Nelson Group Collocation Product Manager

## **FINAL MEETING MINUTES**

**CLEC – Qwest Change Management Process Re-design  
Tuesday, November 27 thru Thursday November 29, 2001 Working Session**  
1801 California Street, 23<sup>rd</sup> Floor, Executive Conference Room, Denver, CO  
Conference Bridge: 1-877-847-0304, passcode 7101617#

**NOTE:** These are FINAL meeting minutes Qwest developed following the three day working session. Draft minutes were circulated to the CMP Re-design Core Team Members on Dec. 7, 2001. As of January 8, 2002, no comments were received from the meeting attendees.

### **INTRODUCTION**

The Core Team (Team) and other participants met November 27th through November 29th to continue with the Re-design effort of the Change Management Process. Following is the write up of the discussions, action items, and decisions in the working session. The attachments to these meeting minutes are as follow;

### **ATTACHMENTS**

Attachment 1: CMP Re-Design November 27 – 29, 2001 Attendance Record  
Attachment 2: CMP Re-Design Meeting November 27 – 29, 2001 Notice and Agenda – 11-20-01  
Attachment 3: CMP Redesign Meeting November 28 – 29, 2001 Revised Agenda – 11-27-01  
Attachment 4: CMP Re-Design Meeting November 29, 2001 Revised Agenda – 11-28-01  
Attachment 5: CMP Re-Design Issues and Action Log – Revised 11-19-01  
Attachment 6: Qwest Proposed Interface Testing Language - Revised 11-27-01  
Attachment 7: Qwest Proposed Production Support - Revised 11-27-01  
Attachment 8: IT Wholesale Systems Help Desk Severity levels 11-27-01  
Attachment 9: 10.0 Regulatory with PID References 11-15-01  
Attachment 10: Schedule of CMP Re-design Working Sessions - Revised 11-29-01  
Attachment 11: Qwest Initiated Product Process CR Initiation Process - Revised 10-3-01  
Attachment 12: NOT CLEC Impacting 11-26-01  
Attachment 13: Change Management Process Improvements 11-26-01  
Attachment 14: Master Redlined CLEC-Qwest CMP Re-design Framework - Revised 11-29-01  
Attachment 15: IT CR Flow Diagram - Qwest 11-28-01

stated that the CLECs couldn't comment on the changes if they cannot see them. There was further discussion of the OSS testing procedures and the way that McNa affected the changes to the documentation.

Menezes-AT&T stated that he was confused about why Qwest couldn't understand what had been written in the interim process. He stated that the CLECs wanted everything redlined or highlighted and included in a historical log. He asked why this wasn't currently being done. Schultz-Qwest stated that this was not currently being done because the subcommittee defined changes that were not part of the workshops. Clauson-Eschelon stated that she had stated in the first subcommittee meeting that all language agreed to in a subcommittee had to be brought back through a formal CMP Redesign meeting. She stated that the subcommittee meeting only formed tentative language. She stated that she was unhappy that Qwest had implemented a tentative process that the CMP Redesign team had not approved.

The discussion then turned to Eschelon's concern that the interim process was broken because Qwest had introduced the additional testing CR. Schultz-Qwest stated that the CR was submitted to CLECs in good faith since Qwest felt it may be CLEC impacting, but was not expressly included in the list of four items. Clauson-Eschelon repeated her concerns with the additional testing CR and stated that Qwest was out of process. Schultz-Qwest stated that under the current process Qwest had the option of noticing CLECs of the change and implementing it. Menezes-AT&T stated that Qwest was breaking contractual obligations and restructuring contractual agreements without negotiations. Clauson-Eschelon asked how the team could keep a situation like the additional testing CR from happening again. Zulevic-Covad stated that any CR which Qwest submitted which had contractual impacts should state that its implementation did not override contractual obligations. Bahner-AT&T stated that she wanted to discontinue all subcommittees and bring all issues to the CMP Redesign team. Clauson-Eschelon stated that nothing should be implemented based on subcommittee action.

After a short break the meeting resumed with Schultz-Qwest requested the CLECs to explain why the interim process was for only changes which result from the workshops or OSS testing. She continued that if this were the case, all other issues would be handled under the existing CMP, and why, if that were the case did the "CLEC altering" list contain TN changes, for example, which clearly were not workshop related. Menezes-AT&T stated that he was not satisfied with the way the current CMP forced CLECs to dispute resolution if their CRs were denied. Zulevic-Covad asked why the additional testing CR wasn't managed through the same collaborative process as the collocation decommissioning CR was. He explained that the collocation CR had been submitted by AT&T in response to a Qwest notification. Steve Nelson-Qwest had met with the CLECs to discuss the CR, and asked them for ideas to handle the decommissioning. A collaborative proposal was developed and managed through CMP as a CR. He further explained that if any CLEC was not satisfied with the agreement, they were allowed to negotiate a separate agreement to their contract. Clauson-Eschelon stated that this is not a good model because it began with Qwest issuing a notice, when Qwest should have issued a CR. Clauson-Eschelon stated that Qwest should bring each product change it wishes to make to the CLECs as a CR for their comment. She stated that Qwest should have to request a change, rather than making an announcement. She stated that CLECs should have the option of denying Qwest CRs. Quintana-PUC asked how this was different from the current CR process. Clauson-Eschelon stated that under the current process CLECs couldn't veto Qwest CRs. Schultz-Qwest stated that the difference is that systems CRs are prioritized and product/process CRs are not. She explained that Qwest has never committed to stop doing business or allow CLECs to reject or deny Qwest CRs. Clauson-Eschelon stated that once Qwest agreed to submit CRs for product/process changes it was a fair assumption that Qwest would allow CLECs to accept or deny them. Quintana-PUC asked what the difference was between a notice and a CR. Schultz-Qwest stated that a CR gives CLECs 45 days advance notice of a pending change and solicited their comments. Clauson-Eschelon stated that CLECs believed they would have denial privileges. Wicks-Allegiance stated that the CLECs also want dialogue to modify the elements of a Qwest CR. Menezes-AT&T stated that he felt Qwest and CLEC CRs were handled differently,

because Qwest can deny CLEC CRs in both the product/process and systems arenas and CLECs cannot deny a Qwest CR. Schultz-Qwest stated that she wanted to see some definition around what was not CLEC altering. Clauson-Eschelon suggested that all Qwest changes become CRs.. Schultz-Qwest asked the Team to come up with a list of those changes that would require notification only. Quintana-PUC stated that she thought the Team could close the process and list today. Schultz-Qwest stated that Qwest had issues with CLEC denial of product/process CRs and suggested that the Team work to get more clarity around the notification list. Clauson-Eschelon stated that she wanted to see the redlining expanded. She asked if she could get a commitment from Qwest to the current interim process. Schultz-Qwest stated that the Team had identified gaps in their collective understanding. She stated it would take some time to clarify within Qwest what would get redlined. McNa-Qwest stated that anything that Qwest is adding is going on the notification form. She stated it would be confusing with multiple versions of a document in the holding tank. Clauson-Eschelon stated that she wanted the process to be easy for CLECs to use and asked that a definition of the specific changes be included in the notice. Schultz-Qwest explained the versioning process and the time intervals involved. She stated that Qwest was looking to CLECs for a list of changes Qwest could just send a notice on without redlining. Clauson-Eschelon asked if all substantive changes would be redlined in the future. Schultz-Qwest stated that she would discuss the issue with Sue McNa over lunch and bring an answer back. The meeting broke for lunch.

After lunch the Team agreed to discuss the documentation history log. Schultz-Qwest stated that during lunch she had communicated with Sue McNa. She explained the CLECs' underlying need was to have a clear delineation of what has changed. Schultz proposed that all changes would be tracked in the Historical Tracking Log. She stated small changes(in terms of size, not substance) could be redlined within the notification letter, and only large changes would be redlined in the holding tank. Wicks-Allegiance stated that Schultz's proposal sounded good as long as the Team agreed that any change could alter CLEC operating procedures and the timing would need to be scheduled accordingly. Clauson-Eschelon stated that the key was the format of the notification. She stated that the notice must be more detailed and clearly define what the changes were. Wicks-Allegiance stated that three to four page notices would be acceptable. Wicks-Allegiance stated that a history log entry would suffice for typo corrections and that all changes should be captured in the history log. Schultz-Qwest suggested that for changes that did not alter the meaning that Qwest include an entry in the history log but not notice the CLECs or redline the document. She suggested that changes that did not alter the meaning would include misspellings, punctuation mark errors, repeated word errors, renumbering to correct a typo, and correction of incorrect capitalization.

The Team next discussed the Qwest document versioning process and the impacts of changes on multiple versions in the holding tank.

The Team then discussed the format of the history log. The team agreed that the history log would be placed at the beginning of the document.

Clauson-Qwest stated that she was concerned that Qwest was making changes due to OSS tester questions and not noticing the CLECs. She asked if there were any situations where some changes became effective immediately. Schultz-Qwest stated that she could not adequately respond to this question now. She stated that Qwest would not intentionally implement a change that would affect the CLECs without notifying the CLECs. She stated that if Qwest felt a need to make a change like this Qwest would invoke the exception process. Clauson-Eschelon stated that if Qwest was not sure if a change was CLEC altering it should submit a CR. Schultz-Qwest stated that there was no documented process to capture what Clauson just stated. She explained that this was why she had been pushing to get clarity around what is CLEC altering. Clauson-Eschelon stated that Qwest must do its best to determine what is CLEC altering. She stated that Qwest should submit a CR for everything Qwest determines, using its best judgement, alters CLEC operating procedures. Clauson-Eschelon stated that she wanted the list of four CLEC altering items removed from implementation immediately and for Qwest to use common

**NO CLEC FORUMS HELD SINCE 2003**

*COMPARE:*

**Albersheim Minnesota Surrebuttal Testimony, p. 9, lines 13-17:**

**“Q. ARE THERE ANY FACTUAL ERRORS IN ESCHELON'S  
DISCUSSION OF NEGOTIATION LANGUAGE?**

A. ...Ms. Johnson's claim that Qwest has not held a CLEC Forum since June 2003 is also not correct. The last forum held in June of 2005, and was repeated in July of 2005. Admittedly the forum venue has changed. Qwest can no longer afford to host CLEC representatives at a hotel, such as the site of the forum in 2003. Instead, the last forum was conducted via conference call.”

*WITH:*

Qwest's own Wholesale Calendar (attached as the following page), which shows that, according to Qwest's records, the last CLEC Forum was held in June 2003.

Total Qwest Product and Process Change Requests Withdrawn by Qwest (2001 to 9/19/2006) = 14 or 12%								
Year Submitted	CR Number	CR Title	Date CR Submitted	CR Submitted By	CR Status	Did Qwest withdraw the CR due to CLEC objection?	CR information on reason for withdrawal	CR URL
2001	PC112901-1	Standardize Process of Receiving Jeopardy Notices	11/29/2001	Qwest	Withdrawn	NO	No notes in the CR to explain why Qwest withdrew this CR. Qwest submitted the CR on 11/29/01 and withdrew it on 12/12/01. No discussion or CLEC objection is noted in the CR.	<a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC112901-1.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC112901-1.htm</a>
2001	PC112701-2	Grandparent SwitchNet 56	12/12/2001	Qwest	Withdrawn	NO	No notes in the CR to explain why Qwest withdrew this CR. Qwest submitted the CR on 11/27/01 and withdrew it on 12/12/01. No discussion or CLEC objection is noted in the CR. Notes say Qwest was filing with Commissions.	<a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC112701-2.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC112701-2.htm</a>
2002	PC043002-1	Fiber Provider Point of Entry	4/30/2002	Qwest	Withdrawn	NO	No notes in the CR to explain why Qwest withdrew this CR. Qwest submitted the CR on 4/30/02 and withdrew it on 5/9/02. No discussion or CLEC objection took place or is noted in the CR detail. Notes say withdrawn by originator. This was a new product.	<a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC043002-1.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC043002-1.htm</a>
2003	PC021103-1	Conditioning for DSL level Data Services in all Products at no charge to the CLEC/DLEC	2/11/2003	Qwest	Withdrawn	NO	Qwest withdrew this CR and issued multiple CRs in its place not because CLECs objected. CR notes state: "Qwest wishes to withdraw CMP CR PC021103-1 CR because the changes it requests are more fully presented and detailed in CMP CRs PC022403-2, PC022403-3, PC022403-4, PC022403-5, PC022403-6, PC022403-7, and PC022403-8. Qwest presented these CRs at the Ad Hoc CMP Meeting on March 3, 2003."	<a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC021103-1.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC021103-1.htm</a>
2003	PC040103-1	Grandfather of Integrated T-1 in Denver and Seattle.	4/1/2003	Qwest	Withdrawn	NO	The CR detail does not contain the reason Qwest withdrew the CR. Notes indicated there was some discussion and questions about the CR, however, CLECs did not object. Qwest submitted the CR on 4/1/03 and Qwest presented its withdrawal on 5/21/03.	<a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC040103-1.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC040103-1.htm</a>
2003	PC072103-1	DLR Option Change	7/21/2003	Qwest	Withdrawn	NO	The CR detail states "08/20/03 August CMP Meeting Kathy McBride with Qwest said that Qwest would like to withdraw the CR because, when implemented, will be a level 3 notification." There was some discussion, however, there was no CLEC objection.	<a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC072103-1.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC072103-1.htm</a>
2003	PC081903-1	Change in Resale, UNE and Interconnection Services Service Interval Guide (SIG)	8/19/2003	Qwest	Withdrawn	NO	The CR detail states: "09/17/03 - September CMP Meeting Sandy Stulen with Qwest gave an update on this CR. Qwest would like to withdraw this CR and doesn't plan to change the SIG." There was some discussion, however, there was no CLEC objection.	<a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC081903-1.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC081903-1.htm</a>
2003	PC110303-2	New Collocation Product Development Louvered Pedestal Collocation	11/3/2003	Qwest	Withdrawn	NO	The CR detail states: "11/19/03 Nov. CMP Meeting Ben Campbell Qwest asked that this CR be withdrawn because it is a modification to an existing product. He said that Louvered Pedestal Collocation had been discussed and a Network Notification had been issued in August. This is a follow up making modifications to the existing product. The intent is to make this a Level 3 change with continued CLEC joint planning."	<a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC110303-2.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC110303-2.htm</a>

2004	PC010604-1	Grandparent DSL Pro USOCs.	1/6/2004	Qwest	Withdrawn	NO	The CR detail states: "03/17/04 March CMP Meeting Janean Van Dusen with Qwest gave an update that Qwest would like to withdraw this CR. This CR will move to Withdrawn Status." Minimal discussion took place, however, there was no CLEC objection.	<a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC010604-1.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC010604-1.htm</a>
2004	PC021204-1	Port In and Add New Non Ported Tn(s) on same LSR	2/12/2004	Qwest	Withdrawn	NO	The CR detail states: "03/17/04 March CMP Meeting Susie Wells with Qwest said she would like to withdraw this CR because it is not a level 4 change and actually is a level 3 change to an existing process. Updates will be made in the Port In PCAT."	<a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC021204-1.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC021204-1.htm</a>
2004	PC062904-1	Grandparent LADS in CO, UT and OR effective 9/7/04	6/29/2004	Qwest	Withdrawn	NO	No notes in the CR to explain why Qwest withdrew this CR. Qwest submitted the CR on 6/29/04 and withdrew it on 7/21/04. No discussion or CLEC objection took place or is noted in the CR detail.	<a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC062904-1.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC062904-1.htm</a>
2004	PC072204-1	Clarification of wording for CLEC to CLEC Connections	7/22/2004	Qwest	Withdrawn	JOINT	The CR detail states: "9/16/04 CMP Meeting Minutes Mark Nickell reported that an ad-hoc call was held and it was mutually agreed to suspend CMP meetings until the current dispute resolution activities conclude in Colorado." Qwest submitted this as a CR because Qwest was changing a download on the collocation site to a PCAT. CLECs did object to Qwest Changes that added the word "common" to ICDF (Qwest said this was a clarification) for two reasons. The CR was in conflict with Eschelon CR PC120301-4 which Qwest completed in April of 2002 and, Covad was arbitrating this issue in CO and both parties agreed to defer the CR until the issue was decided. CR detail notes also state: "2/15/06 Product Process CMP Meeting Jill Martain-Qwest stated that this CR had been in Deferred status for awhile and stated that Qwest would like to withdraw the CR. This CR moves to Withdrawal status."	<a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC072204-1.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC072204-1.htm</a>
2004	PC092104-1	Grandparent Scan Alert in OR and WA	9/21/2004	Qwest	Withdrawn	NO	The CR detail states: "December CMP Meeting Minutes Janean Van Dusen – Qwest advised this CR was cancelled by Retail as there were some issues in Washington. This CR will move to Withdrawn Status."	<a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC092104-1.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC092104-1.htm</a>
2006	PC030606-1	Qwest contacting CLECs Customers to confirm access	3/6/2006	Qwest	Withdrawn	JOINT	The CR detail states: "4/19/06 Product/Process CMP Meeting Jill Martain-Qwest stated that this CR was discussed at the March CMP Meeting and stated that Qwest would like to withdraw the request. Georganne Weidenbach-Qwest stated that based on CLEC comments and further Qwest analysis, Qwest made a decision that the CLEC volume, of no access misses was very small and that Qwest would like to withdraw the CR. Georganne noted that Qwest may pursue this later if the volumes rose. There were no objections to the withdrawal request. This CR moves to Withdrawn Status." Eschelon did tell Qwest at the meeting that this request ("Laura Baird-Qwest stated that Qwest would like permission to contact the end user to confirm access arrangements when required for repair and service orders prior to the field technician going out to the premises. Laura provided an example of a situation of when we would contact the end user.) was in conflict with Qwest's own SGAT.	<a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC030606-1.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC030606-1.htm</a>

Karen, this is not a CMP issue, I will take this. thanks, jean

**From:** Clauson, Karen L.  
**Sent:** Tuesday, February 04, 2003 2:24 PM  
**To:** 'Novak, Jean'; 'Judith Schultz'  
**Cc:** Hanser, Paul H.; 'Linda Miles'; 'Kelly Cameron'  
**Subject:** input into template proposed interconnection agreement process

I'm not sure to whom at Qwest to direct this request, so I am starting with you, Jean and Judy. (I have already asked Linda Miles, and she wasn't the one.) Please provide this to the appropriate personnel at Qwest (including those working on the template) who can respond to this request, if not you.

This email relates to a template interconnection agreement that Qwest is preparing. (Contract negotiator Linda Miles of Qwest has described that template process to us and may describe it to you as well, if you are unfamiliar with it.) Eschelon understands that generally Qwest may make whatever proposal it chooses in negotiations and, if the parties disagree, they will arbitrate. Not as a legal but as a practical matter, though, if Qwest could voluntarily incorporate input from CLECs into the form of the template, the process should be more efficient for everyone. If Qwest wants to obtain a new generation of interconnection agreements with CLECs, it seems to be in Qwest's interest to help simplify the process. The more information Qwest provides with the template, the simpler the process.

As background, in response to inquiries by Eschelon, Linda Miles had initially said that she thought Qwest was working on a comparison document that would show the differences, by state, in the various SGATs. This would have been helpful to Eschelon, which was not an active participant in the development of those SGATs. Other CLECs in the same position would also benefit from such a comparison. During Eschelon's last conversation with Linda, she said that she had learned that Qwest was NOT creating a comparison. Instead, Qwest is creating a template proposed agreement based on at least one SGAT(s). Linda said that the template may highlight some state-specific differences in the SGATs, but it wasn't clear to us whether it would highlight them all. Eschelon does not know the differences, because it wasn't able to participate in the proceedings. Linda said that she had anticipated that the template would be available by the end of 1st quarter but now thought it would be later.

**Eschelon requests that Qwest provide source information (through footnotes or redlining, etc.) in the template agreement that Qwest is in the process of preparing for interconnection agreement negotiations.** If Qwest indicates which SGAT sections are pulled from, for example, every CLEC will not need to independently search for a piece of information that is already known to Qwest. Early on, Eschelon had asked Qwest to use Eschelon's existing contract (the AT&T contract) as a base for negotiations. Qwest insisted on using the SGAT instead. If Qwest is only willing to negotiate from that document, with which it has the most familiarity, it seems fair that Qwest provide its template in a user-friendly format that helps address the difference in knowledge level about the content. Identifying where the sections come from (whether negotiated as part of a 271 workshop in an identified state or ordered in a specified commission order) will help eliminate questions.

In the past, Eschelon found that, if one state ruled in the CLECs favor on an issue, Qwest did not necessarily bring that into the interconnection agreement discussions. Generally, in the

previous Qwest language, from Eschelon's perspective, Qwest took more of a lowest common denominator approach (including only what was ordered by every state, or ordered in some states to Qwest's advantage, but NOT including things favorable to CLECs but only ordered in certain states). **Eschelon requests that the latter category of language also be included in the template, at least for the state(s) in which Qwest has been ordered to offer it.** For example, Washington apparently made a ruling relating to the build issue that is reflected in the WA SGAT but not other SGATs. (For purposes of this example, we're assuming the language was favorable to CLECs and not desired by Qwest.) Will the template include the WA build language (identifying it as state-specific for WA), or will each CLEC have to review every SGAT to find such differences? If Qwest is willing to offer it in only certain states, the template can say so.

**Eschelon also asks that Qwest update CLECs as to the status of the template and when available (through CMP meetings or otherwise).** More information about the template would be beneficial to CLECs as they decide how to approach obtaining the next generation of interconnection issues. This will also be beneficial to Qwest to help it avoid the same requests about the template from multiple CLECs when the template becomes available.

Negotiations should proceed more quickly if the Parties understand Qwest's proposal and where the language comes from. Please let us know if Qwest will incorporate this feedback into its template development. If CLECs could receive more information about the template, they may have other helpful suggestions to make the negotiation process more efficient for all. I'll share this request with other CLECs in case they have anything to add to it. Thanks,

Karen Clauson  
Sr. Director of Interconnection  
730 Second Ave South Suite 1200  
Minneapolis, MN 55402

Dear Ms. Clauson:

I am in receipt of your October 9, 2003 letter concerning the implementation of changes in law related to the Triennial Review Order ("TRO") and other issues relating to the negotiation of interconnection agreements.

I understand from your letter that Eschelon wishes further clarification of our waiver proposal of the 30-day negotiation period under section 7.3 of the Colorado interconnection agreement between the parties. Toward that end, I hope this letter provides you with the information you need.

The purpose for which Qwest is seeking the waiver of the 30-day negotiation period is in order to have enough time to interpret, design and develop contract language and processes that will implement the TRO in an efficient manner and yet have time to negotiate the Amendment to comply with the changes of law. As my previous letter indicated, Qwest is working diligently toward having a contract amendment proposal relating to TRO changes available in the very near future. Given the scope of the changes to the law and to Qwest's internal processes, it was not possible to commit to providing and negotiating a comprehensive proposal to CLECs in the 30-day negotiation period for changes of law that some Interconnection Agreements dictate. Qwest sent the waiver request with the hope that it would prevent having to address piecemeal proposals or to make proposals that were not fully formed and thought through. Under the process contemplated by Qwest, Qwest will provide proposed contract language in the next few weeks to all CLECs. Negotiations of the Amendment would take place between Qwest and Eschelon's designated contract negotiators. The negotiations would not extend beyond the negotiation time limits set forth in section 252(b) of the Telecommunication Act, i.e., 135-160 days from the effective date of the TRO (October 2) unless jointly agreed to by both parties. After 135 days of negotiation, either party may request resolution pursuant to the individual interconnection agreement provisions. Qwest believes that this is consistent with the FCC's instructions in the TRO itself to use section 252(b) of the Act as a default negotiation timetable (see TRO paragraph 703-704) and with the section 251 obligation to negotiate in good faith. In the case of a party not agreeing to a waiver of the 30-day or other applicable deadline in its interconnection agreement, Qwest will abide by the deadlines imposed by such agreement. As a practical matter, however, Qwest does not believe that this would materially affect how fast the interconnection agreement changes would be finalized and, indeed, could result in the matter being tied up in non-productive dispute resolution proceedings. I hope this adequately explains Qwest's contemplated process of TRO Amendment implementation.

Eschelon also addressed a number of issues in your letter to the interconnection agreement negotiations generally. I have tried to address each one below:

First, regarding Eschelon's question about whether Qwest was proposing to roll together the Colorado negotiations and the TRO change negotiations and extend the negotiations window to March 10, 2004, that was not part of Qwest's proposal; and Qwest does not agree to do so. Because of the timeframe of negotiations in Colorado, Qwest believes it would be most appropriate to amend the agreement with TRO language upon its execution. As you know, many of Eschelon's interconnection agreements have long ago expired and have been on a month-to-month basis ever since; it is Qwest's priority to renegotiate these old agreements so that we can bring a good framework to our business relationship. We should be able to include TRO language in the Washington and Minnesota agreements because of the timing of those negotiating windows. The October 2 letter was not intended to change any agreement negotiations timeframe.

Second, Eschelon has asked Qwest to reveal names of other CLEC parties that are re-negotiating or renewing their interconnection agreements. Qwest considers this information to be confidential. If Eschelon wishes to coordinate its positions with other CLECs that is Eschelon's prerogative, as long as it does not violate any non-disclosure agreement. For its part, Qwest will not facilitate those communications.

Finally, your letter raised several issues concerning the coordination of the negotiation process and initiating contact with Linda Miles. Qwest provided its multi-state template proposal to Eschelon just prior to the commencement of the negotiation window in Colorado. It was only natural that we would wait to hear from Eschelon concerning its interest in that proposal or to continue negotiating from the SGATs. I understand that you have since been in contact with Linda on the scheduling of the negotiations and are reviewing Qwest's contract template for negotiation, so I hope these issues are now settled. In any event, the negotiation process is governed by the duties and timelines set forth in sections 251 and 252 of the Act, and it is each party's obligation to follow them. Qwest is happy to entertain proposals concerning a multi-state negotiation, but barring a written understanding, we will continue to treat each state negotiation on a separate track and timeline based on the written communications initiating those negotiations.

I hope this information has been useful.

L T Christensen

Re: Triennial Review Order and Interconnection Agreement Negotiations;  
Commencement of Negotiations in Minnesota

Dear Mr. Christensen:

Eschelon received your letters dated October 2, 2003 and October 7, 2003, and will respond to both in this letter.

**Triennial Review Order & Qwest Waiver Request**

In your October 2, 2003 letter, Qwest requests a waiver of the 30-day time period in Part A, Section 7.3 of the Qwest-Eschelon Colorado Interconnection Agreement (“ICA”). Before Eschelon will be in a position to respond, Eschelon needs two items from Qwest: (1) a copy of Qwest’s proposed “Triennial Review Order Amendment” mentioned in the second to last paragraph of your letter; and (2) clarification of Qwest’s position as to the ICA negotiations and the affect of the waiver. With respect to the first item, we have requested a copy from our Qwest Service Manager. The second item is discussed in the next paragraph. For both items, we need a prompt response, given the short time frame involved.

With respect to the second item, Qwest’s letters of October 2, 2003 and October 7, 2003 appear contradictory. In your October 2<sup>nd</sup> letter, Qwest does not recognize that any ICA negotiations have commenced. Qwest states that it will contact Eschelon “after Qwest develops a proposed amendment covering *all* the new requirements of the Order” to “initiate” negotiations. *See* 10/2/03 Letter (emphasis added). In contrast, in your October 7<sup>th</sup> letter, Qwest claims that it commenced negotiations in Colorado on August 4, 2003 and wants to commence negotiations effective October 7, 2003 in Washington. Qwest also states that Qwest is working on Triennial Review proposals “on those *parts* of the Triennial Review Order that can be implemented as part of the negotiations.” *See* 10/7/03 Letter (emphasis added). Please clarify Qwest’s proposal.

In your October 2<sup>nd</sup> letter, Qwest also states: “Under this waiver, Qwest anticipates the Parties will meet their change of law obligations prior to March 10, 2004.” It appears that Qwest may be indicating that, if Eschelon agrees to waive the 30-day time

730 Second Avenue South • Suite 1200 • Minneapolis, MN 55402 • Voice (612) 376-4400 • Facsimile (612) 376-4411

**voice data internet equipment**

period in Part A, Section 7.3 of the Qwest-Eschelon Colorado ICA, Qwest will agree to extend its proposed negotiation time frame for Colorado from an end date of December 17, 2003 (per Qwest's August 4, 2003 letter) to March 10, 2004 (per Qwest's October 2, 2003 letter). If the Parties can agree on issues before then, they may implement them earlier, but if not, they may negotiate up to March 10, 2004. Is this Qwest's proposal? If so, Eschelon may be able to agree to this. Naturally, we want to understand the proposal before committing to it.

With respect to your October 2, 2003 letter, as well as any future communications from Qwest, please note that Eschelon does not provide consent by silence. If you want an agreement with Eschelon, you need to reach the appropriate personnel at Eschelon and receive an affirmative response. The following sentence in your letter has no legal effect: "If you do not notify me to reject this waiver or otherwise initiate a negotiations request by October 13, it will be Qwest's understanding and expectation that you have agreed to waive the start date of the negotiation period." Qwest has no legal authority to act unilaterally based on silence, and Eschelon does not agree to your doing so (regardless of whether Qwest sets an arbitrary and meaningless deadline for receiving a response) in this or any other matter. The understanding stated in your letter is incorrect. We are willing to discuss a waiver, but we need additional information, as described in this letter, before agreeing on that approach.

#### ICA Negotiations Generally

Qwest makes a number of additional points in your October 7, 2003 letter. Although it purports to be a response to my September 23, 2003 letter, Qwest does not respond to the single question that Eschelon posed at that time. Eschelon asked Qwest to "reserve a block of time in late October" for negotiations and to "let me know what dates work for you." Your letter is silent on this issue, and Qwest has not otherwise responded to this request. Eschelon would appreciate a response to its express request for dates from Qwest for ICA negotiations.

In the first paragraph of Qwest's October 7, 2003 letter, it appears that Qwest missed the point Eschelon made in its letter. Qwest notified Eschelon that it was "commencing" negotiations but did nothing to facilitate negotiations or suggest how they should proceed. Instead, Qwest placed the burden on Eschelon to initiate contact with Qwest. Telling a party that you are commencing negotiations by asking them to commence the discussions provides no guidance on how you would like to proceed. In the absence of such guidance, Eschelon has put a lot of time and effort in to the approach that it has deemed best. Eschelon's point, therefore, is that Qwest should show some flexibility in adopting Eschelon's approach, given that Qwest left the task to Eschelon.

In the second paragraph of Qwest's October 7, 2003 letter, Qwest states that it "has initiated negotiations under Section 252 with other CLECs." Eschelon suggested coordinating with other parties on common issues. For example, as you may know,

AT&T and MCI negotiated many issues jointly in the first round of negotiations/arbitrations with Qwest. To do so, we would need to know with which CLECs Qwest is currently negotiating. We do not believe this information is confidential. If Qwest disagrees, however, please ask the CLECs if they have any objection to your disclosing this information and let us know. Or, please ask them to contact me directly.

The third paragraph of Qwest's October 7, 2003 letter is discussed above. Additionally, Qwest refers to its "multi-state template." As indicated in my October 6, 2003 email to Linda Miles: "We reviewed the template in several ways, including doing comparisons with the SGAT and inserting the state-specific language to identify the state differences. In the end, we found it pretty confusing, because we weren't sure what all changed, and we didn't know why things did change. So, as I indicated in my earlier note, we are using a combination of sources, including primarily the CO SGAT, the CO AT&T-Qwest ICA, and the Eschelon-Qwest negotiated language to date." Please be sure to provide your proposed language in a manner that allows for easy identification of the issues. We are not working from the multi-state template, and Qwest should not impose the burden on CLECs to identify where Qwest is proposing changes.

In the fourth paragraph of Qwest's October 7, 2003 letter, Qwest again asks us to contact Linda Miles to set up a negotiations meeting as though the burden belongs solely to Eschelon. Eschelon's email of September 22, 2003 (which was also sent to you by letter dated September 23, 2003) was also addressed to Linda Miles. As discussed, Eschelon asked Qwest to "reserve a block of time in late October" for negotiations and to "let me know what dates work for you." The ball for setting up negotiations is in Qwest's court. You indicated in your letter that Qwest will require some time to review Eschelon's redline before responding. Eschelon asks Qwest to remember that this works both ways. Although Qwest was intimately familiar with its own SGATs (unlike Eschelon, which could not participate in the SGAT proceedings), Qwest took approximately six months to develop its multi-state template based on the SGATs. In contrast, Eschelon has had a very short time to review that template, determine that it does not meet our needs, and begin to respond with our own proposals. Both Parties will need to allow the other party the time needed to address the issues.

In the final paragraph of Qwest's October 7, 2003 letter, Qwest sets forth its proposal for negotiations in other states. Eschelon will have input into that issue as well, particularly as Eschelon believes that it is the CLEC (not the ILEC) which may initiate negotiations under Section 252 of the Act. *With this letter and pursuant to Section 252, Eschelon notifies Qwest that Eschelon is initiating negotiations in the state of Minnesota effective October 9, 2003.* To the extent that Qwest now desires to negotiate multiple states at once, Qwest should propose a schedule which reasonably reflects that desire. Obviously, the Parties cannot address all of our states, for example, by mid-December. Eschelon is open to discussing this issue at the first negotiations session. Qwest needs to respond to Eschelon's September 22, 2003 request for proposed dates for

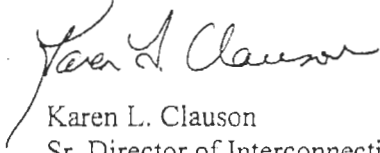

Mr. Larry Christensen  
October 9, 2003  
Page 4 of 4

Eschelon/52  
Johnson/  
6

negotiation sessions. As discussed in the previous paragraph, Eschelon anticipates that the actual dates of the negotiation and arbitration time periods will depend on the time needed by the Parties to address the issues and the progress being made in negotiations.

Please call me if you have questions.

Sincerely,

Karen L. Clauson  
Sr. Director of Interconnection

Re: Interconnection Negotiations

Dear Mr. Christensen:

Eschelon received your letter initiating the negotiations time frame for Colorado and indicating that Qwest asks to commence negotiations. Since then, Qwest has not commenced anything. Therefore, Eschelon is proceeding with putting together its proposed language and an initial issues list. Eschelon is including, for example, the language from Sections 7 and 8 that the parties have negotiated to date and identifying open issues. We are also reviewing the ICA, CO SGAT, AT&T negotiations language, amendments, etc., for proposed language. Eschelon does not know what Qwest meant when it said in its letter that it plans to include language regarding the Triennial Review Order, given that the proceedings will still be pending. The AT&T ICA includes paragraph 2.2.1. Eschelon is willing to agree to the language of 2.2.1 as well.

Eschelon did not know that Qwest had intended to start the time frame. The last discussions we had with Linda Miles were that Qwest was working on a 14-state template and that discussions would resume after that date. Qwest did not initiate the time clock previously, and the discussions took place over many months. Please let us know if Qwest has initiated the time frame for other CLECs as well. Perhaps there can be some resource savings in coordinating with others on common issues. In any event, we will do the best we can in working this in with the other commitments that exist for the same time period and will get a draft to you when we can.

Please reserve a block of time in late October. Depending on when you get the draft and how much time you need, we may even be able to start earlier. But, we should at least

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## CHANGE MANAGEMENT PROCESS (CMP)

### 1.0 INTRODUCTION AND SCOPE

This document defines the processes for change management of Operations Support Systems (OSS) Interfaces, products and processes (including manual) as described below. CMP provides a means to address changes that support or affect pre-ordering, ordering/provisioning, maintenance/repair and billing capabilities and associated documentation and production support issues for local services (local exchange services) provided by Competitive Local Exchange Carriers (CLECs) to their end users. This CMP is applicable to Qwest's 14 state-in-region serving territory.

This CMP is managed by CLEC and Qwest Points of Contact (POCs) each having distinct roles and responsibilities. The CLECs and Qwest will hold regular meetings to exchange information about the status of existing changes, the need for new changes, what changes Qwest is proposing, how the process is working, etc. The process also allows for escalation to resolve disputes, if necessary.

Qwest will track changes to OSS Interfaces, products and processes. This CMP includes the identification of changes and encompasses, as applicable, Design, Development, Notification, Testing, Implementation, Disposition of changes, etc. (See Change Request Status Codes, Section 5.8). Qwest will process any such changes in accordance with this CMP.

In cases of conflict between the changes implemented through this CMP and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement. In addition, if changes implemented through this CMP do not necessarily present a direct conflict with a CLEC interconnection agreement, but would abridge or expand the rights of a party to such agreement, the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such agreement.

This CMP is dynamic in nature and, as such, is managed through the regularly scheduled meetings. The parties agree to act in Good Faith in exercising their rights and performing their obligations pursuant to this CMP. This document may be revised through the procedures described in Section 2.0.

Any opinions expressed at the CMP meetings by representatives of government agencies such as state Public Utilities Commissions (PUC), Federal Communications Commission (FCC), and the Department of Justice (DOJ) do not bind such government agencies.

Throughout this CMP document, terms such as "agreement" or "consensus" are used to identify instances when participants attempt to informally arrive at a unanimous decision by the CMP

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

group at a noticed CMP Meeting. At any time, when the parties cannot informally reach a decision, the parties may continue to work together to reach resolution or conduct a vote in accordance with Section 17.0.

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 2.0 MANAGING THE CHANGE MANAGEMENT PROCESS

### 2.1 Managing the Change Management Process Document

Proposed modifications to this CMP framework shall be originated by a change request submitted by CLEC or Qwest in accordance with Section 5.0. Acceptance of such changes will be discussed at a regularly scheduled Monthly CMP Product/Process Meeting.

The originator of the change will send proposed redlined language and the reasons for the request with the change request at least fourteen (14) days in advance of the Monthly CMP Product/Process Meeting. The request originator will present the proposal to the CMP participants. The parties will develop a process for input into the proposed change including when the vote will be taken. Incorporating a change into this CMP requires unanimous agreement using the Voting Process, as described in Section 17.0. Each CMP change request will be assigned a CR number that contains a suffix of “CM” and will be included in the Monthly CMP Product/Process Meeting distribution package. The CMP change request and redlined language will be included in the Monthly CMP Product/Process Meeting distribution package and the CMP change request will be identified as a proposed change to the CMP framework on the agenda. The requested change will be reviewed at a Monthly CMP Product/Process Meeting and voted on no earlier than the following CMP Product/Process meeting. The agenda for the Monthly CMP Product/Process Meeting, at which the vote will be taken, will indicate that a vote will be taken.

There will be a standing agenda item for each monthly CMP Meeting for discussion about issues relating to the operation and effectiveness of CMP. This discussion is intended to be open and receptive to all input with the goal of constantly evaluating and improving this CMP.

### 2.2 Change Management Point-of-Contact (POC)

Qwest and each CLEC will designate primary, secondary, and, if desired, tertiary change management POC(s), who will serve as the official designees for matters regarding this CMP. CLECs and Qwest will exchange primary, secondary and tertiary POC information including items such as:

- Name
- Title
- Company
- Telephone number
- E-mail address
- Fax number
- Cell phone/Pager number
- POC designation (e.g., primary, secondary, or tertiary)

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 2.3 Change Management POC List

Primary, secondary and tertiary CLEC and Qwest POCs will be included in the Qwest maintained POC list. It is the CLEC POC's responsibility to notify Qwest of any POC changes at <http://www.qwest.com/wholesale/cmp/ppform.html>. If Qwest makes a Primary POC change it will follow the process as described in Section 5.4.3. The list will be posted on the Qwest CMP Web site and may include other contacts.

## 2.4 Qwest CMP Responsibilities

### 2.4.1 CMP Manager

The Qwest CMP Manager is the Qwest Product/Process POC and is responsible for properly processing submitted CRs, conducting the Monthly CMP Product/Process Meeting, assembling and distributing the meeting distribution package, and ensuring minutes are written and distributed in accordance with the agreed-upon timeline.

The Qwest CMP Manager is the Qwest Systems POC and is responsible for properly processing submitted CRs, conducting the Monthly CMP Systems Meeting, assembling and distributing the meeting distribution package, and ensuring minutes are written and distributed in accordance with the agreed-upon timeline. The CMP Manager also distributes the list of CRs eligible for prioritization to Qwest and the CLECs for ranking, tabulates the rankings, and forwards the resulting prioritization of the CRs to Qwest and the CLECs. In addition, the CMP Manager is responsible for coordinating the publication of the Qwest OSS Interface Release Calendar, as described in Section 6.0.

### 2.4.2 Change Request Project Manager (CRPM)

The Qwest CRPM manages CRs throughout the CMP CR lifecycle. The CRPM is responsible for obtaining a clear understanding of exactly what deliverables the CR originator requires to close the CR, arranging the CR clarification meetings and coordinating necessary Subject Matter Experts (SMEs) from within Qwest to respond to the CR, and coordinating the participation of the necessary SMEs in the discussions with the CLECs.

### 2.4.3 Escalation/Dispute Resolution Manager

The Escalation/Dispute Resolution Manager is responsible for managing escalations, disputes and postponements in accordance with the CMP Escalation, Dispute Resolution and Postponement Processes. (See Sections 14.0, 15.0 and 5.5)

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

#### 2.4.4 Implementation Obligations

When Qwest commits to make a change pursuant to CMP, Qwest will review and revise internal and external documentation, as needed, to ensure that the change is appropriately reflected. Qwest will conduct training to communicate the changes to all appropriate Qwest personnel so that they are made aware of relevant changes. If Sections 5.0, 7.0, 8.0 or 9.0 require notification of the change, such notification will be provided in accordance with that section and will include references to external Qwest documentation that will be modified to reflect the change, if applicable. All of the forgoing activities will take place by the implementation date of the change.

#### 2.4.5 Adherence to this CMP

As a general rule, if a CLEC indicates that Qwest is not following this CMP, and Qwest agrees, Qwest will correct the situation by following the process. If Qwest has failed to follow this CMP for a particular change, and is not able to withdraw the change and follow the applicable process, then Qwest and CLECs must unanimously agree on a different manner to correct the situation. If Qwest and the CLECs attempt to, but do not agree that a process was not followed or cannot agree on a manner to correct the situation, any CLEC may pursue any appropriate process available in this CMP (e.g., production support, escalation, dispute resolution, oversight committee).

### 2.5 Method of Communication

The method of communication is e-mail with supporting information posted to the Web site when applicable (see Section 3.3 Qwest Wholesale CMP Web Site). Communications sent by e-mail resulting from CMP will include in the subject line "CMP". E-mail communications regarding document changes will include direct Web site links to the related documentation. All Notifications are sent as "mailouts" and are distributed to all those who subscribe to such notifications at <http://www.qwest.com/wholesale/notices/cnla/maillist.html>.

Redlined PCATs and Technical Publications associated with product, process, and systems changes will be posted to the Qwest CMP Document Review Web site, <http://www.qwest.com/wholesale/cmp/review.html>. For the duration of the agreed upon comment period as specified in this CMP, CLECs may submit comments on the proposed documentation change. At the Qwest CMP Document Review Web site, CLECs may submit their comments on a specific document by selecting the "Submit Comments" link associated with the document. The "Submit Comments" link will take CLECs to an HTML comment template. If for any reason the "Submit" button on the site does not function properly, CLECs may submit comments to [cmpcomm@qwest.com](mailto:cmpcomm@qwest.com). After the conclusion of the applicable CLEC comment period, Qwest will aggregate all CLEC comments with Qwest responses and distribute to all CLECs via Notification e-mail within the applicable period.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

In some instances, a CLEC or Qwest may wish to include proprietary information in a CR. To do this the CLEC or Qwest must identify the proprietary information with bracketed text, in all capitals, preceded and followed by the words "PROPRIETARY BEGIN" and "PROPRIETARY END," respectively. Qwest will blackout properly formatted proprietary information when the CR is posted to the CR Database and distributed in the CMP Monthly Meeting distribution packet.

If a CLEC or Qwest wishes to ask a question, submit a comment, or provide information that is of a proprietary nature, the CLEC or Qwest must communicate directly with the CMP Manager via e-mail, [cmpcr@qwest.com](mailto:cmpcr@qwest.com). Such e-mails must have a subject line beginning with PROPRIETARY.

This CMP contains references to required notifications. Such references typically identify specific information that must be included in such notifications. Such information is not an exclusive list. Qwest will use reasonable efforts to include such other information in its possession that may be useful in aiding CLECs to understand the scope and purpose of the notification.

## **2.6 CMP Relationship with Management of Performance Indicator Definitions (PIDs)**

Qwest Performance Indicator Definitions (PIDs) have been established through collaboration among Qwest, CLECs and state public utilities commissions in a forum known as the Regional Oversight Committee Technical Advisory Group (ROC TAG). This activity was performed in order to test Qwest's performance in connection with Qwest's application to obtain approval under Section 271 of the Telecommunications Act of 1996. The parties anticipate that the ROC TAG (or similar industry group separate from the CMP body) will continue in some form after approval of Qwest's Section 271 application. The parties expect that this industry group will be responsible for change management of the Qwest PIDs (the "PID Administration Group").

The parties acknowledge that the operation of PIDs may be impacted by changes to Qwest OSS Interfaces, products or processes that are within the scope of CMP. Conversely, Qwest OSS Interfaces, products or processes may be impacted by changes to, or the operation of, PIDs that are within the scope of the PID Administration Group. As a result, efficient operation of this CMP requires communication and coordination, including the establishment of processes, between the PID Administration Group and the CMP body.

The parties recognize that if an issue results from CMP that relates to the PIDs (e.g., Qwest denies a CR with reference to PIDs, discussion of PID administration is needed in order to implement a CR, etc.), any party to this CMP may take the issue to the PID Administration Group for discussion and resolution as appropriate under the procedures for that Group. At the time any party brings such an issue to the PID Administration Group, such party shall notify Qwest and Qwest will distribute an e-mail notification to the CMP body. Qwest shall also distribute to the CMP body all correspondence with the PID Administration Group relating to the

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

issue at the time such correspondence is exchanged with the PID Administration Group (if Qwest is not copied on such correspondence, the involved CLEC will forward such correspondence to Qwest for distribution to the CMP body). Qwest or an interested CLEC will bring any resolution or recommendation from the PID Administration Group relating to such issues to the CMP body for consideration in resolving related CMP issues.

It is possible that the PID Administration Group will identify issues that relate to CMP. In that case, the CMP body would expect the PID Administration Group (or a party from that group) to bring such issues to the CMP body for resolution or a recommendation. Such issues may be raised in the form of a CR, but may be raised in a different manner if appropriate. Qwest or an interested CLEC will return to the PID Administration Group any resolution or recommendation from the CMP body on such issues. Qwest and CLECs participating in the PID Administration Group agree that they will propose, develop, and adopt processes for the PID Administration Group that will enable the coordination called for in this Section. One such process may include joint meetings, on an as needed basis, of the PID Administration Group and the CMP body to address issues that affect both groups.

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

### 3.0 CHANGE MANAGEMENT PROCESS MEETINGS

Change Management Process meetings will be conducted on a regularly scheduled basis. The CMP Product/Process and Systems Meetings will be conducted on the same day of each month or on at least two (2) consecutive days on a monthly basis, unless other arrangements are agreed upon by the CLECs and Qwest. Meeting participants can choose to attend meetings in person or participate by conference call.

Meetings are held to review, manage the implementation of Product/Process and System changes, and address Change Requests. Qwest will review the status of all applicable Change Requests. The meeting may also include discussions of Qwest's OSS Interface Release Calendar.

CLEC's request for additional agenda items and associated materials must be submitted to Qwest at least five (5) business days by noon (MT) in advance of the meeting. Qwest is responsible for distributing the agenda and associated meeting materials and will be responsible for preparing, maintaining, and distributing meeting minutes. Attendees with any walk-on items should bring hard copy materials of the walk-on items to the meeting and should, at least two (2) hours prior to the meeting, provide copies of such materials electronically (soft copy) to the CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com), for distribution to all parties.

All attendees, whether in person or by phone, must identify themselves and the company they represent.

Additional meetings may be held at the request of Qwest or any CLEC. Meeting notification must contain an agenda plus any supporting meeting materials. Notification for these meetings will be distributed at least five (5) business days prior to their occurrence. Qwest will record and distribute meeting minutes, unless otherwise noted in this CMP.

#### 3.1 Meeting Materials (Distribution Package) for Monthly Change Management Process Meetings

Meeting materials will include the following information:

- Meeting Logistics
- Minutes from previous meeting
- Agenda
- Change Requests and responses, as applicable
  - New/Active
  - Updated
- Issues, Action Items Log and associated statuses
- Release Summary, as applicable
- OSS Interface Release Calendar, as described in Section 6.0

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

- Date TBD Trouble Tickets, as described in Section 12.3
- Any other material to be discussed

Qwest will provide Meeting Materials (distribution package) electronically, by noon (MT), three (3) business days prior to the Monthly CMP Meeting. In addition, Qwest will provide hard copies of the distribution package at the Monthly CMP Meeting.

### 3.2 Meeting Minutes for Change Management Process Meetings

Qwest will take minutes. Qwest will summarize discussions in meeting minutes and include any revised documents such as issues, action items and statuses.

Minutes will be distributed to meeting participants for comments or revisions no later than five (5) business days by noon (MT) after the meeting. CLEC comments will be provided by noon (MT) two (2) business days after receiving draft minutes to the Qwest CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com). Revised minutes, if CLEC comments are received, will be posted to the CMP Web site within nine (9) business days by noon (MT) after the meeting.

### 3.3 Qwest Wholesale CMP Web Site

To facilitate access to CMP documentation, Qwest will maintain CMP information on its Web site. The Web site should be easy to use and will be updated in a timely manner. The Web site will be a well organized central repository for CLEC notifications and CMP documentation. Active documentation, including meeting materials (distribution package), will be maintained on the Web site. Change Requests and notifications will be identified in accordance with the agreed upon naming conventions to facilitate ease of identification. Qwest will maintain closed and old versions of documents on the Web site's Archive page for 18 months before storing off line. Information that has been removed from the Web site can be obtained by contacting the Qwest CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com). At a minimum, the CMP Web site will include:

- Current version of the Qwest Wholesale Change Management Process Document
- OSS Interface Release Calendar
- OSS Interface hours of availability
- Links to related Web sites, such as IMA, CEMR, Document Review and Notifications
- Change Request Form and instructions to complete form
- Submitted and open Change Requests and the status of each, including written responses to CLEC inquiries
- Meeting (formal and informal) information for Monthly CMP Meetings and interim meetings or conference calls, including descriptions of meetings and participants, agendas, minutes, sign-up forms, and schedules, if applicable
- Interactive CR Report
- Meeting materials (distribution package)
- CLEC Notifications and associated requirements

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

- Directory to CLEC Notifications for the month
- Business rules, SATE test case scenarios Technical Specifications, and user guides will be provided via links on the CMP Web site
- Contact information for the CMP POC list, including CLEC, Qwest and other participants (with participant consent to publish contact information on Web page)
- Redlined PCAT and Technical Publications - see Section 2.5
- Instructions for receiving CMP communications – see Section 2.5

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 4.0 TYPES OF CHANGE

A Change Request must be within the scope of CMP and will fall into one of the following classifications. Types of Changes apply to Systems and Product/Process.

### 4.1 Regulatory Change

A Regulatory Change is mandated by regulatory or legal entities, such as the Federal Communications Commission (FCC), a state commission/authority, or state and federal courts. Regulatory changes are not voluntary but are requisite to comply with newly passed legislation, regulatory requirements, or court rulings. Either the CLEC or Qwest may originate the Change Request.

### 4.2 Industry Guideline Change

An Industry Guideline Change implements Industry Guidelines. Either Qwest or the CLEC may originate the Change Request and these changes are subject to the same processes under this CMP as Qwest and CLEC Originated Changes. These industry guidelines are defined by:

- Alliance for Telecommunications Industry Solutions (ATIS) sponsored
- Ordering and Billing Forum (OBF)
- Local Service Ordering and Provisioning Committee (LSOP)
- Telecommunications Industry Forum (TCIF)
- Electronic Commerce Inter-exchange Committee (ECIC)
- Electronic Data Interchange Committee (EDI)
- Extensible Markup Language (XML)
- American National Standards Institute (ANSI)

### 4.3 Qwest Originated Change

A Qwest Originated Change is originated by Qwest and does not fall within the changes listed above.

### 4.4 CLEC Originated Change

A CLEC Originated Change is originated by the CLEC and does not fall within the changes listed above.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 5.0 CHANGE REQUEST PROCESS

### 5.1 CLEC-Qwest OSS Interface Change Request Process

A CLEC or Qwest seeking to change an existing OSS Interface, to establish a new OSS Interface, or to retire an existing OSS Interface must submit a Change Request (CR). A Change Request originator will complete and e-mail a completed Change Request (CR) Form to the Qwest CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com), in accordance with the instructions set forth in the Qwest Wholesale CMP Web site located at the following URL: <http://www.qwest.com/wholesale/cmp/index.html>.

The CR Process supports Regulatory, Industry Guideline, CLEC originated and Qwest originated changes. The process for Regulatory changes will be managed as described in Section 5.1.1, Section 5.1.2 and Section 5.1.3.

#### 5.1.1 Regulatory Change Request

Qwest or any CLEC may submit Regulatory CRs. The party submitting a Regulatory CR must also include sufficient information to justify the CR being treated as a Regulatory CR in the Description of Change section of the CR Form. Such information must include specific references to regulatory or court orders or legislation as well as dates, docket or case numbers, page or paragraph numbers and the mandatory or recommended implementation dates, if any. All Regulatory CRs initially must be submitted as systems CRs, including when the Regulatory CR clearly is for a product/process change, and will be introduced at the Monthly CMP Systems Meeting. If the Regulatory CR originator seeks to establish that the CR should be implemented by a manual process, the originator must so indicate on the CR Form and include as much information supporting the application of the exception as practicable.

Qwest will send CLECs a notification when it posts Regulatory CRs to the Web site and identify when comments are due and when a vote is to be taken, as described below. Regulatory CRs will also be identified in the Monthly CMP Systems Meeting distribution package.

Not later than eight (8) business days prior to the Monthly CMP Systems Meeting, any party objecting to the classification of such CR as Regulatory must submit a statement to the CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com), documenting reasons why the objecting party does not agree that the CR should be classified as a Regulatory change. Regulatory CRs may not be presented as walk-on items.

If Qwest or any CLEC has objected to the classification of a CR as Regulatory, that CR will be discussed at the next Monthly CMP Systems Meeting. At that meeting, Qwest and the CLECs will conduct a vote under Section 17.0 to determine whether there is unanimous agreement that the CR is a Regulatory change. If Qwest or any CLEC does not agree that the CR is Regulatory, the CR will be treated as a non-Regulatory CR and prioritized, if applicable, with the CLEC originated and Qwest originated CRs, unless and until the CR is declared to be Regulatory through the Dispute Resolution Process. (See Section 15.0) Final determination of CR type will

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

be made by the CLEC and Qwest POCs at that Monthly CMP Systems Meeting, and documented in the meeting minutes.

### 5.1.2 Implementation of Regulatory CRs

As a general rule, a Regulatory Change will be implemented by mechanization unless all parties agree otherwise, as described below.

For each Regulatory CR, Qwest will provide a cost analysis for both a manual and a mechanized solution. The cost analyses will include a description of the work to be performed and any underlying estimates that Qwest has performed associated with those costs. Qwest will also provide an estimated Level of Effort expressed in terms of person hours required for the mechanized solution. The cost analyses will be based on factors considered by Qwest, which may include volume, number of CLECs, technical feasibility, parity with retail, or effectiveness/feasibility of a manual process.

The Regulatory CR will be implemented by a manual solution if there is a Majority vote, as described in Section 17.0, at the Monthly CMP Systems Meeting in favor of one of the following exceptions.

A. The mechanized solution is not technically feasible.

or

B. There is a significant difference in the costs for the manual and mechanized solutions. Cost estimates will allow for direct comparisons between solutions using comparable methodologies and time periods.

Any party that desires to present information to establish an exception may do so at the Monthly Systems CMP Meeting when the implementation plan is presented.

Once a Regulatory CR has been agreed upon to be implemented by a manual solution, the CR will be, from that point forward, tracked as a product/process CR through the Monthly CMP Product/Process Meetings. (See Section 5.7)

If Qwest is unable to fully implement a mechanized solution in the first Release that occurs after the CMP participants agree that a change is a Regulatory CR, Qwest's implementation plan for the mechanized solution may include the short-term implementation of a manual work-around until the mechanized solution can be implemented. In that situation, a single systems Regulatory CR will be used for the implementation of both the manual and mechanized changes. Qwest will continue to work that Regulatory CR until the mechanized solution is implemented.

If a Regulatory CR is implemented by a manual process and later it is determined that a change in circumstance warrants a mechanized solution, Qwest or any CLEC may submit a new systems CR which must include evidence of the change in circumstance, such as an estimated

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

volume increase or changes in technical feasibility, and the number of the CR that was implemented using a manual process. The CR originator may request that the new CR be treated as a Regulatory CR. If Qwest or any CLEC does not agree to treat the new CR as a Regulatory CR, it will be treated as a Qwest or CLEC originated change.

Any party that disagrees with the majority decision regarding Exceptions A and B may initiate the Dispute Resolution Process. (See Section 15.0)

### 5.1.3 Industry Guideline Change Request

Industry Guideline CRs will be submitted as Systems CRs, but if it is determined they should be implemented as a Product/Process change, the CR will follow the Crossover process as documented in Section 5.7. The party submitting the Industry Guideline CR must identify on the CR Form that the CR should be designated an Industry Guideline CR and identify the industry forum that recommended that change. The party submitting an Industry Guideline CR must also include sufficient information to justify the CR being treated as an Industry Guideline CR in the Description of Change section of the CR Form. Such information must include specific references to the industry forum issue or recommendation and the recommended implementation date, if any.

### 5.1.4 Systems Change Request Origination Process

If a CLEC or Qwest wants Qwest to change, introduce or retire an OSS Interface, the originator will e-mail a Change Request (CR) Form to the Qwest CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com). No later than two (2) business days after Qwest receives the CR, the Qwest CMP Manager reviews the CR for completeness, and requests additional information from the CR originator, if necessary.

Once the CR is complete:

- The Qwest CMP Manager will assign a CR Number, and log the CR into the CMP database
- The Qwest CMP Manager sends acknowledgement of receipt to the CR originator and updates the CMP database.

Within two (2) days after acknowledgement:

- The CMP Manager assigns a Change Request Project Manager (CRPM) and identifies the appropriate Director responsible for the CR.
- The Qwest CMP Manager posts the valid CR to the CMP Web site via Qwest's interactive report. The report will contain the CR details, originator identity, assigned CRPM, assigned CR Number and, when practicable, the designated Qwest SME and associated Director.
- The CRPM obtains from the Director the names of the assigned Subject Matter Expert(s) (SME)
- The CRPM will provide a copy of the detailed CR report to the CR originator which includes the following information:
  - Description of CR
  - Originating CLEC

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

- Assigned CRPM contact information
- Assigned CR number
- Designated Qwest SMEs and associated director(s)
- Status of the CR (e.g., Submitted)

Within eight (8) business days after receipt of a complete CR, the CRPM coordinates and holds a clarification meeting with the CR originator and Qwest's SME(s). If the originator is not available within the above specified time frame, then the clarification meeting will be held at a mutually agreed upon time. Qwest may not provide a response to a CR until a clarification meeting has been held. The CR originator may invite representatives from other companies to participate on the clarification call. Such participation is not intended to replace the presentation of the CR at the Monthly CMP Meeting.

At the clarification meeting, Qwest and the originator will review the submitted CR, validate the intent of the originator's CR, clarify all aspects, identify all questions to be answered, and determine deliverables Qwest must produce in order to close the CR. The originator should provide, in the CR, as much detail as possible. After the clarification meeting has been held, the CRPM will document and issue meeting minutes within five (5) business days.

CRs received fourteen (14) calendar days prior to the next scheduled Monthly CMP Systems Meeting will be presented at that Monthly CMP Systems Meeting for clarification from all CLECs participating in the Monthly CMP Systems Meeting.

At the Monthly CMP Systems Meeting, the originator will present the CR and provide any business reasons for the CR. Items or issues identified during the previously held clarification meeting will be relayed. CLECs participating in the Monthly CMP Systems Meeting will be given the opportunity to comment on the CR and provide additional clarifications. If appropriate, Qwest's SME(s) will identify options and potential solutions to the CR. Clarifications and/or modifications related to the CR will be incorporated into the evaluation of the CR.

CRs that are not submitted fourteen (14) calendar days prior to the Monthly CMP Systems Meeting may be introduced at that Monthly CMP Systems Meeting as walk-on items. The Originating CLEC will present the CR and participating CLECs will be allowed to provide comments to the CR. Qwest will provide a status of the CR.

Qwest will develop a draft response based on the CR discussion at the Monthly CMP Systems Meeting. Prior to the next scheduled Monthly CMP Systems Meeting the CRPM will post responses to systems CRs to the CMP database. The response will be made available via the interactive reports and the distribution package for the Monthly CMP Systems Meeting. Qwest will conduct a walk through of the response and participating CLECs will be provided the opportunity to discuss, clarify and comment on Qwest's Response. Qwest's Responses will be either:

- "Accepted" (Qwest will implement the request) with position stated, or

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

- “Denied” (Qwest will not implement the request) with basis for the denial and a detailed explanation, including reference to substantiating material. OSS Interface Change Request may be denied for one or more of the following reasons:
  - Technologically not feasible—a technical solution is not available
  - Regulatory ruling/Legal implications—regulatory or legal reasons prohibit the change as requested, or if the request benefits some CLECs and negatively impact others (parity among CLECs) (Contrary to ICA provisions)
  - Outside the Scope of the Change Management Process—the request is not within the scope of the Change Management Process (as defined in this CMP), seeks adherence to existing procedures, or requests for information
  - Economically not feasible—low demand, cost prohibitive to implement the request, or both
  - The requested change does not result in a reasonably demonstrable business benefit (to Qwest or the requesting CLEC) or customer service improvement

Qwest will not deny a CR solely on the basis that the CR involves a change to back-end systems. Qwest will apply these same concepts to CRs that Qwest originates. The Special Change Request Process (SCRP) (Section 10.4) may be invoked if a CR was denied as economically not feasible.

Based on the comments received from the Monthly CMP Systems Meeting, Qwest may revise its response and issue a revised draft response at the next Monthly CMP Systems Meeting.

If any CLEC does not accept Qwest’s response, any CLEC may elect to escalate or dispute the CR in accordance with the agreed upon CMP Escalation Process or Dispute Resolution Process. (Sections 14.0 and 15.0) If the Originator does not agree with the determination to escalate or pursue dispute resolution, it may withdraw its participation from the CR and any other CLEC may become responsible for pursuing the CR Escalation upon providing written notification to the Qwest CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com). The CR will be assigned an escalation suffix and remain an active CR. Qwest will note in the status history of the interactive reports that the CR has been escalated. However, the CR status will reflect the stage of the CR as it progresses through the CR lifecycle.

If any CLEC does not accept Qwest’s response and does not intend to escalate or dispute at the present time, it may request Qwest to status the CR as ‘Deferred.’ The CR will remain as Deferred and any CLEC may re-activate the CR at a later date.

NOTE: For system CRs associated with Billing, CRs will likely be prioritized for a specific set of Qwest billing system implementation dates (referred in this document as a “Release” or “release”) versus one specific release with a single implementation date which is the case for IMA and CEMR/MEDIACC. In the context of Billing prioritization and/or packaging, when “release” is referred to, the reference is to a specific set of billing system implementation dates.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

At the last Monthly CMP Systems Meeting before Prioritization, Qwest will facilitate the presentation of all CRs eligible for Prioritization. In order for a CR to be eligible for prioritization in the upcoming release, it must be presented at least one (1) month prior to the Prioritization Review meeting in accordance with Section 10.3.1. At this meeting Qwest will provide a high level estimate of the Level of Effort of each CR and the estimated total capacity of the Release. This estimate will be an estimate of the number of person hours required to incorporate the CR into the Release. Ranking will proceed, as described in Section 10.0, Prioritization. The results of the ranking will produce an Initial Prioritization List.

Pursuant to this CMP, Qwest may develop a temporary manual solution to a mechanized change identified in an active systems CR. In these situations, Qwest will open a second systems CR with the same number as the original CR and a “MN” suffix. Qwest will process this “MN” CR as a systems CR through its entire life cycle. During this time the original systems CR will remain open and follow the appropriate systems CR process. The temporary manual solution will remain available at least until closure of the associated systems CR. If possible, all or part of the temporary manual solution can be reintroduced in Production Support if a manual workaround is required. A new CR is not required to revert to the temporary manual solution.

## **5.2 CLEC-Qwest OSS Interface Change Request Lifecycle**

A CLEC or Qwest may elect to withdraw a CR that has been prioritized for an OSS Interface Release, in accordance with Section 10.3.5. Based on the Initial Prioritization List, Qwest will begin its development cycle that includes the milestones listed below.

### **5.2.1 Business and Systems Requirements**

Qwest engineers define the business and functional specifications during this phase. The specifications are completed on a per candidate basis in priority order. During business and system requirements, any candidates which have affinities and may be more efficiently implemented together will be discussed. Candidates with affinities are defined as candidates with similarities in functions or software components. Qwest will present, at the Monthly CMP Systems Meeting, any complexities, changes in candidate size, or other concerns that may arise during business or system requirements, which would impact the implementation of the candidate.

During the business and systems requirement efforts, CRs may be modified or new CRs may be generated (by CLECs or Qwest), with a request that the new or modified CRs be considered for addition to the Initial Prioritization List (late added CRs). If there is a unanimous votes (see Section 17.0) to consider the late added CRs for addition to the Initial Prioritization List, Qwest will size the CR’s requirements work effort. If the requirements work effort for the late added CRs can be completed by the end of system requirements, the candidate list and the new CRs will be prioritized by CLECs in accordance with the agreed upon Ranking of Later Added CR process (see Section 10.3.4). If the requirements work effort for the late added CRs cannot be completed by the end of system requirements, the CR will not be eligible for the Release and will be returned to the pool of CRs that are available for prioritization in the next OSS Interface

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

Release. If packaging has already been presented as described in 5.2.2, any party seeking to submit a late-added CR must follow the Exception process.

### 5.2.2 Packaging

At the conclusion of system requirements, Qwest will present packaging option(s) for implementing the release candidates, including a package of only the prioritized candidates in order. Packaging options are defined as different combinations of candidates proposed for continuing through the next stage of development. Packaging options may not exist for the Release; *i.e.*, there may only be one straightforward set of candidates to continue working through the next stage of development. Options may be identified due to:

- affinities in candidates
- resource constraints which prevent some candidates from being implemented but allow others to be completed

Qwest will provide an updated estimate of the Level of Effort for each CR and the estimated total capacity of the Release. If more than one option is presented, a vote will be held within two (2) days after the meeting on the options. The packaging option with the largest number of votes will continue through the design phase of the development cycle.

### 5.2.3 Design

Qwest engineers define the architectural and code changes required to complete the work associated with each candidate. The design work is completed on the candidates, which have been packaged.

### 5.2.4 Commitment

After design, Qwest will present a commitment list of CRs that can be implemented. Qwest will provide an updated Level of Effort for each CR and the estimated total capacity of the Release. These candidates become the committed candidates for the Release.

### 5.2.5 Code & Test

Qwest engineers will perform the coding and testing required by Qwest to complete the work associated with the committed candidates. The code is developed and baselined before being delivered to system test. A system test plan (system test cases, costs, schedule, test environment, test data, etc.) is completed. The system is tested for meeting business and system requirements, certification is completed on the system readiness for production, and pre-final documentation is reviewed and baselined. If, in the course of the code and test effort, Qwest determines that it cannot complete the work required to include a candidate in the planned Release, Qwest will discuss options with the CLECs in the next Monthly CMP Systems Meeting. Options can include either the removal of that candidate from the list or a postponement in the implementation date to incorporate that candidate. If the candidate is removed from the list, Qwest will also advise the CLECs whether or not the candidate could become a candidate for the next Point Release, with appropriate disclosure as part of the

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

current Major Release of the OSS Interface. Alternatively, the candidate will be returned to the pool of CRs that are available for prioritization in the next OSS Interface Release.

### **5.2.6 Deployment**

During the deployment phase, Qwest representatives from the business and operations review and agree the system is ready for full deployment. Qwest deploys the Release and initiates and conducts production support .

When Qwest has completed development of the OSS Interface change, Qwest will release the OSS Interface functionality into production for use by the CLECs.

Upon implementation of the OSS Interface Release, the CRs will be updated to CLEC test and presented for closure at the next Monthly CMP Systems Meeting.

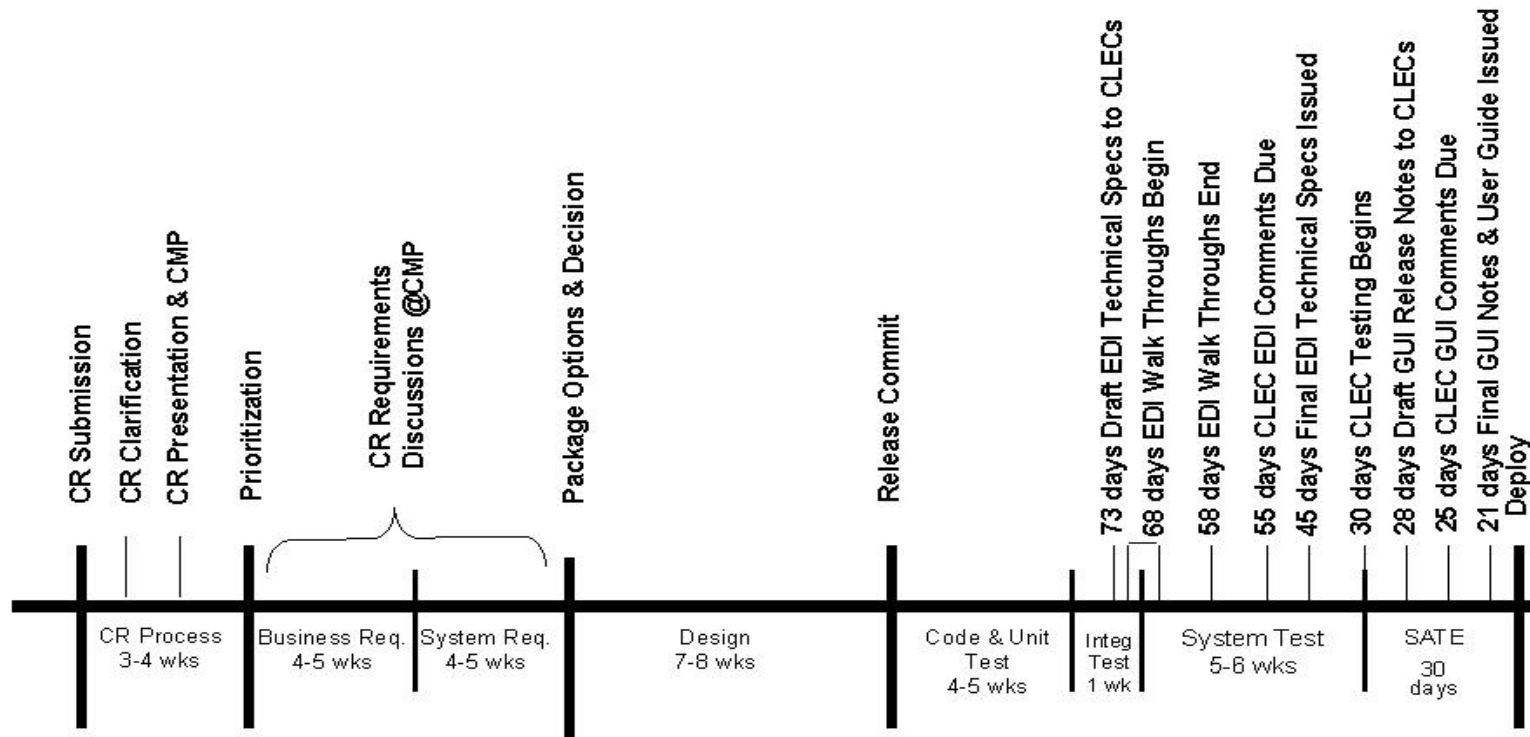

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

Figure 1: IMA Software Development Timeline

## IMA Software Development Timeline

*Time for each phase is approximate and based on current release timelines. Time per phase can change per business needs.*

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

### 5.3 CLEC Originated Product/Process Change Request Process

If a CLEC wants Qwest to change a product/process, the CLEC e-mails a Change Request (CR) Form to the Qwest CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com). No later than two (2) business days after Qwest receives the CR:

- The Qwest CMP Manager reviews the CR for completeness, and requests additional information from the CR originator, if necessary
- The Qwest CMP Manager assigns a CR Number and logs the CR into the CMP database
- The Qwest CMP Manager sends acknowledgment of receipt to the CR originator and updates the CMP Database

Within two (2) business days after acknowledgement:

- The Qwest CMP Manager posts the detailed CR report to the CMP Web site
- The CMP Manager assigns a Change Request Project Manager (CRPM) and identifies the appropriate Director responsible for the CR
- The CRPM obtains from the Director the names of the assigned Subject Matter Expert(s) (SME)
- The CRPM will provide a copy of the detailed CR report to the CR originator which includes the following information:
  - Description of CR
  - Originator (*i.e.*, CLEC name)
  - Assigned CRPM contact information
  - Assigned CR number
  - Designated Qwest SMEs and associated director(s)
  - Status of the CR (e.g, Submitted)

Within eight (8) business days after receipt of a complete CR, the CRPM coordinates and holds a clarification meeting with the Originating CLEC and Qwest's SMEs. If the originating CLEC is not available within the above specified time frame, then the clarification meeting will be held at a mutually agreed upon time. Qwest will not provide a response to a CR until a clarification meeting has been held. The CR originator may invite representatives from other companies to participate on the clarification call. Such participation is not intended to replace the presentation of the CR at the Monthly CMP Meeting.

At the clarification meeting, Qwest and the Originating CLEC will review the submitted CR, validate the intent of the Originating CLEC's CR, clarify all aspects, identify all questions to be answered, and determine deliverables to be produced. After the clarification meeting has been held, the CRPM will document and issue meeting minutes within five (5) business days. Qwest's SME will internally identify options and potential solutions to the CR.

CRs received fourteen (14) calendar days prior to the next scheduled Monthly CMP Product/Process Meeting will be presented at that Monthly CMP Product/Process Meeting. CRs that are not submitted by the above specified cut-off date may be presented at that Monthly CMP Product/Process Meeting as a walk-on item with current status. The Originating CLEC will

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

present the CR and provide any business reasons for the CR. Items or issues identified during the previously held clarification meeting will be relayed. Participating CLECs will be given the opportunity to comment on the CR and subsequent clarifications. If appropriate, Qwest's SME(s) will identify options and potential solutions to the CR. Clarifications and/or modifications related to the CR will be incorporated into the evaluation of the CR. Subsequently, Qwest will develop a draft response based on the discussion from the Monthly CMP Product/Process Meeting. Qwest's response will be:

- "Accepted" (Qwest will implement the CLEC request) with position stated, or
- "Denied" (Qwest will not implement the CLEC request) with basis for the denial and a detailed explanation, including reference to substantiating material. CLEC originated Product/Process Change Request may be denied for one or more of the following reasons:
  - Technologically not feasible—a technical solution is not available
  - Regulatory ruling/Legal implications—regulatory or legal reasons prohibit the change as requested, or if the request benefits some CLECs and negatively impact others (parity among CLECs) (Contrary to ICA provisions)
  - Outside the Scope of the Change Management Process—the request is not within the scope of the Change Management Process (as defined in this CMP), seeks adherence to existing procedures, or requests for information
  - Economically not feasible—low demand, cost prohibitive to implement the request, or both
  - The requested change does not result in a reasonably demonstrable business benefit (to Qwest or the requesting CLEC) or customer service improvement

Qwest will not deny a CR solely on the basis that the CR involves a change to the back-end systems. Qwest will apply these same concepts to CRs that Qwest originates. SCRIP may be invoked if a CR was denied due to Economically not feasible.

At least one (1) week prior to the next scheduled Monthly CMP Product/Process Meeting, the CRPM will have the response posted to the Web, added to the CMP Database, and will notify all CLECs via e-mail.

All Qwest Responses will be presented at the next scheduled Monthly CMP Product/Process Meeting. Qwest will conduct a walk through of its Response. Participating CLECs will be provided the opportunity to discuss, clarify and comment on Qwest's Response.

Based on the comments received from the Monthly CMP Product/Process Meeting, Qwest may revise its Response and issue a modified Response at the next Monthly CMP Product/Process Meeting. Within ten (10) business days after the Monthly CMP Product/Process Meeting, Qwest will notify the CLECs of Qwest's intent to modify its Response.

If the CLECs do not accept Qwest's Response, any CLEC can elect to escalate or dispute the CR in accordance with the agreed upon CMP Escalation Process or Dispute Resolution Process. (See Sections 14.0 and 15.0) If the originating CLEC does not agree with the determination to escalate or pursue dispute resolution, it may withdraw its participation from the CR and any other CLEC may become responsible for pursuing the CR upon providing written

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

notification to the Qwest CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com). Qwest will note in the status history of the interactive reports that the CR has been escalated. However, the CR status will reflect the stage of the CR as it progresses through the CR lifecycle.

If the CLECs do not accept Qwest's Response and do not intend to escalate or dispute at the present time, they may request Qwest to status the CR as Deferred. The CR will remain as Deferred and CLECs may reactivate the CR at a later date.

The CLECs' acceptance of Qwest's Response may result in:

- The Response answered the CR and no further action is required
- The Response provided an implementation plan for a product/process to be developed
- Qwest Denied the CLEC CR and no further action is required by CLEC

### 5.3.1 Implementation Notification

If the CLECs have accepted Qwest's response, Qwest will provide notice of planned implementation as follows.

Prior to implementing a CLEC originated product/process CR Qwest must notify the CLECs of the pending change. Qwest will issue such notifications at the time it intends to implement a CLEC originated change (in whole or in part). It is possible that more than one such notification will be issued in order to fully address the CLEC requested change. Such notifications may be issued during CLEC Test and may continue to be issued until the CLEC initiated CR is closed. These notifications will adhere to the notification standards for Level 1, Level 2, and Level 3 detailed in Section 5.4 (Qwest Originated Product/Process Changes). If the change is not specifically captured in the existing Level categories, or if the change is captured in the Level 4 categories, Qwest will follow the Level 3 notification schedule.

Finally, the CR will be closed when CLECs determine that no further action is required for that CR.

## 5.4 Qwest Originated Product/Process Changes

The following defines five levels of Qwest originated product/process changes and the process by which Qwest will originate and implement these changes. None of the following shall be construed to supersede timelines or provisions mandated by federal or state regulatory authorities, certain CLEC facing Web sites (e.g., ICONN and Network Disclosures) or individual interconnection agreements. Each notification will state that it does not supercede individual interconnection agreements. The lists of change categories under each level provided below are exhaustive/finite but may be modified by the process set forth in Section 2.1. Qwest will utilize these lists when determining the disposition level to which new changes will be categorized. The changes that go through these processes are not changes to OSS Interfaces. Level 1-4 changes under this process will be tracked and differentiated by level in the History Log for the affected documents.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

### 5.4.1 Level 0 Changes

Level 0 changes are defined as changes that do not change the meaning of documentation and do not alter CLEC operating procedures. Level 0 changes are effective immediately without notification.

Level 0 Change Categories are:

- Font and typeface changes (e.g., bold to un-bold or bold to italics)
- Capitalization
- Spelling corrections and typographical errors other than numbers that appear as part of an interval or timeframe
- Hyphenation
- Acronym vs. non-acronym (e.g., inserting words to spell out an acronym)
- Symbols (e.g., changing bullets from circles to squares for consistency in document)
- Word changes from singular to plural (or vice versa) to correct grammar
- Punctuation
- Changing of a number to words (or vice versa)
- Changing a word to a synonym
- Contact personnel title changes where contact information does not change
- Alphabetizing information
- Indenting (left/right/center justifying for consistency)
- Grammatical corrections (making a complete sentence out of a phrase)
- Corrections to apply consistency to product names (i.e., "PBX - Resale" changed to "Resale - PBX")
- Moving paragraphs/sentences within the same section of a document to improve readability
- Hyperlink corrections within documentation
- Removing unnecessary repetitive words in the same paragraph or short section.

For any change that Qwest considers a Level 0 change that does not specifically fit into one of the categories listed above, Qwest shall issue a Level 3 notification.

#### 5.4.1.1 Level 0 Process/Deliverables

For Level 0 changes, Qwest will not provide a notification, Web change form, or History Log to CLECs. Changes to the documentation will be updated and posted immediately.

### 5.4.2 Level 1 Changes

Level 1 changes are defined as changes that do not alter CLEC operating procedures or changes that are time critical corrections to a Qwest product/process. Time critical corrections may alter CLEC operating procedures, but only if such Qwest product/process has first been implemented through the appropriate level under CMP. Level 1 changes are effective immediately upon notification.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

**Level 1 Change Categories are:**

- Time critical corrections to information that adversely impacts CLECs' ability to conduct business with Qwest
- Corrections/clarifications/additional information that do not change the product/process
- Corrections to synch up related PCAT documentation with the primary PCAT documentation that was modified through a higher level change (notification needs to include reference to primary PCAT documentation)
- Document corrections to synch up with existing OSS Interfaces documentation (notification needs to include reference to OSS Interfaces documentation)
- Process options with no mandatory deadline, that do not supercede the existing processes and that do not impose charges, regardless of whether the CLEC exercises the option
- Modifications to Frequently Asked Questions that do not change the existing product/process
- Re-notifications issued within one hundred and eighty (180) calendar days after initial notification (notification will include reference to date of initial notification or, if not available, reference to existing PCAT)
- Regulatory Orders that mandate a product/process change to be effective in less than twenty-one (21) days
- Training information (note: if a class is cancelled, notification is provided two (2) weeks in advance)
- URL changes with redirect link

For any change that Qwest considers a Level 1 change that does not specifically fit into one of the categories listed above, Qwest shall issue a Level 3 notification.

**5.4.2.1 Level 1 Process/Deliverables**

For Level 1 changes, Qwest will provide a notification to CLECs. Level 1 notifications will state the disposition level 1, description of change, that changes are effective immediately, that there is no comment cycle and will advise CLECs to contact the CMP Manager by e-mail at [cmpcr@qwest.com](mailto:cmpcr@qwest.com) immediately if the change alters the CLECs' operating procedures and requires Qwest's assistance to resolve. Qwest will respond to the CLEC, within one (1) business day, and work to resolve the issue. Possible resolutions may include withdrawal of the change, re-notification under a different level or creation of a new category of change under a different level. In addition, Qwest will provide the following for PCAT and Non-FCC Technical Publication ("Tech Pub") changes:

- The complete red-lined PCAT or Non-FCC Tech Pub will be available for review in the Product/Process Document Review Archive section of the CMP Web site, [http://www.uswest.com/wholesale/cmp/review\\_archive.html](http://www.uswest.com/wholesale/cmp/review_archive.html),
- A History Log that tracks the changes

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

### 5.4.3 Level 2 Changes

Level 2 changes are defined as changes that have minimal effect on CLEC operating procedures. Qwest will provide notification of Level 2 changes at least twenty-one (21) calendar days prior to implementation.

Level 2 Change Categories are:

- Contact Information updates excluding time critical corrections (Expedites and Escalations Overview (<http://www.qwest.com/wholesale/clecs/exesclover.html>), Wholesale Customer Contacts (<http://www.qwest.com/wholesale/clecs/escalations.html>), Technical Escalations Contact List (<http://www.qwest.com/wholesale/systems/productionsupport.html>), CMP Points of Contact (POCs, Qwest POC changes only) (<http://www.qwest.com/wholesale/cmp/poc.html>))
- Changes to a form that do not introduce changes to the underlying process
- Changes to eliminate/replace existing Web functionality will be available for twenty-one (21) days until comments are addressed. (Either a demo or screen shot presentation will be available at the time of the notification for evaluation during the twenty-one (21) day cycle.)
- Removal of data stored under an archive URL
- Elimination of a URL re-direct
- Addition of new Web functionality (e.g., CNLA)
- Re-notifications issued one hundred and eighty (180) calendar days or more after the initial notification (notification will include reference to date of initial notification or, if not available, reference to existing PCAT)
- Documentation concerning existing processes/products not previously documented
- Changes to manually generated notifications normally transmitted to CLECs through their OSS Interfaces that are made to standardize or clarify, but do not change the reasons for, such notifications
- LSOG/PCAT documentation changes associated with new OSS Interface Release documentation resulting from an OSS Interface CR
- Reduction to an interval in Qwest's SIG

For any change that Qwest considers a Level 2 change that does not specifically fit into one of the categories listed above, Qwest shall issue a Level 3 notification.

#### 5.4.3.1 Level 2 Process/Deliverables

For Level 2 changes, Qwest will provide a notification to CLECs. Level 2 notifications will state the disposition level 2, description of change, proposed implementation date, and CLEC/Qwest comment cycle timeframes. In addition to the notification, any documentation changes required to PCATs and Non-FCC Tech Pubs will be red-lined and available for review in the Document Review section of the CMP Web site, <http://www.qwest.com/wholesale/cmp/review.html>, commonly known as the Document Review site. In the Document Review site, a comment button will be available next to the document to allow CLECs to provide comments. For Level 2 changes that do not impact PCATs or Non-FCC Tech Pubs, a comments link will be provided within the notification for comments.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

Qwest must provide initial notification of Level 2 changes at least twenty-one (21) calendar days prior to implementation and adhere to the following comment cycle:

- CLECs have seven (7) calendar days following initial notification of the change to provide written comments on the notification.
- Qwest will reply to CLEC comments no later than seven (7) calendar days following the CLEC cut-off for comments. The Qwest reply will also include confirmation of the implementation date. In the event there are extenuating circumstances, (e.g., requested change requires significant research, information is required from national standards body or industry (e.g., Telcordia)), Qwest's response will indicate the course of action Qwest is taking and Qwest will provide additional information when available. Once the information is available, Qwest will provide a notification and any available updated documentation (e.g., Tech Pubs, PCATs) at least seven (7) calendar days prior to implementation. If Qwest extends the comment response period, Qwest will present an update on the response at each Monthly CMP Product/Process Meeting until final notification is distributed.
- Qwest will implement no sooner than twenty-one (21) calendar days from the initial notification.

CLECs may provide General comments regarding the change (e.g., clarification, request for modification, request to change the disposition level of a noticed change). Comments must be provided during the comments cycle as outlined for level 2 changes.

If a CLEC requests to change the disposition level of a noticed change, CLECs and Qwest will discuss such requests at the next Monthly CMP Product/Process Meeting. In the event that timing doesn't allow for discussion at the upcoming Monthly CMP Product/Process Meeting, Qwest will call a special ad hoc meeting to address the request. If the parties are not able to reach agreement on any such request, CLECs and Qwest will take a vote in accordance with Section 17.0. The result will be determined by the Majority. If the disposition level of a change is modified, from the date of the modification forward, such change will proceed under the modified level with notifications and timelines agreed to by the participants.

For general comments, Qwest will respond to comments and provide a final notification of the change. Additionally, Qwest will provide documentation of proposed changes to Qwest PCATs and Non-FCC Tech Pubs to CLECs and implement the change(s) according to the timeframes put forth above. If there are no CLEC comments, a final notification will not be provided and the changes will be effective according to the date provided in the original notification.

If the CLECs do not accept Qwest's response, any CLEC may elect to escalate or pursue dispute resolution in accordance with the agreed upon CMP Escalation Process or Dispute Resolution Process. (See Sections 14.0 and 15.0)

#### **5.4.4 Level 3 Changes**

Level 3 changes are defined as changes that have moderate effect on CLEC operating procedures and require more lead-time before implementation than Level 2 changes. Qwest will provide initial notification of Level 3 changes at least thirty-one (31) calendar days prior to implementation.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

Level 3 Change Categories are:

- NC/NCI code changes
- Adding of new features to existing products (excluding resale)
- Customer-facing Center hours and holiday schedule changes
- Modify/change existing manual process
- Expanding the availability and applicability or functionality of an existing product or existing feature (excluding resale)
- Regulatory Orders that mandate a product/process change to be effective in twenty-one (21) days or more

For any change that Qwest considers a Level 3 change that does not specifically fit into one of the categories listed above, Qwest shall issue a Level 3 notification.

#### 5.4.4.1 Level 3 Process/Deliverables

For Level 3 changes, Qwest will provide a notification to CLECs. Level 3 notifications will state the disposition level 3, description of change, proposed implementation date, and CLEC/Qwest comment cycle timeframes. Level 3 notifications will only include Level 3 changes and any dependent Level 1 and Level 2 changes. Level 3 notifications of Tech Pub changes may include notification of any Level 1, Level 2 and Level 3 change.

For a Level 3 notification that Qwest believes should fall under a different Level, Qwest will propose the Level under which it believes that change should be processed. CLECs and Qwest will discuss the proposal in the next Monthly CMP Product/Process Meeting. In addition to the notification, any documentation changes required to PCATs and Non-FCC Tech Pubs will be red-lined and available for review in the Document Review section of the CMP Web site, <http://www.qwest.com/wholesale/cmp/review.html>, commonly known as the Document Review site. In the Document Review site, a comment button will be available next to the document to allow CLECs to provide written comments. For Level 3 changes that do not impact PCATs or Non-FCC Tech pubs, a link will be provided within the notification for comments.

Qwest will provide initial notification of Level 3 changes at least thirty-one (31) calendar days prior to implementation and adhere to the following comment cycle:

- CLECs have fifteen (15) calendar days following initial notification of the change to provide written comments on the notification
- Qwest will reply to CLEC comments no later than fifteen (15) calendar days following the CLEC cut-off for comments. The Qwest reply will also include confirmation of the implementation date. In the event there are extenuating circumstances, (e.g., requested change requires significant research, information is required from national standards body or industry (e.g., Telcordia)), Qwest's response will indicate the course of action Qwest is taking and Qwest will provide additional information when available. Once the information is available, Qwest will provide a notification and any available updated documentation (e.g., Tech Pubs, PCATs) at least fifteen (15) calendar days prior to implementation. If Qwest extends the comment response period, Qwest will present an update on the response at each Monthly CMP Product/Process Meeting until final notification is distributed.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

- Qwest will implement no sooner than fifteen (15) calendar days after providing the response to CLEC comments. For example, if there are no CLEC comments, Qwest may send out a final notification on the first day following the CLEC cut-off for comments (day 16 after the initial notification). Thus, implementation would be thirty-one (31) days from the initial notification. However, if Qwest does not respond to the CLEC comments until the 15th day after the CLEC cut-off for comments, the earliest possible implementation date would be forty-five (45) calendar days from the initial notification.

CLEC comments must be provided during the comment cycle as outlined for Level 3 changes. Comments may be one of the following:

- General comments regarding the change (e.g., clarification, request for modification)
- Request to change disposition level of a noticed change
  - If the request is for a change to Level 4, the request must include substantive information to warrant a change in disposition (e.g., business need, financial impact).
  - A request to change disposition level to a Level 0, Level 1 or Level 2 is not required to include substantive information to warrant a change.
- Request for postponement of implementation date, or effective date

For general comments, Qwest will respond to comments and provide a final notification of the change. Additionally, Qwest will provide documentation of proposed changes to Qwest PCATs and Non-FCC Tech Pubs available to CLECs and implement the change(s) according to the timeframes put forth above.

CLECs and Qwest will discuss requests to change the disposition level of notified changes at the next Monthly CMP Product/Process Meeting. In the event that timing doesn't allow for discussion at the upcoming Monthly CMP Product/Process Meeting, Qwest will call a special ad hoc meeting to address the request. If the parties are not able to reach agreement on any such request, CLECs and Qwest will take a vote in accordance with Section 17.0. The result will be determined by the Majority. If the disposition level of a change is modified, from the date of the modification forward, such change will proceed under the modified level with notifications and timelines agreed to by the participants. Except that, within five (5) business days after the disposition level is changed to a Level 1, Qwest will provide a Level 1 notification.

For a request for postponement of a Level 3 change, Qwest will follow the procedures as outlined in Section 5.5 of this document.

If the CLECs do not accept Qwest's response, any CLEC may elect to escalate or pursue dispute resolution in accordance with the agreed upon CMP Escalation or Dispute Resolution procedures. (See Sections 14.0 and 15.0)

#### **5.4.5 Level 4 Changes**

Level 4 changes are defined as changes that have a major effect on existing CLEC operating procedures or that require the development of new procedures. Level 4 changes will be originated using the CMP CR process and provide CLECs an opportunity to have input into the development of the change prior to implementation.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

Level 4 Change Categories are:

- New products, features, services (excluding resale)
- Increase to an interval in Qwest's Service Interval Guide (SIG)
- Changes to CMP
- New PCAT/Tech Pub for new processes
- New manual process
- Limiting the availability and applicability or functionality of an existing product or existing feature
- Addition of a required field on a form excluding mechanized forms that are changed through an OSS Interface CR (See Section 5.1)

For any noticed change that Qwest considers a Level 4 change that does not specifically fit into one of the categories listed above, Qwest shall issue a Level 3 notification with an indication in the notification that Qwest believes the change should be a Level 4 change.

#### 5.4.5.1 Level 4 Process/Deliverables

Qwest will submit a completed Change Request no later than fourteen (14) calendar days prior to the Monthly CMP Product/Process Meeting. At a minimum, each Change Request will include the following information:

- A description of the proposed change
- A proposed implementation date (if known)
- Indication of the reason for change (e.g., regulatory mandate)
- Basis for disposition of Level 4

Within two (2) business days from receipt of the CR:

- The Qwest CMP Manager assigns a CR Number and logs the CR into the CMP Database
- The Qwest CMP Manager sends acknowledgment of receipt to the CR originator and updates the CMP Database

Within two (2) business days after acknowledgement:

- The Qwest CMP Manager posts the detailed CR report to the CMP Web site
- The CMP Manager assigns a Change Request Project Manager (CRPM) and identifies the appropriate Director responsible for the CR
- The CRPM identifies the CR Subject Matter Expert (SME) and the SME's Director.
- The CRPM will provide a copy of the detailed CR report to the CR originator which includes the following information:
  - Description of CR
  - Assigned CRPM
  - Assigned CR number
  - Designated Qwest SME(s) and associated director(s)
  - Status of the CR (e.g., Submitted)

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

Qwest will present the Change Request at the Monthly CMP Product/Process Meeting. The purpose of the presentation will be to:

- Clarify the proposal with the CLECs
- Confirm the disposition level of the Change (see below).
- Propose suggested input approach (e.g., a 2 hour meeting, 4 meetings over a two week period, etc.), and obtain agreement for input approach
- Confirm deadline, if change is mandated
- Provide proposed implementation date, if applicable

At the Monthly CMP Product/Process Meeting, the parties will discuss whether to treat the Change Request as a Level 4 change. If the parties agree, the Change Request will be reclassified as a Level 0, 1, 2 or 3 change, and the change will follow the process set forth above for Level 0, 1, 2, or 3 changes, as applicable. If the parties do not agree to reclassify the Change Request as a Level 0, 1, 2 or 3 change, the following process will apply:

- The parties will develop a process for Qwest to obtain CLEC input into the proposed change. Examples of processes for input include, but are not limited to, one-day conferences, multi-day conferences, or written comment cycles.
- After completion of the input cycle, as defined during the Monthly CMP Product/Process Meeting, Qwest will modify the CR, if necessary, and design the solution considering all CLEC input.
- For Level 4 changes, when the solution is designed and all documentation is available for review, a notification of the planned change is provided to the CLECs. Level 4 notifications will only include Level 4 changes and any dependent Level 1, Level 2 changes, and Level 3 changes. Level 4 notifications of Tech Pub changes may include notification of any Level 1, Level 2, Level 3, and Level 4 change. This notification will be provided at least thirty one (31) calendar days prior to implementation. The notification will contain reference to the original CR, proposed implementation date, and the CLEC/Qwest comment cycle. In addition, any documentation changes required to PCATs and Non-FCC Tech Pubs will be red-lined and available for review in the Document Review site with a Comment button available to provide written comments. For Level 4 changes that do not impact PCATs or Non-FCC Tech Pubs, a comments link will be provided within the notification.
- CLECs have fifteen (15) calendar days following notification of the planned change to provide written comments on the notification
- Qwest will reply to CLEC comments no later than fifteen (15) calendar days following the CLEC cut-off for comments. The Qwest reply will also include confirmation of the implementation date. In the event there are extenuating circumstances, (e.g., requested change requires significant research, information is required from national standards body or industry (e.g., Telcordia)), Qwest's response will indicate the course of action Qwest is taking and Qwest will provide additional information when available. Once the information is available Qwest will provide a notification and any available updated documentation (e.g., Tech Pubs, PCATs) at least fifteen (15) calendar days prior to implementation. If Qwest extends the comment response period, Qwest will present an update on the response at each Monthly CMP Product/Process Meeting until final notification is distributed.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

- Qwest will implement no sooner than fifteen (15) calendar days after providing the response to CLEC comments. For example, if there are no CLEC comments, Qwest may send out a final notification on the first day following the CLEC cut-off for comments (day 16 after the initial notification). Thus, implementation would be thirty one (31) days from the initial notification. However, if Qwest does not respond to the CLEC comments until the 15th day after the CLEC cut-off for comments, the earliest possible implementation date would be forty five (45) calendar days from the initial notification.

CLEC comments must be provided during the comment cycle as outlined for Level 4. CLEC comments may be one of the following:

- General comments regarding the change (e.g., clarification, request for modification)
- Request for postponement of implementation, or effective date for which comments are being provided.

For general comments, Qwest will respond to comments and provide a final notification of the change. Additionally, Qwest will provide documentation of proposed changes to Qwest PCATs and Non-FCC Tech Pubs available to CLECs and implement the change(s) according to the timeframes put forth above.

For a request for postponement of a Level 4 change, Qwest will follow the procedures as outlined in Section 5.5 of this document.

If the CLECs do not accept Qwest's response, any CLEC may elect to escalate the CR or pursue the Dispute Resolution Process in accordance with Section 15.0.

## **5.5 Postponement and Arbitration of a Product/Process Change**

A CLEC may request that Qwest postpone the implementation of a Qwest-originated or CLEC-originated product/process change in accordance with this section.

### **5.5.1 Timeframe for Request for Postponement**

A CLEC invokes the Postponement Process in accordance with the conditions and timeframes specified below:

#### **5.5.1.1 Qwest-Originated Product /Process Changes**

For Qwest-originated Level 3 or Level 4 product/process changes, if a CLEC intends to invoke the postponement process, it must do so during the final CLEC comment period.

If, however, in its response to CLEC comments Qwest revises the proposed change and that revision materially impacts a CLEC, a CLEC may invoke the postponement process within five (5) business days after the issuance of Qwest's final notification of the change.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

### 5.5.1.2 CLEC-Originated Product/Process Changes

For CLEC-originated product/process changes, if a CLEC intends to invoke the postponement process, it must do so during the CLEC comment period applicable to the notification called for in Section 5.3.1.

If, however, in its response to CLEC comments Qwest revises the proposed change and that revision materially impacts a CLEC, a CLEC may invoke the postponement process within five (5) business days after the issuance of Qwest's final notification of the change.

### 5.5.1.3 A CLEC may Join or Oppose a Postponement Request

A CLEC may only join or oppose a postponement request if it submits a request to join or oppose the postponement request within two (2) business days after the issuance date of Qwest's notification to the CLECs that a postponement request has been received by Qwest.

## 5.5.2 Process for Initiating a Postponement Request

### 5.5.2.1 CLEC Initiates Postponement Request by E-mail

A request for postponement, a request to join a postponement request or opposition to a postponement request must be sent to the Qwest CMP Postponement e-mail address ([cmpesc@qwest.com](mailto:cmpesc@qwest.com)).

The subject line of the request must include:

- CLEC Company Name
- POSTPONEMENT
- Change Request (CR) number or Notification Subject Line and Notification Date as appropriate

#### 5.5.2.1.1 Required Content for Request for Postponement

A CLEC may request that Qwest postpone implementation of all or part of the proposed change until the issue is resolved in CMP or until the dispute is resolved pursuant to the Dispute Resolution Process (Section 15.0). In its request for postponement, whether initiating or joining a postponement request, a CLEC shall provide the following information, if relevant:

- The basis for the request for a postponement;
- The extent of the postponement requested, including the portions of the proposed change to be postponed and length of requested postponement;
- The harm that the CLEC will suffer if the proposed change is not postponed, including the business impact on the CLEC if the proposed change is not postponed; and
- Whether and how the CLEC alleges that the proposed change violates its interconnection agreement(s) or any applicable commission rules or any applicable law.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

### 5.5.2.1.2 Additional Requirement for Request for Postponement Arising from Revision

If a CLEC requests a postponement because Qwest's response to CLEC comments includes a revision of the proposed change and that revision materially impacts a CLEC, such a request must contain a description of why Qwest's response affects the CLEC in a new or different way than the proposed change initially affected the CLEC, along with the information that would have been required if the CLEC submitted a request for postponement in its comments.

### 5.5.2.1.3 Opposition to a Postponement Request

If a CLEC wishes to oppose a postponement request, it must submit its opposition to a postponement request within the same time period that CLECs have to join a postponement request. Any opposition to a postponement request must include information responsive to the assertions made by the CLEC seeking postponement as called for in Section 5.5.2.1.1. For example, under Section 5.5.2.1.1, CLEC(s) seeking postponement must describe the harm it will suffer if the change is not postponed. In response to this assertion, a CLEC opposing a postponement request will state the harm it would suffer if Qwest does postpone the change.

### 5.5.2.2 Qwest will Work to Resolve CLEC Concerns

Following the receipt of a postponement request, Qwest will proactively work with the objecting CLEC(s) to resolve the concerns of the CLEC(s).

### 5.5.2.3 Qwest Acknowledges Receipt of Request and Notifies CLECs

Within two (2) business days after receipt of the postponement request, Qwest will acknowledge receipt of the postponement request or the request to join the postponement with an acknowledgment e-mail to the originator of the request. If the request does not contain the relevant information, as specified in Section 5.5.2.1.1, Qwest will notify the CLEC by the close of business on the following day, identifying and requesting information that was not originally included. When the postponement e-mail is complete, the acknowledgment e-mail will include:

- Date and time of receipt of postponement request
- Date and time of acknowledgment e-mail
- Qwest will give notification and post the postponement request and any associated responses on the CMP Web site within three (3) business days after receipt of the complete request or response.

### 5.5.3 Qwest's Determination of Postponement Request

The standard set forth in this section applies only to Qwest's postponement determination under this section and the arbitrator's determination under Section 5.5.4.5 and has no bearing on the standard applicable to any other review or determination.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

### 5.5.3.1 Standard for Determining whether to Postpone.

Qwest will postpone the implementation of the proposed change whenever Qwest reasonably determines that postponing the proposed change will prevent more harm or cost to the requesting and any joining CLECs than postponing the proposed change imposes harm or cost upon Qwest or any CLECs who oppose the postponement. Qwest will postpone the implementation of the proposed change if it is inconsistent with a requesting or joining CLEC's interconnection agreement, applicable commission rule or law.

Qwest will not postpone the implementation of the proposed change whenever Qwest reasonably determines that postponing the proposed change will impose more harm or cost upon Qwest or any CLECs who oppose the postponement than postponing the proposed change will prevent harm or cost to the CLECs supporting the postponement. Qwest will provide in its response notification that the proposed change will not be postponed.

### 5.5.3.2 Qwest's Response to Request for Postponement

If Qwest decides to postpone the proposed change, it will provide the following information in its response:

- The time period (not less than thirty (30) calendar days) for which the proposed change will be postponed;
- The CLECs for which the proposed change will be postponed; and
- Any other details of the postponement, including the portions of the proposed change to be postponed and the length of the postponement.

If Qwest decides not to postpone the proposed change, it will provide in its response:

- The reason the requested postponement is not being implemented;
- An explanation of the harm and cost evaluation; and
- How Qwest alleges that the proposed change is consistent with interconnection agreement(s) or any applicable commission rules or any applicable law.

### 5.5.3.3 30-day Postponement if Request is Denied

If Qwest does not grant the requested postponement, Qwest will not implement the objected-to proposed change for at least thirty (30) calendar days following notification to CLECs that Qwest will not postpone the proposed change.

## 5.5.4 Optional Arbitration Process for Interim Postponement of Disputed Changes while Dispute Resolution Proceeds

If Qwest does not postpone a proposed change and a CLEC has initiated Dispute Resolution proceedings (Section 15.0) with regard to the proposed change, the CLEC has the option to request a neutral arbitrator to determine whether Qwest must postpone implementation of that proposed change. This optional arbitration provides interim relief only and is limited to the question of whether Qwest must postpone implementation of the proposed change until the

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

dispute or the postponement request is resolved under the Dispute Resolution process. The arbitrator's decision will have application in all of the states where the CLEC initiates Dispute Resolution proceedings on the issue. As decisions on the dispute or the postponement request are made in each state, such decisions will supersede the determination of the arbitrator for that state.

All references in Section 5.5.4 (including all subsections) to “CLEC” and “CLECs” include all CLECs who have submitted or joined requests for postponement of a proposed change, initiated Dispute Resolution proceedings and seek arbitration for the interim postponement of the same proposed change. There may be multiple CLECs seeking postponement of the same proposed change in any given state. Such CLECs will, to the greatest extent possible, cooperate with one another to select a single arbitrator to address the issue of interim postponement for a given state. In the event that one or more CLECs have initiated Dispute Resolution proceedings on the issue of interim postponement of the same proposed change in multiple states, such CLECs may agree to the use of a single arbitrator to address such issue for all such states.

References in Section 5.5.4 (including all subsections) to “parties” will include Qwest and all CLECs who have submitted or joined requests for postponement of the same proposed change, initiated Dispute Resolution proceedings and seek arbitration for the interim postponement of that proposed change. However, the reference to “all parties” in Section 5.5.4.1.1 means Qwest and all CLECs in CMP who have received proper notification, in accordance with Section 3.0, about selection of individuals for the Agreed Arbitrators List and participated in the selection discussions.

This optional arbitration process set forth below does not apply to any proceeding before a regulatory or other authority.

#### **5.5.4.1 Selection of Arbitrator**

If a CLEC chooses arbitration under this section, the parties shall select a neutral arbitrator by agreeing to an individual or by following the processes set forth below to select an arbitrator from an alternative dispute resolution organization.

##### **5.5.4.1.1 Agreed Arbitrators List**

Qwest and the CLECs may, by mutual agreement, develop a list of individual arbitrators to which all parties agree as an additional source for selection of a neutral arbitrator (Agreed Arbitrators List). Names of arbitrators may be added to the list at any time upon agreement of all parties. Qwest or any CLEC may strike an individual arbitrator from the Agreed Arbitrators List at any time, except that Qwest or any CLEC may not strike an arbitrator from the list while an arbitration initiated under this provision is pending before that arbitrator. If a CLEC chooses a name from the Agreed Arbitrators List, that individual will be the arbitrator.

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

#### 5.5.4.1.2 Alternative Dispute Resolution Organization

If a CLEC does not choose an individual arbitrator from the Agreed Arbitrators List, or if Qwest and CLECs do not otherwise agree on an individual arbitrator, then Qwest and the CLEC shall select a neutral arbitrator from any of the following pursuant to the process set forth below: Judicial Arbitrator Group (JAG), American Arbitration Association (AAA), JAMS, or any other mutually agreeable alternative dispute resolution organization. Within two (2) business days after receipt of Qwest's acknowledgment e-mail, the CLEC shall advise the alternative dispute resolution organization and Qwest of the identity of the parties and the nature of the dispute and the CLEC shall acquire from JAG, AAA, JAMS, or other alternative dispute resolution organization as to which agreement is reached, a list of 5 potential arbitrators who have no apparent conflict of interest or any circumstances likely to affect their impartiality or independence and who have experience in handling general commercial disputes, along with a brief summary of each potential arbitrator's relevant background and experience. The CLEC shall forward the list to the specified Qwest contact as soon as practicable after it receives the list, along with the identity of the two of the five potential arbitrators the CLEC wishes to strike from the list. Within one business day after receipt of the list and indication of the potential arbitrators the CLEC has stricken, Qwest will respond to the CLEC contact with the two additional names Qwest wishes to strike from the list.

#### 5.5.4.2 Initiating Postponement Arbitration

A CLEC initiates arbitration for interim postponement of Qwest's implementation of a proposed change under this provision by sending an e-mail to Qwest at [cmpecsc@qwest.com](mailto:cmpecsc@qwest.com). The e-mail must include, at a minimum, the following:

- Subject line that includes "Postponement" and the CR [insert number] or Notification Subject Line
- The CLEC's contact person for matters relating to the postponement arbitration and method of communication (e.g., e-mail address or facsimile number)
- A statement that the CLEC desires to have a neutral arbitrator decide whether Qwest must postpone implementation of the change until the request for postponement is decided by the regulatory or other authority
- A copy of the documents that the CLEC filed with the Regulatory or other authority to initiate the dispute resolution
- The identity of the alternative dispute resolution organization or individual arbitrator the CLEC proposes to use

Within two (2) business days after receipt of the Request for Postponement Arbitration, Qwest shall respond with an e-mail acknowledging receipt of the Request for Postponement Arbitration. The e-mail must include, at a minimum, the following:

- A subject line that includes "Acknowledgment of Request for Postponement" and the CR [insert number] or Notification Subject Line
- Qwest's contact person for matters relating to the postponement arbitration and method of communication (e.g., e-mail address or facsimile number)

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

- If the Request for Postponement Arbitration identifies an alternative dispute resolution organization other than those listed in Section 5.5.4.1.2 or individual other than those on the Agreed Arbitrators List, Qwest's acknowledgment will state whether it agrees to the use of that alternative dispute resolution organization or individual arbitrator and, if it does not agree, Qwest will identify an organization or individual arbitrator that appears on the Agreed Arbitrator List that it agrees to use.

Qwest and the CLEC shall communicate with one another regarding matters relating to the postponement arbitration through the contact person and by the method of communication designated in accordance with the process set forth above.

#### **5.5.4.3 No Unilateral Communication with Arbitrator or Potential Arbitrator**

Neither Qwest nor the CLEC, and no person acting on behalf of either Qwest or the CLEC, shall communicate unilaterally concerning the arbitration with the arbitrator or any potential arbitrator.

#### **5.5.4.4 Scope of Authority of the Arbitrator**

The arbitrator shall decide only the issue of whether Qwest must postpone implementation of the change. The arbitrator shall not have authority to award any damages or make any other determination outside this scope.

If the CLEC has initiated dispute resolution with regard to the same change in more than one state, a single arbitrator can decide the postponement issue for all states in which the CLEC has initiated dispute resolution proceedings regarding the same issue.

This arbitration option is not an exclusive remedy and does not preclude any CLEC from using appropriate state commission procedures, expedited or otherwise, to raise issues or seek a postponement.

#### **5.5.4.5 Arbitrator's Decision**

The arbitrator shall decide the issue upon written submissions. The CLEC and Qwest both shall submit their position statements to the arbitrator and to each other by e-mail or facsimile within one business day from the date on which agreement regarding the identity of the arbitrator is reached.

In determining whether Qwest must postpone implementation of a proposed change, the arbitrator must apply the standards set forth in Section 5.5.3.1.

The arbitrator must provide his/her decision to Qwest and the CLECs within five (5) business days after receipt of the parties' position statements. The arbitrator's decision must be in writing, signed by the arbitrator, and must include a brief summary of the basis for the decision.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

#### 5.5.4.6 Effect of Arbitrator's Decision

The parties agree to abide by the arbitrator's decision regarding a postponement of implementation in the state in which the decision applies until the decision expires. If the arbitrator's decision applies to more than one state, the decision will expire on a state by state basis. Unless the parties agree otherwise, the arbitrator's decision expires in a state when the first of any of the following occurs in that state:

- The regulatory or other authority from whom the CLEC has requested a postponement rules on the postponement request; or
- The dispute resolution proceeding initiated by the CLEC regarding the proposed change is dismissed, withdrawn, or otherwise concluded without a ruling on the CLEC's request for a postponement; or
- Any regulatory or other authority orders otherwise at the request of Qwest or the CLEC.

The arbitrator's decision regarding postponement of implementation is not binding precedent and shall have no precedential or persuasive value. The parties shall not cite or present the content of any arbitrator's decision as having precedential or persuasive value.

#### 5.5.4.7 Arbitration Costs

Each party shall bear the costs it incurs in preparing and presenting its own case. The party against whom the issue is decided shall pay the costs for the arbitrator.

### 5.6 Comparability of Change Request Treatment

When a CLEC or Qwest submits a Product/Process CR in CMP, Sections 5.3 and 5.4, respectively, are applicable. While the processes contained in these sections are not identical, Qwest and the CLECs intend that the events and timeframes associated with Qwest and CLEC Product/Process CRs will be the same in all material respects for CRs that are comparable. Comparability of CRs is determined based on relative complexity, time for implementation and other relevant factors. The parties agree to periodically assess the time required to complete comparable CRs. To facilitate this assessment, Qwest will document the amount of time it takes to evaluate a Qwest originated Product/Process CR prior to CR submission to compare to the documented time it takes to evaluate a CLEC Product/Process CR. Evaluation time for Qwest Product/Process CRs shall include only activities similar to those Qwest performs for a CLEC originated Product/Process CR after CR submission until Qwest issues its final response.

### 5.7 Crossover Change Requests

During the operation of this CMP, there may be situations when systems CRs have requirements for product/process discussions or solutions, or when product/process CRs require System solutions. These crossover CR situations exist in three basic categories:

Category A. If a CR submitted to the product/process CMP is discovered to require a mechanized solution the following will occur:

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

- Qwest will open a new systems CR, on behalf of the original CR originator, with a reference to the product/process CR number
- Qwest will close the product/process CR with a reference to the new systems CR number
- The new systems CR will comply with the CMP OSS Interface CR process(See Section 5.1)

Category B. If a CR submitted to the Systems CMP is discovered to require a manual solution the following will occur:

- Qwest will open a product/process CR, on behalf of the original CR originator, with a reference to the systems CR number;
- Qwest will close the systems CR with a reference to the new product/process CR number.
- This CR will comply with the CMP product/process CR process.

Category C. If a CR submitted to the Systems CMP is discovered to require an interim manual solution, the CR will be tracked as a systems CR for the length of the CR lifecycle including the development and implementation of both the interim manual and final mechanized solutions. In these situations, Qwest will open a second systems CR with the same number as the original CR and a “MN” suffix.

The determination to close and open CRs as described above will be made by the CMP body at a Monthly CMP Product/Process Meeting.

If a CR becomes a crossover CR, Qwest may request an ad hoc clarification meeting with the CR originator or request that a portion of the appropriate Monthly CMP Meeting be devoted to discussing the CR. If a CR is closed in one CMP arena and opened in the other, the new CR will retain the status, where feasible, and the date submitted of the old, “closed” CR. Under no circumstances will the CR be restarted.

All crossover CRs will be distinctly labeled in the Monthly CMP Meeting distribution packages and addressed as a separate item on the Monthly CMP Meeting agenda. All crossover CRs (including those closed in Categories A and B) will include the “X” designation identified in Section 5.9. All Regulatory and Industry Guideline CRs will be submitted as systems CRs and maintained in the Systems database until closure, or until they are deemed to require a manual process solution, at which point they will become product/process CRs.

## 5.8 Change Request Status Codes

The following status codes will be applied to Change Requests of all types (i.e., Regulatory, Industry Guideline, Qwest Originated, CLEC Originated). The status of the CR will be included in the interactive reports. CR status codes will not necessarily be assigned in the order set forth below, and not every status code will apply to every CR.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

- Submitted - A CR is updated to Submitted status when Qwest's CMP Manager has formally acknowledged the CR. The CR remains in Submitted status until Qwest has conducted a clarification meeting with the originator.
- Clarification – A CR is updated to Clarification status once the clarification meeting has been held with the originator.
- Evaluation – A CR is updated to Evaluation status if the CR requires further investigation by Qwest.
- Presented – A CR is updated to Presented status after the originator has presented it at the Monthly CMP Meeting.
- Pending Prioritization – The Pending Prioritization status is only applicable to CRs for which the impacted OSS Interface requires prioritization (e.g. IMA). A CR is updated to Pending Prioritization status after it has been presented and is waiting for Prioritization.
- Prioritized - The Prioritized status is only applicable to CRs for which the impacted interface is an OSS Interface that requires prioritization (e.g., IMA). A CR is updated to Prioritized status once it has been presented for prioritization and the Prioritization Process (Section 10.2) has been completed.
- Packaged -- A CR is updated to Packaged status from Prioritized status if it is included in the packaging option chosen for the release. Design work is continued on change requests that have been packaged. CRs not updated to Packaged status (from Prioritized status) will revert to Pending Prioritization status.
- Development – A product/process CR is updated to a Development status when Qwest's response requires development of a new or revised process. A systems CR is updated to Development status when development begins for the next OSS Interface Release.
- CLEC Test – A CR is updated to the CLEC Test status upon the effective date of the change. CLECs have the ability to evaluate the effectiveness of Qwest's change and its implementation, provide feedback, and indicate whether further action is required. Through interaction between Qwest and the interested CLECs, a product/process Change as initially implemented may undergo modification. Depending on the magnitude of such modifications, it may be appropriate to return the CR to Development status. Problems found with newly deployed Systems changes will be handled in accordance with Production Support process as described in Section 12.0. Certain processes in Section 12.0 are also applicable to product/process changes. If no further action is required for a consecutive 60 day period, the status is updated to Completed, unless the parties agree otherwise.
- Completed – A CR is updated to Completed status when the CLECs and Qwest agree that no further action is required to fulfill the requirements of the CR.
- Denied – A CR is updated to Denied status when Qwest denies the CR.
- Deferred - A CR is updated to Deferred status if the originator does not intend to escalate or dispute the CR at the present time, but wants the ability to activate or close the CR at a later date.
- Pending Withdrawal – A CR is updated to a status of Pending Withdrawal when the originator requests that a CR be withdrawn from the CMP process. Change Requests with a status of Pending Withdrawal are reviewed at the appropriate Monthly CMP Meeting to determine if another party wishes to sponsor the CR.
- Withdrawn - The CR receives a Withdrawn status when the CR originator requests that the CR be withdrawn from the CMP and the CR is not sponsored by another party.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

## 5.9 Change Request Designations

In certain circumstances CR numbers will require special suffix designations to identify certain characteristics. Suffixes include:

- “CM” - Changes to the CMP framework
- “DR” - Dispute Resolution Process invoked on a CR
- “ES” - Escalation Process invoked on a CR
- “EX” - Change being implemented utilizing the Exception process
- “IG” - Industry Guideline CR
- “MN” – CR for a manual workaround related to an OSS Interface Change Request
- “RG” - Regulatory CR
- “SC” - Change being implemented as an SCRIP request
- “X” - Crossover CR

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 6.0 OSS INTERFACE RELEASE CALENDAR

Qwest will provide a rolling 12 month OSS Interface Release calendar in the distribution package of the first scheduled Monthly CMP Systems Meeting of each quarter. The calendar will show Release schedules, for all OSS Interfaces within the scope of CMP starting in that quarter and for a total of 12 months in the future. The following schedule entries will be made available, when applicable:

- Name of OSS Interface
- Date for CMP CR Submission Cutoff (for prioritized OSS Interfaces)
- Date for issuing Draft Release Notes
- Date when Initial Notification for new OSS Interfaces will be issued
- Date when Initial Notification for OSS Interface retirements will be issued
- Date when comparable functionality for OSS Interface retirements will be available
- Date for issuing Initial or Draft Technical Specifications
- Comment cycle timeline
- Prioritization, packaging and commitment timeline (for prioritized OSS Interfaces)
- Date for issuing Final Technical Specifications
- Testing period
- Date for issuing Final Release Notes
- Planned Release Production Date
- Release sunset dates (as applicable)

The OSS Interface Release calendar will be posted on the CMP Web site as a stand-alone document.

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 7.0 INTRODUCTION OF A NEW OSS INTERFACE

The process for introducing a new OSS Interface will be part of this CMP. Introduction of a new OSS Interface may include an application-to-application or a Graphical User Interface (GUI).

It is recognized that the planning cycle for a new OSS Interface, of any type, may be greater than the time originally allotted. In that case, discussions between CLECs and Qwest will be held prior to the announcement of the new OSS Interface.

With a new OSS Interface, CLECs and Qwest may define the scope of functionality introduced as part of the OSS Interface.

### 7.1 Introduction of a New Application-to-Application Interface

At least two hundred and seventy (270) calendar days in advance of the planned Release Production date of a new application-to-application interface, Qwest will issue a Release Notification, post the Preliminary Interface Implementation Plan on Qwest's Web site, and host a design and development meeting.

#### 7.1.1 Initial Release Notification

The Initial Release Notification will include:

- Where practicable, the Release Announcement and Preliminary Interface Implementation Plan will include: Proposed functionality of the OSS Interface including whether the OSS Interface will replace an existing OSS Interface
- Proposed implementation timeline (e.g., milestone dates, CLEC/Qwest comment cycle)
- Proposed meeting date to review the Preliminary Interface Implementation Plan
- Exceptions to industry guidelines/standards, if applicable
- Planned Release Production Date

#### 7.1.2 CLEC Comments to Initial Release Notification

CLECs have fourteen (14) calendar days from the Initial Release Notification to provide written comments/questions on the documentation. CLECs may submit comments via the Qwest CMP comment Web site at <http://www.qwest.com/wholesale/cmp/comment.html>.

#### 7.1.3 Qwest Response to CLEC Comments

Qwest will respond with written answers to all CLEC issues within twenty-one (21) calendar days after the Initial Release Notification.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

#### 7.1.4 Preliminary Implementation Plan Review Meeting

Qwest will review CLEC comments and the implementation schedule at the Preliminary Implementation Plan Review Meeting no later than two hundred and forty-two (242) calendar days prior to the Release Production Date.

#### 7.1.5 Draft Interface Technical Specifications

Qwest will issue a notification associated with draft interface Technical Specifications no later than one hundred twenty (120) calendar days prior to implementing the Release. In addition, Qwest will confirm the schedule for the walk through of Technical Specifications, CLEC comments, and Qwest response cycle.

The Draft Interface Technical Specification notification will include:

- Purpose
- Logistical information (including a conference line) for walk through
- Reference to draft Technical Specifications, or Web site
- Additional pertinent material
- CLEC Comment/Qwest Response cycle
- Draft connectivity and firewall rules
- Draft Test Plan

#### 7.1.6 Walk Through of Draft Interface Technical Specifications

Qwest will sponsor a walk through, including the appropriate internal Subject Matter Experts (SMEs), between one-hundred and ten (110) calendar days prior to Release Production and one hundred and six (106) calendar days prior to the Release Production Date. A walk through will afford CLEC SMEs the opportunity to ask questions and discuss specific requirements with Qwest's technical team and will take as much of this period as is necessary to address CLECs' questions. CLECs are encouraged to invite their technical experts, systems architects, and designers, to attend the walk through.

Qwest will lead the review of Draft Interface Technical Specifications. Qwest technical experts will answer the CLEC SMEs' questions. Qwest will capture action items such as requests for further clarification. Qwest will follow-up on all action items.

#### 7.1.7 CLEC Comments on Draft Interface Technical Specifications

If the CLEC identifies issues or requires clarification, the CLEC must send written comments/concerns to Qwest no later than one-hundred and four (104) calendar days prior to the Release Production Date. CLECs may submit comments via the Qwest CMP comment Web site at <http://www.qwest.com/wholesale/cmp/comment.html>.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

### 7.1.8 Qwest Response to CLEC Comments

Qwest will review and respond with written answers to all CLEC issues, comments/concerns and action items captured at the walk through, no later than one hundred (100) calendar days prior to the Release Production Date. The answers will be shared with all CLECs, unless the CLECs question(s) are marked proprietary. Any changes that may occur as a result of the responses will be distributed to all CLECs in the Final Interface Technical Specifications notification. The Final Interface Technical Specifications notification will include the description of any change(s) made as a result of CLEC comments. The change(s) will be reflected in the final Technical Specifications.

### 7.1.9 Final Interface Technical Specifications

Generally, no later than one hundred (100) calendar days prior to the Release Production Date of the new OSS Interface, Qwest will issue the Final Technical Specifications to CLECs via Web site posting and a CLEC notification.

The Final Interface Technical Specifications notification will include:

- Summary of changes from Qwest response to CLEC comments on Draft Technical Specifications
- If applicable, Indication of type of change (e.g., documentation change, business rule change, clarification change)
- Purpose
- Reference to Final Technical Specifications, or Web site
- Additional pertinent material
- Final Connectivity and Firewall Rules
- Final Test Plan (including Joint Testing Period)
- Final Release Production Date
- Qwest response to CLEC comments

The implementation timeline for the Release will not begin until Final Interface Technical Specifications are provided. Production Support type changes within the thirty (30) calendar day test window can occur without advance notification but will be posted within twenty four (24) hours of the change.

## 7.2 Introduction of a New GUI

### 7.2.1 Initial Release Notification

Qwest will issue an Initial Release Notification no later than forty-five (45) calendar days in advance of the Release Production Date. This will include:

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

- Proposed functionality of the OSS Interface including whether the new OSS Interface will replace an existing OSS Interface.
- Implementation timeline (e.g., milestone dates, CLEC/Qwest comment cycle, GUI overview meeting date)
- Release Production Date
- Logistics for GUI Overview Meeting

### 7.2.2 Draft Release Notes

Qwest will issue a Draft Release Notes notification no later than twenty-eight (28) calendar days in advance of the planned Release Production Date of a new GUI. At a minimum, the notification will include:

- Draft User Guide
- How and When Training will be administered

### 7.2.3 GUI Overview Meeting

The GUI Overview meeting will be held no later than twenty-seven (27) calendar days prior to the Release Production Date. At the meeting, Qwest will present an overview of the new OSS Interface.

### 7.2.4 CLEC Comments

At least twenty-five (25) calendar days prior to the Release Production Date. CLECs must forward their written comments and concerns to Qwest. CLECs may submit comments via the Qwest CMP comment Web site at <http://www.qwest.com/wholesale/cmp/comment.html>.

### 7.2.5 Qwest Response to CLEC Comments

Qwest will consider CLEC comments and respond with written answers as part of the Final Notification.

### 7.2.6 Final Release Notes

Qwest will issue Final Release Notes notification no later than twenty-one (21) calendar days prior to the Release Production date. The notification will include:

- A summary of changes from the Draft Release Notes notification, including type of changes (e.g., documentation change, clarification, business rule change).
- Final User Guide
- Final Training information
- Final Release Production Date.
- Qwest response to CLEC comments

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

Figure 2: Introduction of a New Application-to-Application OSS Interface Timeline

## Qwest-CLEC Change Management Process Introduction of A New Application-to-Application OSS Interface Timeline

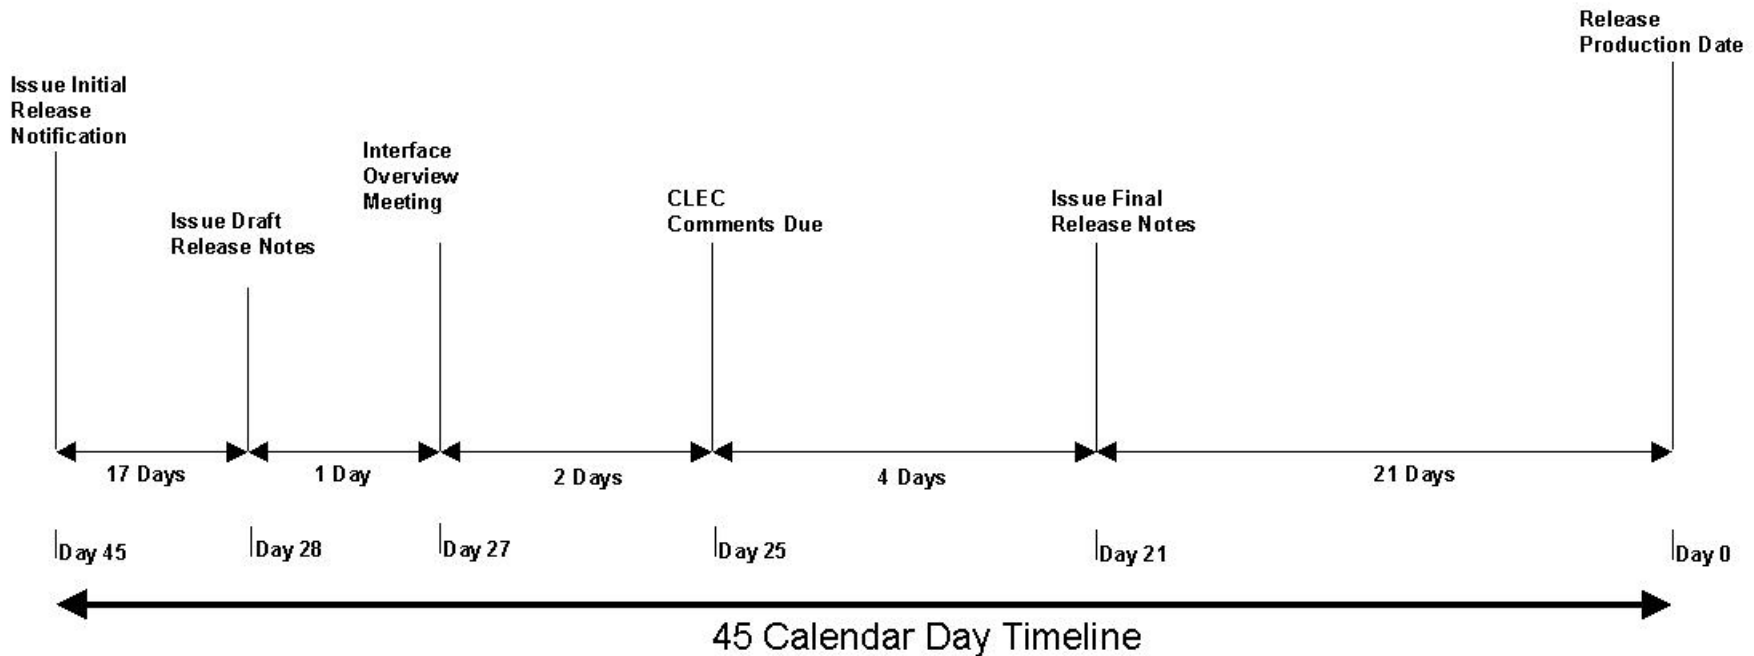

The events listed above are intended to occur on business days. If the date on which any event is scheduled to occur falls on a weekend or holiday, then Qwest and the CLECs may negotiate a revised timeline.

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

Figure 3: Introduction of a New Graphical User Interface (GUI) Timeline

## Qwest-CLEC Change Management Process Introduction of A New Graphical User Interface (GUI) Timeline

The events listed above are intended to occur on business days. If the date on which any event is scheduled to occur falls on a weekend or holiday, then Qwest and the CLECs may negotiate a revised timeline.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 8.0 CHANGE TO AN EXISTING OSS INTERFACE

The process for changing an existing OSS Interface will be part of this CMP. Changes to an existing OSS Interface may include an application-to-application or a Graphical User Interface (GUI). NOTE: An Application-to-Application interface is an electronic interface, e.g., Extensible Markup Language (XML) or Electronic Data Interchange (EDI), that supports billing or ordering processes.

It is recognized that the planning cycle for a change to an OSS Interface, of any type, may be greater than the time originally allotted and that discussions between CLECs and Qwest may be held prior to the announcement of the change to the OSS Interface.

With a change to an OSS Interface, CLECs and Qwest may define the scope of functionality introduced as part of the OSS Interface.

Qwest standard operating practice is to implement three Major Releases and three Point Releases (for IMA only) within a calendar year. Unless mandated as a Regulatory Change, Qwest will implement no more than four (4) Releases per IMA OSS Interface requiring coding changes to the CLEC interfaces within a calendar year. Unless mandated as a Regulatory Change, the Major Release changes will occur no less than seventy-five (75) calendar days apart.

At a Monthly CMP Systems Meeting in the fourth quarter of each year, Qwest will communicate to the CLECs the Major Release schedule and hourly capacity of each release for the next calendar year. Qwest will subsequently issue a notification containing the same information. Qwest will attempt to provide this information prior to any prioritization scheduled during the fourth quarter.

### Application-to-Application OSS Interface

Qwest will support the previous Major Release of an Interconnect Mediated Access (IMA) Application-to-Application interface for one hundred eighty (180) calendar days after the subsequent Major Release of IMA has been implemented. In the event that IMA major releases are implemented more than six (6) months apart, any CLEC desiring to delay retirement of the previous release should submit a CR requesting the delay. Qwest will review and grant the retirement delay up until sixty (60) days after the Release Production Date of the next Major Release; however, Qwest will maintain no more than three (3) Major Releases of an IMA Application-to-Application interface in production at any time. Qwest may retire the extended release before the extension expires when all CLECs have migrated off the extended release, but no earlier than five (5) business days after the last scheduled CLEC migration from the extended release. CLECs who do not successfully migrate from the retiring release, must contact their Qwest Implementation Team immediately to schedule a new migration. Any such new migration shall not be rescheduled beyond the sixty (60) day retirement delay. (A timeline

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

illustrating the operation of this provision is provided at the end of Section 8.) Past Releases of an IMA Application-to-Application interface will only be modified as a result of production support changes. When such production support changes are made, Qwest will also modify the related documentation. All other changes become candidates for future IMA Application-to-Application interface Releases.

Qwest makes one Release of the Electronic Bonding-Trouble Administration (EBTA) and billing interfaces available at any given time, and will not support any previous Releases.

### **Graphical User Interface (GUI)**

Qwest makes one Release of a GUI available at any given time and will not support any previous Releases.

IMA GUI changes for pre-order or ordering will be implemented at the same time as the related IMA Application-to-Application interface Release.

## **8.1 Application-to-Application Interface**

This section describes the timelines that Qwest, and any CLEC choosing to implement on the Qwest Release Production Date, will adhere to in changing existing application-to-application interfaces.<sup>1</sup> For any CLEC not choosing to implement on the Qwest Release Production Date, Qwest and the CLEC will negotiate a mutually agreed to CLEC implementation timeline, including testing.

### **8.1.1 Draft Interface Technical Specifications**

Prior to Qwest implementing a change to an existing application-to-application interface, Qwest will notify CLECs of the draft Technical Specifications. Qwest will issue draft Technical Specifications no later than seventy-three (73) calendar days prior to the implementation date unless an exception has been granted. Technical Specifications are documents that provide information the CLECs need to code the application-to-application interface. The Draft Technical Specifications notification letter will include:

- Written summary of change(s)
- Planned time frame for Release Production
- Purpose
- Logistical information (including a conference line) for walk through
- Reference to draft Technical Specifications, or reference to a Web site with draft specifications

---

<sup>1</sup> For a CLEC converting from a prior release, the CLEC implementation date can be no earlier than the weekend after the Qwest Release Production Date, if production LSR conversion is required.

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

- Additional pertinent material
- Draft Technical Specifications documentation, or instructions on how to access the draft Technical Specifications documentation on the Web site.

### **8.1.2 Walk Through of Draft Interface Technical Specifications**

Qwest will sponsor a walk through, including the appropriate internal Subject Matter Experts (SMEs), between sixty-eight (68) calendar days prior to the planned implementation date and fifty-eight (58) calendar days prior to the planned implementation date. A walk through will afford CLEC SMEs the opportunity to ask questions and discuss specific requirements with Qwest's technical team and will take as much of this period as is necessary to address CLECs' questions. CLECs are encouraged to invite their technical experts, systems architects, and designers, to attend the walk through.

Qwest will lead the review of the Draft Technical Specifications. Qwest technical experts will answer the CLEC SMEs' questions. Qwest will capture action items such as requests for further clarification. Qwest will follow-up on all action items and notify CLECs of responses forty five (45) calendar days prior to the planned implementation date.

### **8.1.3 CLEC Comments on Draft Interface Technical Specifications**

If the CLEC identifies issues or requires clarification, the CLEC must send written comments to Qwest no later than fifty-five (55) calendar days prior to the planned implementation date. CLECs may submit comments via the Qwest CMP comment Web site at <http://www.qwest.com/wholesale/cmp/comment.html>.

### **8.1.4 Qwest Response to CLEC Comments**

Qwest will review and respond with written answers to all CLEC issues, comments/concerns no later than forty-five (45) calendar days prior to final implementation date. The answers will be shared with all CLECs, unless the CLECs question(s) are marked proprietary. Any changes that may occur as a result of the responses will be distributed to all CLECs in the same notification letter. The notification will include the description of any change(s) made as a result of CLEC comments. The change(s) will be reflected in the Final Technical Specifications.

### **8.1.5 Final Interface Technical Specifications**

The Final Interface Technical Specifications will include the following:

- Reference to Final Technical Specifications, or Web site
- Qwest response to CLEC comments
- Summary of changes from the prior implementation, including any changes made as a result of CLEC comments on Draft Technical Specifications

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

- Indication of type of change (e.g., documentation change, business rule change, clarification change)
- Final Joint Test Plan including transactions which have changed
- The suite of re-certification test scenarios
- Joint Testing Period
- Final implementation date

Qwest will issue Final Interface Technical Specifications no later than forty-five (45) calendar days before the final implementation date, unless the exception process has been invoked. The implementation timeline for the Release will not begin until Final Technical Specifications are provided. Production Support type of changes that occur within the thirty (30) calendar day test window can occur without advance notification but will be posted within 24 hours of the change.

### **8.1.6 Joint Testing Period**

Qwest will provide a thirty (30) day test window for any CLEC who desires to jointly test with Qwest prior to the Release Production Date.

### **8.1.7 Release Documentation Addenda**

After the Final Technical Specifications are published, there may be other changes made to documentation or the coding that is documented in the form of addenda.

- 1<sup>st</sup> Addendum – 2 weeks after the Release the 1<sup>st</sup> addendum is sent to the CLECs, if needed.
- Subsequent Addendum's – Subsequent addendum's are sent to the CLECs after the Release Production Date as needed. There is no current process and timeline.
- Application-to-Application interface CLECs – one hundred eighty (180) calendar days after the Release those CLECs using the Application-to-Application interface are required to cut over to the new Release. CLECs are not required to support all new Releases.

## **8.2 Graphical User Interface (GUI)**

### **8.2.1 Draft GUI Release Notes**

Prior to implementation of a change to an existing GUI, Qwest will notify CLECs of the Draft GUI Release Notes and the planned Release Production Date.

Notification will occur no later than twenty-eight (28) calendar days prior to the planned Release Production Date unless an exception has been granted. This notification will include draft user guide information if necessary.

The notification will contain:

- Written summary of change(s)

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

- Planned time frame for Release Production
- Any cross-reference to draft documentation such as the user guide or revised user guide pages.

### 8.2.2 CLEC Comments on Draft Interface Release Notification

CLECs must provide comments/questions on the Draft GUI Release Notes no less than twenty-five (25) calendar days prior to the planned Release Production Date. CLECs may submit comments via the Qwest CMP comment Web site at <http://www.qwest.com/wholesale/cmp/comment.html> or via an e-mail to [cmpcomm@qwest.com](mailto:cmpcomm@qwest.com).

### 8.2.3 Qwest Response to Comments

Qwest will consider CLEC comments and will address them in the Final GUI Release Notification no later than twenty one (21) calendar days before the Release Production Date.

### 8.2.4 Content of Final Interface Release Notification

The Final Interface Release Notification, will include:

- Final notification letter
- Summary of changes from draft GUI Release notification
- Final user guide (or revised pages)
- Final Release Production Date
- Qwest Response to CLEC comments

Qwest will issue the Final Interface Release Notification no later than twenty-one (21) calendar days before the final Release Production Date. Qwest will post this information on the CMP Web site. Production support type changes that occur without advance notification will be posted within 24 hours of the change. The implementation timeline for the Release will not begin until all related documentation is provided.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

Figure 4: Release Extension Illustrative Timeline

### Qwest-CLEC Change Management Process Change to an Existing OSS Interface Release Extension Illustrative Timeline

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

Figure 5: Changes to an Existing Application-to-Application OSS Interface Timeline

## Qwest-CLEC Change Management Process Changes to An Existing Application-to-Application OSS Interface Timeline

The events listed above are intended to occur on business days. If the date on which any event is scheduled to occur falls on a weekend or holiday, then Qwest and the CLECs may negotiate a revised timeline.

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

Figure 6: Changes to An Existing Graphical User Interface (GUI) Timeline

## Qwest-CLEC Change Management Process Changes to An Existing Graphic User Interface (GUI) Timeline

The events listed above are intended to occur on business days. If the date on which any event is scheduled to occur falls on a weekend or holiday, then Qwest and the CLECs may negotiate a revised timeline.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 9.0 RETIREMENT OF AN EXISTING OSS INTERFACE

The retirement of an existing OSS Interface occurs when Qwest ceases to accept transactions using a specific OSS Interface. This may include the removal of a GUI or a protocol transmission of information (Application-to-Application) interface.

### 9.1 Application-to-Application OSS Interface

#### 9.1.1 Initial Retirement Notification

At least two hundred seventy (270) calendar days before the retirement date of application-to-application interfaces, Qwest will share the retirement plans via Web site posting and CLEC notification. The scheduled new application-to-application interface is to be in a CLEC certified production Release prior to the retirement date of the older interface.

Alternatively, Qwest may choose to retire an interface if there is no CLEC usage of that interface for the most recent ninety (90) consecutive calendar days. Qwest will provide thirty (30) calendar day notification of the retirement via Web posting and CLEC notification.

Qwest will issue the initial Retirement Notification no later than two hundred seventy (270) calendar days before retirement. The Initial Retirement Notification will include:

- The rationale for retiring the OSS Interface
- Available alternative interface options for existing functionality
- The proposed detailed retirement timeline (e.g., milestone dates, CLEC-Qwest comment and response cycle)
- Planned retirement date

#### 9.1.2 CLEC Comments to Initial Retirement Notification

CLEC comments on the Initial Retirement Notification are due to Qwest no later than fifteen (15) calendar days following the Initial Retirement Notification. CLECs may submit comments via the Qwest CMP comment Web site at <http://www.qwest.com/wholesale/cmp/comment.html>.

#### 9.1.3 Qwest Response to Comments

Qwest will consider CLEC comments and respond in the Final Retirement Notification.

#### 9.1.4 Final Retirement Notification

The Final Retirement Notification will be provided to CLECs no later than two-hundred and twenty-eight (228) calendar days prior to the retirement date of the application-to-application interface. The Final Retirement Notification will contain:

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

- The rationale for retiring the OSS Interface (e.g., no usage or replacement)
- If applicable, where the replacement functionality will reside in a new interface and when the new interface has been certified by a CLEC
- Qwest’s responses to CLECs’ comments/concerns
- Actual retirement date

### 9.1.5 Comparable Functionality

Unless otherwise agreed to by Qwest and a CLEC user, when Qwest issues the Initial Retirement Notification the retirement of an interface for which a comparable interface does or will exist, a CLEC user will not be permitted to commence building to the retiring interface. CLEC users of the retiring interface will be grandfathered until the retirement of the interface. Qwest will ensure that an interface with comparable functionality is available no later than one hundred and eighty (180) calendar days prior to retirement of an Application-to-Application interface.

## 9.2 Graphical User Interface (GUI)

### 9.2.1 Initial Retirement Notification

At least sixty (60) calendar days in advance of the retirement date of a GUI, Qwest will share the retirement plans via Web site posting and CLEC notification. The scheduled new interface is to be in a CLEC certified production Release prior to the retirement of the older interface.

Alternatively, Qwest may choose to retire a GUI if there is no CLEC usage of that interface for the most recent ninety (90) consecutive calendar days. Qwest will provide thirty (30) calendar day notification of the retirement via Web posting and CLEC notification.

Initial Retirement Notification will include:

- The rationale for retiring the OSS Interface
- Available alternative interface options for existing functionality
- The proposed detailed retirement timeline (e.g., milestone dates, CLEC-Qwest comment and response cycle)
- Planned retirement date

### 9.2.2 CLEC Comments to Initial Retirement Notification

CLEC comments to the Initial Retirement Notification are due to Qwest no later than fifteen (15) calendar days following the Initial Retirement Notification. CLECs may submit comments via the Qwest CMP comment Web site at <http://www.qwest.com/wholesale/cmp/comment.html>.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

### 9.2.3 Qwest Response to Comments

Qwest will consider CLEC comments and respond in the Final Release Notification.

### 9.2.4 Comparable Functionality

Qwest will ensure comparable functionality no later than thirty-one (31) days before retirement of a GUI.

### 9.2.5 Final Retirement Notification

The Final Retirement Notification, for GUI retirements, will be provided to CLECs no later than twenty-one (21) calendar days before the retirement date. The Final Retirement Notification will contain:

- The rationale for retiring the OSS Interface (e.g., no usage or replacement)
- If applicable, where the replacement functionality will reside in a new interface and when the new interface has been certified by a CLEC
- Qwest's responses to CLECs' comments/concerns
- Actual retirement date

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

Figure 7: Retirement of an Existing Application-to-Application OSS Interface Timeline

## Qwest-CLEC Change Management Process Retirement of An Existing Application-to-Application OSS Interface Timeline

The events listed above are intended to occur on business days. If the date on which any event is scheduled to occur falls on a weekend or holiday, then Qwest and the CLECs may negotiate a revised timeline.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

Figure 8: Retirement of an Existing Graphic User Interface Timeline

## Qwest-CLEC Change Management Process Retirement of An Existing Graphic User Interface Timeline

The events listed above are intended to occur on business days. If the date on which any event is scheduled to occur falls on a weekend or holiday, then Qwest and the CLECs may negotiate a revised timeline.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 10.0 PRIORITIZATION

Each OSS Interface Release is prioritized separately. If the Systems CMP Change Requests for any interface do not exceed Release capacity, no prioritization for that Release is required. The prioritization process provides an opportunity for CLECs and Qwest to prioritize OSS Interface Change Requests (CRs). CRs for introduction of a new interface or retirement of an existing interface are not subject to prioritization and will follow the introduction or retirement processes outlined in Sections 7.0 and 9.0, respectively.

### 10.1 Test Environment Releases

When an OSS Interface release is prioritized, some of the prioritized OSS Interface CRs will cause a change in that OSS Interface's corresponding test environment. These changes will be included in the test environment release that is made available thirty (30) days prior to the OSS Interface implementation date, and will not be subject to prioritization. The business and systems requirements for these test environment changes will be developed in the same order as the prioritized OSS Interface CRs. Qwest will ensure that the resources allocated to the test environment are sufficient to complete the corresponding OSS Interface Release changes described above.

Any remaining test environment capacity will be allocated to CRs that are specific to the test environment. CRs that are specific to the test environment will be prioritized in accordance with Section 10.0.

Qwest's OSS Interface production environment and test environment development efforts will not compete for resources.

### 10.2 Regulatory Change Requests

Regulatory changes, are defined in Section 4.0. Separate procedures are required for prioritization of CRs requesting Regulatory changes to ensure that Qwest can comply with the recommended or required implementation date, if any. The process for determining whether a CR is a Regulatory Change is set forth in Section 5.1.

Qwest will send CLECs a notification when it posts Regulatory CRs to the Web and identify when comments are due, as described in Section 5.1. Regulatory CRs will also be identified in the Monthly CMP Systems Meeting distribution package.

#### 10.2.1 Regulatory Changes

For Regulatory Changes, Qwest will implement changes no later than the time specified in the legislation, regulatory requirement, or court ruling. If no time is specified, Qwest will implement the change as soon as practicable.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

Regulatory CRs will be ranked with all other CRs. If the implementation date for a Regulatory CR requires all or a part of the change to be included in the upcoming Major Release, the CR will not be subject to ranking and will be automatically included in that Major Release.

### 10.2.2 Industry Guideline Changes

Industry Guideline CRs will be identified in the Monthly CMP Systems Meeting distribution package. Industry Guideline CRs will be ranked with all other systems CRs during prioritization as described in Section 10.0. If an Industry Guideline CR is prioritized high enough to be included in the business and systems requirements phase and is dependant on a “foundation” CR, the “foundation” CR will automatically be worked in conjunction with the Industry Guideline CR.

### 10.2.3 Regulatory Change Implementation

When more than one Major Release is scheduled before the mandated or recommended implementation date for a Regulatory CR, Qwest will present information to CLECs regarding any technical, practical, or development cycle considerations that may affect Qwest's ability to implement the CR in any particular Major Release as part of the CR review and continue to provide information up to the packaging options. At the Monthly CMP Systems Meeting where the Regulatory CR is presented, Qwest will advise CLECs of the possible scheduled Releases in which Qwest could implement the CR and the CLECs and Qwest will determine how to allocate those CRs among the available Major Releases, taking into account the information provided by Qwest regarding technical, practical, and/or development considerations. If the Regulatory CR is not included in a prior Release, it will be implemented in the latest Release specified by Qwest.

## 10.3 Prioritization Process

### 10.3.1 Prioritization Review

At the last Monthly CMP Systems Meeting before Prioritization, Qwest will facilitate a Prioritization Review including a discussion of all CRs eligible for prioritization in a Major Release. If there are any Industry Guideline CRs eligible for prioritization, Qwest will identify all Industry Guideline CRs that would need to be implemented prior to or in conjunction with such CRs. Qwest will distribute all materials five (5) calendar days prior to the Prioritization Review. The materials will include:

- Agenda
- Summary document of all CRs eligible for prioritization including identification of dependencies (see Appendix A - Sample – IMA 11.0 Rank Eligible CRs)

Both CLECs and Qwest will have appropriate Subject Matter Experts in attendance at the Prioritization Review. The review and discussion meetings are open to all CLECs.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

The Prioritization Review objectives are to:

- Allow CLECs and Qwest to discuss eligible OSS Interface or test environment Change Requests by providing specific input as to the relative importance that CLECs, as a group, and Qwest assign to each such Change Request.

### 10.3.2 Ranking Process

Within three (3) business days following the Monthly CMP Systems Meeting that includes the Prioritization Review, Qwest will distribute the Prioritization Form for ranking. Ranking will be conducted according to the following guidelines:

- Each CLEC and Qwest may submit one completed Prioritization Form. The ranking must be submitted by a Point of Contact. The ranking will be submitted to the Qwest CMP Manager in accordance with the process described in Section 10.3.3 below. Refer to Appendix B: Sample – IMA 11.0 Initial Prioritization Form
- Qwest and each CLEC ranks each Change Request on the Prioritization Form by providing a point value from 1 through n, where n is the total quantity of CRs. The highest point value will be assigned to the CR that Qwest and CLECs wish to be implemented first. The total points will be calculated by the Qwest CMP Manager and the results will be distributed to the CLECs in accordance with the process described in Section 10.3.3 below. Refer to Appendix C : Sample – IMA 11.0 Prioritization List.

### 10.3.3 Ranking Tabulation Process

CLECs and Qwest who choose to vote must submit their completed Prioritization Form via e-mail, [cmpcr@qwest.com](mailto:cmpcr@qwest.com), within three (3) business days following Qwest's distribution of the Prioritization Form. Within two (2) business days following the deadline for submission of ranking, Qwest will tabulate all rankings and e-mail the resulting Initial Prioritization List to the CLECs. The results will be announced at the next scheduled Monthly CMP Systems Meeting. Prioritization is based on the results of the votes received by the deadline. Based on the outcome of the final ranking of the CR candidates, an Initial Prioritization List is produced.

### 10.3.4 Ranking of Late Added CRs

For those late added CRs that are eligible for inclusion, as a candidate, in the most recently prioritized Release, the prioritization process will be as follows.

- Within three (3) business days following the Monthly CMP Systems Meeting that resulted in the decision to include the late added CR as a candidate in the recently prioritized Release, Qwest will distribute the late added CR for ranking, along with the initial prioritization.
- Each CLEC and Qwest may submit a suggested rank for the late added CR. The suggested rank will be the number corresponding to the position on the Initial Prioritization List that the CLEC or Qwest believes the late added CR should be inserted.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

- CLECs and Qwest who choose to vote must return their suggested rank for the late added CR via e-mail within three (3) business days following Qwest's distribution of the late added CR for ranking.

Within two (2) business days following the deadline for the return of the suggested rank, Qwest will tabulate the results by averaging the returned suggested ranks for the late added CR. Qwest will insert the late added CR into the Initial Prioritization List at the resulting point on the list and will renumber the remaining candidates on the list based on this insertion. Qwest will e-mail an updated Prioritization List to the CLECs. The results will be announced at the next scheduled Monthly CMP Systems Meeting.

### 10.3.5 Withdrawal of Prioritized CRs

A CLEC or Qwest may elect to withdraw a CR that has been prioritized for an OSS Interface Release. This process may be invoked at any time between the prioritization process and the commitment for the Release. Qwest will determine its ability to work additional CRs for the Release based upon the timing of the withdrawal request. After commitment, a CLEC or Qwest could request the CR be withdrawn, however, the withdrawal of the CR may not be feasible based upon the development status at the time of the withdrawal request. The process will be as follows:

- The originating CLEC or Qwest will submit an e-mail request to the Qwest CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com), indicating that they wish to withdraw the CR. This e-mail must be sent no later than twenty one (21) calendar days prior to the Monthly CMP Systems Meeting at which the request will be discussed. The written request must contain:
  - the CR number
  - the CR title
  - an explanation of why the originator wishes to withdraw the CR
- Within two (2) business days after receipt of the request to withdraw the CR the CMP Manager will notify, in writing, all of the CLECs that submitted a prioritization ranking. The subject line will note "INTENT TO WITHDRAW PRIORITIZED CR [number]." The notification will include:
  - the CR number
  - the CR title,
  - the ranking that it received from the prioritization,
  - the explanation of why the originator wishes to withdraw the CR
- If a CLEC or Qwest disagrees with the withdrawal of the CR from the Release, they have the option to assume sponsorship of that CR. They may do so by notifying the CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com), in writing of their intent to assume sponsorship of the CR within five (5) business days after the CMP Manager has sent the intent to withdraw e-mail. If the CMP Manager receives no response within five (5) business days, then the CR will be withdrawn. The new status will be reviewed in the next Monthly CMP Systems Meeting.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

## 10.4 Special Change Request Process (SCRP)

In the event that a systems CR is not ranked high enough in prioritization for inclusion in the next Release, or as otherwise provided in this CMP, the CR originator may elect to invoke the CMP Special Change Request Process (SCRP) as described in this section. In the event that a carrier submits a CR after prioritization and wishes to invoke the SCRCP, the originator may elect not to follow the Late Added CR process as defined in Section 10.3.4.

The SCRCP does not supercede the process defined in Section 5.0 (Change Request Origination Process).

The foregoing process applies to Qwest and CLEC originated CRs. In the event a CR is submitted through the SCRCP, Qwest agrees that it will not divert IT resources available to work on the CMP systems CRs, to support the SCRCP request. Qwest will have to apply additional resources to, and track, the additional work required for the CR it seeks to implement through the SCRCP.

All time intervals within which a response is required from one Party to another under this section are maximum time intervals. Each Party agrees that it will provide all responses in writing to the other Party as soon as the Party has the information and analysis required to respond, even if the time interval stated herein for a response is not over.

### 10.4.1 SCRCP Request Form

To invoke the SCRCP, the CR originator must send an e-mail to the Qwest CMP SCRCP mailbox (cmnesc@qwest.com). The subject line of the e-mail message must include:

- “SCRCP FORM”
- CR number and title
- CR originator’s company name

The text of the e-mail message must include:

- Description of the CR
- A completed SCRCP Form (See Appendix E)
- A single point of contact for the SCRCP request including:
  - Primary requestor’s name and company
  - Phone number
  - E-mail address
- Circumstances which have necessitated the invocation of the SCRCP
- Desired implementation date
- If more than one company is making the SCRCP request, the names and point of contact information for the other requesting companies.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

#### 10.4.2 Qwest Acknowledges SCRP Request Receipt with a Confirmation E-mail

Within two (2) business days following receipt of the SCRP request e-mail, Qwest will acknowledge receipt of the complete SCRP request e-mail with a confirmation e-mail and advise the SCRP Requestor of any missing information needed for Qwest to process and analyze the request. When the SCRP request e-mail is complete, the SCRP confirmation e-mail will include:

- Date and time of receipt of complete SCRP request e-mail
- Date and time of SCRP confirmation e-mail
- SCRP title and number
- The name, telephone number and e-mail address of the assigned Qwest manager
- Amount of the non-refundable Processing Fee as specified in Section 10.4.8.

#### 10.4.3 Process Fee Invoice

Within one (1) business day of sending the SCRP confirmation e-mail Qwest will bill the SCRP Requestor a non-refundable Processing Fee as specified in Section 10.4.8 below.

#### 10.4.4 SCRP Review Meeting

Within ten (10) business days after the SCRP confirmation e-mail, Qwest will schedule and hold a review meeting with the SCRP Requestor to review Qwest's analysis of the request.

#### 10.4.5 Preliminary SCRP Quote and Review Meeting

During business and systems requirements analysis, Qwest will review the SCRP request to determine if it has any affinities with CRs packaged for the planned OSS Interface Release. As soon as feasible, but in any case within thirty (30) business days, after receipt of a completed SCRP request form, Qwest will schedule and hold a meeting with the SCRP Requestor to provide and review:

- An estimated Preliminary SCRP quote. The SCRP quote will, at a minimum, include the following information:
  - A description of the work to be performed
  - Estimated Development costs with a cap on cost
  - Targeted Release
  - An estimate of the terms and conditions surrounding the firm SCRP quote. (If the estimate increases before Qwest issues the Firm SCRP Quote, Qwest will communicate the cost increases to the SCRP Requestor.) The SCRP Requestor must comply with payment terms as outlined in Section 10.4.7 before Qwest proceeds with the request.
- An invoice covering the business and systems requirements analysis
  - Payment for this invoice is due no later than thirty (30) calendar days following Qwest's written issuance of the Preliminary SCRP Quote. Qwest will not proceed with further

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

development in support of the SCRP Request until the business and systems analysis and processing invoices are paid.

#### **10.4.5.1 SCRP Requestor Accepts the Preliminary Quote and Decision for Qwest to Proceed**

The SCRP Requestor has ten (10) business days, upon receipt of the SCRP quote, to either agree to purchase under the quoted price or cancel the SCRP request.

If the SCRP Requestor accepts the SCRP Preliminary Quote, the SCRP Requestor must send an e-mail to the assigned Qwest manager with the following information:

The subject line of the e-mail message must include:

- “SCRP PRELIMINARY QUOTE ACCEPTED”
- CR number and title
- CR originator’s company name

The text of the e-mail message must include:

- Statement accepting SCRP Preliminary Quote, planned OSS Interface Release date, and terms and conditions
- CR originator’s name, phone number, and e-mail address

#### **10.4.5.2 SCRP Requestor Asks to Change the SCRP Request**

If the SCRP Requestor decides to modify the SCRP request after Qwest provides the preliminary SCRP Quote, the SCRP requestor must submit a written request for change to the assigned Qwest manager. If changes are acceptable to Qwest, Qwest will notify the SCRP Requestor by e-mail within five (5) business days after receipt of such request for a change with a revised preliminary SCRP Quote, if applicable. The SCRP Requestor must inform Qwest, in writing, within five (5) business days, if the modified SCRP quote is acceptable, further changes are required, or the SCRP request is cancelled.

#### **10.4.5.3 SCRP Requestor Cancels the SCRP Request**

The last point at which a SCRP Request may be cancelled is at the Monthly CMP Meeting at which Qwest presents the CRs that Qwest has committed to in the Release. Otherwise, the SCRP request will be implemented with the Release and the SCRP Requestor is obligated to pay the full amount of the firm SCRP quote consistent with the payment schedule described below in Section 10.4.7.

#### **10.4.6 Firm SCRP Quote and Review**

Qwest will provide the SCRP Requestor a Firm SCRP Quote when Qwest commits CRs to the specific OSS Interface Release.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

Qwest will send an e-mail to the SCRП Requestor with the following information:

- The subject line of the e-mail message must include:
  - “FIRM SCRП QUOTE”
  - CR number and title
  - CR originator’s company name
- The text of the e-mail message must include:
  - Final SCRП quote and terms and conditions
  - Committed implementation date, or OSS Interface Release
  - Qwest contact name, phone number, and e-mail address

Qwest will schedule and hold a meeting to review the quote no less than ten (10) days following issuance of the Firm SCRП Quote. At this meeting Qwest will review the elements of the Firm Quote and the firm Release Date of the targeted Release.

#### **10.4.7 Payment Schedule**

The SCRП Requestor must pay 50% of the Firm SCRП Quote no more than ten (10) calendar days following the scheduled Release date and the remaining 50% of the Firm SCRП Quote within thirty (30) calendar days after the scheduled Release date.

#### **10.4.8 Applicable SCRП Charges**

This section describes the different costs for a SCRП request.

- Processing Fee – a one-time flat fee that must be paid within thirty (30) calendar days after the Qwest-SCRП Review meeting to review the SCRП form. This fee is non-refundable and is treated separately from those charges for development and implementation as described under “Charges for the SCRП Request” below.
- Charges for Business and Systems Requirements - These charges include the costs of developing business and systems requirements.
- Charges for the Development of the SCRП Request – These charges, included in the Preliminary and Firm SCRП Quotes, including labor charges, time and capital costs incurred as a result of developing code and performing testing.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 11.0 APPLICATION-TO-APPLICATION INTERFACE TESTING

If a CLEC is using an application-to-application interface, the CLEC must work with Qwest to certify the business scenarios that CLEC will be using in order to ensure successful transaction processing in production. If multiple CLECs are using a service bureau provider, the service bureau provider need only be certified for the first participating CLEC; subsequent CLECs using the service bureau provider need not be re-certified. Qwest and CLEC shall mutually agree to the business scenarios for which CLEC requires certification. Certification will be granted for the specified Release of the application-to-application interface. If CLEC is certifying multiple products or services, CLEC has the option of certifying those products or services serially or in parallel if technically feasible.

New Releases of the application-to-application interface may require re-certification of some or all business scenarios. A determination as to the need for re-certification will be made by the Qwest coordinator in conjunction with the Release Manager of each Release. Notification of the need for re-certification will be provided to CLEC as the new Release is implemented. The suite of re-certification test scenarios will be provided to CLECs with the Final Technical Specifications. If CLEC is certifying multiple products or services, CLEC has the option of certifying those products or services serially or in parallel, if technically feasible. If multiple CLECs are using a service bureau provider, the service bureau provider need only be re-certified for the first participating CLEC; subsequent CLECs using the service bureau provider need not be re-certified.

Qwest provides a separate Customer Test Environment (CTE) for the testing of transaction based application-to-application interfaces for pre-order, order, and maintenance/repair. The CTE will be developed for each Major Release and updated for each Point Release that has changes that were disclosed but not implemented as part of the Major Release. Qwest will provide test files for batch/file interfaces (e.g., billing).

The CTE for Pre-order and Order currently includes:

- Stand Alone Test Environment (SATE)

The CTE for Maintenance and Repair currently includes:

- CMIP Interface Test Environment (MEDIACC)

Qwest provides Initial Implementation Testing, and Migration Testing (from one Release to the next) for all types of OSS Interface Change Requests. Such testing provides the opportunity to test the code associated with those OSS Interface exchange requests. The CTE will also provide the opportunity for regression testing of OSS Interface functionality.

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 11.1 Testing Process

Qwest will send an industry notification, including testing schedules (see Section 8.0 – Changes to Existing OSS Interfaces), to CLECs so they may determine their intent to participate in the test. CLECs wishing to test with Qwest must participate in at least one joint planning session and determine:

- Connectivity (required)
- Progression Testing (required)
- Controlled Production Testing (required)
- Production Turn-up (required)
- A test schedule (required) that reflects agreed upon dates for phases

A joint CLEC-Qwest test plan may also include some or all of the following based on type of testing requested:

- Requirements Review
- Test Data Development

Qwest will communicate any agreed upon changes to the test schedule. CLECs are responsible for establishing and maintaining connectivity to the CTE.

The CLEC should, in general, experience response times similar to production provided a CLEC uses the same software components and similar connectivity configuration in its test environment that it does in production. This environment is not intended for volume testing. The CTE contains the appropriate applications for pre-ordering and Local Service Request (LSR) ordering, including the service order processor. Production code problems identified in the test environment will be resolved by using the Production Support process as outlined in Section 12.0.

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 12.0 PRODUCTION SUPPORT

### 12.1 Notification of Planned Outages

Planned Outages are reserved times for scheduled maintenance to OSS Interfaces. Qwest sends associated notifications to all CLECs. Planned Outage Notifications must include:

- Identification of the subject OSS Interface
- Description of the scheduled OSS Interface maintenance activity
- Impact to the CLECs (e.g., geographic area, products affected, system implications, and business implications)
- Scheduled date and scheduled start and stop times
- Work around, if applicable
- Qwest contact for more information on the scheduled OSS Interface maintenance activity

Planned Outage Notifications will be sent to CLECs and appropriate Qwest personnel no later than two (2) calendar days after the scheduling of the OSS Interface maintenance activity.

### 12.2 Newly Deployed OSS Interface Release

Following the Release Production Date of an OSS Interface change, Qwest will use production support procedures for maintenance of software as outlined below. Problems encountered by the user will be reported, if at all, to the IT Wholesale Systems Help Desk (IT Help Desk). Qwest will monitor, track, and address troubles reported by CLECs or identified by Qwest. Problems reported will be known as IT Trouble Tickets.

A week after the deployment of an IMA Release into production, Qwest will host a conference call with the CLECs to review any identified problems and answer any questions pertaining to the newly deployed software. Qwest will follow this CMP for documenting the meeting as described in Section 3.2. Issues will be addressed with specific CLECs and results/status will be reviewed at the next Monthly CMP Systems Meeting.

### 12.3 Request for a Production Support Change

The IT Help Desk supports CLECs who have questions regarding connectivity, outputs, and system outages. The IT Help Desk serves as the first point of contact for reporting trouble. If the IT Help Desk is unable to assist the CLEC, it will refer information to the proper Subject Matter Expert, also known as Tier 2 or Tier 3 support, who may call the CLEC directly. Often, however, an IT Help Desk representative will contact the CLEC to provide information or to confirm resolution of the trouble ticket.

Qwest will assign each CLEC generated and Qwest generated IT Trouble ticket a Severity Level 1 to 4, as defined in Section 12.5. Severity 1 and Severity 2 IT trouble tickets will be

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

implemented immediately by means of an emergency Release of process, software or documentation (known as a Patch). If Qwest and CLEC deem implementation is not timely, and a work around exists or can be developed, Qwest will implement the work around in the interim. Severity 3 and Severity 4 IT trouble tickets may be implemented when appropriate taking into consideration upcoming Patches, Major Releases and Point Releases and any synergies that exist with work being done in the upcoming Patches, Major Releases and Point Releases.

Qwest will attempt to make a software patch when the system is not working as defined in the technical specifications and/or the GUI systems documentation (excluding PCAT documentation), and issue an event notification clearly defining the change.

If Qwest determines that a software patch is not feasible, and/or Qwest or any CLEC identifies a Patch Release of software or related systems documentation changes that may impact CLEC production coding, Qwest will issue an event notification, initiate a Technical Escalation, and request a joint meeting between Qwest and the CLECs in order to discuss the particular Patch Release. Qwest will notify CLECs of the joint meeting in which Qwest will review the Patch Release, the proposed solution, and the variables which affect the resolution. In all instances, these joint meetings are exempt from the five (5) business day advance notification requirement described in Section 3.0.

At this joint meeting, Qwest and the impacted CLECs will discuss how the pending Patch Release will affect their code. Qwest and the impacted CLECs will discuss any potential resolution options and implementation timeframes. In the event that agreement cannot be reached between Qwest and the impacted CLECs regarding the type of Patch Release to be implemented, the parties will attempt to negotiate an appropriate workaround.

The first time a trouble is reported by Qwest or CLEC, the Qwest IT Help Desk will assign an IT Trouble Ticket tracking number, which will be communicated to the CLEC at the time the CLEC reports the trouble. The affected CLEC(s) and Qwest will attempt to reach agreement on resolution of the problem and closing of the IT Trouble Ticket. If no agreement is reached, any party may use the Technical Escalation Process, <http://www.qwest.com/wholesale/systems/productionsupport.html>. When the IT Trouble Ticket has been closed, Qwest will notify CLECs with one of the following disposition codes:

- No Trouble Found – to be used when Qwest investigation indicates that no trouble exists in Qwest systems.
- Trouble to be Resolved in Patch – to be used when the IT Trouble Ticket will be resolved in a Patch. Qwest will provide a date for implementation of the Patch. This is typically applied to Severity 1 and Severity 2 troubles, although Severity 3 and Severity 4 troubles may be resolved in a Patch where synergies exist.
- CLEC Should Submit CMP CR – to be used when Qwest's investigation indicates that the System is working pursuant to the Technical Specifications (unless the Technical

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

Specifications are incorrect), and that the IT Trouble Ticket is requesting a systems change that should be submitted as a CMP CR.

- Resolved – to be used when the IT Trouble Ticket investigation has resolved the trouble.

If Qwest has identified the source of a problem for a Severity 3 or Severity 4 IT Trouble Ticket but has not scheduled the problem resolution, Qwest may place the trouble ticket into a “Date TBD” status, but will not close the trouble ticket. Once a trouble ticket is placed in “Date TBD” status, Qwest will no longer issue status notifications for the trouble ticket. Instead, Qwest will track “Date TBD” trouble tickets and report status of these trouble tickets on the CMP Web site and in the Monthly CMP Systems Meeting. When a “Date TBD” trouble ticket is scheduled to be resolved in a Patch, Release or otherwise, Qwest will issue a notification announcing that the trouble ticket will be resolved and remove the trouble ticket from the list reported on the CMP Web site and in the Monthly CMP Systems Meeting.

For “Date TBD” trouble tickets, either Qwest or a CLEC may originate a Change Request to correct the problem. (See Section 5.0 for CR Origination.) If the initiating party knows that the CR relates to a trouble ticket, it will identify the trouble ticket number on the CR.

Instances where Qwest or CLECs misinterpret Technical Specifications and/or business rules must be addressed on a case-by-case basis. All parties will take all reasonable steps to ensure that any disagreements regarding the interpretation of a new or modified OSS Interface are identified and resolved during the change management review of the Change Request.

#### **12.4 Reporting Trouble to IT**

Qwest will open a trouble ticket at the time the trouble is first reported by CLEC or detected by Qwest. The ITWSHD Tier 1 will communicate the ticket number to the CLEC at the time the trouble is reported. Once a trouble ticket is opened at the ITWSHD, a CLEC or Qwest may request that the Event Notification process begin on the ticket as described in section 12.6.

If a ticket has been opened, and subsequent to the ticket creation, CLECs call in on the same problem, and the ITWSHD recognizes that it is the same problem, a new ticket is not created. The ITWSHD documents each subsequent call in the primary IT trouble ticket.

If one or more CLECs call in on the same problem, but it is not recognized as the same problem, one or more tickets may be created. When the problem is recognized as the same, one of the tickets becomes the primary ticket, and the other tickets are linked to the primary ticket. The ITWSHD provides the primary ticket number to other reporting CLECs. A CLEC can request its ticket be linked to an already existing open IT ticket belonging to another CLEC. When the problem is closed, the primary and all related tickets will be closed.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

### 12.4.1 Systems Problem Requiring a Workaround

If a CLEC is experiencing problems with Qwest because of a system “issue”, the CLEC will report the trouble to the ITWSHD. The ITWSHD will create a trouble ticket as outlined above.

The ITWSHD Tier 1 will refer the ticket to the IT Tier 2 or 3 resolution process. If, during the resolution process, the Tier 2 or 3 resolution team determines that a workaround is required ITWSHD (with IT Tier 2 or 3 on the line, as appropriate) will contact the CLEC to develop an understanding of how the problem is impacting the CLEC. If requested and available, the CLEC will provide information regarding details of the problem, e.g., reject notices, LSRs, TNs or circuit numbers. Upon understanding the problem, the IT Tier 1 agent, with the CLEC on the line, will contact the ISC Help Desk and open a Call Center Database Ticket. The IT Tier 2 or 3 resolution team along with the WSD Tier 2 team, and other appropriate SMEs, (Resolution Team) will develop a proposed work around. The WSD Tier 2 team will work collaboratively with the CLEC(s) reporting the issue to finalize the work around. The ITWSHD will provide the CLEC and the WSD Tier 2 team with the IT Trouble Ticket number in order to cross-reference it with the Call Center Database Ticket. The ITWSHD will also record the Call Center Database Ticket number on the IT Trouble Ticket. The CLEC will provide both teams with primary contact information. If the CLEC and Qwest cannot agree upon the work around solution, the CLEC can use either the Technical Escalation process or escalate to the WSD Tiers, as appropriate. Qwest will use its best efforts to retain the CLEC’s requested due dates, regardless of whether a work around is required.

### 12.5 Severity Levels

Severity level is a means of assessing and documenting the impact of the loss of functionality to CLEC(s) and impact to the CLEC’s business. The severity level gives restoration or repair priority to problems causing the greatest impact to CLEC(s) or its business.

Guidelines for determining severity levels are listed below. Severity level may be determined by one or more of the listed bullet items under each Severity Level (the list is not exhaustive). Examples of some trouble ticket situations follow. Please keep in mind these are guidelines, and each situation is unique. The IT Help Desk representative, based on discussion with the CLEC, will make the determination of the severity level and will communicate the severity level to the CLEC at the time the CLEC reports the trouble. If the CLEC disagrees with the severity level assigned by the IT Help Desk personnel, either on the initial call or at any time while the ticket is open, a CLEC may request the ITWSHD to change the severity level, identifying the reason for the change in severity. If Qwest questions the validity of the change in severity, Qwest will contact the CLEC Severity Escalation Contact who raised the severity for clarification.

#### Severity 1: Critical Impact

- Critical.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

- High visibility.
- A large number of orders or CLECs are affected.
- A single CLEC cannot submit its business transactions.
- Affects online commitment.
- Production or cycle stopped – priority batch commitment missed.
- Major impact on revenue.
- Major component not available for use.
- Many and/or major files lost.
- Major loss of functionality.
- Problem can not be bypassed.
- No viable or productive work around available.

**Examples:**

- Major network backbone outage without redundancy.
- Environmental problems causing multiple system failures.
- Large number of service or other work order commitments missed.
- A Software Defect in an edit which prevents any orders from being submitted.

**Severity 2: Serious Impact**

- Serious
- Moderate visibility
- Moderate to large number of CLECs, or orders affected
- Potentially affects online commitment
- Serious slow response times
- Serious loss of functionality
- Potentially affects production – potential miss of priority batch commitment
- Moderate impact on revenue
- Limited use of product or component
- Component continues to fail. Intermittently down for short periods, but repetitive
- Few or small files lost
- Problems may have a possible bypass; the bypass must be acceptable to CLECs
- Major access down, but a partial backup exists

**Examples:**

- A single company, large number of orders impacted
- Frequent intermittent logoffs
- Service and/or other work order commitments delayed or missed

**Severity 3: Moderate Impact**

- Low to medium visibility
- Low CLEC, or low order impact

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

- Low impact on revenue
- Limited use of product or component
- Single CLEC device affected
- Minimal loss of functionality
- Problem may be bypassed; redundancy in place. Bypass must be acceptable to CLECs
- Automated workaround in place and known. Workaround must be acceptable to CLECs

**Example:**

- Hardware errors, no impact yet

**Severity 4: Minimal Impact**

- Low or no visibility
- No direct impact on CLEC
- Few functions impaired
- Problem can be bypassed; bypass must be acceptable to CLECs
- System resource low; no impact yet
- Preventative maintenance request

**Examples:**

- Misleading, unclear system messages causing confusion for users
- Device or software regularly has to be reset, but continues to work

**12.6 Status Notification for IT Trouble Tickets**

There are two types of status notifications for IT Trouble Tickets:

- Target Notifications: for tickets that relate to only one reporting CLEC – Target Notifications may be communicated by direct phone calls
- Event Notifications: for tickets that relate to more than one CLEC or for reported troubles that Qwest believes will impact more than one CLEC
- Event Notifications are sent by Qwest to all CLECs who subscribe to the IT Help Desk. Event Notifications will include ticket status (e.g., open, no change, resolved) and as much of the following information as is known to Qwest at the time the notification is sent:
  - Description of the problem
  - Impact to the CLECs (e.g., geographic area, products affected, business implications, other pertinent information available)
  - Estimated resolution date and time if known
  - Resolution if known
  - Severity level
  - Trouble ticket number(s), date and time
  - Work around if defined, including the Call Center Database Reference Ticket number
  - Qwest contact for more information on the problem

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

- System affected
- Escalation information as available

Both types of notifications will be sent to the CLECs and appropriate Qwest personnel within the time frame set forth in the table below and will include all related system trouble ticket number(s).

**12.7 Notification Intervals**

Qwest will distribute notifications during the IT Help Desk normal hours of operation (Monday-Friday 6:00 a.m. - 8:00 p.m. (MT) and Saturday 7:00 a.m. - 3:00 p.m. MT). Qwest will continue to work severity 1 problems outside of Help Desk hours of operation, and will communicate with the CLEC(s) as needed. A severity 2 problem may be worked outside the IT Help Desk normal hours of operation on a case-by-case basis.

Notification Intervals are based on the severity level of the ticket, the ticket’s Disposition code (e.g., Initial, Update, Closure, etc.), and status changes.

The chart below indicates the response intervals a CLEC can expect to receive after reporting a trouble ticket to the IT Help Desk. Beginning with the issue’s immediate acceptance as multi-CLEC impacting issue, Qwest will create and distribute the Initial notification.

Severity Level of Ticket	Response Interval for Status Changes	Response Interval for No Status Changes		Notification Interval upon Resolution
1	Within 1 hour	1 hour		Within 1 hour
2	Within 1 hour	1 hour		Within 1 hour
3	Within 4 hours	Workaround Provided	None. Only status <b>changes</b> will be communicated when a workaround is provided.	Within 4 hours
		No Workaround Provided	4 hours	
4	Within 24 hours	Workaround Provided	None. Only status <b>changes</b> will be communicated when a workaround is provided.	Within 4 hours
		No Workaround Provided	Every 48 hours.	

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

“Notification Interval for Any Change in Status” means that a notification will be sent out within the time specified from the time a change in status occurs. Qwest will provide updates to those notifications that do not have a workaround until a workaround is established to inform the CLEC that the issue is still under investigation. Qwest will not issue Updates when Qwest has provided a Workaround, but no change in status has occurred. “Notification Interval upon Resolution” means that a notification will be sent out within the time specified from the resolution of the problem.

## 12.8 Process Production Support

Process troubles encountered by CLECs will be reported, if at all, to the ISC Help Desk (Tier 0). In some cases the Qwest Service Manager (Tier 3) may report the CLEC trouble to the ISC Help Desk. Tier 0 will open a Call Center Database Ticket for all reported troubles.

### 12.8.1 Reporting Trouble to the ISC

The ISC Help Desk (Tier 0) serves as the first point of contact for reporting troubles that appear process related. Qwest has seven Tiers in Wholesale Service Delivery (WSD) for process Production Support. References to escalation of process Production Support issues means escalation to one of these seven tiers. Contact information is available through the Service Manager (Tier 3). The Tiers in WSD are as follows:

- Tier 0 – ISC Help Desk
- Tier 1 – Customer Service Inquiry and Education (CSIE) Service Delivery Coordinator (SDC)
- Tier 2 – CSIE Center Coaches and Team Leaders, Duty Pager, Process Specialist
- Tier 3 - Service Manager
- Tier 4 – Senior Service Manager
- Tier 5 – Service Center Director
- Tier 6 – Service Center Senior Director

A CLEC may, at any point, escalate to any of the seven Tiers.

If a CLEC is experiencing troubles with Qwest because of a process issue, the CLEC will report the trouble to Tier 0. Tier 0 will attempt to resolve the trouble including determining whether the trouble is a process or systems issue. To facilitate this determination, upon request, the CLEC will provide, by facsimile or e-mail, documentation regarding details of the trouble, e.g., reject notices, LSRs, TNs or circuit numbers if available. Tier 0 will create a Call Center Database Ticket with a two (2) hour response commitment (“out in 2 hour” status), and provide the ticket number to the CLEC. If Tier 0 determines that the trouble is a systems issue, they will follow the process described in Section 12.8.4. With respect to whether the trouble is a systems or process issue, a CLEC may escalate to Tier 1 before the Tier 0 follows the process outlined in Section 12.8.4.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

If Tier 0 does not determine that the trouble is a systems issue or is not able to resolve the trouble, Tier 0 will offer the CLEC the option of either a warm transfer to Tier 1 (with the CLEC on the line), or have Qwest place the Call Center Database Ticket into the Tier 1 work queue. Tier 1 will then analyze the ticket and attempt to resolve the trouble or determine if the trouble is a systems or a process issue. If the trouble is a process issue, Tier 1 will notify the Tier 2 process specialist. Tier 2 process specialist will notify all call handling centers (Tier 0, Tier 1 and Tier 2 at each center) of the reported trouble and current status. If Tier 1 determines that the trouble is a systems issue, they will follow the process described in Section 12.8.4.

The reporting CLEC(s) and Qwest will attempt to reach agreement on resolution of the trouble. This resolution includes identification of processes to handle affected orders reported by the CLEC and orders affected but not reported. If Qwest and the CLEC determine that the trouble can be resolved in a timely manner, Qwest will status the CLEC every 2 hours by telephone, unless otherwise agreed, until the trouble is resolved to the CLEC's satisfaction. If, at any point, the parties conclude that they are unable to resolve the trouble in a timely manner, the CLEC and Qwest will proceed to develop a work around, as described below. At any point, the reporting CLEC may elect to escalate the issue to a higher Tier.

Except in a work around situation, see Section 12.8.3, once the trouble is resolved and all affected orders have been identified and processed, Qwest will seek CLEC agreement to close the ticket(s). If agreement is not reached, CLEC may escalate through the remaining Tiers.

After ticket closure, if the CLEC indicates that the issue is not resolved, the CLEC contacts Tier 2 and refers to the applicable ticket number. Tier 2 reviews the closed ticket, opens a new ticket, and cross-references the closed ticket.

Qwest will use its best efforts to retain the CLEC's requested due dates.

### **12.8.2 Multiple Tickets**

If one or more CLECs call in multiple tickets, but neither the CLECs nor Qwest recognize that the tickets stem from the same trouble, one or more tickets may be created.

Qwest will attempt to determine if multiple tickets are the result of the same process trouble. Also, after reporting a trouble to Tier 0, a CLEC may determine that the same problem exists for multiple orders and report the association to Tier 0. In either case, when the association is identified, Tier 0 will designate one ticket per CLEC as a primary ticket, cross-reference that CLEC's other tickets to its primary ticket and provide the primary ticket number to that CLEC. Tier 2 process specialist will advise the call handling centers (Tier 0, Tier 1 and Tier 2 at each center) and Service Managers (Tier 3) of the issue.

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

Once a primary ticket is designated for a CLEC, the CLEC need not open additional trouble tickets for the same type of trouble. Any additional trouble of the same type encountered by the CLEC may be reported directly to Tier 2 with reference to the primary ticket number.

Qwest will also analyze the issue to determine if other CLECs are impacted by the trouble. If other CLECs are impacted by the trouble, within 3 business hours after this determination, the Tier 2 process specialist will advise the call handling centers (Tier 0, Tier 1 and Tier 2 at each center) and the Service Managers (Tier 3) of the issue and the seven digit ticket number for the initial trouble ticket (Reference Ticket). At the same time, Qwest will also communicate information about the trouble, including the Reference Ticket number, to the impacted CLECs through the Event Notification process, as described in Section 12.6. If other CLECs experience a trouble that appears related to the Reference Ticket, the CLECs will open a trouble ticket with Tier 0 and provide the Reference Ticket number to assist in resolving the trouble.

### **12.8.3 Work Arounds**

The reporting CLEC(s) and Qwest will attempt to reach agreement on whether a workaround is required and, if so, the nature of the work around. For example, a work around will provide a means to process affected orders reported by the CLEC, orders affected but not reported, and any new orders that will be impacted by the trouble. If no agreement is reached, the CLEC may escalate through the remaining Tiers.

If a work around is developed, Tier 1 will advise the CLEC(s) and the Tier 2 process specialist will advise the call handling centers (Tier 0, Tier 1 and Tier 2 at each center) and the Service Manager (Tier 3) of the work around and the Reference Ticket number. Tier 1 will communicate with the CLEC(s) during this affected order processing period in the manner and according to the notification timelines established in Section 12.8.1. After the work around has been implemented, Tier 1 will contact the CLECs who have open tickets to notify them that the work around has been implemented and seek concurrence with the CLECs that the Call Center Database tickets can be closed. The closed Reference Ticket will describe the work around process. The work around will remain in place until the trouble is resolved and all affected orders have been identified and processed.

Once the work around has been implemented, the associated tickets are closed. After ticket closure, CLEC may continue to use the work around. If issues arise, CLEC may contact Tier 2 directly, identifying the Reference Ticket number. If a different CLEC experiences a trouble that appears to require the same work around, that CLEC will open a Call Center Data base ticket with Tier 0 and provide the Reference Ticket number for the work around.

### **12.8.4 Transfer Issue from WSD to ITWSHD**

CLECs may report issues to the ISC Help Desk (Tier 0) that are later determined to be systems issues. Once the ISC Help Desk or higher WSD Tier determines that the issue is the result of a

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

system error, that Tier will contact the CLEC and ask if the CLEC would like that Tier to contact the ITWSHD to report the system trouble. If the CLEC so requests, the Tier agent will contact the ITWSHD, report the trouble and communicate the Call Center Database Ticket to the ITWSHD agent with the CLEC on the line. The ITWSHD agent will provide the CLEC and the WSD agent with the IT Trouble Ticket number. The IT Trouble Ticket will be processed in accordance with the Systems Production Support provisions of Section 12.0.

## 12.9 Communications

When IT Trouble Tickets are open regarding same trouble, the IT and WSD organizations will communicate as follows. The WSD Tier 2 Process Specialists will be informed of the status of IT Trouble Tickets through ITWSHD system Event Notifications. Additionally, WSD Tier 2 has direct contact with the ITWSHD as a participant on the Resolution Team, as necessary. System trouble and information pertinent to ongoing resolution of the trouble will be made available via the external Event notification website found at URL: <http://www.qwest.com/wholesale/systems/eventnotifications/>.

**Note:** Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

**Note:** Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 13.0 TRAINING

Qwest will incorporate all substantive changes to existing Graphical User Interfaces (GUI), including the introduction of new GUI, into CLEC training programs. Qwest will execute CLEC training for pre-order, ordering, billing, and maintenance and repair GUIs.

### 13.1 Introduction of a New GUI

Qwest will include a CLEC training schedule with the Initial Release Notification for the introduction of a new GUI issued in accordance with the interval specified in Section 7.0. Qwest will make available CLEC training beginning no less than twenty-one (21) calendar days prior to the Release Production Date. Web based training will remain available for the life of the Release.

### 13.2 Changes to an Existing GUI

Qwest will include a CLEC training schedule with the Draft Release Notes issued for a change to an existing GUI in accordance with the interval specified in Section 8.0. Qwest will make available CLEC training beginning no less than twenty-one (21) calendar days prior to the Release Production date. Web based training will remain available for the life of the Release.

CEMR training will not be available before the Release Production Date but will be conducted for ninety (90) days in the live environment after the Release Production date.

### 13.3 Product and Process Introductions and Changes

Qwest may offer CLEC training for product and process introductions and changes based on the complexity of the introduction or change. This training is offered in many forms, but is most commonly offered in the following delivery methods: Web-based, instructor-led, job aids, or conference calls.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 14.0 ESCALATION PROCESS

### 14.1 Guidelines

- The Escalation Process will include items that are defined as within the CMP scope.
- The decision to escalate is left to the discretion of the CLEC, based on the severity of the missed or unaccepted response/resolution.
- Escalations may also involve issues related to CMP itself, including the administration of this CMP.
- The expectation is that escalation should occur only after Change Management procedures have occurred per this CMP.

### 14.2 Cycle

Item must be formally escalated through the CMP Web site, [http://www.qwest.com/wholesale/cmp/escalations\\_dispute.html](http://www.qwest.com/wholesale/cmp/escalations_dispute.html). Alternatively, the issue may be escalated by sending an e-mail to the Qwest CMP escalation e-mail address [cmpesc@qwest.com](mailto:cmpesc@qwest.com).

- Subject line of the escalation e-mail must include:
  - CLEC Company name
  - “ESCALATION”
  - Change Request (CR) number and status, if applicable
- Content of e-mail must enclose appropriate supporting documentation, if applicable, and to the extent that the supporting documentation does not include the following information, the following must be provided:
  - Description of item being escalated
  - History of item
  - Reason for Escalation
  - Business need and impact
  - Desired CLEC resolution
  - CLEC contact information including Name, Title, Phone Number, and e-mail address
  - CLEC may request that impacted activities be stopped, continued or an interim solution be established.
- Qwest will acknowledge receipt of the complete escalation e-mail with an acknowledgement of the e-mail no later than the close of business of the following business day. If the escalation e-mail does not contain the preceding specified information Qwest will notify the CLEC by the close of business on the following business day, identifying and requesting information that was not originally included.
- When the escalation e-mail is complete, the acknowledgement e-mail will include:
  - Date and time of escalation receipt
  - Date and time of acknowledgement e-mail
  - Name, phone number and e-mail address of the Qwest Director, or above, assigned to the escalation.
- Qwest will post escalated issue and any associated responses on the CMP Web site within one (1) business day of receipt of the complete escalation or response.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

- Qwest will give notification that an escalation has been requested via the Industry Mail Out process
- Any other CLEC wishing to participate in the escalation may do so by selecting the participate button adjacent to the escalation on the CMP Escalation Web site, <http://www.qwest.com/wholesale/cmp/escalations.html>, within one (1) business day of the mail out. Alternately, a CLEC may participate by sending an e-mail to [cmpesc@qwest.com](mailto:cmpesc@qwest.com) within one business day of the Qwest notification. The subject line of the e-mail must include the title of the escalated issue followed by “ESCALATION PARTICIPATION.”
- If Qwest determines a CLEC meeting is needed to further discuss the escalation, and upon agreement by the originating CLEC, Qwest will also invite the CLECs that chose to participate in the escalation. The meeting will not require 5 day advance notification due to the escalation time constraints.
- Qwest will respond to the originating CLEC and copy the participating CLECs, with a binding position e-mail including supporting rationale as soon as practicable, but no later than:
  - For escalated CRs, seven (7) calendar days after sending the acknowledgment e-mail,
  - For all other escalations, fourteen (14) calendar days after sending the acknowledgment e-mail.
- The escalating CLEC will respond to Qwest within seven (7) calendar days with a binding position e-mail.
- When the escalation is closed, the resolution will be subject to this CMP

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 15.0 DISPUTE RESOLUTION PROCESS

CLECs and Qwest will work together in good faith to resolve any issue brought before this CMP. In the event that an impasse issue develops, a party may pursue the dispute resolution processes set forth below:

- Item must be formally identified through the CMP Web site, [http://www.qwest.com/wholesale/cmp/escalations\\_dispute.html](http://www.qwest.com/wholesale/cmp/escalations_dispute.html). Alternately, a party may send an e-mail to the Qwest CMP Dispute Resolution e-mail address, [cmpdisp@qwest.com](mailto:cmpdisp@qwest.com). Subject line of the e-mail must include:
  - CLEC Company name
  - “Dispute Resolution”
  - Change Request (CR) number and status, if applicable
- Content of e-mail must include appropriate supporting documentation, if applicable, and to the extent that the supporting documentation does not include the following information, the following:
  - Description of item
  - History of item
  - Reason for Escalation
  - Business need and impact
  - Desired CLEC resolution
  - CLEC contact information including Name, Title, Phone Number, and e-mail address
  - Qwest will acknowledge receipt of the complete Dispute Resolution e-mail within one (1) business day
- Qwest or any CLEC may suggest that the issue be resolved through an Alternative Dispute Resolution (ADR) process, such as arbitration or mediation using the American Arbitration Association (AAA) or other rules. If the parties agree to use an ADR process and agree upon the process and rules to be used, including whether the results of the ADR process are binding, the dispute will be resolved through the agreed-upon ADR process.
- Without the necessity for a prior ADR Process, Qwest or any CLEC may submit the issue, following the commission’s established procedures, with the appropriate regulatory agency requesting resolution of the dispute. This provision is not intended to change the scope of any regulatory agency’s authority with regard to Qwest or the CLECs.

This process does not limit any party’s right to seek remedies in a regulatory or legal arena at any time.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 16.0 EXCEPTION PROCESS

Qwest and CLECs recognize the need to allow occasional exceptions to this CMP described herein. Extenuating circumstances affecting Qwest or the CLECs may warrant deviation from this CMP. An exception request will be addressed on a case-by-case basis where Qwest and CLECs may decide to handle the exception request outside of the established CMP. An exception request must be presented to the CMP community for acceptance in accordance with this section to determine if the request shall be treated as an exception.

### 16.1 Exception Initiation and Acknowledgement

If Qwest or a CLEC wishes that any request within the scope of CMP be handled on an exception basis, the party who makes such a request will issue an exception request (“Exception Request”). Exception Requests will be submitted in one of two ways:

- If the request pertains to a single, previously submitted, open CR, the Exception Requestor must follow the process described in Section 16.1.1.
- If the Exception Request is not currently addressed in a single, previously submitted, open CR or if the request involves two or more previously submitted, open CRs, the Exception Requestor must complete a CR form and e-mail it to the CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com). The Exception Requestor must complete the following sections of the CR form: date submitted, company, originator, proprietary (if applicable), optional available dates/times for meetings, area of request, description of exception requested. The description of the exception must contain the information listed in Section 16.1.1.

#### 16.1.1 Requestor Submits an Exception Request

If the Exception Request pertains to a previously submitted CR, the Exception Requestor must send an e-mail to the CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com), with “EXCEPTION” in the subject line. The text of the request must contain the following information:

- Change Request number(s) of an existing Change Request(s) or a completed Change Request form (See Section 5.0)
- Description of the request with good cause for seeking an exception
- A clear statement outlining the course of action the Exception Requestor wishes parties to follow and the desired outcome, if the Exception Request is granted (e.g., timeframe or targeted release)
- Supporting documentation
- Primary contact information
- Whether the Requestor wishes to have the request considered at the next Monthly CMP Meeting, or requests an Exception Call/Meeting pursuant to Section 16.2 prior to the next Monthly CMP Meeting
- If a CLEC requests an Exception Call/Meeting, the CLEC should indicate whether it desires a pre-meeting with Qwest, including the CLEC’s desire to have certain Qwest subject matter experts attend the pre-meeting and/or Exception Call/Meeting.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

### 16.1.2 Tracking of an Exception Request

Exception Requests will be identified by adding the suffix “EX” to the CR number. If an Exception Request references existing CRs, and the Exception Request is granted, the CR numbers of the referenced CRs will then be modified to include the “EX” suffix.

Within one (1) business day after receipt of an Exception Request, Qwest’s CMP Manager will acknowledge receipt of the Exception Request by e-mail to the Requestor. The CMP Manager will include in the acknowledgement an indication of whether an Exception Call/Meeting will be scheduled. If an Exception Call/Meeting is not requested, the Exception change request will be presented to the CMP community as described in Section 16.3 below. The acknowledgement will also include the CR or tracking number.

### 16.2 Exception Notification

Within three (3) business days after receipt of the request, if an Exception Call/Meeting is requested, the CMP Manager will issue a notification to the CMP community for an Exception Call/Meeting (the “Exception Notification”). The Exception Call/Meeting shall be held on a date agreed to by the Requestor, provided that it shall not be held less than seven (7) business days after issuance of the Exception Notification.

The subject line of the Exception Notification must include:

- “EXCEPTION NOTIFICATION”

The content of the Exception Notification will include:

- Requestor
- Logistics for Exception Call/Meeting
- Agenda
- Change Request number on which the exception is sought
- Description of the request with good cause for seeking an exception
- Desired outcome (e.g., timeframe or targeted release)
- Supporting documentation
- Primary contact information
- A clear statement that a decision is required to accept, or decline this request as an Exception during this Exception Call/Meeting.
- Logistics for a pre-meeting, in accordance with Section 16.2.1
- An initial assessment from Qwest regarding the impact if the Exception Request is granted, if available.

#### 16.2.1 Pre-Meeting

The pre-meeting shall be held on a date agreed to by the Requestor, provided that it shall not be held less than two (2) business days after issuance of the Exception Notification. Qwest shall conduct the pre-meeting with the Exception Requestor, any CLECs that wish to participate, Qwest SMEs, and specially requested Qwest personnel, or their equivalents. In all instances, the pre-

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

meeting is exempt from the five (5) business day advance notification requirement described in Section 3.0. The purpose of the pre-meeting is to enable Qwest and CLECs to discuss options for the vote, determine the additional SMEs to invite to the Exception Call/Meeting, and develop a clear statement delineating what “Yes” and “No” votes will mean.

No later than three (3) business days following the pre-meeting, Qwest will distribute an Exception Voting Notification. The subject line of the notification will contain:

- “PRE-MEETING RESULTS – VOTING INSTRUCTIONS”

The body of the notification will contain:

- A clear statement outlining the course of action parties will follow if the Exception Request is granted
- A description of any modifications to the Exception Request made during the pre-meeting
- A clear statement delineating what “Yes” and “No” votes will mean
- Logistics for the Exception Meeting or the Monthly CMP Meeting, at which the vote will be held
- Logistics for additional pre-meetings, if applicable

### **16.2.2 Conduct Exception Call/Meeting**

Qwest will conduct the Exception call/meeting to allow the Requestor to clarify the Exception Request. The Exception Requestor shall present the request and provide good cause as to why such a request should be treated as an exception. Qwest and CLECs present will be given the opportunity to comment on the request. Discussion may also include substantive issues and potential solutions, and schedules for subsequent activities (e.g., meeting, deliverables, milestones, and implementation dates). After the discussion, Qwest will conduct a vote as described in Section 16.4.

Qwest will write, distribute and post minutes as part of the Exception Request Disposition Notification no later than five (5) business days after the Exception Call/Meeting. The minutes will include the disposition and schedule of the implementation of the Exception Request.

### **16.3 Notification of Exception Request Discussion and Vote at Upcoming Monthly CMP Meeting**

If an Exception Requestor desires that the vote be taken at the next Monthly CMP Meeting, the Exception Request must be submitted no later than thirteen (13) business days prior to that Monthly CMP Meeting. If an Exception Call/Meeting is not requested by the Exception Requestor, within three (3) business days after receipt of the request Qwest will notify the CLECs by e-mail that an Exception Request has been received by the CMP Manager.

The subject line of the notification must include:

- “EXCEPTION NOTIFICATION”

The notification content shall include:

- Requestor

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

- Change Request number on which the exception is sought
- Description of the request with good cause for seeking an exception
- Desired outcome (e.g., timeframe or targeted release)
- Supporting documentation
- A clear statement that this request will be discussed and a decision is required to accept, or decline this request as an Exception, at the upcoming Monthly CMP Meeting
- Logistics for a pre-meeting, in accordance with Section 16.2.1
- An initial assessment from Qwest regarding the impact if the Exception Request is granted, if available

### **16.3.1 Discussion and Vote Taken at the Monthly CMP Meeting**

If an Exception Call/Meeting is not requested, Qwest will note on the agenda of the next Monthly CMP Meeting that an Exception Request has been submitted, and that a decision is required to accept or decline this request as an Exception. Qwest will include the Exception Request and supporting documentation as part of the Monthly CMP Meeting distribution package.

The Exception Requestor shall present the request and provide good cause as to why such a request should be treated as an exception. Qwest and CLECs present will be given the opportunity to comment on the request. Discussion may also include substantive issues and potential solutions, and schedules for subsequent activities (e.g., meeting, deliverables, milestones, and implementation dates). After the discussion, Qwest will conduct a vote as described in Section 16.4.

### **16.4 Vote on Exception Request**

A vote on whether an Exception Request will be handled on an exception basis will take place at the Exception Call/Meeting, if one is held (See Section 16.2.2). If an Exception Call/Meeting is not held, the vote will be taken at the Monthly CMP Meeting (See Section 16.3.1). The standards for determining whether a request will be handled on an exception basis are as follows:

- If the Exception Request is for a general change to the established CMP timelines for Product/Process changes, a two-thirds majority vote will be required unless Qwest or a CLEC demonstrates, with substantiating information, that one of the criteria for denial set forth in Section 5.3 is applicable. If one of the criteria for denial is applicable, the request will not be treated as an exception.
- If the Exception Request is for a Systems change or seeks to alter any part of this CMP (other than a particular instance of a Product/Process timeline change), a unanimous vote will be required.

Voting will be conducted pursuant to Section 17.0.

Any party that disagrees with results of a vote may initiate dispute resolution pursuant to the CMP Dispute Resolution provisions.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 16.5 Exception Request Disposition Notification

Qwest will issue a disposition notification, including meeting minutes, within five (5) business days after the close of the Exception Call/Meeting, or the Monthly CMP Meeting, at which the vote was taken. The disposition notification will be posted on the Web site.

## 16.6 Processing of the Exception Disposition

If the outcome of the vote is to grant the Exception Request, then Qwest may proceed with the agreed to disposition. If the outcome of the vote is not to treat the proposed change as an Exception, the originator may withdraw the Exception designation and continue to pursue its change under the established CMP. The originator of the change may also withdraw the change and discontinue pursuit of the requested change.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 17.0 VOTING

When a vote is called, Qwest and CLECs will follow the procedures described below, unless otherwise specified in this CMP.

The Qwest CMP Manager will schedule and hold a discussion call/meeting (if not pursuant to a Monthly CMP Meeting), issue an agenda with any supporting material, and conduct the vote as described below on the open issue. The agenda will be distributed and posted on the web site in advance of the call/meeting as also described below.

The results of the vote will be published, using the voting tally form (refer to Appendix F).

A total of 51% or more of the votes in favor of (or against) a proposal shall constitute a Majority in this CMP.

The standard for the determination of all issues put to a vote under this CMP is the decision of the Majority, except where a different voting standard is expressly stated in this CMP for a particular issue.

### 17.1 Voter

A Voter is any of the POCs designated under Section 2.2. Additionally, any CLEC POC may designate another member of its company or a third party as an interim POC to vote, for a specific vote, in the absence of the primary, secondary, and tertiary POCs. A third party vote must be accompanied by one of the following two valid forms of documentation (e-mail authorization or Letter of Authorization (LOA)). The e-mail must be sent to the CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com), no later than two (2) hours before the meeting at which the vote will take place. The interim POC may provide an LOA to Qwest at the meeting, prior to the vote.

If an e-mail or LOA is provided to designate a third party interim POC, it must contain the following information in the subject line of the e-mail:

- “Voting Proxy”

The body of the e-mail or LOA must contain the following information:

- CLEC Name
- Third Party Company Name
- Brief description of the issue on which the vote is being taken
- Date vote call/meeting is scheduled to be held
- Signature of authorizing Carrier (LOA only)

If a meeting is scheduled for a vote but a vote is not taken, e-mailed designations or LOAs will be discarded.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

## 17.2 Participation in the Vote

Any Carrier that is authorized to provide local services in any one of Qwest's 14-state region may qualify as a Voter.

A Voter may participate in the vote in person, over the phone, or via e-mail ballot, as described in Section 17.4.3.

### 17.2.1 A Carrier is Entitled To a Single Vote

Each Carrier (Qwest or CLEC) is entitled to a single vote regardless of any affiliates. For example, at the time of this writing, WorldCom has several entities offering local services throughout the Qwest region (e.g., MFS, Brooks Fiber, MCI Metro, etc.). WorldCom would be entitled to one vote for all of these affiliates.

## 17.3 Notification of Vote

Qwest will notify CLECs by email within one (1) business day after determining when a vote on a specific issue must occur. This notification will in no event be less than five (5) business days before the call. The subject line of notification will be identified as "VOTE REQUIRED/Title of Issue." Within one (1) business day after issuing the notification, the notification and any supporting material will be posted on the web site.

### 17.3.1 Notification Content

When a notification is issued, the notification will be issued as a CMP notification and will consist of:

- a description of the issue and reason for calling a vote
- date and time of the voting call/meeting
- bridge number for the voting call, or logistics for the meeting
- supporting material, if any
- the deadline date and time for submitting e-mail votes

## 17.4 Voting Procedures

### 17.4.1 Quorum

At any CMP call/meeting where a vote is to be taken, a quorum of Carriers, as described in Section 17.2.1, (Qwest and CLEC) must be present. A quorum will be established as follows:

- Qwest and CLECs will determine the average number of Carriers (including Qwest) at the last six days of Monthly CMP Meetings, excluding the highest and lowest attendance numbers (e.g. add the number of Carriers at the remaining four meetings and divide by four) ("Average Number of Carriers").
- If 62.5% or more of the Average Number of Carriers is present, a quorum has been established. For purposes of establishing a quorum, a Carrier not participating in the meeting is

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

considered present if it submitted an e-mail vote by the time designated in the notification of vote.

- When calculating the average number of Carriers and establishing quorum, Qwest will round to the nearest whole number; *i.e.*, Qwest will round a number ending in 0.5 and above to the higher whole number, and round a number ending below 0.5 to the lower whole number.

If a quorum is not present at a call/meeting when a vote is scheduled to be taken, the vote shall be postponed until such time as a quorum is established.

In the case of an Exception request, if a quorum is not established at the Exception Call/Meeting, the vote shall be postponed for three (3) business days for a second Exception Call/Meeting. At the second Exception Call/Meeting, a vote will be taken regardless of whether a quorum is established. Prior to the second Exception Call/Meeting, Qwest will distribute a notification stating that at this meeting a vote will take place regardless of whether a quorum is established, and that votes will be accepted in accordance with Sections 17.1 and 17.4.1.

#### 17.4.2 Casting Votes

Once a quorum is established, Qwest will ask for all Voters to place their vote by writing their vote and their company name on a piece of paper. The vote will be either a “Yes,” “No” or “Abstain.” When all companies have completed their votes, Qwest will collect the ballots. Voters attending by telephone will e-mail their vote to [cmpcr@qwest.com](mailto:cmpcr@qwest.com), in accordance with Section 17.4.3. After collection of ballots Qwest will read aloud all votes received and collected. If a POC on the phone wishes to vote, but does not have access to a computer, Qwest will arrange with that POC a method to receive its vote. Only votes of “Yes” and “No” will count toward calculating a majority or unanimous decision.

#### 17.4.3 E-mail Ballots

CLECs wishing to e-mail their vote to Qwest may do so by sending an e-mail to the Qwest CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com). E-mail votes will only be accepted, and included in the tally of the votes, if received prior to the official close of voting during the voting call/meeting.

The subject line of the e-mail must include the following:

- “CLEC BALLOT”
- CLEC Name
- Representative Name

The body of the e-mail must include the following:

- CLEC Name
- Representative Name
- Brief description of the issue on which the vote is being taken
- Date vote call/meeting is scheduled to be held
- CLEC vote

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

If a meeting is scheduled for a vote but a vote is not taken, e-mailed votes will be discarded. In addition, CLECs who submitted votes by e-mail will be notified that no vote was taken, their votes were discarded, and that the vote may be taken again at a later date.

In the event a CLEC is present to vote, after submitting an e-mail ballot, such CLEC may cast its vote at the call/meeting regardless of the e-mail ballot.

#### 17.4.4 Voting Tally Form

The Voting Tally Form serves as a collective record of the individual company vote. The results of the tally will be included in the meeting minutes as an attached document.

The form will include the following information:

- *Name of Call/Meeting:* The name of the call/meeting
- *Date of Vote:* The date of occurrence
- *Subject:* The topic or issue that is causing the vote
- *Voting Carrier:* The Carrier's company name
- *Voting Participant:* Write the name of the Voter that participates in a 'vote' and how the vote was cast: in person, by phone or by email
- *Yes:* Place an 'X' in box if agreed with proposed plan
- *No:* Place an "X" in box if party disagrees with proposed plan
- *Abstain:* Any participant may abstain to place a vote by placing an "X" in the box
- *Result:* Qwest shall record the results of the vote in this box

Qwest will announce the results of the vote, by an e-mail notification, no later than five (5) business days following the call/meeting. The result will be included in meeting minutes and posted on the web site.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

## 18.0 OVERSIGHT REVIEW PROCESS

Qwest or a CLEC may identify issues with this CMP using the Oversight Review Process. Issues submitted through this process may include:

- Improper notification under CMP
- No notification under CMP
- Issues regarding scope of CMP
- Failures to adhere to CMP
- Interpretations of CMP
- Gaps in CMP

This Oversight Review Process is optional. It will not be used when one or more processes documented in this CMP are available to obtain the resolution the submitter desires. The submitter is expected to use such available processes. If a submitter chooses to use this process, the following applies.

### 18.1 Guidelines

- A submitter must submit a issue for Oversight Review, as outlined in Section 18.2 or 18.4.4
- A submitter must raise issues within a reasonable period of time after the submitter becomes aware of an issue
- A response to an Oversight Review Issue may be that the resolution requested should be pursued under a different process in this CMP
- If the parties do not agree whether this process applies, the issue will be brought before the CMP Oversight Committee to determine whether the resolution sought by the submitter is available through this process or another documented process in this CMP

### 18.2 Issue Submission

An issue may be presented to the CMP body at a monthly CMP Meeting as part of the standing agenda item relating to the operation and effectiveness of CMP (See Section 2.1) or may be formally submitted by an e-mail to [cmpesc@qwest.com](mailto:cmpesc@qwest.com) and the CMP POC of the carrier that is the subject of the issue. If the issue is presented at a Monthly CMP Meeting and is not resolved, the submitter must follow the e-mail submission process.

In the event a party chooses to submit an e-mail as described above, the subject line of the issue submission e-mail must include:

- Company name
- "CMP OVERSIGHT REVIEW ISSUE SUBMISSION"

The submission e-mail must include appropriate supporting documentation, if applicable, and, to the extent that the supporting documentation does not include the following information, the following must be provided:

- Description of issue
- Basis for considering the matter an Oversight Review Issue

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

- Citation from the Qwest Wholesale Change Management Document that addresses specific guidelines, if applicable
- Desired resolution
- Contact information including Name, Title, Phone Number, and e-mail address

Qwest must acknowledge receipt of the complete issue submission with an acknowledgement within one (1) business day. If the issue submission does not contain the above-specified information, Qwest must notify the submitter within one (1) business day, identifying and requesting information that was not originally included. When the issue submission is complete, the acknowledgement email will include:

- Date and time of issue submission receipt
- Date and time of acknowledgement email

Qwest must issue a notification announcing that an Oversight Review Issue has been submitted within two (2) business days after receipt of the complete issue e-mail submission. The subject of the notification will include “CMP OVERSIGHT REVIEW ISSUE SUBMISSION.”

### **18.3 Issue Resolution**

#### **18.3.1 Response**

The carrier cited in the original submission must respond by e-mail to [cmpesc@qwest.com](mailto:cmpesc@qwest.com). Subject line of the Oversight Review issue response e-mail must include:

- Company name
- “CMP Oversight Review ISSUE RESPONSE”

The response e-mail must include appropriate supporting documentation, if applicable, and, to the extent that the supporting documentation does not include the following information, the following must be provided:

- Agreement/disagreement with the issue
- Reason for agreement/disagreement
- Citation from the Qwest Wholesale Change Management Process Document that addresses responding company position, if applicable
- Response to desired resolution, and alternative proposed resolution, if applicable
- Respondent contact information including Name, Title, Phone Number, and e-mail address

Qwest must distribute a notification with the contents of the response e-mail within two (2) business days of receipt. The subject of the notification must include “RESPONSE TO CMP OVERSIGHT REVIEW ISSUE.”

#### **18.3.2 Issue Meeting**

If the submitter of the Oversight Review Issue is not satisfied with the response provided under Section 18.3.1, the submitter may request a meeting of Qwest and interested CLECs to discuss the issue. Such meeting will be held no later than five (5) business days after the submitter’s meeting request. One of the matters to be addressed at this meeting is whether additional

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

meetings should be held to address the issue. Such meetings will be open to all CLECs and Qwest shall provide advanced notification of such meetings pursuant to this CMP. Qwest will provide notification of the outcome of these discussions within two (2) business days after such discussions are concluded. The subject of the notification must include “OUTCOME OF CMP OVERSIGHT REVIEW ISSUE.”

### **18.3.3 Election to Pursue Issue with CMP Oversight Committee**

At any point in the process under Sections 18.2 or 18.3, a participant in the discussions of an Oversight Review issue may elect to pursue the issue with the CMP Oversight Committee by sending an email to [cmpesc@qwest.com](mailto:cmpesc@qwest.com).

### **18.3.4 Escalation or Dispute Resolution**

If any party is not satisfied with the outcome of this Section 18.3, it may follow the Escalation or Dispute Resolution Processes.

## **18.4 CMP Oversight Committee**

### **18.4.1 Membership**

The CMP Oversight Committee will be comprised of one representative from Qwest, one representative from each of up to six (6) CLECs, and one representative from each public utilities commission that wishes to participate. Members of the CMP Oversight Committee must have a comprehensive understanding of this CMP. Names of the members of the CMP Oversight Committee will be listed on the Qwest Wholesale CMP website at the following URL: <http://www.qwest.com/wholesale/cmp/coc.html>. The membership of the committee has been established through the end of 2003. For 2004 and each year thereafter, the CLEC membership will be established on an annual basis through self nomination. If more than six (6) CLECs are nominated for membership, the CLECs will rank the nominees. The six (6) highest ranked nominees will be the CLEC members of the committee for the following year.

### **18.4.2 Role of the CMP Oversight Committee**

The CMP Oversight Committee will act as a subject matter expert regarding the provisions of this CMP. The CMP Oversight Committee will deliberate on CMP Oversight Review Issues and make recommendations to the CMP body on matters such as interpretation of this CMP and proposed changes to this CMP. A recommendation of the CMP Oversight Committee may result in a CR to change this CMP as contemplated by Section 2.1.

### **18.4.3 Meetings of the CMP Oversight Committee**

Meetings of the CMP Oversight Committee will be called on an ad hoc basis, as needed to address CMP Oversight Review Issues as described in Section 18.4.4, and will be called in the same manner, and applying the same time periods, as set forth in Section 3.0, Change Management Process Meetings. A CMP Oversight Committee meeting may be held at the end of a scheduled

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms “include(s)” and “including” mean “including, but not limited to.”

monthly CMP Meeting. In addition to the CMP Oversight Committee members, other persons may participate in the CMP Oversight Committee meetings to assist the committee in understanding the issues; however, final recommendations to the CMP body may only be made by the CMP Oversight Committee members. In order to conduct a meeting of the CMP Oversight Committee, a majority of its members must be present in person or by teleconference.

#### **18.4.4 Submission of Oversight Review issues to the CMP Oversight Committee**

Oversight Review issues may be submitted to the CMP Oversight Committee in a number of ways:

- When parties disagree on the application of the Oversight Review Issue Submission Process to an issue that is raised (See Section 18.1)
- A party submitting a CMP Oversight Review Issue under Section 18.2, may direct that the issue be brought to the CMP Oversight Committee;
- During the process under Section 18.3, or once that process is completed, a CMP participant may raise the Oversight Review Issue to the CMP Oversight Committee;
- A CMP Oversight Review Issue may be referred to the CMP Oversight Committee during a Monthly CMP Meeting

#### **18.4.5 CMP Oversight Review**

Qwest must issue a notification announcing that a CMP Oversight Review Issue has been referred to the CMP Oversight Committee within two (2) business days after such referral is made. This notification will provide the information for the meeting of the CMP Oversight Committee. The subject of the notification will include "POTENTIAL CMP OVERSIGHT REVIEW ISSUE REFERRED TO THE CMP OVERSIGHT COMMITTEE." The notification will solicit from committee members and submitting carrier, dates during the next ten (10) calendar days on which they are available to meet to address the issue. Qwest will establish a meeting date will be established based on the members' and submitting carrier's availability.

#### **18.4.6 Status and Recommendations of the CMP Oversight Committee**

Status of outstanding Oversight Review issues will be provided at the monthly CMP meetings and will be posted on Qwest's Wholesale CMP website at the following URL: [www.qwest.com/wholesale/coc.html](http://www.qwest.com/wholesale/coc.html). Recommendations of the CMP Oversight Committee will be distributed to the CMP by e-mail notification with a heading that includes "RECOMMENDATION OF THE CMP OVERSIGHT COMMITTEE." Such notifications will state the issue and briefly describe the recommendation and include a link to more detailed information about the issue. Recommendations of the CMP Oversight Committee will be included on the agenda for the next monthly CMP meeting for discussion by the CMP body. If there is not agreement on a single recommendation by the CMP Oversight Committee, the notification will include the competing recommendations discussed by the CMP Oversight Committee.

Note: Throughout this document, OSS Interfaces are defined as existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services (local exchange services) provided by CLECs to their end users

Note: Throughout this document, the terms "include(s)" and "including" mean "including, but not limited to."

## Change Request Form Instructions

The Change Request (CR) Form is the written documentation for submitting a CR for a Product, Process or OSS interface (Systems) change. The CR should be reviewed and submitted by the individual, which was selected to act as a single point of contact for the management of CRs to Qwest. Electronic version of the CR Form can be downloaded from the Qwest Wholesale WEB Page at <http://www.qwest.com/wholesale/cmp/changerequest.html>.

Product/Process and System CRs may be submitted to Qwest via e-mail at: [cmpr@qwest.com](mailto:cmpr@qwest.com)

To input data to the form, use the Tab Key to navigate between each field. The following fields on the CR Form must be completed as a minimum, unless noted otherwise:

### Submitted By

- Enter the date the CR is being submitted to the Qwest CMP Manager.
- Enter Company's name and Submitter's name, title, and email/Phone #.
- Optional – identify potential available dates Submitter is available for a Clarification Meeting.
- Optional – enter a Company Internal Reference No. to be identified.

### Area of Change Request

- Select the type of CR that is being submitted (Product, Process, or Systems).

### Exception Process Requested

- Originator should indicate if they wish to have the request handled on an exception basis.
- Exception requests will be considered at the next monthly CMP meeting, unless the Originator requests an emergency call/meeting.
- Optional - Select Emergency call/meeting requested, if an emergency call/meeting is required.
- Optional - Originator may request a pre-meeting with Qwest by selecting the Pre-meeting with Qwest requested box.
- Optional - Originator may identify certain Qwest SME(s) to attend the Pre-meeting by selecting the Qwest SME(s) requested at Pre-Meeting box and listing the SME(s).

### Regulatory or Industry Guideline CR

- Select either Regulatory or Industry Guideline if you would like the CR to be considered as a Regulatory or Industry Guideline change

### Title of Change

- Enter a title for this CR. This should concisely describe the CR.

### Description of Change/Exception

- Describe the Functional needs of the change being requested. To the extent practical, please provide examples to support the functional need and the names of Qwest personnel with whom the originator has been working to resolve the request. Also include the business benefit of this request.
- If Exception Process requested, provide reason for seeking an exception.

### Expected Deliverables/Proposed Implementation Date (if applicable)

- Enter the desired outcome required (e.g. revised process, clarification, improved communication, etc.) and the desired date for completion. The specific deliverables Qwest must produce in order to close the CR. The originator should provide as much detail as possible.

### Products Impacted – Optional

- To the extent known, check the applicable products that are impacted by the CR.

### Area Impacted – Optional

- To the extent known, check the applicable process areas that are impacted by the CR.

### OSS Interfaces Impacted – Optional

- To the extent known, check the applicable systems that are impacted by the CR.

Qwest's CMP Manager will complete the remainder of the Form.

**Qwest Wholesale Change Management Process (CMP)**

**Special Change Request Process (SCRP) Form**

In the event that a systems CMP CR is not ranked high enough in prioritization for inclusion in the next Release, or as otherwise provided in the Qwest Wholesale CMP, the CR originator may elect to invoke the CMP Special Change Request Process (SCRP) as described Section 10.3 of the Qwest Wholesale Change Management Document.

The SCRCP may be requested up to five (5) calendar days after prioritization results are posted. However, the SCRCP does not supercede the process defined in Section 5.0 of the Qwest Wholesale Change Management Process Document.

The information requested on this form is essential for Qwest to evaluate your invocation of the Special Change Request Process (SCRCP). Specific timeframes for evaluating your request are identified in the Special Change Request section of the Qwest Wholesale Change Management Process Document.

Complete the application form in full, using additional pages as necessary, and then submit the form to [cmpesc@qwest.com](mailto:cmpesc@qwest.com). All applicable sections must be completed before Qwest can begin processing your request.

**Requested By Name:** \_\_\_\_\_ **Email Address:** \_\_\_\_\_

**Company Name:** \_\_\_\_\_

**Please submit this form to Qwest in the following manner:**

Send an e-mail to the Qwest CMP SCRCP mailbox ([cmpesc@qwest.com](mailto:cmpesc@qwest.com)). The subject line of the e-mail message must include:

- "SCRCP FORM"

- CR number and title
- CR originator's company name

The text of the e-mail message must include:

- Description of the CR
- A completed SCRP Form
- A single point of contact for the SCRP request including:
  - Primary requestor's name and company
  - Phone number
  - E-mail address
- Circumstances which have necessitated the invocation of the SCRP
- Desired implementation date
- If more than one company is making the SCRP request, the names and point of contact information for the other requesting companies.

**DEFINITION OF TERMS**

Term	Definition
Application-to-Application interface	An electronic interface that supports billing or ordering processes (e.g., Extensible Markup Language (XML) or Electronic Data Interchange (EDI)).
CLEC	A telecommunications provider that has authority to provide local exchange telecommunications service on or after February 8, 1996, unless such provider has been declared an Incumbent Local Exchange Carrier under the Federal Telecommunications Act of 1996.
Design, Development, Notification, Testing, Implementation and Disposition	<p>Design: To plan out in a systematic way. Design at Qwest includes the Business Requirements Document and the Systems Requirements Document. These two documents are created to define the requirements of a Change Request (CR) in greater detail such that programmers can write system software to implement the CR.</p> <p>Development: The process of writing code to create changes to a computer system or sub system software that have been documented in the Business Requirements and Systems Requirements.</p> <p>Notification: The act or an instance of providing information. Various specific notifications are documented throughout this CMP. Notifications apply to both Systems and Product &amp; Process changes</p> <p>Testing: The process of verifying that the capabilities of a new software Release were developed in accordance with the Technical Specifications and performs as expected. Testing would apply to both Qwest internal testing and joint Qwest/CLEC testing.</p> <p>Implementation: The execution of the steps and processes necessary in order to make a new Release of a computer system available in a particular environment. These environments are usually testing environments or production environments.</p> <p>Disposition: A final settlement as to the treatment of a particular Change Request.</p>
Good Faith	"Good faith" means honesty in fact and the observance of reasonable commercial standards of fair dealing.
History Log	A History Log documents the changes to a specific document. The log will contain the document name and, for each change, the document version number, change effective date, description of change, affected section name and number, reason for change,

Term	Definition
	and any related CR or notification number.
Level of Effort	Estimated range of hours required to implement a Change Request
OSS Interface	Existing or new gateways (including application-to-application interfaces and Graphical User Interfaces), connectivity and system functions that support or affect the pre-order, order, provisioning, maintenance and repair, and billing capabilities for local services provided by CLECs to their end users.
<p>OSS Interface Application to Application Testing</p> <ul style="list-style-type: none"> <li>• Controlled Production Testing</li> <li>• Initial Implementation Testing</li> <li>• Migration Testing</li> <li>• Regression Testing</li> </ul>	<p>Controlled Production Testing: Controlled Production process is designed to validate CLEC ability to transmit transactions that meet industry standards and comply with Qwest business rules. Controlled Production consists of submitting requests to the Qwest production environment for provisioning as production orders with limited volumes. Qwest and CLEC use Controlled Production results to determine operational readiness for full production turn-up.</p> <p>Initial Implementation Testing: This type of application-to-application testing allows a CLEC to validate its technical development of an OSS Interface before turn-up in production of new transactions or significantly changed capabilities.</p> <p>Migration Testing: Process to test in the Customer Testing Environment a subsequent application-to-application Release from a previous Release. This type of testing allows a CLEC to move from one Release to a subsequent Release of a specific OSS Interface.</p> <p>Regression Testing: Process to test, in the Customer Test Environment, OSS Interfaces, business process or other related interactions. Regression Testing is primarily for use with 'no intent' toward meeting any Qwest entry or exit criteria within an implementation process. Regression Testing includes testing transactions previously tested, or certified.</p>
<p>Release</p> <ul style="list-style-type: none"> <li>• Major Release</li> <li>• Point Release</li> <li>• Patch Release</li> </ul>	<p>A Release is an implementation of changes resulting from a CR or production support issue for a particular OSS Interface There are three types of Releases for IMA.:</p> <ul style="list-style-type: none"> <li>• Major Release may be CLEC impacting (to systems code and CLEC operating procedures) via Application-to-Application interface changes, GUI changes, technical changes, or all. Major Releases are the primary vehicle for implementing systems Change Requests of all types (Regulatory, Industry Guideline, CLEC originated and Qwest originated).</li> <li>• Point Release may not be CLEC code impacting, but may affect CLEC operating procedures. The Point Release is used</li> </ul>

Term	Definition
	<p>to fix bugs introduced in previous Releases, apply technical changes, make changes to the GUI, and/or deliver enhancements to IMA disclosed in a Major Release that could not be delivered in the timeframe of the Major Release.</p> <ul style="list-style-type: none"> <li>• Patch Release is a specially scheduled system change for the purpose of installing the software required to resolve an issue associated with a trouble ticket.</li> </ul>
Release Notification	<p>A notification distributed by Qwest through the Mailout tool to provide the information required by the following sections of this CMP: 7.0 - Introduction of a New OSS Interface, 8.0 - Change to Existing OSS Interfaces and 9.0 - Retirement of Existing OSS Interfaces.</p>
Release Production Date	<p>The Release Production Date is the date that a software Release is first available to the CLECs for issuance of production transactions.</p>
Software Defects	<p>A problem with system software that is not working according to the Technical Specifications and is causing detrimental impacts to the users.</p>
Stand-alone Testing Environment (SATE)	<p>A Stand-Alone Testing Environment is a test environment that can be used by CLECs for Initial Implementation Testing, Migration Testing and Regression Testing. SATE takes CLEC pre-order and order transaction requests, passes the requests to the stand-alone database, and returns responses to the CLEC user. SATE uses pre-defined test account data and requests that are subject to the same BPL IMA/Application-to-Application interface edits as those used in production. The SATE is intended to mirror the production environment (including simulation of all legacy systems). SATE is part of the Customer Test Environment.</p>
Sub-systems	<p>A collection of tightly coupled software modules that is responsible for performing one or more specific functions in an OSS Interface.</p>
Subject Matter Expert (SME)	<p>An individual responsible for products, processes or systems identified or potentially affected by the CLEC or Qwest request. When attending a CMP meeting, a SME will either answer specific questions about the request or take action items to answer promptly specific questions.</p>
Technical Specifications	<p>Detailed documentation that contains all of the information that a CLEC will need in order to build a particular Release of an application-to-application OSS Interface. Technical Specifications include:</p> <ul style="list-style-type: none"> <li>• A chapter for each transaction or product which includes a business (OBF forms to use) description, a business model (electronic transactions needed to complete a business</li> </ul>

Term	Definition
	<p>function), trading partner access information, mapping examples, data dictionary</p> <p>Technical Specification Appendices for IMA include:</p> <ul style="list-style-type: none"> <li>• Developer Worksheets</li> <li>• IMA Additional Edits (edits from backend OSS Interfaces)</li> <li>• Developer Worksheets Change Summary (field by field, Release by Release changes)</li> <li>• Application-to-Application interface Mapping and Code Conversion Changes (Release by Release changes)</li> <li>• Facility Based Directory Listings</li> <li>• Generic Order Flow Business Model</li> </ul> <p>The above list may vary for non-IMA application to application interfaces</p>
Version	A version is the same as an OSS Interface Release (Major or Point Release)

## **FINAL MEETING MINUTES**

**CLEC – Qwest Change Management Process Redesign**  
**Tuesday, January 22 through Thursday, January 24, 2002 Working Session**  
1801 California Street, 23<sup>rd</sup> Floor, Executive Conference Room, Denver, CO  
Conference Bridge: 877.550.8686, passcode 2213337#

**NOTE:** These are FINAL meeting minutes Qwest developed following the two day working session. Draft minutes were circulated to the CMP Redesign Core Team Members on Dec. 21, 2001. As of January 21, 2002, no comments were received from the meeting attendees.

### **INTRODUCTION**

The Core Team (Team) and other participants met January 22 - 24 to continue with the Redesign effort of the Change Management Process. Following is the write up of the discussions, action items, and decisions in the working session. The attachments to these meeting minutes are as follow:

### **ATTACHMENTS**

- Attachment 1: CMP Re-Design January 22 - 24, 2002 Attendance Record
- Attachment 2: CMP Redesign Meeting January 22 - 24 Notice and Agenda - 01-10-01

- Attachment 12: Schedule of CMP Re-design Working Sessions - Revised 01-25-02

## Gap Analysis

#	Element/ Topic	Submitter(s)	Gap/Issues/Comments
			<p>documentation relating to Qwest's or CLEC's rights or obligations under this abridges or expands its rights or obligations under this Agreement and that change has not gone through CMP, the Parties will resolve the matter under the Dispute Resolution process. Any amendment to this Agreement that may result from such Dispute Resolution process shall be deemed effective on the Effective Date of the change for rates, and to the extent practicable for other terms and conditions, unless otherwise ordered.</p> <p>The highlighted language above implies that there is no right of recourse for a change that does go through CMP and the result is in a conflict with the agreement. That would not be appropriate. Everything we have heard from Qwest in the redesign is that if a change comes through CMP and is in conflict with a CLEC's interconnection agreement, the interconnection agreement is controlling. This kind of language in the SGAT guts the contract, particularly when CMP essentially allows Qwest to run through any change it wants to.</p> <p>Reference to #15: Qwest has the ability to reject/deny CLEC CRs. CLECs do not have the ability to reject/deny Qwest CRs. We need to discuss and find a way to balance the process. As it stands, Qwest CRs go through to completion over CLEC objections, however, CLEC CRs do not go through over Qwest's objection. CLECs have to use the escalation or dispute resolution process either to advance their CRs (when Qwest rejects/denies) or oppose Qwest CRs (when Qwest ignores CLEC objections). Qwest is never put in this position. This applies to product/process and may apply to systems as well (the group should discuss).</p>
148		AT&T	SGAT Section 12.2.6 remains open.
149		Eschelon	<p>How CMP is addressed in SGAT.</p> <p>Qwest has made some changes to Section 12.2.6 at the request of CLECs, but the parties have not agreed upon the language in the entire paragraph.</p>
150	Interconnecti on Agreements	Eschelon	Qwest needs to establish and document a process to account for individual interconnection agreements ("ICAs") when implementing changes and using the Change Management Process ("CMP"). Qwest needs to ensure that ICAs are not unilaterally modified.

CLEC-Qwest CMP Redesign ATTACHMENT 9  
**Gap Analysis**

#	Element/Topic	Submitter(s)	Gap/Issues/Comments
151			<p>In Colorado, Qwest said:                      First of all, it has been addressed in these workshops by inserting language into the SGAT that indicated that the contract language controls over anything that could come out of the Change Management Process -- a contract is a contract, and I believe that's the same for any other ICA, as well.<sup>3</sup></p> <p>Qwest needs documented processes and checks and balances in place to ensure that Qwest can implement this concept and account for differences in ICAs (including ICAs not based on SGATs). The experience to date shows that Qwest's structure anticipates making global changes and steps need to be developed to account for individual differences before implementation.</p>
		Covad	If a Qwest initiated CR adds or alters terms and conditions to an existing IA, how will implementation be delayed pending resolution. What dispute resolution process controls?
152	Review of CICMP Documentation listed	AT&T	Qwest's Original proposal (June 2001) states "ongoing review of the CICMP occur at each CICMP meeting to enable co-providers the opportunity to express concerns or suggest changes." Other than the references above, this does not appear to be addressed in the Master Redline.
153	Issue/Action Log	AT&T	All of the items on the existing Issues/Action Items Log and the Running Log.
154	Table of Contents-Numbering	AT&T	The table of contents for the Master Redline should be updated to reflect all of the provisions contained in the Master Redline (for example, numbering in the table of contents does not match numbering in the Master Redline, headings in the table of contents don't always track with sequence or title of headings in the Master Redline, separate references in the table of contents to timelines contained in the redline would be useful).
155	Business	AT&T	AT&T believes that business rules are part of CMP? We need to be clear this is the case in the

<sup>3</sup> Transcript of CMP Workshop Number 6, Colorado Public Utilities Commission Docket Number 97I-198T (Aug. 22, 2001), p. 292, lines 8-13 (Andrew Crain of Qwest).

## FINAL MEETING MINUTES

### **CLEC – Qwest Change Management Process Redesign Tuesday, April 2 through April 4, 2002 Working Session 1801 California Street, Room 2, 13<sup>th</sup> floor, Denver, CO Conference Bridge: 877.550.8686, passcode 2213337#**

**NOTE:** These are FINAL meeting minutes Qwest developed following the working session. Draft minutes were circulated to the CMP Redesign Core Team Members on April 23, 2002. As of July 11, 2002, no comments were received from the meeting attendees.

## INTRODUCTION

The Core Team (Team) and other participants met April 2-4 to continue with the Redesign effort of the Change Management Process. Following is the write up of the discussions, action items, and decisions in the working session. The attachments to these meeting minutes are as follow:

## ATTACHMENTS

- Attachment 1: CMP Redesign April 2-4 Attendance Record

- Attachment 14: Qwest Proposed OSS Release Calendar Language - Revised 04-04-02
- Attachment 15: Qwest Proposed Production Support - Help Desk Language - Revised 04-04-02

## MEETING MINUTES

The meeting began with introductions of the meeting attendees. (Refer to Attachment 1 for attendance record) Judy Lee, the meeting facilitator, reviewed the three-day agenda (Attachment 2).

### **Qwest-initiated Product/Process Change Request Initiation Process**

#### **Level 0**

Schultz-Qwest began by stating that several members of the core team reviewed Product/Process notifications issued from 2/1-3/15 at a sub-team conference call meeting on March 28th. She then reviewed the sub-team meeting and discussed that Level 0, Level 1 and Level 2 change categories had been discussed in that meeting. She stated that the team touched on Level 3 and Level 4 change categories, and that the team agreed to work on those levels during the first day of Redesign on April 2. She stated that the team developed a Level 0 list, and that Qwest had additional items to add to the category. Schultz stated that the document had been updated to reflect the changes from the sub-team meeting (Attachment 3). Maher-Qwest stated that Level 0 list of categories was developed from a list sent by Clauson-Eschelon. Travis-WorldCom asked what Level typos in numbers would fall into. Schultz-Qwest stated that typos were Level 0, and that Level 0 changes do not include interval changes. Menezes-AT&T

for any change that went into the pipeline after April 1. Clauson-Eschelon stated that she wanted to stop getting Level 0 type changes as soon as possible.

Lee asked if CMP Improvements could be closed in concept. Dixon-WorldCom stated that it couldn't because of the open issue on PID/PAP. Lee stated that action item #231 could be closed, and that the team did not agree in concept. Menezes-AT&T stated that the matrix would be ongoing.

The team then adjourned for lunch and the Local Service Freeze Clarification Call. When the call ended and the team returned from lunch the Special Meeting on Retail Parity started. (See CMP Redesign Special Retail Parity Meeting Minutes April 4 2002- DRAFT 04-11-02)

After the meeting Lee asked if Covad Issue #3 could be closed. Menezes-AT&T asked about the Wholesale Retail Checklist. Schultz-Qwest stated that it had been updated. Lee stated that because Covad was not available, the issue would stay open for more discussion.

#### **V.f SGAT- Gap Analysis #148, 149, 155, Action Item #227**

Lee asked if the reason for review was to insert the language in the Master Redline. Crain-Qwest stated no, the issue raised was about the language in the SGAT referencing CMP. The team wanted to review again after the CMP was more developed. Crain and Menezes crafted language. Lee asked the team if the issue could be closed in concept. Team agreed. Action item #115 closed.

#### **ICA vs. CMP: AT&T e-mail, action item #227**

Lee stated that the ICA information could be inserted into the Scope section (Attachment 12). Lee asked if action item 227 and Gap 148, 150 and 155 could be closed. Team agreed.

Dixon-WorldCom stated that there were no impasse issues in Colorado, and that there may be a PID/PAP issues in other states. Crain-Qwest stated that Qwest would operate under the Colorado ruling for all other states. Dixon-Qwest stated that it needed to be summarized that the team had agreed in concept on all the issues and that there are no impasse issues. He continued that the team had built one of the better CMP processes in the country. Menezes-AT&T stated that he agreed to everything in concept. Dixon-WorldCom stated that the team had completed what he had hoped to accomplish. He continued that the team had walked through the issues and resolved them in concept and that there are no impasse issues. Lee summarized that all "1" items were agreed to in concept. The following "0" items were also agreed to: I.A.10 agreed in concept and pending modifications to language, I.A.4 closed—language baselined, I.A5 closed—language baselined with new action item #272, V.b terms closed—language baselined, V.e closed—language baselined, V.f agreed on concept—pending modifications to language, Covad #1 closed—language baselined, Covad #2 agreed on concept—pending language, Covad #3 open—CLECs to review documentation, and WorldCom—CMP improvements document will be revised on an ongoing basis as needed. Clauson-Eschelon stated that she would review the CMP improvements and provide feedback. Dixon-WorldCom stated that Qwest and the CLECs agreed on PID/PAD.

#### **I.A.9 Late Adder**

Lee moved the team to Late Adder language (Attachment 13). Language was crafted on the screen. Lee asked if the language could be added into the Master Redlined Document. Team agreed. Action item #254 and I.A.9 were closed.

#### **OSS Release Calendar Language**

Menezes-AT&T asked if this was for all Qwest OSS interfaces (Attachment 14). Thompson-Qwest stated that it applied to all interfaces under the scope of CMP. Menezes-AT&T asked if that was using the defined term in the document. Thompson-Qwest stated it was. Lee asked if the definition was also true for retirement of interfaces. Thompson-Qwest stated yes, it was included in the language. Menezes-AT&T asked what would happen if the CLECs wanted to

		Meeting		add language that states that CMP will not supersede an ICA.  3/6: Check SGAT section 2.3 for language	Andy Crain	Apr 4	be construed to override or amend the interconnection agreement between Qwest and any CLEC.  3/6/02 Mitch will provide the SGAT language that is in section 2.3  3/26/02: Mitch/ATT provided proposed language to Redesign Team for review.
228	Action	Jan 22 Meeting	Example of Non-FCC Tech Pubs	Provide examples of FCC Tech Pubs vs Non-FCC Tech Pubs.	Qwest— Judy Schultz (Kessler)	CLOSED Feb 5	COMPLETED: Posted on the Redesign website titled “FCC/Non-FCC Tech Pub List – 01-30-02”
232	Action	Jan 23 Meeting	Prioritization— Industry Guidelines	Develop language to address the industry guideline prioritization (above the line and below the line)	Qwest— Judy Schultz/ Teresa Jacobs	CLOSED Mar 6	01/28: This Action Item is addressed in the document which captures Qwest’s understanding of the CLEC prioritization proposal.  COMPLETED: See Prioritization language
233	Action	Jan 24 Meeting	Impasse Issue— Prioritization	Identify the concept of the Prioritization Process. Upon agreement, Qwest to provide draft language of the Prioritization Process to the CLECs for comments	Qwest— Beth Woodcock	CLOSED Mar 5	1/30: Shared with Redesign Core Team 2/6-7: Proposed language reviewed and discussed at Redesign session.  2/8: Impasse issue included in the CO Report on CMP Issue and the AZ Brief on CMP.

4/2/02: Redesign Team agreed on language and to insert into Master Redline under Scope

Following is Section 2.3 from the Qwest SGAT:

2.3 Unless otherwise specifically determined by the Commission, in cases of conflict between the SGAT and Qwest's Tariffs, PCAT, methods and procedures, technical publications, policies, product notifications or other Qwest documentation relating to Qwest's or CLEC's rights or obligations under this SGAT, then the rates, terms and conditions of this SGAT shall prevail. To the extent another document abridges or expands the rights or obligations of either Party under this Agreement, the rates, terms and conditions of this Agreement shall prevail.

As it is not appropriate to insert the foregoing verbatim into the CMP master redline document, AT&T proposes the following language for discussion by the Core Team:

In cases of conflict between the changes implemented through the CMP and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement. In addition, if changes implemented through the CMP do not necessarily present a direct conflict with a CLEC interconnection agreement, but would abridge or expand the rights of a party to such agreement, the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such agreement.

Deleted: and the abridgement or expansion will not be permitted.

NOTE: These FINAL meeting minutes were circulated to the CMP Re-design Core Team Members in attendance for their review and comments. Comments are included as attachments to the minutes.

#### INTRODUCTION

The Core Team (Team) and other participants met October 2 and 3 to continue with the Re-design effort of the Change Management Process. Following is the write-up of the discussions, action items, and decisions made in the working session. The attachments to these meeting minutes are as follows-

#### ATTACHMENTS

- Attachment 1: CMP Redesign Oct 2-3 Attendance Record
- Attachment 2: October 2 & 3 CMP Re-Design Meeting Notice and Agenda - Revised 09-28-01
- Attachment 3: Schedule of CMP Re-design Working Sessions-Revised 10-03-01
- Attachment 4: CMP Re-design Issues and Actions Log - Revised 10-5-01
- Attachment 5: Written Summary Regarding Qwest's Proposed Process for Qwest Changes to Product, Process, and Technical Documentation - 09-25-01
- Attachment 6: Web Release & Notice Schedule 10-02-01
- Attachment 7: INTERIM QWEST PRODUCT-PROCESS CMP - Revised 10-3-01

- Attachment 13: ATT Comments CMP Re-design 10-10-01
- Attachment 14: Oct 2-3 Meeting Minutes Eschelon Comments 10-29-01

#### MEETING MINUTES

The meeting began with introductions of the meeting attendees. Judy Lee reviewed the two day agenda and asked if there were any revisions from the attendees. It was agreed that there were several team members that had not made travel arrangements for the Re-design meeting in Minneapolis on October 30, 31, and Nov 1. Karen Clauson-Eschelon requested that a vote be taken to determine whether the Re-design meeting location be changed from Minneapolis to Denver for Oct 30,31, and Nov 1. A vote was taken and it was a tie vote of 4 to 4 to change the location. Sandy Evans-Sprint asked if there were other options that could be explored for managing the meeting at remote locations since it was difficult to hear what was said on the conference bridge. There was discussion regarding the use of video conferencing, but Judy Schultz-Qwest stated that the Qwest videoconferencing facilities were small and wouldn't be able to accommodate a group the size of the Re-design team. The team agreed to review the meeting

**EXHIBIT 56**

### DS1 CRUNEC Chronology

- 4/30/2003** Qwest sent notice PROS.04.30.03.F.01071.CRUNEC as a Level 3 CMP change with an effective date of 6/16/2003. Qwest made a **one word change** to the CLEC Requested Unbundled Network Elements Construction policy (CRUNEC) PCAT. The change removed the word “conditioning” from the list of incremental facility work examples. ([http://www.qwest.com/wholesale/downloads/2003/030430/PCAT\\_CRUNEC\\_V4\\_1.doc](http://www.qwest.com/wholesale/downloads/2003/030430/PCAT_CRUNEC_V4_1.doc)) (See Exhibit BJJ-10)
- 5/13/2003** Covad submitted comments and expressed “concern with the removal of the word 'conditioning' from the CRUNEC document” ([http://www.qwest.com/wholesale/downloads/2003/030521/CNL3\\_response\\_CRUNEC\\_V4.doc](http://www.qwest.com/wholesale/downloads/2003/030521/CNL3_response_CRUNEC_V4.doc))
- 5/21/2003** Qwest responded. Qwest said it “respectfully declines this comment.” Qwest said: “Removal of the word ‘conditioning’ from the PCAT language allows the CLEC to use CRUNEC for the build process of products where before they could not. Current products that have conditioning at no charge will not be affected.” ([http://www.qwest.com/wholesale/downloads/2003/030521/CNL3\\_response\\_CRUNEC\\_V4.doc](http://www.qwest.com/wholesale/downloads/2003/030521/CNL3_response_CRUNEC_V4.doc))
- JUNE 2003** Echelon started to experience a significant increase in the number of no-build delayed orders. (See 7/18/03 AZ comments below.)
- 7/11/2003** Qwest sent CMP Level 3 notification (PROD.07.11.03.F.03468. UNECRUNEC\_V5.0) with an effective date of 8/25/2003. Qwest described a special fee for quote preparation of a “**simple facility rearrangement**” to provide an Unbundled Loop facility. In the PCAT changes, Qwest said: “A simple facility rearrangement consists of a combination of one or more of the following: Redirecting pairs to the requested address that can be used to provide the requested facility. Placement of an additional apparatus case for services needing repeaters will not be included as a simple facility rearrangement; Removing fewer than four load coils; Removing bridged tap as required for requested facility; Placing a repeater card in existing apparatus case; Changing slots for an existing repeater card in an existing apparatus case.” (See [http://www.qwest.com/wholesale/downloads/2003/030711/PCAT\\_CRUNEC\\_V5\\_1.doc](http://www.qwest.com/wholesale/downloads/2003/030711/PCAT_CRUNEC_V5_1.doc))
- 7/3/2003 – 7/18/2003** Eschelon escalated DS1 loop orders held order issue with Qwest. In its response, Qwest said: “Qwest has in the past not fully enforced our contractual right to collect on the charges incurred when completing DS1

level unbundled services. Charging is the specific change that has occurred." (See Exhibit BJJ-11)

- 7/18/2003** Eschelon submitted comments to the Arizona Corporation Commission. Eschelon said in its comments that it received "more than *four times* the number of these held order notices in 25 days than it had received in the previous 170 days." (See Eschelon's Comments Regarding Staff Second Report, ACC Docket No. T-00000A-97-0238 (July 18, 2003), p. 5) (emphasis added)
- 7/25/2003** Qwest responded to Eschelon's 7/18/03 comments stating: "Eschelon raises several issues relating to Qwest's construction charges. Qwest agrees with Eschelon that these issues should be addressed and believes that the Phase III cost docket is the appropriate forum. However, Qwest does not agree that its policy should be suspended in the interim. Contrary to Eschelon's suggestion, Qwest will agree to refund fees pursuant to a true-up, if necessary, based on the resolution of the issue. Therefore, no suspension of Qwest's construction policy is warranted." (See Qwest Corporation's Reply Comment Regarding Staff's Report and Recommendations, Docket No. T-00000A-97-0238 (July 25, 2003), p. 2)
- 7/25/2003** Eschelon's submitted reply comments asking the Arizona Commission to "require Qwest to undo the changes it has made (and suspend those it is making pursuant to the twice revised CRUNEC policy) to its processes -- thereby decreasing the number of jeopardy notices for service inquiry/no build -- until Qwest brings those changes and associated rates to the Commission and obtains approval" (See Eschelon's Reply Comments Regarding Staff Second Report, Docket No. T-00000A-97-0238 (July 25, 2003), p. 14)
- 7/25/2003** Covad submitted reply comments to the Arizona Commission stating: "Qwest deliberately obfuscated its actions and intent in converting conditioning activity into much more costly and time consuming new construction activity. The Commission should not permit Qwest to undermine competitors' ability to compete with verbal sleights of hand and a deliberate masking of the true impact of its conduct." (Docket. No. T-00000A-97-0238 Covad's Reply Comments Regarding Staff Second Report)
- 7/25/2003** Mountain Telecommunications Inc. submitted reply comments to the Arizona Commission stating: "Unless and until Qwest abandons its policy of imposing "construction" and price quotation charges for line conditioning, it cannot be found to have fulfilled the requirement codified at Section 271(c)(2)(B)(iv) – point 4 of the checklist." (Docket. No. T-00000A-97-0238 Mountain Telecommunications Inc.'s Reply Comments Regarding Staff Second Report)

- 7/25/2003** Allegiance submitted comments via the Qwest CMP Process in response to Qwest's 7/11/2003 CRUNEC V5.0 notice.  
<http://www.qwest.com/wholesale/cnla/uploads/PROD%2E08%2E06%2E03%2EF%2E03494%2EDelayedResponseCRUNEC%2Edoc>
- 7/25/2003** CBeyond submitted comments the Qwest CMP Process in response to Qwest's 7/11/2003 CRUNEC V5.0 notice.  
<http://www.qwest.com/wholesale/cnla/uploads/PROD%2E08%2E06%2E03%2EF%2E03494%2EDelayedResponseCRUNEC%2Edoc>
- 7/25/2003** Eschelon submitted comments the Qwest CMP Process in response to Qwest's 7/11/2003 CRUNEC V5.0 notice.  
<http://www.qwest.com/wholesale/cnla/uploads/PROD%2E08%2E06%2E03%2EF%2E03494%2EDelayedResponseCRUNEC%2Edoc>
- 7/26/2003** Covad submitted comments the Qwest CMP Process in response to Qwest's 7/11/2003 CRUNEC V5.0 notice.  
<http://www.qwest.com/wholesale/cnla/uploads/PROD%2E08%2E06%2E03%2EF%2E03494%2EDelayedResponseCRUNEC%2Edoc>
- 8/6/2003** Qwest sent CMP notification (PROD.08.06.03.F.03494.DelayedResponse CRUNEC). In its notice, Qwest said it was delaying its response to CLEC comments on CRUNEC V5.0 Qwest sent on 7/11/03 (above). Qwest's notice provided the CLEC comments. Qwest also provided notice of its intent to hold an ad hoc call to discuss the comments on 8/15/2003. (See <http://www.qwest.com/wholesale/cnla/uploads/PROD%2E08%2E06%2E03%2EF%2E03494%2EDelayedResponseCRUNEC%2Edoc>)
- 8/8/2003** Qwest sent CMP notification (PROD.08.08.03.F.03496.DelayedResponse CRUNECUpdate). Qwest said: "Qwest proposes and is prepared to discuss in the August 15<sup>th</sup> CMP ad hoc meeting its intent to suspend the current processes associated with the build of DS1 Capable Unbundled Loops under the CLEC requested UNE Construction (CRUNEC) process. This suspension would be effective beginning on August 20, 2003. The suspension will allow all parties an opportunity to contribute to clarification of processes for CLEC requests to build DS1 Capable Unbundled Loops when no compatible facilities are available." (See <http://www.qwest.com/wholesale/cnla/uploads/PROD%2E08%2E08%2E03%2EF%2E03496%2EDelayedResponseCRUNECUpdate%2Edoc>)
- 8/15/2003** Twelve CLECs (Allegiance, AT&T, Cbeyond, Contact Communications, Covad, Eschelon, MCI, McLeod USA, MTI, Tel-West, Time Warner Telecom, and U S Link) submitted a joint proposal to Qwest CMP for discussion on the ad hoc call. In the proposal, CLECs requested:
- "1. Qwest to promptly revert to its pre-June 2003 work activities, provisioning and assignment processes, and rates/charges for UNEs with respect to this issue.

2. Qwest to withdraw CMP notices PROS.04.30.03.F.01071.CRUNEC\_V4.0, PROS.05.21.03.F.01089.FNL\_CRUNEC, PROD.07.11.03.F.03468.UNECCRUNEC\_V5.0, and PROD.08.06.03.F.03494.DelayedResponseCRUNEC, PROD.08.08.03.F.03494DelayedResponseCRUNEC and any associated changes made or pending pursuant to those notices.
3. Qwest to provide sufficient level of detail in the held/jeopardy notices so that the CLEC knows why Qwest is stating the local facility is not available (such as at least the level of detail provided before January 2003, in the manual reports/spreadsheets, as to the reasons for these notices).
4. Qwest to also re-instate the use of "service inquiry" (as previously used) in the Comments section of the jeopardy notification message (instead of the very recently implemented comment stating "Contact your service manager for options, which include the CRUNEC process").
5. For the period of time from when Qwest implemented these changes (approx. June 15, 2003) until Qwest ceases them and restores its previous practices, Qwest to refund to affected CLECs the difference between the higher special access/private line rates and the DS1 capable loop rate (back to each install date), as well as to convert these lines to DS1 capable loops (with no additional charges), for those customers for which Qwest did provide special access/private lines. This includes orders in process until Qwest has fully implemented its rescission of the changes it made.
6. Qwest to agree that it will not use the CMP process to attempt to make this type of change (e.g., introduce a new rate element, redefine a rate element, change a CLEC's ICA or SGAT term, or unilaterally expand/change a process in a manner that allows Qwest to charge rates for activities not previously subject to a charge (or previously subject to a lower charge). Qwest must either negotiate such terms with CLECs or obtain commission approval before making such changes.
7. Qwest to agree to complete, upon CLEC request, any DS1 capable loop orders that were jeopardized/rejected for reasons (e.g., "conditioning") caused by changes made by Qwest in conjunction with its CRUNEC process (including those made pursuant to its version 4 CRUNEC notice) since June 15, 2003, and waive the NRCs. Although CLECs may have lost some of these customers due to this issue, if the customers are willing to proceed, Qwest should process the orders that it would have processed but for the changes to which CLECs are objecting."

- 8/15/2003** Qwest and CLECs held ad hoc CMP call 12-CLEC Proposal (above).
- 8/20/2003** Qwest sent a non CMP notice (GENL.08.20.03.F.01537.DS1 CapableLoop\_CRUNEC) effective immediately. In its notice, Qwest included "the interim process Qwest will follow until the CLECs and Qwest develop a long term process as discussed in the August 15 conference call." (*See* <http://www.qwest.com/wholesale/cnla/uploads/QwestInterimProcess%2DUNBUNDLED%2DLOCALLOOP%2DDDS1CAPABLELOOPANDCRUNEC8%2D20%2D2003%2DFINAL%2Edoc>)
- 9/16/2003** The Arizona Commission ruled: "Staff agrees with Eschelon with respect to the recently imposed construction charges on CLECs for line conditioning. Staff is extremely concerned that Qwest would implement such a significant change through its CMP process without prior Commission approval. As noted by AT&T, during the Section 271

proceeding, the issue of conditioning charges was a contested issue. Language was painstakingly worked out in the Qwest SGAT dealing with the issue of line conditioning which Qwest's new policy is at odds with. Staff recommends that Qwest be ordered to immediately suspend its policy of assessing construction charges on CLECs for line conditioning and reconditioning and immediately provide refunds to any CLECs relating to these unauthorized charges. Qwest should reinstitute its prior policy on these issues as reflected in its current SGAT. If Qwest desires to implement this change, then it should notify the Commission in Phase III of the Cost Docket, but must obtain Commission approval of such a change prior to its implementation. To the extent Qwest does not agree to these conditions, Staff recommends that Qwest's compliance with Checklist Items 2 and 4 be reopened. We agree with Staff.” (See 271 Docket No. T-00000A-97-0238 (Decision No. 66242), (September 16, 2003), ¶ 109.)

**9/18/2003**

Qwest sent CMP notification (PROS.09.18.03.01198.DS1 CapableLoopProc) as a Level 1 CMP notice, effective immediately. Qwest revised the process to perform “Incremental Facility Work” and “Other Network Functions” without requiring use of CRUNEC. See <http://www.qwest.com/wholesale/downloads/2003/030918/QwestDS1CapableLoopProvisioningProcess-FINALREV5Redline.doc>

**EXHIBIT 57**

**Announcement Date:** April 30, 2003  
**Proposed Effective Date:** June 16, 2003

**Document Number:** PROS.04.30.03.F.01071.CRUNEC  
**Notification Category:** Process Notification  
**Target Audience:** CLEC, Resellers

**Subject:** CMP - Competitive Local Exchange Carrier (CLEC) Requested Unbundled Network Elements (UNE) Construction (CRUNEC) V4.0

**Level of Change:** Level 3  
**Associated CR Number or System Release Number:** Not Applicable

**Summary of Change:**

On April 30, 2003, Qwest will post planned updates to its Wholesale Product Catalog that include new/revised documentation for Competitive Local Exchange Carrier (CLEC) Requested Unbundled Network Elements (UNE) Construction (CRUNEC) V4.0. These will be posted to the Qwest Wholesale Document Review Site located at <http://www.qwest.com/wholesale/cmp/review.html>.

Qwest is modifying/changing the existing manual process by removing conditioning as a limiting factor of the CRUNEC process as it relates to DS1 Capable Loops when facilities are not available.

Current operational documentation for this product or business procedure is found on the Qwest Wholesale Web Site at this URL: <http://www.qwest.com/wholesale/clecs/crunec.html>.

**Comment Cycle:**

CLEC customers are encouraged to review these proposed changes and provide comment at any time during the 15-day comment review period. Qwest will have up to 15 days following the close of the comment review to respond to any CLEC comments. This response will be included as part of the final notification. Qwest will not implement the change sooner than 15 days following the final notification.

Qwest provides an electronic means for CLEC customers to comment on proposed changes. The Document Review Web Site provides a list of all documents that are in the review stage, the process for CLECs to use to comment on documents, the submit comment link, and links to current documentation and past review documents. The Document Review Web Site is found at <http://www.qwest.com/wholesale/cmp/review.html>. Fill in all required fields and be sure to reference the Notification Number listed above.

**Timeline:**

Planned Updates Posted to Document Review Site	Available April 30, 2003
CLEC Comment Cycle on Documentation Begins	Beginning May 1, 2003
CLEC Comment Cycle Ends	5:00 PM, MT May 15, 2003
Qwest Response to CLEC Comments (if applicable)	Available May 30, 2003 <a href="http://www.qwest.com/wholesale/cmp/review_archive.html">http://www.qwest.com/wholesale/cmp/review_archive.html</a>
Proposed Effective Date	June 16, 2003

Note: In cases of conflict between the changes implemented through this notification and any CLEC Interconnection Agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such Interconnection Agreement shall prevail as between Qwest and the CLEC party to such Interconnection Agreement.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. All information provided on the site describes current activities and process. Prior to any modifications to existing activities or processes described on the web site, wholesale customers will receive written notification announcing the upcoming change.

If you have any questions on this subject, please submit comments through the following link:  
<http://www.qwest.com/wholesale/cmp/comment.html>.

Sincerely,

Qwest

Note: In cases of conflict between the changes implemented through this notification and any CLEC Interconnection Agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such Interconnection Agreement shall prevail as between Qwest and the CLEC party to such Interconnection Agreement.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. **From:** Smith, Richard A.  
**Sent:** Thursday, July 03, 2003 11:14 AM  
**To:** 'Taylor, Teresa'  
**Subject:** RE: DS1 Facility Response

Ms. Taylor/Teresa:

Thank you - will distribute to the Eschelon Team.

Will let you know if the charges are not complying with Tariffs/Agreements and if there continues to be compliance issues.

Rick Smith

-----Original Message-----

**From:** Taylor, Teresa [\[SMTP:Teresa.Taylor\[CONTACT INFORMATION REDACTED\]\]](#)  
**Sent:** Thursday, July 03, 2003 10:15 AM  
**To:** 'rasmith[CONTACT INFORMATION REDACTED]'  
**Subject:** DS1 Facility Response

Per our phone conversation;

for DS1 or above facilities we have the obligation to unbundle existing facilities; this would include the electronics and intermediate repeaters as required. If the span line does not exist, you have the option to request and pay for what you need. Qwest has in the past not fully enforced our contractual right to collect on the charges incurred when completing DS1 level unbundled services. Charging is the specific change that has occurred

When facilities are not available, you may contact your service managers for options including the CRUNEC process .

In order to make sure that all Qwest employees are consistent; this guidance is included in a revised MCC released to the service center yesterday July 2. In addition, the Network Engineering organization will be releasing a revised notice to clarify this issue with the appropriate engineering forces.

thanks for bringing this to my attention Rick - I believe moving forward you will hear a consistent message from our employees

have a wonderful 4th of July

**Subject:** RE: DS1 capable loop held orders

It would also be useful if Qwest could provide the text of the MCCs sent to its employees on this issue (mentioned by Teresa Taylor in her note below), so that we know what information has been provided to the people we will be dealing with. (Sorry for the second email. Hit send before I added this.)

**Subject:** FW: DS1 capable loop held orders

Below is a note from Teresa Taylor to Rick Smith regarding the DS1 capable loop issue. We understand that this note confirms the conversation between Rick and Teresa. Teresa indicated that there had been a miscommunication at Qwest, and orders would go back to being processed (including incremental facility work) rather than being placed in held order status (service inquiry). The only change would be a rate change, such that Qwest will begin charging rates -- when approved by a Commission -- in some situations in which it was not previously charging those rates.

We would appreciate it if you could identify for us more specifically (1) which rates Qwest will begin to charge (2) in which states (3) under what circumstances and (4) effective upon what date (per state). If a notice has been sent about this, please direct me to the appropriate notice. Thank you.

In addition, this leaves open the status of the orders for which Qwest sent jeps in the last weeks that should not have received jeps if the Qwest miscommunication had not occurred. We could not afford more delay and have been forced by Qwest's error to place orders for private lines for those orders. (We will need to do this until the problem has been corrected. Teresa told Rick that there could be a short delay while she gets the message out to the appropriate people.) Because these orders should not have been jep'd and placed in held status: (1) the lower DS1 capable loop rate should apply to these lines, (2) Qwest should promptly convert these lines to DS1 capable loops, and (3) there should be no charge for the conversion (which would not be needed, if Qwest had processed the DS1 capable loop orders instead of erroneously jep'ing them). Mary Korthour will provide Qwest with a list of the lines to date for which we had to order private lines when we should have been able to order DS1 capable loops as a result of this issue. Please let us know if Qwest does not agree/wil not adjust the bills and perform the conversion accordingly.

Please let me know who will provide the rate information and when. Thank you.

**Subject:** FW: DS1 capable loop held orders

Karen,

I believe that you misunderstood Teresa Taylor's email on the provisioning of DS1-capable loops. Let me provide this information as clarification

1. As Teresa reiterated, Qwest's unbundling obligations extend only to existing DS1 facilities. Therefore, CLECs may have unbundled access to Qwest's DS1-capable loops if Qwest has existing facilities (meaning, a DS1-capable loop already in place that goes from a DSX panel to the field and is currently capable of meeting the service specifications associated with a DS1). Qwest will do incremental facility work (e.g., cross-connects etc.) to provision an existing DS1 facility for a CLEC. (As these are DS1-capable loops, there is no need for conditioning to remove load coils and bridged tap.)
2. When an existing DS1 facility is not available, the CLEC can still pursue the end user, but Qwest will have to construct the facility. The order will go into held status and the CLEC is notified via a jeopardy notice. At this point the CLEC is advised that they can contact their service manager for additional options including CRUNEC. Teresa did not intend for her message to be construed as a change in this process. CRUNEC is not part of the normal provisioning process; and it was not an "error" that Eschelon's DS1-capable loop orders were held. Qwest cannot resume processing the orders. Eschelon may contact the service manager for additional options.
3. When there is no existing DS1-capable loop facility available for unbundling, one of the options for the CLEC is to request and pay for construction charges under CRUNEC. It is the CRUNEC charges that Teresa is referring to when she states a charge will apply.

I hope this has provided clarification to the provisioning of DS1 capable loops. Please discuss this matter with Mr. Smith, and if you still believe that there is confusion over this process, please contact me and I will see if we cannot get it cleared up.

**To:** 'Joan Masztaler'  
**Cc:** Teresa.Taylor[CONTACT INFORMATION REDACTED] Jean Novak; Toni Dubuque; Anne Richardson; 'Judith Schultz'; Johnson, Bonnie J.  
**Subject:** RE: DS1 capable loop held orders

The statement in Teresa's email is very specific. It states: "Qwest has in the past not fully enforced our contractual right to collect on the charges incurred when completing DS1 level unbundled services. Charging is the specific change that has occurred." Teresa very clearly states that (1) a change has occurred; and (2) the change specifically is to start "charging" rates that were not previously charged because Qwest states that it has "not fully enforced our contractual right to collect on the charges." Eschelon's questions relate to these charges, and Qwest needs to answer them so that we can plan for these charges. Teresa Taylor recognized in her conversation with Rick that Eschelon may even object to these charges. We can't review whether to object, however, unless we know what they are and when they apply. Therefore, we asked:

We would appreciate it if you could identify for us more specifically (1) which rates Qwest will begin to charge (2) in which states (3) under what circumstances and (4) effective upon what date (per state). If a notice has been sent about this, please direct me to the appropriate notice.

These questions relate directly to Teresa's statement that "Charging is the specific change that has occurred." Qwest has made a change, so Qwest must know what the change is. We simply want you to share that information with us, as we are affected by the change.

The rest of our questions are equally on point. Teresa recognized that jeps were being sent when they should not be (because the change that "has occurred" relates to charges and not whether an order will be processed). Qwest jep'd orders that should not have been jep'd, and Qwest needs to remedy this situation. So, Qwest needs to address these questions from my previous email:

this leaves open the status of the orders for which Qwest sent jeps in the last weeks that should not have received jeps if the Qwest miscommunication had not occurred. We could not afford more delay and have been forced by Qwest's error to place orders for private lines for those orders. (We will need to do this until the problem has been corrected. Teresa told Rick that there could be a short delay while she gets the message out to the appropriate people.) Because these orders should not have been jep'd and placed in held status: (1) the lower DS1 capable loop rate should apply to these lines, (2) Qwest should promptly convert these lines to DS1 capable loops, and (3) there should be no charge for the conversion (which would not be needed, if Qwest had processed the DS1 capable loop orders instead of erroneously jep'ing them). Mary Korthour will provide Qwest with a list of the lines to date for which we had to order private lines when we should have been able to order DS1 capable loops as a result of this issue. Please let us know if Qwest does not agree/wil not adjust the bills and perform the conversion accordingly. [Mary has since provided that information.]

We would like a prompt response to these questions, which stem directly from the information that Teresa Taylor provided to Eschelon. Your restatement of the issue does not change the information provided to us directly by Teresa Taylor. Her information raised follow up questions, and we would appreciate responses.

**Subject:** RE: DS1 capable loop held orders

Karen,

Jeopardy notices are not being sent out by mistake. If a DS1 facility is not available Qwest will issue a jeopardy notice to the CLEC. I believe I answered this question in my previous email. When the CLEC receives the jeopardy notice they have several choices: they may contact the service manager to discuss the CRUNEC process, elect to provision a private line DS1, cancel the order, leave the order in held status for 30 days, elect at a future time to resubmit the order to determine if facilities are available. The cost will depend upon the choice the CLEC makes. If a private line DS1 is requested the appropriate tariff rate would apply. If the CLEC is interested in the CRUNEC process, they must have language in their ICA that is in the SGAT under 9.19 and the associated rates that are in Exhibit A by state. The change that Teresa is referring to is a recent change in the CRUNEC process that removed the word "conditioning" to eliminate confusion on unbundled DS1-capable loops. In addition Teresa indicated that our internal processes have been reviewed and reinforced to meet compliance with our existing PCAT and SGAT provisioning of DS1 capable loops.

Teresa:

This is different from Eschelon's understanding of your conversations with Rick Smith, particularly with respect to (1) whether order processing over the last few weeks was affected by the miscommunication at Qwest and (2) the change at Qwest that will result in charges when Qwest did not previously charge. Rick recalls you saying that we may disagree on the charges, but at least we will get the orders flowing while we debate that issue. Do you recall something like that? Can you explain how it fits with what Joan says below?

Is there anything that you could add to what Joan has said to help clear up what appears to be quite different information? We would like you to have an opportunity to address this personally if you would like, as we decide on next steps.

**Subject:** RE: SERVICE INQUIRIES - facilities for DS1 capable loops

To be sure the issue you are reviewing and responding to is clear, I'll point out that "line conditioning" itself is only part of the issue. We are talking about the various ways (only one of which is called "line conditioning") that Qwest may provide facilities. In paragraph 164 of the FCC's 9-state Qwest 271 Order (12/20/02), the FCC said: "The record shows that Qwest attempts to locate compatible facilities for competing LECs" and "performs incremental facility work to make UNEs available." In footnote 617, the FCC quotes section 9.1.2.1.2 of Qwest's SGAT, which states:

9.1.2.1.2 If cable capacity is available, Qwest will complete incremental facility work (i.e., conditioning, place a drop, add a network interface device, card existing subscriber Loop carrier systems at the Central Office and Remote Terminal, add Central Office tie pairs, add field cross jumpers) in order to complete facilities to the Customer premises

Qwest has represented to the FCC that it is Qwest's existing policy and practice to make attempts to locate compatible facilities and to perform incremental facility work to make UNEs available. DS1 capable loops are UNEs. We are asking Qwest to ensure that it is enforcing this policy and practice and completing the necessary incremental facility work to provide facilities.

The fact that the number of jeopardy notices for service inquiry/held orders has jumped suggests that Qwest is not doing so or has made some other change leading to this increase.

--Please explain the basis for the increase in these notices.

--Please let us know what Qwest is doing to remedy this situation and decrease the number of such notices.

--Please treat this as a high priority request. If you need to escalate or involve your attorneys, please do so. We need relief from the jep notice problem ASAP.

**Subject:** FW: construction charges/DS1 capable loops

I am back at my desk and found this SGAT provision (that I mentioned on the phone). You have probably found this one too by now, but here it is just in case. Appreciate your looking into these issues and look forward to hearing from you.

#### **9.19 Construction Charges** (emphasis added)

Qwest will assess whether to build for CLEC in the same manner that it assesses whether to build for itself. Qwest will conduct an individual financial assessment of any request that requires construction of network capacity, facilities, or space for access to or use of UNEs. When Qwest constructs to fulfill CLEC's request for UNEs, Qwest will bid this construction on a case-by-case basis. Qwest will charge for the construction through nonrecurring charges and a term agreement for the remaining recurring charge, as described in the Construction Charges Section. **When CLEC orders the same or substantially similar service available to Qwest End User Customers, nothing in this Section shall be interpreted to authorize Qwest to charge CLEC for special construction where such charges are not provided for in a Tariff or where such charges would not be applied to a Qwest End User Customer.** If Qwest agrees to construct a network element that satisfies the description of a UNE contained in this agreement, that network element shall be deemed a UNE.

**Subject:** DS1 Capable loop discussion

Karen,

Here is some additional information to help clarify our discussion yesterday on DS1 capable loops.....

First of all, you asked what are the steps taken in the field when an order is received for a DS1 capable loop...the assignment process or 11 step process (as referenced by you in our call) is used for these loops. You can reference this documented process by looking in the PCAT under <<http://www.qwest.com/wholesale/clecs/provisioning.html>> . There is a word doc for copper facilities listing out the entire 11 step process. I know you are familiar with that process and it does apply to this product. So, that really spells out the steps we take when an order comes through. If we determine there are no facilities after going through these steps, then the last sentence in the SGAT 9.1.2.1 applies and we would offer CRUNEC process as one alternative.

*9.1.2.1 If facilities are not available, Qwest will build facilities dedicated to an End User Customer if Qwest would be legally obligated to build such facilities to meet its Provider of Last Resort (POLR) obligation to provide basic Local Exchange Service or its Eligible Telecommunications Carrier (ETC) obligation to provide primary basic Local Exchange Service. CLEC will be responsible for any construction charges for which an End User Customer would be responsible. In other situations, Qwest does not agree that it is obligated to build UNEs, but it will consider requests to build UNEs pursuant to Section 9.19 of this Agreement.*

#### *9.19 Construction Charges*

*Qwest will assess whether to build for CLEC in the same manner that it assesses whether to build for itself. Qwest will conduct an individual financial assessment of any request that requires construction of network capacity, facilities, or space for access to or use of UNEs. When Qwest constructs to fulfill CLEC's request for UNEs, Qwest will bid this construction on a case-by-case basis. Qwest will charge for the construction through nonrecurring charges and a term agreement for the remaining recurring charge, as described in the Construction Charges Section. When CLEC orders the same or substantially similar service available to Qwest End User Customers, nothing in this Section shall be interpreted to authorize Qwest to charge CLEC for special construction where such charges are not provided for in a Tariff or where such charges would not be applied to a Qwest End User Customer. If Qwest agrees to construct a network element that satisfies the description of a UNE contained in this agreement, that network element shall be deemed a UNE.*

If you go to Appendix A in the SGAT under CRUNEC, you will see that in CO the quote charge is ICB as it is in many states. A quote of actual charges will then be provided including all of the time and materials that the job will require. Charging of course will depend on the magnitude of the job involved. I know that you wanted a definitive cost but since each situation is so different that is not possible and it is the reason why Qwest has set it up as a quote process.

The other question that came up in our discussion is one on incremental facilities as stated below in 9.1.2.1.2. If the facility (DS1 capable loop) is available, we would do the incremental facility work per the SGAT at no additional cost.

9.1.2.1.2 *If cable capacity is available, Qwest will complete incremental facility work (i.e., conditioning, place a drop, add a network interface device, card existing subscriber Loop carrier systems at the Central Office and Remote Terminal, add Central Office tie pairs, add field cross jumpers) in order to complete facilities to the Customer premises.*

I believe this information is consistent with what Joan has already given you and I did add the reference to the 11 step process which is applicable for DS1 capable loops. I hope that this helps give you a better picture. I told Teresa that we were working on this and she has been in the loop on all our correspondence so far. She believes this is consistent with what she discussed with Rick. Let me know if you need anything else. I am on vacation this afternoon so let's talk Monday if necessary.

**Toni Dubuque**

**From:** Clauson, Karen L.  
**Sent:** Friday, July 11, 2003 2:58 PM  
**To:** 'Dubuque, Toni'  
**Cc:** Masztaler, Joan; Taylor, Teresa  
**Subject:** RE: DS1 Capable loop discussion

Thank you for the information, Toni. I appreciate your assistance. Your statement on incremental facility work is more clear, and we appreciate the clarification.

I still need to review with others internally, but a couple of things that I would like to discuss with you on Monday:

The first piece that does not seem to be addressed yet are Joan's statements that "it was not an error that Eschelon's DS-1 capable loop orders were held" and that "jeopardy notices are not being sent out by mistake." We do believe that the spike in jeps did reflect an error that led to erroneous jeps, and we have confirmed again with Rick that he had understood Teresa to say that she agreed and needed a short time to get that problem fixed. We still want Qwest to re-look at those jep orders and see whether, if cost was the only issue and the process followed, the orders would have been jep'd. (You mentioned on the call that perhaps we had not authorized charges. As Jean and Bonnie have been discussing for a long time, the Qwest system does not allow the CLEC to authorize charges in this situation. Also, Teresa referred to a change in "charging." We couldn't address new charges before we even knew that such a change had occurred.

The other piece that still seems outstanding is what was the "change" referred to in Teresa's email. Teresa said: "Qwest has in the past not fully enforced our contractual right to collect on the charges incurred when completing DS1 level unbundled services. Charging is the specific change that has occurred"

I appreciate your reference to ICB language, so I know that it what Qwest views as the rate. Equally important, however, is when Qwest will apply that rate/ICB process (and how that has changed). What steps is Qwest charging for now that Qwest did not charge for when "not fully" enforcing its rights? If I missed this in your email, I apologize. It seems to be a statement of the Qwest SGAT/policy but not a discussion of the change. To start looking for these charges resulting from a "fully enforced" policy so we can analyze whether we agree with them, we need to understand what they are and how we will recognize them. (If the answer is that we need to "authorize" them as a result of increased jeps, see note above regarding authorization.) We just really need to understand what the change was. We have asked for a copy of the text of the MCCs sent out at Qwest and still hope to receive that information. Perhaps it will help in this regard.

We'll review it internally, and then we can talk on Monday.

Thanks,  
Karen

**To:** 'Dubuque, Toni'  
**Cc:** Johnson, Bonnie J.  
**Subject:** RE: DS1 Capable loop discussion

Toni, we would like to know how the enclosed document relates to the discussions below, if at all. In particular, how is "rearrangement of facilities" defined, and how is this different from "incremental facility work"? We don't see the difference. Also, where in the tariff does Qwest change Retail end users for these costs? (If you need to forward this email to someone else at Qwest for a response, please do so, and let me know whom I should be dealing with. We just need to be able to fit it into the discussions we have had so far, so we know if/how it relates.)

I didn't realize that I have a seminar out of the office today, so I won't be able to call you today. If you can either email me with info on these questions (and those below), or call me when you want to discuss this week, that would be great. Thanks.

**Subject:** DS1

Karen,

I am doing an Operations review in Duluth today so here is what I have to share. We can set up time on Friday to visit but hopefully, this is about all I have on this subject.

I'm not sure what additional clarification I can provide on the jeopardy notice process. When a facility is not available Qwest will issue a jeopardy notice to inform the CLEC of the status. It is that process that Joan was explaining in her emails.

In terms of the discussion between Rick and Teresa, I was not at that meeting but believe the emails you have received from Joan and I fully explain what has taken place; the modification of the CRUNEC, and the associated costs for CRUNEC. The charges that apply to a DS1 when facilities are not available are the charges under CRUNEC if a CLEC elects this option.

Rearrangement of facilities is typically a section throw, cable throw, or a pair change. It is not incremental work and therefore is defined differently. Incremental work applies when a DS1 capable loop exists and there is no redirection of the network.

Qwest's Wholesale policies are in parity with our Retail business. The tariffs are public information and are available to you. In looking at your delayed orders, I do not see any significant change. From January to June your delayed orders for DS1 capable loops including EEL range from the mid 70's to mid 80's with a low of 59 in May. June appears to fit in the range of other months. In looking at the specific LSRs you provided each of these were delayed due to no existing DS1 capable facility.

**Subject:** DS1

Toni:

You may get this message twice. I hit send before quite finishing it and recalled it to complete it. Here is the complete note (with the last couple of sentences added).

I am free on Friday if you would like to discuss. I have a meeting at 10am but otherwise look pretty free. Let me know what works for you, if you think a discussion would be helpful.

We do not believe that our questions have been answered. You and Joan have summarized current policy, but you have not addressed our questions about the "the specific change that has occurred" (past tense) described by Teresa. Teresa's email was sent on July 3rd and referred to a change that had already occurred. Eschelon (as well as CBeyond and others) felt the impact of that change with the increase in jep notices. We brought the issue to Qwest, because it was clear something had changed. The CRUNEC change that you are referring to wasn't even noticed until after COB this Friday (7/11), and the comment period hasn't even expired yet. Are you saying that Qwest had already implemented that change?

Regarding the CRUNEC process proposed in the 7/11 notice, the notice provides insufficient detail for us to understand why orders are jep'd and for which activities Qwest will charge. We asked for a definition of "facilities reassignment" and you provided a few examples. Is there documentation of the facilities reassignment activities for which you plan to charge? If not, will you provide a list of activities (like the level of detail in the description of activities in the 11-step process, only this would be the activities that you consider to be facilities reassignment steps for which Qwest plans to charge).

We do not agree with your statement that Qwest can charge for a pair change, for example, because this is somehow a "build." Qwest does not charge its retail customers when it changes pairs to free facilities; so it cannot charge us. See, e.g., AZ ICA, Att. 1, paragraph 3.1. When we asked you to show us that you do charge retail customers, you responded that we should read the tariff. We don't find any evidence in the tariff that you charge retail customers these charges.

We still want Qwest to take another look at the list of orders we provided to you. For each, please state the facilities problem that lead to the jep notice, such as whether in that particular case it was a pair change, etc., that was needed. (Some notices say but others do not.) Please state what steps would have been taken by Qwest in the past with respect to facilities (in the situations that you said in our conversation that Qwest's employees were acting out of process) and whether those steps, if taken now, would have resulted in the processing of the orders (and whether they would result in a charge). This exercise would be helpful in understanding the change Qwest has made.

We have also asked Qwest to provide the text of the MCCs sent to its employees on this issue. If you have responded to that request, I missed it.

You state that you have looked at our "delayed orders." Qwest sends jep notices on a very wide variety of issues. As you know, we are talking here specifically about the service inquiry notices. Within this category, the number jumped.

We have comments due in AZ 271 on Friday, and we'll raise this issue there. The PUC may deal with it in that case or the next phase of the cost case. We will have to get the information in discovery if Qwest does not want to provide it informally. We hope that there is more we can do informally, however. Let me know if you believe there is and would like to discuss.

**Subject:** Reply

Karen,

I am sorry to reply to this so late but I just converted to Outlook and lost some email messages. Yours was one of those. I am not sure that a meeting will be of any benefit to us as I believe we have answered to the best of our ability all of the questions that you have asked. Let me clarify a couple of points that you addressed in your last email.

The CRUNEC change that I referenced is the one that went into eff on 6-16-03.

### **PROS.04.30.03.F.01071.CRUNEC**

Local Exchange Carrier (CLEC) Requested Unbundled Network Elements (UNE) Construction (CRUNEC) provides a method where you may request Qwest to construct new facilities for utilizing Qwest's Unbundled Network Element (UNE) facilities. CRUNEC is not required for requests that can be resolved through facility work or assignments, such as:

- **Line and Station Transfers (LSTs):** Moving a end-user's line to a spare facility and reusing the pair made spare to provision a service request. An LST is not used in a "reverse cut" fashion; Qwest does not swap two working end-user lines to provision a service request.
- **Cable Throws (also known as Section Throws or Plant Rearrangements):** Moving existing end-users from their existing facilities to another set of facilities in order to free up the original facility for use in the provision of a Company Initiated Activity (CIA) (e.g., to place Digital Loop Carriers or modernize a terminal).
- **Incremental Facility Work:** Completing facilities to an end-user's premises (e.g., ~~Conditioning,~~ ~~place~~ Place a drop, add a Network Interface Device (NID), Central Office (CO) tie pairs, field cross connect jumpers, or card in existing Subscriber Loop Carrier systems at the CO and Remote Terminal).
- **Outside Plant construction jobs in progress or Engineering Work Orders in progress.**

There is another change in progress and that is different than this one.

As you know, our policy is not to share internal documentation with customers. The MCC would have included the information denoted above.

We believe the current list of orders that are in held status are the ones that would need further action by Eschelon to process. Again, it would be up to you to determine which option you would want to select, ie, cancel, order Private Line, use CRUNEC process.

I believe we have made every communication attempt to clarify this subject and have dealt with this informally.

**Toni Dubuque**

**EXHIBIT 59**

**Secret TRRO PCAT**

Event Summary (see Chronology below for additional information):

- 3/17/03 Minnesota Statement of Generally Available Terms (SGAT) text last updated
- 3/2/04 USTA II decision
- 10/27/04 In CMP, Qwest submitted Change Request PC102704-1ES CR that cited the TRO and USTA II Decision in the title
- 11/8/04 In CMP, Covad escalated and said "it is absolutely inappropriate for Qwest to implement its interpretation of its legal rights and obligations through change management rather than in the appropriate legal venue."
- 11/16/04 In CMP, Qwest responded that "the CR is not superseding the language in the CLEC ICA."
- 11/17/04 In CMP, CLECs said TRRO issues should be negotiated and arbitrated.
- 1/10/05 In CMP (oversight), Qwest confirmed that SGATs do not reflect the products Qwest offers; Covad said that Qwest's process is backwards because Qwest should work with negotiations teams before CMP as ICAs control; Eschelon said product availability is based on the ICA; five CLECs, including Eschelon, recommended the CR (*i.e.*, any change based on the TRRO) be deferred "***until permanent rules are issued***" (emphasis added). Qwest decided to move forward with the CR instead of defer it.
- 2/16/05 In CMP, Qwest said that, once it determined what the final rulings are, Qwest "would notify via this same CR."
- 3/11/05 USTA II ***permanent rules are issued/effective.***
- 6/23/05 In ICA negotiations, Eschelon proposed TRRO terms
- 6/30/05 In CMP, Qwest said it would negotiate ICAs with CLECs and that "no TRO/TRRO changes to products and processes will be made across the board until such language is final." Qwest added that PCATs and business procedures will be "in alignment" with ICA language. Covad summarized that "PCATs won't be updated until the final language is approved." Qwest said that "there are more changes coming and ***the CR is the means to share those changes***" and that "***PCAT changes will be brought through CMP***" (emphasis added).
- 9/12/05 **QWEST ISSUES PASSWORD PROTECTED (SECRET) TRRO PCAT, without CR and without bringing the PCAT changes through CMP; updates PCAT "effective" three weeks from notice date.**

## Chronology

**3/17/03** – Date Minnesota Statement of Generally Available Terms (SGAT) text (not including exhibits to the SGAT) last updated  
<http://www.qwest.com/wholesale/downloads/2003/030328/MN-SGAT-3-17-03.doc>

**3/2/04** – USTA II decision

**9/13/04** – USTA II Interim rules effective

**10/27/04** – Qwest submitted CR SCR102704-1RG<sup>1</sup> entitled "FCC Triennial Review Order CC 01-338 (TRO), U.S. Court of Appeals for the DC Circuit decision (USTA II) Decision No. 00-1012, and FCC Interim Rules Compliance: Certain Unbundled Network Elements (UNE) Product Discontinuance." Although Qwest submitted it as a systems regulatory CR, the Qwest description of change states: "This CR will be implemented as a product/process CR as there are no CLEC facing system changes." Under Product Availability, Qwest said: "This CR details changes to availability of certain Unbundled Network Elements (UNE) products pursuant to the FCC Report, Order on Remand, and Further Notice of Proposed Rulemaking, referred to as the "Triennial Review Order" (TRO) CC Docket 01-338, the subsequent U.S. Court of Appeals for the DC Circuit decision 00-1012 ('USTA II') which vacated some of the FCC's unbundling rules, and the FCC's Interim Rules, which preserved some of the unbundling rules vacated in USTA II. In accordance with these orders and findings, the following UNE products are no longer available to CLECs unless the most current, effective version of CLEC's Interconnection Agreement (ICA) or Amendment includes terms, conditions, and pricing for the products before 6/15/04: [list of products]." Under Product Transition, Qwest said: "Not Applicable." Under PCAT Updates, Qwest said: "All impacted UNE PCATs will be updated in the future to reflect this change in availability. These changes will be announced via the CMP notification process." Under Expected Deliverables/Proposed Implementation Date, Qwest said: "Retroactive to 6/15/04 pursuant to FCC Interim Rules, subject to CMP Guidelines."

(See [http://www.qwest.com/wholesale/cmp/archive/CR\\_SCR102704-1RG.htm](http://www.qwest.com/wholesale/cmp/archive/CR_SCR102704-1RG.htm))

**10/27/04** – Qwest submitted CR PC102704-1ES<sup>2</sup> with the same title, to replace CR SCR102704-1RG. The body of the CR and description of change remained the same. However, this CR was now a product and process CR, instead of a systems CR.<sup>3</sup> (See [http://www.qwest.com/wholesale/cmp/cr/CR\\_PC102704-1ES.htm](http://www.qwest.com/wholesale/cmp/cr/CR_PC102704-1ES.htm))

**11/4/04** – Qwest CR Status History indicates it revised its CR to remove the regulatory classification. (See [http://www.qwest.com/wholesale/cmp/cr/CR\\_PC102704-1ES.htm](http://www.qwest.com/wholesale/cmp/cr/CR_PC102704-1ES.htm))

---

<sup>1</sup> The change request designation of "RG" in the CR number indicates it is submitted as a "Regulatory CR." See CMP Document § 5.9. (The CMP Document is posted on Qwest's web site at [http://www.qwest.com/wholesale/downloads/2006/060130/QwestWholesaleChangeManagementDocument\\_0130\\_06\\_1\\_.doc](http://www.qwest.com/wholesale/downloads/2006/060130/QwestWholesaleChangeManagementDocument_0130_06_1_.doc)).

<sup>2</sup> The designation of ES in the CR number is defined as "Escalation process invoked on a CR." See CMP Document § 5.9.

<sup>3</sup> A CR number that begins with "SCR" is submitted as a systems CR, and a CR number that begins with "PC" is a product and process CR. See CMP Document § 5.9.

11/8/04 – Covad submitted escalation PC102704-1E32 asking Qwest to withdraw its CR. In its escalation, Covad's attachment included the following (emphasis changed):

***"There are a number of pending legal proceedings at the state and federal regulatory level that are addressing the legal issues surrounding access (whether under Section 251, Section 271 or state law) to most, if not all, of the elements listed on Qwest's change request. At best, therefore, it is premature for Qwest to eliminate access rights unless and until there is a final, non-appealable order out of a regulatory or judicial body that clearly specifies the rights and obligations of Qwest and CLECs. At worst, it is absolutely inappropriate for Qwest to implement its interpretation of its legal rights and obligations through change management rather than in the appropriate legal venue.***

Qwest's interpretation (which benefits itself at the expense of CLECs and consumers) is not a substitute for, or anywhere near the same as, a final, binding order of a federal or judicial body. ***Qwest's attempt to implement its interpretation is nothing more than a shameless backdoor attempt to evade its legal obligations***, particularly when the purpose of change management is to provide the "means to address changes that support or affect pre-ordering, ordering/provisioning, maintenance/repair and billing capabilities and associated documentation and production support issues for local services (local exchange services) provided by Competitive Local Exchange Carriers (CLECs) to their end users" and not to debate legal issues.

***Further, it is clear within the CMP document itself that any and all legal issues surrounding access, as expressed in interconnection agreements, should be addressed within those agreements and not within CMP.***

Despite recognizing that many, if not all, of the elements may continue to be available to CLECs under their current interconnection agreements, Qwest seeks to wholly eliminate access via CMP. In effect, therefore, while paying lip service to access requirements that are clearly in place, Qwest nonetheless is trying to deprive all CLECs of access to all of the listed elements (regardless of whether such elements are in their current IAs). At the very least, Qwest's desire to implement systems changes presumably designed to eliminate all together the ability to order the elements listed will ensure the ordering and provisioning of elements available to a CLEC under its current IA are fraught with problems and delay, which is anti-competitive and inappropriate. ***Qwest's action of eliminating all access while admitting that at least some CLECs continue to have access is tantamount to swatting a fly with a sledgehammer.***

The CMP clearly specifies that "regulatory changes" are changes that are affirmatively required by the applicable regulatory or judicial body. ***Contrary to Qwest's assumptions, there is nothing in the TRO, USTA II or the Interim Rules that requires the elimination of access to all of the elements Qwest has listed in its CR.*** To the contrary, for example, the Interim Rules actually requires access to at least three of the elements on Qwest's list of elements for which it wants to eliminate access. Absent such an affirmative requirement that access not be provided, Qwest has failed to demonstrate that its desired changes are actually mandated changes as defined and understood in the governing CMP document.

Qwest has failed to comply with the procedural requirements surrounding submission of a regulatory CR. The governing CMP document requires specific page and paragraph references. Qwest's CR lacks this specification and thus is faulty and must be withdrawn per the agreed-upon CMP requirements for regulatory CRs and CRs generally.

(See

[http://www.qwest.com/wholesale/downloads/2004/041109/PC102704\\_1\\_E32\\_Covad\\_Escalation.doc](http://www.qwest.com/wholesale/downloads/2004/041109/PC102704_1_E32_Covad_Escalation.doc))

**Nov. 2004** – Eschelon joined Covad's escalation. At that time, Qwest's web site documentation did not indicate which CLECs joined an escalation.

**11/16/04** – Qwest provided its binding response to Covad. Qwest's response includes the following (emphasis added):

“In response to Covad's objections which are provided in detail in Escalation #32, Qwest emphasizes that the CR is not superceding the language in the CLEC ICA. If the language in the current ICA allows the CLEC to order the products, the CLEC will be permitted to continue to order at this time. This change request is instead advising CLECs who don't have this language in their ICA or who don't currently have an ICA that they cannot seek an amendment or ICA with language for these products on a prospective basis. Further, there are no related system changes to impact a CLEC ordering what is available to them in their ICA. ***As this is a change to limit the availability of certain products only, Qwest believes this is a Level 4 change and belongs in CMP.***” (See [http://www.qwest.com/wholesale/downloads/2004/041116/Qwest\\_Response\\_Escalation\\_PC102704\\_1E32\\_11\\_16\\_04.pdf](http://www.qwest.com/wholesale/downloads/2004/041116/Qwest_Response_Escalation_PC102704_1E32_11_16_04.pdf))

(Note: Qwest's entire 11/16/04 response to Covad's escalation is attached to this chronology and is available at the above URL).

**11/17/04** – CMP November monthly meeting minutes included (emphasis added):

Covad “stated that this is more than a product being discontinued. In addition, Qwest can not cite the law and then not call it a Regulatory CR. There are legal means ***to negotiate agreements.***”

Covad “advised the reason they objected to the Regulatory classification is that Qwest didn't cite the page and paragraph. Qwest is still citing the law, (insert comment from Covad/Eschelon)<sup>4</sup> not calling it a regulated changed and that is still out of scope for CMP.”

Covad said “Qwest is trying to manipulate the CMP process to fit their needs.”

TelWest “said it is not important to me what Qwest's interpretation is. ***It should be arbitrated and not unilaterally implemented by Qwest.***”

---

<sup>4</sup> Qwest prepares the CMP meeting minutes. Material in brackets generally indicates that a carrier commented and Qwest reflected the comment in the posted Qwest minutes.

Eschelon "said whether or not we agree on the language, this should not be discussed in CMP. We do not discuss legal interpretation in CMP. *This should be done in a different forum.*"

Covad "stated that *this is an ICA negotiation discussion.*"

(See [http://www.qwest.com/wholesale/cmp/cr/CR\\_PC102704-1ES.htm](http://www.qwest.com/wholesale/cmp/cr/CR_PC102704-1ES.htm))

12/15/04 – Qwest recommended a CMP oversight committee meeting.

1/4/05 – CLECs and Qwest held a CMP oversight committee meeting. Comments from the meeting included (emphasis added):

*"Liz Balvin felt that Qwest has called into question the law and has jerry rigged the CMP process to meet Qwest's needs* because there are system edits in place to restrict ordering the products. [Comment received from Covad: products and that the notifications, even level 4 notices carry the clause that IA supercede PCAT documents.]"

"[Comment received from Eschelon: Bonnie Johnson and Becky Quintana discussed Qwest exercising their rights to limit product availability, basis for product limitation as it relates to PCAT comments, *Bonnie said Qwest is limiting products prematurely and Becky agreed. Becky and Bonnie discussed the appropriateness of legal discussion on Product / Process changes.*]"

"Cindy Buckmaster responded that Qwest has the right to not have to offer products based on the law."

"Bonnie Johnson asked that the meeting minutes reflect all of the conversation that has taken place. [Comment Received from Eschelon: Bonnie said Qwest often reflects their views but not CLECs.]"

"Kim Isaacs and Bill Campbell discussed SGAT changes, PCAT changes and the ICA negotiations. [Comment received from Eschelon: *Bill said that the current negotiation template reflects the correct information but the SGATs have not been updated.* Bonnie asked if there was a particular CLEC that was challenging Qwest on this issue and if that is why Qwest needed to update PCATs.]"

"Cindy Buckmaster, Bonnie Johnson and Liz Balvin continued discussion related to processing the CR, Bonnie Johnson, Bill Campbell and Liz Balvin discussed how CLECs should be notified of the product change and the PCAT reflecting the SGAT, *notification through change of law, how contracts override the PCATs, and product availability is negotiated through the ICA agreements.* [Comment received from Eschelon: *Bonnie said if Qwest will limit product availability in its existing ICA, Qwest would need to notify Eschelon through the change in law provision of its contract and not through a PCAT CMP notice. Bill agreed.*]"

([http://www.qwest.com/wholesale/downloads/2005/050114/CMP\\_Oversight\\_Committee\\_Mtg\\_Min\\_1\\_4\\_05.pdf](http://www.qwest.com/wholesale/downloads/2005/050114/CMP_Oversight_Committee_Mtg_Min_1_4_05.pdf))

1/7/05 – Qwest distributed a red line version of Qwest's CR PC102704-1ES to the CMP oversight committee members. In its email, Qwest said: "As a follow up to our discussion on Tuesday, Qwest has met internally and our preference is to revise the existing change request PC102704-1ES instead of withdrawing and issuing a new CR. We believe that by changing the title and removing references citing the law we would be keeping the historical information and maintaining the documentation trail."

1/10/05 – CMP oversight committee meeting. Comments included (emphasis added):

***"Bill Campbell of Qwest explained that the PCATs are based on the approved SGATs and the SGATs can be different from the ICA. We try to time the CMP update changes with the SGAT changes and Qwest did put together SGAT changes. However, the SGAT's have been pulled back with concurrence of the states due to the unsettled regulatory situation post USTA II, post interim order and pre final FCC order. Qwest has changed the ICA language template (insert comment) but **the current SGAT's do not accurately reflect the products Qwest offers** and Qwest (end comment) feels it is important to notify CLECs on the changes to the products."***

***"Liz Balvin felt that the process was backward because if a CLEC wants these products they would work with the negotiation team and would not go through CMP (insert comment) because CMP specifically call out ICA's override (end comment)."***

***"Bonnie Johnson said that product availability is based on the ICA and even though Qwest notices about product availability, CLEC's can't get the products without an agreement including the product."***

***"Becky Quintana of the Colorado PUC asked if Qwest was considering filing the SGAT prior to the final rules or waiting and Bill Campbell stated that Qwest is waiting, although we did file prior to the USTA decision, but withdrew the filings when it was clear that the states did not believe the timing was right to make the proposed changes knowing full well any state proceedings would have to be revisited. **Becky Quintana voiced concerned that the SGAT on file and the Wholesale tariff are not the current Qwest offering.**"***

***"Liz Balvin stated that the CR should identify the interim rules as the basis for notifying the CLECs of 6/15 product changes and that Qwest is not going to file the SGAT until the permanent rules are available."***

***"Bill Campbell agreed that the CR is based on the USTA II rules and that Qwest has restricted the products and changes will have to be made to comply with the final rules."***

***"Liz Balvin stated the basis is USTA II and Bill Campbell said he agreed that the basis is USTA II, and under the FCC guidance, are no longer required to provide unbundled elements."***

"Bonnie Johnson and Becky Quintana discussed the merit of language changes to the CMP process. *Liz Balvin and Bonnie Johnson stated that the CR should not have defaulted to CMP as it was not the appropriate approach and the importance of keeping the CMP guidelines in tact.*"

"Sharon Van Meter stated that *AT&T* does not think this is a regulatory CR and would like the CR to include the history of what has been discussed. *Deferring the CR would be better* and revising is acceptable if the history is included. *Liz Balvin* agreed *deferring would be better and revising the CR sets a precedent that the CR is regulatory but not identifying in that way.* There was recommendation from *Covad, Eschelon, AT&T, TDS/MetroCom and MCI that the CR be deferred until permanent rules are issued.* Becky Quintana stated that without making any statement on the merits of the CR, she believed that Qwest *should go ahead with the CR because she agreed with Bill Campbell's estimated timeline for permanent rules.* Qwest would like to move forward by revising the CR. The Oversight Recommendation will include the different recommendations from the Oversight members."

[http://www.qwest.com/wholesale/downloads/2005/050202/CMP Oversight Committee Meeting Minutes 1 10 05 CLEC updat .pdf](http://www.qwest.com/wholesale/downloads/2005/050202/CMP_Oversight_Committee_Meeting_Minutes_1_10_05_CLEC_updat_.pdf)

**2/4/05** – FCC release date for TRRO

**2/16/05** - CMP February monthly meeting minutes included (emphasis added):

"Jill Martain-Qwest stated that when the final rulings came out, we received feedback. Jill stated that Qwest would withdraw the PCATs that were affected by the final rules and that Qwest would proceed with UNE-P. Jill stated that Qwest would reissue the PCATs that are being removed from the CR, once it is determined what those changes are *and would notify via this same CR.*"

(See [http://www.qwest.com/wholesale/cmp/cr/CR\\_PC102704-1ES.htm](http://www.qwest.com/wholesale/cmp/cr/CR_PC102704-1ES.htm))

**3/11/05** – USTA II permanent rules are issued/effective.

**3/16/05** - CMP March monthly meeting minutes included (emphasis added):

"Cindy Buckmaster-Qwest stated that this CR will be effective on March 18th and that she would like to move the CR to CLEC Test on the 18th. *Jill Martain-Qwest stated that she was okay moving this CR to CLEC Test on the 18th, but then would like it moved back to Development status for the rest of the piece.*"

(See [http://www.qwest.com/wholesale/cmp/cr/CR\\_PC102704-1ES.htm](http://www.qwest.com/wholesale/cmp/cr/CR_PC102704-1ES.htm))

**6/23/05** – Qwest/Eschelon ICA negotiations – Eschelon provided Qwest with proposed language for Section 9.23, including terms and conditions reflecting the TRRO for service eligibility criteria, self certification, audits, conversions and loop transport combination ordering, billing and repair process (such as a single LSR for loop-transport arrangements in Sections 9.23.4.5.2 & 9.23.4.5.5). (Qwest included Eschelon's proposed language in Qwest's next ICA draft which it sent to Eschelon on 7/6/06.)

**6/30/05** – Qwest CMP adhoc meeting minutes state (emphasis added):

"Cindy Buckmaster-Qwest said that Qwest suggested this Ad-Hoc meeting to help communicate our implementation plans for the TRO/TRRO. She said that many of the CLECs are interested in the implementation of the rules laid out in the orders and may have questions. Cindy said the CLECs likely agree that these orders cover numerous products and processes, not to mention availability and even eligibility. Cindy said that Qwest is developing template language that encompasses our obligations under the TRO/TRRO and that we will be filing that template language with the states in the months to come. She said that the normal filing process will be followed likely allowing a comment period from interested parties. Cindy said that in the meantime, our negotiations team *will negotiate* the amendment or full template with interested CLECs. ***Cindy said that negotiation combined with State approval of our template language that is necessary to finalize applicable language and/or processes. Cindy said that in order to most effectively and efficiently work through that process, we believe that it is best to further delay announcements of process or product changes related to these orders via CMP until such time as the language is finalized and will impact all CLECs. She said that no TRO/TRRO changes to products or processes will be made across the board until such language is final.*** Cindy said, as mentioned earlier, we will implement product and process changes only as you sign the amendment or template language, through the change of law provisions that are outlined in your individual contracts. She said that the CLECs, at that time, will be provided with individual Product Catalogs (PCATs) and Business Procedures ***that are in alignment with their current language*** so that they can determine any changes to the way you do business with Qwest. Tom Hyde-Cbeyond stated that this plan sounds logical and asked when Qwest could share a draft or final version of the language to review ***before negotiating***. Cindy Buckmaster-Qwest said that Candice Mowers (Qwest) is closer to the filings and this Qwest effort. Candice Mowers-Qwest stated that ***with the SGAT, there are no filings scheduled yet and with the number of changes, getting language is quite a task***. Candice said that there is a negotiations template and a TRO Remand Compliance template on the Qwest Wholesale Website at [www.Qwest.com/wholesale/clecs/amendments.html](http://www.Qwest.com/wholesale/clecs/amendments.html). ***Candice said that when the CLECs want to begin negotiations, they can contact the Qwest negotiations team.*** Tom Hyde-Cbeyond said that they would like to review and schedule negotiations. Candice Mowers-Qwest said that this was a good idea and to wait until the last minute will be a push. Tom Hyde-Cbeyond stated that he would download and review the information. The following question was raised in the meeting: What does this have to do with QPP? Cindy Buckmaster-Qwest said that this has nothing to do with QPP. She said that the QPP Commercial Agreements are on the same website and will remain there. ***Liz Balvin-Covad summarized that the purpose of this meeting was to relay information on the TRO negotiations, the templates are out there for review and that the PCATs won't be updated until the final language is approved. Cindy Buckmaster-Qwest stated that we did not want to make process changes that will impact a lot of you and that we will honor your contracts. She said we will share documents as process changes are made.*** The following question was asked in the meeting: Does this have anything to do with PC102704-1ES. Cindy Buckmaster-Qwest said that this CR was opened as a way to communicate changes in the TRO/TRRO. She said that there are more changes coming and ***the CR is the means to share those changes***. Cindy said that the CR was initially issued when the TRO came out and had changes. She said that we had to pull back some of the PCATs but will keep the CR open until we can finish CR. Tom

Hyde-Cbeyond said that he understood the format and information can be used on the website. Cindy Buckmaster-Qwest stated that *the next steps depend on where each Company is*. She said that they can go to the web, study and *start negotiations*. Cindy said that if you don't want involvement, they could do nothing. *She said that as SGAT language changes, we will have a comment period* and that the States will engage you when decisions are made. *Cindy also said that PCAT changes will be brought through CMP.* There were no additional questions or comments." (See [http://www.qwest.com/wholesale/cmp/cr/CR\\_PC102704-1ES.htm](http://www.qwest.com/wholesale/cmp/cr/CR_PC102704-1ES.htm))

**9/12/05 – NON-CMP SECRET PCAT NOTICE** - Qwest distributes a Product notice document number PROS.09.12.05.F.03236.TRRO\_Login\_Product\_Page through its QWEST WHOLESALE NOTIFICATION PROCESS (*i.e.*, not CMP).<sup>5</sup> The subject line of the announcement states: "Triennial Review Remand Order (TRRO) Products & Services." The effective date is listed as October 3, 2005 – three weeks from the date of the announcement. The non-CMP notice contains no comment period. The announcement states (emphasis added):

"On September 12, 2005, Qwest will post updates to its Wholesale Product Catalog that include new/revised documentation for Triennial Review Remand Order (TRRO) Products & Services. This material becomes effective on October 3, 2005.

Updates are associated with documentation not previously documented. Qwest has established a website which will include Product Catalogs (PCATs) and other documentation specific to certain Qwest interconnection products and services as are provided for in the Report, Order on Remand, and Further Notice of Proposed Rulemaking (FCC 03-36), referred to as the "Triennial Review Order" (TRO) effective October 2, 2003 and the Remand Order (CC 01-338) referred to as the "Triennial Review Remand Order" (TRRO) effective March 11, 2005.

These TRO/TRRO-related documents are available and applicable to you only if and/or when you have completed and signed an Interconnection Agreement or Amendment incorporating provisions that reflect the requirements and changes called for in the TRO/TRRO documents.

Pursuant to the TRO/TRRO Decision, certain Unbundled Network Elements are available to you on a limited basis.

The documents on this website are in place to assist CLECs who *have signed* the TRRO Amendment and are ordering services where they are deemed available as UNEs. *When the CLEC receives a copy of their signed amendment Qwest will also include a letter that advises them how to access the web site using an assigned USERID and Password to access the PCATs.* For those CLECs who have already signed an amendment you will be receiving a letter with the USERID and Password by October 3, 2005.

---

<sup>5</sup> The **SUBJECT** field of a Qwest announcement starts with "CMP" when it is a CMP notice. Not all Qwest customer "notices" and PCAT changes are generated as a result of CMP. Carriers may choose among a variety of notices, such as billing, contract, and network notices, that are not CMP notices. See <http://www.qwest.com/wholesale/notices/cnla/maillist.html>. In addition, if it is a CMP notice, the listed contact person is a CMP representative. If it is not a CMP notice, the contact person is the Qwest Service Manager or other contact. CMP notices with comment periods identify the timeframe for comment.

On October 3, 2005 the updates will be found on the Qwest Wholesale Web site at the following URLs:

<http://www.qwest.com/cgi-bin/wholesale/trrologin.cgi>

If you have any questions or would like to discuss this notice *please contact your Qwest Service Manager*. Qwest appreciates your business and we look forward to our continued relationship.

Sincerely,

Qwest Corporation

Note: In cases of conflict between the changes implemented through this notification and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement."

<http://www.qwest.com/wholesale/cnla/uploads/PROS%2E09%2E12%2E05%2EF%2E03236%2ETRRO%5FLogin%5FProduct%5FPage%2Edoc>

**9/12/05** - Eschelon requested a copy of Qwest's secret PCAT from the Qwest ICA negotiations team, in an email copied to Bonnie Johnson, Doug Denney, and the participating Minnesota DOC representative (emphasis added):

"Eschelon requests a copy of Qwest's proposed "TRO/TRRO" PCAT language, which Qwest describes in the enclosed notice.

Does Qwest intend to try to take a similar approach, in which Qwest does not include terms in the ICA but then attempts to impose them through a PCAT (one that has not even been through CMP), after Eschelon has signed an agreement? As you know, Eschelon is negotiating terms through these ICA negotiations and opposes such an approach. Qwest has indicated in numerous Section 12 sessions that the PCAT goes through CMP, but the language described in the enclosed notice did not go through CMP. (The notice refers to CLEC's "ordering services." Does this PCAT language deal with ordering?) Qwest's notice does not even allow for a comment period. (We don't recall ever seeing a notice before in which alleged product/process information is not publicly available, is limited to certain CLECs, and must be accessed with a password.) This notice/conduct appears to be yet another reason to limit any reference to the PCAT in the ICA and deal with any terms that need to be negotiated in the ICA. The ICA controls; not the PCAT. Although the notice states that the PCAT terms are applicable to CLECs after they have "completed and signed an Interconnection Agreement or Amendment," the terms will not be applicable at all, even after we have signed our Agreement, because the ICA controls. *If you want such terms with Eschelon, you need to propose them in negotiations and negotiate with us.*"

**9/23/05** – Qwest's ICA negotiations team sent Eschelon its response to Eschelon's Section 9.23 TRRO proposal (which Eschelon provided to Qwest on 6/23/05 but to which Qwest had not yet responded). (Qwest included its updated language in the next ICA draft on 11/2/05, which was accompanied by an email copied to Bonnie Johnson, Doug Denney, and the participating Minnesota DOC representative from Qwest that stated: "In reply to your message below, attached is the latest draft of the Agreement (Draft 11-2-05). Since the last

release of the "full" Agreement on 8-25-05, this version incorporates the changes made to Sections 9.1 through 9.7, 9.23 and 12. Sections 9.7 and 9.23 incorporated in this version are the exact Sections that Linda provided in her 9-13-05 and 9-23-05 e-mail messages. Qwest is still working on Sections 9.7 and 9.23, and will have updates for these Sections by end of next week..")

**9/29/05** - Qwest distributes announcement that it is providing the password to the Secret<sup>6</sup> PCATs as a result of customer feedback. It states: "***As a result of customer feedback***, this products and services documentation will be made available to the full customer community. However, to differentiate it from existing Wholesale product documentation, access to these TRRO products and services ***will continue to be provided via a common public USERID and Password.***"

<http://www.qwest.com/wholesale/cnla/uploads/PROS%2E09%2E29%2E05%2EF%2E03322%2ETRO%5FUSERID%5FPassword%2Edoc>

**1/18/06** - CMP January monthly meeting minutes stated (emphasis added):

"January 18, 2006 Monthly Product Process CMP Meeting Discussion: Jill Martain-Qwest stated that this is the CR for the TRO work and because there has been no change in the status, for several months, she would like to put the CR in a Deferred Status. Jill stated that ***when it is time for the PCAT updates, this CR would move out of Deferred.*** There was no dissent to moving this CR to Deferred. ***Kim Isaacs-Eschelon stated that there was a notice out today for TRRO and asked if that was separate from this effort. Jill Martain-Qwest stated that it was separate and that it was a non-CMP Notice. (1/27/05 - Comments to Minutes Received from Eschelon: Jill Martain-Qwest stated that the TRRO notices sent today was for CLECs that had signed the TRRO Amendment.***"

[http://www.qwest.com/wholesale/cmp/cr/CR\\_PC102704-1ES.htm](http://www.qwest.com/wholesale/cmp/cr/CR_PC102704-1ES.htm)

**3/29/06** – In response to an email objection from Eschelon to the Qwest Service Management regarding Qwest non-CMP announcement entitled "Product Notice: TRRO: GN: TRRO PCAT with CSIE Updates: Effective 5-1-06," Qwest Service Management states (emphasis added):

"This notice is associated to the overall organizational change that was distributed on March 27, 2006. Please review PROS.03.27.06.F.03801.CSIE\_Contact\_Information and PROD.03.27.06.F.03803.PROD\_PCAT\_CSIE\_Update.

***As agreed to at CMP, the PCATs/Business Procedures associated specifically to TRRO are handled outside the scope of CMP until such time that there is an approved SGAT, which is why the change was noticed as a non-CMP document.***

As we researched your concern, we determined that we should have included the reference in the notice that was sent through the non-CMP process so the overlying notices were related and we will add that reference as applicable to the TRRO notices in the future."

---

<sup>6</sup> Password-protected PCATs are referred to as "Secret" PCATs to distinguish them from generally available PCATs accessible without a password distributed through Qwest notice process.

**4/6/06** - Qwest 4/6/06 New and Amended Responses to Eschelon 3/31/06 Qwest Take Backs/Action Items list in ICA negotiations -- Qwest responded to Eschelon's request with the following (with emphasis changed –yellow shading and bold are in original and indicate Qwest's response):

"9.1.13.4 & 9.1.15.2.3 (see also 9.1.15.3, 9.23.4.5.4, 9.23.4.6.6, 9.23.4.7.1 - order processing, single order, single bill, single circuit ID – billing and repair) (2/7/06, 3/8/06, & 3/21/06 calls) **Jill response**

Qwest (Kathy) sent Eschelon's language (re. single order, single bill, and single circuit ID to Jill Martain of Qwest (CMP). Qwest (Kathy) will ask which issues, if any, Qwest will deal with in CMP. Qwest (Kathy) will also ask Jill which issues, if any, Qwest will deal with in CMP of the issues in Qwest's "TRRO" PCATs.

This is related to Qwest (Harisha's) separate take back from the 2/7/06 call to respond to questions regarding issues and what forum – CMP or other – Qwest would discuss/negotiate them with us/CLECs."

**9.1.13.4 no system edit to challenge orders**

**9.1.15.2.3 circuit IDs will not change**

**9.23.4.5.4 point-to-point EELs, commingled EELs , Loop Mux Transport**

**9.23.4.6.6 same BAN, Loop Transport**

**9.23.4.7.1 single trouble report process**

**In response to the two questions raised by Eschelon, Qwest and the CLECs discussed the TRRO and related TRRO PCATs in CMP with Change Request PC102704-1ES. From those discussions it was agreed that until such time that a SGAT is filed and the TRRO related issues were finalized that all of the TRRO processes and issues would be deferred from a CMP perspective. Since those discussions in CMP, formal proceedings have been initiated with specific state commissions to further discuss the TRRO ruling. Based on those proceedings, Qwest believes that it is premature to initiate TRRO discussions at this time. At the point in time when the state commission proceedings have concluded and an SGAT is approved, Qwest will bring PC102704-1ES back to an active status in CMP and will initiate the appropriate process and PCAT updates at that time."**

**5/26/06** – Eschelon files its petition for arbitration in the state of Minnesota. Issue Nos. 9-43, 9-44, 9-58, 9-59 at impasse.

Qwest continues to distribute non-CMP Secret TRRO PCATs with dates upon which Qwest indicates they will be effective. Example:

**7/21/06** - Qwest distributes a non-CMP Product notice document number PROS.07.21.06.F.04074.TRRO\_Reclass\_Termin\_V1 through its QWEST WHOLESALE NOTIFICATION PROCESS (*i.e.*, not CMP). The subject line of the announcement states: **"TRRO - Reclassification of Terminations for Unbundled Network Element (UNE) Conversions - V1.0."** The effective date is listed as July 28<sup>th</sup>, 2006 – one week from the date of the announcement. The non-CMP notice contains no comment period.

<http://www.qwest.com/wholesale/cnla/uploads/PROS%2E07%2E21%2E06%2EF%2E04074%2ETRRO%5FReclass%5FTermin%5FV1%2Edoc>

The notice included a URL link to a Version 1 (new) non-CMP PCAT, entitled "TRRO - Reclassification of Terminations for Unbundled Network Element (UNE) Conversions - V1.0." The Version 1.0 PCAT is password protected. It includes:

The Description states: "This document is provided for customers who have signed the Triennial Review Remand Order (TRRO) compliant agreement/amendment. TRRO - Reclassification of Terminations for UNE Conversions is a procedure that is needed when you are converting UNE Services to Finished Services in Non-Impaired Central Offices as required by the TRRO."

The Terms and Conditions state: "CLECs are responsible for submitting a Collocation Application to have Qwest reclassify your UNE Collocation terminations to a Finished Service Interconnection Tie Pair (ITP) with the DEMARC outside the collocation as required by the TRRO. This process will reclassify your UNE terminations. To reclassify terminations, an application must be submitted for each Central Office. The terminations will be reclassified "AS IS" and no ITP to Expanded Interconnection Channel Termination (EICT) physical modifications will be performed as part of the reclassification. The Digital Signal Level 1 (DS1) terminations will be reclassified in blocks of 28 DS1s as part of the reclassification request and must reside in the same cable sheath. Digital Signal Level 3 (DS3) terminations may be reclassified on an individual termination basis. When the reclassification is complete, Qwest will send you a revised Alternate Point of Termination (APOT). You are responsible for updating your database to reflect the new cable naming found on the revised APOT."

The Rate Structure section states: "Recurring charges for the UNE-terminations will continue to be billed until a valid application is submitted for the reclassification. You will not be charged a nonrecurring charge to perform this reclassification of terminations from UNE to Finished Service when the activity is associated with TRRO."

The Tariffs, Regulations and Policies section states: "Tariffs, regulations and policies are located in the state specific Tariffs/Catalogs/Price Lists."

The Implementation section states, under "Ordering": "The TRRO - Reclassification of Terminations for UNE Conversions order process is completed by using the TRRO Reclassification of UNES form."

The Provisioning and Installation section states regarding access to *Section 251/252 Collocation* (emphasis added): "***Submission of new connect, change, and disconnect orders on the cable being reclassified<sup>7</sup> will be restricted until the***

---

<sup>7</sup> In a document Qwest provided to Eschelon on August 11, 2006, in response to the question, "Under Qwest's "TRRO PCAT," can the UNE EELs and the non-UNE converted alternative arrangements reside on the same block of 28?," Qwest said: "Yes, when the same cable is being redesignated . . . . In this example, Qwest will allow UNE EELs and non-UNE converted alternative arrangements to reside **on the same cable being reclassified**" (emphasis added). In other words, collocation and UNES are both addressed by this Secret TRRO PCAT. The entire block (including UNES) will be frozen. Qwest indicated in the same document that it has

***reclassification order is complete.*** The restriction of orders will begin once the application for reclassification is validated through the Ready for Service (RFS) date of the Reclassification Request. All work in progress related to the cable being reclassified must either be completed or cancelled by you prior to quote acceptance. Qwest will complete the reclassification request within 45 days of receipt of a valid application. ***The 45-day interval for Reclassification*** applies to the first five (5) Collocation Applications per CLEC per week per state. If six (6) or more Collocation Applications are submitted by CLEC in a one (1) week period in the state, intervals for the Collocation Applications in excess of the first five (5) shall be individually negotiated.”

PC102704-1E32 COVAD ESCALATION November 8, 2004

11/8/04 2:54 PM

Sent by: ebalvin@covad.com

Subject: Covad Escalation PC102704-1

Escalation  
Company: Covad  
CR#: PC102704-1  
Status Code: Submitted

=====

Description:

Qwest inappropriate initiation of PC102704-1. The governing CMP document states:

**14.0 ESCALATION PROCESS Guidelines**

Escalations may also involve issues related to CMP itself, including the administration of this CMP. Covad notes Qwest administration of these changes are inappropriate.

History of Item:

Qwest initially initiated a "Regulatory" Systems change request SCR102704-1RG. When numerous CLECs objected, Qwest withdrew the systems change request and re-issued the exact change request via the Product and Process CMP. Please see Covad's comments attached that continue to apply to PC102704-1.

Reason for Escalation / Dispute:

Qwest inappropriate initiation of PC102704-1.

The governing CMP document states:

**5.4.5 Level 4 Changes**

Level 4 changes are defined as changes that have a major effect on existing CLEC operating procedures or that require the development of new procedures. Level 4 changes will be originated using the CMP CR process and provide CLECs an opportunity to have input into the development of the change prior to implementation.

Level 4 Change Categories are:

- New products, features, services (excluding resale)
- Increase to an interval in Qwest's Service Interval Guide (SIG)
- Changes to CMP
- New PCAT/Tech Pub for new processes
- New manual process
- Limiting the availability and applicability or functionality of an existing product or existing feature
- Addition of a required field on a form excluding mechanized forms that are changed through an OSS Interface CR (See Section 5.1)

For any noticed change that Qwest considers a Level 4 change that does not specifically fit into one of the categories listed above, Qwest shall issue a Level 3 notification with an indication in the notification that Qwest believes the change should be a Level 4 change.

**5.4.5.1 Level 4 Process/Deliverables**

Qwest will submit a completed Change Request no later than fourteen (14) calendar days prior to the Monthly CMP Product/Process Meeting. At a minimum, each Change Request will include the following information:

- A description of the proposed change

- A proposed implementation date (if known)
  - Indication of the reason for change (e.g., regulatory mandate)
  - Basis for disposition of Level 4
- Qwest will present the Change Request at the Monthly CMP Product/Process Meeting. The purpose of the presentation will be to:
- Clarify the proposal with the CLECs
  - Confirm the disposition level of the Change (see below).
  - Propose suggested input approach (e.g., a 2 hour meeting, 4 meetings over a two week period, etc.), and obtain agreement for input approach
  - Confirm deadline, if change is mandated
  - Provide proposed implementation date, if applicable

### 5.9 Change Request Designations

In certain circumstances CR numbers will require special suffix designations to identify certain characteristics. Suffixes include:

- “CM” - Changes to the CMP framework
- “DR” - Dispute Resolution Process invoked on a CR
- “ES” - Escalation Process invoked on a CR
- “EX” - Change being implemented utilizing the Exception process
- “IG” - Industry Guideline CR
- “MN” – CR for a manual workaround related to an OSS Interface Change Request
- “RG” - Regulatory CR
- “SC” - Change being implemented as an SCRCP request
- “X” - Crossover CR

While Qwest asserts the change request is due a mandate (“**FCC Triennial Review Order CC 01-338 (TRO), U.S. Court of Appeals for the DC Circuit decision (USTA II) Decision No. 00-1012, and FCC Interim Rules**”) there is no such designation provided. Covad continues to object in that Qwest is attempting to implement such changes based on its legal interpretation of the orders cited without basis (see attached).

### Attachment

Covad’s objections to SCR102704-1RG

1. There are a number of pending legal proceedings at the state and federal regulatory level that are addressing the legal issues surrounding access (whether under Section 251, Section 271 or state law) to most, if not all, of the elements listed on Qwest’s change request. At best, therefore, it is premature for Qwest to eliminate access rights unless and until there is a final, non-appealable order out of a regulatory or judicial body that clearly specifies the rights and obligations of Qwest and CLECs. At worst, it is absolutely inappropriate for Qwest to implement its **interpretation** of its legal rights and obligations through change management rather than in the appropriate legal venue.

Qwest’s interpretation (which benefits itself at the expense of CLECs and consumers) is not a substitute for, or anywhere near the same as, a final, binding order of a federal or judicial body. Qwest’s attempt to implements its **interpretation** is nothing more than a shameless backdoor attempt to evade its legal obligations, particularly when the purpose of change management is to provide the “means to address changes that support or affect pre-ordering, ordering/provisioning, maintenance/repair and billing capabilities and associated documentation and production support issues for local services (local exchange services) provided by Competitive Local Exchange Carriers (CLECs) to their end users” and not to debate legal issues.

Further, it is clear within the CMP document itself that any and all legal issues surrounding access, as expressed in interconnection agreements, should be addressed within those agreements and not within CMP. As the scope of the CMP makes clear,

[i]n cases of conflict between the changes implemented through this CMP and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), **the rates, terms and conditions of such interconnection**

**agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement. In addition, if changes implemented through this CMP do not necessarily present a direct conflict with a CLEC interconnection agreement, but would abridge or expand the rights of a party to such agreement, the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such agreement.**

2. Despite recognizing that many, if not all, of the elements may continue to be available to CLECs under their current interconnection agreements, Qwest seeks to wholly eliminate access via CMP. In effect, therefore, while paying lip service to access requirements that are clearly in place, Qwest nonetheless is trying to deprive all CLECs of access to all of the listed elements (regardless of whether such elements are in their current IAs). At the very least, Qwest's desire to implement systems changes presumably designed to eliminate all together the ability to order the elements listed will ensure the ordering and provisioning of elements available to a CLEC under its current IA are fraught with problems and delay, which is anti-competitive and inappropriate. Qwest's action of eliminating all access while admitting that at least some CLECs continue to have access is tantamount to swatting a fly with a sledgehammer.
3. The CMP clearly specifies that "regulatory changes" are changes that are affirmatively required by the applicable regulatory or judicial body. Contrary to Qwest's assumptions, there is nothing in the TRO, USTA II or the Interim Rules that requires the elimination of access to all of the elements Qwest has listed in its CR. To the contrary, for example, the Interim Rules actually requires access to at least three of the elements on Qwest's list of elements for which it wants to eliminate access. Absent such an affirmative requirement that access not be provided, Qwest has failed to demonstrate that its desired changes are actually mandated changes as defined and understood in the governing CMP document.
4. Qwest has failed to comply with the procedural requirements surrounding submission of a regulatory CR. The governing CMP document requires specific page and paragraph references. Qwest's CR lacks this specification and thus is faulty and must be withdrawn per the agreed-upon CMP requirements for regulatory CRs and CRs generally.

**Business Need and Impact:**

That Qwest withdraw the proposed change request until a specific mandate is issued.

**Desired CLEC Resolution:**

Qwest resolve legal interpretation issues outside of CMP. Covad requests change request be withdrawn.

**ESCALATION #PC102704-1E32**

November 16, 2004

Liz Balvin  
Covad Communications

Dear Ms. Balvin,

This letter is in response to your November 8, 2004 escalation regarding Qwest's submitted CR PC102704-1 and Covad's request that Qwest withdraw the change request.

Qwest would like to note the scope of the change request was revised on November 10, 2004 to incorporate only those products specifically addressed by the USTA II Decision and the FCC Interim rules. These changes were communicated via notification CMPR.11.10.04.F.02294.Revision\_CR\_PC102704-1ES.

In response to Covad's objections which are provided in detail in Escalation #32, Qwest emphasizes that the CR is not superceding the language in the CLEC ICA. If the language in the current ICA allows the CLEC to order the products, the CLEC will be permitted to continue to order at this time. This change request is instead advising CLECs who don't have this language in their ICA or who don't currently have an ICA that they cannot seek an amendment or ICA with language for these products on a prospective basis. Further, there are no related system changes to impact a CLEC ordering what is available to them in their ICA. As this is a change to limit the availability of certain products only, Qwest believes this is a Level 4 change and belongs in CMP.

As stated in notification CMPR11.04.04.F.02273.Regulatory\_CR\_FCC\_Interim, and cited by Covad in their escalation, Qwest maintains and does not waive its position that the regulatory classification of the CR is appropriate. Qwest revised the CR to remove the regulatory classification. Further, TRO and Non-USTA II items were included in the original CR prematurely. As USTA II is law Qwest intends to exercise the rights afforded to it by the USTA II decision regarding the elimination of the items impacted by that decision.

Qwest believes that because the classification of the CR is no longer regulatory, the issues associated with specific page and paragraph reference required for a Regulatory CR no longer apply.

Hopefully these clarifications will resolve all of Covad's issues. If not, Qwest is committed to continue to work with Covad to resolve these issues.

Sincerely,

Bill Campbell  
Director – Product Management

**Owner:** Buckmaster, Cindy  
**CR PM:** Macy, Cindy

## Description Of Change

Description of Change:

This CR will be implemented as a product/process CR as there are no CLEC facing system changes.

Description of Change:

This CR details changes to availability of certain Unbundled Network Elements (UNE) products pursuant to the U.S. Court of Appeals for the DC Circuit decision 00-1012 (USTA II) which vacated some of the FCC's unbundling rules, and the subsequent FCC Interim Rules which preserved some of the unbundling rules vacated in USTA II.

In accordance with these orders and findings, the following UNE products are no longer available to CLECs unless the most current, effective version of the CLEC's Interconnection Agreement (ICA) or Amendment includes terms, conditions, and pricing for the products before 6/15/04:

- All Enterprise and Mass Market Unbundled Network Elements Switching (UBS) products, detailed in the following Product Catalog (PCAT): <http://www.qwest.com/wholesale/pcat/unswitch.html>
- All Enterprise and Mass Market Unbundled Network Elements-Platform (UNE-P) products, detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/unep.html>
- DS1 Unbundled Loop detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/unloopds1caploop.html>
- DS3 Unbundled Loop detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/unloopds3caploop.html>
- Unbundled Dark Fiber (UDF), including E-UDF and Meet-Point UDF, detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/darkfiber.html>
- DS1 and DS3 Unbundled Dedicated Interoffice Transport (UDIT), including E-UDIT and M-UDIT, detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/udit.html>
- DS1 and DS3 Enhanced Extended Loop (EEL) detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/eel.html>
- Unbundled Customer Controlled Rearrangement Element (UCCRE) detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/uccre.html>
- DS1 and DS3 Loop Mux Combo detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/lmc.html>

As always, any future changes of law may impact this notification and will be supported by the applicable notification.

Expected Deliverables/Proposed Implementation Date (if applicable):  
Retroactive to 6/15/04 pursuant to FCC Interim Rules, subject to CMP Guidelines.  
Implement PCAT changes retroactive to 6-15-04 subject to CMP Guidelines

## *Project Meetings*

### December CMP Meeting Minutes

Cindy Buckmaster – Qwest advised that we have suggested an Oversight Committee meeting be held. Qwest has scheduled the meeting for December 20 at 1:00 p.m. MT. Liz Balvin – Covad advised that Qwest continues to site law without issuing the CR as Regulatory. Covad believes system edits are in place to not allow CLECs to order products not available. If Qwest sites legal interpretation of law the page and paragraph must be included. Covad is not saying that CMP is or isn't the right forum, but Qwest is trying to make a unilateral decision and we do not know what law Qwest is citing. Qwest doesn't believe the CLECs need to know what page and paragraph are referenced, as the CMP document states. It was agreed more discussion would take place at the Oversight meeting. This CR will move to Development Status.

---

### 11/17/04 November meeting minutes

Cindy Buckmaster – Qwest stated that this CR has drawn quite a bit of attention. Qwest would like to clarify the intent of the CR. Cindy advised that we are having an ad hoc meeting on Friday, November 19 to review the documentation and take issues. Qwest apologizes for the confusion as we issued the CR two times. The CR was modified to clarify the scope to include USTA II and FCC Interim Rules. Cindy Buckmaster advised that CLECs who have language in their ICA can continue to order these products and CLEC who do not have language in their ICA can not order the products nor amend their ICA to include such language. Cindy listed the products affected. Josh Theriot – TelWest asked what if a CLEC opts into an existing contract? Cindy Buckmaster – Qwest advised that you are permitted with the exception of the elements cited. David Mittle – TelWest questioned without signing a TRO USTA II agreement a CLEC can opt into a contract?

David advised that Qwest Regulatory has said CLECs can not do this. Cindy Buckmaster – Qwest said that the contract would be modified as it has to be TRO and USTA II compliant. Liz Balvin – Covad advised that we continue to object that Qwest bring (insert comment from Covad / Eschelon) to CMP its legal interpretation. Liz advised that Qwest is using ad hoc meetings to gain insight into the CLECs view of the law and it is inappropriate (end comment). Cindy Buckmaster – Qwest advised this has nothing to do with Qwest telling our interpretation of the law. This is in CMP to advise about a product that is being limited. Liz Balvin – Covad stated that this is more than a product being discontinued. In addition, Qwest can not cite the law and then not call it a Regulatory CR. There are legal means to negotiate agreements. Cindy Buckmaster advised this CR was initially a Regulatory CR and it was opposed. That is why we changed it to a Product Process CR. We are only telling you that you can't have the product if you don't have it in your contract. Liz Balvin – Covad advised the reason they objected to the Regulatory classification is that Qwest didn't cite the page and paragraph. Qwest is still citing the law, (insert comment from Covad/Eschelon) not calling it a regulated changed and that is still out of scope for CMP. Liz advised that Qwest should have followed CMP governing document and not simply converted the systems CR to product and process, that the objections should have been addressed and if agreed to by the community, the CR would have 'crossed over' to product and process. Qwest is trying to manipulate the CMP process to fit their needs. Liz advised that it is inappropriate for Qwest to host an ad hoc meeting. Without following the CMP governing documentation, Qwest is asserting its legal interpretation, and that is the problem (end comment) This should be handled through arbitration of contracts. Cindy Buckmaster restated that if you do not have the products in your contract you can not order them. Qwest does not have an obligation to offer this. David Mittle – TelWest said it is not important to me what Qwest's interpretation is. It should be arbitrated and not unilaterally implemented by Qwest. Cindy Buckmaster – summarized and clarified the discussion - if Qwest sites the page and paragraph, and why it is the law, and if we come to agreement on the language in the CR, than we can move it forward in CMP. Bonnie Johnson – Eschelon said whether or not we agree on the language, this should not be discussed in CMP. We do not discuss legal interpretation in CMP. This should be done in a different forum. Liz Balvin –Covad stated that this is an ICA negotiation discussion. David Mittle – TelWest stated that he still has a concern with how we are treating CLECs without an existing ICA and that they can not opt into existing ICAs. I think the interpretation is wrong and CLECs should be able to do this. Qwest agreed to cancel the November 19 ad hoc meeting and review the CR and provide additional information at a later date.

**Subject:** RE: Product Notice: TRRO: GN: TRRO EEL LMC UBL-DS1: Effective 9-1-06  
Kim,

Qwest and the CLECs discussed the TRRO and related TRRO PCATs in CMP with Change Request PC102704-1ES. From those discussions it was agreed that until such time that the TRRO related issues were finalized that all of the TRRO processes and issues would be deferred from a CMP perspective. At the point in time when the state commission proceedings have concluded, Qwest will bring PC102704-1ES back to an active status in CMP and will initiate the appropriate process and PCAT updates associated with the existing CMP related documentation at that time.

**Subject:** Product Notice: TRRO: GN: TRRO PCAT with CSIE Updates: Effective 5-1-06

Kim,

This notice is associated to the overall organizational change that was distributed on March 27, 2006. Please review PROS.03.27.06.F.03801.CSIE\_Contact\_Information and PROD.03.27.06.F.03803.PROD\_PCAT\_CSIE\_Update.

As agreed to at CMP, the PCATs/Business Procedures associated specifically to TRRO are handled outside the scope of CMP until such time that there is an approved SGAT, which is why the change was noticed as a non-CMP document. As we researched your concern, we determined that we should have included the reference in the notice that was sent through the non-CMP process so the overlying notices were related and we will add that reference as applicable to the TRRO notices in the future.

Jean

Hello Bonnie,

I wanted to clarify that Qwest did send an additional notice on this subject as a result of customer feedback. The notice provided information that the documentation will be made available to the full customer community. Please see the following notice for additional information.  
PROS.09.29.05.F.03322.TRRO\_USRID\_Password.

Because this is a non CMP notice, if you have additional questions please contact your Service Manager.

Thank you,  
Cindy Harlan

**Subject:** Eschelon Objects to Process Notice: General: GN: Triennial Review Remand Order (TRRO) Products & Services Login: Effective 10-3-05 (CH)

Eschelon objects to these documents which Qwest calls PCATs. Eschelon objects to Qwest sending the documents as confidential and requiring a password. Eschelon made objections through ICA negotiations, however, Eschelon also wants to make this clear through CMP.

If Qwest desires any such terms in its dealings with Eschelon, Qwest needs to propose them in ICA negotiations.

**Subject:** RE: "TRRO" PCAT Reclassification of Terminations - Continuing Request for Section 251/252 negotiations and Questions to Qwest/CMP

Qwest did respond to your email: I have copied below my original response to your email re: the initial Qwest notice re: collocation reclassifications.

Again, there is no reason to schedule a meeting to negotiate process issues. Qwest has continually maintained its position that the level of process Eschelon is seeking is best managed through CMP. Until such time as the wire center hearings are completed there is not a scheduled date for CMP TRO/TRRO process. For CLECs that are TRO/TRRO compliant it is necessary to have a means that will allow CLECs and Qwest to be complinat. As you are aware, at this time, these processes are being handled outside of CMP. Upon conclusion of the wire center hearings Qwest will pursue CMP activities to establish CMP processes for TRO/TRRO.

This second notice on reclassification changes the 45 days to 15 days. It was an item I addressed based on Eschelon's stated concerns in its email.

Jean, Joshua, or Jason are not likely to have any further comment than what I have provided.

For your convenience my previous response:

Karen: My response to your August 14<sup>th</sup> email re: a proposed meeting to negotiate TRRO processes.

Qwest remains consistent in its position that process issues are best served by CMP.

Qwest made a good faith effort to respond to Eschelon's questions on the Qwest PCAT notice.

As shared with you in my previous response, The PCAT notice regarding collocation terminations was recently released based on experience with live conversions by TRO/TRRO compliant CLECs.

The negotiations team did do its research during our discussions end of year 2005 and during early 2006. The SMEs had no awareness of this process issue at the time of these discussions. Eschelon is mistaken, if the SMEs had been present during our discussions, the Qwest answers would have been the same at that particular time.

Qwest has no better explanation than what has been provided.

Inverse Augment is the Qwest term for reverse process. Eschelon has previously agreed it is familiar with special access to UNE conversions; the inverse augment process (the reverse) UNEs to special access is the opposite. As I shared in my original response, until recently, based on live conversion activity, there was no anticipated change to the process. Based on live experience with CLECs who are currently TRO/TRRO compliant it became apparent that a process change was needed to cease monthly billing on the UNE collocation terminations.

Eschelon was notified in the same manner as all other CLECs. Eschelon brought the notice to my attention and I responded appropriately.

Qwest has reopened the issues as requested by Eschelon 9-43 and 9-44. Qwest's response remains the same as previously provided in negotiations and as shown in the most recent matrix.

If the intent of the call is to negotiate process issues, Qwest sees no reason to have a call. Process issues are to be addressed via CMP as it impacts all CLECs. This is a TRO/TRRO process. Qwest encourages Eschelon to submit its concerns and future questions specific to this topic to its wholesale service manager as directed in the notice or to CMP.

**Subject:** RE: "TRRO" PCAT Reclassification of Terminations - Continuing Request for Section 251/252 negotiations and Questions to Qwest/CMP (MC)

Kathy/Josh/Jean/Mark/Jason/Qwest:

Qwest has not responded to our email below. What is Qwest's response?

Though Qwest has not responded to Eschelon's email, Qwest has in the meantime issued another NON-CMP notice relating to this issue ("TRRO Reclassification of Terminations V2.0: Effective September 7, 2006; announcement date August 31, 2006). Eschelon also objects to this notice. The notice is ambiguous and raises more questions than it answers. Given that Qwest has once again elected to send its notification outside of CMP, is this Qwest's indirect way of saying no to our questions to CMP/Qwest below ("Specifically, will Qwest address these issues now in CMP? If so, will Qwest resubmit its non-CMP notice through CMP as a Level 4 CR and ensure that, per CMP process, it does not take effect before going through CMP?"). We would appreciate a direct response. Please let us know.

As indicated, our request for Section 251/252 negotiations on this issue is continuing.

Thanks,  
Karen

**Subject:** RE: "TRRO" PCAT Reclassification of Terminations V1.0: Effective 7-28-06 - Request for Section 251/252 negotiations

Kathy/Josh/Jean/Mark/Qwest:

With respect to the paragraph below (copied from your enclosed document received today), it appears that Qwest is refusing to negotiate these issues in Section 251/252 negotiations. If you will not negotiate them, we have insufficient information to craft language. The information you provided in your short written response is sketchy, and we have specifically requested Subject Matter Experts in negotiations to provide us with needed information. If that is not the case, please let us know your availability for a call, if the date we suggested is not convenient.

In response to the last sentence of the paragraph below, I have also addressed this email request to our Qwest service manager, as well as the Qwest CMP manager, on this email so they can respond. Specifically, will Qwest address these issues now in CMP? If so, will Qwest resubmit its non-CMP notice through CMP as a Level 4 CR and ensure that, per CMP process, it does not take effect before going through CMP? Obviously, the fact that Qwest has issued its notice, with an effective date of July 28, 2006, outside of CMP indicates that Qwest is not willing to address this issue in CMP. If it really believed the issue belonged in CMP, it would have initially sent its notice through CMP.

It remains Eschelon's position that these issues are subject to 251/252 ICA negotiations and our request to negotiate them is ongoing. It is also our understanding that Qwest will not address these issues in CMP, as reflected by the fact that Qwest has already implemented its non-CMP "TRRO PCAT" outside of CMP. If it does not revoke that non-CMP notice (enclosed) and issue a CR, then its own position that these issues belong in CMP is belied by Qwest's implementation without using CMP.

From Qwest's 8/18/06 response (enclosed):

"If the intent of the call is to negotiate process issues, Qwest sees no reason to have a call. Process issues are to be addressed via CMP as it impacts all CLECs. This is a TRO/TRRO process. Qwest encourages Eschelon to submit its concerns and future questions specific to this topic to its wholesale service manager as directed in the notice or to CMP. "

Thanks ,  
Karen

**Subject:** FW: "TRRO" PCAT Reclassification of Terminations V1.0: Effective 7-28-06 - Request for Section 251/252 negotiations

**Importance:** High

Kathy/Qwest:

Eschelon will review the information you have provided. In your enclosed response, you said you understand that Eschelon has requested a call to discuss the enclosed Qwest notification relating to reclassification of terminations. While that notice will be discussed, Eschelon has asked Qwest to negotiate contract language in good faith pursuant to Sections 251 and 252, and not just to discuss the Qwest notice. In its 8/3/06 email (below), Eschelon said: "Eschelon asks Qwest to negotiate with Eschelon regarding the terms of conversions, including the terms that Qwest describes in the enclosed notice and "TRRO PCAT.""

During previous negotiations relating to conversions, including those requested by Eschelon in January of this year, Eschelon asked to negotiate the very types of issues that Qwest now claims it has only recently become aware of. If Qwest had provided the Subject Matter Experts (SMEs) requested by Eschelon and negotiated with us then, it is unlikely that we would be learning of this very different information only now. Qwest told us affirmatively in negotiations that the ONLY difference between conversions from special access to UNEs and the reverse would be that the circuit ID would change. We believe that Qwest had a duty to research that answer before providing it. We believe Qwest owes us a better explanation of why the answer has changed, and why Qwest did not come back to us in negotiations and correct the information it previously provided in negotiations, particularly in a timely manner that would have allowed us to address this for the arbitration petition and issues matrix.

With respect to the timing of the negotiations, in its 8/3/06 email (below), Eschelon proposed negotiations on August 8th or 9th. Qwest has responded with August 16th. Unfortunately, that date does not work for Eschelon. Eschelon proposes August 30 or 31 for negotiations. 10am to 11:30am central time would work on either day. Please have subject matter experts on the call, including those involved in conversions where this has arisen. Your document does not describe "Inverse Augment process," for example, nor does it explain why the "question regarding discontinuation of billing never arose" or why it would have to arise in the future if it didn't then. Qwest was able to terminate billing for special access when special access went to UNEs, and Qwest said in negotiations that the process would be the same going the other way. Why wasn't the information Qwest provided accurate? The enclosed Qwest responses need clarification, and we request that Qwest SMEs be available to answer them on the call. Given the timing, this will address more issues in less time than Qwest listing take backs and getting back to us later. The lateness of this notice will prevent full discussion in the direct testimony but we will have to include updates in the reply testimony after negotiations.

Please let us know which date (30th or 31st) works for Qwest's schedule for these negotiations. Thanks,

Karen

**Subject:** FW: TRRO PCAT FW: Process Notice: TRRO: GN: TRRO - Reclassification of Terminations V1.0: Effective 7-28-06

**Importance:** High

Qwest:

It has come to my attention that Qwest has sent a letter to CLECs with new "TRRO PCAT" effective 7/28/06 (see enclosures). The letter and "TRRO PCAT" provide insufficient information to determine what Qwest intends. The terms do, however, appear to be quite bad and potentially end user customer impacting. They relate to issues that we have discussed in the negotiations relating to collocation, APOTs, conversions, etc. For the lengthy time during which Eschelon and Qwest have negotiated such terms and the TRO and TRRO issues, Qwest never disclosed these new terms to Eschelon. Qwest didn't even raise these issues in the wire center proceedings, where conversions are being discussed. In those proceedings, Qwest disclosed the intent to change circuit IDs but not the intent to change APOTs. Importantly, Eschelon did not know of these terms when indicating that it would close issues 9-43 and 9-44 and subparts. At least until these issues can be discussed and negotiated and perhaps other terms agreed upon, issues 9-43 and 9-44 and subparts are open in all 6 states. (See enclosed document with language. Both parties' position statements for these issues are in the the filed MN issues matrix, except for one additional one, and that is enclosed.) Please update the ICA document and WA matrix accordingly. Though the parties' language and position may change, the deadline for finalizing these documents requires that we use these materials for now for purposes of finalizing the documents.

Eschelon asks Qwest to negotiate with Eschelon regarding the terms of conversions, including the terms that Qwest describes in the enclosed notice and "TRRO PCAT." To facilitate discussions and help develop appropriate language, we would like to discuss, for example, the issues set forth in the enclosed list of questions. To the extent that Qwest, including its negotiations team and/or service management team, can provide any answers in writing before negotiations, that will help us prepare. We are available to discuss on Tuesday or Wednesday of next week (e.g., at the previous negotiations times). Please let us know if those times work for you or when Qwest is available for negotiations on this issue.

Qwest TRRO PCAT states: "TRRO - Reclassification of Terminations for UNE Conversions is a procedure that is needed when you are converting UNE Services to Finished Services in Non-Impaired Central Offices as required by the TRRO" It says:

On July 21, 2006, Qwest is providing notification of planned updates to the Wholesale Product Catalog that include new/revised documentation for TRRO - Reclassification of Terminations for Unbundled Network Element (UNE) Conversions. You will find a copy of the new PCAT on the Customer Notification Letter Archive at <http://www.qwest.com/wholesale/notices/cnla/>. This material becomes effective on July 28, 2006.

A new PCAT is being introduced which provides documentation not previously documented for TRRO - Reclassification of Terminations for Unbundled Network Element (UNE) Conversions to assist CLECs who have signed the TRRO Amendment.

### REBUTTAL TESTIMONY OF KAREN STEWART

(Disputed Issue Nos. 4-5 (a,b,c), 9-31, 9-32, 9-33, 9-34, 9-35, 9-36, 9-39, 9-50, 9-52, 9-53, 9-54, 9-54a, 9-55, 9-56, 9-56a, 9-58, 9-58 (a,b,c,d,e), 9-59, 9-61,(a,b,c), 24-92.)

SEPTEMBER 22, 2006

PUBLIC DOCUMENT

TRADE SECRET DATA  
HAS BEEN EXCISED

1 *Review Remand Order.* There are, therefore, network elements and services in  
2 the SGAT that Qwest has no obligation to provide under Section 251.  
3 Conversely, there are new requirements that benefit CLECs -- such as allowing  
4 commingled arrangements -- that are not included in the SGAT.

5 **Q. DO QWEST AND CLECS STILL USE QWEST'S SGATS AS A**  
6 **FOUNDATION FOR THEIR NEGOTIATIONS?**

7 A. Typically not. CLECs now have multiple other options available to them. These  
8 options include other carriers' ICAs that CLECs are able to opt into and also  
9 Qwest's multi-state "Template Agreement." The Template Agreement is based on  
10 the individual states' SGATs. It includes state-specific language and has been  
11 modified to reflect and incorporate changes in law. The Template Agreement is  
12 the underlying agreement that Qwest and CLECs typically use as the base  
13 document for their negotiations. Because of the effectiveness and utility of the  
14 Template Agreement, Qwest stopped updating its SGATs. Indeed, the SGATs  
15 have not been updated to incorporate changes in law since 2003 and are therefore  
16 outdated documents. The regulatory process for modifying and updating SGATs  
17 is very time consuming and resource-intensive. With the other options available  
18 to CLECs, there has not been a need to go through this process and to expend the  
19 significant resources that would be required. Moreover, due to the FCC's  
20 elimination of the "pick-and-choose" rule and its move to the "all-or-nothing"  
21 rule, as discussed below, CLECs are much less likely to opt into a standard SGAT  
22 when ICAs have become increasingly more tailored to CLECs. This tailoring has  
23 increased as CLECs have shaped their businesses to have a specialized focus,  
24 which is often necessary to survive in today's highly competitive  
25 telecommunications markets.

26 **Q. EVEN IF QWEST HAD BEEN UPDATING ITS SGAT, WOULD IT BE**  
27 **APPROPRIATE FOR ESCHELON TO REQUEST THAT INDIVIDUAL**

**Effective Date:** November 16, 2006  
**Document Number:** PROS.11.15.06.F.04322.MultLangChangeforSGATs  
**Notification Category:** Process Notification  
**Target Audience:** CLECs, Resellers  
**Subject:** CMP – Getting Started as a CLEC V21  
Getting Started as a Reseller V12  
Interconnection Agreements V74  
Interconnection Negotiations Process V12  
Provisions Available for Opt In V12  
New Customer Questionnaires V32

**Level of Change:** Level 1

**Summary of Change:**

On November 16, 2006, Qwest will post updates to its Wholesale Product Catalog that include corrections, clarifications and additional information for Getting Started as a CLEC V21, Getting Started as a Reseller V12, Interconnection Agreements V74, Interconnection Negotiations Process V12, Provisions Available for Opt In V12, and New Customer Questionnaires V32 . You will find a redlined version of the changes on the Product/Process Document Review Archive at [http://www.qwest.com/wholesale/cmp/review\\_archive.html](http://www.qwest.com/wholesale/cmp/review_archive.html).

Qwest is updating the mentioned documents to provide additional information and clarification that does not change the process. The references to the SGATs and Exhibits and applicable language changes are being made. The SGATs are no longer available to opt into and have been replaced with the Negotiations Template Agreement (NTA).

Actual updates to the operational documents are found on the Qwest Wholesale Web Site at these URLs:

[http://www.qwest.com/wholesale/clecs/clec\\_index.html](http://www.qwest.com/wholesale/clecs/clec_index.html)  
[http://www.qwest.com/wholesale/clecs/reseller\\_index.html](http://www.qwest.com/wholesale/clecs/reseller_index.html)

<http://www.qwest.com/wholesale/clecs/provisionoptin.html>  
<http://www.qwest.com/wholesale/clecs/newcustquestionnaire.html>

**Comment Cycle:**

No formal comment cycle applies. CLECs who feel the change(s) described in this Level 1 notification alter(s) CLEC operating procedures should immediately contact the Qwest CMP Manager, by e-mail, at [cmpcr@qwest.com](mailto:cmpcr@qwest.com).

Sincerely

## Qwest Corporation

Note: In cases of conflict between the changes implemented through this notification and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. All information provided on the site describes current activities and process. Prior to any modifications to existing activities or processes described on the web site, wholesale customers will receive written notification announcing the upcoming change.

**November 15, 2006**

**Announcement Date:**  
**Effective Date:** November 16, 2006  
**Document Number:** PROS.11.15.06.F.04302.Amendments\_SGATs  
**Notification Category:** Process Notification  
**Target Audience:** CLECs, Resellers,  
**Subject:** Amendments SGATs

**Summary of Change:**

On November 16, 2006 Qwest will post updates to its Wholesale Product Catalog that include new/revised documentation for Amendments and SGATs. This material becomes effective on November 16, 2006.

Qwest is updating the following documents to remove the SGATs, Exhibits and language that pertains to the SGATs. The title of the web page will now become Negotiation Template Agreement. SGATs continue to be available as reference documents through the Quick Links located on the right side of the Wholesale web page.

**Amendments:**

- New Products and Services section – removed SGAT language
- New Products and Services Not in the Files SGATs title of section changed to Amendments for New Products and Services

**SGATs:**

- Title of document changed from SGATs (Wireline) to Negotiations Template Agreement (NTA)
- Interconnection Business section removed including the Dropdown and documents for the 14 state SGAT and Exhibits.
- Negotiations Template Agreement section – removed SGAT language
- Exhibit B by state and Exhibit K by state sections are added to include these Exhibits. These have not changed and remain as last published on the SGAT Interconnection Business section of this same document. Only the location within the document has changed.
- Resale Agreements and Exhibits - removed SGAT language and changed to NTA

Redline SGAT documents are found at URL: <http://www.qwest.com/about/policy/sgats/>

Actual updates are found on the Qwest Wholesale Web site at the following URLs:

<http://www.qwest.com/wholesale/clecs/amendments.html>

## Negotiations Template Agreement (NTA)

[History Log](#)

### Multi-state Negotiation Interconnection Agreement

Qwest Multi-state Negotiations Interconnection Agreement template is offered by Qwest as a baseline Agreement for negotiations between Qwest and CLECs entering into Agreements in multiple states. The Template is Qwest's offer to provide more consistent language across multiple states.

Select Negotiations Template Agreement

Where there is state specific language required, Qwest is indicating that ordered language from that state will be substituted in Agreements negotiated for that state. In many cases, state Commissions require that state specific language to be part of the Agreement. If you are not entering into an Agreement for those states, the statement does not apply.

**Qwest Non-Impaired Wired Center Lists for Loops and Dedicated Transport**

The FCC's Triennial Review Remand Order (TRRO), FCC 04-290 (WC Docket No. 04-313 and CC Docket No. 01-338) released February 4, 2005, modified the rules under which Qwest is required to offer DS1, DS3, and dark fiber loops and transport as Unbundled Network Elements (UNEs) pursuant to section 251(c)(3) of the Communications Act of 1934, as amended. The FCC found that CLECs are not impaired without DS1 and DS3 loops in wire centers that meet certain criteria, and they are not impaired without DS1, DS3, and dark fiber between wire centers that meet other criteria. See 47 U.S.C. §§ 51.319(a)(4) (DS1 loops), 51.319(a)(5) (DS3 loops), 51.319(e)(2)(ii) (dedicated DS1 transport), 51.319(e)(2)(iii) (dedicated DS3 transport), 51.319(e)(2)(iv) (dark fiber transport). CLECs are not impaired without dark fiber loops in any location. See 47 U.S.C. § 51.319(a)(6).

The attached lists identify those Qwest wire centers that meet the non-impairment criteria

established in the TRRO for DS1 and DS3 loops and DS1, DS3, and dark fiber transport.

**Originator:** Whitt, Michael

**Originator Company Name:** Qwest Corporation

**Owner:** Whitt, Michael

**Director:** Campbell, Bill

**CR PM:** Harlan, Cindy

**Description Of Change**

Description of Change:

This CR will be implemented as a product/process CR as there are no CLEC facing system changes.

**Product Availability**

This CR details changes to availability of certain Unbundled Network Elements (UNE) products pursuant to the FCC Report, Order on Remand, and Further Notice of Proposed Rulemaking, referred to as the "Triennial Review Order" (TRO) CC Docket 01-338, the subsequent U.S. Court of Appeals for the DC Circuit decision 00-1012 ('USTA II') which vacated some of the FCC's unbundling rules, and the FCC's Interim Rules, which preserved some of the unbundling rules vacated in USTA II.

In accordance with these orders and findings, the following UNE products are no longer available to CLECs unless the most current, effective version of CLEC's Interconnection Agreement (ICA) or Amendment includes terms, conditions, and pricing for the products before 6/15/04:

? All Enterprise and Mass Market Unbundled Network Elements Switching (UBS) products, detailed in the following Product Catalog (PCAT):  
<http://www.qwest.com/wholesale/pcat/unswitch.html>

? All Enterprise and Mass Market Unbundled Network Elements-Platform (UNE-P) products, detailed in the following PCAT:  
<http://www.qwest.com/wholesale/pcat/unep.html>

? Line Sharing detailed in the following PCAT:  
<http://www.qwest.com/wholesale/pcat/linesharing.html>

**Archived System CR SCR083005-01 Detail****Title: Implement Edits Related to TRRO (FCC 04-290)**

CR Number	Current Status Date	Level of Effort	Interface/ Release No.	Area Impacted	Products Impacted
SCR083005-01	Withdrawn 3/15/2006	1500 - 2000	IMA Common/	Ordering	UBL, EEL, LMC, DS1 & DS3 Loop and/or Transport

**Originator:** Hooper, Sami**Originator Company Name:** Qwest Corporation**Owner:** Hooper, Sami**Director:** Bliss, Susan**CR PM:** Esquibel-Reed, Peggy**Description Of Change**

This is a Regulatory Change Request.

The FCC's Triennial Review Remand Order (TRRO), FCC 04-290 (WC Docket No. 04-313 and CC Docket No. 01-338) released February 4, 2005, modified the rules under which Qwest is required to offer DS1 and DS3, loops and transport as Unbundled Network Elements (UNEs) pursuant to section 251(c)(3) of the Telecommunications Act of 1934, as amended. The FCC ordered impairment criteria impacts DS1 and DS3 loops and transport. Due to the volume of customers that have opted into the TRRO Amendment, Qwest needs to implement edits in those states, for those customer's, where a TRRO has been filed, in their states.

No new or conversion activity is allowed in non-impaired offices on Unbundled Loop, EEL, and Loop Mux Combination (LMC). DS1 and DS3 loops and/or transport will be identified by wire center where the requirements of full competition are met.

This CR will install an edit in IMA to reject requests for service in non-impaired offices on UBL, EEL, LMC, DS1 and DS3 loop and/or transport.

Additionally, on EEL and LMC the SPEC field on the LSR will be utilized to identify the request as EEL Loop, EEL Multiplexer, LMC Loop, or LMC Multiplexer. The product name in IMA for these products will be updated from EEL/UNE Combination to EEL/LMC to match the names in the product catalogs.

Expected Deliverable:

Requested Implementation is the IMA 19.0 Release, April 2006, due to the volume of customers that have opted into the TRRO Amendment, Qwest needs to implement edits in those states, for those customer's, where a TRRO has been filed, in their states.

## Project Meetings

March 15, 2006 Systems CMP Meeting Discussion: Jill Martain-Qwest stated that this CR had been out for awhile, is currently in deferred status, and stated that Qwest would now like to withdraw this CR. Jill stated that if Qwest determines, at a later date, that a system enhancement is needed, Qwest would issue another CR. This CR is in withdrawn status.

September 21, 2005 Systems CMP Meeting Discussion: Jill Martain/Qwest stated that based on other issues that are in progress, in and outside of CMP, Qwest will defer this CR and will remove the Regulatory (RG) classification. Jill stated that once the issues are resolved, the CR will be taken out of deferred status and we would have further discussions regarding this Change Request. Jill noted that there is no need for a vote to take place during the September Monthly CMP Meeting. There were no questions or comments. This CR is in Deferred Status.

-- September 8, 2005 Email Received from Covad: Covad objects to the "regulatory" classification of SCR083005-01. To preface, the CMP document clearly spells out the scope of regulatory CRs and the process for a regulatory designation and this change request does not meet those qualifications. In addition, Covad believes a regulatory designation is inappropriate due to the following:

(a) Currently, Qwest is obligated to provision all orders for services out of arguably unimpaired COs so edits attempting to prevent ordering out of COs Qwest has unilaterally designates as unimpaired is impermissible;

(b) the good faith, self-certification requirement imposed by the TRRO for ordering should accommodate any concerns Qwest may have regarding orders placed out of arguably unimpaired COs; and (c) since Qwest, to date, has made it impossible for any CLEC or state commission to validate whether a CO is unimpaired further reinforces that the only legitimate way to accommodate arguable changes of law resulting from the TRRO is the self-certification process.

Since Covad has not yet executed the TRRO amendment, and since Qwest has not articulated any legitimate reason for using system edits versus the self-certification process, Covad believes that Qwest may not permissibly use any system edits for orders placed by Covad. Thanks, Liz Balvin Covad Communications

September 6, 2005 Email Received from Eschelon: Eschelon objects to the classification of this CR as a Regulatory CR. Qwest's CR is response to freely negotiated amendments. These were negotiated without arbitration. Qwest was not ordered to limit its product availability and could do more. The FCC sets out a minimum. In addition, this change is contrary to the FCC's self certification process. Under that process, Qwest cannot reject an order when the CLEC self certifies. If Qwest and other CLEC's have agreed

to a different process that is voluntary and does not support a Regulatory CR. Eschelon understands that the changes apply only to certain customers that signed the TRO amendment., therefore, the edits/changes, in any event, will not apply to Eschelon or ATI. Bonnie J. Johnson Director Carrier Relations Eschelon Telecom, Inc.

Eschelon/69  
Johnson/  
3

September 1, 2005 Email Received from AT&T: AT&T objects to the treatment of the Qwest-originated change request SCR083005-01RG as a Regulatory Change pursuant to the Change Management Process. Section 4.1 defines a regulatory change: 4.1 Regulatory Change A Regulatory Change is mandated by regulatory or legal entities, such as the Federal Communications Commission (FCC), a state commission/authority, or state and federal courts. Regulatory changes are not voluntary but are requisite to comply with newly passed legislation, regulatory requirements, or court rulings. Either the CLEC or Qwest may originate the Change Request. The definition states that the "Regulatory changes are not voluntary but are requisite to comply with newly passed legislation, regulatory requirements, or court rulings." The FCC's Triennial Review Remand Order Qwest referenced in Qwest's CR simply relieved Qwest of certain obligations under federal law. That ruling did not mandate that Qwest no longer provide the products and services relating to those obligations. Qwest has voluntarily chosen to cease providing these services. As such, this Qwest CR does not qualify as a Regulatory Change under the CMP. If Qwest wishes to pursue these changes, Qwest's CR must be treated as any other systems CR. Sharon Van Meter AT&T Western Region GAM 303-699-6483 303-540-1637 (pager)

September 1, 2005 Clarification: Introduction of Attendees: Sami Hooper-Qwest, Jill Martain-Qwest, Peggy Esquibel Reed-Qwest

Review Requested (Description of) Change: Peggy Esquibel Reed-Qwest reviewed the CR and asked if there was additional information. Sami Hooper-Qwest stated that there is no additional information.

Confirmed Impacted Area(s): Peggy Esquibel Reed-Qwest confirmed that this request is for Ordering.

Confirmed Impacted Interfaces: Peggy Esquibel Reed-Qwest confirmed that this is an impact to IMA Common.

Confirmed Impacted Products: Peggy Esquibel Reed-Qwest confirmed the impacted products UBL, EEL, LMC, DS1 & DS3 Loop and/or Transport.

Establish Action Plan & Resolution Time Frame: Peggy Esquibel Reed-Qwest stated that Sami will present this CR at the September 21, 2005 Systems CMP Meeting. Peggy then noted that the Regulatory Notice was sent on 8/31 and that the deadline for objections, for the Regulatory classification, is 5:00 p.m. MT, September 8th.

**1-877-572-8687, Conference ID 3393947#**  
**2:00 p.m. – 3:00 p.m. Mountain Time**

**PURPOSE**

This was a meeting of the CMP Oversight Committee to review an issue submitted to the committee on 11/30/04 by Liz Balvin of Covad. The following is the write-up of the discussion.

**List of Attendees:**

Jen Arnold – TDS Metrocom/U S Link  
Liz Balvin – Covad  
Becky Quintana – Colorado PUC  
Bonnie Johnson – Eschelon  
Kim Isaacs - Eschelon  
Sharon Van Meter – AT&T  
Kathy Stichter – Eschelon  
Doug Denny – Eschelon  
Amanda Silva – VCI  
Jeff Sonnier – Sprint  
Susie Bliss - Qwest  
Susan Lorence – Qwest  
Cindy Buckmaster – Qwest  
Bill Campbell – Qwest  
Cindy Macy – Qwest  
Jill Martain – Qwest  
Linda Sanchez-Steinke – Qwest

**MEETING MINUTES**

The meeting began with Qwest making introductions.

Linda Sanchez-Steinke of Qwest reviewed the issue Covad submitted to Oversight on 11/30/04. Linda read from the Description of the Issue; Qwest inappropriate use of CMP to drive legal interpretation of the Law, and the desired resolution; the proposed changes (PC102704-1ES) be withdrawn until Qwest can properly follow the CMP governing document. Qwest responded on 12/10/04 requesting that Oversight meet to discuss how to move forward with the Change Request.

Liz Balvin reviewed the history of the issue and stated Covad's position that the biggest issue is Qwest is out of scope of CMP. She stated that the first problem is that the Systems CR SCR102704-1RG was identified as Regulatory and did not follow the process of referencing the page and paragraph and called into question the law or mandate. The second problem is that six CLECs objected to the regulatory classification of the CR and the objections should have been addressed. The CR was then converted to Product / Process, the regulatory classification removed, and Qwest did not follow the crossover guidelines. Qwest's binding response to the Covad escalation continued to assert that Product / Process is not the correct category and it is a regulatory CR. Qwest has been out of scope of CMP for this CR. [Comment received from Covad: Qwest's binding response to the Covad escalation continued to base decision on USTA II and FCC interim rules but not call regulatory. Qwest has been out of scope of CMP for this CR.]

Susie Bliss of Qwest stated Qwest's position was when objections to the regulatory classification were received, the regulatory definition in CMP did not fit. There was not unanimous agreement that the CR was regulatory. Section 5.1.1 states that if there is not unanimous agreement then the CR will be treated as non-regulatory. PCAT changes

need to be made and when PCAT changes are made, Qwest is obligated to notify the CLECs by following 5.4.5 limiting the product availability. Qwest proceeded as a Product / Process Level 4 change.

Liz Balvin and Susie Bliss discussed the concern that CLECs were not given a chance to discuss the CR and whether Qwest was limiting or restricting availability of products. [Comment received from Covad: Liz Balvin stated that CLECs were not given the opportunity to iron out whether the CR should have been categorized as regulatory. Susie Bliss indicated that Qwest has the right to limit the availability of products based on the CMP document. Liz Balvin stated that Qwest is not limiting, but restricting products that other carriers continue to be able to purchase.]

Bonnie Johnson of Eschelon stated that Qwest can not make a decision as a company and not allow the customer to order the product any longer. It is required to provide the basis under which the product is removed.

Bill Campbell of Qwest, Liz Balvin, Bonnie Johnson and Susie Bliss discussed resolving the issue by providing the USTA II document and identifying for each product the page and paragraph reference.

Liz Balvin and Bonnie Johnson were concerned that CMP process has not been followed, and stated the CR is lacking the steps required. Susie Bliss asked if citing the paragraph would resolve. Liz recalled that the CMP document was written to address regulatory CRs and that Qwest tried to remove the regulatory classification and page and paragraph of law should be provided to move forward with the change.

Cindy Buckmaster of Qwest restated Liz's position; Covad does not want the Regulatory classification removed, but instead would like Qwest to add the page and paragraph. [Comment received from Covad: Cindy Buckmaster of Qwest asked to restate Liz's (Covad's) position; does Covad want the Regulatory classification removed or Qwest to cite add the page and paragraph. Liz's stated that Qwest continues to call into question the law but not want to cite page and paragraph, there is a difference.] Further discussion ensued between Liz Balvin and Cindy Buckmaster whether appropriate to revise the CR or leave the CR as is currently. Susan Lorence of Qwest added that when grandparenting products, the CRs remove the product availability.

Liz Balvin felt that Qwest has called into question the law and has jerry rigged the CMP process to meet Qwest's needs because there are system edits in place to restrict ordering the products. [Comment received from Covad: products and that the notifications, even level 4 notices carry the clause that IA supercede PCAT documents.]

Becky Quintana of the Colorado PUC asked if Liz's issue was there is not a way the CR can be categorized as a regulatory CR. Liz Balvin responded that Qwest has called into question the law and should follow the CMP guidelines and provide page and paragraph. Becky Quintana stated that if Qwest withdraws the CR and then re-submits the CR as regulatory it is not clear how the CLECs could object.

Sharon Van Meter of AT&T stated AT&T had objected to the regulatory classification and read the AT&T attorney position. Cindy Buckmaster interjected that this is the very objection that resulted in Qwest removing Regulatory classification from the CR. A number of CLECs objected on this basis and that is where Qwest took its action from. Liz indicated that may have been some CLEC prematurely showing part of their hand but she didn't see these remarks nor a response from Qwest on these remarks and therefore didn't know Qwest had this information.

Bonnie Johnson, Bill Campbell and Cindy Buckmaster discussed that a regulatory classification means Qwest can not (by law) provide the product and a non-regulatory classification means that Qwest does not have an obligation to and chooses not to provide the product. It was agreed this CR is non-regulatory. Becky Quintana added that it is now clear why this is not a regulatory CR.

Liz Balvin stated that Covad had objected to the Systems CR and then escalated the Product / Process CR. If Qwest had followed the process, the CLECs would have discussed the objections and Qwest's responses to the objections. Qwest is aware of all the other CLEC's positions. [Comment received from Covad: Liz Balvin stated it is easy for Qwest, now that it has all the information in hand, to take this new position. If Qwest had followed the process, the CLECs would have discussed the objections and Qwest's responses to the objections. Qwest is aware of all the other CLEC's positions and by not following the CMP guidelines has eliminated CLECs insight to all that Qwest has.]

Cindy Buckmaster requested input on how the CR could be moved forward. Liz Balvin requested that Qwest respond to the objections. There was discussion between Linda Sanchez-Steinke, Liz Balvin and Susie Bliss concerning Section 5.1.1 related to any requirement that Qwest respond to objections.

There was further discussion between Liz Balvin, Susie Bliss, Cindy Macy and Susan Lorence regarding the CMP voting process, classification of the CR, following CMP guidelines for the CR and the precedent that has been set with change to disposition requests. Liz felt these were different situations. [Comment received from Covad: Liz stated these situations were different because no one has requested a change in disposition.]

Becky Quintana asked if the concern was that Qwest did not follow the process outlined in 5.1.1 or if the concern would be the same if 5.1.1 were followed.

Liz Balvin said she couldn't say for sure because Qwest has all the ammunition and we have none.

Bonnie Johnson and Becky Quintana discussed Qwest exercising their rights to limit product availability, basis for product limitation as it relates to PCAT comments, limiting of products prematurely, and appropriateness of legal discussion on Product / Process changes.

[Comment received from Eschelon: Bonnie Johnson and Becky Quintana discussed Qwest exercising their rights to limit product availability, basis for product limitation as it relates to PCAT comments, Bonnie said Qwest is limiting products prematurely and Becky agreed. Becky and Bonnie discussed the appropriateness of legal discussion on Product / Process changes.]

Susan Lorence and Liz Balvin discussed processing grandparenting change requests, the tariff reference being out of CMP scope and whether the products are currently ordered by CLECs. Liz felt this CR is different because Qwest is citing the law. [Comment received from Eschelon: and on grandparenting CRs no CLECs order the products.] [Comment received from Covad: Liz stated that whenever Qwest grandfather's a product, the first question from CLECs is whether anyone is ordering the products.]

Cindy Buckmaster responded that Qwest has the right to not have to offer products based on the law.

Kim Isaacs of Eschelon said that the title of the CR, USTA II, implies that the change is based on the law.

Cindy Buckmaster said that she was not involved when the CR was initiated or when it was decided it was a regulatory CR. The change is not a mandate and Qwest is obligated to notify CLECs of the change. There has been no effort to jerry rig CMP. Qwest is notifying CLECs the products will not be available on a going forward basis.

Liz Balvin and Becky Quintana discussed if notification should be through CMP and PCAT changes.

Bill Campbell said a note in the PCAT stating if the CLEC does not have these products in the current ICA then these products are not available. Bill Campbell, Liz Balvin and Cindy Buckmaster continued discussing options to process the CR, ability to vote down a regulatory CR and then move it to product / process. Re-issuing the CR and starting the clock over based on conversation and intent, changing the title and editing the CR, and posting of historical information to the CR.

Bonnie Johnson asked that the meeting minutes reflect all of the conversation that has taken place. [Comment received from Eschelon: Bonnie said Qwest often reflects their views but not CLECs.]

Liz Balvin, Sharon Van Meter, Susie Bliss and Becky Quintana presented options to process the CR; changing it to a regulatory CR because it is citing the law, submitting a new product / process non-regulatory CR stating intentions, changing the CR title, deferring, amending the current CR and maintaining the history. Susan Lorence suggested Oversight members take a poll on which would like to modify the existing CR, which would like a new CR.

Bill Campbell, Becky Quintana, Cindy Buckmaster, Bonnie Johnson and Liz Balvin discussed options related to the CR. The CR is currently accurate and may change soon. When the final rules are issued DS1 and DS3 loops may

not be accurate. [Comment received from Eschelon: When the final rules are issued this will change because DS1 and DS3 loops may not be accurate.] Bill Campbell asked if the CR is moved to deferred status if the CLEC community is willing to waive the notification requirement.

Kim Isaacs and Bill Campbell discussed SGAT changes, PCAT changes and the ICA negotiations. [Comment received from Eschelon: Bill said that the current negotiation template reflects the correct information but the SGATs have not been updated. Bonnie asked if there was a particular CLEC that was challenging Qwest on this issue and if that is why Qwest needed to update PCATs.]

Cindy Buckmaster, Bonnie Johnson and Liz Balvin continued discussion related to processing the CR, Bonnie Johnson, Bill Campbell and Liz Balvin discussed how CLECs should be notified of the product change and the PCAT reflecting the SGAT, notification through change of law, how contracts override the PCATs, and product availability is negotiated through the ICA agreements. [Comment received from Eschelon: Bonnie said if Qwest will limit product availability in its existing ICA, Qwest would need to notify Eschelon through the change in law provision of its contract and not through a PCAT CMP notice. Bill agreed.]

Becky Quintana suggested that Qwest discuss the CR options internally. The Oversight committee agreed to meet again on 1/10/04 at 3:00 p.m. Mountain time.

The meeting was concluded.

**PURPOSE**

This was the second meeting of the CMP Oversight Committee to review an issue submitted to the committee on 11/30/04 by Liz Balvin of Covad. The following is the write-up of the discussion.

**List of Attendees:**

Jen Arnold – TDS Metrocom/U S Link  
Liz Balvin – Covad  
Becky Quintana – Colorado PUC  
Bonnie Johnson – Eschelon  
Sharon Van Meter – AT&T  
Amanda Silva – VCI  
Susie Bliss - Qwest  
Susan Lorence – Qwest  
Bill Campbell – Qwest  
Cindy Macy – Qwest  
Peggy Esquibel-Reed – Qwest  
Linda Sanchez-Steinke – Qwest

**MEETING MINUTES**

Linda Sanchez-Steinke of Qwest stated that on Friday Qwest sent an e-mail to Oversight members explaining that we would prefer to revise the CR PC102704-1ES. By revising the CR the historical information is preserved and the references to law would be removed and the title would be changed. Attached to the e-mail was a redlined CR with the proposed changes. The proposed deletions would become the revised title and the revised description of change keeping the original title and the original description of change within the CR. The Oversight members stated they had received and reviewed.

Liz Balvin of Covad stated she did not think this process would preserve the CR history and recalled from the last meeting the only recommendation was to defer the CR until the final rules were issued.

Susie Bliss of Qwest stated Qwest reviewed three options for the CR; defer until final rules, amend the CR or withdraw the CR and issue a new CR.

Liz Balvin asked if Qwest was going to consider deferring until the rules are permanent.

Susie Bliss said that the approach was considered and voiced concern that the products are currently not available and current contracts are expiring.

Bonnie Johnson of Eschelon stated there are products in the PCAT that cannot be ordered because they are not in the CLEC's contract. Bonnie said she was trying to understand why the CR is needed.

Bill Campbell of Qwest explained that the PCATs are based on the approved SGATs and the SGATs can be different from the ICA. We try to time the CMP update changes with the SGAT changes and Qwest did put together SGAT changes. However, the SGAT's have been pulled back with concurrence of the states due to the unsettled regulatory situation post USTA II, post interim order and pre final FCC order. Qwest has changed the ICA language template (insert comment) but the current SGAT's do not accurately reflect the products Qwest offers and Qwest (end comment) feels it is important to notify CLECs on the changes to the products.

Liz Balvin countered that if the legal implications were removed, the situation is in flux, the permanent rules will be issued later this month and the CLECs are restricted from ordering existing products that are not included in their ICA.

Bill Campbell responded after 6/15/04 CLECs without the ICA including the products do not have the option of ordering the products. Qwest is choosing to move forward with the CR because the final FCC rules although scheduled to be finalized in January and effective in March, it would most likely be June before changes to the order are made.

Liz Balvin felt that the process was backward because if a CLEC wants these products they would work with the negotiation team and would not go through CMP (insert comment) because CMP specifically call out ICA's override (end comment).

Bill Campbell discussed that Qwest has an obligation to notice the change in the PCAT when the SGAT has not changed.

Bonnie Johnson said that product availability is based on the ICA and even though Qwest notices about product availability, CLEC's can't get the products without an agreement including the product.

Bill Campbell explained that new CLECs may go to the Qwest website to find which products are available and then would be given a contract that does not list all the products that were available on the website. Normally the SGAT change would force the change in the PCAT.

Liz Balvin stated that Qwest restricting products to CLECs who don't have them in their ICA is different than limiting the product availability. The intent of the CR was drawn from legal rules and the permanent rules could change the offering.

Bill Campbell responded that the CR would have to be changed. Bonnie Johnson asked if traditionally a new CLEC would go to the SGAT or PCAT to see what is available and they are not in sync.

Bill Campbell explained that the PCAT and SGAT are in sync but they are not in sync with Qwest policy. The states are not accepting SGAT changes at this time and the SGAT and PCAT are in sync but the ICA template is different.

Becky Quintana of the Colorado PUC asked if Qwest was considering filing the SGAT prior to the final rules or waiting and Bill Campbell stated that Qwest is waiting, although we did file prior to the USTA decision, but withdrew the filings when it was clear that the states did not believe the timing was right to make the proposed changes knowing full well any state proceedings would have to be revisited. Becky Quintana voiced concerned that the SGAT on file and the Wholesale tariff are not the current Qwest offering.

Liz Balvin and Bill Campbell agreed that the CR was issued as a result of law. Liz was concerned that Qwest would be restricting CLECs from gaining the product going forward but it is available for CLECs with an ICA.

Liz Balvin stated that she continues to see the only option is deferring to keep the history of the CR and that not all the history is maintained about the Escalation and Oversight review.

Susie Bliss said at the last meeting the committee was polled on the options.

Liz Balvin and Bill Campbell discussed whether the CR is limiting products (as called for in the CMP governing document), restricting new CLECs from getting these products and if a CLECs contract expires then they would be restricted from the product availability.

Liz Balvin stated that the CR should identify the interim rules as the basis for notifying the CLECs of 6/15 product changes and that Qwest is not going to file the SGAT until the permanent rules are available.

Bill Campbell agreed that the CR is based on the USTA II rules and that Qwest has restricted the products and changes will have to be made to comply with the final rules.

Liz Balvin stated the basis is USTA II and Bill Campbell said he agreed that the basis is USTA II, and under the FCC guidance, are no longer required to provide unbundled elements.

Liz Balvin said Qwest's current position needs to be identified in the CR.

Bill Campbell said that AT&T and Eschelon have a different opinion.

Bonnie Johnson said AT&T and Eschelon agree this is not a Regulatory CR and restated Liz's concern if it was appropriate to issue the CR at all if the guidelines are not followed. We agreed the CR is not regulatory because Qwest was not ordered, Qwest made the choice not to offer the products.

Bill Campbell asked Liz if we include the language and make it a regulatory CR.

Liz Balvin said that the genesis of the change was the USTA II decision and now Qwest wants to remove that.

Bill Campbell stated that during the last meeting it was clear this was not a Regulatory CR. USTA II was a court opinion about what needed to be offered.

Bonnie Johnson said that is what takes it out of Regulatory CR classification.

Liz Balvin argued that the rules are "as is" until the permanent rules come out and since it is just an opinion and believes Qwest should follow the SGATs until the rules are permanent.

Bill Campbell stated that the DC court vacated the FCC rules and in a sense undermined them and took away the unbundled rules. The FCC said here is the interim rules and will freeze prior to 6/15 until we can put out the final rules. Qwest doesn't want to put the CR in deferred status.

Bonnie Johnson said Eschelon does not have an objection to Qwest updating the existing CR (insert comment) because Eschelon has updated CRs without the clock starting over.

Becky Quintana questioned whether the CLECs were arguing the merits of the CR rather than the process that Qwest used.

Liz Balvin said the CR could be updated and requested information relating to Oversight and Escalation be included. Linda Sanchez-Steinke stated that Qwest has not included Escalation response or Oversight minutes in other CRs as the Escalation and Oversight minutes are found in another location on the web site. There was agreement that the CR would provide the revised title, original title, revised description of change, original description of change and url links to the Escalation and Oversight web locations. CR PC120803-1 was provided as an example of a CR that has been revised.

Bonnie stated that the history is captured and that this CR is an anomaly because it had the regulatory issue and was not just a systems to process crossover, but does not agree with the CR and does understand what Qwest is trying to accomplish and Qwest feels the need to move forward.

Sharon Van Meter stated that AT&T does not think this is a regulatory CR and would like the CR to include the history of what has been discussed. Deferring the CR would be better and revising is acceptable if the history is included. Liz Balvin agreed deferring would be better and revising the CR sets a precedent that the CR is regulatory but not identifying in that way. There was recommendation from Covad, Eschelon, AT&T, TDS/MetroCom and MCI that the CR be deferred until permanent rules are issued. Becky Quintana stated that without making any statement on the merits of the CR, she believed that Qwest should go ahead with the CR because she agreed with Bill Campbell's estimated timeline for permanent rules. Qwest would like to move forward by revising the CR. The Oversight Recommendation will include the different recommendations from the Oversight members.

Bonnie Johnson and Becky Quintana discussed the merit of language changes to the CMP process. Liz Balvin and Bonnie Johnson stated that the CR should not have defaulted to CMP as it was not the appropriate approach and the importance of keeping the CMP guidelines in tact.

The meeting was concluded.

### Open Product/Process CR PC102704-1ES Detail

**Title:** CR 1: New Revised title effective 1/11/05: Certain Unbundled Network Elements (UNE) Product Discontinuance (see Description of Change for previous title) CR 2 = PC102704-1ES2

CR Number	Current Status Date	Area Impacted	Products Impacted
PC102704-1ES	Completed 3/23/2007	Provisioning, Ordering	See Description of Change

**Originator:** Whitt, Michael  
**Originator Company Name:** Qwest Corporation  
**Owner:** Buckmaster, Cindy  
**Director:** Hooks, Perry  
**CR PM:** Esquibel-Reed, Peggy

### Description Of Change

DOCUMENTATION FOR THIS CR IS CONTINUED ON PC102704-1ES2

Revised Description of Change effective 3/23/07:

The following products, from the original CR, are removed from this Change Request and were not completed with this CR. The effort for these products may occur via separate CRs.

- Unbundled Local Loop-General Information
- Unbundled Local Loop-Digital Signal Level 1 (DS1) Capable Loop
- Unbundled Local Loop-Digital Signal Level 3 (DS3) Capable Loop
- Enhanced Extended Loop (EEL)
- Loop MUX Combination (LMC)
- Unbundled Dark Fiber (UDF)
- Unbundled Dedicated Interoffice Transport (UDIT)
- Unbundled Customer Controlled Rearrangement Element (UCCRE)

-----

Revised Description of Change effective 3/1/05:

This CR will be implemented as a product/process CR as there are no CLEC facing system changes.

This CR details changes to availability of certain Unbundled Network Elements (UNE) products.

The following UNE products are no longer available to CLECs unless the most current effective version of the CLEC's Interconnection

Agreement (ICA) of Amendment includes terms, conditions, and pricing for the products before 6/14/04.

Unbundled Network Element (UNE)- Switching (UBS)  
<http://www.qwest.com/wholesale/pcat/unswitch.html>

Unbundled Network Elements- Platform (UNE-P)-General Information  
<http://www.qwest.com/wholesale/pcat/unep.html>

Unbundled Network Elements - Platform (UNE-P) - Integrated Services Digital Network (ISDN) Basic Rate Interface (BRI)

<http://www.qwest.com/wholesale/pcat/unepisdnbri.html>

Unbundled Network Elements-Platform (UNE-P)-Centrex  
<http://www.qwest.com/wholesale/pcat/unepcentrex.html>

Unbundled Network Elements-Platform (UNE-P)-Public Access Lines (PAL)  
<http://www.qwest.com/wholesale/pcat/uneppal.html>

Unbundled Network Elements- Platform (UNE-P)- Private Branch Exchange (PBX) Trunks <http://www.qwest.com/wholesale/pcat/uneppbx.html>

Unbundled Network Elements - Platform (UNE-P)-Plain Old Telephone Service (POTS) <http://www.qwest.com/wholesale/pcat/uneppots.html>

Unbundled Network Elements - Platform (UNE-P) - Digital Switched Service (DSS) <http://www.qwest.com/wholesale/pcat/unepdss.html>

Unbundled Network Elements -Platform (UNE-P) - Integrated Services Digital Network (ISDN) Primary Rate Interface (PRI)

<http://www.qwest.com/wholesale/pcat/unepisdnpri.html>

The remaining products on this CR are being revised due to changes based on the FCC Order received 2/4/05. The following products will be revised and will be noticed on a future date associated with this change request.

Unbundled Local Loop-General Information

Unbundled Local Loop-Digital Signal Level 1 (DS1) Capable Loop

Unbundled Local Loop-Digital Signal Level 3 (DS3) Capable Loop

Enhanced Extended Loop (EEL)

Loop MUX Combination (LMC)

Unbundled Dark Fiber (UDF)

Unbundled Dedicated Interoffice Transport (UDIT)

Unbundled Customer Controlled Rearrangement Element (UCCRE)

As always, any future changes of law may impact this notification and will be supported by the applicable notification.

Expected Deliverables/Proposed Implementation Date (if applicable):

Implement PCAT changes retroactive to 6-15-04 subject to CMP Guidelines

-----  
-----

Revised Description of Change effective 1/11/05:

This CR will be implemented as a product/process CR as there are no CLEC facing system changes.

This CR details changes to availability of certain Unbundled Network Elements (UNE) products.

The following UNE products are no longer available to CLECs unless the most current effective version of the CLEC's Interconnection Agreement (ICA) of Amendment includes terms, conditions, and pricing for the products before 6/14/04.

-All Enterprise and Mass Market Unbundled Network Elements Switching (UBS) products, detailed in the following Product Catalog

(PCAT): <http://www.qwest.com/wholesale/pcat/unswitch.html>

-All Enterprise and Mass Market Unbundled Network Elements-Platform (UNE-P) products, detailed in the following PCAT:

<http://www.qwest.com/wholesale/pcat/unep.html>

-DS1 Unbundled Loop detailed in the following PCAT:

<http://www.qwest.com/wholesale/pcat/unloops1caploop.html>

-DS3 Unbundled Loop detailed in the following PCAT:

<http://www.qwest.com/wholesale/pcat/unloops3caploop.html>

-Unbundled Dark Fiber (UDF), including E-UDF and Meet-Point UDF,

detailed in the following PCAT:

<http://www.qwest.com/wholesale/pcat/darkfiber.html>

-DS1 and DS3 Unbundled Dedicated Interoffice Transport (UDIT), including E-UDIT and M-UDIT, detailed in the following PCAT:

<http://www.qwest.com/wholesale/pcat/udit.html>

-DS1 and DS3 Enhanced Extended Loop (EEL) detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/eel.html>

-Unbundled Customer Controlled Rearrangement Element (UCCRE) detailed in the following PCAT:

<http://www.qwest.com/wholesale/pcat/uccre.html>

-DS1 and DS3 Loop Mux Combo detailed in the following PCAT:

<http://www.qwest.com/wholesale/pcat/lmc.html>

As always, any future changes of law may impact this notification and will be supported by the applicable notification.

Expected Deliverables/Proposed Implementation Date (if applicable):

Implement PCAT changes retroactive to 6-15-04 subject to CMP Guidelines

---

Previous Title and CR Description of Change - see below for information prior to 1/10/05. This CR was Revised on 1/11/05

Previous Title:

U.S. Court of Appeals for the DC Circuit decision (USTA II) Decision No. 00-1012, and FCC Interim Rules Compliance: Certain Unbundled Network Elements (UNE) Product Discontinuance

Previous Description of Change:

This CR will be implemented as a product/process CR as there are no CLEC facing system changes.

This CR details changes to availability of certain Unbundled Network Elements (UNE) products pursuant to the U.S. Court of Appeals for the DC Circuit decision 00-1012 ('USTA II') which vacated some of the FCC's unbundling rules, and the subsequent FCC Interim Rules which preserved some of the unbundling rules vacated in USTA II.

In accordance with these orders and findings, the following UNE products are no longer available to CLECs unless the most current, effective version of the CLEC's Interconnection Agreement (ICA) or Amendment includes

terms, conditions, and pricing for the products before 6/15/04:

-All Enterprise and Mass Market Unbundled Network Elements Switching (UBS) products, detailed in the following Product Catalog (PCAT):  
<http://www.qwest.com/wholesale/pcat/unswitch.html>

-All Enterprise and Mass Market Unbundled Network Elements-Platform (UNE-P) products, detailed in the following PCAT:  
<http://www.qwest.com/wholesale/pcat/unep.html>

-DS1 Unbundled Loop detailed in the following PCAT:  
<http://www.qwest.com/wholesale/pcat/unloopds1caploop.html>

-DS3 Unbundled Loop detailed in the following PCAT:  
<http://www.qwest.com/wholesale/pcat/unloopds3caploop.html>

-Unbundled Dark Fiber (UDF), including E-UDF and Meet-Point UDF, detailed in the following PCAT:  
<http://www.qwest.com/wholesale/pcat/darkfiber.html>

-DS1 and DS3 Unbundled Dedicated Interoffice Transport (UDIT), including E-UDIT and M-UDIT, detailed in the following PCAT:  
<http://www.qwest.com/wholesale/pcat/udit.html>

-DS1 and DS3 Enhanced Extended Loop (EEL) detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/eel.html>

-Unbundled Customer Controlled Rearrangement Element (UCCRE) detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/uccre.html>

-DS1 and DS3 Loop Mux Combo detailed in the following PCAT:  
<http://www.qwest.com/wholesale/pcat/lmc.html>

Expected Deliverables/Proposed Implementation Date (if applicable):

Retroactive to 6/15/04 pursuant to FCC Interim Rules, subject to CMP Guidelines.

## Project Meetings

DOCUMENTATION FOR THIS CR IS CONTINUED ON PC102704-1ES2

12-14-06 Prod Proc CMP Mtg: Mark C-Qwest stated that this CR is in Development status & that an ad hoc call was held a few weeks ago which resulted in the creation & distribution of a product matrix being provided to the CLECs. Mark stated that Qwest is awaiting feedback, on the matrix and then will regroup internally & evaluate. Mark then stated that the next ad hoc call is scheduled for January 11th. Mark asked for questions or

comments. Bonnie J-Eschelon asked if Qwest could outline what is going to happen with the items in each of the four buckets. Bonnie asked for Qwest's proposal for each of the buckets. Cindy B-Qwest stated that as previously mentioned, discussions would take place in the ad hoc mtgs & noted that Qwest has no set plan. [Comment from Eschelon: Cindy B-Qwest stated that as previously mentioned, discussions would take place in the ad hoc meetings & noted that Qwest has no strategic plan.] Cindy stated that Qwest is waiting for concurrence on the list & feedback on where each item belongs; we can then proceed. Cindy stated that this effort is casual & that Qwest does not want to dictate the flow of the ad hoc mtgs. [Comment from Eschelon: Cindy stated that Qwest is coming at this very casually & that Qwest does not want to dictate the flow of the ad hoc mtgs.] Cindy asked if that answered Eschelon's question. Bonnie J-Eschelon stated that in regard to Qwest's proposal, she is hearing that Qwest does not really have one. Cindy B-Qwest stated that was correct. Cindy suggested that we move forward with the discussions & noted that everyone was now aware of the classifications, including buckets 2&3. Cindy stated that some items, in buckets 2&3, could also end up in bucket 4. Cindy then stated that items that are in litigation are not open for discussion at this time. Cindy stated that buckets 2&3 will be the focus, unless they are in litigation. Bonnie J-Eschelon thanked Cindy for the information & stated that all, except Unbundled Dark Fiber, are currently in litigation. [Comment from Eschelon: Bonnie J-Eschelon thanked Cindy for the information & stated that Eschelon believes that products all, with possibly the exception of Unbundled Dark Fiber, are currently in litigation.] Cindy B-Qwest stated that we would discuss that in the ad hoc mtg. Lynn O-Covad asked when the matrix was sent. Cindy B-Qwest stated that it was sent a few weeks ago. Susan L-Qwest stated that it was provided via email to the call participants on 12/9 & was provided via a notification on 12/7 There were no additional questions or comments.

11-27-06 Ad Hoc Mtg: Kim Isaacs-Eschelon, Sherry Krewett-McLeod, Doug Denney-Eschelon, Laurie Fredricksen-Integra, Sheila Harris-Integra, Kathy Lee-ATT, Kelly Leveritch-Elec Light Wave, Bonnie Johnson-Eschelon, Peggy Esquibel Reed-Qwest, Cindy Buckmaster-Qwest, Mark Nickell-Qwest, Candace Mowers-Qwest, Vicki Dryden-Qwest, Susan Lorence-Qwest, Karen Ferguson-Qwest. Discussion: Peg ER-Qwest stated that this CR that was submitted, by Qwest, in 10-04 for the discontinuance of certain UNE Products. Peg then stated that some products on this CR were implemented & that some of the products were put on hold & the CR was placed in Deferred Status. Peg then noted that at the October Monthly CMP Meeting, Qwest stated that we wanted to take this CR out of deferred status & to start conversations around how to move forward. This CR was placed in CLEC Test. Peg stated that we then received an email in regard to the CR being in CLEC Test status & the thought that Presented might be more appropriate. Peg stated that the CR was changed from Deferred to CLEC Test due to the implementation of this change for 9 UNE Prods on 3-18-05. There are 8 remaining products on the current CR & noted that Qwest agrees that it is not yet appropriate to ask for closure & that additional discussions are needed & that is what today's meeting is for. Peg then stated that Presented was not an appropriate status, due to the partial implementation of this CR. Peg stated that Presented was for new CRs, after they have been presented in a Monthly CMP Meeting. Peg stated that if the CLECs are uncomfortable with the CLEC Test Status, that the status could be changed to Development. Bonnie J-Eschelon asked if the status could be changed to Evaluation. Peg ER-Qwest stated that CRs in similar situations have been placed in Development status. Bonnie J-Eschelon stated that she would check the CMP Document & would send an

email with her decision. Peg ER-Qwest advised Bonnie J-Eschelon to send her email to the cmpcr mailbox, & then turned the call over to Cindy B-Qwest. Cindy B-Qwest stated that she would tee-up the subject in order to introduce & discuss the items that were deferred in 2005. Cindy then stated that she has a suggested approach & noted that she has no structure, agenda, or intention. She wants to talk about subjects to discuss, the order, & grouping. Once the participants decide, we could set an agenda for future meetings. Cindy stated that if subjects are grouped, we would like to work CRs one at a time, from submission to completion. Cindy stated that it would help eliminate confusion & that discussions would be focused on the topic that is current at that time. Cindy then asked the call participants for feedback & suggestions. Bonnie J-Eschelon stated at the October CMP Meeting that there were some products that needed to be addressed & suggested that is where to start the discussion. Cindy B-Qwest stated that the discussions could start there because we need to talk about what is not currently under the ruling, arbitration, on the wire center list, or items that are not currently in the CMP process. Cindy gave examples of OCN, UBL, & Unbundled Packet Switching. Cindy stated that those are not available or that there is no volume. Cindy noted that there could be small elements at the TRRO level. Cindy stated that these discussions should be unstructured & stated that there is no list. Cindy then stated that she wanted to get the CLECs interests & would then go from there. Bonnie J-Eschelon asked which products were completed & which were not completed on the current CR & asked if they could get a list. Susan L stated that she would get the information from the Final Notification & would provide the information later on the call. Cindy B-Qwest stated that the CR is a tracking mechanism for what was implemented & what was not. Cindy stated that this discussion is related only to Local Service products therefore there are items that will not to be discussed on this call, such as 800 data base query. Cindy stated that other Product Managers may want to be addressing those items. Cindy provided examples of EEL, Comingling, LMC, DS1/DS3 Transport, Optical Carrier Level UDIT, UCCRE, Line Sharing, Unbundled Packet Switching, Fiber to the Curb, & others. Cindy asked if the CLECs were asking for a list of all impacted products that will be discussed on this call. CLECs responded yes. Cindy B stated that she could not discuss the products that she is not responsible for. Sheila H-Integra stated that she would like a list of what was implemented, what is left, what products would be discussed on these calls, & which products would not be discussed. Susan L-Qwest read the list from the current CR of what was implemented & what was not implemented with the current CR. Cindy B-Qwest stated that was a list of PCATs that need to be addressed & asked to clarify if the requested list would be by products or by PCATs. Bonnie J-Eschelon asked that the list be by products with their associated PCATs identified. Cindy B-Qwest stated that she would do her best to compile the list. Bonnie J-Eschelon stated that she noticed that quite a few, such as commingling & shared distribution, are not to be on the list that Susan L read. Cindy B-Qwest stated that is why she asked if the list being requested was to be by prod. Bonnie J-Eschelon stated that she sees 3 buckets: done with PCATs, left to do with PCATs, & those currently in some type of legal arena. Cindy B-Qwest stated she sees 4 lists: the original CR list of what has been implemented, what has not yet been implemented, then what was not addressed on the current CR, & those held for some legal forum. Bonnie J-Eschelon asked if those items that are held for some legal forum are items that could also reside on the list of what has not yet been implemented & on the list of what has not been addressed via the original CR. Cindy B-Qwest stated that they could & stated that she would leave that up to CLEC input. Cindy stated that is due to the fact that she is not involved in all that

is being challenged, as the CLECs are. Cindy noted that the CLECs would need to help identify those. Bonnie J-Eschelon stated that we needed to get our arms around that before we can proceed with the discussions. Bonnie stated that we need the grouping before we can proceed. Cindy B-Qwest stated that she was fine with that & that she would deliver the list in the next few days. Cindy then asked when we would then meet. Bonnie J-Eschelon suggested that we have our next call about 3 days after Qwest provides the list. Peggy ER-Qwest stated that the CMP Process does call for at least 5 business days advanced notice for a call & would base the next call on that as well. Susan L-Qwest stated that Qwest would get the list out & that CLECs could provide suggested groupings back to the cmpcr mailbox, Qwest would compile the list, then schedule the next meeting for further discussion. Cindy B. noted that she would be available after 12-6.

11-15-06 Prod Proc CMP Mtg: Mark C-Qwest stated that this CR had been in deferred status & is now in CLEC Test status. (Comment from Eschelon - Mark C-Qwest stated that this CR had been in deferred status & Qwest is now bringing this in CLEC Test status.) Cindy B-Qwest stated that the FCC issued & released The Report, Order on Remand, & Further Notice of Proposed Rulemaking (FCC 03-36), referred to as the Triennial Review Order (TRO) effective 10-2-2003 & the Remand Order (CC 01-338) referred to as the Triennial Review Remand Order (TRRO) effective 3-11-2005. Subsequently, Qwest issued CR PC102704-1ES. At that time, Qwest provided notification only on items that were clearly not challenged in the TRO order. CLECs have signed the TRO TRRO amendments to their ICAs & are operating under processes associated with that amendment. Qwest would now like to move forward & release the post TRRO documentation through CMP. TRRO issues that are being addressed by Qwest & CLECs in arbitration of their ICAs or items being challenged by law will not immediately be processed through CMP. Cindy stated that Qwest would like to re-open this CR & would also like to issue subsequent CRs for this effort. (Comments from Eschelon: Cindy B-Qwest stated that the FCC issued & released The Report, Order on Remand, & Further Notice of Proposed Rulemaking (FCC 03-36), referred to as the Triennial Review Order (TRO) effective 10-2-2003 & the Remand Order (CC 01-338) referred to as the Triennial Review Remand Order (TRRO) effective 3-11-2005. Subsequently, Qwest issued Change Request PC102704-1ES. Cindy said, at that time, Qwest provided notification only on items that were clearly not challenged in the TRO order. She said CLECs have signed the TRO TRRO amendments to their ICAs and are operating under processes associated with that amendment. She said Qwest would now like to move forward & release the post TRRO documentation through CMP. Cindy said Qwest is asking to release the undisputed items, those not in arbitration or items being challenged under law. Disputed items will not immediately be processed through CMP. Cindy stated that Qwest would like to re-open this CR & would also like to issue subsequent CRs for this effort.) Bonnie J-Eschelon asked to clarify that Qwest wants to add, in CMP, those not in arbitration or are not being challenged under law. Bonnie asked what Qwest was doing. (Comment from Eschelon: Bonnie J-Eschelon asked Qwest to explain & indicate what products Qwest wants to add in CMP. Cindy B-Qwest stated that Qwest would like to move the current CR, for UNE-P and UBL products, to CLEC Test. The other products would then be addressed via different CRs.) Cindy B-Qwest stated that Qwest would like to move the current CR, for UNE-P and UBL products, to CLEC Test. The other products would then be addressed via different CRs. Bonnie J-Eschelon stated that on the 6-30-2005 call, Qwest said that this would be deferred until Qwest filed SGATS, with CLEC input. Bonnie asked if that was still the plan. [Comment from Eschelon: Bonnie J-Eschelon stated that,

on the 6-30-2005 call, CLECs said they wanted to negotiate these terms in ICA negotiations, and Qwest said that, when it filed SGATs, CLECs would at least get an opportunity to have input. Bonnie asked if that was still the plan.) Cindy B-Qwest stated that Qwest is not planning to file SGATs in any state in the near future. Cindy noted that one & a half years ago, we were planning to & that was the intent at that time. Cindy then stated that Qwest is not planning to file SGATs in any state in the near future & would like to move forward based on the CMP process. (Comment from Eschelon: Cindy B-Qwest stated that Qwest is not planning to file SGATs in any state, and that is a change. Cindy noted that was a good point. She said, one & a half years ago, we were planning to & that was the intent at that time. Cindy then stated that Qwest is not planning to file SGATs and would like to move forward based on the CMP process.) Bonnie J-Eschelon stated that there were TRRO PCATs changed outside of CMP & asked how that would work when the TRRO PCATs would be changed without CLEC input. (Comment from Eschelon: Bonnie J-Eschelon stated that TRRO PCATs were changed outside of CMP without CLEC input & asked how that would work.) Cindy B-Qwest the intent was to cover all issues under this CR. Other products, not contested, such as OCN, UPS; those that can no longer be ordered, the PCATs were moved to a separate place on the web site for those who have signed amendments & for other CLECs to look at. Cindy then stated that Qwest wants to add the PCATs that are not currently under arbitration or under a legal status (i.e. wire center lists) or where states need to finish to resolution. Cindy stated that Qwest wants to propose how to add and post those PCATs, with CLEC input. Cindy then noted that Qwest would like to move forward & make discussions public in an open forum. Cindy proposed that questions & discussion on the structure take place on the first meeting that is currently scheduled for 11-27. (Comment from Eschelon: Cindy B-Qwest said the intent was to cover all issues under this CR. Other products, not contested, such as OCN, UPS; those that can no longer be ordered, the PCATs were moved to a separate place on the web site to cover those who have signed amendments & for other CLECs to look at if you want to see them before you sign an amendment. Cindy then stated that Qwest wants to readdress the PCATs that CLECs did not have input on & that are not currently under arbitration or under a legal status (i.e. wire center lists) or where states need to finish to resolution. Cindy stated that Qwest wants to propose how to add and post those PCATs, with CLEC input. Cindy said Qwest would like to address similarly situated products in chunks for all products with the same flavor. Cindy then noted that Qwest would like to move forward & make discussions public in an open forum. Cindy proposed that questions and discussion on the structure take place on the first meeting that is currently scheduled for 11-27) Bonnie J-Eschelon asked if the statement regarding legal proceedings for wire centers included the Qwest/Eschelon arbitration. (Comment from Eschelon: Bonnie J-Eschelon asked if the statement regarding legal challenges included the Qwest/Eschelon arbitration.) Cindy B-Qwest said yes. Bonnie J-Eschelon said okay. Cindy B-Qwest stated that she proposes that this current CR be moved to CLEC Test & to have the 11-27 ad hoc call in order to start discussions. There were no questions or comments. Mark C-Qwest asked to clarify that the current CR would not be changed or updated. Cindy B-Qwest said that was correct. Mark C-Qwest then asked if the new items would be addressed via new CRs. Cindy B-Qwest said yes. Mark C-Qwest asked if there were any questions or comments. Mark N-Qwest stated that at this time Qwest would like the current CR to reflect CLEC Test in order to maintain continuity going forward. Once the new CRs are discussed & there is more comfort around this effort, the closing of this current CR can be addressed. (Comment from Eschelon: Mark N-Qwest stated that at this time Qwest would like the

current CR to reflect CLEC Test in order to maintain continuity going forward. Once the new CRs are discussed & there is more comfort around this effort, Qwest will request closure of the existing CR.) Mark C-Qwest stated that this CR would reflect a CLEC Test status & that Qwest would move forward with the recommended call on 11-27. Bonnie J-Eschelon asked if Cindy B-Qwest had any idea as to what was not included in the legal proceedings at this time. Cindy B-Qwest stated that she is unable to provide a comprehensive list & provided examples of OCN, UBL, & Unbundled Packet Switching. Cindy also noted that Line Sharing may not yet be posted. Bonnie J-Eschelon thanked Cindy B-Qwest for the information. (Comment from Eschelon: Bonnie J-Eschelon thanked Cindy B-Qwest for that information.) There were no additional questions or comments. This CR is in CLEC Test status.

1-18-06 Prod Proc CMP Mtg: Jill M-Qwest stated that this is the CR for the TRRO work & because there has been no change in the status, for several months, she would like to put the CR in a Deferred Status. Jill stated that when it is time for the PCAT updates, this CR would move out of Deferred. There was no dissent to moving this CR to Deferred. Kim I-Eschelon stated that there was a notice out today for TRRO and asked if that was separate from this effort. Jill M-Qwest stated that it was separate & that it was a non-CMP Notice. (1/27/06 - Comment from Eschelon: Jill Martain-Qwest stated that the TRRO notices sent today was for CLECs that had signed the TRRO Amendment.

12-14-05 Prod Proc CMP Mtg: Jill M-Qwest stated that this is still unchanged & that Qwest is still waiting for the SGATs, as previously discussed. This CR remains in Dev Status.

11-16-05 Prod Proc CMP Mtg: Jill M-Qwest stated that there is no change from the previous month. This CR remains in dev.

10-19-05 Prod Proc CMP Mtg: Jill M-Qwest stated that there is no new status for this CR. Liz B-Covad noted that the CLECs do now have access to the secret PCATs.

9-21-05 Prod Proc CMP Mtg: Jill M-Qwest stated that there was no change on this CR & that we are still in a hold mode. Liz B-Covad stated that she had a question on a Process Notification on the TRRO Product and Service Log. On Jill M-Qwest said that she believed that notice was a Non CMP Notice. Liz B-Covad said that they feel the General Notice should have been a CMP Notice because it was the result of a CR. She said that it did not come out in a notice fashion with an effective date of 10/3. Liz said that she can't comprehend how Qwest can determine that you can only look at a PCAT when an amendment is signed. Liz said that she was confused because she thought it was a process change that Qwest was trying to implement. Liz said that the TRRO does not allow Qwest to restrict the ability to send in orders. Liz said that she would like to formally object to the process Qwest is trying to implement. Jill M-Qwest stated that she would like to take this discussion offline with Covad. Jill said that this stemmed from a Product/Process CR where we agreed in an adhoc meeting, held on 6-30-2005 (see PC102704-1ES for meeting minutes) that the TRRO PCATs would be provided separately. She also said that Qwest & the CLECs agreed Qwest would not update the CMP controlled PCAT documents until the SGATs were approved. Liz B-Covad said that restricting access gives the appearance of preferential treatment. Jill M-Qwest stated that she would like to get the appropriate people together &

discuss offline. Bonnie J-Eschelon said that they would like to be included in the discussions. Liz B-Covad stated that it is inappropriate to restrict access to PCATs and that they have a concern with the effective date. Sue W-XO Communications stated that they have a concern as well. She said that they are concerned that Qwest would be implementing differences in process based on the CLEC. Nancy S-Comcast said that they are concerned too. Julie P-TDS Metrocom is concerned. Liz B-Covad stated that the PCATs are not binding and that an adhoc meeting is needed to discuss these concerns. Jill M-Qwest stated that we have noted these concerns & will get back with the CLECs. Liz B-Covad asked if she should escalate via the CMP Process. Jill M-Qwest said no and that we have their concerns noted.

8-17-05 Prod Proc CMP Mtg: Jill M-Qwest stated that there is no change to the status and remains in Development.

7-20-05 Prod Proc CMP Mtg: Jill M-Qwest stated that an adhoc meeting was held to communicate the proposal on how we will move forward and that we will continue down that path. Jill said that this CR will remain in Development.

6-30-05 Ad Hoc Mtg: Rosalin Davis-MCI, Chad Warner-MCI, Chris Terrell-AT&T, Greg Diamond-Covad, Tom Hyde-Cbeyond, Jeff Sonnier-Sprint, Bonnie Johnson-Eschelon, Doug Henney-Eschelon, Liz Balvin-Covad, Kim Isaacs-Eschelon. DISCUSSION: Cindy B-Qwest said that Qwest suggested this Ad-Hoc mtg to help communicate our implementation plans for the TRO TRRO. She said that many of the CLECs are interested in the implementation of the rules laid out in the orders and may have questions. Cindy said the CLECs likely agree that these orders cover numerous products & processes, not to mention availability & even eligibility. Cindy said that Qwest is developing template language that encompasses our obligations under the TRO/TRRO & that we will be filing that template language with the states in the months to come. She said that the normal filing process will be followed likely allowing a comment period from interested parties. Cindy said that in the meantime, our negotiations team will negotiate the amendment or full template with interested CLECs. Cindy said that negotiation combined with State approval of our template language that is necessary to finalize applicable language &/or processes. Cindy said that in order to most effectively & efficiently work through that process, we believe that it is best to further delay announcements of process or product changes related to these orders via CMP until such time as the language is finalized & will impact all CLECs. She said that no TRO TRRO changes to products or processes will be made across the board until such language is final. Cindy said, as mentioned earlier, we will implement product & process changes only as you sign the amendment or template language, through the change of law provisions that are outlined in your individual contracts. She said that the CLECs, at that time, will be provided with individual PCATs & Business Procedures that are in alignment with their current language so that they can determine any changes to the way you do business with Qwest. Tom H-Cbeyond stated that this plan sounds logical and asked when Qwest could share a draft or final version of the language to review before negotiating. Cindy B-Qwest said that Candice M-Qwest is closer to the filings & this Qwest effort. Candice M-Qwest stated that with the SGAT, there are no filings scheduled yet & with the number of changes, getting language is quite a task. Candice said that there is a negotiations template & a TRO Remand Compliance template on the Qwest Wholesale Web at [www.Qwest.com/wholesale/clecs/amendments.html](http://www.Qwest.com/wholesale/clecs/amendments.html). Candice said that when the CLECs want to begin negotiations, they can

contact the Qwest negotiations team. Tom H-Cbeyond said that they would like to review & schedule negotiations. Candice Mowers-Qwest said that this was a good idea & to wait until the last minute will be a push. Tom H-Cbeyond stated that he would download & review the information. The following question was raised in the meeting: What does this have to do with QPP? Cindy B-Qwest said that this has nothing to do with QPP. She said that the QPP Commercial Agreements are on the same website & will remain there. Liz B-Covad summarized that the purpose of this meeting was to relay information on the TRO negotiations, the templates are out there for review & that the PCATs won't be updated until the final language is approved. Cindy B-Qwest stated that we did not want to make process changes that will impact a lot of you & that we will honor your contracts. She said we will share documents as process changes are made. The following question was asked in the meeting: Does this have anything to do with PC102704-1ES. Cindy B-Qwest said that this CR was opened as a way to communicate changes in the TRO/TRRO. She said that there are more changes coming & the CR is the means to share those changes. Cindy said that the CR was initially issued when the TRO came out and had changes. She said that we had to pull back some of the PCATs but will keep the CR open until we can finish CR. Tom H-Cbeyond said that he understood the format and information can be used on the website. Cindy B-Qwest stated that the next steps depend on where each Company is. She said that they can go to the web, study and start negotiations. Cindy said that if you don't want involvement, they could do nothing. She said that as SGAT language changes, we will have a comment period & that the States will engage you when decisions are made. Cindy also said that PCAT changes will be brought through CMP. There were no additional questions or comments.

6-15-05 Prod Proc CMP Mtg: Jill M-Qwest stated that an ad hoc meeting had been scheduled for 6-22 for discussion of Qwest's direction as a result of the order & to discuss how Qwest would like to move forward. Bonnie J-Eschelon stated that she needs to know who to invite to this meeting & asked for further explanation of the discussion intent. Bonnie then noted that this meeting conflicts with Eschelon's schedule. Bonnie then asked who the Qwest participants would be & asked if there was an agenda. Jill M-Qwest stated that the Qwest participants would be Product Managers & stated that the meeting is to discuss how Qwest CMP would like to move forward with the CMP CRs. Bonnie J-Eschelon asked whom the CLECs should invite to participate & asked if they should include systems people or regulatory people. Jill M-Qwest stated that the discussion should not need systems type people & stated that in regard to regulatory participants; she did not know. Qwest wants to discuss how Qwest would like to move forward from a CMP perspective. Bonnie J-Eschelon stated that it might be a good idea that those involved in TRO or with the change of law participate. Jill M-Qwest stated that the meeting was not regarding the interpretation of the rules; rather how Qwest would like to move forward with the implementation of the process as it related to CMP Liz B-Covad stated that she is also on vacation on 6-22 and could have a back-up at the meeting. Jill M-Qwest stated that the meeting could be rescheduled. Bonnie J-Eschelon stated that 6-27 would work for Eschelon & noted that Tuesday's & Wednesday's were not good for Eschelon. Jill M-Qwest asked if 6-30 would work. Bonnie J-Eschelon stated yes. Liz B-Covad also said yes. Jill M-Qwest stated that Qwest would see if the meeting could be rescheduled for 6-30 and stated that if it could not, Qwest would look at other meeting options. There were no additional comments or questions.

5-18-05 Prod Proc CMP Mtg: Peggy ER-Qwest stated that this was effective on March 18th for some products & was moved back to development for the implementation of the remaining products. Peggy stated that she was not aware of a date yet. Peggy then noted that the CR would remain in Development status. Liz B-Covad stated that the actual amendment notice is now available and so is the appendix A sheet. Jill M-Qwest stated that we would check with Cindy B-Qwest offline.

4-20-05 ProdProc CMP Mtg: Peggy ER-Qwest stated that this CR is in CLEC Test due to the effective date of 3-18 for the first set of products & stated that Qwest would like to move the CR back to Development status for the implementation of the remaining products. Liz B-Covad asked if there was a timeline for the changes in law provisions. Jill M-Qwest stated that there are no dates yet. There was no dissent to the CR moving back to Development status.

3-16-05 Prod Proc CMP Mtg: Cindy B-Qwest stated that this CR will be effective on March 18th and that she would like to move the CR to CLEC Test on the 18th. Jill M-Qwest stated that she was okay moving this CR to CLEC Test on the 18th, but then would like it moved back to Development status for the rest of the piece. Bonnie J-Eschelon stated that she was okay with this moving to CLEC Test on the 18th, for those that are effective on the 18th. [Comment from Eschelon: but does not think it is appropriate to do so before 3/18.] Cindy B-Qwest agreed. Jill M-Qwest stated that this CR would move to CLEC Test on 3-18, then when the other notices go out for the rest of the CR, the status would change to Development.

2-16-05 Prod Proc CMP Mtg: Jill M-Qwest stated that when the final rulings came out, we received feedback. Jill stated that Qwest would withdraw the PCATs that were affected by the final rules and that Qwest would proceed with UNE-P. Jill stated that Qwest would reissue the PCATs that are being removed from the CR, once it is determined what those changes are & would notify via this same CR. Liz B-Covad asked if Qwest would confirm that Qwest will follow the change of law provisions in their ICA. Comment received from Eschelon 2/24/05 and said she expected a response to her comments. Jill M-Qwest stated that Qwest had received Covads comment & that Qwest would be responding to the comment & all comments that were received. Jill M-Qwest stated that this CR remains in Development status.

1-25-05 Ad Hoc Mtg: Liz Balvin-Covad, Sue Lamb-One Eighty, Elaine Birkquest-Norstar, Sharon Van Meter-AT&T, Becky Quintana-CO PUC, Marty-Rantel, Noreen Carol-Birch Telcom, Chris Terrell-AT&T, Doug Denney-Eschelon, Bonnie Johnson-Eschelon, Tom Hyde-Cbeyond, Rosalin Davis-MCI, Chad Warner-MCI, Cindy Buckmaster-Qwest, Jill Martain-Qwest, Bob Mohr-Qwest, Robyn Libadia-Qwest, Pat Finley-Qwest, Vicki Dryden-Qwest, John Hansen-Qwest, Susan Lorence-Qwest, Jennifer Fischer-Qwest, Pete Budner-Qwest, Chris Quinn Struck-Qwest, Peggy Esquibel Reed-Qwest. DISCUSSION: Peggy ER-Qwest stated that the purpose of the call was for Qwest to review the updates that will be made to PCAT documentation, for this CR. Cindy B-Qwest stated that in the last CMP Meeting, the CR revisions were communicated & that the CR was re-introduced. Cindy stated that Qwest received a lot of opposition in regard to the Regulatory designation. Cindy noted that Qwest agreed to remove the regulatory designation & moved this CR to a non-regulatory category. Cindy also stated that references to the law & regulatory were removed. Cindy noted that law was the reason for the change, but Qwest would now

show this CR as non-regulatory. Cindy stated that the changes are based on Qwest not being obligated to provide products added to the CR. Cindy noted that future changes will affect product offerings & that they would be noticed. Cindy stated that the PCATs are identified & the products are included in the CR. Cindy then stated that there would be a simple change at the beginning of the PCATs that will state that this PCAT change details changes to availability of certain Unbundled Network Elements (UNE) products pursuant to the U.S. Court of Appeals for the DC Circuit decision 00-1012 ('USTA II') which vacated some of the FCC's unbundling rules, & the FCC's Interim Rules, which preserved some of the unbundling rules vacated in USTA II. In accordance with these orders & findings, the 'product specified' is/are no longer available to CLECs unless the most current, effective version of CLEC's Interconnection Agreement (ICA) or Amendment includes terms, conditions, & pricing for the products before 6/15/04. Bonnie J-Eschelon asked if they would be sent out for review. Cindy B said yes & stated that Qwest is not changing the availability to those who have via an ICA; & would make available for CLECs who do not have an ICA. Tom H-Cbeyond asked for the timing of giving DS1 wire center information. Cindy B-Qwest stated that there would be no wire center information & stated that Qwest is standing by for further instructions from the FCC. Cindy stated that the order is not yet posted & said that once it is posted, Qwest would then have it go into effect in 30-days. Cindy noted that the process would be followed & that notices would be sent to communicate the changes. Tom H-Cbeyond stated that he had a concern regarding timing, & noted that by 3-14, major changes would be involved & concerned as to how quickly Qwest would get the changes out. Tom stated that all need to make changes & need time to react. Cindy B-Qwest stated that Qwest would not make changes without the proper timeframes in place. Sharon VM-AT&T asked if this information was in the CR. Peggy ER-Qwest stated that this discussion would be in the meeting minutes of this call. Liz B-Covad stated that if Qwest did not want to receive comments, Qwest needs to state clearly in the notices. Jill M-Qwest stated that the revised & noted Description of Change would also help. Liz B-Covad stated that Qwest needs to provide the intent of the changes & who would be impacted. Jill M-Qwest stated that what Cindy B-Qwest is proposing will be clear in the notices. Liz B-Covad stated that what Cindy B-Qwest related would go a long way & asked to confirm that once the FCC rules are permanent, that Qwest would adhere to the timeframes and go thru the Regulatory process. Jill M-Qwest said that she agreed that if a particular change is a result of the TRO or is a regulatory change, Qwest would follow that process & would provide the appropriate information. Liz B-Covad asked what level of change the PCATs would be. Jill M-Qwest stated that they would be Level 4 Notices. Liz B-Covad stated that she recommends time be provided, due to Cbeyond's concern. Bonnie J-Eschelon said that she had a global comment that she has noticed that the notices do now have additional information included. Bonnie then thanked Qwest for providing that additional information. There were no additional questions or comments. The call was concluded.

1-21-05 Email to Cbeyond: Mr. Hyde, I received your email & will make note of your comments in the CR. As a result of the Oversight meeting that was held with this CR, Qwest is moving forward with the ad hoc call, & if the final rules warrant a change, we will address it at that time. Thank you, Peggy ER Qwest CMP CRPM

1-21-05 Email from Cbeyond: Once again, it is premature to hold any discussion until the permanent FCC rules are issued in the next few weeks. Among other things, the permanent rules allow DS1 loops & EELs in many-

if not most-Qwest locations. Any attempt to implement prior to reading the FCC's final order is an exercise in futility & a waste of precious resources.

1-10-05 CMP Ovrsght Mtg. PURPOSE: This was the second meeting of the CMP Oversight Committee to review an issue submitted to the committee on 11/30/04 by Liz Balvin of Covad. The following is the write-up of the discussion. Attendees: Jen Arnold-TDS Metrocom/U S Link, Liz Balvin-Covad, Becky Quintana-Colorado PUC, Bonnie Johnson-Eschelon, Sharon Van Meter-AT&T, Amanda Silva-VCI, Susie Bliss-Qwest, Susan Lorence-Qwest, Bill Campbell-Qwest, Cindy Macy-Qwest, Peggy Esquibel Reed-Qwest, Linda Sanchez-Steinke-Qwest. DISCUSSION: Linda SS-Qwest stated that on Friday Qwest sent an e-mail to Oversight members explaining that we would prefer to revise the CR PC102704-1ES. By revising the CR the historical information is preserved & the references to law would be removed & the title would be changed. Attached to the e-mail was a redlined CR with the proposed changes. The proposed deletions would become the revised title & the revised description of change keeping the original title & the original description of change within the CR. The Oversight members stated they had received & reviewed. Liz B-Covad stated she did not think this process would preserve the CR history & recalled from the last meeting the only recommendation was to defer the CR until the final rules were issued. Susie B-Qwest stated Qwest reviewed three options for the CR; defer until final rules, amend the CR or withdraw the CR & issue a new CR. Liz B. asked if Qwest was going to consider deferring until the rules are permanent. Susie B. said that the approach was considered & voiced concern that the products are currently not available & current contracts are expiring. Bonnie J-Eschelon stated there are products in the PCAT that cannot be ordered because they are not in the CLEC's contract. Bonnie said she was trying to understand why the CR is needed. Bill C-Qwest explained that the PCATs are based on the approved SGATs & the SGATs can be different from the ICA. We try to time the CMP update changes with the SGAT changes & Qwest did put together SGAT changes. However, the SGAT's have been pulled back with concurrence of the states due to the unsettled regulatory situation post USTA II, post interim order & pre final FCC order. Qwest has changed the ICA language template (insert comment) but the current SGAT's do not accurately reflect the prods Qwest offers & Qwest (end comment) feels it is important to notify CLECs on the changes to the prods. Liz B countered that if the legal implications were removed, the situation is in flux, the permanent rules will be issued later this month & the CLECs are restricted from ordering existing products that are not included in their ICA. Bill C. responded after 6/15/04 CLECs without the ICA including the products do not have the option of ordering the prods. Qwest is choosing to move forward with the CR because the final FCC rules although scheduled to be finalized in January and effective in March, it would most likely be June before changes to the order are made. Liz B. felt that the process was backward because if a CLEC wants these products they would work with the negotiation team and would not go through CMP (insert comment) because CMP specifically call out ICA's override (end comment). Bill C. discussed that Qwest has an obligation to notice the change in the PCAT when the SGAT has not changed. Bonnie J. said that product availability is based on the ICA and even though Qwest notices about product availability, CLEC's can't get the products without an agreement including the product. Bill C. explained that new CLECs may go to the Qwest website to find which products are available & then would be given a contract that does not list all the products that were available on the website. Normally the SGAT change would force the change in the PCAT. Liz Balvin stated that Qwest restricting products to CLECs who don't have them in their ICA

is different than limiting the product availability. The intent of the CR was drawn from legal rules & the permanent rules could change the offering. Bill C responded that the CR would have to be changed. Bonnie J asked if traditionally a new CLEC would go to the SGAT or PCAT to see what is available & they are not in sync. Bill C. explained that the PCAT & SGAT are in sync but they are not in sync with Qwest policy. The states are not accepting SGAT changes at this time & the SGAT & PCAT are in sync but the ICA template is different. Becky Q-COPUC asked if Qwest was considering filing the SGAT prior to the final rules or waiting & Bill C. stated that Qwest is waiting, although we did file prior to the USTA decision, but withdrew the filings when it was clear that the states did not believe the timing was right to make the proposed changes knowing full well any state proceedings would have to be revisited. Becky Q voiced concern that the SGAT on file & the Wholesale tariff are not the current Qwest offering. Liz B & Bill C agreed that the CR was issued as a result of law. Liz was concerned that Qwest would be restricting CLECs from gaining the product going forward but it is available for CLECs with an ICA. Liz B stated that she continues to see the only option is deferring to keep the history of the CR & that not all the history is maintained about the Escalation & Oversight review. Susie B said at the last meeting the committee was polled on the options. Liz B and Bill C discussed whether the CR is limiting products (as called for in the CMP document), restricting new CLECs from getting these products & if a CLECs contract expires then they would be restricted from the product availability. Liz B stated that the CR should identify the interim rules as the basis for notifying the CLECs of 6/15 product changes & that Qwest is not going to file the SGAT until the permanent rules are available. Bill C agreed that the CR is based on the USTA II rules & that Qwest has restricted the products & changes will have to be made to comply with the final rules. Liz B stated the basis is USTA II & Bill C said he agreed that the basis is USTA II, & under the FCC guidance, are no longer required to provide unbundled elements. Liz B said Qwest's current position needs to be identified in the CR. Bill C said that AT&T & Eschelon have a different opinion. Bonnie J said AT&T & Eschelon agree this is not a Regulatory CR & restated Liz's concern if it was appropriate to issue the CR at all if the guidelines are not followed. We agreed the CR is not regulatory because Qwest was not ordered, Qwest made the choice not to offer the products. Bill C asked Liz if we include the language & make it a regulatory CR. Liz B said that the genesis of the change was the USTA II decision & now Qwest wants to remove that. Bill C stated that during the last meeting it was clear this was not a Regulatory CR. USTA II was a court opinion about what needed to be offered. Bonnie J said that is what takes it out of Regulatory CR classification. Liz B argued that the rules are 'as is' until the permanent rules come out & since it is just an opinion & believes Qwest should follow the SGATs until the rules are permanent. Bill C stated that the DC court vacated the FCC rules & in a sense undermined them & took away the unbundled rules. The FCC said here is the interim rules & will freeze prior to 6/15 until we can put out the final rules. Qwest doesn't want to put the CR in deferred status. Bonnie J said Eschelon does not have an objection to Qwest updating the existing CR (insert comment) because Eschelon has updated CRs without the clock starting over. Becky Q questioned whether the CLECs were arguing the merits of the CR rather than the process that Qwest used. Liz B said the CR could be updated & requested information relating to Oversight & Escalation be included. Linda SS stated that Qwest has not included Escalation response or Oversight minutes in other CRs as the Escalation & Oversight minutes are found in another location on the web site. There was agreement that the CR would provide the revised title, original title, revised description of change, original description of change & url links to the Escalation & Oversight web locations. CR PC120803-1 was

provided as an example of a CR that has been revised. Bonnie stated that the history is captured & that this CR is an anomaly because it had the regulatory issue & was not just a systems to process crossover, but does not agree with the CR & does not understand what Qwest is trying to accomplish & Qwest feels the need to move forward. Sharon VM stated that AT&T does not think this is a regulatory CR & would like the CR to include the history of what has been discussed. Deferring the CR would be better & revising is acceptable if the history is included. Liz B agreed deferring would be better & revising the CR sets a precedent that the CR is regulatory but not identifying in that way. There was recommendation from Covad, Eschelon, AT&T, TDS/MetroCom & MCI that the CR be deferred until permanent rules are issued. Becky Q stated that without making any statement on the merits of the CR, she believed that Qwest should go ahead with the CR because she agreed with Bill Cs estimated timeline for permanent rules. Qwest would like to move forward by revising the CR. The Oversight Recommendation will include the different recommendations from the Oversight members. Bonnie J & Becky Q discussed the merit of language changes to the CMP process. Liz B & Bonnie J stated that the CR should not have defaulted to CMP as it was not the appropriate approach & the importance of keeping the CMP guidelines in tact. The meeting was concluded.

1-4-05 CMP Ovrsght Mtg. PURPOSE: This was a meeting of the CMP Oversight Committee to review an issue submitted to the committee on 11/30/04 by Liz B-of Covad. The following is the write-up of the discussion. Attendees: Jen Arnold-TDS Metrocom/U S Link, Liz Balvin-Covad, Becky Quintana-Colorado PUC, Bonnie Johnson-Eschelon, Kim Isaacs-Eschelon, Sharon Van Meter-AT&T, Kathy Stichter-Eschelon, Doug Denny-Eschelon, Amanda Silva-VCI, Jeff Sonnier-Sprint, Susie Bliss-Qwest, Susan Lorence-Qwest, Cindy Buckmaster-Qwest, Bill Campbell-Qwest, Cindy Macy-Qwest, Jill Martain-Qwest, Linda Sanchez Steinke-Qwest DISCUSSION: The meeting began with Qwest making introductions. Linda S-S-Qwest reviewed the issue Covad submitted to Oversight on 11/30/04. Linda read from the Description of the Issue; Qwest inappropriate use of CMP to drive legal interpretation of the Law, & the desired resolution; the proposed changes (PC102704-1ES) be withdrawn until Qwest can properly follow the CMP governing document. Qwest responded on 12/10/04 requesting that Oversight meet to discuss how to move forward with the CR. Liz B reviewed the history of the issue & stated Covad's position that the biggest issue is Qwest is out of scope of CMP. She stated that the first problem is that the Systems CR SCR102704-1RG was identified as Regulatory & did not follow the process of referencing the page & paragraph & called into question the law or mandate. The second problem is that six CLECs objected to the regulatory classification of the CR & the objections should have been addressed. The CR was then converted to Prod Proc, the regulatory classification removed, & Qwest did not follow the crossover guidelines. Qwest's binding response to the Covad escalation continued to assert that Prod Proc is not the correct category & it is a regulatory CR. Qwest has been out of scope of CMP for this CR. [Comment received from Covad: Qwest's binding response to the Covad escalation continued to base decision on USTA II & FCC interim rules but not call regulatory. Qwest has been out of scope of CMP for this CR.]Susie B-Qwest stated Qwest's position was when objections to the regulatory classification were received, the regulatory definition in CMP did not fit. There was not unanimous agreement that the CR was regulatory. Section5.1.1 states that if there is not unanimous agreement then the CR will be treated as non-regulatory. PCAT changes need to be made & when PCAT changes are made, Qwest is obligated to notify the CLECs by following 5.4.5 limiting the product

availability. Qwest proceeded as a Prod Proc Level 4 change. Liz B & Susie B discussed the concern that CLECs were not given a chance to discuss the CR & whether Qwest was limiting or restricting availability of products. [Comment received from Covad: Liz B stated that CLECs were not given the opportunity to iron out whether the CR should have been categorized as regulatory. Susie B indicated that Qwest has the right to limit the availability of products based on the CMP document. Liz Balvin stated that Qwest is not limiting, but restricting products that other carriers continue to be able to purchase.] Bonnie J-Eschelon stated that Qwest can not make a decision as a company & not allow the customer to order the product any longer. It is required to provide the basis under which the product is removed. Bill C-Qwest, Liz B, Bonnie J, & Susie B discussed resolving the issue by providing the USTA II document & identifying for each product the page & paragraph reference. Liz B & Bonnie J were concerned that CMP process has not been followed, & stated the CR is lacking the steps required. Susie B asked if citing the paragraph would resolve. Liz recalled that the CMP document was written to address regulatory CRs & that Qwest tried to remove the regulatory classification & page & paragraph of law should be provided to move forward with the change. Cindy B-Qwest restated Liz's position; Covad does not want the Regulatory classification removed, but instead would like Qwest to add the page & paragraph. [Comment received from Covad: Cindy B-Qwest asked to restate Liz's (Covad's) position; does Covad want the Regulatory classification removed or Qwest to cite add the page & paragraph. Liz's stated that Qwest continues to call into question the law but not want to cite page & paragraph, there is a difference.] Further discussion ensued between Liz B & Cindy B whether appropriate to revise the CR or leave the CR as is currently. Susan L-Qwest added that when grandparenting products, the CRs remove the product availability. Liz B felt that Qwest has called into question the law & has jerry rigged the CMP process to meet Qwest's needs because there are system edits in place to restrict ordering the products. [Comment received from Covad: products & that the notifications, even level 4 notices carry the clause that IA supercede PCAT documents.] Becky Q-COPUC asked if Liz's issue was there is not a way the CR can be categorized as a regulatory CR. Liz Balvin responded that Qwest has called into question the law & should follow the CMP guidelines & provide page & paragraph. Becky Q stated that if Qwest withdraws the CR & then re-submits the CR as regulatory it is not clear how the CLECs could object. Sharon VM-AT&T stated AT&T had objected to the regulatory classification & read the AT&T attorney position. Cindy B. interjected that this is the very objection that resulted in Qwest removing Regulatory classification from the CR. A number of CLECs objected on this basis & that is where Qwest took its action from. Liz indicated that may have been some CLEC prematurely showing part of their hand but she didn't see these remarks nor a response from Qwest on these remarks & therefore didn't know Qwest had this information. Bonnie J, Bill C. & Cindy B. discussed that a regulatory classification means Qwest cannot (by law) provide the product & a non-regulatory classification means that Qwest does not have an obligation to & chooses not to provide the product. It was agreed this CR is non-regulatory. Becky Q. added that it is now clear why this is not a regulatory CR. Liz B-Covad stated that had objected to the Systems CR & then escalated the Prod Proc CR. If Qwest had followed the process, the CLECs would have discussed the objections and Qwest's responses to the objections. Qwest is aware of all the other CLEC's positions. [Comment received from Covad: Liz Balvin stated it is easy for Qwest, now that it has all the information in hand, to take this new position. If Qwest had followed the process, the CLECs would have discussed the objections & Qwest's responses to the objections. Qwest is

aware of all the other CLEC's positions & by not following the CMP guidelines has eliminated CLECs insight to all that Qwest has.] Cindy B. requested input on how the CR could be moved forward. Liz B. requested that Qwest respond to the objections. There was discussion between Linda S-S, Liz B. & Susie B. concerning Section 5.1.1 related to any requirement that Qwest respond to objections. There was further discussion between Liz B, Susie B, Cindy M & Susan L regarding the CMP voting process, classification of the CR, following CMP guidelines for the CR & the precedent that has been set with change to disposition requests. Liz felt these were different situations. [Comment received from Covad: Liz stated these situations were different because no one has requested a change in disposition.] Becky Q. asked if the concern was that Qwest did not follow the process outlined in 5.1.1 or if the concern would be the same if 5.1.1 were followed. Liz B said she couldn't say for sure because Qwest has all the ammunition & we have none. Bonnie J & Becky Q discussed Qwest exercising their rights to limit product availability, basis for product limitation as it relates to PCAT comments, limiting of products prematurely, & appropriateness of legal discussion on Prod Proc changes. [Comment received from Eschelon: Bonnie J & Becky Q discussed Qwest exercising their rights to limit product availability, basis for product limitation as it relates to PCAT comments, Bonnie said Qwest is limiting products prematurely & Becky agreed. Becky & Bonnie discussed the appropriateness of legal discussion on Prod Proc changes.] Susan L. & Liz B. discussed processing grandparenting change requests, the tariff reference being out of CMP scope & whether the products are currently ordered by CLECs. Liz felt this CR is different because Qwest is citing the law. [Comment received from Eschelon: and on grandparenting CRs no CLECs order the products.] [Comment received from Covad: Liz stated that whenever Qwest grandfather's a product, the first question from CLECs is whether anyone is ordering the products.] Cindy B. responded that Qwest has the right to not have to offer products based on the law. Kim I- Eschelon said that the title of the CR, USTA II, implies that the change is based on the law. Cindy B. said that she was not involved when the CR was initiated or when it was decided it was a regulatory CR. The change is not a mandate & Qwest is obligated to notify CLECs of the change. There has been no effort to jerry rig CMP. Qwest is notifying CLECs the products will not be available on a going forward basis. Liz B & Becky Q discussed if notification should be through CMP & PCAT changes. Bill C said a note in the PCAT stating if the CLEC does not have these products in the current ICA then these products are not available. Bill C, Liz B & Cindy B continued discussing options to process the CR, ability to vote down a regulatory CR & then move it to prod proc. Re-issuing the CR & starting the clock over based on conversation & intent, changing the title & editing the CR, & posting of historical information to the CR. Bonnie J asked that the meeting minutes reflect all of the conversation that has taken place. [Comment received from Eschelon: Bonnie said Qwest often reflects their views but not CLECs.] Liz B, Sharon VM, Susie B & Becky Q presented options to process the CR; changing it to a regulatory CR because it is citing the law, submitting a new ProdProc non-regulatory CR stating intentions, changing the CR title, deferring, amending the current CR & maintaining the history. Susan L suggested Oversight members take a poll on which would like to modify the existing CR, which would like a new CR. Bill C, Becky Q, Cindy B, Bonnie J, & Liz B discussed options related to the CR. The CR is currently accurate & may change soon. When the final rules are issued DS1 & DS3 loops may not be accurate. [Comment received from Eschelon: When the final rules are issued this will change because DS1& DS3 loops may not be accurate.] Bill C asked if the CR is moved to deferred status if the CLEC community is willing to waive the notification requirement. Kim I

& Bill C discussed SGAT changes, PCAT changes & the ICA negotiations. [Comment received from Eschelon: Bill said that the current negotiation template reflects the correct information but the SGATs have not been updated. Bonnie asked if there was a particular CLEC that was challenging Qwest on this issue & if that is why Qwest needed to update PCATs.] Cindy B, Bonnie J & Liz B continued discussion related to processing the CR, Bonnie J, Bill C & Liz B discussed how CLECs should be notified of the product change & the PCAT reflecting the SGAT, notification through change of law, how contracts override the PCATs, & product availability is negotiated through the ICA agreements. [Comment received from Eschelon: Bonnie said if Qwest will limit product availability in its existing ICA, Qwest would need to notify Eschelon through the change in law provision of its contract and not through a PCAT CMP notice. Bill agreed.] Becky Q suggested that Qwest discuss the CR options internally. The Oversight committee agreed to meet again on 1/10/04 at 3:00 p.m. MT. The meeting was concluded.

1-19-05 Prod Proc CMP Mtg: Jill M-Qwest stated that a meeting was held & that the CR Title was revised. Cindy B-Qwest provided history of the CR & noted that the CR was issued as Regulatory & it limited the availability on certain products. The CR designation changed, in 11-2004, to a Prod Proc CR & that several elements remained on the request. Cindy noted that there was discussion in December & on a 1-5 ad-hoc meeting. Cindy stated that the CR was again revised & noted that there is no law forcing Qwest to make this decision. Cindy stated that this is an opportunity that Qwest is taking advantage of. Cindy noted that the CRs Title & Description were changed to remove references to USTA II. Cindy then reviewed the new Title and Description. Cindy stated that the CR Description states "any future changes of law may impact this notification & will be supported by the applicable notification". Cindy stated that the CR is in Development status & will notify the CLECs, on a going forward basis, the dates that the products cannot be ordered. Cindy then noted that there is an ad-hoc meeting scheduled for 1-25 to review the changes. Linda SS-Qwest stated that Qwest sent a notice on 1-17 and as there was no recommendation from Oversight, the notice included the competing recommendations. Jill M-Qwest asked if there were any questions or comments. Bonnie J-Eschelon stated that she has not yet reviewed the revisions & will reserve comments for the ad-hoc meeting. [1/28/05 Comment from Eschelon: and/or comment cycle.]

12-2005 CMP Mtg: Cindy B-Qwest advised that we have suggested an Oversight Committee meeting be held. Qwest has scheduled the meeting for 12-20 at 1:00 p.m. MT. Liz B-Covad advised that Qwest continues to site law without issuing the CR as Regulatory. Covad believes system edits are in place to not allow CLECs to order products not available. If Qwest sites legal interpretation of law the page & paragraph must be included. Covad is not saying that CMP is or isn't the right forum, but Qwest is trying to make a unilateral decision & we do not know what law Qwest is citing. Qwest doesn't believe the CLECs need to know what page & paragraph are referenced, as the CMP document states. It was agreed more discussion would take place at the Oversight meeting. This CR will move to Development Status.

11/17/04 CMP Mtg: Cindy B-Qwest stated that this CR has drawn quite a bit of attention. Qwest would like to clarify the intent of the CR. Cindy advised that we are having an ad hoc meeting on Friday, 11-19 to review the documentation & take issues. Qwest apologizes for the confusion as we

issued the CR two times. The CR was modified to clarify the scope to include USTA II & FCC Interim Rules. Cindy B. advised that CLECs who have language in their ICA can continue to order these products & CLEC who do not have language in their ICA can not order the products nor amend their ICA to include such language. Cindy listed the products affected. Josh T-TelWest asked what if a CLEC opts into an existing contract? Cindy B-Qwest advised that you are permitted with the exception of the elements cited. David M-TelWest questioned without signing a TRO USTA II agreement a CLEC can opt into a contract? David advised that Qwest Regulatory has said CLECs can not do this. Cindy B-Qwest said that the contract would be modified as it has to be TRO & USTA II compliant. Liz B-Covad advised that we continue to object that Qwest bring (insert comment from Covad/Eschelon) to CMP its legal interpretation. Liz advised that Qwest is using ad hoc meetings to gain insight into the CLECs view of the law and it is inappropriate (end comment). Cindy B-Qwest advised this has nothing to do with Qwest telling our interpretation of the law. This is in CMP to advise about a product that is being limited. Liz B-Covad stated that this is more than a product being discontinued. In addition, Qwest can not cite the law & then not call it a Regulatory CR. There are legal means to negotiate agreements. Cindy B. advised this CR was initially a Regulatory CR & it was opposed. That is why we changed it to a Prod Process CR. We are only telling you that you can't have the product if you don't have it in your contract. Liz B-Covad advised the reason they objected to the Regulatory classification is that Qwest didn't cite the page & paragraph. Qwest is still citing the law, [comment from Covad/Eschelon] not calling it a regulated changed and that is still out of scope for CMP. Liz advised that Qwest should have followed CMP governing document & not simply converted the systems CR to prod proc, that the objections should have been addressed & if agreed to by the community, the CR would have 'crossed over' to prod proc. Qwest is trying to manipulate the CMP process to fit their needs. Liz advised that it is inappropriate for Qwest to host an ad hoc meeting. Without following the CMP governing documentation, Qwest is asserting its legal interpretation, & that is the problem (end comment) This should be handled through arbitration of contracts. Cindy B. restated that if you do not have the products in your contract you can not order them. Qwest does not have an obligation to offer this. David M-TelWest said it is not important to me what Qwest's interpretation is. It should be arbitrated & not unilaterally implemented by Qwest. Cindy B. summarized & clarified the discussion-if Qwest sites the page & paragraph, and why it is the law, & if we come to agreement on the language in the CR, than we can move it forward in CMP. Bonnie J-Eschelon said whether or not we agree on the language, this should not be discussed in CMP. We do not discuss legal interpretation in CMP. This should be done in a different forum. Liz B-Covad stated that this is an ICA negotiation discussion. David M-TelWest stated that he still has a concern with how we are treating CLECs without an existing ICA & that they can not opt into existing ICAs. I think the interpretation is wrong & CLECs should be able to do this. Qwest agreed to cancel the 11-19 ad hoc meeting, review the CR, & provide additional information at a later date. This CR will move to Presented Status. (comment from Eschelon) Cindy B. said like in the words of Arnold Swartzager I'll be back (end comment).

**Originator Company Name:** Qwest Corporation

**Owner:** Buckmaster, Cindy

**Director:** Campbell, Bill

**CR PM:** Esquibel-Reed, Peggy

### Description Of Change

THIS DOCUMENTATION IS CONTINUED FROM PC102704-1ES

Revised Description of Change effective 3/23/07:

The following products, from the original CR, are removed from this Change Request and were not completed with this CR. The effort for these products may occur via separate CRs.

Unbundled Local Loop-General Information

Unbundled Local Loop-Digital Signal Level 1 (DS1) Capable Loop

Unbundled Local Loop-Digital Signal Level 3 (DS3) Capable Loop

Enhanced Extended Loop (EEL)

Loop MUX Combination (LMC)

Unbundled Dark Fiber (UDF)

Unbundled Dedicated Interoffice Transport (UDIT)

Unbundled Customer Controlled Rearrangement Element (UCCRE)

-----

Revised Description of Change effective 3/1/05:

This CR will be implemented as a product/process CR as there are no CLEC facing system changes.

This CR details changes to availability of certain Unbundled Network Elements (UNE) products.

The following UNE products are no longer available to CLECs unless the most current effective version of the CLEC's Interconnection

Agreement (ICA) of Amendment includes terms, conditions, and pricing for the products before 6/14/04.

Unbundled Network Element (UNE)- Switching (UBS)  
<http://www.qwest.com/wholesale/pcat/unswitch.html>

Unbundled Network Elements- Platform (UNE-P)-General Information  
<http://www.qwest.com/wholesale/pcat/unep.html>

Unbundled Network Elements - Platform (UNE-P) - Integrated Services Digital Network (ISDN) Basic Rate Interface (BRI)

<http://www.qwest.com/wholesale/pcat/unepisdnbri.html>

Unbundled Network Elements-Platform (UNE-P)-Centrex  
<http://www.qwest.com/wholesale/pcat/unepcentrex.html>

Unbundled Network Elements-Platform (UNE-P)-Public Access Lines (PAL) <http://www.qwest.com/wholesale/pcat/uneppal.html>

Unbundled Network Elements- Platform (UNE-P)- Private Branch Exchange (PBX) Trunks  
<http://www.qwest.com/wholesale/pcat/uneppbx.html>

Unbundled Network Elements - Platform (UNE-P)-Plain Old Telephone Service (POTS)  
<http://www.qwest.com/wholesale/pcat/unepopts.html>

Unbundled Network Elements - Platform (UNE-P) - Digital Switched Service (DSS) <http://www.qwest.com/wholesale/pcat/unepdss.html>

Unbundled Network Elements -Platform (UNE-P) - Integrated

Services Digital Network (ISDN) Primary Rate Interface (PRI)

<http://www.qwest.com/wholesale/pcat/unepisdnpri.html>

The remaining products on this CR are being revised due to changes based on the FCC Order received 2/4/05. The following products will be revised and will be noticed on a future date associated with this change request.

Unbundled Local Loop-General Information

Unbundled Local Loop-Digital Signal Level 1 (DS1) Capable Loop

Unbundled Local Loop-Digital Signal Level 3 (DS3) Capable Loop

Enhanced Extended Loop (EEL)

Loop MUX Combination (LMC)

Unbundled Dark Fiber (UDF)

Unbundled Dedicated Interoffice Transport (UDIT)

Unbundled Customer Controlled Rearrangement Element (UCCRE)

As always, any future changes of law may impact this notification and will be supported by the applicable notification.

Expected Deliverables/Proposed Implementation Date (if applicable):

Implement PCAT changes retroactive to 6-15-04 subject to CMP Guidelines

-----

Revised Description of Change effective 1/11/05:

This CR will be implemented as a product/process CR as there are no CLEC facing system changes.

This CR details changes to availability of certain Unbundled Network Elements (UNE) products.

The following UNE products are no longer available to CLECs unless the most current effective version of the CLEC's Interconnection Agreement (ICA) of Amendment includes terms, conditions, and pricing for the products before 6/14/04.

-All Enterprise and Mass Market Unbundled Network Elements

Switching (UBS) products, detailed in the following Product Catalog

(PCAT): <http://www.qwest.com/wholesale/pcat/unswitch.html>

-All Enterprise and Mass Market Unbundled Network Elements-Platform (UNE-P) products, detailed in the following PCAT:

<http://www.qwest.com/wholesale/pcat/unep.html>

-DS1 Unbundled Loop detailed in the following PCAT:

<http://www.qwest.com/wholesale/pcat/unloops1caploop.html>

-DS3 Unbundled Loop detailed in the following PCAT:

<http://www.qwest.com/wholesale/pcat/unloops3caploop.html>

-Unbundled Dark Fiber (UDF), including E-UDF and Meet-Point UDF, detailed in the following PCAT:

<http://www.qwest.com/wholesale/pcat/darkfiber.html>

-DS1 and DS3 Unbundled Dedicated Interoffice Transport (UDIT), including E-UDIT and M-UDIT, detailed in the following PCAT:

<http://www.qwest.com/wholesale/pcat/udit.html>

-DS1 and DS3 Enhanced Extended Loop (EEL) detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/eel.html>

-Unbundled Customer Controlled Rearrangement Element (UCCRE) detailed in the following PCAT:

<http://www.qwest.com/wholesale/pcat/uccre.html>

-DS1 and DS3 Loop Mux Combo detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/lmc.html>

As always, any future changes of law may impact this notification and will be supported by the applicable notification.

Expected Deliverables/Proposed Implementation Date (if applicable):

Implement PCAT changes retroactive to 6-15-04 subject to CMP Guidelines

---

Previous Title and CR Description of Change - see below for information prior to 1/10/05. This CR was Revised on 1/11/05

Previous Title:

U.S. Court of Appeals for the DC Circuit decision (USTA II) Decision No. 00-1012, and FCC Interim Rules Compliance: Certain Unbundled Network Elements (UNE) Product Discontinuance

Previous Description of Change:

This CR will be implemented as a product/process CR as there are no CLEC facing system changes.

This CR details changes to availability of certain Unbundled Network Elements (UNE) products pursuant to the U.S. Court of Appeals for the DC Circuit decision 00-1012 ('USTA II') which vacated some of the FCC's unbundling rules, and the subsequent FCC Interim Rules which preserved some of the unbundling rules vacated in USTA II.

In accordance with these orders and findings, the following UNE products are no longer available to CLECs unless the most current, effective version of the CLEC's Interconnection Agreement (ICA) or Amendment includes terms, conditions, and pricing for the products before 6/15/04:

-All Enterprise and Mass Market Unbundled Network Elements Switching (UBS) products, detailed in the following Product Catalog (PCAT): <http://www.qwest.com/wholesale/pcat/unswitch.html>

-All Enterprise and Mass Market Unbundled Network Elements-Platform (UNE-P) products, detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/unep.html>

-DS1 Unbundled Loop detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/unloopds1caploop.html>

-DS3 Unbundled Loop detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/unloopds3caploop.html>

-Unbundled Dark Fiber (UDF), including E-UDF and Meet-Point UDF, detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/darkfiber.html>

-DS1 and DS3 Unbundled Dedicated Interoffice Transport (UDIT), including E-UDIT and M-UDIT, detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/udit.html>

-DS1 and DS3 Enhanced Extended Loop (EEL) detailed in the following PCAT: <http://www.qwest.com/wholesale/pcat/eel.html>

-Unbundled Customer Controlled Rearrangement Element (UCCRE) detailed in the following PCAT:

<http://www.qwest.com/wholesale/pcat/uccre.html>

-DS1 and DS3 Loop Mux Combo detailed in the following PCAT:  
<http://www.qwest.com/wholesale/pcat/lmc.html>

Expected Deliverables/Proposed Implementation Date (if applicable):

Retroactive to 6/15/04 pursuant to FCC Interim Rules, subject to  
CMP Guidelines.

3/21/2007	Discussed at Monthly CMP Meeting	Discussed in the March Monthly Product Process CMP Meeting

### Project Meetings

DOCUMENTATION FOR THIS CR IS CONTINUED FROM PC102704-1ES. PLEASE SEE PC102704-1ES FOR PRIOR PROJECT MEETINGS INFORMATION FOR THIS CHANGE REQUEST.

March 29, 2007 Email Sent to Eschelon: Bonnie, Qwest is not

treating all of the CR as completed. As stated in the email below, dated March 26th, The CR was revised in order to remove the products that were not completed. The Completed Status of the CR is valid due to the completion of the products that remain on that CR. Perhaps the confusion is because you have not seen the revised CR. I have attached a copy. Peggy Esquibel-Reed Qwest Wholesale CMP

March 28, 2007 Email Received from Eschelon: Eschelon continues to believe Qwest is not in compliance with CMP closing codes. Not all of the Change Request was completed, but Qwest appears to be treating it all as completed. More importantly, as Eschelon has said before, changes regarding TRRO are considered change in law and should be handled via negotiations and perhaps also in some type of forum, such as changes to the SGAT, where there is also Commission oversight. Bonnie Johnson Director Carrier Relations Eschelon Telecom Inc.

March 26, 2007 Email Sent to Eschelon: Bonnie, The CRs (PC102704-1ES and PC102704-1ES2 have been revised to indicate that some products were removed from the original CRs and that the effort for some of those products would occur via separate CRs. The products that were not removed from the CRs were the products that were completed, therefore the status of Completed would be appropriate. Withdrawal is not appropriate, as some of the products were completed and Defer would also not be appropriate as there is no more action for these specific Change Requests. The history continues to be retained on PC102704-1ES and PC102704-1ES2 and those CRs continue to be available via the Interactive Reports on the Qwest Wholesale web site. None of the documentation has been or will be lost. The email below has been added to PC102704-1ES2, as requested. Peggy Esquibel-Reed Qwest Wholesale CMP

March 23, 2007 Email Received from Eschelon: Eschelon's position has not changed regarding PC102704-1ES and 1ES-2. Changes regarding TRRO are considered change in law and should be handled via negotiations or in some type of forum, such as changes to the SGAT, where there is Commission oversight. In addition, the CR is not completed so a status of complete is not appropriate. Will Qwest be withdrawing or deferring this CR? Please add this comment to the CR before changing the status. Thanks, Bonnie Johnson Director Carrier Relations Eschelon Telecom Inc.

March 21, 2007 Product Process CMP Meeting: Mark Coyne-Qwest stated that these are the two TRRO CRs that were opened a few years ago. Mark then stated that based on the discussion at the February CMP Meeting, where Qwest acknowledged that the effort was moving forward with individual CRs, Qwest is moving to close these two CRs. Mark stated that all the history and notes will be retained and are available via the interactive reports on the web site. Mark stated that none of the information would be lost and

asked if there was any objection to the closure of PC102704-1ES and PC102704-1ES2. There were no objections to the closure of the two CRs. 3/27/07 - Comments to minutes received from Eschelon Mark Coyne-Qwest stated that these are the two TRRO CRs that were opened a few years ago. Mark then stated that based on a number of meetings and discussions, including a discussion at the February CMP Meeting, where Qwest acknowledged that the effort was moving forward with Qwest submitting individual CRs, Qwest is closing these two CRs. Mark stated that all the history and notes will be retained and are available via the interactive reports on the web site. Mark stated that none of the information would be lost

- February 21, 2007 Product Process CMP Meeting: Mark Coyne-Qwest stated that at the end of the last ad hoc call it was mentioned that Qwest would schedule additional calls in order to continue the discussions on this CR to categorize products on the TRRO Product matrix and try to move forward with a prioritization of products. The original Qwest plan to gain CLEC input on the priority of the various products has not been as successful as we planned or hoped. We heard all the comments on that call and considered all the feedback that another call would just be rehashing the same things again. We then took all that feedback and gave it some additional thought in order to determine what the most logical next step would be, to allow Qwest and the CLEC community to continue to move forward on this issue. What makes sense at this point, to Qwest, is that we issue individual CMP CRs for the products that need to be addressed in CMP and hold discussions for specific CRs or product groupings. That would allow those CLECs with impact on those specific products to have a CMP forum for input on the process related changes associated with these products. It should provide a more meaningful and valuable method for proceeding with this effort for Qwest and for those CLECs who are impacted by these changes. Some, if not all, of those CRs will be submitted for the March 21st CMP Meeting. Bonnie Johnson-Eschelon stated that on the last call, Cindy Buckmaster (Qwest) committed to taking one of her products, due to Integra's concerns regarding the PCATs, and to re-do the PCAT and meet on those changes. Bonnie asked if Qwest is now not going to do that. [Comment Received from Eschelon: Bonnie Johnson-Eschelon stated that on the last call, Cindy Buckmaster (Qwest) committed to taking one of her products, due to Integra's concerns regarding Qwest cut an pasting information from the ICA into the PCATs, and to re-do the PCAT and meet on those changes. Bonnie asked if Qwest is now not going follow through with that commitment.] Mark Coyne-Qwest stated that we internally evaluated what would work best and determined that the next step should be to issue the CRs. Bonnie Johnson-Eschelon stated that she had no comment at this time.

February 6, 2007 Qwest/CLEC Ad Hoc Meeting: ATTENDEES: Mary Roberts-Unicon, Sue Yoder-Iowa Telecom, Pam Trickel-TDS MetroCom, Julie Redmond Carter-McLeodUSA, Kathy Lee-AT&T,

Peter Huley-TDS MetroCom, Lynn Oliver-Covad, Ken Black-McLeodUSA, Sheila Harris-Integra, Steve Fisher-Integra, Jay Newsbom-Integra, Nancy Thompson-Wisor, Joyce Bilow-McLeodUSA, Karen Clausen-Eschelon, Doug Denney-Eschelon, Bonnie Johnson-Eschelon, Colette Davis-Covad, Rod Cox-TDS MetroCom, Cindy Buckmaster-Qwest, Susan Lorence-Qwest, Candace Mowers-Qwest, Vicki Dryden-Qwest, Lynn Stecklein-Qwest, Peggy Esquibel Reed-Qwest, Karen Chandler Ferguson-Qwest, Mark Coyne-Qwest DISCUSSION: Peggy Esquibel Reed-Qwest stated that the purpose of this meeting was to continue with the open dialogue for the TRO/TRRO CMP CR. The documents for this meeting can be accessed from the Wholesale calendar out on the CMP web site, by clicking on the entry for this call. Those documents are the PCAT Impacts Matrix and 2 other documents which are the CRs for this effort. PC102704-1ES which is the original CR and contains the history thru January 10th. It references PC102704-1ES2 for the continuation of the history for this effort. The creation of PC102704-1ES2 was necessary due to the character limitation being reached for the original CR, in our data base that houses the CR information. This means that that the PC102704-1ES record/CR could not house any more data or content. PC102704-1ES2 was then created in order to continue with the documentation of this effort. The 2 CRs (-1ES and -1ES2) have a complete accounting of all that has transpired, all the history, regarding the calls and communications that have been held and documented. There was a concern, received in an email, that 2 CRs creates the impression that there is no earlier status history. That should not be the case because the 2 CRs are VERY clearly marked and cross referenced in 6 different places: 1) The numbering of the CRs carries the same number with the 2 added to the end of the continuation CR. 2) The CR Titles are the same and make reference to the other CR 3) The first statement in the CR descriptions note that 'Documentation for this CR is continued on/from the other CR number' 4) There is a Status History Line that indicates that there is a Related CR and notes the CR that is continued to/from 5) There is a second Status History Line of a Record Update stating that documentation is continued to/from the other CR 6) The Project Meetings portion of the CRs each contains a statement AT THE TOP that documentation is continued to/from the other CR. Again, there has been no loss of any history for this CR, the history is complete. Both CRs are active and are available via the Interactive Reports out on the web site. The call today as well as future communications will be documented on the continuation CR PC102704-1ES2. There were no comments or questions. Peggy Esquibel Reed-Qwest then noted that the last call was held on January 11th and its purpose was to start the discussions regarding the PCAT Impacts Matrix and getting items in the appropriate buckets in order to proceed and move forward. There were some CLECs on that call who were not comfortable discussing the Matrix without obtaining input from their regulatory folks so that discussion had to be rescheduled and that is why we are meeting today. Details of that January 11 call are in the

meeting minutes of the CR, in case you have not yet had the opportunity to read them. Peggy then stated that this brings us all up to date and that today's discussion would be started by Cindy Buckmaster (Qwest). Doug Denney-Eschelon asked for the meaning of the terms going forward and proceeding. Peggy Esquibel Reed-Qwest stated that we would like to move forward with the open dialogue and the discussion on the moving of the bucketed items in the appropriate place on the PCAT Impacts Matrix. Cindy Buckmaster-Qwest stated that our intent is to identify all product documentation associated with TRO TRRO that are impacted by law. Cindy stated that a list was compiled and that it is separated into sections, the first section identified items that were already introduced, in 2005. Cindy stated that the 2nd list is the products with changes that were postponed and removed from the initial effort of PC102704-1ES. Cindy noted that those products were moved to Category 2. Cindy stated that the 3rd set is yet to be introduced and that no discussions have yet taken place for them. Cindy then stated that the last set is those products that are currently in litigation. Cindy noted that the 4th set is a subset of the 2nd bucket. In the last meeting there was a concern regarding litigation and a desire to have identified where changes have been made in the catalogues. Qwest's intent is not to usurp litigation and noted that these discussions are so all know what to expect if have signed TRRO agreement. Cindy then noted that at the last call, the CLECs said that they wanted to bring their regulatory/legal people on the call in order to help identify the items, in the buckets, that should be moved to bucket 4. Cindy stated that the intent is then to discuss items that are not in bucket 4, or are in bucket 4, with the CLECs that want to discuss them. Doug Denney-Eschelon stated that there are a lot of assumptions on how processes apply to each CLECs ICAs. Doug noted that the wire center litigation is one example. Cindy Buckmaster-Qwest stated that these discussions have been for the entire CLEC Community and Qwest is happy to let the CLECs structure the calls. Cindy stated that Qwest has no pre-conceived notion of what will or will not be discussed. Cindy stated that Qwest would discuss what the CLECs want to discuss. Cindy then stated that Qwest would take feedback as to what additional items need to be moved into Bucket 4, if the CLECs want to share that information. Karen Clausen-Eschelon stated that an assumption, in the Matrix, is that if you want to talk about it, the discussion starts with the non-TRRO PCATs. Karen stated that was her observation. Karen then noted that Eschelon had provided the list of items that are in litigation to Qwest and stated that Qwest needs to tell them what is in litigation. Cindy Buckmaster-Qwest stated that she is neither in legal nor in the regulatory group. Cindy then stated that she would not force discussions and would discuss what the CLECs want to discuss. Cindy stated that the starting place could be the PCATs Impact Matrix and the documents on the main web site, [www.qwest.com](http://www.qwest.com). Cindy stated that we could also discuss the changes that were made for the TRRO web site. Steve Fisher-Integra stated that every PCAT that is related to TRRO is far reaching. Steve then asked that if a PCAT is

related to TRRO and there are ICA negotiations occurring, why the PCATs had so much relationship to the ICAs. Cindy Buckmaster-Qwest stated that the PCATs contain a general description and the flow of a product. Cindy stated that this is how to do business to business. The contracts are not intended to carry the detail of business to business relationships. Steve Fisher-Integra stated that the new PCATs are far reaching into TRRO and are not product specific. Steve stated that we are blurring the distinction between the ICA and the PCAT and there needs to be discussion. Karen Clausen-Eschelon stated that she disagrees with what was just said and stated that it was asked that issues be brought into negotiations. Karen stated that Qwest is trying to draw a distinct line and that some issues do belong in contracts. Karen then stated that in the CMP Document, the scope will sometimes overlap with an ICA and states that the ICA will have control. Karen then stated that she agreed with Integra and that Qwest should negotiate that. Karen Clausen-Eschelon then noted that Cindy (Buckmaster-Qwest) was not regulatory and that Cindy had asked CLEC regulatory personnel to be present on this call. Karen then asked if there was Qwest legal representation on the call. Cindy Buckmaster-Qwest stated that she did not request that CLEC regulatory or legal personnel be on the call, the CLECs said that they wanted regulatory and/or legal folks on the call. Karen Clausen-Eschelon stated that they had already identified that all products are in litigation. Cindy Buckmaster-Qwest asked that for bucket 1, which includes UBS and UNE-P, if anybody believes that these products are in litigation. Cindy then stated that Qwest believes that these have been completed. Cindy asked if anyone disagreed that they have been completed. Doug Denney-Eschelon stated that Qwest has filed a tariff, in Colorado, to amend SGATs and noted that this is part of that filing and that investigation is suspended. Cindy Buckmaster-Qwest stated that if we were to take that approach then we could never have a CMP call due to changes to the tariff and/or SGAT. Cindy stated that could be pushing the envelope and that this call was for discussion of PC102704-1ES/-1ES2 ONLY. Karen Clausen-Eschelon stated that if Qwest had read what they submitted the day before, that PC102704-1ES/-1ES2 should be left in bucket A. Cindy Buckmaster-Qwest stated that the matrix is to identify all products that are impacted by TRRO. Cindy then noted that she saw, in the email, that Eschelon agrees that those items are closed. Cindy then stated that we have not heard from the other CLECs as to the completion on March 18, 2005, for the items in bucket A. Cindy asked if all on the call agree that all items in bucket a are closed. Steve Fisher-Integra stated that if you go into UBS PCAT, there are links that are in the PCATs that link to other documents that might not yet be closed. Steve stated that he would be hesitant to agree that bucket A is closed due to those links to the other documents. Cindy Buckmaster-Qwest stated that was a very good point and noted that the PCAT, as it specifically relates to UBS is closed. Cindy asked if all were in agreement that UBS is not offered by Qwest and asked if all agreed that UNE-P as identified on the matrix is not offered by Qwest. Karen Clausen-

Eschelon asked Cindy (Buckmaster-Qwest) if she was asking the CLECs to agree and comment. Cindy Buckmaster-Qwest said that she was only saying that the CR was closed in March 2005 and at that time CLECs had no issue with those items. Karen Clausen-Eschelon stated that Cindy was then asking two questions. Karen Clausen-Eschelon stated that yes, the CR was closed in March 2005 and agreed that all are not subject to TRRO. Karen stated that no items are open and noted that there is a fuzzy line. Karen stated that the question is if Qwest intend to make similar filings (tariffs in lieu of SGATs) in other states. She stated that she has asked that question a number of times, specifically asked it in a pre-meeting e-mail and expected it to be answered on this call. Cindy Buckmaster-Qwest stated that did not fall into her area of responsibility and noted that the question is not for this call. Cindy stated that this call is for the discussion of TRRO PCATs ONLY. Karen Clausen-Eschelon asked if Cindy (Buckmaster-Qwest) was going to find out who would answer her question. Cindy Buckmaster-Qwest said no and advised Karen (Clausen-Eschelon) that she would trust that Karen would obtain that information from one of the other avenues, within Qwest, that she has probably already asked. Karen Clausen-Eschelon stated that if Qwest's intent was to insult Eschelon that they had. Cindy Buckmaster-Qwest stated that it was not her intent to insult Eschelon and apologized. Cindy stated that she was not sure if there were filings in other states as that is not her decision or area of responsibility. Karen Clausen-Eschelon stated that she understood that Cindy (Buckmaster-Qwest) does not know the answer. Cindy Buckmaster-Qwest asked if there were any items in the third bucket, such as 800 data base query, that were involved in litigation. Karen Chandler Ferguson-Qwest stated that Qwest is not aware of any current arbitration or litigation that was occurring for items in that third bucket. Karen Clausen-Eschelon stated that Qwest had Eschelons written response and stated that she would not go thru the matrix again. Cindy Buckmaster-Qwest asked if there were any CLECs on the call that believed that items in that third bucket were in litigation or arbitration. Karen Clausen-Eschelon stated yes, for all items. Cindy Buckmaster-Qwest asked for input from other CLECs. McLeod agreed with Eschelon and stated that they were not in a position to discuss, due to negotiations. Integra stated that they echo McLeods comment. Karen Chandler Ferguson-Qwest stated that 800 data base is offered via the tariff and asked if it was in arbitration. McLeod said no and stated that they are moving from negotiations to arbitration. McLeod then stated that Qwest needs to give them the next steps. McLeod then stated that they have a confidentiality agreement. McLeod then stated that all products on the matrix fall under TRRO and that they need to protect McLeod. McLeod stated that they were not in a position to discuss this now. Cindy Buckmaster-Qwest stated that the discussion has made it clearer and thanked the CLECs for their input. Karen Clausen-Eschelon stated that Eschelon has taken time to respond and noted that they have been more clear than Qwest. Karen Chandler Ferguson-Qwest apologized and stated that

Eschelon did not want to respond further on this call and stated that McLeod's explanation did make it clearer. Karen Clausen-Eschelon stated that the law is taking something away and stated that all is subject to arbitration and litigation as to how and when this will be handled. Karen stated that all read an order that something has gone away and Qwest is now asking broad statements as to what is in arbitration and litigation. Cindy Buckmaster-Qwest asked if there was any CLEC on this call that is interested in discussing the changes for 800 database service. Karen Clausen-Eschelon asked what those changes were. Cindy Buckmaster-Qwest stated that she does not yet have the proposed changes and stated that what those changes will be is what needs to be discussed. Cindy stated that for bucket 2, the PCATs may be a starting place for the discussion and the same could be true for bucket 3. Karen Clausen-Eschelon stated that Eschelon will discuss in the ICA negotiations. Cindy Buckmaster-Qwest stated that she is hearing Eschelon saying that Eschelon does not want to discuss 800 data base. Karen Clause-Eschelon asked Cindy (Buckmaster-Qwest) to not recap what she said because she will disagree with Cindy's recap. Cindy Buckmaster-Qwest asked if there was any CLEC on the call that is interested in discussing 800 data base. Integra said no. Karen Clausen-Eschelon stated that it might be better to ask if any one was interested in discussing by bucket instead of by product. Cindy Buckmaster-Qwest asked if there was any CLEC that is interested in discussing bucket B. Karen Clausen-Eschelon asked if the discussion would be in the context of CMP. Cindy Buckmaster-Qwest said yes. Steve Fisher-Integra said no because TRRO is far reaching and he needs to know what the PCAT changes are. Steve stated that the PCATs needed to be slimmed down. Cindy Buckmaster-Qwest stated that the matrix identifies by product and has a link to the PCAT in column C. Cindy asked the CLECs to help her understand how they want the PCATs slimmed down. Steve Fisher-Integra stated that the product descriptions are too far reaching and stated that the content copied from the Contract should not be in a PCAT, it should be in the ICAs. Karen Chandler Ferguson-Qwest stated that everyone's PCAT could then be different and stated that the CLECs contracts do govern how Qwest does business with your business. Karen stated that the PCATs could be general and that each individual contract would govern. Steve Fischer-Integra stated that it would need to be negotiated between two parties and stated that the CLECs would not have to agree on them. Steve stated that the PCAT dictates how Qwest deals with a CLEC and stated that is what they are disagreeing with. Cindy Buckmaster-Qwest asked if that is different then how they deal with Verizon, BellSouth, or AT&T, for example. CLEC said yes and noted that if they do not agree, they file changes and/or disputes. McLeod stated that they did not like the idea of committing now and discussing generically. McLeod noted that they may not have any issues now but that they might have issues later and does not want to have to go through CMP later because of TRO/TRRO arbitration. Cindy Buckmaster-Qwest thanked McLeod for the input and then asked if there was any CLEC

under a TRRO amendment, not in litigation, that is interested in discussing in CMP, these items. No response. Cindy Buckmaster-Qwest asked if the silence meant no. Colette Davis-Covad stated that Covad has signed TRRO agreements with Qwest and stated that any changes that Qwest is proposing, with Covad, needs to be in CMP. Colette noted that she also handles BellSouth and Sprint in the same manner. Colette stated that if an ILEC wants to make changes to a process, it is evaluated. Colette stated that if something is in arbitration, it is then between that CLEC and Qwest. Colette stated that proceeding forward is also important. Colette stated that, from one side, she can see what everyone on the call is saying and on the other side, we need to move forward and see what Qwest recommends and challenge via CMP if need to. Colette stated that if there is a disagreement related to changes in requirements, CLECs can then file a complaint or go into mediation or arbitration for an issue. Colette stated that we need to collaboratively move forward and stated that the CLECs need to arbitrate independently of CMP and that mixing the two together is a problem and why we come to a crossroad. Colette stated that not all CLECs are arbitrating the same thing and noted that Covad's position is a collaborative position. TRRO or CMP will go through proper channels and if the CLECs need to challenge Qwest's position, they can go to the FCC or the PUC. Colette stated that she is trying to get a better sense of what the CLECs want out of this call. Karen Clausen-Eschelon stated that Qwest asked Regulatory and Legal reps to come to the call. Karen stated that the CMP document says that there could be overlap with CMP and the contracts and that the ICAs would have control. The problem is when things are in an ICA when discussing TRRO and Qwest is trying to move forward in CMP and negotiations for ICAs could be an issue. Karen stated that if Qwest's purpose is to remove products from the PCATs, it clearly belongs in an ICA and the ICA does control. Karen stated that they were asked what was in litigation and Qwest doesn't have their people on the call. Karen stated that they are being asked to agree and commit and she is asking agree to what. Colette Davis-Covad stated that with CMP, it gets down to a granular change and that is where it needs to be evaluated. Colette stated that if there is a process that needs to be changed, generally an ICA does not rule, where there is a contract change, the ICA does rule. Steve Fisher-Integra stated that the issue is that a process is in a PCAT. Cindy Buckmaster-Qwest stated that the intent of the PCAT is to contain general information about the product and further define the how-to (for process purposes). Steve Fisher-Integra stated that if he needs to find out if he can have Inter Office Transport, he would go to his ICA to see if he can have it and that the PCAT would tell him how. Cindy Buckmaster-Qwest said Yes! That is the intent of the PCAT. The PCAT structure is such that it begins with a general description of the product and then identifies more of the 'how to' about a product request. Cindy stated that Qwest wants the PCATs to be of value to the CLECs. Cindy noted that the ICAs do govern but that the PCATs should tell the CLECs how to submit an LSR. Steve Fisher-Integra asked Cindy

to show him a PCAT that is showing him that. Cindy Buckmaster-Qwest stated that she would but that is not the purpose of this particular call. Colette Davis-Covad stated that is the gap, CMP addresses processes and procedures. Product availability is generally controlled via an ICA. Colette stated that the PCAT is redundant with the ICA and asked why ICA language is in a PCAT. Colette stated that CMP should be focused on giving the CLECs ordering instructions. The FCC & PUC issue orders on what Qwest can and cannot provide to the CLECs. CMP should be focused on giving CLECs information on how to order products and services. The issue is that Qwest is putting ICA language in the PCATs and Qwest needs to stick to publishing how to order products. Jay Newsbom-Integra stated that they would not write the PCATs for Qwest and stated that Qwest is putting the cart before the horse in trying to write processes before the ICAs are done. Cindy Buckmaster-Qwest stated that she does not want to discuss processes with those CLECs who do not want to discuss. Cindy asked that in the next meeting, if we can get those who have already signed or who are about to sign, interested in discussing. Colette Davis-Covad stated that this should not impede the process on how to order out of a non-impaired wire center. Cindy Buckmaster-Qwest stated that Utah has already reviewed the wire center list and decided what is and what is not impaired. Cindy noted that they need that avenue to tell the CLECs how to order that product. Colette Davis-Covad stated that she does not see a problem. Karen Clausen-Eschelon stated that the PCATs on the matrix may be different than those telling me how to order. Karen stated that she believes that these conversations should occur in negotiations and stated that she will not be told to talk about it in CMP. Karen stated that the discussions need to be in negotiations. Karen stated that they were asked about legal issues that Qwest wants to remove from PCATs and that those are in arbitration and/or negotiations. Cindy Buckmaster-Qwest stated that there is no underlying intent, then asked if there were any CLECs who have signed or are about to sign, that want to discuss any item on the matrix, in CMP. Steve Fisher-Integra said not the way that they are currently structured. Cindy Buckmaster-Qwest stated that we can discuss and change the template, if this one is not of value, but proposed we get through the discussion of topics before PCAT format is discussed. Karen Clausen-Eschelon asked if Cindy (Buckmaster-Qwest) was offering to update the template in CMP. Cindy Buckmaster-Qwest said No, she is offering to update the matrix in CMP. She further stated that if any 'template' is to change via CMP it would be the PCAT template and not the Negotiations Template. Steve Fisher-Integra stated that he was not sure that it needed to be updated. Cindy Buckmaster-Qwest asked the CLECs to look at item #3 Line Sharing. Cindy stated that this was removed as a result of TRRO, is available in a Commercial Agreement, and proposed changes have been made in the PCAT that have not yet been shared. Karen Clausen-Eschelon stated that was Qwest's legal view and stated that Qwest could voluntarily offer it, under 251. Karen stated that Qwest needs to get their ducks in

order before the PCATs can be updated. Cindy Buckmaster-Qwest stated that if we are talking to those who have signed, the horse is where it belongs, before the cart. Colette Davis-Covad stated that the operational details are not yet in the contract. Karen Clausen-Eschelon asked if it is Qwest's position that the Commercial Agreement processes go through CMP. Cindy Buckmaster-Qwest stated that Line Sharing has not yet been addressed in any CMP CR and noted that changes that affect how to order it would be communicated via CMP (for example that you first have to have a Commercial Agreement). Steve Fisher-Integra stated that the Commercial Agreements are separate from this process. Karen Clausen-Eschelon asked if we had gone beyond the scope of this call. Cindy Buckmaster-Qwest said no, that the scope of this call is to determine if there is any CLEC interested in discussing items on a matrix. Cindy then noted that this call started with no structure in mind and stated that everything now seems to be in bucket 4. Cindy stated that process changes, the operational way we do work applies to all CLECs. The TRRO, and how it applies to CLECs, is what we want to discuss. Jay Newsbom-Integra asked why Qwest doesn't just send out the changes. Cindy Buckmaster-Qwest stated that the changes that have been made are already in bucket 2, such as EEL and LMC. Steve Fisher-Integra asked that everything that is in the ICA be taken out of the PCAT and for Qwest send the changes out to the CLECs. Cindy Buckmaster-Qwest asked that we discuss product related items. Colette Davis-Covad stated that this could interfere or compromise where Covad is, in their negotiations. Colette stated that process can be discussed; and legal positions are not to be discussed. Cindy Buckmaster-Qwest stated that process is what Qwest wants to discuss. Karen Clausen-Eschelon stated that the term 'process' is also in litigation. Karen then stated that she does not agree that process belongs in the PCAT, as opposed to a Commercial Agreement. Karen stated that she opposes using TRRO PCATs as a starting place, for discussions. Karen stated that Qwest is claiming that existing processes are to be discussed and that they need to edit PCATs before Qwest can send them out for review. Cindy Buckmaster-Qwest stated that Qwest is not attempting to force anything down anyone's throat. Cindy stated that she wants to talk to CLECs who want to discuss the items. Cindy asked if there would be value if we had another call. Steve Fisher-Integra stated that they want a call and don't want it to be structured. Cindy Buckmaster-Qwest stated that she was fine with that and asked the CLECs what the next call length should be. Karen Clausen-Eschelon stated that she only wanted to discuss the ICA negotiations. Susan Lorence-Qwest recommended that the next call be 2 hours because there are CLECs who do want to discuss. Susan then suggested that a PCAT be reviewed on that next call. Karen Clausen-Eschelon stated that Eschelon will not discuss issues that are in litigation. Cindy Buckmaster-Qwest stated that if a CLEC does want to discuss an item that is on the matrix, that is fine...they don't need to come to the call. She stated she wants to have that discussion with CLECs who do want to discuss. Karen Clausen-Eschelon stated that she wanted a document that

contains only the processes. Cindy Buckmaster-Qwest stated that she would not edit a PCAT without knowing what the CLECs want and what would be of value to them. Cindy noted that she did not want a separate copy, for Eschelon. Jay Newsbom-Integra stated that if Qwest does not provide a document, the next discussion will be the same as today's discussion. Cindy Buckmaster-Qwest stated that she does not know what the CLECs want in the PCATs or want to discuss. Jay Newsbom-Integra stated that Qwest heard their concerns; the ICA language in the PCATs, and he wants the PCATs edited down to processes and procedures. Cindy Buckmaster-Qwest stated that she would research the difference between other ILEC PCATs and Qwest's PCATs for one of her products if that would help the discussion move back to TRRO changes and doesn't plan to allow the discussion to be derailed by discussion about format of the PCAT. If that proves to be do-able before the next call, she will complete a re-write of that one PCAT. Jay Newsbom-Integra stated that they need to see how to do things. Cindy Buckmaster-Qwest stated that is how we will proceed. Cindy stated that proposed PCAT language would be provided at least 3 days prior to the next call. Cindy then noted that the next call would be scheduled for 2 hours. There were no additional comments or questions. The call was concluded. -- February 5, 2007 Email Received From Eschelon: Peggy, Thank you for the response. We have asked specific questions and will look forward to Qwest's responses on the call. Bonnie Johnson Director Carrier Relations Eschelon Telecom Inc. -- February 5, 2007 Email Sent to Cbeyond: Tom, Your email below was received. The Ad Hoc call scheduled for tomorrow will continue to take place in order for the open dialog to continue and for Qwest to address CLEC concerns. If Cbeyond cannot attend the call, the meeting minutes will be posted to the CMP CR, for your future reference. Peggy Esquibel-Reed Qwest Wholesale CMP -- February 5, 2007 Email Sent to Eschelon: Bonnie, Your email below was received. The Ad Hoc call scheduled for tomorrow will continue to take place in order for the open dialog to continue and for Qwest to address CLEC concerns. Peggy Esquibel-Reed Qwest Wholesale CMP -- Email Received From Tom Hyde, Cbeyond: Cbeyond objects to the Ad-Hoc Meeting scheduled for 2/6/2007 as premature. Qwest has not yet furnished sufficient information to make the call meaningful. If Qwest decides to continue requesting a call on this issue with CLEC legal and regulatory personnel, Qwest should provide the necessary information, as well as Qwest's proposal(s), sufficiently in advance of any call so that CLECs and their attorneys and regulatory personnel may review the information and proposal and be prepared to respond. A call, if it is to be held, should be rescheduled until Qwest provides this information. Cbeyond may not be able to participate on tomorrow's call. Cbeyond reserves all of its rights -- February 5, 2007 Email Received From Bonnie Johnson, Eschelon SUBJECT: Information for tentative call tomorrow - CMPR.01.30.07.F.04487.TRROAdHocMeeting Qwest asked CLEC regulatory/legal personnel to answer questions regarding the status of litigation for each item on Qwest's matrix of the "buckets" in which Qwest placed certain products. Enclosed is

Eschelon's response to Qwest's questions. Also enclosed is a copy of Qwest's matrix, with letters and row numbers added in the margin for ease of reference. (This numbering had to be added manually, as Qwest provided the document only in PDF format.) Please explain Qwest's reason and agenda for a call given that: (1) except for items that are completed (Bucket A), the items are in litigation (a fact known to Qwest, as Qwest is a party to each litigation), and Qwest's position is that "Disputed items will not immediately be processed through CMP," (2) Qwest has provided no proposal (see 12/14/06 minutes); and (3) Qwest needs to provide additional information (see Eschelon's Response to Bucket C) on the items that Qwest identifies as "Not Yet Covered in any CR." If Qwest continues to request a call on this issue and/or with CLEC legal/regulatory personnel, Qwest should provide the requested information, as well as Qwest's proposal, sufficiently in advance of any call so that CLECs and their attorneys/regulatory personnel may review the information and proposal and be prepared to respond. A call, if it is to be held, should be rescheduled until Qwest provides this information. Also, please indicate whether Qwest will initiate any proceeding/make any filing similar to its filing in Colorado Commission Docket No. 07S-028T (with respect to a tariff, SGAT, Qwest's template, etc.) in any other state. (Please either provide this information before any call or, if a call is held tomorrow and Qwest has not responded, please respond on the call.) If a call is held, Karen Clauson, an attorney and Sr. Director of Interconnection, will represent Eschelon on the call, per Qwest's request that CLECs bring legal representation to the call. In addition, Doug Denney, a witness familiar with issues in litigation, will participate as well. Eschelon reserves all of its rights.

ATTACHMENT included with this Email: ESCHELON RESPONSE TO QWEST'S QUESTION AS TO WHICH ITEMS ON QWEST'S CHART ARE SUBJECT TO LITIGATION/ARBITRATION February 5, 2007 If a call is held, please add these comments to the meeting minutes for the call. If not, please add these minutes to the status history for the CR. (Please note that Qwest has inappropriately separated out the CR into two numbers, with one being followed by '-2', which creates the impression that there is no earlier status history, when there is additional information that is part of the history of events. Qwest needs to put them back together, so the single status history is complete.) Qwest CMP Minutes of 1/11/07 Ad Hoc Call: "Cindy Buckmaster-Qwest confirmed that the CLECs will take this information back. She said that she would still like to go through the matrix line-by-line in the next adhoc meeting. Cindy states that we need to ask two questions: 1) Is this in litigation and why, and 2) Can we get consensus if something is in litigation where we can move it on the list." -- See Eschelon responses below to each of these questions for each Qwest Bucket on Qwest's matrix. Qwest CMP Minutes of 11/15/06 Monthly Call: "Cindy said Qwest is asking to release the undisputed items, those not in arbitration or items being challenged under law. Disputed items will not immediately be processed through CMP." Qwest CMP Minutes of 12/14/06 Monthly Call: "Bonnie J-Eschelon stated that in regard to Qwest's proposal,

she is hearing that Qwest does not really have one. Cindy B-Qwest stated that was correct." Minnesota Arbitrators' Report, Qwest-Eschelon ICA MN Arbitration, ¶¶21-22: "The CMP document itself provides that in cases of conflict between changes implemented through the CMP and any CLEC ICA, the rates, terms and conditions of the ICA shall prevail. In addition, if changes implemented through CMP do not necessarily present a direct conflict with an ICA but would abridge or expand the rights of a party, the rates, terms, and conditions of the ICA shall prevail. Clearly, the CMP process would permit the provisions of an ICA and the CMP to coexist, conflict, or potentially overlap. The Administrative Law Judges agree with the Department's analysis that any negotiated issue that relates to a term and condition of interconnection may properly be included in an ICA, subject to a balancing of the parties' interests and a determination of what is reasonable, non-discriminatory, and in the public interest. Eschelon has provided convincing evidence that the CMP process does not always provide CLECs with adequate protection from Qwest making important unilateral changes in the terms and conditions of interconnection." QWEST BUCKETS FROM QWEST'S CHART (enclosed) A = "Products/Processes Introduced on PC102704-1ES" B = "Products/Processes Postponed on PC102704-1ES" C = "Products/Processes Not Yet Covered on any CR" D = "Products Known to be in Arbitration/Litigation" NOTE: Eschelon disagrees with Qwest's characterizations, as further described in Eschelon's testimony in the Qwest-Eschelon ICA arbitrations. QWEST BUCKET A All nine of the items listed in Qwest Bucket A (A1-A9) deal with UNE-P. Qwest has indicated that items A1-A9 were completed in CMP. In addition, CLECs have signed amendments regarding elimination of UNE-P (at least some in conjunction with QPP), and the terms of those agreements control. Eschelon is not aware of pending litigation regarding UNE-P. As Qwest has said it intends to discuss which products or terms relating to its identified items are subject to litigation, if Qwest is a party to, or aware of, any pending litigation, Qwest should provide this information to CLECs (before a call, if any call is held). RESPONSE TO QWEST #1: Not in litigation to Eschelon's knowledge. RESPONSE TO QWEST #2: Leave in Bucket A and note in final column ("Notes"): "Completed in CMP." There is no need to "release the undisputed items" because they are completed. QWEST BUCKET B All eleven of the items in Qwest Bucket B (B10 - B20) are subject to litigation. Qwest repeats B(10), B(15), B(17), and B(18) in Qwest's Bucket D (which identifies these items as known to be in litigation). Qwest does not explain why it does not also include the other items, which are also in litigation (often in the same cases). See Colorado Commission Docket No. 07S-028T, The Investigation and Suspension of Tariff Sheets Filed by Qwest Corporation with Advice Letter No. 3058. See also Wire Center Dockets: AZ Docket Nos. T-03632A-06-0091; T-03267A-06-0091; T-04302A-06-0091; T-03406A-06-0091; T-03432A-06-0091; and T-01051B-06-0091; CO Docket No. 06M-080T; MN Docket Nos. P-5692, 5340, 5643, 5323, 465, 6422/M-06-211 and P-5692, 5340, 5643, 5323, 465, 6422/M-06-685; OR Docket No.

UM 1251; UT Docket No. 06-049-40. See also Qwest-Eschelon ICA arbitrations: AZ T-03406A-06-0572, T-01051B-06-0572 CO 06B-497T MN P5340, 421/IC-06-768 OR ARB 775 UT petition not yet filed WA UT-063061 As Qwest has said it intends to discuss which products or terms relating to its identified items are subject to litigation, if Qwest is a party to, or aware of, any additional pending litigation, Qwest should provide this information to CLECs (before a call, if any call is held). RESPONSE TO QWEST #1: In litigation. RESPONSE TO QWEST #2: Move to Bucket D. QWEST BUCKET C All thirteen of the items in Qwest Bucket C (C21-C33) have related terms that is subject to approval before becoming effective in the Qwest-Eschelon ICA arbitrations and/or Colorado Docket No. 07S-028T. In addition, C31 (Reclassification of Terminations for UNE Conversions, APOTs) relates to open disputed language in the Qwest-Eschelon ICA arbitrations. For all thirteen of the items in Qwest Bucket C (C21-C32), Qwest identifies them as "not yet covered." Depending on what these items entail, additional issues could be subject to litigation. See Colorado Commission Docket No. 07S-028T, The Investigation and Suspension of Tariff Sheets Filed by Qwest Corporation with Advice Letter No. 3058. See also Qwest-Eschelon ICA arbitrations: AZ T-03406A-06-0572, T-01051B-06-0572 CO 06B-497T MN P5340, 421/IC-06-768 OR ARB 775 UT petition not yet filed WA UT-063061 As Qwest has said it intends to discuss which products or terms relating to its identified items are subject to litigation, if Qwest is a party to, or aware of, any additional pending litigation, Qwest should provide this information to CLECs (before a call, if any call is held). FOR C(21)-C(30) & C(32)-C(33): RESPONSE TO QWEST #1: In litigation. RESPONSE TO QWEST #2: As "not yet covered" by Qwest, Qwest to provide (before a call, if any call is held) a written proposal identifying the changes it wants to make to the existing PCAT and indicating, for each change, whether all ICAs have been amended accordingly. FOR C(31): RESPONSE TO QWEST #1: In litigation. RESPONSE TO QWEST #2: Move to Bucket D. QWEST BUCKET D All four of the items in Qwest Bucket D (D34 – D37) are subject to litigation, per Qwest's own inclusion of them in the bucket for "Products Known to be in Arbitration/Litigation." (Qwest provided no docket numbers. Eschelon has provided docket numbers below.) Qwest's list is incomplete (see above). For example, Qwest omits Commingled EELs (B19), Reclassification of Terminations for UNE Conversions (APOTs) (B19), Loop Mux Combination (B11), UCCRE (B13), TRRO compliance and transition procedures (B20) from its Bucket D, even those issues are clearly subject to litigation in the Qwest-Eschelon ICA arbitrations and wire center proceedings and are subject to change of law provisions requiring ICA terms (see, e.g., TRRO ¶196). See Colorado Commission Docket No. 07S-028T, The Investigation and Suspension of Tariff Sheets Filed by Qwest Corporation with Advice Letter No. 3058. See also Wire Center Dockets: AZ Docket Nos. T-03632A-06-0091; T-03267A-06-0091; T-04302A-06-0091; T-03406A-06-0091; T-03432A-06-0091; and T-01051B-06-0091; CO Docket No. 06M-080T; MN Docket Nos. 5643, 5323, 465, 6422/M-06-685; OR Docket No. UM 1251; UT Docket No. 06-049-40. See also Qwest-Eschelon ICA arbitrations: AZ T-03406A-06-0572, T-01051B-06-0572 CO 06B-497T MN P5340, 421/IC-06-768 OR ARB 775 UT petition not yet filed WA UT-063061 As Qwest has said it intends to discuss which products or terms relating to its identified items are subject to litigation, if Qwest is a party to, or aware of, any additional pending litigation, Qwest should provide this information to CLECs (before a call, if any call is held). RESPONSE TO QWEST #1: In litigation. RESPONSE TO QWEST #2: Remain in Bucket D (Bucket D should also be expanded to include the items identified above as in litigation and belonging in Bucket D). Bonnie Johnson Director Carrier Relations Eschelon Telecom Inc. -- January 17, 2007 Monthly CMP Meeting Discussion: Mark Coyne-Qwest stated that this CR is currently in Development Status. Cindy Buckmaster-Qwest stated that the meetings for this effort are being held outside of the monthly CMP Meeting and are ongoing. Jeff Sonnier-Sprint asked if the next meeting has been scheduled. Cindy Buckmaster-Qwest stated that it had not yet been scheduled. This CR remains in Development Status. -- January 11, 2007 Ad Hoc Meeting: Jeff Sonnier-Sprint Nextel, Paulette Davis-Covad, Lynn Hankins-Covad, Tom Hyde-Cbeyond, Bonnie Johnson-Eschelon, Kim Isaacs-Eschelon, Nancy Thompson-Wisor Telecom, Sue Wright-XO Communications, Ken Black-McLeod, Pam Trickel-TDS, Cindy Buckmaster-Qwest, Susan Lorence-Qwest, Candice Mowers-Qwest, Vicki Dryden-Qwest, Lynn Stecklein-Qwest Lynn Stecklein-Qwest stated that the matrix to be discussed in this meeting could be located on the Wholesale Resource Website (<http://www.qwest.com/wholesale/calendar/>) and by clicking on the calendar entry for today's meeting. Cindy Buckmaster-Qwest stated that this matrix was provided to the CLECs for their review from the last Ad Hoc meeting. She reviewed the 4 categories on the matrix – the 1st category introduced on CR PC102704-1ES 3/18/05, the 2nd category for Product/Processes postponed on PC102704-1ES, the 3rd category for Product/Processes not yet introduced, and the 4th category for Products known to be in arbitration or litigation. Bonnie Johnson-Eschelon stated that she mentioned in the last CMP Meeting that Eschelon does not agree that this is the case. She said that Eschelon believes that everything with the exception of Dark Fiber is in litigation or arbitration. Cindy Buckmaster-Qwest stated that Qwest would like to review the matrix line-by-line and come to an agreement where each Product/Process belongs. Bonnie Johnson-Eschelon stated that the CLECs on this call are operations people. She said that she is not in a position to discuss Products that may be a legal issue or in a legal arena and does not know what is being discussed in the Wire Center hearings. Cindy Buckmaster-Qwest said what she is hearing is that the CLECs on this call are not prepared to discuss legal issues. Tom Hyde-Cbeyond stated that they need their Regulatory people involved in these discussions. Jeff Sonnier-Sprint Nextel stated that he agreed with Eschelon and that their Regulatory people need to be involved. Cindy Buckmaster-Qwest

said that we could arrange a call with their Regulatory people or the CLECs could take this information to their Regulatory Teams for review and bring back to discuss in an adhoc meeting. Bonnie Johnson-Eschelon stated that Eschelon's position when Qwest introduced this CR and looking at the escalation from Covad that the introduction of TRO is considered a change of law and that some are done in Commission Oversight or in negotiations. She said that CMP is not the appropriate area to discuss because this is a change of law. Bonnie said that in June of 2005, Qwest said that they were updating SGATs and that the PCATs should be updated appropriately. Cindy Buckmaster-Qwest stated that we are in between two different circumstances. She said that the CR was introduced to make a process change to align with the law and that there is no other way to do this except in CMP. Bonnie Johnson-Eschelon said that the operations people don't take part in the Wire Center hearings and the discussion in those hearings are done at a high level with little detail. She said that they have been clear that they are trying to negotiate in the Interconnect Agreement. Bonnie reiterated that she is on the operations side and not an attorney. Cindy Buckmaster-Qwest stated that the Interconnect Agreement does not cover process and process was never part of the Commission Oversight. Bonnie Johnson-Eschelon stated that if you read their proposal, that we are back to square one and that we are talking about an interpretation of orders. Bonnie said that she does not believe that CMP is appropriate arena to discuss Cindy Buckmaster-Qwest stated that she was very clear when we talked in the Monthly CMP Meeting that this was our intent. She said that she would like to take a vote from the CLECs on the call to determine if everyone agrees that these items can be discussed today. Bonnie Johnson-Eschelon stated that Qwest did not want to talk about items in litigation. Cindy Buckmaster-Qwest said that we are not here to override the FCC or State level. She said that we want to communicate processes associated with TRO. Cindy said that 8 items were implemented on March 18, 2004 Bonnie Johnson-Eschelon said that those associated with UNE-P were completed with the Commission Oversight. Tom Hyde-Cbeyond stated that the effective dates are confusing on the matrix. Cindy Buckmaster-Qwest stated that the algorithm was adding a 1 to the date and that we will get that corrected. Bonnie Johnson-Eschelon stated that she thought they made it clear in the CMP meeting and in the minutes and that Qwest agreed that these items were in litigation and would not be discussed. Cindy Buckmaster-Qwest stated that we are not here to override any topics outside of litigation. She said that there is no hidden agenda and that she thought we made our intent very clear. Cindy stated that there are more CLECs that have signed up to do business with Qwest under the TRRO. She said that the reason we delayed was because TRO was in an appeal status. She said we want to provide the process for those CLECs doing business with us or for those who will be. She also said that she would challenge that there are items on the list that nobody cares about. She stated that all we want to do is put a note in the column for example that this item is in litigation. Bonnie Johnson-Eschelon

stated once again that the people on the phone don't know that answer. Cindy Buckmaster-Qwest asked if there was consensus that we can't discuss this topic. Sue Wright-XO Communications stated that they do not have the answers and can't discuss. Tom Hyde-Cbeyond stated that if something is in litigation they can't discuss the process on items not yet decided on. Bonnie Johnson-Eschelon stated that was her concern at CMP and should have made her concern clearer. Sue Wright-XO Communications stated that they might not be in litigation but someone else may be. Tom Hyde-Cbeyond stated that he is not tapped to testify. Lynn Hankins-Covad said that Covad is not prepared to discuss this either and that she reviewed the CR and is not completely sure of what Qwest is trying to do. Ken Black-McLeod stated that McLeod is not up to speed either. Cindy Buckmaster-Qwest stated that we have consensus and that the CLECs will take this item to their Regulatory Teams for discussion. She said that it may be easier to have their Regulatory people attend the meetings. Jeff Sonnier-Sprint Nextel stated that the Regulatory people should sort this out. Sue Wright-XO Communications agreed. Bonnie Johnson-Eschelon also agreed and that they need to get their Regulatory Teams engaged. She said that she is not in a position to make that decision. Sue Wright-XO Communications said that they might find that they don't want to discuss in CMP. Cindy Buckmaster-Qwest confirmed that the CLECs will take this information back. She said that she would still like to go through the matrix line-by-line in the next adhoc meeting. Cindy stated that we need to ask two questions – 1) Is this in litigation and why, and 2) Can we get consensus if something is in litigation where can we move it on the list. Bonnie Johnson-Eschelon said that she thought we were going to discuss processes and that the TRO PCATs exist and that without CLEC input and that Qwest just changed unilaterally. Cindy Buckmaster-Qwest asked what processes Eschelon was referring to and that we have been discussing this topic for over a month. Bonnie Johnson-Eschelon asked what was being done with the PCATs and that Qwest has not been clear on what they are trying to do. Cindy Buckmaster-Qwest stated that this is not any different than any other CLEC CMP change. She said that we need to look at the number of CLECs operating under the new process, look at recommendations. She said that we need to determine if there are any questions and go through step by step to make sure everyone understands. Cindy said that we need to set up a hierarchy of what to go through 1st Sue Wright-XO Communications asked if there was a Regulatory review prior to implementation. Cindy Buckmaster-Qwest stated that Regulatory always looks at the process changes if necessary. She said that regardless of the operating environment we try to implement with as little risk as possible. Tom Hyde-Cbeyond stated that he was looking at the PCATs on the website and does not see the proposed changes. Cindy Buckmaster-Qwest stated that is what we want to discuss. She said that EEL, for example, if you click on the link, you will see the TRRO version of the EEL PCAT. Tom Hyde-Cbeyond said that he missed the TRO PCAT on the website but he will review. Cindy

Buckmaster-Qwest stated that it could be a matter of interpretation but that we just want to get the process communicated. Cindy Buckmaster-Qwest stated that the CLECs will bring information from their Regulatory Teams to the next adhoc meeting and that we will prioritize the list and discuss with those CLECs who are interested. Lynn Stecklein-Qwest asked for input on when the next meeting should be scheduled. Sue Wright-XO Communications asked if 2 weeks was enough time for the CLECs to contact their Regulatory people. Ken Black-McLeod stated that his contacts are out of the office until February. Bonnie Johnson-Eschelon stated that the week of February 5th looked good with the exception of the afternoons of February 6th and 7th. Lynn Stecklein-Qwest stated that a meeting would be scheduled sometime during that week.

Escheloncommentson  
QwestBuckets.doc

QwestBuckets.pdf

Qwest asked CLEC regulatory/legal personnel to answer questions regarding the status of litigation for each item on Qwest's matrix of the "buckets" in which Qwest placed certain products. Enclosed is Eschelon's response to Qwest's questions. Also enclosed is a copy of Qwest's matrix, with letters and row numbers added in the margin for ease of reference. (This numbering had to be added manually, as Qwest provided the document only in PDF format.)

Please explain Qwest's reason and agenda for a call given that: (1) except for items that are completed (Bucket A), the items are in litigation (a fact known to Qwest, as Qwest is a party to each litigation), and Qwest's position is that "Disputed items will not immediately be processed through CMP," (2) Qwest has provided no proposal (see 12/14/06 minutes); and (3) Qwest needs to provide additional information (see Eschelon's Response to Bucket C) on the items that Qwest identifies as "Not Yet Covered in any CR." If Qwest continues to request a call on this issue and/or with CLEC legal/regulatory personnel, Qwest should provide the requested information, as well as Qwest's proposal, sufficiently in advance of any call so that CLECs and their attorneys/regulatory personnel may review the information and proposal and be prepared to respond. A call, if it is to be held, should be rescheduled until Qwest provides this information.

Also, please indicate whether Qwest will initiate any proceeding/make any filing similar to its filing in Colorado Commission Docket No. 07S-028T (with respect to a tariff, SGAT, Qwest's template, etc.) in any other state. (Please either provide this information before any call or, if a call is held tomorrow and Qwest has not responded, please respond on the call.)

If a call is held, Karen Clauson, an attorney and Sr. Director of Interconnection, will represent Eschelon on the call, per Qwest's request that CLECs bring legal representation to the call. In addition, Doug Denney, a witness familiar with issues in litigation, will participate as well. Eschelon reserves all of its rights.

**EXHIBIT 75**

**ESCHELON RESPONSE TO QWEST'S QUESTION AS TO WHICH ITEMS ON QWEST'S CHART ARE SUBJECT TO LITIGATION/ARBITRATION**

February 5, 2007

If a call is held, please add these comments to the meeting minutes for the call. If not, please add these minutes to the status history for the CR. (Please note that Qwest has inappropriately separated out the CR into two numbers, with one being followed by "-2," which creates the impression that there is no earlier status history, when there is additional information that is part of the history of events. Qwest needs to put them back together, so the single status history is complete.)

Qwest CMP Minutes of 1/11/07 Ad Hoc Call: "Cindy Buckmaster-Qwest confirmed that the CLECs will take this information back. She said that she would still like to go through the matrix line-by-line in the next adhoc meeting. Cindy states that we need to ask two questions: 1) Is this in litigation and why, and 2) Can we get consensus if something is in litigation where we can move it on the list."

-- See Eschelon responses below to each of these questions for each Qwest Bucket on Qwest's matrix.

Qwest CMP Minutes of 11/15/06 Monthly Call: "Cindy said Qwest is asking to release the undisputed items, those not in arbitration or items being challenged under law. Disputed items will not immediately be processed through CMP."

Qwest CMP Minutes of 12/14/06 Monthly Call: "Bonnie J-Eschelon stated that in regard to Qwest's proposal, she is hearing that Qwest does not really have one. Cindy B-Qwest stated that was correct."

Minnesota Arbitrators' Report, Qwest-Eschelon ICA MN Arbitration, ¶¶21-22: "The CMP document itself provides that in cases of conflict between changes implemented through the CMP and any CLEC ICA, the rates, terms and conditions of the ICA shall prevail. In addition, if changes implemented through CMP do not necessarily present a direct conflict with an ICA but would abridge or expand the rights of a party, the rates, terms, and conditions of the ICA shall prevail.<sup>1</sup> Clearly, the CMP process would permit the provisions of an ICA and the CMP to coexist, conflict, or potentially overlap. The Administrative Law Judges agree with the Department's analysis that any negotiated issue that relates to a term and condition of interconnection may properly be included in an ICA, subject to a balancing of the parties' interests and a determination of what is reasonable, non-discriminatory, and in the public interest. Eschelon has provided convincing evidence that the CMP process does not always provide CLECs with adequate protection from Qwest making important unilateral changes in the terms and conditions of interconnection."

---

<sup>1</sup> Ex. 1 (Albersheim Direct) at RA-1, part 1.0, page 15.

**QWEST BUCKETS FROM QWEST’S CHART (enclosed)**

A = “Products/Processes Introduced on PC102704-1ES”

B = “Products/Processes Postponed on PC102704-1ES”

C = “Products/Processes Not Yet Covered on any CR”

D = “Products Known to be in Arbitration/Litigation”

NOTE: Eschelon disagrees with Qwest’s characterizations, as further described in Eschelon’s testimony in the Qwest-Eschelon ICA arbitrations.

**QWEST BUCKET A**

All nine of the items listed in Qwest Bucket A (A1 – A9) deal with UNE-P. Qwest has indicated that items A1-A9 were completed in CMP.<sup>2</sup> In addition, CLECs have signed amendments regarding elimination of UNE-P (at least some in conjunction with QPP), and the terms of those agreements control. Eschelon is not aware of pending litigation regarding UNE-P. As Qwest has said it intends to discuss which products or terms relating to its identified items are subject to litigation, if Qwest is a party to, or aware of, any pending litigation, Qwest should provide this information to CLECs (before a call, if any call is held).

**RESPONSE TO QWEST #1:** Not in litigation to Eschelon’s knowledge.

**RESPONSE TO QWEST #2:** Leave in Bucket A and note in final column (“Notes”): “Completed in CMP.” There is no need to “release the undisputed items” because they are completed.

**QWEST BUCKET B**

All eleven of the items in Qwest Bucket B (B10 - B20) are subject to litigation. Qwest repeats B(10), B(15), B(17), and B(18) in Qwest’s Bucket D (which identifies these items as known to be in litigation). Qwest does not explain why it does not also include the other items, which are also in litigation (often in the same cases).

See Colorado Commission Docket No. 07S-028T, The Investigation and Suspension of Tariff Sheets Filed by Qwest Corporation with Advice Letter No. 3058.

---

<sup>2</sup> Qwest provides a CMP effective date in the second to last column. In addition, the URLs provided in the third column do not use the term “TRRO,” as do the non-CMP TRRO PCAT URLs in other columns.

MN P5340, 421/IC-06-768  
OR ARB 775  
UT petition not yet filed  
WA UT-063061

As Qwest has said it intends to discuss which products or terms relating to its identified items are subject to litigation, if Qwest is a party to, or aware of, any additional pending litigation, Qwest should provide this information to CLECs (before a call, if any call is held).

**RESPONSE TO QWEST #1:** In litigation.

**RESPONSE TO QWEST #2:** Move to Bucket D.

### QWEST BUCKET C

All thirteen of the items in Qwest Bucket C (C21 – C33) have related terms that is subject to approval before becoming effective in the Qwest-Eschelon ICA arbitrations and/or Colorado Docket No. 07S-028T. In addition, C31 (Reclassification of Terminations for UNE Conversions, APOTs) relates to open disputed language in the Qwest-Eschelon ICA arbitrations. For all thirteen of the items in Qwest Bucket C (C21 – C32), Qwest identifies them as “not yet covered.” Depending on what these items entail, additional issues could be subject to litigation.

*See Colorado Commission Docket No. 07S-028T, The Investigation and Suspension of Tariff Sheets Filed by Qwest Corporation with Advice Letter No. 3058.*

*See also Qwest-Eschelon ICA arbitrations:*

AZ T-03406A-06-0572, T-01051B-06-0572  
CO 06B-497T  
MN P5340, 421/IC-06-768  
OR ARB 775  
UT petition not yet filed  
WA UT-063061

As Qwest has said it intends to discuss which products or terms relating to its identified items are subject to litigation, if Qwest is a party to, or aware of, any additional pending litigation, Qwest should provide this information to CLECs (before a call, if any call is held).

**FOR C(21)-C(30) & C(32)-C(33):**

**RESPONSE TO QWEST #1:** In litigation.

**RESPONSE TO QWEST #2:** As “not yet covered” by Qwest, Qwest to provide (before a call, if any call is held) a written proposal identifying the changes it wants to make to the existing PCAT and indicating, for each change, whether all ICAs have been amended accordingly.

**FOR C(31):**

**RESPONSE TO QWEST #1:** In litigation.

**RESPONSE TO QWEST #2:** Move to Bucket D.

**QWEST BUCKET D**

All four of the items in Qwest Bucket D (D34 – D37) are subject to litigation, per Qwest’s own inclusion of them in the bucket for “Products Known to be in Arbitration/Litigation.” (Qwest provided no docket numbers. Eschelon has provided docket numbers below.) Qwest’s list is incomplete (see above). For example, Qwest omits Commingled EELs (B19), Reclassification of Terminations for UNE Conversions (APOTs) (B19), Loop Mux Combination (B11), UCCRE (B13), TRRO compliance and transition procedures (B20) from its Bucket D, even those issues are clearly subject to litigation in the Qwest-Eschelon ICA arbitrations and wire center proceedings and are subject to change of law provisions requiring ICA terms (*see, e.g.*, TRRO ¶196).

**Re: Eschelon/Qwest Minnesota Arbitration, Issue 9-58**

Dear Ms. Clauson:

I am writing to advise you of a policy-related decision Qwest has reached that has a bearing on Issue 9-58, commingled arrangements, and the related sub-issues within Issue 9-58.

As you recall, Issue 9-58 and sub-issues involve Eschelon's requests that Qwest modify its existing provisioning processes and operating systems for commingled arrangements. As Qwest has explained in its response to Eschelon's petition for arbitration and in the pre-filed testimony of Ms. Karen Stewart, Qwest opposes these requests on several grounds, including on the ground that substantial changes to processes and systems that affect many CLECs should not be addressed in a single arbitration between Qwest and Eschelon.

Notwithstanding Qwest's substantive concerns and consistent with Qwest's view that changes of the type Eschelon is proposing should be reviewed in a forum open to all interested carriers, Qwest has decided to initiate review of these issues in the Change Management Process ("the CMP"). Qwest will submit these issues to CMP within the next two months. By proceeding in this manner, all Minnesota local exchange carriers that have an interest in these issues will be permitted to provide input.

Re: Eschelon/Qwest Minnesota Arbitration Issue 9-58 and subparts

Dear Mr. Devaney:

As you know, Eschelon disagrees with your position and the manner in which you have described it in your letter. You attempt to portray Qwest as being concerned about “all Minnesota carriers that have an interest in these issues,” despite Qwest’s history of steadfastly refusing to address this issue in any collaborative or other forum for a period of years. (*See, e.g.*, Starkey Direct, p. 67 line 5 – p. 68, line 4; Starkey Rebuttal, p. 30, line 6 – p. 31, line 6; Starkey Surreply, p. 31, line 4 – p. 35, line 15; Exhibit BJJ-7.)

You also portray Issue 9-58 as a proposal to change “existing” processes, even though Qwest implemented those processes outside of ICA negotiations (as requested by Eschelon and other CLECs),<sup>1</sup> CMP (as promised by Qwest),<sup>2</sup> and Commission proceedings (as also promised by Qwest).<sup>3</sup> (*See* Starkey Surrebuttal, p. 34.) Qwest has unilaterally implemented at least 77 non-CMP “TRRO” PCAT changes without going through CMP, negotiations, or Commission proceedings. (*See* Exhibit BJJ-44.) They are not existing processes; they are improper. If changes are now required, Qwest is the cost causer for those changes. (Starkey Surrebuttal, p. 35.)

Your letter omits any reference to updating the SGATs. At the January 5, 2005 CMP Oversight Committee Meeting (the minutes of which Qwest omitted from its allegedly complete Exhibits RA 26-28 but which Eschelon provided as part of Exhibit BJJ-36 and quoted in Exhibit BJJ-7), Becky Quintana of the Colorado commission staff objected to limiting products via CMP prematurely (*i.e.*, before Qwest updated its SGATs). (*See* Exhibit BJJ-36, p. 8.) Qwest committed to update the SGATs and has repeated that commitment since then. (*See* Starkey Surrebuttal, pp. 32-34.)

---

<sup>1</sup> *See, e.g.*, Exhibit BJJ-7, p. 4 (11/17/04 CMP November monthly meeting minutes); *see* Qwest Exhibit RA-26, p. 7; *see also* Exhibit BJJ-30.

<sup>2</sup> *See, e.g.*, Exhibit BJJ-7, pp. 8-9 (6/30/05); Qwest Exhibit RA-26, pp. 4-5.

<sup>3</sup> Exhibit BJJ-7, pp. 8-9 (6/30/05).

John M. Devaney  
October 17, 2006  
Page 2 of 2

Qwest claims that CLEC opposition to addressing these issues in CMP rather than ICA negotiations can somehow be construed as CLEC consent for Qwest to unilaterally impose its TRRO view “outside the scope of CMP”<sup>4</sup> with no negotiation or arbitration. No reasonable interpretation of CLEC comments leads to this result. For example, TelWest specifically said in CMP that the issues “should be arbitrated and not unilaterally implemented by Qwest.”<sup>5</sup> (*See* Starkey Direct, pp. 67-68.) Eschelon properly raised these issues in negotiations, and they are properly before the Commission for arbitration.

Your letter “advising” Eschelon of Qwest’s “policy-related” decision to finally bring issues through CMP comes too late. Qwest denied request after request to deal with these issues earlier. Now, when Eschelon has expended the time and resources to arbitrate these issues, Qwest attempts to pull the decision away from the Commission and belatedly decide them for itself in CMP. If the result is unsatisfactory, Qwest would have Eschelon expend additional resources to litigate the issues and again travel to six states to decide later still what should be decided now. Even at this late date, Qwest limits its offer to Issue 9-58 and does not address Issues 9-43 and 9-44.

If Qwest is interested in negotiating a resolution along the lines of the language proposed by Eschelon so that Qwest agrees in advance to the parameters (*e.g.*, single order, single circuit ID, single bill, without APOT changes), Eschelon is certainly willing to discuss implementing the mechanics through CMP. Absent such a resolution, however, these issues are properly before the Commission for resolution in this arbitration.

Sincerely,

Karen L. Clauson

**EXHIBIT 79**

## NO BUILD HELD ORDER CHRONOLOGY

- **12/01/00** - Eschelon submitted Change Request (“CR”) Number 5263637 entitled “Installation of adequate facilities and reduction in number of held orders” (*See* [http://www.qwest.com/wholesale/cmp/archive/CR\\_5263637.htm](http://www.qwest.com/wholesale/cmp/archive/CR_5263637.htm)). In its CR, Eschelon included the following description of the change it was requesting:

“Modify Qwest’s processes to ensure installation of adequate facilities and reduction in the number of held orders. Through recurring rates, Qwest is being compensated for expanding its network to account for new growth. Qwest will build facilities for its own retail customers. (In Arizona arbitration’s, for example, Qwest reported that it installs 3 lines per customer to anticipate growth.) However, Qwest will not do so for CLECs in similar situations. Qwest has rejected orders from Eschelon for the stated reason that “no jobs planned in the near future for this area.” (Examples of such rejections were provided to Eschelon’s account team on August 30, 2000.) The orders are placed in held status indefinitely, with no date for completion. When asked about these rejections, Qwest indicated it believes it has no obligation to build. At the last CICMP meeting, Qwest again confirmed that it is Qwest’s policy not to build additional UNE’s when Qwest is out of capacity, but Qwest will build for a retail customer’s order. As indicated, however, Qwest is being compensated for such growth and would build for its own retail customer in the same situation. Please modify Qwest’s practices to build in these situations and to provide notice to CLECs as to when held orders will be completed. In the meantime, until such processes are in place, please institute a process to provide to CLECs (perhaps through a website) a list of those areas for which Qwest has jobs planned, a list of areas for which no jobs are planned, and a description of the nature of the jobs planned. Because Qwest has access to this information for its planning purposes, parity requires that CLECs also have access to the same information for their planning purposes.”

- **January – July 2001** – CR under review. The CR Status History includes descriptions such as “documentation currently being created by Qwest personnel”; “currently under review”; “Some additional work is necessary to determine if precedent has been set due to past actions or previous sideline agreements”; “due date changed due to corporate strategy involvement”; “document complete pending approval by Legal,” *etc.*
- **August 2001** – Qwest distributed a CR response, which was not accepted by Eschelon. In its 8/9/01 CR response, Qwest said:

...” When the CLEC submits a request for a Secondary DS0-Analog (voice grade) line, DSL, ISDN, DS1 or DS3 service, the normal assignment process will be followed in its entirety. If no facilities can be found, and there is No Planned Engineering Job, the LSR will be rejected

(the CLEC will receive a Reject Notice) and the Order will be cancelled. The CLEC now has the opportunity to request construction by filing the proper request through their Account Team.’

In this Statement, Qwest agrees to ensure adequate facilities to support Primary DS0-Analog (voice grade) requests only.

The second issue in this Change Request deals with Held Orders. In various sections of the Request, Eschelon requires Qwest to reduce the number of held orders, not leave held orders in held status indefinitely, with no date for completion and to provide notice to CLECs as to when held orders will be completed.

As Qwest believes the ILECs are not obligated to provide more than the existing network for the CLECs, it follows that the ILECs are not obligated to hold and review old CLEC requests on a regular basis. Therefore, Qwest’s implementation of the Network Build Position for the Unbundled Loop (UBL) Product ensured that all operational work groups were in alignment not to hold requests where facilities are not currently available. . . .”

- **October 18, 2001** – Qwest distributed an amended CR response, stating:

“As discussed earlier, currently Qwest has no plans to modify the existing policy or processes regarding Qwest’s obligation to build new facilities. The issues addressed in your CR have been discussed in workshops. Some of the issues have been resolved. Rulings have been received in 10 of the 12 workshops to date. In each ruling, the Commissions support the Qwest position that the ILEC is not required to build additional facilities to deliver to a CLEC. . . .

Finally, between the August 7th reply, the August 9th reply, and the attached, Qwest believes we have addressed the issues associated with this CR and we need to let the regulatory process determine the next steps.”
- **Nov./Dec. 2001** – Requests for clarification addressed
- **12/12/01** – CR placed in development status
- **March & April 2001** – Qwest provides ICA negotiations template to Eschelon as part of Qwest-Eschelon interconnection agreement negotiations; parties begin negotiations with Sections 8 (Collocation) and 7 (Interconnection). [Held order issue is in Section 9 (UNEs), which was not yet under discussion in negotiations.]
- **Jan./Feb. 2002** – Qwest developing its Special Construction process
- **2/01/02** – Qwest issued its Special Construction Process

- **2/20/02** – Qwest denied Eschelon’s CR, after attempting to close it as completed. The CR Status History states:

“CMP Meeting - Qwest reviewed the two additional questions raised at last month's CMP meeting that were incorporated into Qwest's Special Construction Process. Qwest advised that the Special Construction PCAT language would be issued April 5, 2002. Qwest requested that the CR be closed. Eschelon advised that they felt the CR should be denied because Qwest isn't reducing the number of held orders, but rather canceling them. It was agreed that the CR would be stasued as Denied. Meeting discussions will be set forth in the Product/Process Draft Meeting Minutes contained in the Product/Process CMP Meeting Distribution Package 03/20/02.”

- **3/20/02** – Qwest added closed to the denied status of Eschelon’s CR. The CR Status History states:

“CR Open/Closed Status changed to Closed per agreement at 03/20/02 Monthly CMP Meeting that CRs having Denied status should also reflect Closed Status”

- **11/02/02** – CMP Document adopted in CMP. The adopted CMP Document included the following language in Section 15.0: “A party may pursue the dispute resolution processes set forth below. . . . This process does not limit any party’s right to seek remedies in a regulatory or legal arena at any time.”
- **10/20/03** – ICA negotiations continuing, with Qwest and Eschelon discussing Sections 1-7 of the ICA. [The held order issue appears in Section 9 (UNEs), which was not yet under discussion in negotiations.]
- **5/22/04**: ICA negotiations move to additional sections of the ICA, including Section 9 (UNEs), which addresses held orders. Eschelon sent Qwest a markup of Sections 9.1 and 9.2 that included the following proposal (though Qwest did not update the draft till later to reflect this proposal):

9.2.2.3.2 If CLEC orders a 2/4 wire non loaded or ADSL compatible Unbundled Loop for an End User Customer served by a digital ~~l~~oop carrier system Qwest will conduct an assignment process which considers the potential for a LST or alternative copper facility. If a LST is not available, Qwest may also seek alternatives such as Integrated Network Access (INA), hair pinning, or placement of a Central Office terminal, to permit CLEC to obtain an Unbundled Loop. (See Section 12.) If no such facilities are available, Qwest will make every feasible effort to unbundle the IDLC in order to provide the Unbundled Loop for CLEC. If no copper facility capable of supporting the requested service is available, ~~then Qwest will reject the order~~the order will remain open, pending

availability of facilities at Parity with Qwest retail End User Customer orders, unless CLEC cancels the order.-

- **3/29/05** - On the Eschelon/Qwest ICA negotiations call, as a compromise Eschelon provided Qwest with 2 alternative proposals to its original proposal: (1) 90 days instead of 30 days; and (2) Eschelon would resubmit the order but Eschelon would maintain its place in queue
- **6/10/05** – Eschelon sent Qwest a revised version of Sections 9.1 through 9.7, which documented the two additional held order proposals that Eschelon made verbally on the 3/29/05 call.
- **3/21/06** – Eschelon provided Qwest with its fourth held order proposal (CLEC submits a supplemental order before the due date).
- **5/26/06** – Eschelon files Qwest-Eschelon ICA arbitration petition in Minnesota, including Issue 9-32 (“Delayed Orders When Facilities Are Not Available”), including the 4 Eschelon options/proposals for alternative language, one of which is changing only the time frame before the order is canceled (from 30 days to 90 days).

At this time (and during the preceding ICA negotiations), the Qwest CMP Document, §15.0, provides that a CLEC “may” pursue the outlined dispute resolution but that “process does not limit any party’s right to seek remedies in a regulatory or legal arena at any time.” There is no exclusion for the regulatory arenas for ICA negotiation and arbitration.

- **6/01/06**: Qwest negotiations team sent the Eschelon negotiations team an email with the following subject line: “Qwest initiated CMP actions relating to ICA negotiations.” The enclosed document listed this notice as a “Level 3” notice. Qwest’s memo described this notice as a “CMP notice” and said:

“Level 3 CMP notices initiated by Qwest today to propose a 90 day hold for facilities.

PROD.06.01.06.F.03973 Updates are associated with a modification/change to an existing manual process. To better accommodate completion of CLEC UNE orders, Qwest will change the 30 business days your service request is held when no facilities are available to 90 business days

PROD.06.01.06.F.03974

To better accommodate completion of CLEC UNE orders, Qwest will change the 30 business days your service request is held when no facilities are available to 90 business days.

PROD.06.01.06.F.03975 (no level listed)

To better accommodate completion of CLEC UNE orders, Qwest will change the 30 business days your service request is held when no facilities are available to 90 business days.”

- **6/01/06**: Qwest sent a Level 3 CMP product and process change notification, proposing a change to Qwest’s process to cancel a request in 90 days instead of

30 days (*see* Eschelon held order proposal #2). *See* <http://www.qwest.com/wholesale/cnla/uploads/PROD%2E06%2E01%2E06%2E%2E03974%2EHeld%5FOrder%5F30%5Fto%5F90%5FDay%2Edoc>. The only redlined change was from 30 to 90 days. Qwest did *not* change “not available” to “in the ground” through CMP. The Qwest CMP redlined documents simply provided:

“When you submit your service request and facilities are not available, your request may be held for ~~30~~90 business days.”

Qwest proposed the same change from 30 to 90 days in multiple PCATs. The links to the red lined Qwest PCAT changes are:

- **6/07/06:** Eschelon provided the following comments through CMP (*See* [http://www.qwest.com/wholesale/downloads/2006/060629/Qwest\\_Resp\\_Comment\\_PROD\\_06\\_29\\_06\\_F\\_04050\\_REV\\_FNL\\_Held\\_Order\\_30\\_90.doc](http://www.qwest.com/wholesale/downloads/2006/060629/Qwest_Resp_Comment_PROD_06_29_06_F_04050_REV_FNL_Held_Order_30_90.doc)):

“In the email below Qwest indicates that this change may impact the arbitration of Eschelon’s Interconnection Agreement. If Qwest is serious about dealing with the issue of orders held for no local facilities in CMP, Eschelon believes that Qwest should provide the CLEC community the opportunity to have meaningful dialogue on this topic. Qwest said in the Minnesota arbitration that: “The entire purpose of CMP was to ensure that the industry (not just Qwest or one CLEC) is involved in creating and approving processes.” If so, Qwest should include in its proposal, at least, the following 4 options to facilitate a full discussion with the CLEC community.

Option 1: The current Washington held order process  
Option 2: Hold for 90 business days versus 30 business days  
Option 3: CLEC resubmits the request.

Option 4: CLEC supplements the request.

Details of each option:

Option 1: Qwest will send CLEC an indication that there is a lack of available facilities and the order will be delayed. The delayed order will remain open, pending availability of facilities at Parity with retail End User Customer orders. In the event that an engineering job is completed that would allow

delivery of the UNEs requested, or Qwest completes construction of facilities for delivery of UNEs for CLEC pursuant to a request to build the UNEs, and this occurs after Qwest sends the delayed order notification, CLEC will receive a new FOC identifying a new Due Date when the UNEs will be available for installation.

Option 2: For UNEs that meet the POLR/ETC requirements, CLEC will receive a jeopardy notice indicating that no facilities are available. Qwest will initiate an engineering job order for delivery of primary service to the End User Customer. Once the engineering job is initiated, the CLEC's order will be assigned to it. The CLEC's order will remain open from the time of initial submission until the engineering job is completed. When the engineering job is completed, CLEC will receive a FOC identifying a Due Date when the UNEs will be ready for installation. In response to such FOCs, CLEC can request a different Due Date by submitting a supplemental order to change the Due Date to a later date.

For UNEs that do not meet the POLR/ETC requirements, Qwest shall send CLEC a jeopardy notice indicating that facilities are not available, however, Qwest shall maintain the order as pending for a period of ninety (90) business days. Qwest shall send such jeopardy notice to CLEC as soon as possible, but in no event less than forty-eight (48) hours prior to the CLEC requested Due Date

(i) If facilities become available to fill the order within that ninety (90) business day period, Qwest shall notify the CLEC of such availability. CLEC and Qwest acknowledge that the availability of facilities hereunder is on a first come, first served basis. Any facility orders placed by any other provider, including Qwest, which predate CLEC's order shall have priority in any facilities made available under the terms of this Section.

(ii) If facilities do not become available to fill the order within that ninety (90) business day period, Qwest will send CLEC a rejection notice for the LSR or ASR and cancel the Service Order.

(iii) Upon receipt of the rejection notice, or at any time after receipt of the jeopardy notice, CLEC may:

- (a) submit a request to build UNEs or
- (b) while a UNE order is in Jeopardy Status, CLEC may cancel its UNE order at any time at no charge.

Option 3: If Qwest rejects the order after thirty (30) business days, CLEC may re-submit the order. If CLEC re-submits the order within three (3) business days of receipt of the rejection notice, CLEC maintains its position in queue for the facilities if they become available. CLEC's maintaining of its position in queue does not affect the application of the PIDs or PAP (as described in Exhibits B and K), but ensures that CLEC maintains its first come, first served status.

Option 4: CLEC can submit a supplement to its existing service request to identify a Due Date that is up to thirty (30) business days later than the previously requested Due Date. If CLEC submits such a supplemental request, the CLEC service order will remain open until the requested Due Date or until CLEC submits another supplemental request. Qwest will not reject CLEC's supplemental requests based on the Due Date change. If

facilities become available, Qwest will send CLEC another FOC with a new Due Date.”

- **6/29/06:** Qwest did not present the other three held order options/proposals in CMP as suggested by Eschelon. Instead, Qwest provided the following non-response to Eschelon (*See* [http://www.qwest.com/wholesale/downloads/2006/060629/Qwest\\_Resp\\_Comment\\_PROD\\_06\\_29\\_06\\_F\\_04050\\_REV\\_FNL\\_Held\\_Order\\_30\\_90.doc](http://www.qwest.com/wholesale/downloads/2006/060629/Qwest_Resp_Comment_PROD_06_29_06_F_04050_REV_FNL_Held_Order_30_90.doc)):

“Qwest initiated this CMP Level 3 “change in process” to move from 30 business days to 90 business days if there are no facilities available. With a Change Management Process level 3 change, Qwest is utilizing the formal comment process which is what is required.

Qwest acknowledges this comment.”

- **7/14/06:** Effective Date of Qwest’s Level 3 CMP notice (*See* <http://www.qwest.com/wholesale/cnla/uploads/PROD%2E06%2E01%2E06%2E%2E03974%2EHeld%5FOrder%5F30%5Fto%5F90%5FDay%2Edoc>)
- **7/25/06:** Qwest for the first time in the ICA negotiations proposed new language to replace “available” with “in the ground.” Qwest provided no basis for the proposal other than to say: “For clarity if Qwest has copper in the ground, Qwest will hold the order for 90 Days. If there is no copper in the ground, Qwest will NOT hold the order, it will reject the order.” Qwest said:

“9.2.2.3.2 Qwest Proposed Modifications\_7-25-06 to Eschelon’s MN ICA Draft dated in error as 8-1-06. Please advise if Eschelon agrees or if the parties are at impasse. If at impasse we will need to add to the MN matrix. WA this is NOT an issue.

- If CLEC orders a 2/4 wire non loaded or ADSL compatible Unbundled Loop for an End User Customer served by a Digital Loop Carrier System Qwest will conduct an assignment process which considers the potential for a LST or alternative copper facility. If a LST is not available, Qwest may also seek alternatives such as Integrated Network Access (INA), hair pinning, or placement of a Central Office terminal, to permit CLEC to obtain an Unbundled Loop. If no such facilities are available, Qwest will make every feasible effort to unbundle the IDLC in order to provide the Unbundled Loop for CLEC. If copper facilities are in the ground than Qwest will hold the order for 90 Days. If no copper facility capable of supporting the requested service is available- in the ground, Qwest will reject the order. ~~Qwest will hold the order pending availability of facilities.”~~

- **Currently:** Qwest’s current PCAT provides for 90 rather than 30 days for held orders in no build situations. It continues to refer to whether facilities are “available” and *not* whether they are “in the ground.” *See, e.g.*, the updated PCAT for Unbundled Loops (Unbundled Local Loop - General Information - V68.0) at <http://www.qwest.com/wholesale/pcat/unloop.html>:

“If facilities can not be located and there is No Planned Engineering Job, your service request will be held for 90 business days. Availability of facilities is on first come, first served basis. If spare facilities become available, a Firm Order Confirmation (FOC) is generated and sent to you in response to your original service request. If at the conclusion of the 90-business day hold, facilities are still unavailable, your service request will be rejected.”

**Time to complete Eschelon CR #5263637 versus Qwest Level 3 Held Order Notice:**

	Date Submitted	Date CR Denied or Date CR Completed	Total Duration in Days
Eschelon Change Request : <b>5263637</b> <b>Installation of adequate facilities and reduction in number of held orders</b>	12/1/2000	Closed 3/20/2002	469 Days
Eschelon proposed language the order will remain open for 90 days instead of 30 days in Eschelon/Qwest ICA negotiations	3/29/2005	N/A	
Qwest Product and Process Notice: <b>PROD.06.01.06.F.03974.Held_Order_30_to_90_Day</b>	6/1/2006	Completed 7/14/2006	43 Days

**EXHIBIT 80**

## 1. QWEST'S CR PC100101-5ES DETAIL

### Open Product/Process CR PC100101-5ES Detail

#### Title: Clarification of Additional Testing Process

CR Number	Current Status	
Date	Area Impacted	Products Impacted

---

PC100101-5ES	Completed
7/12/2002	Repair EEL, UDIT, Unbundled Loop
<b>Originator:</b> Smith, Debra	
<b>Originator Company Name:</b> Qwest Corporation	
<b>Owner:</b> Augustson, Cathy	
<b>Director:</b> Aesquivel III, Frederick	
<b>CR PM:</b> Martin, Ric	

---

#### Description Of Change

Currently, CLECs' are responsible for testing UNE's prior to submitting a trouble report to Qwest. CLECs' are to provide test diagnostics including specific evidence that the trouble is in the Qwest Network along with the associated Qwest circuit identification number. If the CLEC elects not to perform the necessary UNE testing, Qwest will offer to do such testing on CLECs' behalf. If such testing is requested by the CLEC, Qwest will perform the additional testing and bill the CLEC the appropriate charges that are in their Interconnection agreement.

If the CLEC does not provide test diagnostics and elects not to have Qwest perform additional testing on their behalf, Qwest will not accept a trouble report. Additional Charges may apply when the testing determines the trouble is beyond the Loop Demarcation Point

This additional testing option is available on the Unbundled Loop Product Suite, Unbundled Dedicated Transport (UDIT), Enhanced Extended Loop (EEL) and Loop Mux.

---

#### Status History

10/01/01 - CMP receives CR from Deb Smith, Qwest (Subject Matter Expert (SME))

10/01/01 - CMP CR status changed to 'Submitted.'

10/01/01 - CMP forwards updated CR to Deb Smith, Qwest.

10/17/01 - CMP Meeting: Qwest introduced "Description of Change" and agreed to provide detailed package for CLEC review. Walk through meeting to be scheduled by Qwest in the late October/early November 2001 time frame.

10/26/01 - Notification forwarded to the CLEC community regarding presentation of CR in the 10/31/01 CMP Re-Design Meeting.

10/31/01 - CR presented to the participating CLECs at the CMP Re-Design Meeting. CLECs were requested to provide comments.

11/08/01 - Qwest Notification (Document No. PROD.11.08.R.00197.Mtce&Repair Language; Subject: Update to Product Information on Maintenance and Repair Language within EEL, UDIT, LMC and Unbundled Loop General) transmitted to CLEC community.

11/08/01 - PCAT Documents posted to the Qwest Wholesale CMP Document Review WEB page [<http://www.qwest.com/wholesale/cmp/review.html>]. Comments from CLEC community due in 15 calendar days (11/23/01), as stated in 'Interim External Change Management Process for Qwest Initiated Product/Process Changes, Version 6, 11/26/01.'

11/12/01 - Qwest and Eschelon personnel met to review the information shared in the 10/31/01 CMP Re-Design meeting and to answer additional questions.

11/13/01 - Notification prepared for transmittal to CLEC community regarding follow-up meeting scheduled for 11/26/01.

11/14/01 - CMP Meeting - Qwest advised CLEC community that PCAT documents currently are available for comment.

11/24/01 - No comments were received from the CLEC community regarding PCAT documents posted to the Qwest Wholesale CMP Document Review WEB page.

11/26/01 - Qwest conducted a follow-up meeting with the CLEC community to discuss any technical issues with the CR (primarily operational and testing issues). Responses to questions were prepared for posting on the Qwest Wholesale WEB page.

11/28/01 - "Questions & Answers for Additional Testing 11/26/01" document posted to Qwest Wholesale WEB page [<http://www.qwest.com/wholesale/cmp/changerequest.html>].

11/28/01 - "Additional Testing Process Document - 11/09/01" and "Additional Testing Process Presentation - 11/09/01" posted to Qwest Wholesale WEB page [<http://www.qwest.com/wholesale/cmp/changerequest.html>]. These documents were previously posted in the Qwest Wholesale CMP Re-Design WEB page [<http://www.qwest.com/wholesale/cmp/redesign.html>].

11/30/01 - Qwest IT Wholesale Communicator, November 30, 2001, Document No. SYST.11.30.01.F.02444\_CEMR\_UG\_Update, CEMR User's Guide Update prepared for transmittal to Qwest Wholesale Customers

12/05/01 - Formal Escalation received from Eschelon regarding implementation of CR.

12/06/01 - Qwest response sent acknowledging receipt of Formal Escalation from Eschelon (PC100101-5-E01).

12/07/01 - KMC Telecom notified Qwest to participate in the formal escalation initiated by Eschelon.

12/07/01 - Qwest publishes "QWEST - INTERNAL NOTIFICATION; Announcement Date: December 7, 2001; Effective Date: December 21, 2001; Document Number: I.PROD.12.07.01.F.00603.Pending-\_ULL\_EEL\_LMC\_UDIT; Notification Category: Product Notification; Target Audience: CLECs, Resellers; Subject: Pending Updates to Unbundled Local Loop General, EEL, LMC and UDIT Product Catalogs; Change Request Number: CR PC100101-5" for distribution to CLEC community. Notice indicates an effective date of subject updates as December 21, 2001. A fifteen-(15) day notice is provided to the CLEC community.

12/12/01 - CMP Meeting - Qwest advises CLEC community that a formal escalation has been received & that a formal escalation response is forthcoming.

12/13/01 - Qwest transmitted formal escalation response (via e-mail) to the originating CLECs (i.e., Eschelon Telcom, Inc., Covad Communications, and Allegiance Telecom Inc.) [response posted in Qwest Wholesale CMP WEB page; <http://qwest.com/wholesale/cmp/escalations.html> ].

12/21/01 - Eschelon reply received responding to the Qwest formal escalation response (dated 12/13/01) [reply posted in Qwest Wholesale CMP WEB page; <http://qwest.com/wholesale/cmp/escalations.html> ].

01/16/02 - CMP Meeting - Qwest provided status update indicating that CR is in "Escalated" status, and that Qwest is reviewing Eschelon reply (received 12/21/01).

02/20/02 - Qwest provided status update. CR remains in "Escalated" status. Meeting discussions will be set forth in the Product/Process Draft Meeting Minutes contained in the Product/Process CMP Meeting Distribution Package (03/20/02).

03/20/02 - CMP Meeting - Qwest advised that the CR was still in an Escalated status. Meeting discussions will be set forth in the Product/Process Meeting Minutes to be posted on the CMP Web site.

04/17/02 - CMP Meeting - Qwest advised that the CR was still in an Escalated status.

05/15/02 - CMP Meeting - Qwest advised that the CR was still in an Escalated status. CLECs next step would be to go to Dispute Resolution.

06/19/02 - CMP Meeting - Qwest advised that the CR was still in an Escalated status.

07/08/02 - Per the agreement reached with the CLECs in Junes Product and Process CMP meeting, regarding escalated status this CR will carry the appropriate status prior to the escalation

---

### **Project Meetings**

10/31/01 - CR presented to the participating CLECs at the CMP Redesign Session. Meeting minutes to be incorporated when posted to Wholesale CMP Re-Design WEB page [ <http://www.qwest.com/wholesale/cmp/redesign.html> ].

**BEFORE THE PUBLIC UTILITY COMMISSION OF OREGON**

**Subject:** Escalation regarding Qwest's additional testing CR, #PC100101-5

Eschelon, Covad, and Allegiance initiate an escalation with respect to Qwest's additional testing CR, #PC100101-5. The completed escalation form is enclosed in Word format. (The web-based format didn't work well for this joint escalation.)

Because this issue has been discussed in re-design, we are copying the re-design participants as well, for their information.

Lynne Powers  
Executive Vice President  
Eschelon Telecom, Inc.  
612-436-6642  
flpowers@eschelon.com

Terry Wicks  
LEC Account Manager  
Allegiance Telecom, Inc

The information below was contained in the attachment sent to Judy Schultz in regard to an escalation:

**CMP Escalations and Dispute Submittal Form**  
Items marked by a red asterisk (\*) are required.

**\* CLEC Company Name:**

This escalation is submitted jointly by:

Eschelon Telecom, Inc.  
Covad Communications  
Allegiance Telecom Inc.

Referred to jointly as "CLECs."

**\* Action Type:**

- select an action type -

Escalation

**Entering a change request number is optional, but you are required to select a status (select "no change request number" if you choose not to enter a number).**

**Change Request Number:**

CR #PC100101-5

**Change Request Status:**

- select one - no change request number Submitted Clarification/Evaluation Presented Implementation CLEC Test Completed

CLECs believe that the appropriate status is "Denied" by CLECs. Qwest has listed the status as "Development."

NOTE: (Status choices on web need to be revised to include "denied" and "development.")

**\* Description:**

Qwest provided this description of the CR: "Currently, CLECs' are responsible for testing UNE's prior to submitting a trouble report to Qwest. CLECs' are to provide test diagnostics including specific evidence that the trouble is in the Qwest Network along with the associated Qwest circuit identification number. If the CLEC elects not to perform the necessary UNE testing, Qwest will offer to do such testing on CLECs' behalf. If such testing is requested by the CLEC, Qwest will perform the additional testing and bill the CLEC the appropriate charges that are in their Interconnection agreement.

If the CLEC does not provide test diagnostics and elects not to have Qwest perform additional testing on their behalf, Qwest will not accept a trouble report. Additional Charges may apply when the testing determines the trouble is beyond the Loop Demarcation Point This additional testing option is available on the Unbundled Loop Product Suite, Unbundled Dedicated Transport (UDIT), Enhanced Extended Loop (EEL) and Loop Mux."

**\* History of Item:**

Qwest provides the following status history in its Interactive Report (*see* [http://www.qwest.com/wholesale/downloads/2001/011203/CLEC\\_CMP\\_ProductProcess\\_Interactive\\_Report.PDF](http://www.qwest.com/wholesale/downloads/2001/011203/CLEC_CMP_ProductProcess_Interactive_Report.PDF)):

“10/01/01 - CR received by Deb Smith of Qwest  
10/01/01 - CR status changed to Submitted  
10/01/01 - Updated CR sent to Deb Smith  
10/17/01 - CMP Meeting: Qwest presented "Description of Change" and agreed to provide detailed package for CLEC review.  
Walk through meeting to be scheduled by Qwest in the late October/early November 2001 time frame.  
10/31/01 - CR presented to the participating CLECs at the Redesign Session. CLECs to provide comments.  
11/08/01 - Qwest Notification (Document No. PROD.11.08.R.00197.Mtce&Repair Language; Subject: Update to Product Information on Maintenance and Repair Language within EEL, UDIT, LMC and Unbundled Loop General) transmitted to CLEC”

**Eschelon provided Qwest with the following summary on 12/3/01:**

“ . . . . We have objected to this CR on several occasions. Other CLECs have objected as well. Terry Wicks of Allegiance has said that, at a minimum, there are too many unanswered questions at this time to implement it. There is no acceptance or consensus from CLECs. (Eschelon does not believe that rates can be established through a CR.) Yet, Qwest has said that it would implement the CR on December 1st. While we can continue to deal with the process issues raised by this approach in Re-Design, today is December 3rd, so we need to know ASAP that this particular CR has not been implemented (or, if implemented, in which states). Qwest does not have the authority to implement the rates in this CR in all states and circumstances described or to refuse trouble tickets, at least as to Eschelon (and others that have opted in to the same AT&T/WCOM contracts). Because it appears that Qwest plans to show the charges on the bill as "miscellaneous" charges, the charges will be difficult, if not impossible, to identify. We need to ensure that no unauthorized charges are placed on our bill. **Please let us know what activities were taken pursuant to this CR and what steps have been taken to ensure that unauthorized charges will not appear on our bill.**

As we discussed, Qwest did not provide citations to any interconnection agreements in its CR. Terry Wicks said at last week's re-design meeting that, when

Qwest presented its CR at the CMP meeting, he asked whether Qwest had reviewed all contracts to be sure that all interconnection agreements required the process and rates in the CR. Terry said that Qwest said it had done so. Eschelon asked Qwest to provide the citations to all of its contracts upon which Qwest relied for its CR. At a later meeting, Qwest agreed to do so. Qwest was later able to provide citations to interconnection agreements for only 3 of the 6 states in which Eschelon has switches (*see* email, copied at end of this email, from Dennis Pappas of Qwest). The rates cited are from the collocation sections of the rate attachments, and it is at least unclear that these rates were intended to apply to this situation. Moreover, the cited interconnection agreement language refers to a trouble isolation charge. It appears that Qwest plans to charge a testing charge, in addition to a trouble isolation charge, in some circumstances. For a fourth contract (Colorado), Qwest provided a citation to language but said "the rates were not noted in your ICA." (*See* email copied below.) Qwest provided no language or rates for MN or OR. Although the CR specifically states that Qwest will "bill the CLEC the appropriate charges that are in their Interconnection agreement," Qwest said on telephone and conference calls that it plans to charge CLECs retail or SGAT rates when a rate is not in the interconnection agreement. (Qwest's rates and basis for charging rates should be formally documented and not gathered from telephone conversations.) Qwest has provided no basis for charging Eschelon retail or SGAT rates, nor does Eschelon agree that those rates apply to Eschelon (which has not opted in to an SGAT). Moreover, Eschelon also provides testing in similar circumstances, and Qwest has not indicated that it intends to pay Eschelon for that testing. If Qwest can charge this rate, Eschelon should also be able to charge Qwest, particularly when Eschelon has to dispatch a technician to prove to Qwest that the trouble is in Qwest's network. Nonetheless, Dennis Pappas of Qwest has said that Qwest will not pay CLECs for providing the same services. Eschelon disagrees.

As Eschelon has previously indicated to Qwest, for the three interconnection agreements for which Qwest provided citation to language and rates (AZ, UT, WA), Eschelon does not agree that the language necessarily applies in the way that Qwest plans to implement it. For example, none of the contract language states that Qwest may refuse to accept a trouble ticket without test results, but Qwest's CR says that it will do so (and, in fact, Qwest has already started doing so, according to participants at the re-design meeting). The number of questions that CLECs have raised in meetings and conference calls is a reasonable indication that the documentation provided by Qwest to date is inadequate. Also, if Qwest is applying the testing process and charges consistently with interconnection agreements (and only when authorized by interconnection agreements, it is unclear why a CR was necessary. What is the "change" that Qwest is requesting?

At last week's re-design meeting, Michael Zulevic of Covad said that the CR is also not consistent with the SGAT language on this issue. I am not familiar with that issue, so I suggested to you on a break that you should follow up with him on that. Eschelon has not opted in to the SGAT.

As we have discussed with Qwest, Eschelon already performs testing. While it plans to continue doing so, its greatest objections to this CR are the rates, the manner in which Qwest plans to show the information on the bill (which is not specific enough for verification of charges), and the way this CR/process has been handled. Eschelon does not want it to set a precedent suggesting that this is acceptable going forward.

Many issues remain disputed, unanswered, or unclear. The interconnection agreement language cited by Qwest specifically requires the parties to work "cooperatively." As we discussed at the re-design meeting, the process used for collocation decommissioning has aspects that could be used as a model in the future for cooperatively reaching agreement. In the meantime, however, Eschelon's immediate concern is ensuring that this CR is not implemented inappropriately. Please let me know what Qwest has in place today and, if this CR has not been suspended, whether it will be.

**EMAIL FROM DENNIS PAPPAS OF QWEST:**

*[NOTE: Dennis called Garth Morrisette of Eschelon to indicate that the "critical sentence," referred to below, was that Qwest is relying upon tariffs for the rates not found in the contracts. On separate calls, Qwest has said that, if there is no rate in the interconnection agreement, Qwest will charge the SGAT rate. Eschelon has not opted in to the SGAT.*

*With respect to the citations to language below (except rates), the cites below are from Attachment 5 to the interconnection agreements."]*

**Subject:** Optional Testing Response

Good afternoon Garth

Just a recap for you. The language mentioned during our meeting was in AZ, UT and WA. In all three agreements, 3.2.17 spoke to responsibility for trouble resolution and 6.2.20.1.1 speaks to the billing of charges depending on where the trouble was isolated.

In CO, the language is in sections 5.1.17, 5.1.25 and 5.2.20.

The rates associated with these sections in AZ is in schedule 1 - attachment 1 under Common elements. Maintenance 1/2 hour increments - Regular is \$22.20 for each 1/2 hour and Overtime is \$31.57 for each 1/2 hour.

Rates in the UT and WA agreement are noted as "Maintenance Labor" and are - Basic \$26.97 / Overtime \$35.87 in UT and Basic \$25.36 / Overtime \$33.73 in WA.

Language existed in CO but the rates were not noted in your ICA. In this instance, we referenced the Tariff to get rates for Basic, Overtime and Premium "Additional Labor other" of \$28.91, \$38.61 and \$48.33 respectively.

Call me with any questions or contact your Account Team representative for additional details. Thank You

Dennis Pappas - Product Manager”

**Allegiance provided the following information on 12/3/01:**

“Allegiance Telecom has strong concerns regarding Qwest's implementation of the Additional Testing CR and insists that Qwest suspend implementation of Additional Testing charges until Qwest demonstrates the needs for such charges and terms, rates, and conditions for Additional Testing are mutually agreed to by both parties. As Terry Wicks has been stating in the CMP meetings, Allegiance is concerned about numerous unanswered questions concerning the Additional Testing CR, including the rates that Qwest is proposing to charge and the manner in which those rates would be included on an invoice. Since Qwest has not adequately responded to Allegiance's and other CLEC's repeated requests for clarification of this process, Allegiance requests that this CR be immediately suspended and that Qwest clarify the terms, rates and conditions it is proposing for such testing.

It is Allegiance's position that rates must be contained in an effective tariff or an interconnection agreement. Thus, until such time as Qwest has clearly articulated the terms, rates and conditions for Additional Testing and our companies have concluded an amendment or Qwest has an effective tariff, Allegiance can not be held liable for any charges for Additional Testing.”

**Covad provided the following information to Qwest on 12/4/01:**

“I could not agree more strongly with Karen on the issue of additional testing. As I stated at last week's meetings, not only does Covad find the proposal made by Dennis Pappas and Bill Campbell unacceptable, but it is also inconsistent with the language negotiated during the SGAT 271 workshops. This is exactly the kind of unilateral action historically taken by Qwest that has led to the need to redesign the Change Management Process. It was my understanding that the proposal was being tabled

and re-thought and that Qwest would seek agreement with CLECs through the Change Management Process prior to implementation. I sincerely hope this is still Qwest's plan.”

**\* Reason for Escalation / Dispute:**

Qwest has denied the request of CLECs to suspend the CR at least while clarifying the unanswered questions and attempting to gain consensus when possible. Implementation of the CR violates interconnection agreements with CLECs. Many questions remain unanswered. Escalation is urgent, because Qwest has already implemented the CR over CLECs' objections. With so many unanswered questions, CLECs cannot even determine exactly what has been implemented and whether their individual interconnection agreements are being handled differently. Also, because of the manner in which Qwest is handling the billing of the charges per this CR, bill verification is difficult if not impossible.

CLECs believe that Qwest should be the party responsible for initiating an escalation in this case, because Qwest did not clarify the process and was unable to gain CLEC consensus or approval before implementing its CR. Because Qwest has not initiated the escalation, however, CLECs initiate this escalation.

**\* Business Need and Impact:**

For all of the reasons stated above and in meetings and conference calls on this issue, the business need/impact associated with this CR is substantial. This is particularly true because of the potential precedent set by this CR for the handling of future CRs and implementation of rates.

**\* Desired CLEC Resolution:**

Suspend implementation of Qwest-initiated CR #PC100101-5 (process and rates).

Review any steps that Qwest has taken to make system changes, train people, or otherwise implement this CR universally at Qwest to ensure compliance with particular interconnection agreements (*e.g.*, interconnection agreements with Eschelon, Covad, and Allegiance in each state). This includes re-training, etc., as to the differences among various interconnection agreements, as well as difference from the SGAT. (Eschelon, Covad, and Allegiance each has an interconnection agreement with Qwest, and none of these CLECs has opted into the SGAT.)

Provide documentation showing that Qwest has trained its personnel and taken other steps to ensure compliance with individual interconnection agreements, including differences in those agreements as compared with the SGAT.

Begin a collaborative effort (similar to that used for collocation decommissioning) to develop an improved process and, when possible, gain consensus before implementation. Ensure that part of the process is to provide accurate bills that reflect interconnection agreement rates and provide sufficient information for bill verification. If no consensus can be reached, Qwest should then be responsible for escalation before implementation.

Ensure reciprocity so that CLECs may recover their costs in the same circumstances in which Qwest is allowed to recover its costs for such testing.

**EXHIBIT 82**

In this response, Qwest addresses the Escalations submitted jointly by Eschelon Telecom, Inc., Covad Communications, and Allegiance Telecom Inc. on December 6, 2001 regarding CR#PC100101-5 on Clarification of Additional Testing Process.<sup>1</sup>

### **BACKGROUND**

Qwest's clarification of the testing and test diagnostic requirements for the trouble ticket initiation process, including the option to have Qwest perform these test services, is driven by three primary business reasons: improved repair performance, which benefits both the CLECs and Qwest operationally; increased end user customer satisfaction; and consistent and streamlined communication between CLECs and Qwest.

Testing prior to initiating the trouble report will reduce the number of unnecessary trouble reports CLECs submit to Qwest. This will allow Qwest to allocate its resources into other maintenance and repair areas. The requirement that CLECs perform test isolation allows them to identify and repair cases of trouble that are not in the Qwest network. These trouble isolation steps are the most efficient manner of dealing with service issues.

Testing will also result in reduced repair time and lead to improved customer satisfaction. Circuit repair involves two steps: initial testing to isolate the trouble to a particular network and trouble repair. Accurate information provided by CLECs at the time a trouble report is submitted will focus Qwest's efforts on the network segment that needs to be repaired.

In addition, Qwest is entitled as a matter of law to reasonable cost recovery and when the CLEC authorizes Qwest to perform the testing, Qwest should be reasonably compensated for the costs it incurs to perform that function.

Several meetings were held with CLECs before deployment of the stated process ensued. At the October 17, 2001 CMP Meeting, this process was introduced. Qwest took questions from the audience and scheduled a follow-up meeting to address issues. On October 31, 2001 Qwest presented the Clarification of Additional Testing Process to the CLECs at a CMP meeting and answered questions related to the presentation. The presentation and subsequent questions and answers were issued and posted on the CMP web site following that session. In response to a request from Eschelon, Qwest and Eschelon personnel met on November 12, 2001 to review the information shared at the October 31, 2001 CMP Redesign meeting and to answer additional questions. Finally, on November 26, 2001 Qwest met again with the CLECs to finalize all Questions and Answers. Qwest stayed at this last meeting until there were no unanswered questions. The questions and final responses were posted to the web site as supporting documentation. Those Questions and Answers can be found in the attached Q&A document or at the CMP web site.

---

<sup>1</sup> Although this response does not specifically address KMC's Escalation because it was received later, Qwest believes that it is equally applicable and serves as a response to that Escalation as well.

At each meeting, the deployment schedule was fully discussed. CLECs were allowed 15 days to try the process out without billing and full billing began on December 1, 2001. Although there was discussion about effective dates, at no time prior to implementation was it implied or suggested that the implementation date would be postponed or cancelled due to objection.

In its escalation, Eschelon and the other CLECs takes issue with the way this CR has been handled, the rates Qwest proposes to charge, and the way the charge appears on the bill. Each of these issues is addressed below.

**Qwest's handling of this CR.**

Qwest submitted CR #PC100101-5, Clarification of Additional Testing Process, in accordance with its good faith interpretation of the Interim Qwest Product/Process Change Management Process that was agreed to by the Change Management Redesign Core Team.<sup>2</sup> In addition, the CLECs requested that Qwest formally notify them through the change management processes when Qwest was tightening adherence to existing requirements. Because CLECs were not consistently complying with the requirement to provide test results prior to opening a trouble ticket, Qwest submitted a CR to put CLECs on notice that it would be enforcing that requirement for the reasons noted above. Qwest also outlined an elective testing option available upon CLEC authorization to complement the ticket initiation process for which charges will apply.

As stated above, Qwest implemented this change only after several weeks' notice and several meetings with the CLECS. In each meeting, Qwest offered to negotiate an amendment to a CLEC's interconnection agreement if it disagreed with the rates Qwest has proposed for Optional Testing.

As this CR is a clarification of an existing process, Qwest did provide to CLECs who asked specific cites from the CLEC contracts for the language requested. Additionally, Qwest specifically provided such cites to Eschelon.

It is standard in the industry for each party to test their own facilities and for the CLECs to provide these test results to the ILECs when reporting trouble. CLECs in Qwest's region, including these CLECs, have stated that they are generally in compliance with the standard industry practice. However, it has been Qwest's experience that many CLEC trouble tickets result in No Trouble Found or trouble isolated beyond the demarcation point to the CLEC network. If the testing and trouble isolation steps are not performed by the CLEC, Qwest will not have enough information to issue a trouble report for the CLEC end user. At

---

<sup>2</sup> While there has subsequently been disagreement regarding the applicability of the interim process, at the time Qwest issued the CR, it believed in good faith that it applied to process changes that affect a CLEC's operating procedures.

this point, the CLEC can choose to either conduct these tests for their end user or request Qwest to conduct the tests on the CLEC's behalf.

**The Rates.**

Qwest will not conduct nor bill a CLEC for Optional Testing unless agreed to by the contact personnel at the CLEC business at the time the request is made. If the CLEC does not provide test diagnostics to Qwest, the Qwest representative asks if the CLEC desires for Qwest to perform the Optional Testing on its behalf and validates with the CLEC representative that a testing charge will apply. Thus, every time a CLEC authorizes Qwest to perform Optional Testing, it has also authorized Qwest to charge the CLEC. The CLEC will receive the benefit of this Optional Testing in that the test results will be provided to the CLEC either verbally or electronically.

Qwest is entitled to recover its costs. To this point, Qwest has, until now, borne the entire cost of testing and trouble isolation where the CLECs have not met their requirements to test. These efforts include dispatch into the central office to separate CLEC network troubles from Qwest network troubles or dispatched to the field to separate Qwest network troubles from end-user customer equipment troubles.

As the option for the CLEC to request Qwest to test on a CLEC's behalf is a new offering, if a CLEC should so choose, the CLEC will be billed for the labor expended to conduct the test. Once the test is complete, the test results will be related back to the CLEC. The CLEC can then choose to amend these test results to its initial request and submit a trouble ticket to Qwest or can then choose to resolve the trouble without Qwest's assistance. If Qwest receives a complete trouble ticket and begins trouble resolution, and subsequently determines that the trouble is in the CLEC portion of the network, then the CLEC will be billed the Additional Labor charge for the labor expended on trouble that is not in the Qwest network. This charge is in addition to the Optional Testing charge defined above. Additionally, if the CLEC asks the Qwest technician to perform work to repair trouble in the CLEC network, that CLEC will be billed the Maintenance of Service charge. Again, this charge is in addition to both of the charges identified above. The CLEC only pays for any work that Qwest performs on its behalf.

The Maintenance of Service charge and the Optional Testing charge are separate issues. Maintenance of Service is billed when CLEC authorizes work to be conducted on the CLEC side of the Network. Again, this work is not performed nor billed if not authorized by the CLEC. Additional Labor is requested by the customer and agreed to by the Company. This element is incurred to accommodate a specific customer request that involves only labor, including testing and maintenance. Therefore, this charge applies to a request to test to achieve Trouble Isolation as well as to trouble resolution on a circuit reported to Qwest subsequent to Trouble Isolation. Qwest implemented billing for the Trouble Resolution in June. Qwest believes that some of the concerns that Eschelon has raised about charges that have appeared on the Eschelon bill relate to this implementation, since the bill identified by Eschelon does not include Optional Testing charges. If a CLEC disputes any of the

aforementioned charges, they should continue to do so under the applicable provisions of their interconnection agreements.

Since all of these charges cover different forms of work, there is no double recovery.

Qwest does not bill Retail rates for these services. Qwest will bill only:

1. From the CLEC Contract if a rate is available
2. From the SGAT if a rate is not available. The SGATs contain generally available rates filed by Qwest.<sup>3</sup> This ensures non-discriminatory treatment of all CLECs.

### **Billing Issues.**

Concerns have been raised about Qwest's plan to show the charges on the bill as "miscellaneous" charges. Qwest agreed not to begin billing the Optional Testing charge until December 2001. Thus, the charges to which Eschelon refers are not Optional Testing charges. Once Qwest Systems are modified, a unique line item will be available on each bill for the CLEC. This modification is in direct response to the Eschelon concern for line item identification. In the interim the billing for optional testing will appear under additional labor basic. This new line item is planned to read "Additional Labor – Basic Optional Testing". A sample of how Qwest intends to present this information on the bill is set forth below.

---

<sup>3</sup> The SGAT rates are interim in nature until finally approved and may be subject to true-up upon approval, if a commission determines that is necessary.

**Proposed Method for Resolution**

As set forth above, Qwest believes that it has appropriately clarified the testing and test diagnostic requirements for the trouble ticket initiation process and the Optional Testing charge. However, in the spirit of collaboration, Qwest proposes that the CLECs work together with Qwest to resolve the CLECs' concerns regarding the appropriate rate for the Optional Testing. Qwest's proposal is as follows.

The parties will meet to discuss and, if possible, reach agreement on the following issues:

1. What are the appropriate rates for Optional Testing?
2. When will Optional Testing rates apply?

3. How do the parties appropriately implement the rate (i.e., use individual contract rates, the SGAT rate, amend agreements to reflect the rate)?
4. How are the charges for Optional Testing presented on the CLEC bills?

If the CLECs agree to this proposal, Qwest will suspend billing the Optional Testing charge until January 31, 2002 in order to allow the parties to discuss and reach agreement on these issues. The suspension of billing the Optional Testing will begin at a mutually agreed time and end on January 31, 2002. During that period, Qwest will continue to follow the Optional Testing process as it has been clarified, but will not bill the Optional Testing charge to the CLECs when the CLECs authorize Qwest to perform the Optional Testing. Billing will resume following the suspension. Issues not addressed or closed prior to January 31, 2002 will be considered through CMP.

Qwest requests that the CLECs advise Qwest by December 21, 2001 whether they agree to this collaborative approach.

Just a note to indicate that, where it says Eschelon's Reply below, it should say Reply of Allegiance, Covad, and Eschelon. Thanks.

**REPLY OF ALLEGIANCE, COVAD, AND ESCHELON TO  
QWEST'S RESPONSE TO THEIR ESCALATION OF  
CR # PC100101-5 REGARDING  
ADDITIONAL TESTING AND RELATED ISSUES**

December 21, 2001

Qwest's Response to the joint escalation by Allegiance, Covad, and Eschelon of Qwest-initiated Change Request ("CR") #PC100101-5 is unsatisfactory. Qwest has cited no authority for its processes or rates, and it is evident from Qwest's Response that it has none. Qwest's proposal for resolution does not address the bulk of the issues raised by Allegiance, Covad, and Eschelon, and the proposal erroneously suggests that Qwest may nonetheless impose rates without a contract in place after January 31, 2002. Allegiance, Covad, and Eschelon once again place Qwest on notice that their individual interconnection agreements ("ICAs") control and that Qwest's conduct is in breach of those agreements. Qwest's CR and this escalation do not change that.

Allegiance, Covad, and Eschelon have made a reasonable request to Qwest to consider a collaborative effort, modeled after successful aspects of the one ultimately used to address collocation decommissioning, to address all of the issues raised in this escalation. Allegiance, Covad, and Eschelon continue to support and request use of such a process and suspension of the current one (including rates) in the interim. As we have said throughout this process, we are not opposed in principle to the type of testing at issue and encourage use of reasonable practices along these lines. We already conduct testing before submitting trouble tickets. The process and rates that Qwest has imposed, and the manner in which Qwest has approached this issue, however, are unacceptable. Our proposal for resolution, unlike the Qwest proposal, is not limited to rates or to one month. CLEC CRs are rarely, if ever, processed in a month or even a few months. We are willing, however, to dedicate resources to expedite a collaborative process.

**A Legitimate Process for Imposing Terms and Rates, That Recognizes Individual ICA Differences (including ICAs not Based on the SGAT), is Needed.**

Qwest seems to agree that the ICAs control over Change Management Process ("CMP") activities. In Colorado, Qwest said:

First of all, it has been addressed in these workshops by inserting language into the SGAT that indicated that the contract language controls over anything that could come out of the Change Management Process -- a contract is a contract, and I believe that's the same for any other ICA, as well.<sup>1</sup>

If that were the case, a reasonable expectation would be that Qwest's Response would have simply included citations to each ICA indicating the basis for each term and rate to which we objected. Not only does Qwest's response fail to cite a single contract

---

<sup>1</sup> Transcript of CMP Workshop Number 6, Colorado Public Utilities Commission Docket Number 97I-198T (Aug. 22, 2001), p. 292, lines 8-13 (Andrew Crain of Qwest).

provision, but also Qwest states that the ICAs do not address all of the issues. For example, Qwest said in its Response that rates are not available in at least some situations, and that Qwest bills from the Statement of Generally Available Terms (“SGAT”) in those situations. (Qwest Resp. p. 4.) No SGAT provision has been opted into by Allegiance, Covad, or Eschelon, however. Qwest has no legal or good faith basis for imposing SGAT rates on Competitive Local Exchange Carriers (“CLECs”) that are not subject to the SGAT.<sup>2</sup>

Qwest defends its unilateral imposition of rates by stating that it started imposing rates and terms “only after several weeks’ notice and several meetings with CLECs.” (Qwest Resp. p. 2.) Qwest can not cite to a statute or contract authorizing imposition of new rates and terms based on notice of several weeks and several meetings, because one does not exist. The federal Act requires Qwest to negotiate with CLECs and, if agreement is not reached, to arbitrate the issue. In addition, state commissions have rules governing establishment of rates, and ICAs contain provisions regarding rates, terms, and dispute resolution. Despite all of these requirements, Qwest extended none of these processes to the terms and rates that it imposed here. Qwest used the CMP merely as a notice tool, rather than as a means to build consensus and reach agreement. As a basis for doing so, Qwest asserts in its Response that it is entitled to recover its costs. This is an argument properly made in negotiations or dispute resolution proceedings, or to an arbitrator or state commission, *before* imposition of a term or rate. In such situations, CLECs would be allowed to respond that Qwest is permitted cost recovery only when the applicable ICAs permit such recovery and charges are cost-based and approved by a state commission. Then, if the parties do not agree, an arbitrator or commission, with all the facts and evidence relating to the charges before it, would decide the issue. Qwest didn’t follow any such process. Instead, Qwest has unilaterally implemented its claimed entitlement to cost recovery — at the expense of the entitlement of CLECs to the process due to them under the laws and ICAs.

Qwest’s CR and its Response have demonstrated that Qwest applies a “one-size-fits-all” approach, despite differences in individual ICAs. For the actions subject to this particular escalation, Qwest needs to suspend its conduct and follow proper procedures before implementing new terms and rates. Overall, Qwest needs to establish a process to account for individual ICAs when using the CMP and before implementing processes.<sup>3</sup>

---

<sup>2</sup> In footnote 3 on page 4 of its Response, Qwest states: “The SGAT rates are interim in nature until finally approved and may be subject to true-up upon approval, if a commission determines that is necessary.” Qwest cites no authority for this statement, and it is certainly not the case everywhere. For example, in Minnesota, the SGAT rates have not been adopted on an interim or any other basis. If Qwest is referring to a term of the SGAT that provides that the rates are interim and subject to true-up, the argument is circular. Just as the rate doesn’t apply because we haven’t opted in to any SGAT, the true-up provision in an SGAT doesn’t apply either. The rates Qwest is seeking to charge have not been approved by the state commissions for application to Allegiance, Covad, and Eschelon, none of which have opted in to an SGAT.

<sup>3</sup> In the CMP Re-Design meetings, CLECs have questioned whether Qwest may use CRs to establish rates at all.

**Qwest is Recovering Costs, Without These Additional Charges.**

For the reasons discussed above, this is not the appropriate forum in which to argue cost recovery. Because Qwest has interjected that issue here, however, we will briefly point out that Qwest is currently recovering its costs, and perhaps double or triple recovering them in some instances.

**Cost Recovery Through Reciprocity.**

Much like cost recovery under a bill-and-keep compensation mechanism, Qwest has been compensated through charges that it has not had to pay CLECs to date. For example, when Qwest reports to a CLEC that there is No Trouble Found (“NTF”), the CLEC often dispatches its own technician to test and isolates the trouble to the Qwest network. Once Qwest admits that the trouble was, in fact, in Qwest’s network, Qwest must repair it, because the trouble is in Qwest’s network. Under both the ICAs and the SGATs, Qwest should not be able to charge CLEC in this situation, because the trouble was in Qwest’s network.<sup>4</sup> But, although the trouble was in Qwest’s network all along, the CLEC incurred the costs associated with the dispatch and trouble isolation/testing. Allegiance, Covad, and Eschelon do not currently recover these costs from Qwest. This is the reciprocity issue raised in the CR calls and in the Escalation. If Qwest is allowed to impose charges in these situations, CLECs will begin to charge Qwest as well. This would increase costs for all in recording and billing these charges among the parties. As long as CLECs are not charging Qwest in these situations, Qwest is recovering costs through these savings to Qwest. If Qwest is dissatisfied with the current arrangement, Qwest needs to commence negotiations, dispute resolution, or arbitrations. It cannot shift this burden to CLECs by simply ignoring the law governing proper procedures and begin unilaterally imposing processes and rates.

**Cost Recovery Through Recurring Rate/Maintenance Expense.**

Qwest is also recovering costs through the recurring wholesale rates. Qwest is paid a recurring rate to deliver a working product that meets the specifications for that product. CLECs do not pay the full rate to buy a sub-standard or non-working product. If the product is not working properly or does not meet specifications, Qwest is over-recovering costs when receiving the full recurring rate. If Qwest had brought this issue to an appropriate forum for discussion of rates, cost studies would be available to show the components of the recurring rate. Not only do the recurring rates assume a working product, but also the loop cost includes an expense factor that is applied to the loop for

---

<sup>4</sup> See, e.g., AZ Eschelon-Qwest ICA, Att. 5, ¶ 3.2.17.7 (providing that a charge “may” apply if Qwest dispatches to perform tests on an unbundled loop “and the fault is not in Qwest’s facilities”) (emphasis added); AZ SGAT 9.4.5.3.4 (“If this additional testing uncovers electrical fault trouble . . . in the portion of the network for which Qwest is responsible, CLEC will not be charged by Qwest for the testing.”). Although Qwest suggests in its Response that charges only apply when the trouble is not in Qwest’s network, the discussions about the CR have suggested otherwise. Moreover, in the escalation, Eschelon provided a specific example (with ticket number) of a situation in which the trouble was in Qwest’s network and yet Qwest charged Eschelon (at the SGAT rate) \$84.60 for “Maintenance Dispatch – No Trouble Found.” Qwest did not respond to this example.

maintenance. Because this cost recovery mechanism is already in the wholesale price, any additional charge for the same activity is a double recovery. By not providing any cost support for Qwest's charges and taking the discussion out of any context in which such data would be available, Qwest has prevented analysis of whether any of the costs it is claiming in these charges are already being recovered elsewhere.

### **Double or Triple Cost Recovery.**

In addition to double recovering costs already accounted for in the recurring rates, Qwest will double or triple recover rates if it charges for any of the same activities through what has now developed into at least three charges: (1) testing; (2) trouble isolation charge ("TIC"); and (3) maintenance and repair. As indicated in the Escalation of this issue, it was unclear when and how these charges would apply and whether there is more than one charge. Eschelon identified charges that have already appeared on Eschelon's bill (at SGAT rates) that Eschelon believed, based on Qwest's discussion of this CR to date, were associated with the additional testing issue. In its Response, Qwest said that those charges were not for testing but were for other charges that Qwest instituted in June. There was no ICA activity of any kind in June that would have resulted in new charges being applied to Eschelon's bill. Qwest unilaterally began charging Eschelon SGAT rates, even though Eschelon has not opted in to any SGAT. Eschelon has been left to attempt to identify and verify these charges to dispute them.

Because Qwest has provided no data whatsoever to support the new charges, CLECs are not in a position to determine whether any of the components of each charge overlap and constitute double or triple recovery. Qwest created this problem by attempting to impose rates without following the proper procedures, as discussed above. Applying the proper procedures would help resolve the mysteries created by Qwest's Response and explanations of this CR. When Qwest submitted its Additional Testing CR, Eschelon asked Qwest to provide a basis in its ICAs for the Additional Testing rates. Qwest could not provide citations to provisions of all of Eschelon's ICAs. For those for which Qwest claimed language did support the rates, Qwest pointed to a provision of Eschelon's ICA in AZ that allows a charge for *trouble isolation* when the fault is not in Qwest's network as the basis for the *testing* charge. (See AZ ICA, Att. 5, 3.2.17.7, cited in Qwest email by Dennis Pappas, copied in Escalation.) Therefore, in the Escalation, Eschelon challenged some of those charges. In its Response, Qwest said that Eschelon was mistaken, and those charges are something different. They relate to "Trouble Resolution" billing that Qwest implemented in June. (Qwest Resp. p. 3.) Qwest said that the Additional Testing charge is different from the "Maintenance of Service" charge. The latter charge "involves only labor, *including testing* and maintenance." (Qwest Resp. p. 3, emphasis added). This explanation certainly raises the possibility that the testing charge and the labor charge will both have some of the same components, resulting in double recovery. Similarly, Qwest refers to a "*test* to achieve Trouble Isolation." (Qwest Resp. p. 3, emphasis added). Now, there is some fancy footwork. How is trouble typically isolated, if not through testing? Yet, Qwest has at least two separate charges that it plans to apply: (1) testing; and (2) trouble isolation. Attempting to find the components of each charge begins to feel like a shell game. At a minimum,

the confusion allows for mistakes in application that result in double or triple recovery. Rates and processes should not be imposed in this manner.

**If a Compliance Problem Exists, Qwest Needs to Address the Compliance Issue with the Non-Complying CLECs.**

Qwest claims that it submitted its Additional Testing CR “because CLECs were not consistently complying with the requirement to provide test results prior to opening a trouble ticket.” (Qwest Resp. p. 2.) Aside from whether there is such a requirement in every ICA of Allegiance, Covad, and Eschelon,<sup>5</sup> Qwest’s statement raises two additional issues: (1) Qwest has not shown that there is a compliance problem; and (2) Qwest has not explained why Qwest did not deal directly with the non-complying CLECs.

**Qwest has Provided No Evidence of a Compliance Problem.**

When CLECs submit CRs to CMP, Qwest consistently requires CLECs to provide data and extensive examples to prove that a problem exists before Qwest will provide a solution. Qwest does not simply take the CLEC, a customer, at its word. Yet, in submitting and clarifying its CR, Qwest has provided no data to support its assertion of a compliance problem. CLECs are supposed to take Qwest at its word. In its Response, Qwest does not even attempt to quantify the magnitude of the alleged problem. Qwest’s approach in addressing this problem with a CR applicable to all CLECs is akin to using a sledgehammer to kill a fly.

Although the data did not come to us through CMP, we are aware of related claims that Qwest has made in the wholesale service quality docket in Minnesota (docket number P-421/AM-00-849). In that proceeding, Qwest submitted an exhibit (number 38) that purports to show the percentage of CLEC trouble tickets that Qwest coded with a trouble resolution code of “No Trouble Found.” Presumably, the claim is related to Qwest’s position in this Escalation that there is a compliance problem. Attached is a copy of Eschelon’s testimony that refutes the accuracy of Qwest’s information. As indicated in the attached testimony, a sampling of the Qwest data showed that 54% of Qwest’s results (where Qwest claims NTF) did not match the resolution code Eschelon used in closing the ticket. Specifically, Eschelon’s records show that 28.8% of those tickets were closed with trouble found; 10.9% were closed with a resolution code of “came clear with testing (CCWT),” which means that Qwest saw trouble on the line initially, but the trouble cleared while testing; 6.5% were closed without a call back from Qwest with a trouble resolution code to Eschelon; and 8.7% of the reports do not match trouble tickets in Eschelon’s records. The remaining 45.7% of those tickets were closed

---

<sup>5</sup> Qwest claims that it submitted its Additional Testing CR to “notify” CLECs that it was “tightening adherence to existing requirements.” (Qwest Resp. p. 2.) As indicated, Qwest has not shown that there were such existing requirements in each ICA of Allegiance, Covad, and Eschelon. When Eschelon asked for Qwest’s authority for its position that the CR merely “clarified” existing requirements, Qwest could produce no ICA requirement in three states and no rates in several states. The language Qwest did provide does not support all of Qwest’s conduct and rates, and the parties disagree about its application. Whether there is a requirement to provide test results prior to opening a trouble ticket (for these CLECs, which have not opted into an SGAT) is discussed below.

by Qwest with trouble resolution code of “test OK, no trouble found (TOK/NTF).” Of the remaining 45.7% of the tickets, there is also reason to doubt the accuracy of their trouble resolution code. As discussed in the attached testimony, the reason relates to errors in orders written by Qwest order writers that result in closure of the trouble ticket and issuance of a new service order. Because Qwest does not count service order errors in its trouble report data, Qwest’s trouble report data will tend to overestimate the percentage of trouble tickets coded as TOK/NTF.

Qwest has not established that a compliance problem exists, particularly with respect to Allegiance, Covad, and Eschelon. An alleged compliance problem that may not even relate to these CLECs is not a sound basis for imposing new terms and rates on Allegiance, Covad, and Eschelon.

**Qwest Should Deal Directly With the Non-Complying CLECs, if Any.**

If a compliance problem does exist, Qwest’s Response did not address whether Qwest has attempted to deal directly with the non-complying CLECs to gain compliance. CLECs generally have enforcement and dispute resolution provisions in their ICAs. If these really are existing ICA requirements, Qwest has ample basis to approach a CLEC on a non-compliance issue. Qwest did not even claim in its Response that it had tried to do so and was unsuccessful. If Qwest did so, Qwest did not say what happened and why a CR is a better solution. If Qwest did make this attempt and has reasons why a CR is a better approach, such data should have been part of the presentation and clarification of the CR. Without such supporting data, using a CR to address a compliance issue appears to be further evidence of Qwest’s “one-size-fits-all” approach and the problems it creates.

**The CR and Related Terms and Charges are New Requirements and Not Simply Clarifications of Existing Requirements.**

In reality, although Qwest has tried to present its CR as a “clarification” of “existing” requirements, Qwest is imposing *new* terms and rates through this CR and related charges that have been discussed as part of this Escalation.<sup>6</sup> Qwest cites no authority in the ICAs for its claim. None of our ICAs contain all of the Additional Testing, Trouble Isolation, and Maintenance terms at the rates and in the manner in which Qwest is implementing them. Some of our ICAs have some of the requirements to which Qwest refers, and some have none at all. For example, the Minnesota AT&T/WCOM ICA, into which both Allegiance and Eschelon have opted, has *no* provision requiring the

---

<sup>6</sup> A similar language issue involves Qwest’s change from “additional testing” (the term used in the initial CR) to “optional testing” (the term used in Qwest’s Response). Qwest appears to be emphasizing the allegedly optional nature of the testing to counter objections about the rates. Given that Qwest will reject a trouble ticket without testing or acceptance of a unilateral, unapproved rate, this is not a truly “optional” situation. Moreover, CLECs cannot conduct testing in certain situations involving pair gain, but the documentation makes no exception for such circumstances. Although Bill Campbell seemed to suggest on a call that an exception would be acceptable to Qwest, this has not been confirmed or documented. Such issues could be dealt with in the CLEC-proposed collaborative process. Even assuming the testing is truly optional, however, an optional rate is also subject to the requirements that rates be based on cost and approved by the commissions.

CLEC to provide test results to Qwest (before opening a trouble ticket or otherwise). Qwest cannot “clarify” a term that is not in the ICA. Even when the CLEC is required to provide test results, the rates imposed by Qwest are not supported by the ICAs. Qwest is imposing new terms, without first following processes required by the ICAs and the law.

Instead of citing any basis in the ICAs for the testing “requirement,” Qwest argues that CLEC testing is important and efficient. (Qwest Resp. p. 1.) Qwest also argues that testing is an industry standard.<sup>7</sup> (Qwest Resp. p. 1.) As with Qwest’s cost recovery argument, these are arguments properly made in negotiations or dispute resolution proceedings, or to an arbitrator or state commission, *before* imposition of a term or rate. For example, Qwest negotiated language for inclusion in the SGAT that states that “CLEC will perform trouble isolation on the Unbundled Loop and any associated ancillary services prior to reporting trouble to Qwest.” *See, e.g., AZ SGAT 9.2.5.1.* Allegiance, Covad, and Eschelon have not opted in to the SGAT. Before imposing this requirement on them, Qwest needs to negotiate a similar requirement with them in each of their states. All three have said that they in principle agree with this concept, but they want input into how the concept is applied in practice. Instead of coming to the table to negotiate such terms, Qwest is unilaterally imposing its own requirement by rejecting trouble tickets that do not have test results.

In its Response, Qwest states that “In each meeting, Qwest offered to negotiate an amendment to a CLEC’s interconnection agreement if it disagrees with the rates Qwest has proposed for Optional Testing.” (Qwest Resp. p. 2.) This is not the case. Allegiance, Covad, and Eschelon had representatives at the meetings, and this offer was not made at each meeting. To the contrary, Qwest presented the CR as a “clarification” of “existing” requirements, making an amendment unnecessary. At the monthly process CMP meeting in November, Terry Wicks of Allegiance asked Bill Campbell of Qwest whether Qwest had checked everyone’s ICAs to be sure the CR was consistent with those ICAs. Bill Campbell said yes. This response certainly suggested that no amendment was necessary. In fact, an agreement with CLECs is necessary, but Qwest failed to obtain one.

**Qwest Has No Authority to Proceed on a “Notice-And-Go” Basis, As it Has Done Here.**

Although Qwest entitled the document at issue a “CR,”<sup>8</sup> it is actually a simple a notice of intent. Qwest essentially acknowledges this in its Response, in which Qwest

---

<sup>7</sup> Qwest provides no documentation or citations to standards to support this statement.

<sup>8</sup> On page 2 of its Response, Qwest states that it submitted its CR based on its “good faith interpretation” of the interim process. In footnote 2 on the same page, Qwest states that “disagreement” has since arisen in CMP Re-Design about the applicability of the interim process to this type of CR. Both Qwest and CLECs agreed that Qwest would submit Qwest-initiated changes as CRs in Product/Process CMP. This mutual understanding is shown by the fact that Qwest submitted this CR. The fact that Qwest has since withdrawn other Qwest-initiated CRs from the Product/Process CMP and seems to indicate in the Response that it would like to do the same with this one, demonstrates a *reversal in position* by Qwest, not a disagreement. Although there is now substantial disagreement about the interim process, that does not change that fact that Qwest has changed course on this issue.

states that the purpose of its CR was to “formally notify” CLECs of the change.<sup>9</sup> (Qwest Resp. p. 2.) Qwest’s CR stated Qwest’s policy,<sup>10</sup> and Qwest announced a date for implementation. Qwest did not seek consensus or approval at the time, nor did it suspend its plans upon CLEC objection. Although Qwest states in its Response that it answered all questions about the CR (Qwest Resp. pp. 1-2), Qwest omits that several CLECs objected repeatedly to the process and rates and that Qwest answered many questions and objections in the negative. Covad believed that the process had been ceased after a call held during a Re-Design meeting, because of the universal and extensive nature of the objections. But, it turns out that Qwest announced only a slight delay in implementation of the billing, and it proceeded with implementation of the processes over objection. At this time, Qwest is rejecting trouble tickets without testing in states where our ICAs do not require us to test prior to submitting a trouble ticket. Qwest has also said that it will impose SGAT rates when there is no rate in the ICA. As indicated in the Escalation, Qwest is already billing Eschelon SGAT rates, even though Eschelon has not opted in to the SGAT, though Qwest now claims those bills are not for testing. They are for yet another charge or charges.

Qwest’s handling of this CR is very similar to its initial handling of its collocation Release Notifications (“RNs”), in which Qwest announced process changes to collocation that were different from ICA provisions governing collocation. Covad objected to Qwest’s practice of unilaterally changing terms without regard to Covad’s ICAs. Covad (as well as other CLECs, such as AT&T, XO, and ELI) testified as to the inappropriateness of the RNs during section 271 proceedings in Arizona, Colorado, and Washington. The RNs were introduced into evidence as well. As a result, Qwest had to suspend that process<sup>11</sup> and recognize that it cannot unilaterally announce a change that amounts to a modification to an ICA. Qwest needs to have the same realization here and pursue a different course in this case. Overall, Qwest needs to recognize that it has no authority for a “notice-and-go” approach to changes that affect CLECs. Blanket notifications that do not account for differences in individual ICAs, whether in the form of a CR or RN, are unauthorized and unenforceable.<sup>12</sup>

Qwest’s handling of this CR has highlighted many issues for resolution in CMP Re-Design. Not only does the Core Team need to re-address the process for Qwest-initiated CRs in Product/Process CMP, but also the Core Team needs to re-address the systems issues with respect to such CRs. For example, Qwest has indicated that it will

---

<sup>9</sup> Qwest represents that CLECs requested notice. *See id.* CLECs have consistently requested that Qwest submit CRs to **build consensus and gain approval**, not simply to notify CLECs of unilateral changes. Whether, when, and to what extent agreement or approval is needed, and the process for obtaining it when needed, are all issues that remain for discussion in the CMP Re-Design sessions. In the meantime, the ICAs require agreement.

<sup>10</sup> The one-paragraph CR is quoted in its entirety in the Escalation.

<sup>11</sup> Instead, Qwest and CLECs entered into a collaborative process that, despite the unfortunate circumstances leading to its development, ultimately proved successful and satisfactory to CLECs and Qwest. As discussed below, Allegiance, Covad, and Eschelon have suggested using the successful aspects of the collocation decommissioning process as model for resolution here.

<sup>12</sup> Qwest has claimed, in the Re-Design sessions, that under its existing CMP (formerly CICMP) procedures for Product/Process, Qwest may make such changes through RNs only. Qwest’s experience with the collocation decommissioning RNs shows that the contrary is true.

modify its systems to make billing changes. (Qwest Resp. p. 4.) Although Qwest has apparently been planning this change for some time, and Eschelon raised its concerns about the billing aspects of this CR immediately, Qwest has not submitted a systems CR to accomplish such changes. Until such issues can be addressed, in particular, Qwest needs to review and respect each CLEC's ICAs.

**Billing Process and Verification Issues Remain Unclear and Unsatisfactory.**

In its Response, Qwest states that “a unique line item will be available on each bill for the CLEC.” (Qwest Resp. p. 4.) Qwest indicates that it is making this change “in direct response to the Eschelon concern for line item identification.” (Qwest Resp. p. 4.) Eschelon does need line item identification and sufficient information to identify the basis for each charge. We believe the best method for doing this should be discussed among those affected. Qwest is not making line item identification available immediately. In its Response, Qwest states that it will be providing a paper bill in the interim until a systems modification can be made. Qwest has an obligation to provide an electronic bill (an obligation which has existed since 1996). Nonetheless, Qwest has planned this change without coordinating timing of a systems change. Paper bills place CLECs at a significant disadvantage. Bill validation is virtually impossible using paper bills. Eschelon's paper bills, for example, are hundreds and sometimes more than a thousand pages long. At a minimum, if Qwest intends to use paper bills for these charges, Qwest must use a separate Billing Account Number (“BAN”) for these charges, so that we can try to find these charges in all of that paper.

More information on the bill is only a part of the request made by Allegiance, Covad, and Eschelon in their joint Escalation. With respect to billing, we also asked Qwest to “Ensure that CLECs receive notification, at the time of the activity, if a charge will be applied, because CLECs should not have to wait until the bill arrives to discover that Qwest charged for an activity.” (Joint Suppl. Escalation, p. 9.) As Eschelon said at the most recent CMP meeting, the CLEC needs to know at the time of the event that a charge will apply. Immediately after the work is completed, Qwest needs to send CLEC a statement of services performed, testing results, and applicable charges (by telephone number) that will appear on CLEC's next invoice. If Qwest is claiming that a charge was authorized, a process should also be in place to provide timely documentation as to who authorized the charge. If CLECs must wait until the bill is received, it will be a huge task to go back and analyze what happened in each situation and whether a charge should have been applied. All of these kinds of issues should be discussed and reviewed jointly before implementation.

**The CLEC-Proposed Collaborative Process Should be Used to Resolve the Issues.**

In the Joint Escalation, we stated as the “Desired CLEC Resolution:”

“Suspend implementation of Qwest-initiated CR #PC100101-5 (process and rates).

Review any steps that Qwest has taken to make system changes, train people, or otherwise implement this CR universally at Qwest to ensure compliance with particular interconnection agreements (*e.g.*, interconnection agreements with Eschelon, Covad, and Allegiance in each state). This includes re-training, etc., as to the differences among various interconnection agreements, as well as difference from the SGAT. (Eschelon, Covad, and Allegiance each has an interconnection agreement with Qwest, and none of these CLECs has opted into the SGAT.)

Provide documentation showing that Qwest has trained its personnel and taken other steps to ensure compliance with individual interconnection agreements, including differences in those agreements as compared with the SGAT.

Begin a collaborative effort (similar to that used for collocation decommissioning) to develop an improved process and, when possible, gain consensus before implementation. Ensure that part of the process is to provide accurate bills that reflect interconnection agreement rates and provide sufficient information for bill verification. Ensure that CLECs receive notification, at the time of the activity, if a charge will be applied, because CLECs should not have to wait until the bill arrives to discover that Qwest charged for an activity. If no consensus can be reached, Qwest should then be responsible for escalation before implementation.

Ensure reciprocity so that CLECs may recover their costs in the same circumstances in which Qwest is allowed to recover its costs for such testing.

Explain the rates being charged before December 1, 2001 for loop maintenance and testing and explain how these rates and their application differ, if at all, from the procedures after December 1, 2001.”

These items continue to be the CLEC desired resolution.<sup>13</sup> At the December Product/Process CMP meeting, Allegiance, Covad, and Eschelon made a reasonable request to Qwest to consider a collaborative effort, modeled after successful aspects of the one ultimately used to address collocation decommissioning, to address all of the issues raised in this escalation. That process involved, for example:

---

<sup>13</sup> In addition, on December 7, 2001, Eschelon sent an email to Qwest (Judy Schultz) stating: The mailout below relates to "Optional Testing" and states that "there were no comments returned to Qwest regarding this change." The change relates to Qwest-initiated CR# PC100101-5. Given the number of communications, written and oral, about this issue, as well as the pending joint escalation, Eschelon does not understand how the notice can indicate that no comments were returned to Qwest.

Eschelon asks Qwest to consider, as part of the "Desired CLEC Resolution" section of the Escalation of CR# PC100101-5, a request to suspend these PCAT changes.

In addition, for purposes of Re-Design, Eschelon asks Judy Lee to add an action item to discuss a process for ensuring that the administrator of these mailouts is notified of comments made through CMP, account teams, etc.

- CLEC opportunity to express desires with respect to the new "product offering."
- Qwest review of CLEC input; proposed "product offering" at the next meeting.
- Meetings (approx. 2 months)
- Presentation to CMP; Posting for 30 days on the WEB for CLEC comment
- Contract amendments to the participating CLECs (option to agree to amend per the new product, negotiate specific changes based upon individual needs, or not do anything until need for the offering).

Although not all aspects of the collocation product were agreed upon, much progress was made in approximately two months of meetings. In addition to this example, the parties have gained experience and learning from Qwest's handling of the appointment scheduler issue. That experience showed that the process works more smoothly if information is provided in advance of action. Qwest's initial announcement of its plan to implement an appointment scheduler in a point release received a substantial adverse reaction. Because Qwest provided so little information about its plans and did not work together with CLECs to confirm what would really meet CLEC needs, Qwest encountered strong opposition. After Qwest incorporated CLEC feedback and provided more information, Qwest met with substantially less resistance. CLECs have asked that, in the future, Qwest take the consensus building approach first, before "announcing" a change. If Qwest comes in with a proposal (a true request for a change, as opposed to notice of one), the parties can work together to develop a workable process/product and minimize disputes.

Allegiance, Covad, and Eschelon continue to support and request use of a thorough collaborative process and suspension of the current process (including rates) in the interim. As we have said throughout this process, we are not opposed in principle to the type of testing at issue and encourage use of reasonable practices along these lines. We already conduct testing before submitting trouble tickets. The process and rates that Qwest has imposed, and the manner in which Qwest has approached this issue, however, are unacceptable. Our proposal for resolution, unlike the Qwest proposal, is not limited to rates or to one month. The collaborative process needs to deal with the processes associated with the trouble isolation and maintenance charges as well, to be clear when each applies. We are willing to dedicate resources to expedite a collaborative process, and we ask Qwest to re-consider this request.

If Qwest agrees, the following representatives will be the points of contact for each of our companies in the collaborative process:

RE: In the Matter of Qwest Wholesale Service Quality Standards  
Docket No. P-421/AM-00-849

Dear Dr. Haar:

Enclosed is an original and fifteen (15) copies of Supplemental Testimony by Garth Morrisette. The purpose of Mr. Morrisette's testimony is to respond to inaccurate trouble report data presented by Qwest in Exhibit 38. Since Qwest Exhibit 38 was presented by Qwest late in the afternoon on the last day of the evidentiary hearing, Eschelon is responding with this testimony at this time.

Sincerely,

Dennis Ahlers  
Senior Attorney

DOCKET NO. P-421/AM-00-849

**SUPPLEMENTAL TESTIMONY OF  
GARTH MORRISETTE FOR ESCHELON TELECOM, INC.**

**December 19, 2001**

1 **Q. PLEASE STATE YOUR NAME, EMPLOYER, AND TITLE.**

2 A. My name is Garth Morrisette and I am the Director of Regulatory Affairs for  
3 Eschelon Telecom, Inc. (Eschelon). My business address is 730 Second Avenue  
4 South, Suite 1200, Minneapolis, MN 55402.

5 **Q. HAVE YOU BEEN PREVIOUSLY SWORN IN AS A WITNESS IN THIS**  
6 **PROCEEDING?**

7 A. Yes.

8 **Q. WHAT IS THE PURPOSE OF YOUR SUPPLEMENTAL TESTIMONY?**

9 A. The purpose of my supplemental testimony is to correct the record with respect to  
10 Eschelon specific data contained in Qwest Exhibit 38.

11 **Q. PLEASE DESCRIBE QWEST EXHIBIT 38.**

12 A. Qwest Exhibit 38 purports to show the percentage of CLEC trouble tickets that  
13 Qwest coded with a trouble resolution code of "no trouble found." Qwest Exhibit  
14 38 contains confidential and trade secret information regarding trouble report  
15 rates on 73 CLECs, including Eschelon, in Qwest's 14 state service territory. The  
16 exhibit is titled "Percent Trouble Tickets for Which No Trouble Was Found -  
17 Qwest Region - September 2001." Qwest refers to the exhibit in its Reply Brief  
18 in criticizing the Coalition's proposal for MN-6 (Trouble Rate). Qwest implies  
19 that the Coalition's proposed standard for MN-6 of no more than 2.5 trouble  
20 reports per 100 access lines is not attainable for Qwest because the trouble report  
21 rate for CLECs is biased upward as a result of CLECs submitting trouble reports  
22 when no trouble is found. Qwest's brief states: "The record shows the percentage  
23 of CLEC trouble reports result in no trouble being found." Qwest Reply Brief at

1 p. 31. Qwest supports that statement by referring to Exhibit 38, which was  
2 introduced by Qwest late in the afternoon on the last day of the evidentiary  
3 hearings. Because the exhibit was introduced so late in the hearing, Eschelon did  
4 not have a chance at hearing to refute or rebut the accuracy of the data. Qwest  
5 Witness Mr Inouye stated that the data used for Exhibit 38 came from Qwest's  
6 Network Department and that he was not sure whether the data had been audited  
7 by Liberty Consulting Group as part of the PID auditing process. TR Vol. 9, p.  
8 14.

9 **Q. DOES ESCHELON HAVE EVIDENCE THAT REFUTES THE**  
10 **ACCURACY OF THE RESULTS IN EXHIBIT 38?**

11 A. Yes. Eschelon personnel reviewed trouble tickets for the months of July-October  
12 2001 for which Qwest claims the Trouble Tickets were closed with a resolution  
13 code of "Test OK, No Trouble Found" (TOK/NTF). Our analysis indicates that  
14 54% of those results reported did not match the resolution code Eschelon used in  
15 closing the ticket. Specifically, Eschelon's records show that 28.8% of the tickets  
16 were closed with trouble found; 10.9% were closed with a resolution code of  
17 "came clear while testing" (CCWT) which means that Qwest saw trouble on the  
18 line initially, but the trouble cleared while testing; 6.5% were closed without a  
19 call back from Qwest with a trouble resolution code, which means that Qwest did  
20 not report the trouble resolution code to Eschelon; and 8.7% of the reports do not  
21 match trouble tickets in our records. The remaining 45.7 percent of the tickets  
22 were closed by Qwest with trouble resolution code of "test OK, no trouble found"  
23 (TOK/NTF).

1 **Q. IS THERE ANY REASON TO DOUBT THE ACCURACY OF THE**  
2 **TROUBLE RESOLUTION CODE FOR THE REMAINING 45.7% OF THE**  
3 **TROUBLE TICKETS IN QUESTION?**

4 A. Yes. Eschelon has experienced significant increase in the number of errors on  
5 orders attributable to Qwest that result in features being dropped or omitted from  
6 Eschelon's UNE Platform orders. In some cases, PIC changes were not processed  
7 on the orders. I was told by a Qwest representative that as many as 70% of  
8 Eschelon's orders written by Qwest order writers in November were corrected for  
9 these types of errors. I have also been told by Qwest representatives and  
10 Eschelon repair personnel that these types of feature/translation issues would be  
11 classified by Qwest with the TOK/NTF resolution code. When Qwest closes the  
12 ticket with trouble resolution code of TOK/NTF it directs Eschelon to issue a new  
13 service order (LSR) to add the feature, or change the PIC on the line. Since  
14 Qwest does not count service order errors in its trouble report data, Qwest's  
15 trouble report data will tend to overestimate the percentage of trouble tickets  
16 coded as TOK/NTF.

17 **Q. BASED ON YOUR TESTIMONY, DO YOU THINK EXHIBIT 38**  
18 **ACCURATELY REFLECTS THE PERCENTAGE OF CLEC TROUBLE**  
19 **REPORTS THAT RESULT IN NO TROUBLE FOUND?**

20 A. No, at least not with respect to the Eschelon data.

21 **Q. DOES THAT CONCLUDE YOUR SUPPLEMENTAL TESTIMONY?**

22 A. Yes.

**Example of Eschelon Oversight Committee Meeting Request:  
Meeting Minutes**

This document includes excerpts from Qwest-prepared CMP Redesign Meeting Minutes, as well as excerpts from the CMP Document. It also includes URLs to the complete documents from which the excerpts were taken. Following the excerpts there is a Eschelon-Qwest email exchange in which, despite Qwest’s documented July 2001 commitment in CMP Redesign “to provide minutes from each CICMP meeting and ad hoc meetings/calls,” Qwest said “Qwest believes that minutes for ad hoc meetings associated with a change to disposition request are not required under the current CMP Document. The Eschelon-Qwest email exchange also includes Eschelon’s request for Oversight Committee review.

***Excerpt from July 2001 CMP Redesign Meeting Minutes:***

**“MEETINGS**

Qwest has committed to provide minutes from each CICMP meeting and ad hoc meetings/calls. The minutes will include summaries of the discussions and issues from the meeting. Each CLEC will designate a primary and alternate Change Management point-of-contact who will serve as the official designees for matters regarding the Change Management Process.

- **DECISION:** Qwest committed to provide minutes from each CICMP meeting and ad hoc meetings/calls.
- **DECISION:** Primary point-of-contact is the official voting member, and a secondary (alternate) point-of-contact can vote in the absence of the primary contact.”

**Excerpt from September 2002 CMP clean up document – Sections 3.0, 3.1 and 3.2 clean up resulting from the September 2002 Redesign Meeting:**

**“3.0 CHANGE MANAGEMENT PROCESS MEETINGS**

Change Management Process meetings will be conducted on a regularly scheduled basis, at least two (2) consecutive days on a monthly basis. Meeting participants can choose to attend meetings in person or participate by conference call.

Meetings are held to review, ~~prioritize,~~ manage the implementation of Product/Process and System changes, and address ~~eChange management r~~Requests. Qwest will review the status of all applicable Cehange Rrequests. The meeting may also include discussions of Qwest’s OSS Interface Release Calendardevelopment view.

CLEC’s request for additional agenda items and associated materials ~~must~~should be submitted to Qwest at least five (5) business days by noon (MT) in advance of the meeting. Qwest is responsible for distributing the agenda and associated meeting materials ~~at least three (3) business days by noon (MT) in advance of the meeting.~~ IREDUNDANT TO 3.1 and Qwest will be responsible for preparing, maintaining, and distributing meeting minutes. Attendees with any walk-on items should bring hard copy materials of the walk-on items to the meeting and should, at least two (2) hours prior to the meeting, provide copies of such materials electronically (soft copy) to the CMP Manager, cmpcr@qwest.com, for distribution to all parties.

All attendees, whether in person or by phone, must identify themselves and the company they represent.

Additional meetings may be held at the request of Qwest or any CLEC. Meeting notification must contain an agenda plus any supporting meeting materials. ~~Notification for these~~ ~~These~~ meetings ~~will should be distributed announced~~ at least five (5) business days prior to their occurrence. ~~Exceptions may be made for emergency situations.~~ Qwest will record and distribute meeting minutes, unless otherwise noted in this CMP.

### 3.1 Meeting Materials [Distribution Package] for Monthly Change Management Process Meetings [AT&T Note: ~~does this section really only apply to monthly meetings? There should be some standard for all meetings~~]

Meeting materials ~~should~~ will include the following information:

- Meeting Logistics
- Minutes from previous meeting
- Agenda
- Change Requests and responses, as applicable
- New/Active
- Updated
- ~~Log~~
- Issues, Action Items Log and associated statuses
- Release Summary, as applicable
- OSS Interface Release Calendar, as described in Section 6.0
- ~~12 Month Development View~~ [AT&T Note: ~~Redundant to previous bullet~~]
- ~~Monthly System Outage Report~~ Date TBD Trouble Tickets, as described in Section 12.3
- Any other material to be discussed

Qwest will provide Meeting Materials (~~d~~Distribution ~~p~~Package) electronically, by noon ~~(MT), three (3) business days prior to the Monthly CMP Meeting.~~ In addition, Qwest will provide hard copies of the ~~d~~Distribution ~~p~~Package at the Monthly CMP Meeting.

### 3.2 Meeting Minutes for Monthly Change Management Process Meetings [AT&T Note: ~~Qwest writes minutes for all meetings, not just monthly meetings. Relates to Gap 111.~~]

Qwest will take minutes. Qwest will summarize discussions in meeting minutes and include any revised documents such as ~~t~~issues, ~~A~~action items and statuses.

Minutes ~~should~~ will be distributed to meeting participants for comments or revisions no later than five (5) business days by noon (MT) after the meeting. CLEC comments ~~should~~ will be provided ~~within by noon (MT) two (2) business days after receiving draft minutes by noon (MT) to the Qwest CMP Manager.~~ Revised minutes, if CLEC comments are received, ~~should~~ will be distributed ~~posted~~ to the CMP Web site within nine (9) business days by noon (MT) after the meeting. [AT&T Note: ~~"Should" appears in several places in the CMP document. It should be replaces with "will" or "shall"~~]

**Excerpt from Current CMP Document Sections 3.0, 3.1 and 3.2 – No Change from September 2002 Clean Up Document (see above):**

### **“3.0 CHANGE MANAGEMENT PROCESS MEETINGS**

Change Management Process meetings will be conducted on a regularly scheduled basis. The CMP Product/Process and Systems Meetings will be conducted on the same day of each month or on at least two (2) consecutive days on a monthly basis, unless other arrangements are agreed upon by the CLECs and Qwest. Meeting participants can choose to attend meetings in person or participate by conference call.

Meetings are held to review, manage the implementation of Product/Process and System changes, and address Change Requests. Qwest will review the status of all applicable Change Requests. The meeting may also include discussions of Qwest's OSS Interface Release Calendar.

CLEC's request for additional agenda items and associated materials must be submitted to Qwest at least five (5) business days by noon (MT) in advance of the meeting. Qwest is responsible for distributing the agenda and associated meeting materials and will be responsible for preparing, maintaining, and distributing meeting minutes. Attendees with any walk-on items should bring hard copy materials of the walk-on items to the meeting and should, at least two (2) hours prior to the meeting, provide copies of such materials electronically (soft copy) to the CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com), for distribution to all parties.

All attendees, whether in person or by phone, must identify themselves and the company they represent.

Additional meetings may be held at the request of Qwest or any CLEC. Meeting notification must contain an agenda plus any supporting meeting materials. Notification for these meetings will be distributed at least five (5) business days prior to their occurrence. Qwest will record and distribute meeting minutes, unless otherwise noted in this CMP.

#### **3.1 Meeting Materials (Distribution Package) for Monthly Change Management Process Meetings**

Meeting materials will include the following information:

- Meeting Logistics
- Minutes from previous meeting
- Agenda
- Change Requests and responses, as applicable
  - New/Active
  - Updated
- Issues, Action Items Log and associated statuses
- Release Summary, as applicable
- OSS Interface Release Calendar, as described in Section 6.0
- Date TBD Trouble Tickets, as described in Section 12.3
- Any other material to be discussed

Qwest will provide Meeting Materials (distribution package) electronically, by noon (MT), three (3) business days prior to the Monthly CMP Meeting. In addition, Qwest will provide hard copies of the distribution package at the Monthly CMP Meeting.

### **3.2 Meeting Minutes for Change Management Process Meetings**

Qwest will take minutes. Qwest will summarize discussions in meeting minutes and include any revised documents such as issues, action items and statuses.

Minutes will be distributed to meeting participants for comments or revisions no later than five (5) business days by noon (MT) after the meeting. CLEC comments will be provided by noon (MT) two (2) business days after receiving draft minutes to the Qwest CMP Manager, [cmpcr@qwest.com](mailto:cmpcr@qwest.com). Revised minutes, if CLEC comments are received, will be posted to the CMP Web site within nine (9) business days by noon (MT) after the meeting.”

**QWEST-ESCHELON EMAIL EXCHANGE:**

---

**From:** Stecklein, Lynn [Qwest; Contact Information Redacted]  
**Sent:** Tuesday, October 31, 2006 2:07 PM  
**To:** Johnson, Bonnie J.; Isaacs, Kimberly D.; sue.wright[Contact Information Redacted];  
Fredricksen, Laurie; Tom Hyde  
**Subject:** Maintenance and Repair and Dispatch meeting description

Attached you will find the meeting description associated with the meeting held on October 10, 2006 to discuss objections on **PROS.09.27.06.F.04212.Dispatch\_and\_MR\_Overview**.

Qwest is providing a more detailed description of the October 10, 2006 ad hoc meeting as an accommodation to Eschelon. Qwest believes that minutes for ad hoc meetings associated with a change to disposition request are not required under the current CMP Document and Eschelon's reference to the July 2001 meeting in which Qwest stated it would provide minutes for ad hoc meetings on the creation of the CMP Document did not create an obligation for all ad hoc meetings. As we pointed out, Section 3 does not provide that. As Eschelon is well aware, Qwest has not in the past provided minutes for all change to disposition request meetings and Eschelon has not objected to this practice in the past. Nonetheless, Qwest has scheduled an ad hoc meeting on November 2, 2006 to discuss Eschelon's proposal for adding a new requirement for ad hoc meeting minutes in the CMP Document.

Thanks,

Lynn Stecklein  
Qwest Wholesale CRPM

**Cc:** Johnson, Bonnie J.; Isaacs, Kimberly D.  
**Subject:** Eschelon Telecom/CMP OVERSIGHT REVIEW ISSUE SUBMISSION - Meeting minutes

Eschelon submits this issue relating to Qwest's failure to adhere to CMP for Oversight Review per Section 18.0 of the CMP document. Qwest is failing to provide meeting minutes for all CMP meetings (specifically ad hoc meetings), as required by Section 3.0 of the CMP document and per Qwest's commitment in CMP Redesign to do so. Qwest has, at times, provided minutes for ad hoc CMP meetings, but its compliance has not been consistent and appears to be worse lately. Excerpts from the Qwest-Eschelon email exchanges to date on this issue are copied below.

On October 12, 2006 Eschelon asked Qwest when Qwest would be providing meeting minutes for an ad hoc call held on October 10, 2006 regarding tagging at the demarc and dispatch. Qwest did not provide meeting minutes. Instead, Qwest provided one paragraph indicating that Qwest will review the PCATs and hold another meeting.

Eschelon provided Qwest the language in 3.0 of the CMP document requiring Qwest to provide meeting minutes. Section 3.0 of the CMP Document is also available at: [http://www.qwest.com/wholesale/downloads/2006/061030/QwestWholesaleChangeManagementDocument\\_10\\_30\\_06.doc](http://www.qwest.com/wholesale/downloads/2006/061030/QwestWholesaleChangeManagementDocument_10_30_06.doc). Section 3.0 requires Qwest to provide meeting minutes. It states

(with emphasis added): "**Additional meetings may be held at the request of Qwest or any CLEC.** Meeting notification must contain an agenda plus any supporting meeting materials. Notification for these meetings will be distributed at least five (5) business days prior to their occurrence. **Qwest will record and distribute meeting minutes, unless otherwise noted in this CMP.**" This is the provision of the CMP Document under which ad hoc meetings are held, and yet Qwest does not consistently distribute meeting minutes.

Eschelon also provided Qwest with the final meeting minutes from the July 19, 2001 CMP redesign meeting. Those meeting minutes are also available at: [http://www.qwest.com/wholesale/downloads/2001/010821/CMP\\_July19\\_Mtg\\_Minutes\\_FINAL\\_Rev\\_14aug2001.doc](http://www.qwest.com/wholesale/downloads/2001/010821/CMP_July19_Mtg_Minutes_FINAL_Rev_14aug2001.doc). The minutes state (with emphasis added): "**Qwest has committed to provide minutes from each CICMP meeting and ad hoc meetings/calls. The minutes will include summaries of the discussions and issues from the meeting.** Each CLEC will designate a primary and alternate Change Management point-of-contact who will serve as the official designees for matters regarding the Change Management Process. · DECISION: Qwest committed to provide minutes from each CICMP meeting and ad hoc meetings/calls." This decision was documented in Section 3.0 of the CMP Document. Qwest cannot change this commitment without a unanimous vote to change the CMP Document, which Qwest has not requested. Eschelon does not favor any change in the CMP Document. The proper course is for Qwest to consistently adhere to Section 3.0's requirement to provide meeting minutes for each ad hoc meeting/call.

On October 26, 2006, Eschelon submitted the following request to Qwest:

"Eschelon requests that the following item be added to the agenda for the ad hoc call regarding CMP meeting minutes:

--Qwest use of notifications as meeting minutes substitutes, when notifications are not subject to comment and posting of comments

A recent example is Qwest's October 25, 2006 notification (CMPR.10.25.06.F.04292. Ad\_Hoc\_Meeting\_Dispatch) regarding tagging at the demarcation point. In the notification, Qwest said the companies agreed to redlining the PCAT, when in fact Qwest simply announced its intent to do so rather than ask for agreement. In addition, Qwest said it was removing inconsistencies in the PCAT when the companies did not agree there were inconsistencies. Qwest presented this information as having been discussed in the October 11, 2006 ad hoc call. If Qwest had provided meeting minutes for the October 11, 2006 ad hoc call, as required by Section 3.0 of the CMP Document, CLECs would have had an opportunity to comment on the minutes and those comments would then be posted to the website. By substituting commentary in the notification for minutes, Qwest avoids this meeting minute comment process. There is no process for a CLEC to comment upon this type of notification that would result in the posting of the CLEC's comments. Qwest needs to place any recap of meeting discussions in minutes that can be commented upon and not in notifications. Eschelon asks Qwest to comply with the CMP Document's requirement to provide meeting minutes for CMP meetings, including ad hoc calls. If, after the call on November 2<sup>nd</sup>, Qwest still will not do so, Eschelon will take this issue to the Oversight Committee."

On October 31, 2006, three weeks after the tag at the demarc call and 19 days after Eschelon requested meeting minutes, Qwest provided a document that does not conform to the meeting minutes format used for CMP monthly meetings and specifically is in a format that precludes any changes to the document. In the subject line of the email, Qwest described the minutes as a "meeting description." Qwest did not refer to the attached PDF document as meeting minutes, as the CMP Document requires. In the email, Qwest said: "Qwest believes that minutes for ad hoc meetings associated with a change to disposition request are not required under the current CMP Document and Eschelon's reference to the July 2001 meeting in which Qwest stated it would

provide minutes for ad hoc meetings on the creation of the CMP Document did not create an obligation for all ad hoc meetings. As we pointed out, Section 3 does not provide that. As Eschelon is well aware, Qwest has not in the past provided minutes for all change to disposition request meetings and Eschelon has not objected to this practice in the past. Nonetheless, Qwest has scheduled an ad hoc meeting on November 2, 2006 to discuss Eschelon's proposal for adding a new requirement for ad hoc meeting minutes in the CMP Document." Qwest's use of the PDF format to prevent changes, which is not how CMP minutes are provided to CLECs, so short in time after receiving Eschelon's request to be able to redline the minutes and have their comments posted creates a question as to Qwest's basis for using PDF. The use of PDF precludes the very redlining described and requested by Eschelon only days before Qwest issued its document in the limiting PDF format. As Qwest acted in this manner, Eschelon is taking this issue to the Oversight Committee now, rather than waiting until after the November 2nd call. The issue needs to be addressed.

Eschelon was present at the CMP Redesign meeting and, in any event, the minutes and the CMP Document speak for themselves. The CMP Document clearly requires minutes for all ad hoc calls. There are no exceptions for any ad hoc meetings described in either the CMP Redesign meeting minutes reflecting the discussion of the subject or in the CMP Document. To the contrary, the discussion in the CMP Redesign meeting minutes specifically states that minutes will be provided for "each" CICMP and ad hoc meeting. Qwest's October 31, 2006 email, states incorrectly that Eschelon is "proposing adding a new requirement for ad hoc meeting minutes in the CMP Document." The CMP Document and the CMP meeting minutes show that this statement is untrue, as the requirement pre-dates the CMP Document and is included in the CMP Document. There is no provision in the CMP Document for changing the document by failing to comply with it consistently. As discussed, Qwest cannot change this commitment without a unanimous vote to change the CMP Document. Unless and until it obtains such a vote, it needs to provide minutes (like the minutes provided for the monthly meetings) for each ad hoc meeting.

Eschelon does not need to update or change the CMP document. The language that Qwest is required to provide meeting minutes is very clear. If Qwest desires to change its requirement to provide meeting minutes for all ad hoc meetings, then it is Qwest, not Eschelon, who will need to make that request and obtain a unanimous vote to implement that change in the CMP document. Eschelon's desired resolution is that Qwest consistently provide meeting minutes (like the minutes provided for the monthly meetings) for each ad hoc meeting.

Supporting documentation:

[http://www.qwest.com/wholesale/downloads/2006/061030/QwestWholesaleChangeManagementDocument\\_10\\_30\\_06.doc](http://www.qwest.com/wholesale/downloads/2006/061030/QwestWholesaleChangeManagementDocument_10_30_06.doc)

"Additional meetings may be held at the request of Qwest or any CLEC. Meeting notification must contain an agenda plus any supporting meeting materials. Notification for these meetings will be distributed at least five (5) business days prior to their occurrence. Qwest will record and distribute meeting minutes, unless otherwise noted in this CMP."

## **"MEETINGS**

Qwest has committed to provide minutes from each CICMP meeting and ad hoc meetings/calls. The minutes will include summaries of the discussions and issues from the meeting. Each CLEC

will designate a primary and alternate Change Management point-of-contact who will serve as the official designees for matters regarding the Change Management Process.

**DECISION:** Qwest committed to provide minutes from each CICMP meeting and ad hoc meetings/calls.

**DECISION:** Primary point-of-contact is the official voting member, and a secondary (alternate) point-of-contact can vote in the absence of the primary contact."

CLEC Adhoc Meeting  
PROS.09.27.06.F.04235.Dispatch\_and\_MR\_Overview  
October 10, 2006

Attendees: Bonnie Johnson – Eschelon, Kim Isaacs – Eschelon, Tom Hyde – Cbeyond, Laurie Fredricksen – Integra, Sue Wright – XO Communications, Georganne Weidenbach – Qwest, Cindy Buckmaster – Qwest, Mark Dyson – Qwest, Cathy Garcia – Qwest, Don Tolman – Qwest, Cim Chambers – Qwest, Bud Witte – Qwest, Alan Braegger – Qwest, Mark Coyne – Qwest, Susan Lorence – Qwest, Lynn Stecklein - Qwest

Lynn Stecklein – Qwest stated that the purpose of this meeting is to discuss a level 1 process notice that was distributed on September 27<sup>th</sup>. The proposed documentation update on this notice was to the Dispatch and the Maintenance and Repair Overview PCATs. Qwest received comments and/or questions from multiple CLECs regarding this notice. Qwest retracted this notice on September 28<sup>th</sup> in order to work with the CLEC Community to resolve any outstanding issues. This adhoc meeting was scheduled to further clarify that these documentation updates are not a change in Qwest's process and to answer any questions the CLECs may have.

Lynn Stecklein – Qwest stated that the document in question – Dispatch V4.0 and the Maintenance and Repair Overview V66 can be found on the Product/Process Document Review and Response Archive if anyone wanted to refer to them during this discussion.

Georganne Weidenbach – Qwest stated that Qwest's intention on this notice was to get the Dispatch PCAT in sync with the Maintenance and Repair PCAT. She said that words were added to provide clarity on tagging and that the existing Qwest process was not changing.

Bonnie Johnson – Eschelon said she thought we were all clear on the tagging process and policy with documentation back to January/February 2004 and asked if Qwest was now saying that is not the policy.

Georganne Weidenbach – Qwest stated that there are many variables associated with this process design, non design, before and after 30 days.

Tom Hyde – Cbeyond said that he agreed that the changes made to the Maintenance and Repair PCAT is not a clarification but a change. He said there was a situation beyond the 30 day timeline and tagging was done at no charge. Tom said that this tells him the practice is inaccurate.

Georganne Weidenbach – Qwest reiterated that there are so many variables and asked if the situation Cbeyond was referring to was a POTS service.

Tom Hyde – Cbeyond said that they only deal in design UBL.

Georganne Weidenbach – Qwest asked Cbeyond if the technician went out to install and did not tag.

Tom Hyde – Cbeyond stated that in the Denver market they never reuse and that there are always new loops and 100% dispatched.

Georganne Weidenbach – Qwest asked if the technician waived the fee on repair.

Cindy Buckmaster – Qwest stated that the current process is that when a technician is dispatched and the tag is not there, they will tag.

Tom Hyde – Cbeyond stated that the PCATs removed references.

Cindy Buckmaster – Qwest stated that the distinction on the variables was there and we are now reinforcing it in the PCAT.

Tom Hyde – Cbeyond stated that it is not clear.

Alan Braegger – Qwest asked if the repair was an out of service scenario.

Tom Hyde – Cbeyond stated that they never request a dispatch for tagging only.

Alan Braegger – Qwest said that tagging was done incidentally to repair and not billed because there was already a dispatch.

Tom Hyde – Cbeyond stated that this is not clear in the PCAT.

Bonnie Johnson – Eschelon stated that there has been a lot of discussion about tagging. She said that Qwest has never said in the PCAT that they will tag at the time of repair or installation in the PCAT, passed 30 days, within 30 days; on some products and that charges apply to some products.

Cindy Buckmaster – Qwest suggested that we read through the language and see if we could clarify.

Bonnie Johnson – Eschelon asked if anyone could tell her if Qwest tags when dispatching on installation.

Georganne Weidenbach – Qwest stated that we will tag on design with provisioning and on POTS and will tag if asked for free if it is within 30 days.

Cindy Buckmaster – Qwest asked how we could make this clear.

Bonnie Johnson – Eschelon said that this practice is very different from what Qwest has told them.

Cindy Buckmaster – Qwest said that if it is clear they would not have had to ask. She said that if it is not clear then we need to clarify and sync up the language. She said that it should not be in 2 places because it causes confusion and that is why we want to keep the documents in sync and follow the existing process.

Susan Lorence – Qwest asked if we should look at the dispatch PCAT, remove the language and point to the Maintenance and Repair language to determine what needs to be clarified.

Bonnie Johnson – Eschelon said that we should go back the way it was documented 2 to 3 years ago. She said that the intent in the M & R PCAT was to say that you don't tag on POTS orders.

Georganne Weidenbach – Qwest asked if Eschelon meant on provisioning.

Bonnie Johnson – Eschelon said yes.

Susan Lorence – Qwest asked everyone to go to the September Document Review site to look at the language.

Georganne Weidenbach – Qwest reviewed the language in the M&R PCAT.

Tom Hyde – Cbeyond stated that this is a significant change in the M & R PCAT.

Georganne Weidenbach – Qwest said that the Dispatch PCAT did not get to the nitty gritty.

Bonnie Johnson – Eschelon said that in 1<sup>st</sup> paragraph in the M&R PCAT it says that if no dispatch is required on new service, you don't tag. She said it does not say anything for POTS.

Cindy Buckmaster – Qwest stated that is why we need to make the language clearer as there is additional information and detail later in this paragraph.

Tom Hyde – Cbeyond said that POTS have never been tagged. He said this was a SR out of AT&T.

Cindy Buckmaster – Qwest said that was 20 years ago and we need to look at it now.

Bonnie Johnson – Qwest said that with a dispatch, the technician was responsible for tagging.

Cindy Buckmaster – Qwest said that we need to fix that and say that the technician may be responsible for tagging.

Georganne Weidenbach – Qwest said that we will be happy to tag if asked to on POTS.

Bonnie Johnson – Eschelon asked if they would be required to drop their orders to manual handling.

Georganne Weidenbach – Qwest stated that we would need to look at the process beyond 30 days.

Bonnie Johnson – Eschelon stated that she was talking on installation and not beyond 30 days.

Cindy Buckmaster – Qwest said that Eschelon is reading this literally in the 1<sup>st</sup> sentence but that they have to read further into the document.

Bonnie Johnson – Eschelon said she wants clarification on design and non design.

Cindy Buckmaster – Qwest said that we are looking at maintenance and repair and not installation. She said that we are trying to communicate what the current process is. She asked that we be given the opportunity to capture and clarify the thought.

Bonnie Johnson – Eschelon said that after all the conversations with Qwest she is surprised Qwest first said that they tagged on dispatch but now they are saying that they don't.

Georganne Weidenbach – Qwest said that Eschelon does not have very many POTS and asked if we were delving into an area we don't need to worry about.

Bonnie Johnson – Eschelon said that this is something we need to pay attention to.

Cindy Buckmaster – Qwest said that we are also flabbergasted and struggle when we hear that Qwest does this inequitably.

Bonnie Johnson – Eschelon said that if you look at the documentation in the dispatch PCAT it says you tag.

Cindy Buckmaster – Qwest stated that sentence really belongs in the provisioning PCAT.

Georganne Weidenbach – Qwest stated that we want to make the process clear.

Bonnie Johnson – Eschelon said that it is pretty clear and that you can't interpret.

Cindy Buckmaster – Qwest said that you have to read the paragraph in the PCAT in conjunction with the entire document and that you can't read just that 1 sentence.

Susan Lorence – Qwest stated that where it says 'was responsible' in that paragraph is contingent with what is in design and POTS. She said that you have to read the details under design and POTS. She said that you can't take that sentence by itself. Susan said that the 1<sup>st</sup> sentence should be "may be responsible..." and "see below for further details".

Georganne Weidenbach – Qwest stated that we are missing finite details and continuity and that customers need those details to understand going forward.

Susan Lorence – Qwest stated that when you have these things in multiple places you tend to have piece parts and that is not enough. Susan asked if we could start with saying details are provided below.

Bonnie Johnson – Eschelon stated that you need to do what you think is appropriate. She said that the way it is worded in the PCAT is clear and supported by years of the process. She said that Qwest said if they dispatched they would tag and now we are being told that we can't take what you say at face value.

Cindy Buckmaster – Qwest stated that when we say "may dispatch and tag" is under question. She said that a lot of good issues are being raised and we want to address and fix those issues.

Tom Hyde – Cbeyond said that he would like clarity on what the conditions are and what Qwest will and won't do.

Cindy Buckmaster – Qwest agreed that we are trying to provide clarity on this issue.

Laurie Fredricksen – Integra stated that in looking at the Provisioning PCAT there is a sentence regarding premise visits.

Cindy Buckmaster – Qwest stated it is further defined later in the document and that we need to make it more clear.

Bonnie Johnson – Eschelon said that it is defined differently for design vs. non-designed products.

Georganne Weidenbach – Qwest stated that it is the same issue with broad statements and that we need to bring it all in sync.

Cindy Buckmaster – Qwest said that we need to make sure everything is all aligned and that we do not intend to change or defraud – we just want to clarify.

Georganne Weidenbach – Qwest said that reviewing the language is a team effort and we need to make it clearer.

Lynn Stecklein – Qwest asked if we are agreeing to take an action item to make the language more clear in the M&R PCAT.

Vicki Dryden – Qwest said that we need to look at not only the M&R PCAT but the Dispatch PCAT as well as the Provisioning and Installation language.

Georganne Weidenbach – Qwest said that we want to make the language match across the PCATs.

Bonnie Johnson – Eschelon said that it does match.

Georganne Weidenbach – Qwest said that it needs more detail.

Bonnie Johnson – Eschelon said that they need to understand the differences for installation and after installation.

Susan Lorence – Qwest asked if it was appropriate to get a tentative agreement that the installation PCAT will have detail and the M&R PCAT will point to the installation PCAT for details.

Bonnie Johnson – Eschelon said that you have to say when you tag for non-designed or how do we find out.

Cindy Buckmaster – Qwest said that the decision was based on the premise that residential units were single family dwellings and not POTS. She said that we are now into large structures with retail users and POTS type services.

Georganne Weidenbach – Qwest said that you can still ask for tagging to be done.

Bonnie Johnson – Eschelon stated that she was in disbelief after fighting for so many years to hear that Qwest never tags POTS services. She said if you need to make a distinction then do so.

Georganne Weidenbach – Qwest asked if the examples Eschelon was referring to were UBL or resale.

Bonnie Johnson – Eschelon said that they were POTS.

Georganne Weidenbach – Qwest asked if they were POTS UNE-P or QPP and said we need to clarify the process for all services. She said that it has never been the process to tag on POTS provisioning but that you could always request it. She said that it is protocol on design. Georganne said that we need to regroup internally to get the documentation to match and send it

out for review. She said that if we make a change to the process we will follow the appropriate process for that change. Georganne asked if everyone was ok with this 2 step approach.

Tom Hyde – Cbeyond said that he was ok with the 2 step approach but was not sure if we could reach agreement. He said that a great deal of work is needed on the PCATs. He also stated that he will advise his Company to dispute the billing on loop until the circuit is tagged because tagging is required on design services. He said that if the tag blows off, the technician did not install it correctly and that tags don't blow off.

Georganne Weidenbach – Qwest said that was just an example and that tags can be torn off.

Tom Hyde – Qwest stated that it would be the ILEC technician tearing it off.

Georganne Weidenbach – Qwest said that there are a lot of variables. She said that there is a process in place to contact Qwest if you want a circuit tagged. She asked again if everyone was ok with moving forward with clarifying the language.

Tom Hyde – Cbeyond said he was ok with moving forward.

Susan Lorence – Qwest stated that Qwest would review the documents to add clarification and would re-issue this notice as a Level 2 to document the existing process. She said that if changes are needed we can use other means to change the process.

Cindy Buckmaster – Qwest asked if we could have discussions prior to updating the documentation.

Susan Lorence – Qwest said that we could follow up with another adhoc meeting and can all work together to get the language where it needs to be.

Bonnie Johnson – Eschelon asked what she was supposed to tell their people and customers. She said that Qwest doesn't tag and that they need to ask for it and the customer get it 5 days later.

Georganne Weidenbach – Qwest said that you can always ask for tagging upfront.

Bonnie Johnson – Eschelon said that we should meet again to review the revised language.

Susan Lorence – Qwest asked if there was anything we could change immediately in the language.

Cindy Buckmaster – Qwest said that would not solve anything because we should be reading more than 1 sentence.

Georganne Weidenbach – Qwest said that we will attempt to revise the redline documents and review as a team with the CLECs.

Tom Hyde – Cbeyond said that the billing issues may need to be addressed as well. He said that the billing should not start until tagged. He said tagging is part of installation.

Georganne Weidenbach – Qwest said that don't always dispatch.

Tom Hyde – Cbeyond stated that dispatch is required on design services and billing should not start until tagging is complete.

Cindy Buckmaster – Qwest said that this would be a process change.

Georganne Weidenbach – Qwest said that if the circuit is accepted and working, billing should start.

Lynn Stecklein – Qwest asked if there any other questions or comments. There were none.

The meeting was adjourned at 4:00 pm.

**Announcement Date:** December 01, 2006  
**Proposed Effective Date:** January 15, 2007  
**Document Number:** PROS.12.01.06.F.04363.Tagging\_of\_Circuits  
**Notification Category:** Process Notification  
**Target Audience:** CLECs, Resellers  
**Subject:** CMP - Multiple PCAT update for Tagging of Circuits  
**Level of Change:** Level 3

**Summary of Change:**

On December 1, 2006, Qwest will post planned updates to its Wholesale Product Catalog that include new/revised documentation for Dispatch V5.0, Maintenance and Repair V68.0 and Provisioning and Installation Overview - V99.0. These will be posted to the Qwest Wholesale Document Review Site located at <http://www.qwest.com/wholesale/cmp/review.html>

On September 27, 2006, Qwest sent a Level 1 PROS.09.27.06.F.04212.Dispatch\_and\_MR\_Overview notice to synch up language in the Dispatch and the Maintenance and Repair PCATs. As a result of questions and comments from multiple CLECs regarding this update, Qwest retracted this via PROS.09.28.06.F.04222.Dispatch\_MR\_Retraction. During an adhoc call held on October 10, 2006 Qwest agreed to review the PCATs impacted and agreed to re-issue notice as a Level 2. Since that time, Qwest has determined that a change should be made to the tagging of circuit process and is sending this notice of change as a Level 3.

Updates are associated with a change to the tagging of circuits process. When you report a repair condition and also request tagging on this circuit, and a dispatch to the premises is required, Qwest will perform tagging at no charge to you.

The updates to the Maintenance and Repair Overview will be found in the CLEC Roles and Responsibilities section under Demarcation Points and Tagging of Circuits which describes the change in the tagging of circuits process.

The updates to the Provisioning and Installation Overview will be found in the Additional Miscellaneous Work Activities section under Tagging of Circuits at the Demarc, Qwest will clarify the current process for tagging of circuits.

The updates to the Dispatch PCAT will be found in the Description section. Qwest will update the language by providing links to the Maintenance and Repair Overview and the Provisioning and Installation Overview for dispatch information and the associated charges. In the Pricing section under Rate Structure, Qwest will add language which pertains to a Conversion activity.

Also throughout the PCATs mentioned above additional minor updates will be made.

Current operational documentation for this product or business procedure is found on the Qwest Wholesale Web Site at this URL:

<http://www.qwest.com/wholesale/clecs/dispatch.html>  
<http://www.qwest.com/wholesale/clecs/maintenance.html>  
<http://www.qwest.com/wholesale/clecs/provisioning.html>

**Comment Cycle:**

CLEC customers are encouraged to review these proposed changes and provide comment at any time during the 15-day comment review period. Qwest will have up to 15 days following the close of the comment review to respond to any CLEC comments. This response will be included as part of the final notification. Qwest will not implement the change sooner than 15 days following the final notification.

Qwest provides an electronic means for CLEC customers to comment on proposed changes. The Document Review Web Site provides a list of all documents that are in the review stage, the process for CLECs to use to comment on documents, the submit comment link, and links to current documentation and past review documents. The Document Review Web Site is found at <http://www.qwest.com/wholesale/cmp/review.html>. Fill in all required fields and be sure to reference the Notification Number listed above.

**Timeline:**

Planned Updates Posted to Document Review Site	Available December 01, 2006
CLEC Comment Cycle on Documentation Begins	Beginning December 02, 2006
CLEC Comment Cycle Ends	5:00 PM, MT December 16, 2006
Qwest Response to CLEC Comments (if applicable)	Available December 31, 2006 <a href="http://www.qwest.com/wholesale/cmp/review_archive.html">http://www.qwest.com/wholesale/cmp/review_archive.html</a>
Proposed Effective Date	January 15, 2007

If you have any questions on this subject, please submit comments through the following link: <http://www.qwest.com/wholesale/cmp/comment.html>.

Sincerely

Qwest Corporation

Note: In cases of conflict between the changes implemented through this notification and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. All information provided on the site describes current activities and process. Prior to any modifications to existing activities or processes described on the web site, wholesale customers will receive written notification announcing the upcoming change.

**Eschelon's 12/15/06 comments on Qwest's 12/01/06 Level 3 notice**

Thank you for submitting your comments through the Qwest CMP Document Review and Comment Process:

The information you entered is listed below.  
If you have any questions, please direct them to [cmpcomm@qwest.com](mailto:cmpcomm@qwest.com).

=====

Notice Number: 1956\_CNL3\_PROS.12.01.06.F.04363.Tagging\_of\_Circuits

Document Name:

Document Version Number:

Document History Log Line Number:

Comment:

Eschelon objects to Qwest noticing this as a level three change. Eschelon asks Qwest to withdraw this notice and submit Qwest's proposal as a level four change request (CR) for the reasons provided below. Eschelon also objects to the content of the redlines for numerous reasons, which should be discussed further in the context of a change request.

Qwest's proposed changes (shown in its red lined Dispatch, P&I and M&R PCATs) have a significant change to CLEC operating procedures.

From the redlines of the PCATs, Qwest appears to be attempting to implement new rates through CMP. If Qwest is not attempting to do so, Qwest can explain in the context of discussing a CR and then revise its proposal. A comment period connected with a notice is insufficient to deal with these extensive changes.

Qwest described its current policy/process on the October 10th, 2006 call regarding tagging the demarc. Qwest's proposed changes do not reflect that description (see excerpts from 10/10/2006 ad hoc call below).

On that call, Qwest also said it would draft the language and review with CLEC input (see excerpts from 10/10/2006 ad hoc call below). Qwest has not scheduled the ad hoc call it committed to schedule to discuss the changes.

The multiple proposed PCATs conflict with each other and, in some cases, there are conflicts within a single PCAT.

Examples of comments from the October 10th, 2006, meeting minutes regarding the current process:

“Cindy Buckmaster – Qwest stated that the current process is that when a technician is dispatched and the tag is not there, they will tag.”

“Georganne Weidenbach – Qwest stated that we will tag on design with provisioning and on POTS and will tag if asked for free if it is within 30 days.”

“Georganne Weidenbach – Qwest said that we will be happy to tag if asked to on POTS.”

Examples of comments from the October 10th, 2006, meeting minutes regarding obtaining CLEC input and working as a team:

“Georganne Weidenbach – Qwest said that reviewing the language is a team effort and we need to make it clearer.”

“Cindy Buckmaster – Qwest asked if we could have discussions prior to updating the documentation.”

“Susan Lorence – Qwest said that we could follow up with another adhoc meeting and can all work together to get the language where it needs to be.”

“Georganne Weidenbach – Qwest said that we will attempt to revise the redline documents and review as a team with the CLECs.”

**Announcement Date:** December 19, 2006  
**Effective Date:** Immediately  
**Document Number:** PROS.12.19.06.F.04415.QwestDelayedResp-TaggingC  
**Notification Category:** Process Notification  
**Target Audience:** CLECs, Resellers  
**Subject:** CMP - Qwest Delayed Response - Multiple PCAT update for Tagging of Circuits  
**Level of Change:** Level 3

Qwest recently posted proposed updates to Dispatch V5.0, Maintenance and Repair V68.0 and Provisioning and Installation Overview - V99.0. CLECs were invited to provide comments to these proposed changes during a Document Review period from December 02, 2006 through December 16, 2006.

Because of the complexity of CLEC comments, Qwest is unable to meet the required 15-day timeline for comment response. However, Qwest will provide a response to these comments a minimum of 15 days prior to the implementation of the proposed updates. These responses and implementation dates will be provided through a subsequent final notification.

**Subject:** Tagging of Circuits

Kim,

I'm sending this email to try and help clarify our position and understanding on changes being noticed on PROS.12.01.06.F.04363.Tagging \_of\_Circuits.

Contrary to Eschelons understanding Qwest does not tag every time they dispatch to the customer premises - this misunderstanding was clarified during the interconnection negotiations. Therefore, it was agreed that CLECs will follow Qwest's normal practice and request tagging to ensure it takes place.

Qwest original intention was to correct the PCATs (Maintenance and Repair, Dispatch, and Provisioning and Installation) to comport with its existing processes.

Qwest scheduled and held its first adhoc call to discuss this and agreed to take CLEC comments into consideration. After the adhoc call, during ICA negotiations with Eschelon, Qwest agreed to tag circuits without charge anytime Qwest is dispatched to an end-users premise and tagging is requested. Because this agreement was reached during negotiations, it is Qwest's intent to make the process change ( it is not a rate change) agreement available to the entire CLEC community and submitted the change as a level 3, which differs greatly from the original intention of correcting and clarifying the existing PCAT language.

The previous process would have charged CLECs additionally for tagging designed circuits during repair if requested.

Qwest is following the CMP requirements in Section 5.4.4.1 and will add this item to the agenda for the next CMP meeting. However, Qwest would prefer not issuing a level 4 CR that will delay implementation of this process change that benefits the full CLEC community.

If there are any questions about the specific contract language, contact your Qwest Service Manager or Phil Linse.

Mark Coyne

**From:** Johnson, Bonnie J. [email redacted]  
**Sent:** Tuesday, January 16, 2007 2:49 PM  
**To:** Coyne, Mark; Isaacs, Kimberly D.; Coyne, Mark; Isaacs, Kimberly D.  
**Cc:** Novak, Jean; Linse, Philip; Lorence, Susan; Stecklein, Lynn; Esquibel-Reed, Peggy; Johnson, Bonnie J.; Novak, Jean; Linse, Philip; Lorence, Susan; Stecklein, Lynn; Esquibel-Reed, Peggy; Johnson, Bonnie J.  
**Subject:** RE: Tagging of Circuits

Mark,

Thanks for your response. From your email, it sounds as though Qwest's goal is to have the PCAT reflect the language that will be in the Qwest-Eschelon interconnection agreement. (Let me know if that is incorrect.) After reviewing Qwest's language, we don't believe the language meets that goal. It also has some other problems, such as dealing with an issue that is unrelated to tagging, inconsistency in presentation of information that may lead to confusion, etc. We may discuss these types of things in tomorrow's meeting.

We continue to request a change in status to a Level 4. Qwest's proposal is a significant change from Qwest's existing process as reflected in the PCAT. (We also continue to disagree with your description of "existing processes" and your description of when charges apply under those processes. The existing process is reflected in the long-standing PCAT language that says, for example: "Whenever a Qwest technician is dispatched to a premise, the Qwest demarcation point will be tagged if a tag is not present." [1]). You indicate that you would prefer not issuing a Level 4 CR, but you did not give any reason why it would not be a Level 4 CR. If you have a preference that is different from the actual level of the request, you need to request an exception. You indicate that this change benefits the full CLEC community, but that is for the CLEC community to decide. Eschelon was willing to sacrifice some of the benefits of the current process (such as requesting tagging in some cases when a request is not currently required under the existing process as reflected in Qwest's PCAT) in order to close this issue, other CLECs may make a different choice. You would need to request an exception, etc., to find out.

Thanks and we look forward to discussing this issue tomorrow,

---

**Product/Process CMP Team Meeting**

**Distribution Package**

## Tagging of Circuits

Mark Coyne-Qwest stated that Qwest issued a Level 1 notice in October with the intent to provide consistent documentation in the Provisioning, Installation and M&R PCATs. He said that this notice resulted in some CLEC comments and concerns and that Qwest held an adhoc meeting to discuss. Mark stated that Qwest moved forward with some additional updates on a Level 2 notice. He said that due to decisions made associated with the negotiations going on with Eschelon, Qwest was prompted to issue a Level 3 notice for more PCAT updates and a change in process. Mark said that we did receive comments requesting a change in disposition to a Level 4. He said that Qwest issued a delayed response and that we did receive additional comments from Eschelon. Mark stated that Qwest would like to move forward with a separate adhoc meeting to understand Eschelon's concerns and discuss what was discussed in negotiations. He stated that we would proceed with a Level 3 if we can reach agreement and if we can't reach an agreement, Qwest would open up a Level 4 CR.

Bonnie Johnson-Eschelon stated that at a high level there are inconsistencies in dispatch vs. provisioning and installation. She said that **(Comments to minutes from Eschelon 1/26/07) - the Dispatch PCAT refers you to the M&R PCAT** you refer to dispatch and the same should be done for in the Provisioning and Installation PCATs. Qwest also made a change under Service Wire Rearrangements and that has nothing to do with tagging. She also said that Additional Labor and Additional Labor - other **dispatch** are 2 different charges.

Cindy Buckmaster-Qwest said **(Comments to minutes from Eschelon 1/27/07 - yes she made that change as a clean up when she was going through the PCAT.)** She disagreed because they are the same charges.

Bonnie Johnson-**(Comments to minutes from Eschelon 1/26/07 - Eschelon provided Mark Coyne with a copy of Exhibit A and showed him the two different charges.** She said that some changes were not in the tagging section and some changes were made with no explanation as to why.

Cindy Buckmaster-Qwest said that she just saw what Eschelon was referring to and that maybe we should not have made the changes together.

Bonnie Johnson-Eschelon stated that discussions were held with Georganne Weidenbach (Qwest) and Cindy Buckmaster (Qwest) regarding **(Comments to minutes from Eschelon 1/26/07 - Qwest's changes the PCAT and these updates do not match what they said.** She said that **then they read Mark's e-mail and realized that Qwest was trying to make updates that matched what Eschelon had negotiated for its contract. Bonnie said Eschelon made some concessions and** also discussed their concerns regarding **ICA controls and if other CLECs want to opt in the can but are not required to** and that other CLECs need to provide input.

Cindy Buckmaster-Qwest stated that other CLECs do need to weigh in and that is why we have CMP. She said that we get feedback and decide if we move forward with a change. Cindy said that she and Georganne Weidenbach (Qwest) never said the PCATs were wrong but that the PCATs appeared to be inconsistent. She said that we were trying to clarify and acknowledge that they could be misleading if taken out of context.

Bonnie Johnson-Eschelon stated that Qwest said that the PCAT was wrong and **Qwest** has sworn testimony.

Mark Coyne-Qwest stated that we will schedule an adhoc meeting to address the differences and Qwest will determine if we need a Level 3 or 4.

Bonnie Johnson-Eschelon stated that she was ok with this path but **(Comments to minutes from Eschelon 1/26/07 - Eschelon will continue to ask that this be a level 4 change request.)**

Mark Coyne-Qwest asked why Eschelon is requesting a Level 4.

Bonnie Johnson-Eschelon stated that this looks like a major process change to Eschelon **(Comments to minutes from Eschelon 1/26/07 - and the previous Provisioning and Installation and Repair PCATs state Qwest will tag when they dispatch.**

Cindy Buckmaster-Qwest said **(Comments to minutes received from Eschelon 1/26/07 - UBLs are always tagged and the language Qwest proposed changes are different than the current process.** She said that we tried to address that the dispatch PCAT was written from a UBL perspective and not from a POTS perspective. She said that we found that the documentation needed distinction between POTS and design for tagging.

Mark Coyne-Qwest stated that an adhoc meeting will be scheduled.

From: Peterson Lussenhop, Joan [email redacted]  
Sent: Tuesday, October 12, 2004 9:54 AM  
To: Clauson, Karen L.  
Cc: Johnson, Bonnie J.; Susan Peirce; Ed Fagerlund; Novak, Jean; Montez, Evelyn; Munn, John; Hsiao, Doug  
Subject: RE: Delivery Levels on Some New T1 Orders

Karen:

Contrary to your assertions, the reason my e-mail reached you after close of business is because I was on the phone with Ed Fagerlund from the DOC. I had just spent 2 hours with Qwest personnel on a conference call after they had spent a number of days gathering information. During my conference call, I saw Ed's phone number on my Caller ID about 4 times and felt that I needed to call him immediately. We spent 30 to 45 minutes on the phone. It did not "take a call from DOC" to get me to respond. I was responding and the call from DOC delayed the response.

I will now address the setting of the db at -7.5. As you know, the ANSI range is -16.5 as the lowest setting and "0" as the highest setting for db levels. When the db is set at "0", the signal is very "hot".

We have received increasing numbers of complaints from end-users on our network that their equipment could not perform properly when the db was set at "0". Thus, a number of years ago (approximately four), as Qwest ordered new equipment, we ordered equipment that defaulted to -7.5 (the middle of the range) rather than at either extreme end. In addition, techs were instructed to reset the db at -7.5 whenever they did a repair. This was first given as an instruction four years ago and has been repeated over time. Thus, in order to allow for proper performance of end-user equipment, Qwest has been moving the network over time to a default setting of -7.5. We have looked but cannot find the "memo" you reference. If you have a copy of whatever document you are referring to, that would help.

Qwest is delivering the DSL's within ANSI standards as required by our interconnection agreement. Even though Qwest is fully within the requirements of our interconnection agreement, we have been exploring the situation to see whether we could find a solution that does not create other problems. I will get back to you at the end of the day today.

Subject: RE: Delivery Levels on Some New T1 Orders

Joan:

After waiting for a substantive response from Qwest, Eschelon is disappointed with the email below. It doesn't seem that it should take almost a week to come back with such a response. If Qwest had a question about the distance, Qwest certainly could have asked it earlier, so we could address that issue. Instead, you have waited until after COB on Friday, so you will not get a response until Monday. We will also respond to Qwest's other statements below

next week. It is unfortunate that it takes a call from the DOC to get even this kind of a response from you. We'll provide that information about the outstanding circuits on Monday - the next business day. (We would like to see a similar turnaround time from Qwest in response to Eschelon's questions.) Qwest has not previously suggested that distance is an issue, even though we have spent weeks dealing with this issue, but we will check into it. In any event, that does not explain the timing. Eschelon still needs to know about the Qwest memo and whether and when Qwest said to start setting the dB levels at -7.5 dB.

Regarding your statement that I "stated that Qwest has not provided" me with an answer, you are incorrect. My email below was specific to you, Joan, and not Qwest generally. I said that I had not heard an answer from you at all since Ken Beck said you were the person who would communicate a response, and that is a true statement. As I said in my email below, "As you are the point of contact now, you need to be sending regular status updates so we have current information on this important, and apparently growing, problem." Far from getting regular status updates, I haven't received so much as an estimate of when we would receive a response from you or even an "I'm working on it." A simple status email would just be common courtesy, but no courtesy has been extended to Eschelon. Given the dearth of any kind of status or other communication from you, Joan, your reference to "responsiveness to our customers" rings hollow. As previously indicated, Eschelon disagrees with your statements about the ICA requirements and believes Qwest does have this requirement. We will send that information on Monday.

Subject: RE: Delivery Levels on Some New T1 Orders

Karen:

This is in reply to the e-mails you have sent me this week. In one you stated that Qwest has not provided you with an answer. Qwest has given you an answer that it is providing the T1's within the ANSI standards as required. You have asked for further review. Although Qwest is not required by its interconnection agreement with you to provide db levels at 0, we are currently exploring how your issues might be resolved. We certainly want to be responsive to our customers.

In exploring this issue, we are puzzled by the fact that this problem only appears to be occurring in Minnesota and only with Eschelon. One thing that is unique in Minnesota is that it has an MPOP requirement. This means that the end-user equipment tends to be further away from the point of demarcation. Can you tell me how far from the MPOP your end-user equipment is on these lines where you have experienced problems?

To: Peterson Lussenhop, Joan  
Cc: Johnson, Bonnie J.; 'Susan Peirce'  
Subject: RE: Delivery Levels on Some New T1 Orders

Joan:

The two additional PONs (both Minnesota) are MN 424414 and MN435006. In both of these cases, Qwest delivered T1s of poor quality that needed an immediate repair. Obviously, when Eschelon pays Qwest for T1s, Eschelon expects a product that does not need a repair before we can use the product as intended. In both of these situations, Eschelon submitted repair tickets. In both cases, as Eschelon has contended, an adjustment to the dB levels and voltage (dB levels and voltage being related) corrected the problem. The dB and voltage levels to which the T1s were set to correct the problem are within the range in the tech pub and ANSI standard. The ICA requires Qwest to provide service consistent with those documents. As indicated below, the tech pub also requires the loop to be free of errors, which it was not until the levels were adjusted.

If Qwest had set the levels at zero dB and 6 volts peak-to-peak which is consistent with Qwest tech pub and ANSI standard) when it installed the loops or adjusted the levels at the time of acceptance (the latter being Qwest's process in every other state even now), these repairs would have been unnecessary. The repair process creates additional work for both parties. This is inefficient. In addition, the Qwest CEMR notes for MN424414 indicate that Qwest plans to bill for 1 hour for this repair. We don't believe such a charge is approved in MN. Even if it were, it would be inappropriate to charge Eschelon for work that Qwest should have done to deliver a quality T1 that does not need repair.

Please let me know what steps Qwest is taking to work on this issue and when Qwest will respond.

Thank you,  
Karen

Joan:

We have two more of these, also both in MN. I will forward you the PONs when I receive them. Ken's email on Tuesday said: "All Future correspondence will come through Joan Peterson from here on with this issue." I haven't heard from you at all. As you are the point of contact now, you need to be sending regular status updates so we have current information on this important, and apparently growing, problem. We have been working the issue on some of these circuits on our end through vendor meets (which have confirmed that the problem is the one we described relating to adjusting levels), but that does not prevent the problem from occurring in the first place (as shown by the two new ones). We are also concerned that Qwest will try to tack on additional charges, such as for vendor meets that should not have had to occur if Qwest simply followed the process that, until this issue arose, it had been following.

What is the status at Qwest, and when will Qwest respond to our questions?

Joan:  
The problem seems to be spreading. We have two new PONs, also both in MN, to add to your list:

PON MN 433239T1FAC  
PON MN 434638T1FAC

Joan: Can you identify some difference in Qwest's processes or personnel specific to MN which would explain why all of these (now 4 customers/6 circuits -- are in MN)?

The fact that the number is increasing is obviously of concern and we need a solution ASAP.

Joan:  
Dennis said you had called about this issue. I have been working on it, so please call me to discuss. Below is some background information for you. Also, Cindy Buckmaster at Qwest said, when such problems arise or we disagree about

the quality of the loop, CLECs should accept the loop and request repair. My understanding, however, is that we did try repair and Qwest did not get the circuits working.

We may try repair again. We need both to get the specific circuits in issue working and to obtain answers to the broader questions regarding Qwest's policy (see, e.g., the third point in Laurie's email below) so we know what to expect going forward. Any assistance that you can provide would be appreciated. This is a time sensitive issue that has been going on for weeks now.

-----Original Message-----

From: Clauson, Karen L.  
Sent: Monday, October 04, 2004 11:37 AM  
To: 'Ken.Beck@qwest.com'  
Cc: 'Novak, Jean'; Spohn, Wayne; Larson, Laurie A.; Boeke, Gerald A.; Johnson, Bonnie J.  
Subject: Delivery Levels on Some New T1 Orders

Ken:

I understand that Wayne is out of the office this week, so Eschelon is addressing this to you. In Wayne's absence, Eschelon may also escalate to his supervisor as needed. In Eschelon's list of questions below, the third one stated:

"Third, as indicated in Kim's earlier email, a Qwest field technician and tester communicated that Qwest has an internal memo indicating they are now setting NIU's at -7.5dB instead of 0dB.

Despite Jean's email, this is a change in process. Please confirm whether Qwest has, in an internal memo or otherwise, decided or provided direction to

set NIU's at -7.5dB instead of 0dB. Also, please indicate whether this decision/direction applies to Qwest retail customers as well." Qwest did not directly respond to this request. Eschelon received this information from a Qwest field technician and a tester. Is Qwest denying the existence of any such communication?

Qwest's enclosed response states that "the Technical Publication is a technical reference guide and is not a contract." In this case, however, the Minnesota Qwest-Eschelon ICA specifically states that Qwest "will deliver the DS-1 service to the End User's network interface consistent with Technical Publication 77375." (MN Amendment No. 4, paragraph 2.3.2.) Qwest's statements about the ICA are wrong. It would be helpful if someone at Qwest familiar with the ICA actually reviewed it before Qwest makes incorrect representations to our business folks.

As Eschelon indicated in the email below: "Technical Publication 77375 requires, however, that the signal be "free of crosstalk, amplified noise and distortion." (See Section 2.1 of that tech pub.) When Eschelon requests 0dB and Qwest instead provides a circuit at a different level, there is noise and distortion. Because the circuit is NOT "free of crosstalk, amplified noise and distortion," the circuit is inconsistent with Technical Publication 77375." In the enclosed response, Qwest suggests that a provision is not enforceable because it is a "declarative statement." Please have your attorneys provide me with the legal basis for that proposition. I am also happy to deal with your attorneys directly if you prefer. If so, please let me know who that is or have the attorney(s) contact me directly.

In the enclosed response, Qwest also discusses digital fiber. Qwest's statements in its letter about digital fiber are inapplicable here. Here, Qwest delivers a 4-wire copper circuit handed off at the NIU. Distortion problems are introduced and, in the past, adjusting the dB loss has cured the problems. Under the process used by Qwest until recently, the adjusted dB level was within in the tech pub's range AND it met the other requirements of the tech pub. Now, Qwest is refusing to do this.

We need to know the basis for the change in process (which was not done through CMP). Qwest appears to be saying in its response that, so long as it always provides a circuit at the bottom end of the range in the Tech Pub, it is meeting the Tech Pub. If that were true, there would be no need for the Tech Pub to contain a range. The Tech Pub would simply say that the carrier must provide a dB of no less than X (-7.5dB in this case). The Tech Pub does not do that. It contains a range. To meet the Tech Pub, the service has to be within that range (including the top of the range = 0 in this case) and actually work for the intended purpose/customer. Meeting the Tech Pub is required by the ICA. (MN Amendment No. 4, paragraph 2.3.2.)

Qwest's enclosed letter is unclear but appears to suggest that the issue with these circuits could be something other than adjusting the dB level. If so, please cooperate with Eschelon, your customer, in adjusting the dB levels on these 4 MN circuits so that, at least as a diagnostic matter, we can confirm this is the issue. In the past, a simple dB level adjustment has worked.

Given the importance of this issue and the delay that has already occurred, we need to proceed to get this issue addressed promptly.

Tietz, Jeff; Johnson, Bonnie J.; 'Novak, Jean'  
Subject: RE: Delivery Levels on Some New T1 Order

Wayne,  
Eschelon has escalated this issue to you, and we have additional questions for you.

First, with respect to Technical Publication 77375, Qwest appears to be reading one provision in isolation to arrive at an incorrect conclusion. Jean's email indicated that Qwest is delivering the DS1 circuits within the ANSI standard. Technical Publication 77375 requires, however, that the signal be "free of crosstalk, amplified noise and distortion." (See Section 2.1 of that tech pub.) When Eschelon requests 0dB and Qwest instead provides a circuit at a different level, there is noise and distortion. Because the circuit is NOT "free of crosstalk, amplified noise and distortion," the circuit is inconsistent with Technical Publication 77375. Have you reviewed Section 2.1 of this Tech Publication? If so, please explain if/and how Qwest claims it is meeting Section 2.1 of Technical Publication 77375 in these circumstances.

Second, Qwest has asked Eschelon to use an NCI code containing the letters "DS" (04DS9) to obtain 0dB. According to table 4-2 on page 4-5 of the same tech pub (77375), however, "DS" indicates a carrier's premises. These circuits go to the end user customer premises. According to the same table in the same tech pub (77375), the letters "DU" are needed for the end user customers premises. Given this, why is Qwest suggesting use of an NCI code with the letters DS to order this local service at?

Third, as indicated in Kim's earlier email, a Qwest field technician and a tester communicated that Qwest has an internal memo indicating they are now setting NIU's at -7.5dB instead of 0dB. Despite Jean's email, this is a change in process. Please confirm whether Qwest has, in an internal memo or otherwise, decided or provided direction to set NIU's at -7.5dB instead of 0dB. Also, please indicate whether this decision/direction applies to Qwest retail customers as well.

Finally, as a matter of customer service, Qwest should provide the dB level requested by the customer to serve the customer's needs. Will Qwest reverse its recent process change and work with CLECs to adjust the levels to those desired by the customer to ensure that signals are free of crosstalk, amplified noise and distortion? Resolution of this issue has already taken too long. We have waited approx. 15 days for Jean's response, and as you can tell from the questions above, Jean did not provide the information we need. Please provide

responses to these questions promptly so we can analyze the information and decide where to go from here.

Regards,  
Laurie Larson  
Sr. Director, Service Delivery

Wayne Spohn, VP Wholesale Markets  
Qwest Communications  
1801 California, Suite 2400  
Denver, CO 80202

September 29, 2004

Ms. Laurie Larson, Sr. Director, Service Delivery  
Eschelon  
730- Second Avenue South, Suite 900  
Minneapolis, MN 55402

Dear Laurie;

As a threshold matter, Eschelon has stated to Qwest on numerous occasions that the Technical Publication is a technical reference guide and is not a contract. I would refer Eschelon to the interconnection agreements; nowhere in them does it state that DS1 loops will be provisioned to a CLEC at 0 db loss. It does state, however, that Qwest will provide loops and DS1 loops in accordance with ANSI standards, specifically ANSI T1.403. See e.g., Minnesota ICA Attachment 3, §4.2.4.6.

With respect to Technical Publications, Qwest is required to document the specifications for products offered by Qwest. The specifications for the DS1 type service is documented in Technical Publication 77375. Qwest disagrees with Eschelon's interpretation of the DS1 specifications. The statement referred to by Eschelon in the Technical Publication 77375, Section 2.1, paragraph 2, last sentence, is a declarative statement that simply states a fact that digital circuits, in comparison to analog circuits are not subject to interference (crosstalk, amplified noise and distortion). A digital circuit on its own will not induce interference on itself no matter what the db loss is on the circuit. Interference is a factor of multiple circuits within a copper cable—a factor that clearly does not apply to a digital fiber.

Eschelon alleges if Qwest does not set the db at zero (0) the circuit would not be free of crosstalk, amplified noise and distortion (interference). To the contrary, a digital circuit on its own will not induce interference on itself no matter what the db loss is on the circuit. Based on the example provided by Kim Isaacs in an email dated, September 10, 2004, the circuit delivered met all requirements and the documented tests performed by Qwest indicate that the circuit is within the parameters set forth in the interconnection agreement, the ANSI standards and the Technical Publication. All of them consistently set the standard to ensure a circuit turns up at between 0 and -16.5db.

The information provided in an email on September 16 from Jean Novak indicated that nci code (04ds9) delivered service at 0db. Eschelon is correct, however, that this nci code applies to customers with private networks connecting to Qwest and not services terminating at an end users location. This suggested solution would not work, and Qwest apologizes for the inconvenience this may have caused Eschelon.

There was no change in process. Qwest has consistently indicated that Qwest provisions services as specified in the Qwest Technical Publication and following ANSI standards. Qwest process has not changed with regard to db range of 0db to -16.5 db loss as within the accepted parameters. Network channel codes are the same for retail as wholesale. Please refer to technical publication 77375.

Qwest has indicated that Qwest provisions services as specified in the Qwest Technical Publications and following ANSI standards. It is Qwest's responsibility to manage the network and meet the requirements which ensure parity for all customers utilizing Qwest's services whether retail or wholesale.

The information provided in an email on September 16, 2004, from Jean Novak indicating that for the nc/nci code order by Eschelon 0db to -16.5 db was in the normal range. Eschelon elected not to accept the answer; therefore, service management on behalf of Eschelon requested further review at Qwest.

Sincerely,

Wayne Spohn  
VP Wholesale Markets

**BEFORE THE PUBLIC UTILITY COMMISSION OF OREGON**

**In the Matter of the Petition of Eschelon            )**  
**Telecom of Oregon, Inc. for Arbitration with    )** **Docket No. ARB 775**  
**Qwest Corporation, Pursuant to 47 U.S.C.        )**  
**Section 252 of the Federal                         )**  
**Telecommunications Act of 1996                    )**

---

**EXHIBIT 87**

## **SUMMARY OF EXAMPLES FOR ISSUES 12-64, 12-65 AND 12-66.**

*Note: Supporting documents follow the Summary.*

### **ISSUE 12-64 (ROOT CAUSE ANALYSIS)**

#### **Example 1. Qwest repair technician uses profanity and insults Eschelon's customer**

- Eschelon submitted a repair ticket for customer's line 1.
- Qwest technician was dispatched to repair line 1 and took down line 2 (customer credit card machine).
- The next day Eschelon and Qwest had a vendor meet regarding line 2.
- Eschelon's customer told Qwest he was out \$110.00 for free food because the line for his credit card machine was out of service.
- The Qwest technician made a gesture to reach for his wallet and said "*not paying for <expletive>*".
- Eschelon requested root cause.
- Qwest gave the technician a written warning and covered him on code of conduct.

#### **Example 2. Qwest CO technician refused to cut back an out of service customer**

- A day of customer's cutover from Qwest to Eschelon an issue caused an out of service condition for a customer during a conversion to DS0 loops.
- Eschelon requested Qwest cut the service back to Qwest (standard process).
- Qwest's Coordinated Cutover Center ("QCCC") representative contacted the Qwest Central Office ("CO") technician. The Qwest CO tech refused to cut the customer back.
- Eschelon manager escalated the issue to QCCC manager who got the customer cut back after being out of service for 2 hours.
- Eschelon requested root cause.
- Qwest provided root cause and said Qwest was out of process. The people were trained.

#### **Example 3. Qwest did not follow delayed order process and customer service was delayed**

- Qwest did not follow its delayed order process by failing to send a notification of the customer-related jeopardy condition. As a result, customer jeopardy was cleared 6 days late.
- Eschelon requested root cause.
- Qwest provided root cause and said Qwest was out of process. The people were trained.

#### **Example 4. Qwest tester refused to dispatch; problem in Qwest CO; customer sent to premise at 10 pm**

- Eschelon opened repair ticket for busy Uptown restaurant.
- Qwest said it needed access to customer premises to repair the circuit.

- The customer's personnel responsible for telephone service agreed to go to the location at 10 PM at night. The Qwest technician never showed up.
- Qwest repaired a card in the CO so it never needed access.
- Eschelon requested root cause.

Qwest provided root cause and said Qwest was out of process. The people were trained.

#### **ISSUES 12-64 (ROOT CAUSE ANALYSIS), 12-65 (WINBACK ATTEMPT/DISPARAGING REMARKS BY QWEST'S TECHNICIAN)**

##### **Example 5. Qwest repair attempted winback while at customer's location and said Qwest had superior service**

- Eschelon opened a repair ticket.
- Qwest dispatched a technician.
- Qwest tech told Eschelon's customer Qwest had superior service and the customer would never have these problems if they came back to Qwest.
- Qwest tech said trouble is Customer Premise Equipment (CEMR notes state the cause was in F2 (feeder) but Qwest later clarified that system problem caused CEMR to show changed F2 and really the cause was CPE).
- Eschelon requested root cause.
- Qwest said "Qwest did interview the Qwest employee and appropriate action was taken. Qwest re-trained the employee on Qwest's process on interactions between Qwest employees and CLEC's end users. Additionally, this employee was informed that failure to follow Qwest's process could lead to discipline or the possibility to employee termination."

##### **Example 6. Qwest repair technician makes disparaging remarks about Eschelon; attempts winback; brochures appear**

- Eschelon opened a repair ticket.
- Qwest dispatched a technician.
- The Qwest technician told the customer how bad Eschelon was and tried to sell Qwest' service. Qwest's brochures appeared in the customer's mail 3 days later.
- The Qwest technician told the customer the cause of trouble was Customer Premise Equipment.
- Eschelon dispatched a technician and the lines worked (At Eschelon we call this CCBM (Came clear by magic).
- Eschelon requested root cause.
- Qwest took corrective action.

##### **Example 7. Qwest engineer attempted winback while at premises to install NIU**

- Eschelon submitted order to install demarcation equipment (Network Interface Unit, "NIU") and move existing service from NIU at one building to NIU at the next building.
- Qwest dispatched a Qwest field engineer.
- The Qwest field engineer told Eschelon's customer she should have ordered service from Qwest.

- The Qwest field engineer did return visit and bridged Eschelon's customer on with the Qwest retail sales office.
- Qwest told Eschelon's customer she needed to decide whether she was staying with Eschelon or going to Qwest before they could move the NIU.
- The customer left Eschelon a voice mail saying Qwest was "holding her hostage."
- Eschelon requested root cause.
- Qwest said it "took appropriate action."

**Example 8. Conversion order: a Qwest technician gives inaccurate info, Qwest disconnects DSL 7 days early**

- Eschelon submitted conversion order to Qwest.
- Qwest disconnected the customer's DSL in error, 7 days early.
- The customer contacted Qwest repair about the DSL outage because the conversion was not scheduled for one week (customer was still Qwest's retail customer).
- Problem 1: Qwest repair told the customer Qwest just did what Eschelon told them to do.
- Problem 2: Days prior to the conversion a Qwest technician told the customer the Eschelon order would be held because of lack of facilities upsetting the customer. (This information should have been shared only with Eschelon.)
- The order (1 DS1 loop and 5 analog loops) did not go held, and Qwest installed them on the due date.
- Eschelon requested root cause.
- Qwest did coaching and retraining in the field and centers.

**ISSUES 12-64 (ROOT CAUSE ANALYSIS), 12-65 (WINBACK ATTEMPT/DISPARAGING REMARKS BY QWEST'S TECHNICIAN), 12-66 (WINBACK ATTEMPT DURING QWEST-CAUSED TROUBLE)**

**Example 9. Qwest repair referred customer to the Qwest business office while clearing Qwest caused trouble**

- Eschelon submitted a repair ticket to Qwest.
- The trouble was Qwest caused outage.
- Repair ticket (CEMR) notes state that Qwest referred the customer to the Qwest business office for a winback.
- Eschelon requested root cause.
- Qwest reviewed, retrained and took appropriate action.

## SUPPORTING DOCUMENTS

### Example 1. Qwest repair technician uses profanity and insults Eschelon's customer

Cc: Novak, Jean; Nielsen, Joshua; Johnson, Bonnie J.; Isaacs, Kimberly D.  
Subject: Matrix: Qwest Employee Concerns - CO

Gerry, Mike, Bonnie and Kim,

Qwest visited your end user and apologized for any misconception which may have caused the end user displeasure. The end user appreciated the visit by Qwest. This occurred in the mid August timeline.

Qwest has given this technician a written warning and was recovered on Qwest's Technician Expectations and Code of Conduct.

Please accept our apology for the time to respond to this issue. Qwest does take these situation as serious issues and does take immediate action. As previously shared, my SPOC did have a heart attack and I was not aware until recently. Since that time Qwest is reviewing all email in the employee's mail box. The good news is she is recovering without any after affects and may be back to work shortly.

Thanks and have a great Turkey Day.

Jean Novak

Entry on shared issues log from weekly call with Qwest

**11/21/05:** Jean will check status and send issue status to Kim on 11-22-05

Entry on shared issues log from weekly call with Qwest

**10/24/05** Bonnie requested escalation again. Bonnie told Jean she would escalate within Eschelon if Qwest does not provide a response

Entry on shared issues log from weekly call with Qwest

**9/26/05** Jean said she received responses and will format responses. Jean will provide response by 9/20/05.

Entry on shared issues log from weekly call with Qwest

**9/14/05** Jean has escalated within compliance.

Entry on shared issues log from weekly call with Qwest

9/7/05 Bonnie asked Jean to provide a response. Bonnie said that it is difficult to revisit this issue with the customer when 60 to 90 days has past before Qwest sends a response. Jean will get status.

**Importance:** High

Josh-

I wanted to bring an issue to your attention regarding this trouble ticket. TN in question is [CUSTOMER IDENTIFYING INFORMATION REDACTED]. Qwest tech was out to work on this issue yesterday and took the customer's credit card line down in the process. We had a vendor meet today with our tech and the Qwest tech. the Qwest tech immediately began complaining that he doesn't like to dispatch on repeat tickets and questioned why he was there in the first place. While both techs were on site for the meet the customer questioned them as to why his credit card line was down and advised them that he was out \$110.00 for free food that he gave away due to his credit card line being down. The Qwest tech advised the customer that he was out at the crossbox and advised the customer that he would pay the \$110.00 that the customer was owed. He made a gesture to reach for his wallet and then advised the customer that he was "not paying for <expletive>". Our tech, Paul Ware, basically made the Qwest technician leave at that point after verifying the line good to the dmarc. He then had to apologize profusely for the Qwest technician's behavior and then called me to report the issue. The Qwest technician's name is Ron Runsted. Please look into this issue and let us know your

findings, and please let us know what you plan on doing to make sure this does not happen again. Our technician, our customer, and now myself all agree that this kind of behavior is absolutely unacceptable.

Thank you in advance for your attention to this matter.

Regards,

**Michael R. Offerdahl**

**To:** jlnovak[CONTACT INFORMATION REDACTED]  
**Cc:** Isaacs, Kimberly D.; Johnson, Bonnie J.; Knudson, Ronda K.  
**Subject:** Qwest technician refused to cut a customer back in an out of service condition

Jean,

A Qwest technician refused to do a cut back at the Qwest QCCC testers request. This caused an out of service condition for our customer. Eschelon had to escalate to get the customer cut back and Eschelon would like confirmation that this event been root caused and addressed internally at Qwest.

On Monday, May 2<sup>nd</sup> (scheduled cut date), Eschelon was working a cut for our customer with the QCCC. Eschelon requested a reuse of facilities on the LSR (noted below). Qwest did not reuse facilities as Eschelon requested on the LSR and Qwest did not add remarks on the FOC that Qwest did not reuse facilities as Qwest should have done per Qwest's documented process. Eschelon was not aware that Qwest was installing new loops for the conversion and Eschelon did not schedule an outside technician to do a cross connect because Qwest did not tell Eschelon

Qwest was not reusing facilities and was installing new loops for the conversion. Eschelon asked the QCCC tester (Rhonda) if the Qwest technician could do the cross connect. Qwest told Eschelon Qwest would charge so Eschelon asked the QCCC tester to cut the customer back because the customer was left with no dial tone. At this time our customer was out of service. Rhonda (the Qwest tester) told Eschelon she asked the Qwest technician to cut the service back, however, Rhonda said the Qwest technician refused to cut the customer back. After almost 2 hours, Ronda Knudson at Eschelon, escalated the issue to a QCCC Supervisor (at the QCCC tester's request). The QCCC Supervisor agreed this was not appropriate and escalated within Qwest network to get the Qwest technician to cut the lines back.

The escalation was successful, however, Eschelon should not have had to escalate with Qwest to get a customer cut back when the customer was without service. In the past, Qwest has told Eschelon that the Qwest tester is in control of the cut. This event is in conflict with Qwest's statements.

We appreciate your assistance with:

- Address training or compliance needs related to reuse of facilities when a CLEC requests such
- Determine why the Qwest technician refused to cut the customer back at the Qwest testers request
- Determine why the Qwest tester did not have the ability to escalate within the QCCC to get the support she needed on this issue. (please note that Eschelon does not take issue with Rhonda's actions and believe she did all she could, however, perhaps there is some gap that needs to be closed regarding the tester being in charge of the cut and when a Qwest tester should escalate internally).
- Verify Qwest took the appropriate corrective action to ensure this will not occur in the future and communicate that has been done to Eschelon.

N order N21637786

**Cc:** Jean Novak (E-mail); Johnson, Bonnie J.; Jegtvig, Daniel E.  
**Subject:** PON: AZ617631T1FAC LSR ID: 16726010 Root Cause

Hello Josh,  
Could you please provide root cause on PON AZ617631T1FAC LSR ID 16726010 to determine why Eschelon did not receive a timely C29 jeopardy on this LSR. Eschelon lost 6 business days that we could have use to coordinate with our end user customer to resolve the C29 jeopardy. This type of delay is not acceptable. Eschelon is requesting root cause and the corrective action Qwest will be taking to ensure that customer jeopardies are sent in a timely manner. Thank you.

Order History:

PON: AZ617631T1FAC LSR ID: 16726010

- 1-23-06 Eschelon submitted PON AZ617631T1FAC for 1 EEL with a requested due date of 1-30-06
- 1-23-06 Qwest sent an FOC confirming the 1-30-06 due date.
- 1-24-06 Qwest sent a K17 Capacity Provisioning- Local Facility Not Available jeopardy
- 1-31-06 Eschelon opened escalation ticket # 25881196 because Qwest did not provide an FOC or additional jeopardy information with 72 hours of the original jeopardy. Russ with Qwest advised that the K17 jep was cleared and the order was in a C29 jep status. Eschelon reported that we never received the C29 jeopardy. Russ stated the C29 jep was missed and we should receive the jeopardy shortly.
- 1-31-06 Qwest sent C29 Customer-Pending Customer Status in RTT jeopardy with the following remarks: THIS IS HELD FOR CONDUIT INSPECTION...AS OF 1/23, CUST HAS NOT SCHEDULED INSPECT.

ACTION: Please provide root cause and corrective action.

Jean,

One of the Des Moines testers refused to dispatch on a ticket last night for a circuit in Minneapolis. I called your cell phone last night but got voicemail so left a message but didn't hear back from you.

DE478213  
15HCFS116267NW  
[CUSTOMER IDENTIFYING INFORMATION REDACTED]

Testers remarks at 2019 ticket time "ADV WE NO LONGER DO THAT ("do that" being dispatch w/o prem access)/JANET TO FOLLOW UP HER ACCOUNT REP". Ticket was the NA'd until morning. The customer returned Janets voicemail from earlier and agreed to provide access. Qwest took ticket out of NA status and dispatched. Problem found was "CARD WAS PULLED IN CO AT SONEPLEX SHELF".

As you can see the Des Moines testers are still telling us they do not dispatch after hours if there is no prem access. This one was especially bad because 1) they refused to dispatch, 2) the problem was in the CO, 3) we had the customer out at 10PM for no reason.

Jean we would appreciate some answers and some action. There does not appear to be any continuity between what you are telling us and what Des Moines is telling us.

Thanks,  
Tom

**Example 5. Qwest repair attempted winback while at customer's location and said Qwest had superior service**

Subject: Matrix: QE 20.00

Bonnie

You are correct, I did get this mixed up with QE19.0. The outstanding issue on this was Qwest employee behavior. I finally found the email and here is the results:

Qwest take very serious any alleged misconduct in the interactions between Qwest employees and CLEC's end users. Qwest did interview the Qwest employee and appropriate action was taken. Qwest re-trained the employee on Qwest's process on interactions between Qwest employees and CLEC's end users. Additionally, this employee was informed that failure to follow Qwest's process could lead to discipline or the possibility to employee termination.

Thanks  
Jean Novak

Entry on shared issues log from weekly call with Qwest  
**5-15-06** Jean will look at this week

**From:** Johnson, Bonnie J.  
**Sent:** Thursday, May 11, 2006 8:58 AM  
**To:** jlnovak [CONTACT INFORMATION REDACTED]  
**Cc:** Isaacs, Kimberly D.; Johnson, Bonnie J.  
**Subject:** Confusion on QE issues log

Jean,

In your response you have confused two different issues. You named the subject line QE20.0 when this response below was in fact the response to QE19.0 on the log. Qwest never did respond to the Qwest technician portion of issue. Qwest did respond to Qwest's inconsistency in the CEMR ticket. I will attach the last email and add this back on the log and add this email note.

Please provide a response to the Qwest technician issue.

To avoid this confusion in the future, it would be helpful for you to respond to the issue on the email I originally sent you rather than creating a new email and adding the log number in the subject line. These QE issues are so close in nature it is easy to confuse them.

The 1/5/06 note here is not accurate.

QE20.0	12/14/2005	OR	Qwest technician attempts winback to Qwest on Eschelon repair call	12/14/05 Bonnie wrote ":A customer told Eschelon that a Qwest technician Qwest dispatched to repair a trouble on Eschelon's behalf, tried to winback the customer. Per the customer, the Qwest technician used an
				opportunity to tell the customer that Qwest service is superior to Eschelon's service when the customer was already upset about the service outage. When Qwest is dispatched to the customer premise representing
				Eschelon, it is not appropriate for a Qwest technician to try to sell Qwest retail service. On 12/11/05, Qwest dispatched Qwest technician Shannon (per the attached Qwest CEMR ticket) to clear a trouble
				Eschelon reported to Qwest. The customer was very upset when he contacted Eschelon to tell Eschelon that the Qwest technician told him ""If you had Qwest service I could guarantee that you would not have service
				issues like this. If you are interested I can get you in contact with a Qwest rep and we can have your service converted within one week." These events are particularly disturbing to Eschelon because when the customer

				told the Qwest technician he just wanted the Qwest technician to fix trouble, the Qwest technician told the customer Qwest could not fix the problem because it appeared to be an inside wire problem.
				This raises yet another concern. If you review the ticket, Qwest notes the change in cable and pair but coded the ticket to CPE. Action Required: Tell Eschelon what steps Qwest will take to prevent
				this from recurring. Tell Eschelon why Qwest changed cable and pair but coded the ticket to CPE I am attaching the repair ticket below."
				<b>12/14/05</b> Jean wrote "checking"
				<b>12/14/05</b> Jean wrote "I am going to respond on this issue in two email because of the two separate issues. I can immediately respond to ticket closure and have sent for review the issue on tech behavior. #1 Ticket Closure"
				"The Field technician provided a Disposition and cause code in the wrong field. By not using the correct field when inputting the Disposition and cause code it drives errors in the WFA system,
				which is what has happened here. If Eschelon remembers, there have been previous discussions on previously on this issue. This has been reported to the Process Staff for the outside technician. The outside
				technician will be re-trained on the appropriate field to populate. Qwest considers this a performance issue and will deal with it appropriately. The ticket closed to CPE is correct. Qwest did not make any
				changes to the cable or pair. If Eschelon finds any other examples please provide to Qwest for corrective action"
				<b>12/14/05</b> Jean wrote "I had another service manager pull from TIRKS the design of this circuit to check the cable and pair. If this would have been changed it would be reflected in TIRKS. This circuit is still designed to cable 22 pair 1702."
				<b>12/14/05</b> Bonnie wrote "We will wait for the response on the technician then. Gerry will attempt to provide examples, however, this is information
				Qwest already has and should notice when doing quality checks. I assume that it is currently being addressed when found."

				<b>1/5/06</b> Jean wrote "Qwest has reviewed and taken appropriate action on this issue. Any information where Eschelon is not the customer of record will not be provided to Eschelon or any other customer, wholesale or retail." <b>Closed</b>

**Subject:** Qwest technician attempts winback to Qwest on Eschelon repair call

Bonnie  
I had another service manager pull from TIRKS the design of this circuit to check the cable and pair. If this would have been changed it would be reflected in TIRKS. This circuit is still designed to cable 22 pair 1702.

**Subject:** Qwest technician attempts winback to Qwest on Eschelon repair call

Bonnie  
I am going to respond on this issue in two email because of the two separate issues. I can immediately respond to ticket closure and have sent for review the issue on tech behavior.

#1 Ticket Closure

The Field technician provided a Disposition and cause code in the wrong field. By not using the correct field when inputting the Disposition and cause code it drives errors in the WFA system, which is what has happened here. If Eschelon remembers, there have been previous discussions on previously on this issue.

This has been reported to the Process Staff for the outside technician. The outside technician will be re-trained on the appropriate field to populate. Qwest considers this a performance issue and will deal with it appropriately.

The ticket closed to CPE is correct. Qwest did not make any changes to the cable or pair.

If Eschelon finds any other examples please provide to Qwest for corrective action.

Thanks

Jean Novak

Bonnie  
Can you point to me in the ticket attached where it states Qwest changed cable and pair. I am not finding and maybe I am just not understanding where Eschelon reads these notes.

Thanks, Jean

**Subject:** Qwest technician attempts winback to Qwest on Eschelon repair call

Jean,

A customer told Eschelon that a Qwest technician Qwest dispatched to repair a trouble on Eschelon's behalf, tried to winback the customer. Per the customer, the Qwest technician used an opportunity to tell the customer that Qwest service is superior to Eschelon's service when the customer was already upset about the service outage. When Qwest is dispatched to the customer premise representing Eschelon, it is not appropriate for a Qwest technician to try to sell Qwest retail service.

On 12/11/05, Qwest dispatched Qwest technician Shannon (per the attached Qwest CEMR ticket) to clear a trouble Eschelon reported to Qwest. The customer was very upset when he contacted Eschelon to tell Eschelon that the Qwest technician told him "*If you had Qwest service I could guarantee that you would not have service issues like this. If you are interested I can get you in contact with a Qwest rep and we can have your service converted within one week.*" These events are particularly disturbing to Eschelon because when the customer told the Qwest technician he just wanted the Qwest technician to fix trouble, the Qwest technician told the customer Qwest could not fix the problem because it appeared to be an inside wire problem. This raises yet another concern. If you review the ticket, Qwest notes the change in cable and pair but coded the ticket to CPE.

Action Required:

Tell Eschelon what steps Qwest will take to prevent this from recurring.

Tell Eschelon why Qwest changed cable and pair but coded the ticket to CPE

I am attaching the repair ticket below.

Thanks,

Bonnie Johnson  
Director Carrier Relations  
Eschelon Telecom, Inc.

**Example 6. Qwest repair technician makes disparaging remarks about Eschelon; attempts winback; brochures appear**

-----Original Message-----  
From: Novak, Jean [CONTACT INFORMATION REDACTED]  
Sent: Friday, April 01, 2005 4:05 PM  
To: Johnson, Bonnie J.  
Cc: Novak, Jean; Nielsen, Joshua  
Subject: Inappropriate Qwest technician comments  
Importance: High

Bonnie

Corrective action has been taken for the incident described by Eschelon. Qwest has Customer Care Expectations and Guidelines for all employees to follow on how to appropriately handle a customer contact, in particular when the end-user is not a Qwest customer.

Thanks  
Jean

Subject: Inappropriate Qwest technician comments

Jean,  
A Qwest technician Qwest dispatched to the customer's premise on a repair ticket made very disturbing comments about Eschelon to our customer. The customer called to report that while a Qwest repair technician was at the customer's location, the Qwest technician told our customer how "bad Eschelon service was". The customer also told Eschelon the Qwest technician tried to sell the customer Qwest service, then 3 days later Qwest brochures describing Qwest services, showed up in the customer's mail. Both Eschelon and our customer find the Qwest's technicians' comments very disturbing. I will attach the associated trouble ticket information below.

Action Required:

- \* Tell Eschelon what Qwest has done about the comments the Qwest technician made to our customer
- \* Tell Eschelon what steps Qwest will take to prevent future occurrences
- \* Tell Eschelon what generated the brochures the customer received 3 days after the Qwest technician was at the location
- \* Tell Eschelon what other Eschelon trouble tickets this Qwest

technician has worked on. Eschelon will need to contact these customers.

\* Qwest closure indicates the trouble was in the customers CPE, however, based on Qwest's report, Eschelon dispatched a technician after the Qwest technician left the location. When the Eschelon technician arrived, the Eschelon technician tested the lines clear. The service worked after the Qwest technician left without any action for the customer or the Eschelon technician. Verify that Qwest closed the ticket to the correct code.

Thanks,

Bonnie J. Johnson

Bonnie,  
As part of the Security investigation, the Qwest Retail person was also part of the reveiw. The detailed report was provided to Qwest Compliance for review and appropriate action has been taken.  
thanks jean

Subject: Follow up

Hi Jean,  
After you updated me on the Colorado Engineer item yesterday, we realized that you did not address the Qwest Retail employee. Though the Qwest field engineer initiated the call, the Qwest BO rep was well aware of the situation at hand and that this involved an Eschelon customer and order.

Eschelon believes the Qwest BO rep should have communicated that he could not discuss the customers service under the circumstances. Can you confirm that has been covered as well and the appropriate action was taken?

Bonnie Johnson  
Sr. Manager ILEC Relations  
Eschelon Telecom, Inc.  
[CONTACT INFORMATION REDACTED]

Entry on shared issues log from weekly call with Qwest  
**5/20/03** Security completed inverstigation. Meeting was held with the field engineer. Did discuss conduct rules and appropriate action was taken.

Entry on shared issues log from weekly call with Qwest  
**5/13/03** Security completed investigation and supplied to compliance. Jean will follow up with compliance.

**Subject:** RE: Inappropriate Qwest Contact With Wholesale Customer

Hi Jean,  
After our discussion this morning, I requested information on the building owner. Here is the information I received.

[CUSTOMER IDENTIFYING INFORMATION REDACTED] is the owner of the buildings and of [CUSTOMER IDENTIFYING INFORMATION REDACTED], which is the parent company of [CUSTOMER IDENTIFYING INFORMATION REDACTED]. Contact is [CUSTOMER IDENTIFYING INFORMATION REDACTED] for all accounts.

Customer did not initiate contact with Qwest. Order # C275242TIH requested move of 4 lines and installation of DMARC at 2101. This order was jepp'd and referred to Qwest Engineering for installation of DMARC. At that time Eschelon provided Qwest with [CUSTOMER IDENTIFYING INFORMATION REDACTED] contact information and the Qwest engineer contacted both [CUSTOMER IDENTIFYING INFORMATION REDACTED]

**Cc:** Clauson, Karen L.; Burgess, Galen J.; Larson, Laurie A.  
**Subject:** RE: Inappropriate Qwest Contact With Wholesale Customer  
**Importance:** High

Jean,  
As of this morning Qwest is still pursuing this customer. In the customers words "Qwest is basically holding me hostage". Qwest told the customer that Qwest can provide her service by the end of this week if she orders Qwest service, however, the service will be delayed due to the demarc installation if she orders her service with Eschelon. The customer said Qwest is calling this a winback even though Qwest never provided service at this location.

How can Qwest install service by the end of the week but Eschelon's will be delayed because there is no demarc.

Thanks,

Bonnie Johnson  
Sr. Manager ILEC Relations

**Cc:** Larson, Laurie A.; Knudson, Ronda K.; Clauson, Karen L.; Johnson, Bonnie J.  
**Subject:** Inappropriate Qwest Contact With Wholesale Customer

Jean,  
Please review the following information for Eschelon and communicate what action will be taken.

Background: Business customer owns two buildings. The addresses are [CUSTOMER IDENTIFYING INFORMATION REDACTED] and [CUSTOMER IDENTIFYING INFORMATION REDACTED]. Per the customer there was never a demarc installed at the 2101 address and all services for 2101 were terminated at the 2107 address demarc and run to the 2101 address. There will now be different owners for the two buildings. The 2101 building can no longer share a demarc with the 2107 building. A new demarc needs to be installed at the 2101 location.

Sequence of events:

**New Service**

- Eschelon customer moved into the 2101 building and needed new service.
- Eschelon submitted LSR ID 6341914 on 3/13 to install new service. Qwest installed the new service on 3/20 at the 2107 demarc, even though Eschelon requested the 2101 address on the LSR.

**Move request**

- Eschelon submitted LSR ID 6549891 to move the 4 lines from the 2107 address to the 2101 address. Qwest issued C14136886 to move the service. Qwest jepp'd the order and communicated to Eschelon that the move cannot be completed until a new demarc is installed.
- Eschelon opened ticket 25083171 with the delayed order group to start the process of getting a demarc installed. Qwest told Eschelon that our LSR to move the customer needed to be cancelled until the demarc was installed. Eschelon did not cancel the LSR. ***Why would Eschelon be required to cancel the order. Wouldn't the held order drive the demarc install?***

**Qwest contact**

- During the week of 4/21 a Qwest engineer was on-site speaking to our customer regarding the demarc install. The Qwest engineer told the customer they should have ordered service from Qwest (Eschelon does not know if this was the same engineer noted below)
- The Qwest engineer was on-site speaking to our customer again on 4/28. The field engineer (Kim Sorento [CONTACT INFORMATION REDACTED]) bridged on a Qwest Retail Sales representative (David Good) and the Qwest Retail Sales rep quoted the customer rates for 4 CTX21 lines @ \$31.38 + installation charges and DSL charges of \$48.90 for 256K and \$54.00 for 640K.
- Qwest told the customer she needs to decide whether she is staying with Eschelon or going to Qwest before they can move forward with the DMARC install.

Please handle appropriately.

Thanks,

Bonnie Johnson  
Sr. Manager ILEC Relations  
Eschelon Telecom, Inc.

Subject: Matrix: [CUSTOMER IDENTIFYING INFORMATION REDACTED] Root Cause Analysis/Action required

Bonnie,

The Director level management at Qwest has thoroughly investigated both issues. Coaching and re-training on technician conduct with CLECs and CLEC customers has been done both in the repair centers and in the field. Appropriate action has been taken individually with each employee.

Regards,  
Jean Novak

**Subject:** [CUSTOMER IDENTIFYING INFORMATION REDACTED] Root Cause Analysis/Action required

Eschelon requests Qwest's prompt assistance on an End User Customer conversion issue. This issue involves 1.) A Qwest technician making inappropriate comments to our customer and 2. Qwest taking down our customers DSL and then the Qwest repair center blaming the early disconnection on Eschelon.

The customer is a National Account/multi-location customer for Eschelon. This is the first of 8 total locations the customer was to convert to Eschelon and means over \$200,000 or almost a quarter of a million dollars in revenue for Eschelon. Because this is the first of 8 locations to convert, Qwest needs to deal with this issue before the other 7 locations are converted to avoid similar problems with those conversions.

I have attached a chronology of these events.

Qwest Action required:

- 1.) Qwest will takes measures to address comments made by the Qwest technician. The Qwest technician told our customer that the customer would not receive facilities even though facilities were available by the due date. Qwest employees dispatched to the customers', premises on behalf of the CLEC, should only be sharing information related to the LSR with the customer of record (Eschelon). In the end, none of the orders went held and Qwest delivered all services requested (One DS1 capable loop and 5 analog loops) on the due date Eschelon requested. The Qwest technician unnecessarily upset the customer about a non issue.
- 2.) Qwest will take measures to address the Qwest repair agent telling the End User Customer that "Qwest was just doing what Eschelon asked us to do" without first reviewing the Qwest service order or CLEC LSR. The repair center should refer the customer to Eschelon. In any event the repair center had no basis for their statement because Qwest had obviously not reviewed the service order or LSR before making this statement. If Qwest had done so, it would have seen that the date was later. Instead, Qwest not only discussed issues with our customer that it should not be discussed but also provided false information to our customer. Eschelon asks what steps Qwest will take to prevent this from happening in the future.
- 3.) Qwest will determine why Qwest disconnected the customer's DSL 7 days early. Qwest will communicate what steps it will take to prevent early disconnect of DSL in the future.
- 4.) Qwest will determine if the DSL repair was recorded as a Retail repair. The repair problem was caused by a Qwest error in processing a CLEC Wholesale order.

Between the Qwest technicians comments, Qwest early disconnection of the customers DSL and the Qwest repair center blaming Eschelon in error, the End User Customer is understandably upset and concerned about the port for this order and conversion of the 7 remaining locations. Because Qwest created this upsetting situation for the customer through its errors, it is particularly important that Qwest process the remaining locations without incident.

Let me know if you have any questions,

Bonnie J. Johnson  
Director Carrier Relations  
Eschelon Telecom, Inc.  
[CONTACT INFORMATION REDACTED]

Attachment to e-mail -- File *T D C Root Cause Request 3-23-04.doc*:

## **LSR information**

LSR (1) T1 Facility order

- Eschelon submitted PON: AZ379176T1FAC LSR ID: 9882814 to Qwest on 3/11/04 with a 3/18/04 DDD.
- Qwest sent Eschelon a K17 (local facility not available) jeopardy on 3/12/04. Qwest order number is N53132976
- ***Qwest dispatched a Qwest technician to resolve Qwest jeopardy on order on 3/16 and 3/17. The Qwest technician told the End User Customer that "there is no way Eschelon will get this T1 or the 5 analog loops they ordered installed because of facility problems."***

- Qwest sent Eschelon a FOC releasing the order with a 3/18/04 DD (Eschelon's original DD requested)
- Qwest delivered the T1 to Eschelon on 3/18/04 (Eschelon's original DD requested)

#### LSR (2) 5 analog UBL

- Eschelon submitted PON:AZ379180IBC LSR ID: 9908208 to Qwest on 3/15/04 with a DDD of 3/22/04
- Qwest sent Eschelon "K" jeopardy notices (local facility not available) on all 5 Qwest service orders (N53523842 – N53523846)
- Qwest sent Eschelon a FOC releasing all 5 orders from hold on 3/16/04 with a 3/22/04 DD (Eschelon's original DD requested)
- Qwest delivered all 5 loops to Eschelon on 3/22/04 (Eschelon's original DD requested)

#### LSR (3) LNP port order

- Eschelon submitted PON: AZ379180-2IBC LSR ID 9916087 to Qwest on 3/15/04 with a DDD of 3/24/04
- Qwest sent Eschelon an FOC on 3/16/04 confirming Eschelon's DD of 3/24/04. Qwest issued Qwest service order numbers D53926060, N53926061 through N53926079 and N54672724 through N54672729 (PSON showed 3/24/04 DD on all orders)
- ***The End User Customer contacted Qwest Retail Repair on 3/17/04 and told Qwest that the Qwest DSL on TN [CUSTOMER IDENTIFYING INFORMATION REDACTED] was no longer working. (Eschelon does not have the Qwest repair ticket number Qwest will need to find the ticket using the telephone number). Qwest Repair told the customer the reason the DSL was no longer working was because "Eschelon sent an order to disconnect your DSL and we are just doing what they told us to do." (Please note the customer had DSL on two lines. The DSL that Qwest disconnected early was CAP. The DSL that was not disconnected early was DMT.)***
- The customer contacted Eschelon on 3/17/04 upset because Qwest told her that Eschelon disconnected her DSL and she was concerned that she could not get service from Eschelon because the Qwest technician told her Qwest could not install the service Eschelon ordered.
- Eschelon told the customer that the DD Eschelon requested for disconnecting the DSL was not 3/17/04 but was 3/24/04. Eschelon also told her it had received confirmation from Qwest that the T1 service would be installed on 3/18/04 as Eschelon requested.
- The customer contacted Qwest repair on 3/18/04 to get status on the disconnected DSL. After the customer said Eschelon told her Eschelon did not disconnect the DSL on 3/17/04, The Qwest repair agent then admitted that this was a Qwest error.

**Example 9. Qwest repair referred customer to the Qwest business office while clearing Qwest caused trouble**

**Subject:** Qwest Employee Referred Eschelon Customer to BO for Winback while working on Qwest caused repair

Jean,  
A Qwest employee referred Eschelon's customer to the Qwest business office for a winback while clearing a Qwest caused outage Eschelon reported to Qwest. It is quite disturbing to think that a Qwest employee would use this situation as an opportunity to winback an Eschelon customer while repairing a Qwest caused problem on behalf of Eschelon.

In the CEMR ticket below notes say the technician "talked to [CUSOMTER IDENTIFYING INFORMATION REDACTED] ...referred to business office to get line changed to Qwest" (CEMR notes: TT [CUSOMTER IDENTIFYING INFORMATION REDACTED].REF'D TO BO TO GET LINE CHNGD TO QWEST).

**Action required:**

- 1.) Qwest will take measures to address the Qwest technician's actions
- 2.) Qwest will tell Eschelon what measures Qwest is taking to prevent future occurrences

**THANK YOU  
FOR YOUR ORDER**

Please double-check your order below. If you need to make changes, or have any questions, please call 1 866-99QWEST (1 866-997-9378) and refer to:  
**Your order date: 08-09-2006**  
**Your order number: C62078891**

**ORDER CONFIRMATION**

You have ordered these services for:

Qwest Choice Business

More information about your services can be found on the back of this letter and on the product sheet(s) enclosed.

Dear Valued Customer;

Thank you for once again putting your trust in Qwest. We're pleased to continue bringing you the quality and reliability you demand, along with a level of service you'd be proud to give your own customers.

To make sure this new phase in our relationship starts off on the right foot, **please verify your order details listed at left and review the enclosed instructions.**

**Important Things to Remember**

- Manage your account conveniently at [qwest.com/smallbusiness](http://qwest.com/smallbusiness). View and pay your bill, sign up for special offers, find product information, and more.
- Get the **best value for your dollar** when you bundle Qwest<sup>SM</sup> High-Speed Internet, long-distance and/or wireless services with a Qwest Choice<sup>TM</sup> Business line. Call or visit us online to learn more.

We look forward to helping you grow your business. As your communications needs expand and change, you know you can call us at 1 866-997-9378.

Sincerely,

Qwest Business Marketing

P.S. if you have any questions about your order, or to learn more about the valuable Qwest options available to you, just call 1 866-997-9378 or visit us at [qwest.com/smallbusiness](http://qwest.com/smallbusiness).

ATTN Phil

**Cc:** Johnson, Bonnie J.; Isaacs, Kimberly D.  
**Subject:** Immediate Action Required - Qwest Retail Letters Sent to End User's Converting to Eschelon.

Hello Jean and Josh,  
Eschelon is receiving sporadic reports from end users that are converting to Eschelon that they are receiving letters from Qwest retail. The Qwest retail letters state:

“Thank you for once again putting your trust in Qwest. We’re pleased to continue bringing you the quality and reliability you demand, along with a level of service you’d be proud to give your own customers.

To make sure this new phase in our relationship starts off on the right foot, **please verify your order details listed at left and review the enclosed instructions.**”

The order number and due date “at left” on the Qwest retail letter is the Eschelon “C” order number associated with Eschelon’s request for a partial conversion of 1 line to Eschelon QPP w/DSL. It is not acceptable for Qwest retail to engage this type of communication with an end user who has chosen Eschelon as their local service provider for some or all of their service. Eschelon is requesting that Qwest determine why this type of letter is generated and ensure that this type of communication no longer occurs.

Example:

PON: CO724206DSLNLXK

LSR ID: 18451981

Qwest Order Numbers: C62078891 and N62078915

Request for a partial conversion of 1 line to Eschelon QPP w/DSL. Please note that the other telephone numbers on this customer’s Qwest retail account are converting to Eschelon Loop with LNP and are addressed on another LSR.

Qwest Retail sent a letter with the language quoted above to the end user customer on 8-10-06.

**ACTION:**

Please determine why the Qwest retail letters, with the Eschelon order number, are being generated and sent to the end user.

Please ensure that this type of communication is not longer sent to customers, who have chosen Eschelon as their local service provider. Eschelon’s end user customers are concerned and very confused when they receive this type of communication from Qwest retail.

Thank you.

*Kim Isaacs*

**EXHIBIT 90**

**QWEST RETAIL LETTER - CHRONOLOGY**

- 8/4/2006 Eschelon submitted a Local Service Request (LSR) [with the Purchase Order Number (PON) of CO724206DSLNLKX; LSR Identification (ID) 18411855]. On the LSR, Eschelon requested conversion of service from Qwest Retail (the Customer's former provider) Eschelon (*i.e.*, a carrier switch).<sup>1</sup>
- 8/4/2006 In response to Eschelon's initial LSR, Qwest sent Eschelon a firm order confirmation (FOC). [On the FOC, Qwest provided Qwest Change "C" order number C60809986 (a Qwest C order to disconnect from the Qwest Retail account) and New "N" order number N60809987 (a Qwest N order to install on to a new Eschelon account).]
- 8/9/2006 Eschelon submitted a supplemental Local Service Request (LSR) [with the Purchase Order Number (PON) of CO724206DSLNLKX; LSR ID 18451981] to change the requested due date to 8/29/06. On the supplemental LSR, Eschelon also requested conversion of service from Qwest Retail (the Customer's former provider) Eschelon (*i.e.*, a carrier switch) but changed the requested due date.
- 8/9/2006 In response to Eschelon's supplemental LSR, Qwest sent Eschelon a firm order confirmation (FOC) confirming that the conversion of service from Qwest Retail to Eschelon would take place on 8/29/06. [On the FOC, Qwest provided Qwest Change "C" order number C62078891 (a Qwest C order to disconnect from the Qwest Retail account) and New "N" order number N62078915 (a Qwest N order to install on to a new Eschelon account).]
- 8/10/2006 Eschelon's End User Customer received a letter dated August 10, 2006, from Qwest Retail. *See* Exhibit BJJ-12. In the margin of the letter, Qwest included ***the date of Eschelon's supplemental order (8/9/09)*** and Eschelon's C order number (***C62078891***). The body of the letter said (with emphasis in original):

"Thank you for once again putting your trust in Qwest. We're pleased to continue bringing you the quality and reliability you demand, along with a level of service you'd be proud to give your own customers.

To make sure this new phase in our relationship starts off on the right foot, **please verify your order details listed at left and review the enclosed instructions.**

---

<sup>1</sup> This End User Customer had 2 lines with Qwest and wanted both converted to Eschelon. Eschelon converted one line with this LSR and the other at a later time with a separate LSR. Qwest requires two LSRs for this type of conversion. *See* <http://www.qwest.com/wholesale/clecs/ordering.html> (deconsolidation).

**Important Things to Remember**

- Manage your account conveniently at **qwest.com/smallbusiness**. View and pay your bill, sign up for special offers, find product information, and more.
- Get the **best value for your dollar** when you bundle Qwest High-Speed Internet, long-distance and/or wireless services with a Qwest Choice Business line. Call or visit us online to learn more.

We look forward to helping you grow your business. As your communications needs expand and change, you know you can call us at 1-800-997-9378.

Sincerely,

Qwest Business Marketing

P.S. If you have any questions about your order, or to learn more about the valuable Qwest options available to you, just call 1-866-997-9378 or visit us at [qwest.com/smallbusiness](http://qwest.com/smallbusiness).”

- 8/21/2006 Although the letter invited the End User Customer to call Qwest, the End User Customer did not initiate contact with Qwest. Instead, *the Qwest Retail Business Office called the End User Customer directly about Eschelon's wholesale order*. The Qwest Retail Business Office told the End User Customer that the service would be **disconnected** at Eschelon's request on 8/29/06 (via Qwest order C62078891).  
The Qwest Retail Business Office did not tell the End User Customer that his service would be transferred to an Eschelon account on 8/29/06 (via Qwest order N62078915) so service disruption would not occur.
- 8/21/2006 Based on the information provided by the Qwest Retail Business Office, the End User Customer called Eschelon extremely upset that his service was going to be disconnected at Eschelon's request. The End User Customer said he was so concerned he was considering cancelling his request to convert the service to Eschelon.
- 8/23/2006 Eschelon's Service Delivery group had to contact the End User Customer and explain Qwest's letter and why the Customer would not be losing service, despite Qwest's use of the term "disconnect." Only after this discussion did the End User Customer say he would move forward with the switch to Eschelon. The End User Customer said he remained concerned about the switch.

- 8/24/2006 Eschelon's End User Customer faxed a copy of the Qwest Retail letter to Eschelon.
- 8/24/2006 Eschelon sent the Qwest Wholesale Service Management team an email about the Qwest Retail letter sent to the End User Customer switching to Eschelon. Eschelon asked Qwest to "ensure that this type of communication is not longer sent to customers, who have chosen Eschelon as their local service provider." See E-mail attached above.
- 8/24/2006 Qwest's Wholesale Regional Service Director responded: "I will take this. We had this before and it was human error." See E-mail above.
- 8/29/2006 Qwest sent Eschelon a completion notice indicating that Eschelon's order had completed. The End User Customer's service was converted to Eschelon.
- 8/31/2006 In an email (attached below), Qwest's Wholesale Regional Service Director provided a root cause analysis stating (with Eschelon footnote added):

"Eschelon requested on LSR 18451981 Version 4 to convert 1 line (CUSTOMER-IDENTIFYING INFORMATION REDACTED) to Eschelon and maintain 1 line (CUSTOMER-IDENTIFYING INFORMATION REDACTED) with Qwest. This end user had subscribed to Qwest's 2-line package.

Qwest's contracted employee incorrectly issued the C order. The order should have changed the 2-line package to no package, which would have converted 1 line (CUSTOMER-IDENTIFYING INFORMATION REDACTED) to Eschelon and retained 1 line (CUSTOMER-IDENTIFYING INFORMATION REDACTED) with Qwest. By issuing the order incorrectly, a letter was automatically generated by the system because the end user's account had changed from a Qwest 2-line package to a Qwest 1 line package.

Qwest Retail did not issue the letter to be sent to this customer on August 10, 2006. The letter was generated automatically by the system because of the C order being incorrectly issued by Qwest Wholesale. The original LSR 18411855 was sent by Eschelon on 8/4/06 with a due date of 8/9/06. The last LSR 18451981 as issued on due date 8/9/06 to change the due date to 8/29/06. Because the LSR was issued on due date the incorrectly written order had already been processed and waiting for due

date. The system had automatically generated to coincide with the original due date of 8/9/06.<sup>2</sup>

Qwest has requested retraining of the contracted employee and all contracted employees have been advised of the correct process and also shown where the process is documented. The situation has addressed.

Please provide to me immediately and further examples so Qwest can take immediate action to correct.”

---

<sup>2</sup> *Note:* The original due date of 8/9/06 was requested on the LSR Eschelon submitted on 8/4/09 (for which the C order number was C60809986). The letter from Qwest Retail, however, did not reference the 8/4/09 order or its C order number. The letter from Qwest Retail (Exhibit BJJ-12) specifically gave the supplemental order date of “08-09-2006” and its C order number of C62078891, identifying the 8/9/09 supplemental order (which had a due date of 8/29/06) as the one prompting the letter.

Kim

I can not remember if I responded to this fully so if I have please forgive the redundancy.

Eschelon PON CO724206DSLNLK

LSR 18451981

Eschelon requested on LSR 18451981 Version 4 to convert 1 line ([CUSTOMER INFORMATION REDACTED]) to Eschelon and maintain 1 line ([CUSTOMER INFORMATION REDACTED]) with Qwest. This end user had subscribed to Qwest's 2-line package.

Qwest's contracted employee incorrectly issued the C order. The order should have changed the 2-line package to no package, which would have converted 1 line ([CUSTOMER INFORMATION REDACTED]) to Eschelon and retained 1 line ([CUSTOMER INFORMATION REDACTED]) with Qwest. By issuing the order incorrectly, a letter was automatically generated by the system because the end user's account had changed from a Qwest 2-line package to a Qwest 1 line package.

Qwest Retail did not issue the letter to be sent to this customer on August 10, 2006. The letter was generated automatically by the system because of the C order being incorrectly issued by Qwest Wholesale. The original LSR 18411855 was sent by Eschelon on 8/4/06 with a due date of 8/9/06. The last LSR 18451981 as issued on due date 8/9/06 to change the due date to 8/29/06. Because the LSR was issued on due date the incorrectly written order had already been processed and waiting for due date. The system had automatically generated to coincide with the original due date of 8/9/06.

Qwest has requested retraining of the contracted employee and all contracted employees have been advised of the correct process and also shown where the process is documented. The situation has addressed.

Please provide to me immediately and further examples so Qwest can take immediate action to correct.

Thanks,

Jean Novak

**EXHIBIT 92**

## **Qwest Service Center and Manager Roles in Relation to CMP – Revised 06-06-02**

As discussed in Section 1.0 of the Qwest Wholesale Change Management Process Document, the purpose of the Qwest Wholesale CMP is to afford Qwest and the CLECs a way of changing, retiring, or providing development input for a Qwest OSS interface, product, or process. The CMP is not a forum to resolve isolated issues or CLEC problems that do not involve a change to the way Qwest does business. The CLEC/Qwest Interconnection Agreement may contain applicable procedures and if so this document will not supercede the Interconnection Agreement. CLECs should pursue resolution of all problems of this nature through the informative materials Qwest provides to the CLECs (e.g., Qwest web sites, Product Catalogues (PCATs), and Technical Publications) and through Qwest's Service Centers and Service Managers, as described below. CLECs should contact their assigned Sales Executive when they want to submit an initial product idea, qualify a new opportunity, and ask questions regarding their contract pricing or want to negotiate contract amendments.

When a Service Manager becomes aware of an issue that should become a CMP change, he/she should contact the appropriate product manager, process specialist, and other Qwest SMEs as appropriate who will address the issue in accordance with the CMP.

- Requests for Information - If a CLEC requires information that cannot be found in the appropriate website, PCAT or Technical Publication, the CLEC should contact its Service Manager. The Service manager will contact the Sales Executive to obtain the information if necessary. If the Service Manager is unable to resolve the problem or provide the requested information to the CLEC's satisfaction the CLEC should escalate the problem through the Service Management Escalation Process (<http://www.qwest.com/wholesale/clecs/exesscover.html> ).
- Systems Problems - If a CLEC encounters a systems problem, the CLEC should first contact the Wholesale Services Help Desk (WSHD). If the WSHD is unable to resolve the problem or provide the requested information to the CLEC's satisfaction the CLEC should invoke the escalation process detailed in the Qwest-CLEC Technical Issues Escalation document (<http://www.qwest.com/wholesale/systems/generalinfo.html>).
- Service Order Problems - If a CLEC encounters a problem with service orders, the CLEC should first contact the Qwest Interconnect Services Center (ISC) Help Desk. If the ISC Help Desk is unable to resolve the problem or provide the requested information to the CLEC's satisfaction the CLEC should escalate through the ISC Help Desk. If the center escalation does not resolve the problem to the CLEC's satisfaction the CLEC should contact the CLEC's designated Service Manager.
- Billing Problems – If a CLEC encounters a billing problem the CLEC should first contact its designated Qwest Billing Representative. If the Billing Representative is unable to resolve the problem or provide the requested information to the CLEC's satisfaction then the CLEC should escalate through each level of the Qwest billing management organization. Questions concerning the application of the CLEC/Qwest ICA are considered compliance issues.

- Compliance Issues – If a CLEC encounters contract compliance issues, the CLEC should contact its Service Manager. If the Service Manager is unable to resolve the problem or provide the requested information to the CLEC's satisfaction the CLEC should escalate the issue through the Service Management Escalation Process (<http://www.qwest.com/wholesale/clecs/exesscover.html> ).
- Network Repair Problems – If a CLEC encounters a network repair problem, the CLEC should contact the Network Repair Center. If the CLEC is not satisfied with the Network Repair Center's solution the CLEC should escalate through the Network Repair Center as outlined on the Qwest Business Procedures - Maintenance and Repair Web site, <http://www.qwest.com/wholesale/clecs/maintenance.html>. If, after escalation, the Network Repair Center is unable to resolve the problem or provide the requested information to the CLEC's satisfaction the CLEC should contact its designated Service Manager.
- Product Information - If a CLEC requires product information that cannot be found in the appropriate website or PCAT, the CLEC should contact its designated Service Manager. If the Service Manager is unable to resolve the problem or provide the requested information to the CLEC's satisfaction the CLEC should escalate the problem through the Service Management Escalation Process (<http://www.qwest.com/wholesale/clecs/exesscover.html> ).
- Chronic Performance Issues – If a CLEC encounters chronic poor performance from a Qwest division or employee the CLEC should contact its Service Manager. If the Service Manager is unable to resolve the problem or provide the requested information to the CLEC's satisfaction the CLEC should escalate the problem through the Service Management Escalation Process (<http://www.qwest.com/wholesale/clecs/exesscover.html> ).
- Isolated Personnel Performance Issues - If a CLEC encounters isolated poor performance by a Qwest employee the CLEC should contact the applicable service center. If the applicable service center is unable to resolve the problem or provide the requested information to the CLEC's satisfaction the CLEC should escalate through the Service Management Escalation Process (<http://www.qwest.com/wholesale/clecs/exesscover.html> ).

In all above instances the reporting CLEC should be prepared to discuss the specific details and examples of the issue and all informative documentation researched. Qwest will conduct a root cause analysis of the examples of the problem, and provide its analysis to the reporting CLEC in a timely manner.

**EXHIBIT 93**

## Chronology of the Qwest Change Management Process (CMP) Changes Relating to Expedites

In the first section of this Chronology, background information is provided to explain the terms and context of the CMP items discussed below. In the second section of this Chronology, the history of changes Qwest has made or attempted to make in CMP to both of its expedite processes (requiring approval based on emergency conditions process and later additional for-pay process) is discussed. There are seven sections in the latter history section. Documents cited in each of the seven sections are attached to this Chronology and organized by corresponding section number. Also attached are excerpts from Qwest's Statement of Generally Available Terms (SGAT) and Qwest's complete CMP Document, both printed from Qwest's web site. The CMP document governing the procedures for CMP ("CMP Document") is found at:

[http://www.qwest.com/wholesale/downloads/2006/060130/QwestWholesaleChangeManagementDocument\\_01\\_30\\_06\\_1\\_.doc](http://www.qwest.com/wholesale/downloads/2006/060130/QwestWholesaleChangeManagementDocument_01_30_06_1_.doc)

The "Expedites & Escalations Overview" is a section of Qwest's Product Catalog ("PCAT") on the Qwest wholesale web site. See <http://qwest.com/wholesale/>. Changes to the wholesale PCAT are sometimes made through Qwest's Change Management Process (CMP) either by notice or Change Request ("CR"), depending on the nature of the change. Qwest assigned "Version" numbers to its proposed changes to the "Expedites & Escalations Overview" section of the PCAT, and the first six sections of the history discussion are arranged by Version number. The seventh section addresses CLEC objections, Qwest's denials, and dispute resolution.<sup>1</sup>

### BACKGROUND

**Participation in CMP.** Qwest's CMP documentation on its wholesale web site addresses who may participate in CMP: "Current CLEC Product, Process, or OSS Interface users, or those who have an agreed upon project work plan for implementing a Product, Process or OSS Interface, may submit change requests and participate in the CLEC Industry Team."<sup>2</sup> Eschelon must use Qwest's processes and OSS interfaces to conduct business with Qwest and therefore receives CMP notices and participates in CMP meetings. The CMP is often the only means through which information about system and process changes is obtained. Participation does not equal consent. The CMP Document provides that a participating CLEC's interconnection agreement ("ICA") governs over all CMP changes, and this does not vary depending of whether the CLEC participated in that change. See CMP Document §1.0; see also Qwest-Eschelon ICA, Part A, § 17.1.

**No Voting on Process Changes in CMP.** No voting occurs in CMP as to the substance of product and process changes. In other words, there is no vote in CMP as to whether a particular change request should be adopted or not. Qwest will complete or deny a request for a change in process or product. Regarding Expedites & Escalations, Qwest

---

<sup>1</sup> Most of the attached documents are Qwest's own documents (*i.e.*, admissions by Qwest).

<sup>2</sup> <http://www.qwest.com/wholesale/cmp/index.html> (italics deleted)

described its proposed changes as “process” changes. They were not system changes. CLECs are permitted to object in CMP to Qwest product and process changes. Even if, however, every single CLEC objects and Qwest still does not agree, Qwest nonetheless implements its desired change after applicable time periods for product and process changes. (*See* §5.4 of CMP Document.) Qwest refers to such CMP changes as “notification” processes.<sup>3</sup> In contrast to Qwest’s “notice and go” relatively quick process, an objecting CLEC’s only recourse is to seek expensive and time-consuming dispute resolution for each change in state affected by the change. *See id.* & §15.0 Voting only occurs in two situations. First, voting occurs for changes to the CMP Document itself and certain procedures within that document (such as whether to change the disposition level of a CR, §5.4.3.1; whether to grant an exception to the CMP procedures, §16.2.1; *etc.*). *See* CMP Document §§ 5.1.1, 5.1.2, 5.4.3.1, 16.2 *et al.*, 16.4 *et al.*, 17.0. The expedite changes are not changes to the CMP Document or the CMP procedures. Second, voting occurs to prioritize (*i.e.*, “rank) proposed systems (OSS) changes. *See* CMP Document §§ 5.2.1, 5.2.2, 10.3.3, 10.3.4, 16.2 *et al.*, 17.0. The expedite changes are not system changes. Therefore, any reference to voting with respect to the expedite processes is a red herring to create the impression that there is a democratic process for process changes when there is not.

**Section 252(a):** Terms and conditions requiring mutual assent are governed by the ICA, and the CMP Document is clear that the ICA controls *vis a vis* CMP. *See* CMP Document §1.0; *see also* §252(a) of the Act; Notice of Apparent Liability for Forfeiture, *In the Matter of Qwest Corporation Apparent Liability for Forfeiture*, FCC File No. EB-03-IH-0263, ¶32 (March 11, 2004) (FCC said: At “no point did we create a general ‘web-posting exception’ to section 252(a)”).

**CMP, PCAT and SGAT:** Neither the PCAT nor CMP are mentioned anywhere in the Qwest-Eschelon ICA. Eschelon opted into the original AT&T ICA, and the Eschelon-Qwest ICA was approved by the ACC on April 28, 2000. The PCAT and CMP were developed after approval of the ICA, largely through or as the result of the Section 271 proceedings to determine the terms under which Qwest could enter the long distance market. Both the CMP and the PCAT are referenced in Qwest’s Statement of Generally Available Terms (“SGAT”) (which was developed largely through Section 271 proceedings). Qwest’s Arizona SGAT, in both Section 4.156 and Section 7.4.7, provides: “Qwest agrees that CLEC shall not be held to the requirements of the PCAT.”<sup>4</sup> This provision shows that the history of CMP is that it was not intended to bind CLECs. Eschelon is similarly not held to the requirements of the PCAT, as neither the PCAT nor the CMP are part of its ICA with Qwest. Nonetheless, as described below, Eschelon voluntarily followed those processes in this case.

<sup>3</sup>*See, e.g.* Qwest’s 11/18/05 response to Eschelon’s objections to Version 30 (Qwest said: “Qwest utilized the appropriate CMP notification processes to notify CLECs of the pending changes.”) This indicates Qwest’s view that it can unilaterally notify CLECs of changes, rather than obtain their agreement. To the extent that CMP is such a “notice” process, it does not meet the requirement of mutuality for negotiated terms (or Commission involvement for arbitrated terms) governed by Section 252 and does not supplant Section 252, as the CMP Document itself recognizes by indicating that the ICA controls. *See* CMP Document, §1.0.

<sup>4</sup> <http://www.qwest.com/wholesale/downloads/2003/030909/Arizona-SGAT-8-29-03.doc>

**Scope of CMP:** The document governing CMP,<sup>5</sup> in Section 1.0 (“Introduction and Scope”), provides: “In cases of conflict between the changes implemented through this CMP and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement. In addition, if changes implemented through this CMP do not necessarily present a direct conflict with a CLEC interconnection agreement, but would abridge or expand the rights of a party to such agreement, the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such agreement.”<sup>6</sup> Qwest also repeats this language on many of its CMP notices. Rates and the application of rates are also outside the scope of CMP. *See, e.g.*, Qwest’s response to the McLeod-Eschelon escalation (attached and discussed below) in which Qwest states: “discussion around rates associated with an Interconnection Agreement are outside the scope of the CMP process.”

---

<sup>5</sup> The CMP document is Exhibit G to the SGAT. The SGAT provides (at SGAT Section 12.2.6.3) that Exhibit G can be changed per the CMP document processes (which require a unanimous vote in CMP) without amendment of the SGAT. Therefore, the SGAT Exhibit G on the Qwest web site may not have all of the revisions made through CMP that are in the updated CMP document on the Qwest web site (see URL above). For the SGAT Exhibit G, see <http://www.qwest.com/wholesale/downloads/2003/030909/Arizona-08-29-03-Exhibit-G.doc>

<sup>6</sup>[http://www.qwest.com/wholesale/downloads/2006/060130/QwestWholesaleChangeManagementDocument\\_01\\_30\\_06\\_1\\_.doc](http://www.qwest.com/wholesale/downloads/2006/060130/QwestWholesaleChangeManagementDocument_01_30_06_1_.doc)

## HISTORY OF PROPOSED CHANGES<sup>7</sup> TO QWEST EXPEDITE PROCESSES

### 1. Expedites Process – Later Called “Expedites Requiring Approval” Process

[See See Product Notification for Version 1 of the Expedites & Escalations Overview <http://www.qwest.com/wholesale/cnla/uploads/PROD%2E09%2E20%2E01%2EF%2E00087%2EF%2EBFRSR%2Edoc>; see also “Expedites & Escalations Overview – V8.0” - Copy is attached. It appears it is no longer on the Qwest web site.]

**Summary:** Under this process (“Expedites Process”), Qwest will expedite orders for all products and services (including all unbundled loops), but only if the order meets one of the criteria/conditions below. The conditions relate generally to emergencies and harm to end user customers. If the conditions are met, Qwest will grant the expedite (*i.e.*, meet the earlier due date) resources permitting, and no additional charge will apply. If the conditions are not met, no expedite will be granted (*i.e.*, the standard interval applies to establish the due date). The conditions are listed in the bullet points *below*. To obtain such an expedite, the CLEC submits an order with the normal due date interval and may call Qwest to request an expedite. On such a call, the CLEC provides information from which Qwest can determine if the expedite meets one or more of the conditions so that Qwest will approve the request.<sup>8</sup> Under the expedites requiring approval process, Qwest granted expedite requests to Eschelon. [See, *e.g.*, PON Numbers AZ418942CJH (7/26/04); AZ409134CJH (6/22/04); CAZ5016941TIH (5/11/04); AZ467137RAK (1/10/05).] Although there are Commission approved rates for dispatches and hourly labor in Arizona, so that Qwest could have otherwise charged for expedites pursuant to the ICA if such additional dispatches or work were required, the ICA also provides for nondiscrimination.<sup>9</sup> As Qwest does not require its own retail customers to pay an additional expedite charge (*see, e.g.*, Qwest RPD – “Due Dates – POTS/Non-Design – All States Bus Res”),<sup>10</sup> no additional charge applies for CLEC expedites meeting the Original Conditions either under the expedites requiring approval process.

---

<sup>7</sup> Other Proposed Changes/Versions. The Qwest “Expedites & Escalations Overview” went through several versions, but some of those versions/changes are not discussed here. Those versions did not affect, for example, the criteria or products to which those criteria apply. (This is just noted here to explain why the version numbers are not consecutive.) To view the other versions, see the history log for the “Expedites & Escalations Overview.” See

[http://www.qwest.com/wholesale/downloads/2006/060407/HL\\_Exp\\_Escl\\_V36.doc](http://www.qwest.com/wholesale/downloads/2006/060407/HL_Exp_Escl_V36.doc)

<sup>8</sup> Therefore, Qwest later called the Expedites Process the “Expedites Requiring Approval” process. This title was not needed initially, as there was only one process. When Qwest later added an optional for pay process to obtain expedites when the conditions were not met but a CLEC would pay a higher charge (see below), Qwest referred to the additional process as the “Pre-Approved Expedite Process” and the Expedites Process as the “Expedites Requiring Approval” process to distinguish them.

<sup>9</sup> The ICA provides that Qwest “shall provide CO-PROVIDER the capability to expedite a service order. . . . If CO-PROVIDER requests a due date earlier than the standard due date interval, then expedite charges may apply.” (ICA Att. 5, Sections 3.2.2.13 & 3.2.4.2.1.) This language is in Attachment 5, which applies to all products and services. Section 31.1 of Part A of the ICA provides that Qwest “shall conduct all activities and interfaces which are provided for under this Agreement with CO-PROVIDER Customers in a carrier-neutral, nondiscriminatory manner.”

<sup>10</sup> Note that “waive charges” refers to other NRCs (such as installation) and not expedite charges, as there are no expedite charges in this process. Eschelon understands that the installation NRC charge will not be waived when Eschelon causes the disconnect in error and has not sought such a waiver here. If the end user customer caused the disconnect, the expedite would not be granted, but that is not the case here. It is a carrier-caused disconnect in error. Eschelon does not get the NRC waiver, as it is the carrier in this case,

Effective Date: The Commission approved the Eschelon-Qwest ICA on April 28, 2000. The mutually agreed upon process was in place before Qwest documented it on its website. On September 22, 2001, Qwest issued a product notification that Qwest had updated its website on methods and procedures for Expedites and Escalations to document the definition of expedite and valid expedite reasons (*i.e.*, the emergency conditions). (*See* Product Notification for Version 1 of the Expedites & Escalations Overview.) This was not a change request or change in process. Qwest specifically recognized in the product notification that “these updates reflect current practice.” *See* <http://www.qwest.com/wholesale/cnla/uploads/PROD%2E09%2E20%2E01%2EF%2E00087%2EF%2EBFRSR%2Edoc> (This Notification is included below in this Exhibit)

Products: All (including unbundled loops – analog and high capacity)

Expedite Charge: No additional charge. [The carrier pays the standard installation/order charge generally but does not pay an extra charge for expediting the due date to an earlier date. The same work (as the work included in the standard charge) is performed, but it is just performed earlier.]

Conditions/criteria for obtaining an expedite requiring approval (“Original Conditions”):

- Fire
- Flood
- Medical emergency
- National emergency
- Conditions where your end-user is completely out of service (primary line)
- Disconnect in error by Qwest
- Requested service necessary for your end-user’s grand opening event delayed for facilities or equipment reasons with a future Ready For Service (RFS) date
- Delayed orders with a future RFS date that meet any of the above described conditions

## **2. Optional, Additional Pay-for-Expedites Not Meeting Criteria Process (Optional “Pre-Approved Expedite” Process)**

[*See* “Expedites & Escalations Overview – V11.0”  
([http://www.qwest.com/wholesale/downloads/2004/040629/PCAT\\_Exp\\_Escl\\_V11\\_0\\_reis\\_sue.doc](http://www.qwest.com/wholesale/downloads/2004/040629/PCAT_Exp_Escl_V11_0_reis_sue.doc))]

Summary: Sometimes a carrier desires an expedite but the situation does not meet the emergency criteria. For example, an existing End User Customer with service may call its carrier and say: “I need to add 2 lines, and I need it within 2 days because my equipment vendor is only available then.” This situation does not meet the above criteria, so historically an expedite was not available. Covad indicated that, if Qwest were to provide expedites in this type of optional situation (*i.e.*, when the above criteria are not met), Covad would be willing to pay an additional charge to obtain an expedite. Covad submitted a Change Request (CR #PC 021904-1) to Qwest’s CMP to request this optional process. The title of Covad’s CR is “Enhancement to Existing Expedite Process

---

but it does get the expedite at no additional charge over and above that NRC (or, Eschelon is willing to pay the Commission approved rates for costs to Qwest for the expedite, if any).

for Provisioning.” Eschelon supported Covad’s request, so long as the imposition of charges was optional and the expedites meeting the criteria were still available (at no additional charge). In Qwest’s May 12, 2004 Response to the Covad CR, Qwest reassured CLECs that: “If a CLEC chooses not to amend their Interconnection Agreement, the current expedite criteria and process will be used.” *See* [http://www.qwest.com/wholesale/cmp/archive/CR\\_PC021904-1.htm](http://www.qwest.com/wholesale/cmp/archive/CR_PC021904-1.htm).

In Qwest’s July 15, 2004 Response to Eschelon’s comments on Covad’s CR, Qwest added: “If a CLEC chooses not to sign the amendment and pay the approved rates, this will not impact resources. For Qwest’s Retail and Access customers, they are bound by the terms established in the tariffs (which have been or are in the process of being filed). Qwest did not want to shut the door for its Interconnect customers *because of existing contractual obligations*, so is offering those customers *two options*: 1) To be able to expedite without reason for a per-day improved rate, like the Retail and Access customer, or 2) Continue with the existing process that is in place. Qwest is providing the Interconnect customers an *additional option*. *If the CLEC chooses option 2, and the expedite reason is for one of those listed in the PCAT*, they are given the same opportunity at having the due date requested. This comment is accepted.” (emphasis changed):  
[http://www.qwest.com/wholesale/downloads/2004/040715/DNLD\\_QwestResponse\\_Exp\\_Escl\\_V11.doc](http://www.qwest.com/wholesale/downloads/2004/040715/DNLD_QwestResponse_Exp_Escl_V11.doc)).

In Qwest’s June 29, 2004 announcement related to Covad’s CR, Qwest said: “Qwest is modifying/changing the existing manual Expedite process to incorporate *two processes*. These are described as Pre-Approved and Expedites Requiring Approval” (emphasis added).

Qwest’s own responses and announcement show that the Covad CR did nothing to alter or eliminate the Expedites Process requiring approval, which remained available for expedites of loop orders when the conditions were met, in addition to the Covad-initiated option, without an ICA amendment. In contrast, Qwest claims in ¶14(B) of its Answer, that “Qwest worked on the process with the industry in CMP for 18 months – from February 2004 to July 2005. Qwest then gave the industry – including Eschelon – until January 2006 to prepare for the new process.” Nothing in Qwest’s responses and announcement, however, suggested that there was going to be an “old process” and a “new process.” Qwest clearly stated that there were “two options” (*see* above), denying that one process would replace the other. CLECs had no reason, therefore, to “prepare” for a new process.

Announcement/Effective Dates: June 29, 2004/July 31, 2004

Products/Pre-Approved Expedite Process: Applies to specified products (see Version 11) only, including unbundled loop (*except for* 2/4 wire analog loops)

Exclusive process for loops? *No*. The Expedites Process (a/k/a “Expedites Requiring Approval”) is still available for all products for no additional charge, if the Original

Conditions are met.<sup>11</sup> For example, Qwest provided expedites at no additional charge to Eschelon that completed on January 10, 2005 (AZ PON 467137RAK), and May 11, 2005 (AZ PON CAZ5016941TIH).

Expedite Charge/ Pre-Approved Expedite Process: \$200 per day expedited (*i.e.*, if the standard interval was 5 days, and the order was for a same day expedite, the additional charge would be \$1,000).

Criteria for obtaining / Pre-Approved Expedite Process: Must sign contract amendment, order products on specified list, and payment of additional charge. No need to meet Original Conditions listed above to obtain an expedite at the \$200 per day expedited rate.

Background (see attached documents):

2/20/04 – Covad submitted a Change Request (CR) requesting a process to expedite installations that did not meet Qwest’s Original Conditions for expedites (see above). ([http://www.qwest.com/wholesale/cmp/archive/CR\\_PC021904-1.htm](http://www.qwest.com/wholesale/cmp/archive/CR_PC021904-1.htm))

6/15/04 – Qwest sent PROS.06.15.04.F.01792.ExpeditesV11 for review and comments. <http://www.qwest.com/wholesale/cnla/uploads/PROS%2E06%2E15%2E04%2EF%2E01792%2EExpeditesV11%2Edoc>

6/18/04 – To review CLEC comments and Qwest responses to the Qwest proposed changes see [http://www.qwest.com/wholesale/downloads/2004/040715/DNLD\\_QwestResponse\\_Exp\\_Escl\\_V11.doc](http://www.qwest.com/wholesale/downloads/2004/040715/DNLD_QwestResponse_Exp_Escl_V11.doc)

6/29/04 – Qwest announcement (attached)

7/31/04 Effective date (see above)

### **3. Expansion of the Original Conditions to Add Additional Conditions**

[See “Expedites & Escalation Overview – V22.0”

([http://www.qwest.com/wholesale/downloads/2005/050506/PCAT\\_Exp\\_Escl\\_V22.doc](http://www.qwest.com/wholesale/downloads/2005/050506/PCAT_Exp_Escl_V22.doc))]

Summary: The status of the Expedites Process requiring approval remained the same. Qwest added three conditions to the list of Original Conditions to expand the occasions upon which Qwest would grant expedites when the conditions were met.

Announcement/Effective Date: May 9, 2005/June 23, 2005

Announcement:

<http://www.qwest.com/wholesale/cnla/uploads/PROS%2E05%2E09%2E05%2EF%2E02892%2EExpedites%5FEscalations%5FV22%2Edoc>

Expedite Charge: No additional charge.

Products: All (including unbundled loops – analog and high capacity). For example, although Covad’s CR had been processed and the optional Pre-Approved for pay process was in place at this time, expedites remained available to CLECs that had not signed that

---

<sup>11</sup> See, e.g., later objection by Integra (#6 below): “When Integra signed the Qwest Expedite Amendment we were not advised that by signing the amendment it would change the current Expedites Requiring Approval process. We signed the amendment believing that this would ADD to our options of having an order completed outside the standard interval.”

amendment but met the emergency conditions. For example, Qwest provided an expedite at no additional charge to Eschelon that completed on July 6, 2005 (PON MN510386T1FAC).

Conditions/criteria for obtaining an expedite requiring approval (with three new conditions highlighted as last three bullet points) (“Original Conditions”):

- Fire
- Flood
- Medical emergency
- National emergency
- Conditions where your end-user is completely out of service (primary line)
- Disconnect in error by Qwest
- Requested service necessary for your end-user’s grand opening event delayed for facilities or equipment reasons with a future Ready For Service (RFS) date
- Delayed orders with a future RFS date that meet any of the above described conditions
- National Security
- Business Classes of Service unable to dial 911 due to previous order activity
- Business Classes of Service where hunting, call forwarding or voice mail features are not working correctly due to previous order activity where the end-users business is being critically affected

#### **4. Expansion of Optional, Additional Pay-for-Expedites Not Meeting Criteria Process (“Pre-Approved Expedite” Process) to Add Two Products**

[See “Expedites & Escalation Overview – V27.0”

([http://www.qwest.com/wholesale/downloads/2005/050909/PCAT\\_Exp\\_Escl\\_V27.doc](http://www.qwest.com/wholesale/downloads/2005/050909/PCAT_Exp_Escl_V27.doc))]

Summary: Qwest added two products to the recent optional Pre-Approved Expedite Process (where a charge applies and the conditions need not be met) with no mention that any products would later be removed from the original Expedites Requiring Approval Process (no charge when Original Conditions are met). At this time (*i.e.*, after the effective date of the Version 27 notice), the original process was still available (at no additional charge) for all unbundled loops when the Original Conditions were met. It did not matter to what products the Pre-Approved process applied or did not apply for CLECs not opting to use that process, because such CLECs could still use the Expedites Process when they met the emergency conditions. In Version 27, Qwest added the following two products to the Pre-Approved Expedite Process: (1) port in/port within associated with certain products; and (2) 2/4 wire analog unbundled loops. In the list of products to which the Pre-Approved Expedite Process applied, 2/4 wire analog unbundled loops were previously listed as an exception. Qwest added 2/4 wire analog unbundled loops to the list by removing this exception to the list of applicable products. This allowed CLECs desiring such a process to expedite unbundled analog loops when the expedite did not meet the Original Conditions. Eschelon did not desire to use an expedite process, except in the emergency kinds of situations that are identified on the list of Original Conditions. Because expedites for all unbundled loops (including 2/4 wire analog unbundled loops) were still available at no charge under the original process when the Original Conditions were met, Eschelon expressed no objection to adding them to the Pre-Approved Expedite Process for CLECs who desired to use that process for expedites not meeting the Original Conditions. Eschelon did inquire, however, as to the

cost if a CLEC should later desire to use that process. *See* <http://www.qwest.com/wholesale/downloads/2005/051011/QwestResponsetoDocumentInReview.doc>

Announcement/Effective Dates: October 12, 2005/October 27, 2005

Products/Pre-Approved Expedite Process: Applies to specified products (see Version 11) only, including unbundled loop (*including* 2/4 wire analog loops)

Exclusive process for loops? *No*. The Expedites Requiring Approval are still available for all products for no additional charge, if the Original Conditions are met. For example, Qwest provided an expedite at no additional charge to Eschelon that was granted on Nov. 7, 2005 (PON CO588026T1FAC).

Expedite Charge/ Pre-Approved Expedite Process: \$200 per day expedited (*i.e.*, if the standard interval was 5 days, and the order was for a same day expedite, the additional charge would be \$1,000).

Criteria for obtaining / Pre-Approved Expedite Process: Must sign contract amendment, order products on specified list (which includes all loops), and payment of additional charge. No need to meet Original Conditions listed above to obtain an expedite at that rate.

#### **5. Qwest Attempted to Change the Expedites Process to Exclude CLEC-Caused Disconnects in Error, But Retracted its Proposal After Eschelon Objected.**

[*See* Initial “Expedites & Escalation Overview – V29.0”

([http://www.qwest.com/wholesale/downloads/2005/051014/PCAT\\_Exp\\_Escl\\_V29.doc](http://www.qwest.com/wholesale/downloads/2005/051014/PCAT_Exp_Escl_V29.doc)); *See also* Qwest notice retraction PROS.10.18.05.F.03397.Retract\_ExpandEscal\_V29 <http://www.qwest.com/wholesale/cnla/uploads/PROS%2E10%2E18%2E05%2EF%2E03397%2ERetract%5FExpandEscal%5FV29%2Edoc>]

Summary: Qwest issued a Version 29 in which it attempted to modify some of the original emergency conditions. For example, one of the conditions states that expedites will be granted for “Conditions where your end-user is completely out of service (primary line).” In its proposed Version 29, Qwest proposed to add to this condition a limiting qualifier that said: “Does not include disconnects in error” to begin to exclude CLEC-caused disconnects in error from the emergency conditions. Qwest issued its Version 29 as a “Level 1” notice, which is defined in the CMP Document as minor changes that do not affect CLEC’s procedures so they can become effective immediately.<sup>12</sup> Eschelon objected to the assignment of a Level 1 designation and objected to Qwest’s description of such changes as “simple clarifications that have not been previously documented.” In fact, under this process, Qwest grants expedites for conditions when CLEC’s end user customer is completely out of service (primary line) due to a CLEC disconnect in error. (*See, e.g.*, CAZ5016941TIH (5/11/04); Z467137RAK (1/10/05.)) After all, CLEC is the carrier, just as Qwest is the carrier when

---

<sup>12</sup> *See* CMP Document §5.4.2 (“Level 1 changes are defined as changes that do not alter CLEC operating procedures or changes that are time critical corrections to a Qwest product/process. Time critical corrections may alter CLEC operating procedures, but only if such Qwest product/process has first been implemented through the appropriate level under CMP. Level 1 changes are effective immediately upon notification.”).

Qwest disconnects in error. In both cases, the circumstances are different from an error caused by the end user customer. Qwest retracted this notice and did not re-issue it at all (at any Level). Therefore, the Original conditions are still in place and were not modified to exclude CLEC-caused disconnects in error from the emergency conditions.

Announcement/Effective Dates: October 17, 2005/None (Retracted October 18, 2005)

Products: No change (Retracted)

Expedite Charge: No change (Retracted)

Criteria for obtaining: No change (Retracted).

Exclusive process for loops? No change (Retracted)

**6. Two Expedite Processes (Requiring Approval and For Pay) Exist, But Qwest Will No Long Honor the Expedites Process Requiring Approval for Unbundled Loop Products, Even When Conditions Met. For Loops, Expedites Only Available If CLEC Agrees to a Per Day Rate Structure.**

[See “Expedites & Escalation Overview – V30.0”

([http://www.qwest.com/wholesale/downloads/2005/051018/PCAT\\_ExpEscl\\_V30.doc](http://www.qwest.com/wholesale/downloads/2005/051018/PCAT_ExpEscl_V30.doc))]

Summary: Qwest’s changes in Version 30 denied the capability to a CLEC with expedite “language in [its] Interconnection Agreement (ICA)” to expedite any product (including all loops) on Qwest’s expanded Pre-Approved Expedite product list, even when the Original Conditions are met. Among other changes, Qwest deleted the quoted phrase in the previous sentence regarding the ICAs from the PCAT (*see* below). Through this change in CMP, Qwest imposed a “per day” expedite rate structure upon CLECs requesting an expedite for loops, even though rate issues are outside the scope of the CMP process. Ironically, however, in response to an Eschelon and McLeod escalation to object, Qwest denied the escalation because rate issues are “outside the scope of the CMP process.” (*See* #6 below.)<sup>13</sup> As a result of Qwest’s January 3, 2006 Version 30 changes (when combined with those in Version 27), for the first time during the term of the Qwest-Eschelon ICA (since April of 2000), Qwest changed the terms on which expedites were available so that Qwest will not provide the capability to expedite orders under the ICA for unbundled loops, even when the ICA contains expedite language and the Original Conditions are met. As the above examples show, Qwest previously not only did so under the ICA but also did so at no additional charge. The ICA has not changed.<sup>14</sup>

---

<sup>13</sup>[http://www.qwest.com/wholesale/downloads/2005/051104/Qwest\\_Response\\_to\\_Escalation\\_39\\_McLeodUSA.doc](http://www.qwest.com/wholesale/downloads/2005/051104/Qwest_Response_to_Escalation_39_McLeodUSA.doc)

<sup>14</sup> The ICA provides that its terms cannot be altered without a written amendment of the parties. A party desiring an amendment may request one and, if it is not obtained, seek dispute resolution. Qwest did not do so to obtain an amendment to allow it to refuse to apply the expedites process requiring approval to loops or to impose a new rate structure different from any approved by the Commission. *See* Eschelon-Qwest ICA, Part A, § 17.1: “Except as otherwise provided in this Agreement, no amendment or waiver of any provision of this Agreement, and no consent to any default under this Agreement, shall be effective unless the same is in writing and signed by an officer of the Party against whom such amendment, waiver or consent is claimed. If either Party desires an amendment to this Agreement during the term of this Agreement, it shall provide written notice thereof to the other Party describing the nature of the requested amendment. If the Parties are unable to agree on the terms of the amendment within thirty (30) days after the initial request therefore, the Party requesting the amendment may invoke the dispute resolution process

Following is the Qwest redline showing these changes from the previous version to Version 30 of its PCAT:

Requesting an expedite follows one of two processes, depending on the product being requested ~~and the language in your Interconnection Agreement (ICA)~~. If the request being expedited is for a product ~~on the list of products contained in the “Pre-Approved Expedites” section below (see below), and~~ your ICA has must contain language supporting expedited requests with a “per day” expedite rate; ~~then the requested does not need approval~~. If the request being expedited is for a product that is not on the defined list, ~~or your ICA does not support a “per day” expedite rate~~, then the expedited request follows the process defined in the “Expedites Requiring Approval” section below.

In its November 18, 2005 Response, Qwest gave the following reason for its refusal to provide the capability to expedite orders for loops under the Expedites Process: “Qwest does not sell Unbundled Loops to its end user customers.” In other words, Qwest is apparently claiming there is no retail analogue for loops. Qwest then concludes in the same Response: “so it is not appropriate to make a comparison to retail in this situation.” The Commission, not Qwest, must determine whether the FCC’s tests in the NY 271 Order<sup>15</sup> are met for the provision of UNEs on terms that are just, reasonable, and nondiscriminatory -- in “substantially the same time and manner” for an element with a retail analogue and offering a “meaningful opportunity to compete” when no retail analogue. The FCC stated specifically that the latter retail analogue test is no less rigorous than the first. (*Id.* ¶ 55.) When Qwest decided to change course after six years of operating in an agreed upon matter under the ICA, Qwest should have submitted the issue to the Commission to determine application of this test, not implemented its own, unapproved decision. *See* ICA, Part A, § 17.1.

Announcement/Effective Dates: October 19, 2005/January 3, 2006

Products/Pre-Approved Expedite Process: Applies to specified products (see Version 11) only, including unbundled loop (except for 2/4 wire analog loops until the Version 27 change took effect to include them). Despite earlier effective date for Version 27, Qwest did not change the PCAT to reflect Version 27 until after Version 30 was announced. Therefore, the announcement for Version 30 did not reflect the Version 27 change to add the two products.

Expedite Charge/ Pre-Approved Expedite Process: \$200 per day expedited (*i.e.*, if the standard interval was 5 days, and the order was for a same day expedite, the additional charge would be \$1,000).

Criteria for obtaining / Pre-Approved Expedite Process: Must sign contract amendment with “per day” rate structure, order products on specified list, and payment of additional

---

under Section 27 of this Part A of this Agreement to determine the terms of any amendment to this Agreement.”

<sup>15</sup> Memorandum Opinion and Order, *In the Matter of the Application by Bell Atlantic New York for Authorization Under Section 271 of the Communications Act To Provide In-Region, InterLATA Service in the State of New York*, FCC 99-404, CC Docket No. 99-295, ¶ 44 (rel. December 22, 1999).

charge. No need to meet Original Conditions listed above to obtain an expedite at that rate.

Exclusive process for loops? *Yes, according to Qwest.* Qwest claims the Expedites Requiring Approval are *now no longer available* for all products on the Pre-Approved Expedite list (including all unbundled loops) for no additional charge, even when the Original Conditions are met. The Expedited Requiring Approval process exists as it did before, but Qwest denies the capability to use it for unbundled loops.

## **7. CLEC Objections, Qwest's Denials, and Dispute Resolution**

Although the CMP Document is not part of Eschelon's ICA with Qwest, Eschelon voluntarily followed the CMP objection, escalation, and dispute resolution processes to attempt to resolve this matter. Eschelon also complied with the ICA's dispute resolution provisions before bringing this matter to the Commission.

On October 21, 2005, Eschelon requested a CMP ad hoc call to obtain further information about Qwest's proposed Version 30 changes.

On October 27, 2005, McLeod submitted a written escalation in which McLeod said: "2w/4w analog loops are no longer an exception in the Pre-Approved Expedite process. Thus Qwest will begin charging \$200 per circuit per day expedite fee instead of following the existing process of approving expedites based upon the Expedites Requiring Approval process. . . . McLeodUSA wants 2w/4w loops to remain in the Expedites Requiring Approval process and thus incur no charges for an approved expedite. . . . Makes it almost impossible for McLeodUSA to expedite with such a high charge for just 2w/4w loop service. . . . McLeodUSA wants 2w/4w loops to remain in the Expedites Requiring Approval process and thus incur no charges for an approved expedite."<sup>16</sup> See

[http://www.qwest.com/wholesale/downloads/2005/051028/Escalation\\_39\\_Mcleod\\_PROS\\_09\\_12\\_05\\_F\\_0342\\_Expedites\\_Escalations\\_V27.doc](http://www.qwest.com/wholesale/downloads/2005/051028/Escalation_39_Mcleod_PROS_09_12_05_F_0342_Expedites_Escalations_V27.doc). McLeod and Eschelon escalated these issues after Qwest announced both Versions 27 and 30 so it had now become clear that Qwest was attempting to deny the capability to use the Expedites requiring approval process for unbundled loops, though it was unclear through which Version Qwest had actually done so.<sup>17</sup>

---

<sup>16</sup> McLeod cited the Version 27 Qwest notice in its escalation (and not also Version 30). By this time, however, Version 30 had been announced and the substance of McLeod's escalation addressed the problem created by the two versions combined. As indicated below, Qwest recognized in its response regarding Version 30 that CLEC's were commenting to multiple notices together. Also, Qwest later claimed that the issue of Qwest's process change resulting in a change in the rate and application of the rate was outside the scope of CMP. Qwest thus rendered further CMP escalation moot, as it had both provided its binding denial and indicated that it would not discuss the issue again in CMP.

<sup>17</sup> Qwest issues a series of notices in a short amount of time that created confusion. It was so confusing that Qwest, in its Nov.18, 2005 had to both describe the overlapping changes and include a complicated timeline to show what it said it had done.

Eschelon joined McLeod's escalation. (Qwest did not formally post the participants at that time but has acknowledged in writing that Eschelon joined the escalation and that Qwest sent its escalation response to Eschelon.) (*See* Qwest/Jill Martain 3/28/06 email.)

On November 1, 2005, a CMP ad hoc call was held on which Qwest and CLECs discussed CLEC's questions and concerns about Versions 27 and 30. Eschelon participated in the ad hoc call.

On November 3, 2005, Eschelon objected to Qwest's Version 30 changes. ***McLeod, Covad, Integra, and PriorityOne also objected.*** CLECs objected, for example, on the grounds that the change resulted in discrimination (between Qwest retail and CLECs & between facility based and non-facility based CLECs)<sup>18</sup> and created unilateral, unapproved rate changes. Qwest issued a written denial.<sup>19</sup> For CLEC objections and Qwest's response, *see*

[http://www.qwest.com/wholesale/downloads/2005/051118/PROS.11.18.05.F.03492.FNL\\_Exp-EscalationsV30Qwest%20Response.doc](http://www.qwest.com/wholesale/downloads/2005/051118/PROS.11.18.05.F.03492.FNL_Exp-EscalationsV30Qwest%20Response.doc)

In Qwest's response sent by email on November 7, 2005 (and dated November 4, 2005), Qwest issued a binding written denial of the McLeod-Eschelon escalation. In Qwest's response, Qwest said: "In response to McLeod's concern around the costs associated with an expedited request; discussion around rates associated with an Interconnection Agreement are outside the scope of the CMP process. Qwest maintains its position that 2w/4w analog loops be included in the pre-approved expedite process to create consistencies across the UBL product line as well as other products that follow the designed services flow." *See*

[http://www.qwest.com/wholesale/downloads/2005/051104/Qwest\\_Response\\_to\\_Escalation\\_39\\_McLeodUSA.doc](http://www.qwest.com/wholesale/downloads/2005/051104/Qwest_Response_to_Escalation_39_McLeodUSA.doc)

On November 18, 2005, Qwest also issued a written denial of the objections of multiple CLECs (including Eschelon) to Version 30. Qwest acknowledged in its response that it had distributed multiple notices on this topic and thus that comments from CLECs dealt with both Versions 27 and 30.<sup>20</sup> By this time CLECs had already received the binding denial to their escalation (*see* previous paragraph). In the previous denial of the McLeod-Eschelon escalation, even though Qwest had added its requirement for a "per day" rate structure through CMP, Qwest said that rate issues were outside the scope of CMP and therefore Qwest would not discuss in CMP. Qwest had already made clear, therefore, that no further CMP escalation was necessary or would be granted by Qwest.

The CMP Document includes escalation and dispute resolution procedures in Sections 14.0 and 15.0. The CMP document states, in Section 15.0, that: "Without the necessity

---

<sup>18</sup> The Eschelon-Qwest ICA contains several provisions requiring nondiscrimination. Section 31.1 of Part A, for example, provides that Qwest "shall conduct all activities and interfaces which are provided for under this Agreement with CO-PROVIDER Customers in a carrier-neutral, nondiscriminatory manner."

<sup>19</sup> CMP is not a consensus process, as described above in the Background section.

<sup>20</sup> Documentation is cited above (as CLEC objections and Qwest response are at the same URL). *See* [http://www.qwest.com/wholesale/downloads/2005/051118/PROS.11.18.05.F.03492.FNL\\_Exp-EscalationsV30Qwest%20Response.doc](http://www.qwest.com/wholesale/downloads/2005/051118/PROS.11.18.05.F.03492.FNL_Exp-EscalationsV30Qwest%20Response.doc)

for a prior ADR Process, Qwest or any CLEC may submit the issue, following the commission's established procedures, with the appropriate regulatory agency requesting resolution of the dispute. This provision is not intended to change the scope of any regulatory agency's authority with regard to Qwest or the CLECs. This process does not limit any party's right to seek remedies in a regulatory or legal arena at any time."<sup>21</sup> There is no time limit on requesting resolution, which may occur "at any time." *See id.* The process provides that "any CLEC" may submit an issue to the Commission for resolution. The CMP dispute resolution process anticipates, therefore, that the dispute will be a dispute between an individual CLEC and Qwest. There is no multiple-CLEC requirement or other CMP-specific type of dispute resolution. Under the CMP dispute resolution process (§15), any individual CLEC may submit an issue to the Commission at any time, as Eschelon has done in this case.

Eschelon did not rush to judgment. Eschelon continued to request expedites, which provided Qwest with an opportunity to comply with the ICA. If Eschelon had complained earlier, it would undoubtedly be facing claims now that it did not give Qwest a fair chance to do so. In addition, Eschelon needed to assess the impact on the business, given the high cost and drain on resources caused by litigating individual issues. The severity of the particular rehabilitation center example in Arizona, involving serious 911 issues, compelled action. In addition, it became clear after a number of requests that this was not a Qwest compliance problem but a Qwest policy. Qwest will impose its position that it can unilaterally breach a six-year mutually agreed upon term under the ICA, and create a required "per day" rate structure, without filing anything with the Commission or gaining its approval.<sup>22</sup> It requires a Commission proceeding, therefore, to resolve the issue.

In addition to objecting to Qwest's changes and joining McLeod's escalation in CMP, Eschelon later escalated with Qwest pursuant to the dispute resolution provisions of the Qwest-Eschelon ICA (Part A, §27.2). On a March 31, 2006 dispute resolution call with Qwest, the CMP issues were discussed and, in Eschelon's April 3, 2006 letter to Qwest relating to dispute resolution in this matter, Eschelon specifically cited both Qwest CMP notices (Versions 27 and 30) as subject to the escalation and dispute resolution. Qwest cannot legitimately claim to be unaware of Eschelon's CMP objection and escalation and their relationship to this dispute when the dispute resolution letter contained the following detailed information in the subject line: "Joint McLeod-Eschelon Escalation #39 Re. PROS.09.12.05.F.03242.Expedites\_Escalations\_V27 – Denied by Qwest 11/4/05; Eschelon 11/3/05 objections to PROS.10.19.05.F.03380.ExpeditesEscalationsV30." Qwest is well aware, therefore, that Eschelon has objected to Qwest's change in CMP, escalated the matter in CMP, and pursued both CMP and ICA escalation and dispute resolution to resolve this dispute.

<sup>21</sup>[http://www.qwest.com/wholesale/downloads/2006/060130/QwestWholesaleChangeManagementDocument\\_01\\_30\\_06\\_1\\_.doc](http://www.qwest.com/wholesale/downloads/2006/060130/QwestWholesaleChangeManagementDocument_01_30_06_1_.doc)

<sup>22</sup> This is not the first time Qwest has done so. Its actions here, for example, are similar to those rejected by this Commission in the Qwest 271 proceeding. Qwest is on notice through these documents and that proceeding that it should not have implemented such a change without first seeking Commission approval. *See, In re. US West Communication, Inc.'s, Compliance with Section 271 of the Telecommunications Act of 1996*, ACC Docket No. T-00000A-97-0238, Decision No. 66242, ¶109 (Sept. 16, 2003).

Section 27.2 of Part A of the ICA provides that, to the extent that Qwest and Eschelon “are unable to agree on certain issues during the term of this Agreement, the Parties may identify such issues for arbitration before the Commission.”

Pursuant to the dispute resolution provisions of both the ICA and the CMP document, the next step was to bring the issue to the state commission for resolution, as Eschelon has done in this case.

		<p><a href="#">doc</a></p>	
<p>16</p>	<p>For product and process changes in CMP, while votes may be taken as to certain CMP procedural issues in the course of considering the change, no vote is taken in CMP as to whether a particular product or process change requested by a CLEC or Qwest should be granted or denied.</p>	<p>Document Nos. 000159-000287</p> <p>The CLEC Originated Product/Process Change Request Process states: “Qwest will develop a draft response based on the discussion from the Monthly CMP Product/Process Meeting. Qwest’s response will be:</p> <ul style="list-style-type: none"> <li>• “Accepted” (Qwest will implement the CLEC request) with position stated, or</li> <li>• “Denied” (Qwest will not implement the CLEC request) with basis for the denial and a detailed explanation, including reference to substantiating material. CLEC originated Product/Process Change Request may be denied for one or more of the following reasons:</li> </ul> <p style="padding-left: 40px;">Technologically not feasible—a technical solution is not available</p> <p style="padding-left: 40px;">Regulatory ruling/Legal implications—regulatory or legal reasons prohibit the change as requested, or if the request benefits some CLECs and negatively impact others (parity among CLECs) (Contrary to ICA provisions)</p> <p style="padding-left: 40px;">Outside the Scope of the Change Management Process—the request is not within the scope of the Change Management Process (as defined in this CMP), seeks adherence to existing procedures, or requests for information</p> <p style="padding-left: 40px;">Economically not feasible—low demand, cost prohibitive to implement the request, or both</p> <p style="padding-left: 40px;">The requested change does not result in a reasonably demonstrable business benefit (to Qwest or the requesting CLEC) or customer service improvement</p> <p>Qwest will not deny a CR solely on the basis that the CR involves a change to the back-end systems. Qwest will apply these same concepts to CRs that Qwest originates. SCRIP may be invoked if a CR was denied due to Economically not feasible.</p>	

		<p><b>Qwest Originated Product/Process Changes</b></p> <p>The following defines five levels of Qwest originated product/process changes and the process by which Qwest will originate and implement these changes. None of the following shall be construed to supersede timelines or provisions mandated by federal or state regulatory authorities, certain CLEC facing Web sites (e.g., ICONN and Network Disclosures) or individual interconnection agreements. Each notification will state that it does not supercede individual interconnection agreements. The lists of change categories under each level provided below are exhaustive/finite but may be modified by the process set forth in Section 2.1. Qwest will utilize these lists when determining the disposition level to which new changes will be categorized. The changes that go through these processes are not changes to OSS Interfaces. Level 1-4 changes under this process will be tracked and differentiated by level in the History Log for the affected documents.</p> <p><a href="http://www.qwest.com/wholesale/downloads/2006/060130/_Toc22021536">http://www.qwest.com/wholesale/downloads/2006/060130/_Toc22021536</a></p>	
17	<p>Eschelon told Qwest in writing that it will pay charges for expedites pursuant to the ICA without amendment, including hourly and dispatch charges, in addition for the installation charge for the order requesting the expedite.</p>	<p>Document 000137-000139</p> <p>Eschelon (Danny de Hoyos, Vice President, Customer Service and Product Delivery), in a letter dated April 3, 2006 to Qwest (Kenneth Beck, Regional Vice President; Director – Interconnection Compliance; General Counsel, Law Department), indicated in the subject line that the letter was regarding: “Escalation and Request for Dispute Resolution pursuant to the Interconnection Agreements; LSR #17114755 (#D49232945); LSR #17192206 (#N49828418; PON #AZ657718T1FAC); ASR #0607700072 (#C50456587; PON # AZ657718T1FAC) stated: “Eschelon said it was willing to pay maintenance and repair charges pursuant to the interconnection agreements (including those approved by the state commissions, which Qwest already routinely charges Eschelon for other types of repairs) to re-establish service.”</p>	

18	When an unbundled loop is installed and then an expedited order is needed several months later ( <i>e.g.</i> , to correct a later disconnect in error of that loop) Qwest charges the Commission approved non-recurring charge (NRC) for the later installation of the unbundled loop ( <i>e.g.</i> , \$87.93 for DS1 capable loop without testing in Arizona) to restore service ( <i>e.g.</i> , to correct the later disconnect in error of that loop), even if the facilities remain in place and no premise dispatch is required.	Document 001674-001675 Qwest expedite amendment, Exhibit A (\$200 per day expedited rate) & Qwest SGAT, Exhibit A, Section 9.2.5.1.1 (\$87.93 rate & footnote A. In Footnote A of Exhibit A to the SGAT, Qwest recognizes that the rate is Commission approved.	
19	Qwest charges the rate in its expedite amendment ( <i>e.g.</i> , \$200 per day expedited, which is \$1,000 for a 5-day expedite) if the CLEC has signed the expedite amendment.	The Qwest Expedites for Design Services Exhibit A states: “Expedite for Design Services - Per Order Per Day Event – Non-Recurring \$200.00 <a href="http://www.qwest.com/wholesale/downloads/2005/050707/QPP-Expedite-for-Design-Services-Exhibit-A-6-29-05.xls">http://www.qwest.com/wholesale/downloads/2005/050707/QPP-Expedite-for-Design-Services-Exhibit-A-6-29-05.xls</a>	
20	The Arizona Corporation Commission authorized Eschelon to provide competitive facilities-based and resold local exchange and interexchange telecommunications services in Arizona.	Document 000373	
21	A mutually agreed upon process for expedites requiring approval was in place, including for unbundled loops, before Qwest documented it on its website through CMP Qwest issued an expedites and escalations product notification (Version 1)	Document 000022-000025  Qwest Notice: PROD.09.20.01.F.00087.F.BFR SR. POA LOA. Expedites stated: “The new Expedite and Escalation Overview will be posted to the Wholesale Markets Web page at the following URL:	

The document numbers refer to non-confidential documents produced in discovery to Qwest in the Arizona complaint case. Qwest has a copy of these documents.

	when documenting the process on its website in which Qwest said that “these updates reflect current practice.”	<a href="http://www.qwest.com/wholesale/clecs/exesclover.html">http://www.qwest.com/wholesale/clecs/exesclover.html</a> . All updates are consistent with the information available in the Statement of Generally Available Terms (SGAT) URL <a href="http://www.qwest.com/about/policy/sgats/">http://www.qwest.com/about/policy/sgats/</a> ”  <a href="http://www.qwest.com/wholesale/cnla/uploads/PROD%2E09%2E20%2E01%2EF%2E00087%2EF%2EBFRSR%2Edoc">http://www.qwest.com/wholesale/cnla/uploads/PROD%2E09%2E20%2E01%2EF%2E00087%2EF%2EBFRSR%2Edoc</a>	
22	May 12, 2004, Qwest told CLECs that: “If a CLEC chooses not to amend their Interconnection Agreement, the current expedite criteria and process will be used.”	Document 000006 <a href="http://www.qwest.com/wholesale/cmp/archive/CR_PC021904-1.htm">http://www.qwest.com/wholesale/cmp/archive/CR_PC021904-1.htm</a>	
23	July 15, 2004, Qwest told CLECs that: “If a CLEC chooses not to sign the amendment and pay the approved rates, this will not impact resources. For Qwest's Retail and Access customers, they are bound by the terms established in the tariffs (which have been or are in the process of being filed). Qwest did not want to shut the door for its Interconnect customers because of existing contractual obligations, so is offering those customers two options: 1) To be able to expedite without reason for a per-day improved rate, like the Retail and Access customer, or 2) Continue with the existing process that is in place. Qwest is providing the Interconnect customers an additional option. If the CLEC chooses option 2, and the expedite reason is for one of those listed in the PCAT, they are given the same opportunity at having the due date	Document 000006 <a href="http://www.qwest.com/wholesale/downloads/2004/040715/DNLD_QwestResponse_Exp_Escl_V11.doc">http://www.qwest.com/wholesale/downloads/2004/040715/DNLD_QwestResponse_Exp_Escl_V11.doc</a> ).	

The document numbers refer to non-confidential documents produced in discovery to Qwest in the Arizona complaint case. Qwest has a copy of these documents.

	requested. This comment is accepted.”		
24	June 29, 2004, Qwest told CLECs that: “Qwest is modifying/changing the existing manual Expedite process to incorporate two processes. These are described as Pre-Approved and Expedites Requiring Approval.”	Document 000006 – 000007 Qwest sent PROS.06.15.04.F.01792.ExpeditesV11 for review and comments. <a href="http://www.qwest.com/wholesale/cnla/uploads/PROS%2E06%2E15%2E04%2EF%2E01792%2EExpeditesV11%2Edoc">http://www.qwest.com/wholesale/cnla/uploads/PROS%2E06%2E15%2E04%2EF%2E01792%2EExpeditesV11%2Edoc</a>	
25	After Qwest issued Version 30 of the Expedites and Escalations Overview PCAT, the Expedites Requiring Approval process remained in place at Qwest, but Qwest removed certain products (including unbundled loops) from the list of products to which Qwest said the Expedites Requiring Approval process applied.	Document. 000107-000115 The Qwest Expedites and Escalations Overview V30.0 stated: “Requesting an expedite follows one of two processes, depending on the product being requested. If the request being expedited is for a product contained in the “Pre-Approved Expedites” section below, your ICA must contain language supporting expedited requests with a “per day” expedite rate. If the request being expedited is for a product that is not on the defined list, then the expedited request follows the process defined in the “Expedites Requiring Approval” section below.”  <a href="http://www.qwest.com/wholesale/downloads/2005/051018/PCAT_ExpEscl_V30.doc">http://www.qwest.com/wholesale/downloads/2005/051018/PCAT_ExpEscl_V30.doc</a>	
26	Qwest describes its expedites and escalations “local business procedures” in the Qwest “Expedites and Escalations Overview – V40.0,” which is available on the web	Document 001645 - 001654 <a href="http://www.qwest.com/wholesale/clecs/exesclover.html">http://www.qwest.com/wholesale/clecs/exesclover.html</a> ;	
27	Requesting an expedite “follows one of two processes”	Document 001645 The Qwest Expedites and Escalations Overview – V40.0 states: “Requesting an expedite follows one of two processes, depending on the product being requested. If the request being expedited is for a product contained in the "Pre-Approved Expedites" section below, your ICA must contain language supporting expedited requests with	

The document numbers refer to non-confidential documents produced in discovery to Qwest in the Arizona complaint case. Qwest has a copy of these documents.

		<p>a "per day" expedite rate. If the request being expedited is for a product that is not on the defined list, then the expedited request follows the process defined in the "Expedites Requiring Approval" section below."</p> <p><a href="http://www.qwest.com/wholesale/clecs/exesclover.html">http://www.qwest.com/wholesale/clecs/exesclover.html</a>;</p>	
28	<p>One of the processes for requesting an expedite is the Expedites Requiring Approval" process and the Expedites Requiring Approval process still exists</p>	<p>Document 001645</p> <p>The Qwest Expedites and Escalations Overview – V40.0 states: “For products not listed in the Pre-Approved Expedite section below, (non-designed products such as POTS, Centrex or DSL service) the following expedite process applies.”</p> <p><a href="http://www.qwest.com/wholesale/clecs/exesclover.html">http://www.qwest.com/wholesale/clecs/exesclover.html</a>;</p>	
29	<p>Expedite charges are not applicable with the Expedites Requiring Approval process.”</p>	<p>Document 001645</p> <p>The Qwest Expedites and Escalations Overview – V40.0 states: “Expedite charges are not applicable with the Expedites Requiring Approval process”</p> <p><a href="http://www.qwest.com/wholesale/clecs/exesclover.html">http://www.qwest.com/wholesale/clecs/exesclover.html</a>;</p>	
30	<p>Following is a list of conditions where an expedite is granted” under the “Expedites Requiring Approval” process:</p> <ul style="list-style-type: none"> <li>“Fire</li> <li>Flood</li> <li>Medical emergency</li> <li>National emergency</li> <li>Conditions where your end-user is completely out of service (primary line)</li> <li>Disconnect in error by Qwest</li> </ul>	<p>Document. 001646</p> <p><a href="http://www.qwest.com/wholesale/clecs/exesclover.html">http://www.qwest.com/wholesale/clecs/exesclover.html</a>;</p>	

The document numbers refer to non-confidential documents produced in discovery to Qwest in the Arizona complaint case. Qwest has a copy of these documents.

	<p>Requested service necessary for your end-user's grand opening event delayed for facilities or equipment reasons with a future RFS date</p> <p>Delayed orders with a future RFS date that meet any of the above described conditions</p> <p>National Security</p> <p>Business Classes of Service unable to dial 911 due to previous order activity</p> <p>Business Classes of Service where hunting, call forwarding or voice mail features are not working correctly due to previous order activity where the end-users business is being critically affected”</p>		
31	<p>In Qwest Expedites Requiring Approval process there are two options to request an expedite on a Local Service Request (LSR)</p>	<p>Document 001646</p> <p>The Qwest Expedites and Escalations Overview – V40.0 states: To request an expedite on a Local Service Request (LSR) you can either:</p> <ul style="list-style-type: none"> <li>• Submit the request with your expedited due date and populate the EXP field. Also include in REMARKS the reason for the expedited request and then call the Qwest Call Center.</li> <li>• Submit the request with a due date interval from our <a href="#">SIG</a> or</li> </ul>	

		<p>your ICA and then call the Qwest Call Center.</p> <p>In both scenarios, a call to the Qwest Call Center is required on 1-866-434-2555 to process the expedited request.</p> <p><a href="http://www.qwest.com/wholesale/clecs/exescoper.html">http://www.qwest.com/wholesale/clecs/exescoper.html</a>;</p>	
32	<p>The Qwest Call Center and its telephone number of 1-866-434-2555 used to request an expedite under the Qwest Expedites Requiring Approval process is the same Qwest Call Center and telephone number that is used generally for other LSR Tier 1 escalations; (b) the next escalation level is Tier 2; and (c) the next escalation level is Tier 3, which is the Qwest Service Manager assigned to that CLEC's account.</p>	<p>Document. 001646 &amp; 001653-001654</p> <p>The Qwest Expedites and Escalations Overview – V40.0 states:</p> <p>Expedites and Escalations</p> <ul style="list-style-type: none"> <li>• Local Service Requests (LSRs)</li> </ul> <p><b>Wholesale Center</b></p> <p>Tier 1 Customer Service Inquiry and Education Center (CSIE) First point of contact for CLECs 866-434-2555</p> <p>Tier 2 Subject Matter Expert (SME), Team Leaders, Team Coaches Respond to issues not resolved at Tier 1 800-366-9974</p> <p>Tier 3 Appropriate Qwest Service Manager Respond to issues not resolved at Tier 2 <a href="#">Service Manager</a></p>

## Description

This method provides information on:

- Application Date/Time
- Appointment Codes
- Commitment/Completion Time
- Due Dates
- Expedites
- Missed Appointment Codes
- Promise of Service
- Subsequent Due Dates

Refer to each individual topic for the current description.

---

## Application Date/Time (APP Date/Time)

The Application (APP) Date is the date and time the Market Unit (MU) negotiated the service order with the customer. The APP Date entry is located in the Fielded ID section of the service order and the format varies between regions:

- Western: MM-DD-YYYY TTP (06-14-2002 04P)
- Eastern: MM-DD-YY TTA (06-14-02 10A)
- Central: MM-DD TTP (06-14 04P) or MM-DD TP (06-14 4P)

An APP Date is a required order entry.

## Saturday APP Date/Time (Consumer Only)

When an order is taken on a Saturday, the APP date and time on the service order will reflect the Saturday information. The standard due date interval (SDDI) on the order however will be incremented by one day. Example: Saturday and Sunday are not counted. Monday would be day zero (if it's not a Holiday). Tuesday would be day one, etc. See Orders Originated on Saturday (Consumer Only) for additional information.

## Extended Hours (Consumer Only)

When an order is taken on or after 7pm Mountain Standard Time (6pm PST and 8pm CST), the APP date and time on the service order will reflect the extended hours information. The SDDI on the order however will be incremented by one business day. See Extended Hours (Consumer Only) for additional information.

## Appointment Codes

Appointment Codes are one-digit entries required on all N, T and C service orders in all three regions and on D orders in Western region. Appointment Codes are used to identify a customer requested or a company offered due date. The two most commonly used Appointment Codes are X and W. Under very rare occasions would an Y or Z Appointment Code be used. The Appointment Code is located in the Fielded ID section of the service order. See complete Appointment Code definitions below:

APPOINTMENT CODES	
CODE	DESCRIPTION
X	<b>Customer Requested Due Date</b> - the customer asks for a specific date and the company agrees to install service on that date. Types of `X' orders include: <ul style="list-style-type: none"> <li>- Temporary transfer of calls</li> <li>- Suspend/restore service</li> <li>- customer requested a later due date than the standard due date interval</li> </ul>
W	<b>Company Offered Due Date</b> - the DD the customer requests is not available; a company offered date is negotiated. Types of `W' orders include: <ul style="list-style-type: none"> <li>- Completed Work Orders (CWD) - Non-appointment completions</li> <li>- Restore service from non-payment</li> <li>- customer requested an earlier due date than the standard due date interval</li> </ul>
Y	<b>Company initiated change</b> , e.g., number change due to Central Office conversion
Z	<b>Official company service</b> for Qwest

The Appointment Code can be changed on the service order if the orientation of the due date changes. Example:

The customer originally wanted a sooner due date than what the company had available (the Appointment Code would be a W). The customer calls back in and wants to move the due date out by two weeks. The Appointment Code needs to be changed to an X.

## Customer credits

It is important to always apply the appropriate Appointment Code to a service order. The Appointment Codes of either `X or W' indicate the interval between the application date and the due date. (See, Application Date/Time (APP Date/Time ) for additional information). Placing an X in the Fielded ID section of the service order is the only means Qwest has of determining when the customer accepts Qwest's standard due date interval (SDDI) or requests a due date that is later than the SDDI. Conversely, the W has importance because it designates a negotiated due date when the customer's desired due date in not available.

Regulations in nearly all the states require that Qwest complete an order in a given time frame (usually 2 to 5 days) or by the customer's requested date, if later. Failure to complete the order within the state-specific interval for `W' due dates initiates an automatic credit to the customer's bill. An incorrect appointment code may cause a payment to be made when one is not required or worse, a credit is not granted when it should have been. Credits are also given to customers when we completely miss the due date for either the `X or W' appointment codes. See Missed Appointment (MA) Codes - `Not Met Codes' for additional information.

Accurate appointment codes provide Qwest with the ability to provide the customer the service they want while still meeting our regulatory requirements and minimizing the expenses to the Company.

## Exceptions

**DO NOT** enter an Appointment Code on:

- F or R Orders
- D orders in Central and Eastern Regions
- Designed Services
- P Orders (Prewire)
- DB5 and ZZ0 Class of Service orders (establish, change or disconnect)

## Due Dates

Due Dates (DD) are required on every service order. The DD defines the day the service order will be worked and is located in the Fielded ID section of the service order.

## Standard Due Date Matrix

The following job aid is to assist in assigning the correct standard due date interval (SDDI) to the service order. If there are specific product/service due date questions, please refer to the product/service method for the answer. This job aid is for general use only.

<b>BUSINESS AND RESIDENCE STANDARD DUE DATE JOB AID</b>			
<b>ORDER SERVICE TYPE</b>	<b>AND</b>	<b>NOTE</b>	<b>DUE DATE INTERVAL</b>
Flow Through (N,T)	Facility Check indicates "AVAILABLE" and DISPATCH "NO"	CPE may require specific DD interval	3 Business Days* <b>-Exception: MN is 2 business days unless select AIN products</b>

			are being added, then it's 3 business days.
Working Left-In (N,T)	Facility Check shows working detail & TN	Pending Out	<b>Co-ordinate</b> with Pending Out DD - Minimum 3 Business Days <b>-Exception: MN is 2 business days unless select AIN products are being added, then it's 3 business days.</b>
		Working	3 Business Days* <b>-Exception: MN is 2 business days unless select AIN products are being added then it's 3 business days.</b>
Work Order (N,T,C with inward line activity)	Facility Check indicates "AVAILABLE DISP. REQ" and/or DISPATCH "YES"		Next Available Due Date as indicated by Appointment Scheduler*
	Facility Check indicates "HELD ORDER"		Next Available Due Date as indicated by Appointment Scheduler*
Work Order (C Orders)	Select, non-dispatchable, flow through features. See One or Two Day Due Date Availability for additional information.	No Saturday, Sunday or Holidays.	1 or 2 Business Days
Work Order (C Orders)	Features or TN change without inward line activity	For some CO features or Regrades, does not include CustomNet, Caller ID (when ordering the adjunct unit), etc. <b>NOTE:</b> TFC-send mini form "INTERCEP"	3 Business Days <b>-Exception: MN is 2 business days unless select AIN products are being added, then it's 3 business days.</b>
Disconnect (D,F,C) See note in interval column		No Saturdays, Sundays or Holidays	Sub requested Due Date on C orders if the order is taken before 3pm and before 12pm on D and F orders. If not, due date the order for the next business day and EBD.

			<b>Note: If a C order is issued to remove features or an additional line, it is allowed on the Customer requested due date only if it is JUST removals, if there are any I action codes on the order then it does not qualify for the Customer Requested Due Date. Use EBD when appropriate.</b>
Record Order (R)	Examples: Calling Card Only, Adding a Calling Plan, or Billed Number Screening Only	Any service being added with a Record order must follow the guidelines outlined in the method of that service.	Standard due date interval (Use EBD where appropriate)
	Company	Avoid heavy load periods (i.e. 1st and last of each month)	2 Bus Days or more
Non-Work Order (N,T,C,D) CWD (Completed Work Order) <b>Or</b> WC (Work Complete Order)	"For Record Work Only" i.e., Supercedure/ Chg of Resp, Consolidate/ Deconsolidate, <b>Exception - Toll Only</b>	This type of order does not add or remove services to a customers account. <b>Exception - Toll Only</b> orders will still be a 2 day due date in all 14 states	3 Business Days. Use EBD where appropriate for proper billing <b>-Exception MN is 2 Business days unless select AIN products are being added then it's 3 business days.</b> <b>Exception - Toll only orders are 2 business days all states</b>
Suspend/Restore 'C' Orders	For customers with service placed on 'vacation'	This process maintains the customer's account and bill statement. This is not a standard disconnect or new connect.	"Next Business Day" -**This is an exception to Standard 3 business day interval guidelines**
	Treatment - Denial & Restoral for Non-payment issues		See the Treatment and Collection methods in InfoBuddy for each Market Units specific due date guidelines.
*The customer should be asked what due date they want. If it is on or after Qwest's standard due date interval (SDDI) give them their request. If it is not, negotiate a due date using the SDDI.			

Also, Qwest must use FACILITY CHECK on every inward line order and then due date the service order appropriately.

**REMINDER:** If deregulated work is requested or required, in addition to the original order, you can issue a subsequent order using APPOINTMENT SCHEDULER for the due date. This applies to all flow through work orders (on main line).

**When adding additional Products/Services to a pending service order make sure you check the due date requirements for that product/service before you add the item to the order. Some product/services require a minimum due date of three business days (i.e. voice messaging, some AIN features, etc). Because of this requirement, a subsequent C order may have to be issued.**

## Expedites for Non-Dispatchable Service Orders

### Expedite Reason Codes

An expedite is a customer's request for an earlier due date other than the standard day due date interval on non-dispatchable orders. (For dispatchable orders, follow the Override process found in the method). Qwest **does not** grant expedites unless the request falls under the following circumstances:

- Disconnect in Error (DIE)

There are two types of DIE: 1) Qwest generated and 2) customer generated. An expedite will **only** be granted if the DIE is Qwest generated. See Disconnects in Error (DIE) for additional DIE information. *Waive ALL charges.*

Expedite code: DIE

- Medical Emergency

In order for the customer to obtain a medical emergency expedite they must have the supporting documentation. The documentation has to be on legal letterhead and signed by a practicing physician. The documentation has to be faxed or mailed to the Sales Consultant for verification prior to the release of the order. The documentation should be filed according to the local office procedure. *Do not waive charges.*

Expedite code: MED

- Company Error resulting in incomplete customer service (use good judgment when discussing an expedite) An example of this would be the service order is typed incorrectly, adding an unwanted service while leaving off the requested service. An expedite can be done if it is determined that the error was caused by Qwest. *Waive charges only if appropriate.*

Expedite code: QWE

- Fire

Customer has to provide the necessary insurance documentation to obtain an expedite. The documentation has to be faxed or mailed to the Sales Consultant for verification prior to the release of the order. The documentation should be filed according to the local office procedure. *Waive charges only if appropriate.*

Expedite code: FFD

- Flood

Customer has to provide the necessary insurance documentation to obtain an expedite. The documentation has to be faxed or mailed to the Sales Consultant for verification prior to the release of the order. The documentation should be filed according to the local office procedure. *Waive charges only if appropriate.*

Expedite code: FFD

- National Emergency. Examples would include Earthquake, Tornado, and Hurricane. *Waive charges only if appropriate.*

Expedite code: FFD

### Non-Valid Expedites

- Disconnect (D) Orders
- From (F) Orders
- Record (R) Orders
- Working Left Ins (WLI) that have not gone `00-00' due date
- House Arrest/Home Confinement
- Appointment Scheduler (AS)/Tech Visits (must follow the Override process)
- Change (C) Orders with Out (O) action only
- C Orders with C/T action removing or downgrading service only

### Expedite Process for Small Business and Consumer Markets

Step:	Action:
1.	Determine reason for expedite
2.	If the reason is valid obtain all required documentation from customer.
3.	Establish order (Small Business)
	SONAR: <ul style="list-style-type: none"> <li>• Enter the expedited DD in the Desired Due Date field on the SDD01 screen. Make sure the completion time shows 5pm.</li> <li>• Enter the confirmation code* in the CONF# field on the SDD01 screen.</li> <li>• (Remember to add a clear and detailed RMK entry on why the order is being expedited along with the `approving' coach's name, TN and Center)</li> <li>• Proceed with order</li> </ul>
OR	
3	Establish order (Consumer Markets)
4.	If the request is on existing service, enter detailed BOSS/CARS notes

	on why the order was expedited; include the approving coach's name, TN and Center.
--	--

\* The confirmation code consists of the expedite code, e.g. DIE, FFD, etc. and the approving coaches initials: AAB. Example: DIEAAB. The confirmation code would appear in the Extended ID section of the service order like this: EXOR DIEAAB

For additional information on the EXOR FID, see Exclude Service Order (EXOR) Tracking - All States Bus Res .

✖

An `approving coach' can be any authorized manager from any Qwest channel, i.e. Sales, Care, LRAC, RCMAC, etc.
--

✖

<b>The due date rules are serious, important obligations of Qwest. Employees adding false or inaccurate information as a reason for expediting the due dates may be falsifying company records and could be subject to disciplinary action, up to and including dismissal.</b>
--

\*\*The initials MUST be the coaches initials and not their BOSS/CARS ID. There are edits in place to prevent initials with numbers.

## Expedite Process for Large Business and Global Accounts (Non-Design-Only)

Step	Action
1.	Determine reason for expedite
2.	Obtain all required documentation from customer
3.	Obtain expedite approval from coach.
4.	
5.	Issue order (see applicable system method for specific step/action process)
6.	Enter complete BOSS/CARS note to include reason for expediting and the name and TN of approving coach.

\* The confirmation code consists of the expedite code, e.g. DIE, FFD, etc. and the approving coaches initials: AAB. Example: DIEAAB. The confirmation code would appear in the Extended ID section of the service order like this: EXOR DIEAAB

For additional information on the EXOR FID, see Exclude Service Order (EXOR) Tracking - All States Bus Res

---

subject to disciplinary action, up to and including dismissal.

## Expedites for Dispatchable Service Orders

To obtain an expedite on a dispatchable service order, refer to the Override process in method.

## One and Two Day Due Date Availability

Qwest offers one and two day due dates on select, non-dispatchable flow through features. Features not on the following lists most follow their standard due date interval.

Click [here](#) to view the One-Day Due Date select feature list. Check [here](#) to view the Two-Day Due Date select feature list.

## Order Specifics

- Change `C' orders only
- One day due dates will be the next business day unless the order is taken on or after 6pm (PST), 7pm (MST) or 8pm (CST). If the service order is taken on or after 7pm (MST), an extra day must be added to the due date interval. Also, service orders should never be due dated on a Saturday, Sunday or Holiday.
  - Example: Order is taken Tuesday evening at 7:05pm. The due date will be Thursday (if Thursday is not a holiday)
  - Example: An order is taken on Friday, the due date will be Monday (if Monday is not a holiday).
  - Example: An order is taken on Saturday, the order will be due Tuesday (if Tuesday is not a holiday)
- Two day due dates will be the day after tomorrow unless the order is taken on or after 6pm (PST), 7pm (MST) or 8pm (CST). If the service order is taken on or after 7pm (MST), an extra day must be added to the due date interval. Also, service orders should never be due dated on a Saturday, Sunday or Holiday.
  - Example: An order is taken on Saturday, the order will be due on Wednesday (if Wednesday is not a holiday)
- If a non-select feature is to be added to the order with a select, flow through feature, the service order must

carry the non-select feature due date.

When figuring a due date, remember the day the service order is placed is day zero except for Saturday. Saturday is day zero, zero.

- I, O, C and T are the only action codes that can be used on these select, non-dispatchable flow through features. Non-select features can be removed `O' from the C order but they can not be added (I or T).
- The following Classes of Service (COS) are the only COS that the one/two day due date can be applied to when adding a select, non-dispatchable flow through feature to an account.
  - POTS
  - Centron
  - Centrex
  - Centrex 21
  - Centrex Plus
  - Centrex Prime

- PAL
- PBX - Non-design
- Resale and UNE-P POTS
- Resale and UNE-P PAL
- Resale and UNE-P Centrex 21
- Resale PBX Trucks Non-designed
- Unbundled Switch Analog Line Port

## Due Date Calendar Job Aid

### Monday - Friday Charts - All market Units

Next Business Day	Five Business Days	Nine Business Days
Two Business Days	Six Business Days	Ten Business Days
Three Business Days	Seven Business Days	
Four Business Days	Eight Business Days	

Some Central Offices in some states are not visited daily, check Appointment Scheduler to determine due date availability if unsure.

### Holidays

No service orders with holiday due dates will be allowed. The following holidays are **NOT** available for service order due dates:

New Years	Jan 1st
Memorial Day	Last Monday in May
Independence Day	July 4th
Labor Day	1 <sup>st</sup> Monday in September
Thanksgiving Day	4 <sup>th</sup> Thursday in November
Christmas	December 25th

### Saturday Due Dates through Appointment Scheduler

It is acceptable to assign a Saturday due date to a dispatchable service order if the Saturday date is available in Appointment Scheduler.

### Sunday Due Dates

Sunday due dates are **never** assigned. Check Appointment Scheduler for the appropriate due date on dispatchable orders.

### Orders Originated on Saturday (Consumer Only)

Service orders taken on Saturday must be due dated as if the order was taken on Monday, Monday being day zero. Another way to look at it is if the order was taken on Saturday, add an extra day to the standard due date interval (SDDI). See the Due Date Calendar Job Aid for help in the due date calculations.

## Extended Hours (Consumer Only)

Any service order taken on or after 7pm Mountain Standard Time (6pm PST and 8pm CST) must add a business day to the standard due date interval (SDDI). Example: a service order is taken at 7:05pm (MST) on a Tuesday evening. Wednesday is day zero, making the due date the following Monday (using a standard three day due date interval). See the Due Date Calendar Job Aid for help in the due date calculations.

## Embargo (Frozen DD)

Service order embargoes are necessary during Central Office (CO) conversions because of the possibility that service orders will be disrupted when the 'cutover' is made to the new or upgraded switch. When an embargo is in place, the Market Units may not issue a service order (see service order exceptions below) with a due date that is within the embargo period.

## Service Order Exceptions

The following service order types are the only orders that can be due dated during an embargo. All other order types must be due dated before or after the embargo. If an order type is issued during an embargo that does not appear on the following list, it will be returned to the originating Market Unit so they can renegotiate a new due date with the customer.

- D and R orders
- F orders, but no T orders
- C orders to suspend and restore for non-payment
- PIC changes
- Toll Restriction orders
- C orders billing for "non-switched" products, such as wiring, wire maintenance plans, time and materials, or trouble isolation charges
- Emergency orders with the approval of the RCMAC

## Appointment Time - 'Access'

Appointment time or Access is the block of time that Qwest has agreed to physically be at the work location to fulfill the customer's work request. Appointment times can range from two-hours to all day depending upon the work request. Appointment times are managed through Appointment Scheduler (AS).

- Residence: Offer AM and PM access first then All Day access.
- Business: Offer AM and PM access first then All Day access or can be divided into 2 hour increments using even hours (i.e., 8A-10A, 10A-12P, etc).

**Note:** Offer All Day access ONLY if the technician just needs access to the Network Interface i.e., NW1/NW2 is the only dispatchable USOC on the service order.

The Appointment Time or Access entry is located in the RMK section of the order. If Qwest misses the appointment time promised to the customer, Qwest will compensate the customer for their inconvenience. See Promise of Service for additional information.

## Commitment/Completion Time (On Hold)

When placing a non-dispatchable service order, the Sales/Service Consultant (S/SC) should advise the customer that their service will be in and working no later than 8am on the due date.

The only exception to the 8am-completion time rule would be if the service order is expedited. If the service order is expedited and the application date and the due date are the same, the completion time must be 5pm. In C+ - over type the 8am-completion time with 5pm.

If the customer calls into the Business Office on the due date to question the status of their service order, the S/SC must review the pending service order for potential problems. If potential problems are detected, the S/SC must follow the order through to resolution. The S/SC must make sure that the problem has been resolved or a satisfactory resolution has been reached before releasing the customer. Follow the process outlined on the [Pending Order Inquiry Job Aid](#) for additional information.

If Qwest misses the commitment time promised to the customer, Qwest will apologize to the customer for any inconvenience we might have caused them. See Promise of Service for additional information.

## Systems

## Negotiation for D & F Orders

When negotiating a DD with a customer who is terminating their service, it is critical to remind them that the disconnect orders are the first orders worked for the day. Because of this, the Sales/Service Consultant should advise the customer to call Qwest the day before the DD if they need to change their order to ensure their service is not interrupted. If the customer calls on the DD, the DD can be changed as long as the order has not completed in the SOP. If the order has already completed, a new order will have to be written to restore the service.

---

## Subsequent Due Dates

A Subsequent Due Date (SD) is used when the original DD on an order needs to be changed. When the DD is changed, a Pending Order Change (POC) is issued and the new date is placed in the Unfielded section (top) of the order. Each time the DD is changed, another SD is placed on the order along with the appropriate Missed Appointment (MA) Code. This process can be achieved by typing directly into the Service Order Processors (SOPs)

or SONAR. Consulting Plus does not have the capability yet.

**It is never appropriate to overwrite an existing SD with a new one. See the examples below for the correct format.**

- SD are not valid on R orders in the Eastern region.

**EXHIBIT 96**

**Announcement Date:** September 20, 2001  
**Effective Date:** Immediately

**Document Number:** PROD.09.20.01.F.00087.F.BFR SR. POA LOA. Expedites  
**Notification Category:** Product Notification  
**Target Audience:** CLECs

**Subject:** Updates to Product Catalog for Bona Fide Request and Special Request, Expedites and Escalations, Proof of Agency and Letter of Agency

TO:

Beginning September 22, 2001, Qwest will issue updates to its Wholesale Product Catalog on methods and procedures for Bona Fide Request (BFR) and Special Request (SR) Processes, Expedites and Escalations, and Proof of Agency (POA) and Letter of Authority (LOA.)

Qwest has enhanced sections of its Business Procedures site to provide a more efficient means for CLECs to obtain procedural information. You will find a summary of these updates on the attached Web Change Notification Forms. You will also find these procedural updates within the Qwest Wholesale Web Site at these locations:

- BFR SR <http://www.qwest.com/wholesale/preorder/bfrsrprocess.html>
- Expedites & Escalations <http://www.qwest.com/wholesale/clecs/exesclover.html>.
- POA/LOA <http://www.qwest.com/wholesale/preorder/index.html>

Some modifications were made based on changes to the Statement of Generally Accepted Terms and Conditions (SGAT). You will find the SGAT documents at: <http://www.qwest.com/about/policy/sgats/>.

You are encouraged to provide feedback to this notice through our web site. We provide an easy to use feedback form at <http://www.qwest.com/wholesale/feedback.html>. A Qwest representative will contact you shortly to discuss your suggestion.

Sincerely,

Qwest

Note: While these updates reflect current practice, it is important to note that there are additional changes that will be forthcoming as a result of ongoing regulatory activities e.g., collaborative workshops and state commission orders. As these changes are defined and implementation dates are determined, notice of additional updates will be provided accordingly.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. All information provided on the site describes current activities and process. Prior to any modifications to existing activities or processes described on the web site, wholesale customers will receive written notification announcing the upcoming change.

**WEB CHANGE NOTIFICATION FORM:**

Section	Sub Section	UPDATE / ACTIVITY
Product Description		Enhance description of Proof of Authorization (POA) / Letter of Agency (LOA) combining requirements and impact to improve communication with Wholesale customers doing business with Qwest.
Product Description		Defines methods for obtaining a Letter of Agency, also called a Letter of Authorization (LOA) and contents required within the LOA document.
Product Description		Provides examples of an end-user and a CLEC to CLEC LOA.
Product Description		Outlines POA requirements and impact should a conflict exist between end-user’s designation and CLEC/Reseller’s written evidence. Qwest honors end-user’s designated, changing them back to previous provider and, if applicable, charging the CLEC/Reseller a Customer Transfer Charge slamming fee.
Product Description		Explains Qwest follows these same POA/LOA requirements with the same impacts.

**EXHIBIT 97**

**Announcement Date:** October 19, 2005  
**Proposed Effective Date:** January 3, 2006  
**Document Number:** PROS.10.19.05.F.03380.ExpeditesEscalationsV30  
**Notification Category:** Process Notification  
**Target Audience:** CLECs, Resellers  
**Subject:** CMP - Expedites and Escalations V30  
**Level of Change:** Level 3

**Summary of Change:**

On October 19, 2005, Qwest will post planned updates to its Wholesale Product Catalog that include new/revised documentation for Expedites and Escalations V30. These will be posted to the Qwest Wholesale Document Review Site located at <http://www.qwest.com/wholesale/cmp/review.html>.

Qwest is changing its Expedite process to require an expedite amendment to be signed for expedited requests that involve products that follow the designed services flow in order to bring parity across its entire customer base. Qwest recognizes that time is required for some customers to get amendments signed and is therefore extending the implementation of the Level 3 process change beyond the allotted 45 day time frame.

Current operational documentation for this product or business procedure is found on the Qwest Wholesale Web Site at this URL: <http://www.qwest.com/wholesale/clecs/exesclover.html>.

**Comment Cycle:**

CLEC customers are encouraged to review these proposed changes and provide comment at any time during the 15-day comment review period. Qwest will have up to 15 days following the close of the comment review to respond to any CLEC comments. This response will be included as part of the final notification. Qwest will not implement the change sooner than 15 days following the final notification.

Qwest provides an electronic means for CLEC customers to comment on proposed changes. The Document Review Web Site provides a list of all documents that are in the review stage, the process for CLECs to use to comment on documents, the submit comment link, and links to current documentation and past review documents. The Document Review Web Site is found at <http://www.qwest.com/wholesale/cmp/review.html>. Fill in all required fields and be sure to reference the Notification Number listed above.

**Timeline:**

Planned Updates Posted to Document Review Site	Available October 19, 2005
CLEC Comment Cycle on Documentation Begins	Beginning October 20, 2005
CLEC Comment Cycle Ends	5:00 PM, MT November 03, 2005

Qwest Response to CLEC Comments (if applicable)	Available November 18, 2005 <a href="http://www.qwest.com/wholesale/cmp/review_archive.html">http://www.qwest.com/wholesale/cmp/review_archive.html</a>
Proposed Effective Date	January 3, 2006

If you have any questions on this subject, please submit comments through the following link:  
<http://www.qwest.com/wholesale/cmp/comment.html>.

Sincerely

Qwest Corporation

Note: In cases of conflict between the changes implemented through this notification and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. All information provided on the site describes current activities and process. Prior to any modifications to existing activities or processes described on the web site, wholesale customers will receive written notification announcing the upcoming change.

## Qwest Response to Document In Review

**Response Date:** November 18, 2005  
**Document:** Process: Expedites and Escalations V30  
**Original Notification Date:** October 19, 2005  
**Notification Number:** PROS.10.19.05.F.03380.ExpeditesEscalationsV30  
**Category of Change:** Level 3

Qwest recently posted proposed updates to Expedites and Escalations V30. CLECs were invited to provide comments to these proposed changes during a Document Review period from October 20, 2005 through November 3, 2005. The information listed below is Qwest's Response to CLEC comments provided during the review/comment cycle.

### **Resources:**

Customer Notice Archive <http://www.qwest.com/wholesale/cnla/>  
Document Review Site <http://www.qwest.com/wholesale/cmp/review.html>

If you have any questions on this subject or there are further details required, please contact Qwest's Change Management Manager at [cmpcomm@qwest.com](mailto:cmpcomm@qwest.com).

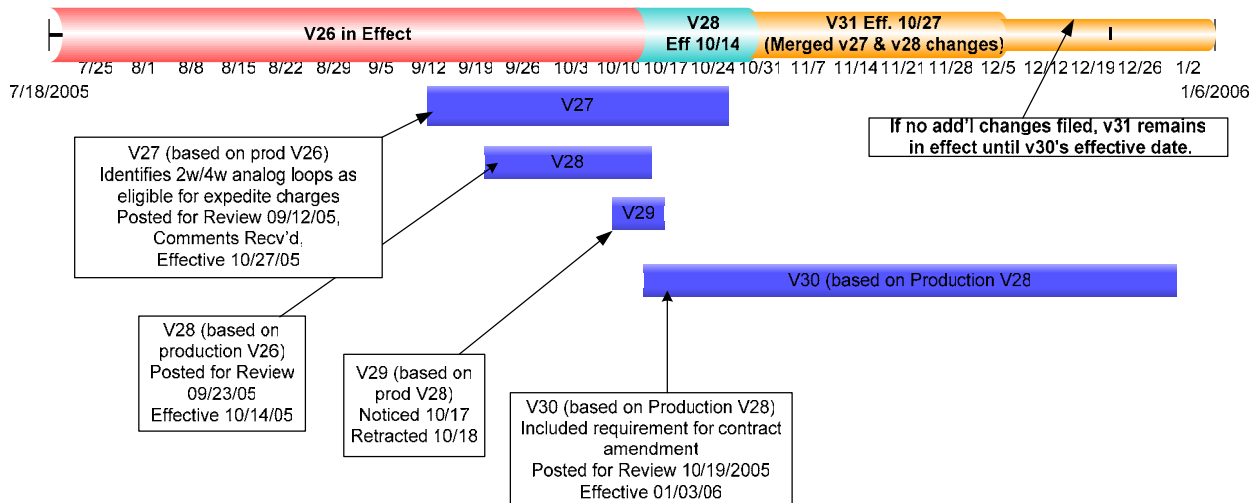

### Qwest Response to Product/Process Expedites and Escalations V30 Comments

As a course of doing documentation updates, it is not unusual for multiple changes to be in process at any given time. These changes may or may not ultimately be implemented. Therefore, CMP standard practice is to base the proposed changes on the current production Version, not a Version that is in process. It appears that this practice led to the submittal of comments by the CLECs during the V30 comment cycle that actually addressed changes made in V27 of this document.

The picture below provides a timeline of the changes that have been made to this document. Version 27 of the document included the change to make 2w/4w analog loops eligible for expedite payments. That change was not commented on (other than a clarifying question on the rate) during the comment cycle and became effective on 10/27/05. Because Version 28 had already become effective, Version 31 was issued -- and merged the Version 27 changes with the Version 28 changes.

Meanwhile Version 30, which added language requiring an amendment to address expedites, had been created. Because Version 30 was created before Version 27 had taken effect, it did not include the Version 27 language per CMP practice. The Version 30 changes will be incorporated into the version that is in production on 1/3/06.

Several of the comments received on the Version 30 document actually address changes that were made in Version 27. Qwest will not respond to the comments which address Version 27 changes but will respond to comments related to the Version 30 amendment language.

#	Page/Section	CLEC Comment	Qwest Response
1		<p><i>McCloud</i> 10/26/05 Comment: Qwest announced it will begin charging expedite fee for 2w/4w loops on Oct. 27th. Qwest just posted a Expedites and Escalations V30 which still has the 2w/4w analog loop exception included. I looked at the previous version (V29) and the exception was also present in that version. Qwest has given until November 3rd to comment on the V30 so I don't see how (1) Qwest can begin charging tomorrow (Oct. 27th) when the review isn't complete and (2) Qwest can even claim that 2w/4w analog loops are no longer an exception in the Pre-Approved Expedite process when it doesn't appear that Qwest has addressed this issue in prior reviews</p>	<p>The change referenced in this comment was included in Version 27 which is already in effect.</p>
2		<p><i>McCloud</i> 11/1/05 Comment:</p>	<p>There is no condition being removed in the Version 30 change. The change referenced in this comment was included in Version 27</p>

		<p>Can you please clarify which condition is being removed where an expedite is granted? Also, I see under the "Pre-Approved Expedites" section that the first product listed is "UBL all except 2W/4W analog".</p> <p>Does this mean that we are going to have this as an exception starting with V30 going forward? I don't see this listed in the history log as something that is being added back into the document as an exception. Please advise. Thank you.</p>	<p>which is already in effect.</p> <p>V30 is changing the process to require expedite language in the customers Interconnection Agreement (ICA) when an expedite is requested for products that follow the designed services flow. Products that follow the designed services flow will not be part of the Expedite Requiring Approval process except in the state of Washington.</p>
3		<p><i>Eschelon</i> <i>11-3-05</i> Comment: In Qwest's response to Covad's CR PC021904-1, Qwest said: "If a CLEC chooses not to amend their Interconnection Agreement, the current expedite criteria and process will be used." The current "expedite requiring approval process" allows a CLEC to request an expedite, at no charge, when the customer's needs met certain criteria. Eschelon relied upon Qwest's response and based its decision to comment, or not comment, on that response. Qwest is now failing to keep the commitments it made to CLECs in CMP, and in its response to Covad, by now changing its position on expedites and unilaterally imposing charges via a process change in CMP. Qwest's proposed change to remove the existing approval required expedite process for designed products will negatively impact Eschelon and its</p>	<p>In regards to Eschelon's comments regarding Qwest's commitments with PC021904-1, discrimination allegations and timing of process notifications, Qwest submits the following response:</p> <p>Qwest did meet its commitment to PC021904-1. As with all processes that exist, they do change over time. Qwest utilized the appropriate CMP notification processes to notify CLECs of the pending changes. In fact, with this particular PCAT, process changes have been implemented since PC021904-1 was closed. For example, Qwest changed the process when it bills expedite charges in the following situations: billing per ASR/LSR instead of per service order, bill expedite charges on delayed orders only when additional costs are incurred, and finally, changed the pre-approved expedite process to include port in/port within.</p> <p>Qwest does not sell Unbundled Loops to its end user customers so it is not appropriate to make a comparison to retail in this situation. Qwest is selling a pipe, not a switched POTS service. The DS0 UBL product can be used for services other than a POTS type service and Qwest does not know what service the CLEC is providing its end user with the DS0 pipe. Therefore, Qwest's position is that there is not the parity component that is being raised with this comment.</p>

	<p>customers. Qwest said its basis for this change is “parity” and that Qwest retail charges for all expedites for “designed” services. However, this claim of “parity” is misleading as Qwest’s new process now treats CLEC POTS customers differently than Qwest POTS customers. Qwest defines parity based on whether a service is “designed.” Qwest has chosen to apply the “design” process to DS0 UBLs, but not to its own POTS customers. The result is that though from the customer perspective the service is the same, Qwest now proposes to treat them differently for the expedite process. The change Qwest is proposing is discriminatory to CLECs and their customers. A CLEC DS0 UBL and a Qwest retail 1FB functionally are the same service. A DS0 loop is merely a POTS line that Qwest choose to provision using a design flow process. For example, a customer could request an expedite using the approval required process when ordering service from Qwest (e.g. a 1FB), and would not have to pay additional charges for the expedite. However, if the customer orders service from a CLEC via a DS0 loop and the customer requests an expedite from the CLEC, the CLEC and the customer would have to pay an additional charge for the same basic service.</p> <p>Eschelon objects to Qwest’s proposed changes to the current approval required</p>	<p>Finally, Qwest did choose to implement the changes on different process notices. This was done to allow the CLEC community ample time to get the expedite amendments through the implementation process, which is longer than the CMP Level 3 notification requirements. For each of the process changes that were made on this process since PC021904-1 completed, Qwest stated clearly in the notification the process change that was being made in each of the notifications.</p>
--	--	--

		<p>expedite process because it is discriminatory to CLECs and CLEC customers. In addition, because Eschelon relied upon Qwest's comments to Covad's CR, Eschelon also objects to Qwest's addition of UBL DSO products to the pre-approved list of products. Qwest chose to make the change to the approval required expedite process after it added DSO loops to the product list for pre-approved products. The result is that CLECs were unable to effectively comment on a change that now, coupled with Qwest's further change, significantly impacts a CLEC's business.</p>	
4		<p><i>McCloud</i> 11-3-05 Comment: Qwest's removal of the 2w/4w analog loop exception from the Expedites Requiring Approval process places CLECs at a competitive disadvantage because it forces expedite charges upon the end user consumer only when that end user consumer is purchasing from a facilities based CLEC. These expedite charges are not applicable if the end user consumer is purchasing from Qwest or a non-facilities based provider.</p>	<p>The change referenced in this comment was included in Version 27 which is already in effect.</p>
5		<p><i>PriorityOne</i> 11-3-05 Comment: PriorityOne Telecommunications, Inc. objects to Qwest's proposed changes due to feeling that it is discriminatory to CLEC's and CLEC customers. Adding UBL DSO to the list of products is</p>	<p>The change referenced in this comment was included in Version 27 which is already in effect.</p> <p>Qwest has noted PriorityOne's objection to the process change associated with V30. The process change associated with V30 is being made to create consistencies across Qwest's entire customer base for products that follow the Designed Services flow.</p>

		<p>not “parity” as the customer’s perception is that they are requesting a “line”. The end user does not know whether the line is POTs or UBL DSO. They just know that it’s a line.</p> <p>Also, PriorityOne objects to Qwest’s proposed change to remove the existing approval required expedite process for designed products and note that it will negatively impact PriorityOne and its customers.</p>	
6		<p><i>Covad</i> 11-3-05 Comment: Regarding Qwest’s proposed change to remove the existing approval required expedite process for designed products, Covad requests clarification regarding availability of expedited services in the state of Washington, where, currently, Qwest does not offer an expedited services amendment. Covad requests that Qwest reiterate that the Expedites Requiring Approval products will still be available in the State of Washington.</p>	<p>Qwest has reiterated that the Expedites Requiring Approval process will still be available in the state of WA in the V30 redline document. Qwest currently has the following two statements addressing the state of Washington:</p> <p><i>The Expedites Requiring Approval section of this procedure does not apply to any of the products listed below (unless you are ordering services in the state of WA).</i></p> <p><i>The Pre-Approved expedite process is available in all states except Washington for the products listed below when your ICA contains language for expedites with an associated per day expedite charge.</i></p>
7		<p><i>Integra</i> 11-3-05 Comment: Integra objects to Qwest proposed change to remove the existing approval required expedite process for designed products. When Integra signed the Qwest Expedite Amendment we were not advised that by signing the amendment it would change the current Expedites Requiring</p>	<p>Integra was not advised that by signing the amendment it would change the Expedites Requiring Approval Process for a couple of reasons:</p> <p>1) When an expedite amendment is signed, the CLEC is automatically included in the pre-approved process and the Expedite Requiring Approval process is not applicable any longer for the products identified in the Pre-Approved Expedite section of the PCAT. This was clarified and documented with PC021904-1. In the meeting minutes for the ad-hoc meeting held on July 9, 2004, Qwest</p>

		<p>Approval process. We signed the amendment believing that this would ADD to our options of having an order completed outside the standard interval. When Integra signed the amendment UBL DS0 loops were not included as a product on the list of products in the "Pre-Approved Expedites" list. When the UBL DS0 was added to this list Integra did not comment as at that time we still believed the Expedites Requiring Approval process was in place for our use.</p>	<p>clarified that when a CLEC amends their contract there are no reasons any longer and that if Qwest expedites a request, expedite charges apply.</p> <p>2) The PCAT that was revised with PC021904-01 states the following:</p> <p><i>Requesting an expedite follows <b>one of two processes</b>, depending on the product being requested and the language in your Interconnection Agreement (ICA). If the request being expedited is for a product on the list of products in the "Pre-Approved Expedites" (see below) and your ICA has language supporting expedited requests with a "per day" expedite rate, then the request does not need approval. If the request being expedited is for a product that is not on the defined list, or your ICA does not support a "per day" expedite rate, then the expedited request follows the process defined in the "Expedites Requiring Approval" section below.</i></p> <p>For the change that is being implemented with V30, there is no change to the CLECs that already have an expedite amendment in place.</p>

To: Clauson, Karen L.  
Subject: Request for InfoBuddy Access

Karen,

I have had a chance to research your inquiry regarding the differences between InfoBuddy, a Qwest internal system database and the Resale Product Database (RPD), a CLEC accessible database.

InfoBuddy is a system that contains all of Qwest's Methods, Practices and policies regarding ordering processes. In addition to that Qwest also has information within the system that is proprietary. In order to comply with the Telecommunications act of 1996 Qwest developed a redaction process which allows CLEC's access to the retail product methods and procedures contained in InfoBuddy that are available for Resale. That information is formatted into a WEB based application known as RPD. The redaction process removes only the proprietary information found in InfoBuddy that Qwest is not mandated via the Act to provide to CLEC's.

For the reason stated above, Qwest is unable to process your request for access to the InfoBuddy system. I previously provided to you information on how to obtain access to the RPD. Should you desire to gain access to the RPD follow the instructions I outlined to you in my June 18, 2001 email and I will process your request.

Respectfully,  
Steve Sheahan  
Senior Service Manager  
Qwest Wholesale Customer Service Operations

**EXHIBIT 100**

March 29, 2006

Kim Isaacs  
Eschelon Telecom Inc.  
730 2nd Avenue South - Suite 900  
Minneapolis, MN 55402  
kdisaacs@eschelon.com

TO:Kim Isaacs

<b>Announcement Date:</b>	<b>March 29, 2006</b>
<b>Effective Date:</b>	<b>April 29, 2006</b>
<b>Document Number:</b>	<b>SYST.03.29.06.F.03780.FinalResaleProdDBRet.doc</b>
<b>Notification Category:</b>	<b>Systems Notification</b>
<b>Target Audience:</b>	<b>CLECs, Resellers</b>
<b>Subject:</b>	<b>Final Announcement / Reminder – Resale Product Database Retirement</b>
<b>Associated CR# or System Name and Number</b>	<b>Qwest CR# SCR 062105-01</b>

Qwest is sending this notice as a thirty day reminder courtesy notice regarding the retirement of the Resale Product Database (RPD) scheduled for April 29, 2006. Effective on this date, all references to the RPD, including associated links to the system and corresponding documentation, will be removed from the Qwest Web site (<http://www.qwest.com/>).

Please note that this is the final **systems** notice regarding retirement of the RPD. Any corresponding PCAT documentation changes will be announced through the Product/Process notification protocols.

On August 2, 2005, Qwest notified the customer community of its intent to retire the Resale Product Database (RPD). Qwest sent systems notification number SYST.08.02.05.F.03156.RPDRetire1stNotImpPlan advising of the retirement, and to provide the retirement plan. On August 3, 2005, Qwest issued related notification SYST.08.03.05.F.03159.RPDRetire1stNotCorrection to correct a date related to the comment cycle.

In notification SYST.08.02.05.F.03156.RPDRetire1stNotImpPlan, Qwest stated that, effective April 29, 2006, Qwest will retire the Resale Product Database (RPD) from the list of Operational Support Systems (OSS). With the retirement of the RPD, reference to the RPD will be removed from the Qwest Operations Support System (OSS) Release Calendar and the Change Request form.

Additional information associated with SCR 062105-01 can be found at <http://www.qwest.com/wholesale/cmp/changerequest.html>.

### **Rationale for Retirement and Alternative Information Channels**

1. Qwest is retiring the RPD as part of an overall business strategy to streamline documentation processes and to gain efficiencies in the way documentation is maintained and presented externally. As cited in AI031903-1, *Qwest has already undertaken efforts to provide critical customer information in other documentation including the Product Catalogs (PCATs), business procedures, and Local Service Ordering Guidelines (LSOG).*

As part of the RPD retirement timeline, should a CLEC discern that information in the RPD is not captured in Qwest's other documentation, Qwest has established protocols for requesting updates to those documents. Information on the process, and forms for submitting requested updates, are available on Qwest's Wholesale Web site at <http://www.qwest.com/wholesale/customerService/clecs.html>

2. Qwest believes that the RPD has become a low-utility tool. Based on access data, Qwest concludes that the other vehicles are the preferred information source for customers, and that minimal requests to access the RPD do not justify

Announcement Date:

its continued maintenance.

If you have any questions on this subject, please submit comments through the following link:  
<http://www.qwest.com/wholesale/cmp/comment.html>.

Qwest will continue on schedule for the retirement of the RPD. The timeline appears below.

**Timeline:**

Courtesy Reminder Notice Issued	As a courtesy, 30 days prior to the official retirement, Qwest will publish a Systems notification reminder to the CLEC community.	March 29, 2006
Targeted Retirement Date		April 29, 2006

Sincerely,

Qwest Corporation

Note: In cases of conflict between the changes implemented through this notification and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. ## Qwest Response to Document In Review

**Response Date:** September 13, 2005  
**Document:** Systems: SYST.09.13.05.F.03272.RPDRetireFinNot\_CommRspns  
**Original Notification Date:** August 02, 2005  
**Original Notification Number:** SYST.08.02.05.F.03156.RPDRetire1stNotImpPlan

Qwest recently proposed retirement of the Resale Product Database (RPD). CLECs were invited to provide comments to these proposed changes during a Document Review period from *August 2, 2005* through August 17, 2005. The information listed below is Qwest's Response to CLEC comments provided during the review/comment cycle.

#	Page/Section	CLEC Comment	Qwest Response
1	N/A	Eschelon 08/17/05 During the Ad hoc call on August 17, 2005, Eschelon raised concerns that in Iowa, and maybe Colorado, there was litigation regarding discriminating access to Qwest's M&Ps, to assure that the M&Ps were not discriminatory and different than the Process that Wholesale uses. Eschelon objected to Qwest retiring the database based on the view that there was existing litigation to not discriminate.	Qwest has researched the verbal objection raised by Eschelon in regards to the retirement of RPD and a non-discrimination obligation and has responded directly to them with our findings. Qwest believes it is in compliance with our obligations through our existing PCATs, Business Procedures and LSOG documentation and plans to move forward with the retirement of RPD in April 2006.

**EXHIBIT 101**

**Announcement Date:** May 06, 2003  
**Effective Date:** May 27, 2003

**Document Number:** PROS.05.06.03.F.01079.Expedite\_Escalation  
**Notification Category:** Process Notification  
**Target Audience:** CLEC, Resellers

**Subject:** CMP - Expedites & Escalations Overview V6.0

**Level of Change:** Level 2  
**Associated CR Number or System Release Number:** Not Applicable

**Summary of Change:**

On May 6, 2003, Qwest will post planned updates to its Wholesale Product Catalog that include new/revised documentation for Expedites & Escalations Overview V6.0. These will be posted to the Qwest Wholesale Document Review Site located at <http://www.qwest.com/wholesale/cmp/review.html>.

Updates to this document are associated with an existing process not previously documented. In the Expedites section, medical emergency has been added to the list of reasons for Expedites.

Current operational documentation for this product or business procedure is found on the Qwest Wholesale Web Site at this URL: <http://www.qwest.com/wholesale/clecs/exesclover.html>.

**Comment Cycle:**

CLEC customers are encouraged to review these proposed changes and provide comment at any time during the 7-day comment review period. Qwest will have seven days following the close of the comment review to respond to any CLEC comments.

Qwest provides an electronic means for CLEC customers to comment on proposed changes. The Document Review web site provides a list of all documents that are in the review stage, the process for CLECs to use to comment on documents, the submit comment link, and links to current documentation and past review documents. The Document Review Web Site is found at <http://www.qwest.com/wholesale/cmp/review.html>. Fill in all required fields and be sure to reference the Notification Number listed above.

**Timeline**

Planned Updates Posted to Document Review Site	Available May 06, 2003
CLEC Comment Cycle on Documentation Begins	Beginning May 07, 2003
CLEC Comment Cycle Ends	5:00 PM, MT May 13, 2003
Qwest Response to CLEC Comments (if applicable)	Available May 20, 2003 <a href="http://www.qwest.com/wholesale/cmp/review_archive.html">http://www.qwest.com/wholesale/cmp/review_archive.html</a>
Proposed Effective Date	May 27, 2003

If you have any questions on this subject, please submit comments though the following link:  
<http://www.qwest.com/wholesale/cmp/comment.html>

Sincerely,

Qwest

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. All information provided on the site describes current activities and process. Prior to any modifications to existing activities or processes described on the web site, wholesale customers will receive written notification announcing the upcoming change.

## Expedites & Escalations Overview – ~~V5.0~~V6.0

[History Log](#) (Link blue text to: [Replace Existing Download With Attached History Log](#))

### Introduction

Qwest quickly responds to your escalation or expedite requests offering you clear and complete explanations so you can satisfactorily respond to your end-users.

- Expedites: Requests for an improved standard interval, Individual Case Basis (ICB) or committed to ICB (Ready for Service (RFS) + Interval) date
- Escalations: Requests for status or intervention around a missed date

The following summarizes the processes used within Qwest for all Wholesale Products and Services to handle expedite and escalation requests.

### Expedites

While Qwest standard intervals, defined in our [Service Interval Guide \(SIG\)](#) (Link blue text to: <http://www.qwest.com/wholesale/guides/sig/index.html>) identify reasonable intervals, at times a valid expedite situation can occur such as:

- Fire
- Flood
- [Medical emergency](#)
- National emergency
- Conditions where your end-user is completely out of service (primary line)
- Disconnect in error by Qwest
- Requested service necessary for your end-user's grand opening event delayed for facilities or equipment reasons with a future RFS date
- Delayed orders with a future RFS date that meet any of the above described conditions

If an expedite situation occurs, call the assigned Qwest Wholesale Center Representative responsible for processing your service requests. All expedite requests require approval to ensure resource availability. The Qwest Wholesale Center Representative will coordinate with you and Qwest internal organizations to resolve. Expedite charges may apply. If your expedite request is denied, denial reason(s) will be provided.

[Back to Top](#)

### Escalations

Escalations are a request for status or intervention around a missed critical date such as:

- Plant Test Date (PTD)
- Due Date (DD)
- Ready For Service (RFS)

Qwest's Service Centers pro-actively escalate any critical dates in jeopardy and will notify you. If, however, you find it necessary to initiate an escalation, call the assigned Qwest Wholesale Center Representative responsible for processing your orders, for assistance. Regardless of how initiated, by you or internally, Qwest escalation roles and responsibilities can be summarized as:

- Qwest Wholesale Center Representatives  
Local Service Request (LSR) or Access Service Request (ASR) escalations related to Rejects/Delayed orders, critical dates and Firm Order Confirmations (FOC).
- Qwest Service Manager

## Qwest Response to Document In Review

**Response Date:** May 20, 2003  
**Document:** Product/Process: Expedites & Escalations Overview V6.0  
**Original Notification Date:** May 6, 2003  
**Notification Number:** PROS.05.06.03.F.01079.Expedite\_Escalation  
**Category of Change:** Level 2

Qwest recently posted proposed updates to Expedites & Escalations Overview V6.0. CLECs were invited to provide comments to these proposed changes during a Document Review period from May 7, 2003 through May 13, 2003. The information listed below is Qwest's Response to CLEC comments provided during the review/comment cycle.

## Qwest Response to Product/Process: Expedites & Escalations Overview V6.0 Comments

#	Page/Section	CLEC Comment	Qwest Response
1		<i>Name of CLEC:AT&amp;T            Date received: 5/6/03            Comment: Please update the ordering rules in the Disclosure Documents as well. AT&amp;T has been instructed to place the expedite situation (such as Medical Expedite) in the remarks field and set the manual indicator to "Y".            As May 6, the LSR EXP field in the IMA EDI disclosure states: If EXP + "Y", the MANUAL IND should = "N".</i>	<p>The current process for Expedites will not change. "Medical emergency" is a valid Expedite reason that was not previously documented. The PCAT updates were clarifying updates only in order to provide an additional valid reason to request an expedite.</p> <p>Placing a "Y" in the EXP field of the Local Service (LSR) forces the order to be handled manually. It is not necessary to place a "Y" in the Manual Indicator field. The REMARKS field can be used to expand upon and clarify the specific reason for the request.</p> <p>The PCAT is being updated to clarify the actions for Expedite situations.</p> <p>Qwest accepts this comment.</p>
2		<i>Name of CLEC:AT&amp;T            Date received: 5/12/03</i>	<p>Based on the comments received, the PCAT updates were clarifying updates only in order to</p>

Note: In cases of conflict between the changes implemented through this notification and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. All information provided on the site describes current activities and process. Prior to any modifications to existing activities or processes described on the web site, wholesale customers will receive written notification announcing the upcoming change.

		<p>Comment: AT&amp;T is not satisfied with this change to the maintenance and repair language. AT&amp;T requested a CR to document the medical expedite process. This document still does not document that process. If the specifics for the ordering process should be contained in another document, i.e. the EDI disclosure document, then there should be a direct reference and link to that site. We have had several meetings with Qwest to outline the specifics of the medical expedite process, and none of that information is contained in this PCAT, not the disclosure document for EDI, not other PCATs for ordering and provisioning. It has taken AT&amp;T approximately 5 and a half months to get the information we have been requesting, and still it is not documented.</p>	<p>provide additional information.</p> <p>The current process for Expedites will not change. "Medical emergency" is a valid Expedite reason that was not previously documented.</p> <p>The PCAT is being updated to clarify the actions for Expedite situations along with a link to the field entry requirements in the Local Service Ordering Guide (LSOG).</p> <p>Qwest accepts this comment.</p>

**Document Number:** PROS.09.12.05.F.03242.Expedites\_Escalations\_V27  
**Notification Category:** Process Notification  
**Target Audience:** CLECs, Resellers  
**Subject:** CMP - Expedites and Escalations V27  
**Level of Change:** Level 3  
**Associated CR Number or System:** Not Applicable  
**Release Number:**

**Summary of Change:**

On September 12, 2005, Qwest will post planned updates to its Wholesale Product Catalog that include new/revised documentation for Expedites and Escalations V27. These will be posted to the Qwest Wholesale Document Review Site located at <http://www.qwest.com/wholesale/cmp/review.html>.

Qwest is changing its Expedite process to include all loop types in order to create consistencies across the product line. 2w/4w analog loops are no longer an exception in the Pre-Approved Expedite process. Additionally, Qwest is also including requests for Port In/Port Within that are associated with one of applicable designed services that are already included in the Pre-Approved Expedite Process. Customers who currently have an expedite amendment will automatically be included in this change.

Current operational documentation for this product or business procedure is found on the Qwest Wholesale Web Site at this URL: <http://www.qwest.com/wholesale/clecs/exesclover.html>.

**Comment Cycle:**

CLEC customers are encouraged to review these proposed changes and provide comment at any time during the 15-day comment review period. Qwest will have up to 15 days following the close of the comment review to respond to any CLEC comments. This response will be included as part of the final notification. Qwest will not implement the change sooner than 15 days following the final notification.

Qwest provides an electronic means for CLEC customers to comment on proposed changes. The Document Review Web Site provides a list of all documents that are in the review stage, the process for CLECs to use to comment on documents, the submit comment link, and links to current documentation and past review documents. ## Expedites and Escalations Overview – ~~V26.0~~V27.0

*History Log* (Link italicized text to: [Replace Existing Download With Attached History Log](#))

### Introduction

Qwest quickly responds to your escalation or expedite requests offering you clear and complete explanations so you can satisfactorily respond to your end-users.

- Expedites are requests for an improved standard interval that is shorter than the interval defined in our [Service Interval Guide \(SIG\)](#) (Link italicized text to: <http://www.qwest.com/wholesale/guides/sig/index.html>) or your interconnection Agreement (ICA), Individual Case Basis (ICB) or committed to ICB (Ready for Service (RFS) + Interval) date.
- Escalations can be initiated for any issue, at anytime, and at any escalation point. Escalations can also be for requests for status or intervention around a missed date.

The following summarizes the processes used within Qwest for all Wholesale Products and Services to handle expedite and escalation requests.

### Expedites

Requesting an expedite follows one of two processes, depending on the product being requested and the language in your Interconnection Agreement (ICA). If the request being expedited is for a product on the list of products in the “Pre-Approved Expedites” (see below) and your ICA has language supporting expedited requests with a “per day” expedite rate, then the requested does not need approval. If the request being expedited is for a product that is not on the defined list, or your ICA does not support a “per day” expedite rate, then the expedited request follows the process defined in the “Expedites Requiring Approval” section below.

#### Expedites Requiring Approval

For products not listed in the Pre-Approved Expedite section below, (non-designed products such as POTS, Centrex or DSL service), or if your ICA does not contain, or has not been amended to include language for expedites with an associated “per day” expedite rate for those specified designed services, the following expedite process applies. Expedite charges are not applicable with the Expedites Requiring Approval process.

Following is a list of conditions where an expedite is granted:

- Fire
- Flood
- Medical emergency
- National emergency
- Conditions where your end-user is completely out of service (primary line)
- Disconnect in error by Qwest
- Requested service necessary for your end-user’s grand opening event delayed for facilities or equipment reasons with a future RFS date
- Delayed orders with a future RFS date that meet any of the above described conditions
- National Security
- Business Classes of Service unable to dial 911 due to previous order activity
- Business Classes of Service where hunting, call forwarding or voice mail features are not working correctly due to previous order activity where the end-users business is being critically affected

For any of the above conditions, expedited request can be made either prior to, or after, submitting your service request.

To request an expedite on a Local Service Request (LSR) you can either:

- Submit the request with your expedited due date and populate the EXP field. Also include in REMARKS the reason for the expedited request and then call the Qwest Call Center.
- Submit the request with a due date interval from our [SIG \(Link italicized text to: http://www.qwest.com/wholesale/guides/sig/index.html\)](http://www.qwest.com/wholesale/guides/sig/index.html) or your ICA and then call the Qwest Call Center.

In both scenarios, a call to the Qwest Call Center is required on 1-888-796-9087 to process the expedited request.

To request an expedite on service requests issued via an Access Service Request (ASR), you may use either of the options described above for LSRs to submit the ASR. You should then call 1 800-244-1271

You may be asked to provide verification of the expedited reason or situation for any of the expedite reasons listed above. In some cases, you may be asked for the service order number that caused the expedite condition, such as the service order number that caused the hunting or call forwarding expedite. The type of verification required will depend on the specific circumstances of the expedite and will be determined on an Individual Case Basis (ICB).

Once your expedite request is received, your Wholesale representative will review the request based on the previous list of available expedite scenarios to determine if the request is eligible for an expedite. If approved, the next step is to contact our Network organization to determine resource availability.

Depending on the type of service on the account, the following action is taken once the request is determined to be eligible for an expedited due date:

#### **Non-Designed/No Dispatch Required**

For requests that do not require a dispatch, the order is issued with the expedited due date.

#### **Non-Designed/Dispatch Required**

For requests that require a dispatch, the Network organization is contacted to determine Technician availability. If appointments are available on the requested due date, your expedite is granted. If no appointments are available, then Qwest will offer an alternative date, if one is available, prior to the requested due date. You can expect to receive a response to your expedited request usually within four business hours.

#### **Designed Services**

For Designed Services, the Network organization is contacted to determine resource availability for the Central Office and Outside Technicians as well as for the Testers that work with you to accept the service. You can expect to receive a response usually within four business hours.

#### **Approved Expedited Requests**

If the expedited request is approved and the original request contained the expedited due date and the EXP field was populated, Qwest will return a Firm Order Confirmation (FOC) acknowledging the agreed to expedited due date. If the expedited or agreed to due date is different from what was originally submitted on the ASR or LSR, Qwest will contact you and request that you supplement your request with the agreed to expedited date. The EXP field on the supplement ASR or LSR must also be populated. If the supplement is not received within

four business hours, Qwest will continue to process the ASR or LSR as if the expedited request was not received and will FOC back the standard interval or the original due date provided on the ASR or LSR if it was longer than the standard interval.

### Denied Expedited Requests

If denied, then we will provide you reasons that the request was denied or we will offer an alternative date that we could install the service. If the request is denied, and you still want to continue to have Qwest provision the service request, Qwest will return a FOC with the standard interval or the original due date provided on the FOC if it was longer than the standard interval.

### Pre-Approved Expedites

The Pre-Approved expedite process is available in all states except Washington for the products listed below when your ICA contains language for expedites with an associated per day expedite charge. An expedite charge applies per ASR or LSR for every day that the due date interval is improved, based on the standard interval in the SIG, ICA, or ICB criteria as described above. It is not necessary for you to call into Qwest to have the expedite approved. To expedite a service request on an ASR or LSR you must populate the EXP field and put the desired expedited due date in the DDD field on the ASR or LSR.

NOTE: If you order Resold Design Products, which are identified below, you do not need to sign an amendment. You are automatically included based on the terms and conditions outlined in the ICA and individual state tariffs, catalogs or price lists.

When Qwest receives an ASR or LSR with the EXP populated and the DDD is less than the standard interval, Qwest will determine if the request is eligible for an expedite without a call from you. If the request meets the criteria for the Pre-Approved Expedite process, Qwest will process the request and return a FOC acknowledging the expedited due date. The appropriate expedite charge will be added to your service order.

If the request does not meet the criteria for the Pre-Approved Expedite process, the ASR or LSR will be processed under the guidelines for Expedites Requiring Approval as described above.

Following is a list of the products, which require an amendment and may be expedited that will receive the appropriate Expedite Charge:

- UBL ~~all except 2w/4w analog~~
- UBL DID (Unbundled digital trunk)
- UBL DS1 (Unbundled digital trunk facility)
- UNE-C PL (EEL)
- UNE-P ISDN BRI
- UNE-P DSS Facility
- UNE-P DSS Trunk
- UNE-P PRI ISDN Facility
- UNE-P PRI ISDN Trunk
- UNE-P PBX Designed Trunks
- UNE-P PBX DID IN-Only Trunks
- Port In/Port Within associated with any of the applicable designed products listed above
- UDIT
- LIS
- CCSAC SS7 Trunk or Facility
- Unbundled Dark Fiber

Following is a list of Resold Designed Products, which do not require an amendment, which may be expedited and will receive the appropriate expedite charge:

- Analog PBX DID
- Private Line (DS0, DS1, DS3 or above)
- ISDN PRI T1
- ISDN PRI Trunk
- ISDN BRI Trunk
- Frame Relay Trunk
- DESIGNED TRUNKS (Includes designed PBX trunks) Trunk
- MDS / MDSI (*IIS Only*)
- DPAs (multiple DPAs or FX, FCO) Trunk
- Port In/Port Within associated with any of the applicable designed products listed above

Note: Any requests that are expedited due to a Qwest caused reason, do not incur an expedite charge. Additionally, if the due date of an expedited request is missed due to Qwest reasons, expedite charges do not apply.

If the order becomes a Delayed Order on the due date, Qwest will cooperatively work with you to obtain the best Ready For Service date (RFS) possible and expedite charges do not apply.

If an order becomes delayed for facilities prior to the due date, once Qwest establishes a new RFS it is communicated to you via the FOC. If you do not accept the due date that is established and request to expedite the RFS, expedite charges may apply. Each expedited delayed order request will be reviewed on an ICB to determine if expedite charges apply. If the expedited due date request results in Qwest incurring additional costs to improve the date that was FOC'd, expedite charges apply. Qwest will advise you if expedite charges apply prior to confirming the expedited request to obtain approval from you, or offer an alternate date that Qwest can meet. The expedite charges will be based on the number of days improved from the original RFS date.

### **Expedites Supporting Non-Qwest caused Restoral Requests**

This process includes Restoral Requests on Resale/UNE-P/Retail to Resale or UNE-P Conversions and Transfer of Service when the service orders have completed. This process applies to Resale/UNE-P POTS, Resale/UNE-S and Resale UNE-P Centrex 21 products, including DSL.

You will follow this documented **Expedite** process as outlined when you require an expedite to a standard interval in order to restore an end-user due to a Non-Qwest caused out of service condition. An expedite restoral request is a result of your inability to complete a conversion or outside move service request where you were unable to cancel or change the due date on the service order(s) prior to order completion. Restoral requests may involve you alone, a Qwest Retail account and you, or you and a different CLEC on conversion and outside move (T & F) type service order's. Restoral requests will be accepted for both full and partial restorals.

When an expedite restoral request situation occurs, refer to the following when you prepare your service request:

- Issue the Restoral Request LSR as directed per the Decision Charts and order type scenario's.
  - Populate the RPON field with the PON used on the original LSR if available
  - Populate the EXP field
  - Populate Manual IND = Y
  - The REMARKS field can be populated with the specific reason for the request such as:

**Qwest Response to Document In Review**

**Response Date:** October 12, 2005  
**Document:** Process Notification  
**Original Notification Date:** September 12, 2005  
**Notification Number:** PROS.09.12.05.F.03242.Expedites\_Escalations\_V27  
**Category of Change:** Level 3

Qwest recently posted proposed updates to Expedites and Escalations V27. CLECs were invited to provide comments to these proposed changes during a Document Review period from September 13, 2005 through September 27, 2005. The information listed below is Qwest's Response to CLEC comments provided during the review/comment cycle.

**Qwest Response to Product/Process Expedites and Escalations V27 Comments**

#	Page/Section	CLEC Comment	Qwest Response
1		<i>Eschelon</i> September 13, 2005 Comment: PROS.09.12.05.F.03242.Expedites_Escalations_V27, indicates that 2/4 Wire Analog Loops will be added as a valid product to the Pre-Approved Expedite Process. What is the rate for a 2/4 Wire Analog Loop Pre-Approved Expedite? Thank you.	The rate for a 2/4 Wire Analog Loop Pre-Approved Expedite is outlined in the Expedite Agreement rate sheet that can be reviewed in the Negotiation Template Agreement at this URL: <a href="http://www.qwest.com/wholesale/clecs/sqats_wireline.html">http://www.qwest.com/wholesale/clecs/sqats_wireline.html</a> .

Escalation

Company: McLeodUSA

CR#: PROS.09.12.05.F.03242.Expedites\_Escalations\_V27

Status Code: Completed

=====

Description:

2w/4w analog loops are no longer an exception in the Pre-Approved Expedite process. Thus Qwest will begin charging \$200 per circuit per day expedite fee instead of following the existing process of approving expedites based upon the Expedites Requiring Approval process.

History of Item:

McLeodUSA was not even aware this issue was on table for discussion.

Reason for Escalation / Dispute:

McLeodUSA wants 2w/4w loops to remain in the Expedites Requiring Approval process and thus incur no charges for an approved expedite.

Business Need and Impact:

Makes it almost impossible for McLeodUSA to expedite with such a high charge for just 2w/4w loop service.

Desired CLEC Resolution:

McLeodUSA wants 2w/4w loops to remain in the Expedites Requiring Approval process and thus incur no charges for an approved expedite.

=====

Escalation #39 Regarding PROS.09.12.05.F.03242.Expedites\_Escalations\_V27

November 4, 2005

James LeBlanc  
McLeodUSA

Subject: McLeodUSA Escalation on  
PROS.09.12.05.F.03242.Expedites\_Escalations\_V27

This letter is Qwest's binding response to your October 27, 2005 escalation regarding PROS.09.12.05.F.03242.Expedites\_Escalations\_V27, which changed the expedite process to include 2w/4w analog loops.

Qwest has reviewed the formal escalation and maintains its position to include 2w/4w analog loops in the expedite process.

We researched McLeod's comments regarding not being aware that the issue was on the table for discussion, Qwest sent notification PROS.09.12.05.F.03242.Expedites\_Escalations\_V27 to the CLEC community on September 12, 2005. With that notification, Qwest also included a summary of the changes that were planned to occur and also made available a red-lined copy of the updated PCAT.

As part of the notification, Qwest provided the following summary:

Qwest is changing its Expedite process to include all loop types in order to create consistencies across the product line. 2w/4w analog loops are no longer an exception in the Pre-Approved Expedite process. Additionally, Qwest is also including requests for Port In/Port Within that are associated with one of applicable designed services that are already included in the Pre-Approved Expedite Process. Customers who currently have an expedite amendment will automatically be included in this change.

CLEC customers were encouraged to review the proposed changes and provide comment at any time during the 15-day comment review period, which ended at 5:00 PM, MT September 27, 2005. Qwest only received one comment associated with this change, questioning what the rate would be and Qwest responded to those comments on October 12, 2005, (Pros.10.12.05.f.03344.final\_exp\_escl\_v27), pointing customers to the negotiations template.

In response to McLeod's concern around the costs associated with an expedited request; discussion around rates associated with an Interconnection Agreement are outside the scope of the CMP process.

Qwest maintains its position that 2w/4w analog loops be included in the pre-approved expedite process to create consistencies across the UBL product line as well as other products that follow the designed services flow.

**Subject:** Escalation #39 PROS.09.12.05.F.03242.Expedites\_Escalations\_V27

Hi Jill,  
I am fairly certain that Eschelon joined this escalation but I do not see a list of CLECs that joined the escalation posted on the Qwest website. Where can I find the list of CLECs that joined an escalation? Also, can you confirm that Eschelon joined Escalation #39? Thanks.

**To:** Isaacs, Kimberly D.  
**Subject:** FW: Escalation Response posted to web

Hi Kim,

Qwest does not formally post the escalation participants on the external web; however, we do show that Eschelon did join the escalation. Per our discussions at CMP, and the subsequent change to the CMP document, we did include the escalation participants in our response. Following is a copy of the email that was sent. If you have additional questions, please let me know.

Regards,  
Jill Martain

**EXHIBIT 103**

**Announcement Date:** October 19, 2005  
**Proposed Effective Date:** January 3, 2006  
**Document Number:** PROS.10.19.05.F.03380.ExpeditesEscalationsV30  
**Notification Category:** Process Notification  
**Target Audience:** CLECs, Resellers  
**Subject:** CMP - Expedites and Escalations V30  
**Level of Change:** Level 3

**Summary of Change:**

On October 19, 2005, Qwest will post planned updates to its Wholesale Product Catalog that include new/revised documentation for Expedites and Escalations V30. These will be posted to the Qwest Wholesale Document Review Site located at <http://www.qwest.com/wholesale/cmp/review.html>.

Qwest is changing its Expedite process to require an expedite amendment to be signed for expedited requests that involve products that follow the designed services flow in order to bring parity across its entire customer base. Qwest recognizes that time is required for some customers to get amendments signed and is therefore extending the implementation of the Level 3 process change beyond the allotted 45 day time frame.

Current operational documentation for this product or business procedure is found on the Qwest Wholesale Web Site at this URL: <http://www.qwest.com/wholesale/clecs/exesclover.html>.

**Comment Cycle:**

CLEC customers are encouraged to review these proposed changes and provide comment at any time during the 15-day comment review period. Qwest will have up to 15 days following the close of the comment review to respond to any CLEC comments. This response will be included as part of the final notification. Qwest will not implement the change sooner than 15 days following the final notification.

Qwest provides an electronic means for CLEC customers to comment on proposed changes. The Document Review Web Site provides a list of all documents that are in the review stage, the process for CLECs to use to comment on documents, the submit comment link, and links to current documentation and past review documents. The Document Review Web Site is found at <http://www.qwest.com/wholesale/cmp/review.html>. Fill in all required fields and be sure to reference the Notification Number listed above.

**Timeline:**

Planned Updates Posted to Document Review Site	Available October 19, 2005
CLEC Comment Cycle on Documentation Begins	Beginning October 20, 2005
CLEC Comment Cycle Ends	5:00 PM, MT November 03, 2005

Qwest Response to CLEC Comments (if applicable)	Available November 18, 2005 <a href="http://www.qwest.com/wholesale/cmp/review_archive.html">http://www.qwest.com/wholesale/cmp/review_archive.html</a>
Proposed Effective Date	January 3, 2006

If you have any questions on this subject, please submit comments through the following link:  
<http://www.qwest.com/wholesale/cmp/comment.html>.

Sincerely

Qwest Corporation

Note: In cases of conflict between the changes implemented through this notification and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. All information provided on the site describes current activities and process. Prior to any modifications to existing activities or processes described on the web site, wholesale customers will receive written notification announcing the upcoming change.

## Expedites and Escalations Overview – [V29-0V30.0](#)

*History Log* ([Link italicized text to: Replace Existing Download With Attached History Log](#))

### Introduction

Qwest quickly responds to your escalation or expedite requests offering you clear and complete explanations so you can satisfactorily respond to your end-users.

- Expedites are requests for an improved standard interval that is shorter than the interval defined in our [Service Interval Guide \(SIG\)](#) ([Link italicized text to: <http://www.qwest.com/wholesale/guides/sig/index.html>](#)) or your interconnection Agreement (ICA), Individual Case Basis (ICB) or committed to ICB (Ready for Service (RFS) + Interval) date.
- Escalations can be initiated for any issue, at anytime, and at any escalation point. Escalations can also be for requests for status or intervention around a missed date.

The following summarizes the processes used within Qwest for all Wholesale Products and Services to handle expedite and escalation requests.

### Expedites

Requesting an expedite follows one of two processes, depending on the product being requested ~~and the language in your Interconnection Agreement (ICA).~~ If the request being expedited is for a product ~~on the list of products contained~~ in the “Pre-Approved Expedites” ~~section below(see below),~~ and your ICA ~~has must contain~~ language supporting expedited requests with a “per day” expedite rate, ~~then the requested does not need approval.~~ If the request being expedited is for a product that is not on the defined list, ~~or your ICA does not support a “per day” expedite rate,~~ then the expedited request follows the process defined in the “Expedites Requiring Approval” section below.

#### Expedites Requiring Approval

For products not listed in the Pre-Approved Expedite section below, (non-designed products such as POTS, Centrex or DSL service), or if your ICA does not contain, or has not been amended to include language for expedites with an associated “per day” expedite rate for those specified designed services, the following expedite process applies. Expedite charges are not applicable with the Expedites Requiring Approval process.

Following is a list of conditions where an expedite is granted:

- Fire
- Flood
- Medical emergency
- National emergency
- Conditions where your end-user is completely out of service (primary line)
- Disconnect in error by Qwest
- Requested service necessary for your end-user’s grand opening event delayed for facilities or equipment reasons with a future RFS date
- Delayed orders with a future RFS date that meet any of the above described conditions
- National Security
- Business Classes of Service unable to dial 911 due to previous order activity
- Business Classes of Service where hunting, call forwarding or voice mail features are not working correctly due to previous order activity where the end-users business is being critically affected

For any of the above conditions, expedited request can be made either prior to, or after, submitting your service request.

To request an expedite on a Local Service Request (LSR) you can either:

- Submit the request with your expedited due date and populate the EXP field. Also include in REMARKS the reason for the expedited request and then call the Qwest Call Center.
- Submit the request with a due date interval from our [SIG \(Link italicized text to: http://www.qwest.com/wholesale/guides/sig/index.html\)](http://www.qwest.com/wholesale/guides/sig/index.html) or your ICA and then call the Qwest Call Center.

In both scenarios, a call to the Qwest Call Center is required on 1-888-796-9087 to process the expedited request.

To request an expedite on service requests issued via an Access Service Request (ASR), you may use either of the options described above for LSRs to submit the ASR. You should then call 1 800-244-1271

You may be asked to provide verification of the expedited reason or situation for any of the expedite reasons listed above. In some cases, you may be asked for the service order number that caused the expedite condition, such as the service order number that caused the hunting or call forwarding expedite. The type of verification required will depend on the specific circumstances of the expedite and will be determined on an Individual Case Basis (ICB).

Once your expedite request is received, your Wholesale representative will review the request based on the previous list of available expedite scenarios to determine if the request is eligible for an expedite. If approved, the next step is to contact our Network organization to determine resource availability.

Depending on the type of service on the account, the following action is taken once the request is determined to be eligible for an expedited due date:

#### **Non-Designed/No Dispatch Required**

For requests that do not require a dispatch, the order is issued with the expedited due date.

#### **Non-Designed/Dispatch Required**

For requests that require a dispatch, the Network organization is contacted to determine Technician availability. If appointments are available on the requested due date, your expedite is granted. If no appointments are available, then Qwest will offer an alternative date, if one is available, prior to the requested due date. You can expect to receive a response to your expedited request usually within four business hours.

#### **Designed Services**

For Designed Services, the Network organization is contacted to determine resource availability for the Central Office and Outside Technicians as well as for the Testers that work with you to accept the service. You can expect to receive a response usually within four business hours.

#### **Approved Expedited Requests**

If the expedited request is approved and the original request contained the expedited due date and the EXP field was populated, Qwest will return a Firm Order Confirmation (FOC) acknowledging the agreed to expedited due date. If the expedited or agreed to due date is different from what was originally submitted on the ASR or LSR, Qwest will contact you and request that you supplement your request with the agreed to expedited date. The EXP field on the supplement ASR or LSR must also be populated. If the supplement is not received within

four business hours, Qwest will continue to process the ASR or LSR as if the expedited request was not received and will FOC back the standard interval or the original due date provided on the ASR or LSR if it was longer than the standard interval.

### Denied Expedited Requests

If denied, then we will provide you reasons that the request was denied or we will offer an alternative date that we could install the service. If the request is denied, and you still want to continue to have Qwest provision the service request, Qwest will return a FOC with the standard interval or the original due date provided on the FOC if it was longer than the standard interval.

### Pre-Approved Expedites

The Pre-Approved expedite process is available in all states except Washington for the products listed below when your ICA contains language for expedites with an associated per day expedite charge.

**Note: Resold Designed products are automatically included based on the terms and conditions outlined in the ICA and individual state tariffs, catalogs or price lists.**

**For products other than the Resold Design products identified below, if your contract does not contain the appropriate expedite language, you will not be able to expedite the request unless the expedite is due to a Qwest caused reason.**

**The Expedites Requiring Approval section of this procedure does not apply to any of the products listed below (unless you are ordering services in the state of WA).**

An expedite charge applies per ASR or LSR for every day that the due date interval is improved, based on the standard interval in the SIG, ICA, or ICB criteria as described above. It is not necessary for you to call into Qwest to have the expedite approved. To expedite a service request on an ASR or LSR you must populate the EXP field and put the desired expedited due date in the DDD field on the ASR or LSR.

~~NOTE: If you order Resold Design Products, which are identified below, you do not need to sign an amendment. You are automatically included based on the terms and conditions outlined in the ICA and individual state tariffs, catalogs or price lists.~~

When Qwest receives an ASR or LSR with the EXP populated and the DDD is less than the standard interval, Qwest will determine if the request is eligible for an expedite without a call from you. If the request meets the criteria for the Pre-Approved Expedite process, Qwest will process the request and return a FOC acknowledging the expedited due date. The appropriate expedite charge will be added to your service order.

If the request does not meet the criteria for the Pre-Approved Expedite process, the ASR or LSR will be processed ~~under the guidelines for Expedites Requiring Approval as described above~~ using the standard interval that is defined in the *Standard Interval Guide for Resale, UNE and Interconnection Services* (Link italicized text to: <http://www.qwest.com/wholesale/guides/sig/index.html>).

Following is a list of the products, which require ~~an amendment~~ expedite language in the ICA and may be expedited that will receive the appropriate Expedite Charge:

- UBL all except 2w/4w analog

- UBL DID (Unbundled digital trunk)
- UBL DS1 (Unbundled digital trunk facility)
- UNE-C PL (EEL)
- UNE-P ISDN BRI
- UNE-P DSS Facility
- UNE-P DSS Trunk
- UNE-P PRI ISDN Facility
- UNE-P PRI ISDN Trunk
- UNE-P PBX Designed Trunks
- UNE-P PBX DID IN-Only Trunks
- UDIT
- LIS
- CCSAC SS7 Trunk or Facility
- Unbundled Dark Fiber

Following is a list of Resold Designed Products, which do not require an amendment, which may be expedited and will receive the appropriate expedite charge:

- Analog PBX DID
- Private Line (DS0, DS1, DS3 or above)
- ISDN PRI T1
- ISDN PRI Trunk
- ISDN BRI Trunk
- Frame Relay Trunk
- DESIGNED TRUNKS (Includes designed PBX trunks) Trunk
- MDS / MDSI (*IIS Only*)
- DPAs (multiple DPAs or FX, FCO) Trunk

Note: Any requests that are expedited due to a Qwest caused reason, do not incur an expedite charge. Additionally, if the due date of an expedited request is missed due to Qwest reasons, expedite charges do not apply.

If the order becomes a Delayed Order on the due date, Qwest will cooperatively work with you to obtain the best Ready For Service date (RFS) possible and expedite charges do not apply.

If an order becomes delayed for facilities prior to the due date, once Qwest establishes a new RFS it is communicated to you via the FOC. If you do not accept the due date that is established and request to expedite the RFS, expedite charges may apply. Each expedited delayed order request will be reviewed on an ICB to determine if expedite charges apply. If the expedited due date request results in Qwest incurring additional costs to improve the date that was FOC'd, expedite charges apply. Qwest will advise you if expedite charges apply prior to confirming the expedited request to obtain approval from you, or offer an alternate date that Qwest can meet. The expedite charges will be based on the number of days improved from the original RFS date.

### **Expedites Supporting Non-Qwest caused Restoral Requests**

This process includes Restoral Requests on Resale/UNE-P/Retail to Resale or UNE-P Conversions and Transfer of Service when the service orders have completed. This process applies to Resale/UNE-P POTS, Resale/UNE-S and Resale UNE-P Centrex 21 products, including DSL.

You will follow this documented **Expedite** process as outlined when you require an expedite to a standard interval in order to restore an end-user due to a Non-Qwest caused out of service condition. An expedite restoral request is a result of your inability to complete a conversion or outside move service request where you were unable to cancel or change the due date on the

service order(s) prior to order completion. Restoral requests may involve you alone, a Qwest Retail account and you, or you and a different CLEC on conversion and outside move (T & F) type service order's. Restoral requests will be accepted for both full and partial restorals.

When an expedite restoral request situation occurs, refer to the following when you prepare your service request:

- Issue the Restoral Request LSR as directed per the Decision Charts and order type scenario's.
  - Populate the RPON field with the PON used on the original LSR if available
  - Populate the EXP field
  - Populate Manual IND = Y
  - The REMARKS field can be populated with the specific reason for the request such as:
    - Restoral request Full, Resale to UNE-P conv, restore original service, Or
    - Restoral request, Partial, Resale to UNE-P conv, restore original service, Or
    - Restoral request, Partial, UNE-P to Resale conv, restore original service, Or
    - Restoral request, Full, Resale or UNE-P T&F, restore F location, etc., Or
    - Restoral Request, Restore original full service back to CLEC XXXX, Or
    - Restoral Request, Restore original partial service back to CLEC XXXX, Or
    - Restoral Request, Restore original F Loc service, full/partial back to old CLEC
    - Restoral Request, Disc service, restore original Retail service, full/partial
- Contact the Wholesale Interconnect Services Center (ISC) at 888 796-9087
- Open an Escalation ticket.
- Request a Warm Transfer to the Customer Service Inquiry and Education Center (CSIE) Tier 1 support group.
- Request a Restoral Request for Previous Service.
- Provide LSR ID if appropriate per Decision Chart and order type scenario's.

#### **Benefits**

- Expedited intervals for restoral of previous service
- Uniform documented process for restoral requests
- Qwest will negate the one month minimum billing on a disconnect or conversion service order as applicable.

#### **Restrictions**

- You must issue appropriate LSRs first (if directed to do so per the Decision Chart below) followed by opening a Call Center escalation ticket. Restoral requests received prior to new LSR issuance will not be accepted, excludes Qwest Retail restorals.
- Standard intervals must be used when submitting LSRs, CSIE will expedite due date appropriately for restoral
- Expedited restoral requests must be requested within 24 hours, extending into the next business day, following the LSR completion date. Restoral requests received after 3 PM will be considered next business day work activity; this includes restoral requests received after 3 PM on Saturday based on the SIG (except for DSL)."
- Service being restored must be the same type of service with same features, same TN's, etc. as was previously provisioned. Full or partial restorals are acceptable.
- Qwest will reuse facilities when the facilities are available for the restoral.
- All applicable recurring and non-recurring charges will apply, based on order completion and physical work that was completed or needs to be completed to restore service. Retail practices will apply when restoring Qwest Retail accounts.
- When a restoral involves two CLECs, it is up to you and the old CLEC to coordinate and agree upon an expedite, prior to opening up the Call Center Escalation ticket(s).
- Expedite charges may apply based upon individual interconnection agreements, state tariffs or SGATS.

The following **Order Type Scenario's** are included in this restoral process:

1. Resale / UNE-P T & F, same CLEC
2. Resale to UNE-P Conversion as is, same CLEC
3. Resale to UNE-P Conversion as specified, same CLEC
4. UNE-P to Resale Conversion as is, same CLEC
5. UNE-P to Resale Conversion as specified, same CLEC
6. Resale / UNE-P Migration to new CLEC with move via single LSR
7. Resale to UNE-P Conversion as is, to a new CLEC
8. Resale to UNE-P Conversion as specified, to a new CLEC
9. UNE-P to Resale Conversion as is, to a new CLEC
10. UNE-P to Resale Conversion as is, to a new CLEC
11. Qwest Retail to Resale / UNE-P Conversion as is
12. Qwest Retail to Resale / UNE-P Conversion as specified
13. Qwest Retail to Resale / UNE-P Conversion with move via single LSR process

<b>Decision Chart, Scenario's 1-5, Same CLEC</b>		
<b>IF</b>	<b>AND</b>	<b>THEN</b>
Conversion, Migration and/or Move Service Order has completed	You want full or partial restoral of previous service	<ul style="list-style-type: none"> <li>• Issue Restoral Request LSR as appropriate based on order scenario and order completion, such as a New Connect, Change or Conversion with or without move, Transfer of Service or Disconnect</li> <li>• Follow expedite procedures</li> </ul>

<b>Decision Chart, Scenario's 6-10, To a New CLEC</b>		
<b>IF</b>	<b>AND</b>	<b>THEN</b>
Conversion, Migration and/or Move Service Order has completed	You want full or partial restoral of previous service	<ul style="list-style-type: none"> <li>• Either the end-user, or the new CLEC and the end-user must contact the old CLEC's Customer Contact Center and request that the end-user's service be re-established as previously provisioned for the old CLEC on Resale or UNE-P service</li> <li>• Old CLEC must follow expedite procedures</li> <li>• Old CLEC will issue Restoral Request LSR as appropriate based on order scenario and order completion, such as a New Connect, Change or Conversion with or without move</li> <li>• New CLEC must follow expedite procedures</li> <li>• New CLEC will issue Disconnect LSR if required based on order scenario</li> </ul>

		<p>and order completion</p> <ul style="list-style-type: none"> <li>• Old and new CLECs will coordinate their order activity</li> <li>• Contact your Qwest Service Manager if you require assistance with old CLEC contact</li> </ul>
--	--	--

<b>Decision Chart, Scenario's 11-13, Conversion from Qwest Retail to New CLEC</b>		
<b>IF</b>	<b>AND</b>	<b>THEN</b>
Conversion, Migration and/or Move Service Order has Completed	You want full or partial restoral of previous service	<ul style="list-style-type: none"> <li>• Contact the Wholesale ISC Call Center at 888 796-9087</li> <li>• Open an Escalation ticket</li> <li>• Request a warm transfer to the CSIE Tier 1 support group</li> <li>• Place a verbal Restoral Request for Previous Retail Service, full or partial restoral</li> <li>• CSIE will advise you if a new LSR will need to be issued by you</li> <li>• If a new LSR is needed and is not issued within 2 business hours, the escalation ticket will be closed. If this occurs, the CLEC must start the expedite process again once the LSR has been issued as directed.</li> </ul>

[Back to Top](#)

## Escalations

Escalations are a request for status or intervention around a missed critical date such as:

- Plant Test Date (PTD)
- Due Date (DD)
- Ready For Service (RFS)

Qwest's Service Centers pro-actively escalate any critical dates in jeopardy and will notify you. If, however, you find it necessary to initiate an escalation, call the assigned Qwest Wholesale Center Representative at one of the numbers listed in the Expedites section for assistance. Regardless of how initiated, by you or internally, Qwest escalation roles and responsibilities can be summarized as:

- Qwest Wholesale Center Representatives  
Local Service Request (LSR) or Access Service Request (ASR) escalations related to Rejects/Delayed orders, critical dates and Firm Order Confirmations (FOC).
- Qwest Service Manager

Involved only after normal processes fail to resolve the escalation to your satisfaction. Evaluates the situation based on commitments managing associated resolution activities.

- Qwest Senior Service Manager/Director  
Involved only when the Service Manager's efforts are unsuccessful. Provides direction to those working the issue, partnering with Center Coaches and Team leaders.
- Qwest Senior Service Director/Vice President  
Contacted for direction and/or assistance for those working the escalation, providing timely status updates back to the prior level and you directly.

### Escalations – Maintenance and Repair

At your discretion, you may initiate an escalation of your trouble report through our electronic interface Customer Electronic Maintenance and Repair (CEMR) or by calling either the Account Maintenance Support Center (AMSC) for Unbundled Network Elements (UNEs) and Complex services or the Repair Call Handling Center (RCHC) for Plain Old Telephone Service (POTS) and Non-Complex services. Refer to our [Maintenance and Repair Overview](http://www.qwest.com/wholesale/clecs/maintenance.html) (Link italicized text to: <http://www.qwest.com/wholesale/clecs/maintenance.html>) for additional information. You will be referred to [Held, Escalated & Expedited Tool \(HEET\)](http://www.qwest.com/wholesale/systems/heet.html) (Link italicized text to: <http://www.qwest.com/wholesale/systems/heet.html>) for ongoing status if your service was requested on an ASR.

### Escalations – Technical Escalation Process

Additional information about the Technical Escalation Process can be obtained from Qwest's [Operations Support Systems General Information](http://www.qwest.com/wholesale/systems/generalinfo.html). (Link italicized text to: <http://www.qwest.com/wholesale/systems/generalinfo.html>)

Note: Occasionally, your end-user may find their way to the Qwest Wholesale Center or Qwest Service Manager and our Wholesale Center Representatives will explain that you are our customer and direct them to you for assistance.

Should you have questions, or need additional information related to the expedite or escalation processes defined above, contact your [Qwest Service Manager](http://www.qwest.com/wholesale/clecs/accountmanagers.html) (Link italicized text to: <http://www.qwest.com/wholesale/clecs/accountmanagers.html>) for assistance.

## Training

### Qwest 101 "Doing Business With Qwest"

This introductory instructor-led training course is designed to teach the CLEC and Reseller how to do business with Qwest. It will provide a general overview of products and services, Qwest billing and support systems, processes for submitting service requests, reports, and web resource access information. [Click here](http://www.qwest.com/wholesale/training/ilt_desc_qwest_101.html) (Link italicized text to: [http://www.qwest.com/wholesale/training/ilt\\_desc\\_qwest\\_101.html](http://www.qwest.com/wholesale/training/ilt_desc_qwest_101.html)) for course detail and registration information.

## Qwest Response to Document In Review

**Response Date:** November 18, 2005  
**Document:** Process: Expedites and Escalations V30  
**Original Notification Date:** October 19, 2005  
**Notification Number:** PROS.10.19.05.F.03380.ExpeditesEscalationsV30  
**Category of Change:** Level 3

Qwest recently posted proposed updates to Expedites and Escalations V30. CLECs were invited to provide comments to these proposed changes during a Document Review period from October 20, 2005 through November 3, 2005. The information listed below is Qwest's Response to CLEC comments provided during the review/comment cycle.

### **Resources:**

Customer Notice Archive <http://www.qwest.com/wholesale/cnla/>  
Document Review Site <http://www.qwest.com/wholesale/cmp/review.html>

If you have any questions on this subject or there are further details required, please contact Qwest's Change Management Manager at [cmpcomm@qwest.com](mailto:cmpcomm@qwest.com).

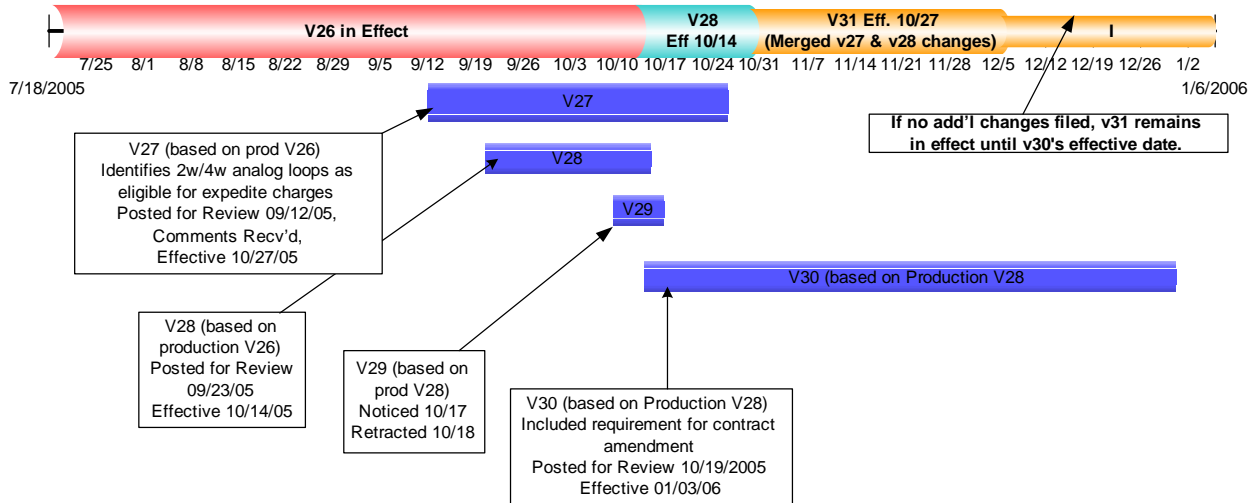

### Qwest Response to Product/Process Expedites and Escalations V30 Comments

As a course of doing documentation updates, it is not unusual for multiple changes to be in process at any given time. These changes may or may not ultimately be implemented. Therefore, CMP standard practice is to base the proposed changes on the current production Version, not a Version that is in process. It appears that this practice led to the submittal of comments by the CLECs during the V30 comment cycle that actually addressed changes made in V27 of this document.

The picture below provides a timeline of the changes that have been made to this document. Version 27 of the document included the change to make 2w/4w analog loops eligible for expedite payments. That change was not commented on (other than a clarifying question on the rate) during the comment cycle and became effective on 10/27/05. Because Version 28 had already become effective, Version 31 was issued -- and merged the Version 27 changes with the Version 28 changes.

Meanwhile Version 30, which added language requiring an amendment to address expedites, had been created. Because Version 30 was created before Version 27 had taken effect, it did not include the Version 27 language per CMP practice. The Version 30 changes will be incorporated into the version that is in production on 1/3/06.

Several of the comments received on the Version 30 document actually address changes that were made in Version 27. Qwest will not respond to the comments which address Version 27 changes but will respond to comments related to the Version 30 amendment language.

#	Page/Section	CLEC Comment	Qwest Response
1		<p><i>McCloud</i> 10/26/05 Comment: Qwest announced it will begin charging expedite fee for 2w/4w loops on Oct. 27th. Qwest just posted a Expedites and Escalations V30 which still has the 2w/4w analog loop exception included. I looked at the previous version (V29) and the exception was also present in that version. Qwest has given until November 3rd to comment on the V30 so I don't see how (1) Qwest can begin charging tomorrow (Oct. 27th) when the review isn't complete and (2) Qwest can even claim that 2w/4w analog loops are no longer an exception in the Pre-Approved Expedite process when it doesn't appear that Qwest has addressed this issue in prior reviews</p>	<p>The change referenced in this comment was included in Version 27 which is already in effect.</p>
2		<p><i>McCloud</i> 11/1/05 Comment:</p>	<p>There is no condition being removed in the Version 30 change. The change referenced in this comment was included in Version 27</p>

		<p>Can you please clarify which condition is being removed where an expedite is granted? Also, I see under the "Pre-Approved Expedites" section that the first product listed is "UBL all except 2W/4W analog".</p> <p>Does this mean that we are going to have this as an exception starting with V30 going forward? I don't see this listed in the history log as something that is being added back into the document as an exception. Please advise. Thank you.</p>	<p>which is already in effect.</p> <p>V30 is changing the process to require expedite language in the customers Interconnection Agreement (ICA) when an expedite is requested for products that follow the designed services flow. Products that follow the designed services flow will not be part of the Expedite Requiring Approval process except in the state of Washington.</p>
3		<p><i>Eschelon</i> <i>11-3-05</i> Comment: In Qwest's response to Covad's CR PC021904-1, Qwest said: "If a CLEC chooses not to amend their Interconnection Agreement, the current expedite criteria and process will be used." The current "expedite requiring approval process" allows a CLEC to request an expedite, at no charge, when the customer's needs met certain criteria. Eschelon relied upon Qwest's response and based its decision to comment, or not comment, on that response. Qwest is now failing to keep the commitments it made to CLECs in CMP, and in its response to Covad, by now changing its position on expedites and unilaterally imposing charges via a process change in CMP. Qwest's proposed change to remove the existing approval required expedite process for designed products will negatively impact Eschelon and its</p>	<p>In regards to Eschelon's comments regarding Qwest's commitments with PC021904-1, discrimination allegations and timing of process notifications, Qwest submits the following response:</p> <p>Qwest did meet its commitment to PC021904-1. As with all processes that exist, they do change over time. Qwest utilized the appropriate CMP notification processes to notify CLECs of the pending changes. In fact, with this particular PCAT, process changes have been implemented since PC021904-1 was closed. For example, Qwest changed the process when it bills expedite charges in the following situations: billing per ASR/LSR instead of per service order, bill expedite charges on delayed orders only when additional costs are incurred, and finally, changed the pre-approved expedite process to include port in/port within.</p> <p>Qwest does not sell Unbundled Loops to its end user customers so it is not appropriate to make a comparison to retail in this situation. Qwest is selling a pipe, not a switched POTS service. The DS0 UBL product can be used for services other than a POTS type service and Qwest does not know what service the CLEC is providing its end user with the DS0 pipe. Therefore, Qwest's position is that there is not the parity component that is being raised with this comment.</p>

	<p>customers. Qwest said its basis for this change is “parity” and that Qwest retail charges for all expedites for “designed” services. However, this claim of “parity” is misleading as Qwest’s new process now treats CLEC POTS customers differently than Qwest POTS customers. Qwest defines parity based on whether a service is “designed.” Qwest has chosen to apply the “design” process to DS0 UBLs, but not to its own POTS customers. The result is that though from the customer perspective the service is the same, Qwest now proposes to treat them differently for the expedite process. The change Qwest is proposing is discriminatory to CLECs and their customers. A CLEC DS0 UBL and a Qwest retail 1FB functionally are the same service. A DS0 loop is merely a POTS line that Qwest choose to provision using a design flow process. For example, a customer could request an expedite using the approval required process when ordering service from Qwest (e.g. a 1FB), and would not have to pay additional charges for the expedite. However, if the customer orders service from a CLEC via a DS0 loop and the customer requests an expedite from the CLEC, the CLEC and the customer would have to pay an additional charge for the same basic service.</p> <p>Eschelon objects to Qwest’s proposed changes to the current approval required</p>	<p>Finally, Qwest did choose to implement the changes on different process notices. This was done to allow the CLEC community ample time to get the expedite amendments through the implementation process, which is longer than the CMP Level 3 notification requirements. For each of the process changes that were made on this process since PC021904-1 completed, Qwest stated clearly in the notification the process change that was being made in each of the notifications.</p>
--	--	--

		<p>expedite process because it is discriminatory to CLECs and CLEC customers. In addition, because Eschelon relied upon Qwest's comments to Covad's CR, Eschelon also objects to Qwest's addition of UBL DSO products to the pre-approved list of products. Qwest chose to make the change to the approval required expedite process after it added DSO loops to the product list for pre-approved products. The result is that CLECs were unable to effectively comment on a change that now, coupled with Qwest's further change, significantly impacts a CLEC's business.</p>	
4		<p><i>McCloud</i> 11-3-05 Comment: Qwest's removal of the 2w/4w analog loop exception from the Expedites Requiring Approval process places CLECs at a competitive disadvantage because it forces expedite charges upon the end user consumer only when that end user consumer is purchasing from a facilities based CLEC. These expedite charges are not applicable if the end user consumer is purchasing from Qwest or a non-facilities based provider.</p>	<p>The change referenced in this comment was included in Version 27 which is already in effect.</p>
5		<p><i>PriorityOne</i> 11-3-05 Comment: PriorityOne Telecommunications, Inc. objects to Qwest's proposed changes due to feeling that it is discriminatory to CLEC's and CLEC customers. Adding UBL DSO to the list of products is</p>	<p>The change referenced in this comment was included in Version 27 which is already in effect.</p> <p>Qwest has noted PriorityOne's objection to the process change associated with V30. The process change associated with V30 is being made to create consistencies across Qwest's entire customer base for products that follow the Designed Services flow.</p>

		<p>not “parity” as the customer’s perception is that they are requesting a “line”. The end user does not know whether the line is POTs or UBL DSO. They just know that it’s a line.</p> <p>Also, PriorityOne objects to Qwest’s proposed change to remove the existing approval required expedite process for designed products and note that it will negatively impact PriorityOne and its customers.</p>	
6		<p><i>Covad</i> 11-3-05 Comment: Regarding Qwest’s proposed change to remove the existing approval required expedite process for designed products, Covad requests clarification regarding availability of expedited services in the state of Washington, where, currently, Qwest does not offer an expedited services amendment. Covad requests that Qwest reiterate that the Expedites Requiring Approval products will still be available in the State of Washington.</p>	<p>Qwest has reiterated that the Expedites Requiring Approval process will still be available in the state of WA in the V30 redline document. Qwest currently has the following two statements addressing the state of Washington:</p> <p><i>The Expedites Requiring Approval section of this procedure does not apply to any of the products listed below (unless you are ordering services in the state of WA).</i></p> <p><i>The Pre-Approved expedite process is available in all states except Washington for the products listed below when your ICA contains language for expedites with an associated per day expedite charge.</i></p>
7		<p><i>Integra</i> 11-3-05 Comment: Integra objects to Qwest proposed change to remove the existing approval required expedite process for designed products. When Integra signed the Qwest Expedite Amendment we were not advised that by signing the amendment it would change the current Expedites Requiring</p>	<p>Integra was not advised that by signing the amendment it would change the Expedites Requiring Approval Process for a couple of reasons:</p> <p>1) When an expedite amendment is signed, the CLEC is automatically included in the pre-approved process and the Expedite Requiring Approval process is not applicable any longer for the products identified in the Pre-Approved Expedite section of the PCAT. This was clarified and documented with PC021904-1. In the meeting minutes for the ad-hoc meeting held on July 9, 2004, Qwest</p>

		<p>Approval process. We signed the amendment believing that this would ADD to our options of having an order completed outside the standard interval. When Integra signed the amendment UBL DS0 loops were not included as a product on the list of products in the "Pre-Approved Expedites" list. When the UBL DS0 was added to this list Integra did not comment as at that time we still believed the Expedites Requiring Approval process was in place for our use.</p>	<p>clarified that when a CLEC amends their contract there are no reasons any longer and that if Qwest expedites a request, expedite charges apply.</p> <p>2) The PCAT that was revised with PC021904-01 states the following:</p> <p><i>Requesting an expedite follows <b>one of two processes</b>, depending on the product being requested and the language in your Interconnection Agreement (ICA). If the request being expedited is for a product on the list of products in the "Pre-Approved Expedites" (see below) and your ICA has language supporting expedited requests with a "per day" expedite rate, then the request does not need approval. If the request being expedited is for a product that is not on the defined list, or your ICA does not support a "per day" expedite rate, then the expedited request follows the process defined in the "Expedites Requiring Approval" section below.</i></p> <p>For the change that is being implemented with V30, there is no change to the CLECs that already have an expedite amendment in place.</p>

### Expedites and Escalations Overview - V44.0

[History Log](#)

#### Introduction

Qwest quickly responds to your escalation or expedite requests offering you clear and complete explanations so you can satisfactorily respond to your end-users.

- Expedites are requests for an improved standard interval that is shorter than the interval defined in our [Service Interval Guide \(SIG\)](#) or your interconnection Agreement (ICA), Individual Case Basis (ICB) or committed to ICB (Ready for Service (RFS) + Interval) date.
- Escalations can be initiated for any issue, at anytime, and at any escalation point. Escalations can also be for requests for status or intervention around a missed date.

The following summarizes the processes used within Qwest for all Wholesale Products and Services to handle expedite and escalation requests.

#### Expedites

Requesting an expedite follows one of two processes, depending on the product being requested. If the request being expedited is for a product contained in the "Pre-Approved Expedites" section below, your ICA must contain language supporting expedited requests with a "per day" expedite rate. If the request being expedited is for a product that is not on the defined list, then the expedited request follows the process defined in the "Expedites Requiring Approval" section below.

#### Expedites Requiring Approval

For products not listed in the Pre-Approved Expedite section below, (non-designed products such as POTS, Centrex or DSL service) the following expedite process applies. Expedite charges are not applicable with the Expedites Requiring Approval process.

Following is a list of conditions where an expedite is granted:

- Fire
- Flood
- Medical emergency
- National emergency
- Conditions where your end-user is completely out of service (primary line)
- Disconnect in error by Qwest
- Requested service necessary for your end-user's grand opening event delayed for facilities or equipment reasons with a future RFS date
- Delayed orders with a future RFS date that meet any of the above described conditions

- National Security
- Business Classes of Service unable to dial 911 due to previous order activity
- Business Classes of Service where hunting, call forwarding or voice mail features are not working correctly due to previous order activity where the end-users business is being critically affected

For any of the above conditions, expedited request can be made either prior to, or after, submitting your service request.

To request an expedite on a Local Service Request (LSR) you can either:

- Submit the request with your expedited due date and populate the EXP field. Also include in REMARKS the reason for the expedited request and then call the Qwest Call Center.
- Submit the request with a due date interval from our [SIG](#) or your ICA and then call the Qwest Call Center.

In both scenarios, a call to the Qwest Call Center is required on 1-866-434-2555 to process the expedited request.

To request an expedite on service requests issued via an Access Service Request (ASR), you may use either of the options described above for LSRs to submit the ASR. You should then call 1 800-244-1271.

You may be asked to provide verification of the expedited reason or situation for any of the expedite reasons listed above. In some cases, you may be asked for the service order number that caused the expedite condition, such as the service order number that caused the hunting or call forwarding expedite. The type of verification required will depend on the specific circumstances of the expedite and will be determined on an Individual Case Basis (ICB).

Once your expedite request is received, your Wholesale representative will review the request based on the previous list of available expedite scenarios to determine if the request is eligible for an expedite. If approved, the next step is to contact our Network organization to determine resource availability.

Depending on the type of service on the account, the following action is taken once the request is determined to be eligible for an expedited due date:

#### **Non-Designed/No Dispatch Required**

For requests that do not require a dispatch, the order is issued with the expedited due date.

#### **Non-Designed/Dispatch Required**

For requests that require a dispatch, the Network organization is contacted to determine Technician availability. If appointments are available on the requested due date, your expedite is granted. If no appointments are available, then Qwest will offer an alternative date, if one is available, prior to the requested due date. You can expect to receive a response to your expedited request usually within four business hours.

#### **Designed Services**

For Designed Services, the Network organization is contacted to determine resource availability for the Central Office and Outside Technicians as well as for the Testers that work with you to accept the service. You can expect to receive a response usually within four business hours.

#### **Approved Expedited Requests**

If the expedited request is approved and the original request contained the expedited due date and the EXP field was populated, Qwest will return a Firm Order Confirmation (FOC) acknowledging the agreed to expedited due date. If the expedited or agreed to due date is different from what was originally submitted on the ASR or LSR, Qwest will contact you and request that you supplement your request with the agreed to expedited date. The EXP field on the supplement ASR or LSR must also be populated. If the supplement is not received within four business hours, Qwest will continue to process the ASR or LSR as if the expedited request was not received and will FOC back the standard interval or the original due date provided on the ASR or LSR if it was longer than the standard interval.

#### **Denied Expedited Requests**

If denied, then we will provide you reasons that the request was denied or we will offer an alternative date that we could install the service. If the request is denied, and you still want to continue to have Qwest provision the service request, Qwest will return a FOC with the standard interval or the original due date provided on the FOC if it was longer than the standard interval.

#### **Pre-Approved Expedites**

The Pre-Approved expedite process is available in all states except Washington for the products listed below when your ICA contains language for expedites with an associated per day expedite charge.

**Note:** Resold Designed products are automatically included based on the terms and conditions outlined in the ICA and individual state tariffs, catalogs or price lists.

For products other than the Resold Design products identified below, if your contract does not contain the appropriate expedite language, you will not be able to expedite the request unless the expedite is due to a Qwest caused reason.

The Expedites Requiring Approval section of this procedure does not apply to any of the products listed below (unless you are ordering services in the state of WA).

An expedite charge applies per ASR or LSR for every day that the due date interval is improved, based on the standard interval in the SIG, ICA, or ICB criteria as described above. It is not necessary for you to call into Qwest to have the expedite approved. To expedite a service request on an ASR or LSR you must populate the EXP field and put the desired expedited due date in the DDD field on the ASR or LSR.

Note: If the ASR/LSR you are submitting requests a same day due date, your request must be received before 12 noon MT.

When Qwest receives an ASR or LSR with the EXP populated and the DDD is less than the standard interval, Qwest will determine if the request is eligible for an expedite without a call from you. If the request meets the criteria for the Pre-Approved Expedite process, Qwest will process the request and return a FOC acknowledging the expedited due date. The appropriate expedite charge will be added to your service order.

If the request does not meet the criteria for the Pre-Approved Expedite process, the ASR or LSR will be processed using the standard interval that is defined in the [Standard Interval Guide for Resale, UNE and Interconnection Services](#).

Following is a list of the products, which require expedite language in the ICA and may be expedited that will receive the appropriate Expedite Charge:

- UBL
- UBL DID (Unbundled digital trunk)
- UBL DS1 (Unbundled digital trunk facility)
- UNE-C PL (EEL)
- UNE-P ISDN BRI
- UNE-P DSS Facility
- UNE-P DSS Trunk
- UNE-P PRI ISDN Facility
- UNE-P PRI ISDN Trunk
- UNE-P PBX Designed Trunks
- UNE-P PBX DID IN-Only Trunks
- Port In/Port Within associated with any of the applicable designed products listed above
- UDIT
- LIS
- CCSAC SS7 Trunk or Facility
- Unbundled Dark Fiber

Following is a list of Resold Designed Products, which do not require an amendment, which may be expedited and will receive the appropriate expedite charge:

- Analog PBX DID
- Private Line (DS0, DS1, DS3 or above)
- ISDN PRI T1
- ISDN PRI Trunk
- ISDN BRI Trunk
- Frame Relay Trunk
- DESIGNED TRUNKS (Includes designed PBX trunks) Trunk
- MDS / MDSI (IIS Only)
- DPAs (multiple DPAs or FX, FCO) Trunk
- Port In/Port Within associated with any of the applicable designed products listed above

Note: Any requests that are expedited due to a Qwest caused reason, do not incur an expedite charge. Additionally, if the due date of an expedited request is missed due to Qwest reasons, expedite charges do not apply.

If the order becomes a Delayed Order on the due date, Qwest will cooperatively work with you to obtain the best Ready For Service date (RFS) possible and expedite charges do not apply.

If an order becomes delayed for facilities prior to the due date, once Qwest establishes a new RFS it is communicated to you via the FOC. If you do not accept the due date that is established and request to expedite the RFS, expedite charges may apply. Each expedited delayed order request will be reviewed on an ICB to determine if expedite charges apply. If the expedited due date request results in Qwest incurring additional costs to improve the date that was FOC'd, expedite charges apply. Qwest will advise you if expedite charges apply prior to confirming the expedited request to obtain approval from you, or offer an alternate date that Qwest can meet. The expedite charges will be based on the number of days improved from the original RFS date.

If an order was delayed due to a Customer Not Ready (CNR) condition as described in the [Provisioning and Installation Overview](#); and you wish to expedite the newly requested due date, supplement the request with the new Desired Due Date and populate the EXP field of the LSR/ASR. Qwest will review your expedited request for resource availability. In some cases, we may contact you to advise resources for expedite are not available or offer an alternate date. Expedite charges apply and are based on the number of days the CNR standard interval is improved.

#### **Expedites Supporting Non-Qwest caused Restoral Requests**

This process includes Restoral Requests on Resale/UNE-P/Retail to Resale or UNE-P Conversions and Transfer of Service when the service orders have completed. This process applies to Resale/UNE-P POTS, Resale/UNE-S and Resale UNE-P Centrex 21 products, including DSL.

You will follow this documented Expedite process as outlined when you require an expedite to a standard interval in order to restore an end-user due to a Non-Qwest caused out of service condition. An expedite restoral request is a result of your inability to complete a conversion or outside move service request where you were unable to cancel or change the due date on the service order(s) prior to order completion. Restoral requests may involve you alone, a Qwest Retail account and you, or you and a different CLEC on conversion and outside move (T & F) type service order's. Restoral requests will be accepted for both full and partial restorals.

When an expedite restoral request situation occurs, refer to the following when you prepare your service request:

- Issue the Restoral Request LSR as directed per the Decision Charts and order type scenario's.
  - Populate the RPON field with the PON used on the original LSR if available
  - Populate the EXP field
  - Populate Manual IND = Y
  - The REMARKS field can be populated with the specific reason for the request such as:
    - Restoral request Full, Resale to UNE-P conv, restore original service, Or
    - Restoral request, Partial, Resale to UNE-P conv, restore original service, Or
    - Restoral request, Partial, UNE-P to Resale conv, restore original service, Or
    - Restoral request, Full, Resale or UNE-P T&F, restore F location, etc., Or
    - Restoral Request, Restore original full service back to CLEC XXXX, Or
    - Restoral Request, Restore original partial service back to CLEC XXXX, Or
    - Restoral Request, Restore original F Loc service, full/partial back to old CLEC
    - Restoral Request, Disc service, restore original Retail service, full/partial
- Contact the Customer Service Inquiry and Education (CSIE) Center at 866-434-2555
- Open an Escalation ticket.
- Request a Restoral Request for Previous Service.
- Provide LSR ID if appropriate per Decision Chart and order type scenario's.

### Benefits

- Expedited intervals for restoral of previous service
- Uniform documented process for restoral requests
- Qwest will negate the one month minimum billing on a disconnect or conversion service order as applicable.

### Restrictions

- You must issue appropriate LSRs first (if directed to do so per the Decision Chart below) followed by opening a Call Center escalation ticket. Restoral requests received prior to new LSR issuance will not be accepted, excludes Qwest Retail restorals.
- Standard intervals must be used when submitting LSRs, CSIE will expedite due date appropriately for restoral
- Expedited restoral requests must be requested within 24 hours, extending into the next business day, following the LSR completion date. Restoral requests received after 3 PM will be considered next business day work activity; this includes restoral requests received after 3 PM on Saturday based on the SIG (except for DSL)."
- Service being restored must be the same type of service with same features, same TN's, etc. as was previously provisioned. Full or partial restorals are acceptable.
- Qwest will reuse facilities when the facilities are available for the restoral.

- All applicable recurring and non-recurring charges will apply, based on order completion and physical work that was completed or needs to be completed to restore service. Retail practices will apply when restoring Qwest Retail accounts.
- When a restoral involves two CLECs, it is up to you and the old CLEC to coordinate and agree upon an expedite, prior to opening up the Call Center Escalation ticket(s).
- Expedite charges may apply based upon individual interconnection agreements, state tariffs or SGATS.

The following **Order Type Scenario's** are included in this restoral process:

1. Resale / UNE-P T & F, same CLEC
2. Resale to UNE-P Conversion as is, same CLEC
3. Resale to UNE-P Conversion as specified, same CLEC
4. UNE-P to Resale Conversion as is, same CLEC
5. UNE-P to Resale Conversion as specified, same CLEC
6. Resale / UNE-P Migration to new CLEC with move via single LSR
7. Resale to UNE-P Conversion as is, to a new CLEC
8. Resale to UNE-P Conversion as specified, to a new CLEC
9. UNE-P to Resale Conversion as is, to a new CLEC
10. UNE-P to Resale Conversion as is, to a new CLEC
11. Qwest Retail to Resale / UNE-P Conversion as is
12. Qwest Retail to Resale / UNE-P Conversion as specified
13. Qwest Retail to Resale / UNE-P Conversion with move via single LSR process

Decision Chart, Scenario's 1-5, Same CLEC		
IF	AND	THEN
Conversion, Migration and/or Move Service Order has completed	You want full or partial restoral of previous service	<ul style="list-style-type: none"> <li>• Issue Restoral Request LSR as appropriate based on order scenario and order completion, such as a New Connect, Change or Conversion with or without move, Transfer of Service or Disconnect</li> <li>• Follow expedite procedures</li> </ul>

Decision Chart, Scenario's 6-10, To a New CLEC		
IF	AND	THEN
Conversion, Migration and/or Move Service Order has completed	You want full or partial restoral of previous service	<ul style="list-style-type: none"> <li>• Either the end-user, or the new CLEC and the end-user must contact the old CLEC's Customer Contact Center and request that the end-user's service be re-established as previously provisioned for the old CLEC on Resale or UNE-P service</li> <li>• Old CLEC must follow expedite procedures</li> <li>• Old CLEC will issue Restoral Request LSR as appropriate based on order scenario and order completion, such as a New Connect, Change or Conversion with or without move</li> <li>• New CLEC must follow expedite procedures</li> <li>• New CLEC will issue Disconnect LSR if required based on order scenario and order completion</li> <li>• Old and new CLECs will coordinate their order activity</li> </ul>

		<ul style="list-style-type: none"> <li>• Contact your Qwest Service Manager if you require assistance with old CLEC contact</li> </ul>
--	--	--

<b>Decision Chart, Scenario's 11-13, Conversion from Qwest Retail to New CLEC</b>		
<b>IF</b>	<b>AND</b>	<b>THEN</b>
Conversion, Migration and/or Move Service Order has Completed	You want full or partial restoral of previous service	<ul style="list-style-type: none"> <li>• Contact the CSIE Center at 866-434-2555</li> <li>• Open an Escalation ticket</li> <li>• Request a warm transfer to the CSIE Tier 1 support group</li> <li>• Place a verbal Restoral Request for Previous Retail Service, full or partial restoral</li> <li>• CSIE will advise you if a new LSR will need to be issued by you</li> <li>• If a new LSR is needed and is not issued within 2 business hours, the escalation ticket will be closed. If this occurs, the CLEC must start the expedite process again once the LSR has been issued as directed.</li> </ul>

**Escalations**

Escalations are a request for status or intervention around a missed critical date such as:

- Plant Test Date (PTD)
- Due Date (DD)
- Ready For Service (RFS)

Qwest's Service Centers pro-actively escalate any critical dates in jeopardy and will notify you. If, however, you find it necessary to initiate an escalation, call the assigned Qwest Wholesale Center Representative at one of the numbers listed in the Expedites section for assistance. Regardless of how initiated, by you or internally, Qwest escalation roles and responsibilities can be summarized as:

- Qwest Wholesale Center Representatives  
Local Service Request (LSR) or Access Service Request (ASR) escalations related to Rejects/Delayed orders, critical dates and Firm Order Confirmations (FOC).
- Qwest Service Manager  
Involved only after normal processes fail to resolve the escalation to your satisfaction. Evaluates the situation based on commitments managing associated resolution activities.
- Qwest Senior Service Manager/Director  
Involved only when the Service Manager's efforts are unsuccessful. Provides direction to those working the issue, partnering with Center Coaches and Team leaders.
- Qwest Senior Director/Vice President  
Contacted for direction and/or assistance for those working the escalation, providing timely status updates back to the prior level and you directly.

**Escalations - Maintenance and Repair**

At your discretion, you may initiate an escalation of your trouble report through our electronic interface Customer Electronic Maintenance and Repair (CEMR) or by calling either the Qwest Wholesale Repair Center for Unbundled Network Elements (UNEs) and Complex services or the Repair Call Handling Center (RCHC) for Plain Old Telephone Service (POTS) and

Non-Complex services. Refer to our [Maintenance and Repair Overview](#) for additional information.

### Escalations - Technical Escalation Process

Additional information about the Technical Escalation Process can be obtained from Qwest's [Operations Support Systems General Information](#).

Note: Occasionally, your end-user may find their way to the Qwest Wholesale Center or Qwest Service Manager and our Wholesale Center Representatives will explain that you are our customer and direct them to you for assistance.

Should you have questions, or need additional information related to the expedite or escalation processes defined above, contact your [Qwest Service Manager](#) for assistance.

## Training

### Local Qwest 101 "Doing Business with Qwest"

- This introductory web-based training course is designed to teach the Local CLEC and Local Reseller how to do business with Qwest. It will provide a general overview of products and services, Qwest billing and support systems, processes for submitting service requests, reports, and web resource access information. [Click here to learn more about this course and to register.](#)

[Back to Top](#)

## Contacts

Qwest contact information is located in [Wholesale Customer Contacts](#)

Expedites and Escalations

- Local Service Requests (LSRs)

Wholesale Center			
Tier	Responsibility	Activity	Contacts
Tier 1	Customer Service Inquiry and Education Center (CSIE)	First point of contact for CLECs	866-434-2555 Monday - Friday 8:00 AM - 6:00 PM Central, Mountain, and Pacific Time Zones <b>Note:</b> Only orders due to complete on a Saturday that require a same day cancellation, due date change or concurrence should call 612-327-0511. All other requests should be made the next business day.
Tier 2	Subject Matter Expert (SME), Team Leaders, Team Coaches	Respond to issues not resolved at Tier 1	800-366-9974 Monday - Friday 8:00 AM - 6:00 PM Central, Mountain, and Pacific Time Zones
Tier 3	Appropriate Qwest Service	Respond to issues	<a href="#">Service Manager</a>

	Manager	not resolved at Tier 2	
--	---------	------------------------	--

A call center ticket is opened on every call into the CSIE Center. Upon resolution of the ticket a close code is assigned to the ticket. Upon request the close code is provided to you. Should you disagree with the codes used to close the ticket you will use the escalation process. For a list of the close codes used at the CSIE level see the Call Center Database Ticket Reports section of the [Ordering Overview PCAT](#).

Only orders due to complete this immediate Saturday and require a cancellation or due date change or for concurrence should call 612-327-0511. All other requests should be made the next business day.

<b>Announcement Date:</b>	<b>April 2, 2007</b>
<b>Proposed Effective Date:</b>	<b>May 17, 2007</b>
<b>Document Number:</b>	<b>PROS.04.02.07.F.04590.Expedites_Escalations_V45</b>
<b>Notification Category:</b>	<b>Process Notification</b>
<b>Target Audience:</b>	<b>CLECs, Resellers</b>
<b>Subject:</b>	<b>CMP - Expedites and Escalations V45</b>
<b>Level of Change:</b>	<b>Level 3</b>

**Summary of Change:**

On April 2, 2007, Qwest will post planned updates to its Wholesale Product Catalog that include revised documentation for Expedites and Escalations V45. These will be posted to the Qwest Wholesale Document Review Site located at <http://www.qwest.com/wholesale/cmp/review.html>.

Qwest is updating the Expedite process to change the existing manual process. The Approved Expedites Requests and the Pre-Approved Expedites will be changed to return a Firm Order Confirmation (FOC) with the new due date instead of calling you. In an effort to improve center efficiencies Qwest will begin sending a FOC to you for the date provided by Network that Qwest can meet in expedite situations whether it is the date requested by you or an alternate date.

Current operational documentation for this product or business procedure is found on the Qwest Wholesale Web Site at this URL: <http://www.qwest.com/wholesale/clecs/exesclover.html>

**Comment Cycle:**

CLEC customers are encouraged to review these proposed changes and provide comment at any time during the 15-day comment review period. Qwest will have up to 15 days following the close of the comment review to respond to any CLEC comments. This response will be included as part of the final notification. Qwest will not implement the change sooner than 15 days following the final notification.

Qwest provides an electronic means for CLEC customers to comment on proposed changes. The Document Review Web Site provides a list of all documents that are in the review stage, the process for CLECs to use to comment on documents, the submit

comment link, and links to current documentation and past review documents. The Document Review Web Site is found at <http://www.qwest.com/wholesale/cmp/review.html>. Fill in all required fields and be sure to reference the Notification Number listed above.

**Timeline:**

Planned Updates Posted to Document Review Site	Available April 2, 2007
CLEC Comment Cycle on Documentation Begins	Beginning April 3, 2007
CLEC Comment Cycle Ends	5:00 PM, MT April 17, 2007
Qwest Response to CLEC Comments (if applicable)	Available May 2, 2007 <a href="http://www.qwest.com/wholesale/cmp/review_archive.html">http://www.qwest.com/wholesale/cmp/review_archive.html</a>
Proposed Effective Date	May 17, 2007

If you have any questions on this subject, please submit comments through the following link: <http://www.qwest.com/wholesale/cmp/comment.html>.

Sincerely,

Qwest Corporation

Note: In cases of conflict between the changes implemented through this notification and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. All information provided on the site describes current activities and process. Prior to any modifications to existing activities or processes described on the web site, wholesale customers will receive written notification announcing the upcoming change.

If you would like to unsubscribe to mailouts please go to the "Subscribe/Unsubscribe" web site and follow the unsubscribe instructions. The site is located at:

## Expedites and Escalations Overview – ~~V44.0~~V45.0

*History Log* (Link italicized text to: [Replace Existing Download With Attached History Log](#))

### Introduction

Qwest quickly responds to your escalation or expedite requests offering you clear and complete explanations so you can satisfactorily respond to your end-users.

- Expedites are requests for an improved standard interval that is shorter than the interval defined in our [Service Interval Guide \(SIG\)](#) (Link italicized text to: <http://www.qwest.com/wholesale/guides/sig/index.html>) or your interconnection Agreement (ICA), Individual Case Basis (ICB) or committed to ICB (Ready for Service (RFS) + Interval) date.
- Escalations can be initiated for any issue, at anytime, and at any escalation point. Escalations can also be for requests for status or intervention around a missed date.

The following summarizes the processes used within Qwest for all Wholesale Products and Services to handle expedite and escalation requests.

### Expedites

Requesting an expedite follows one of two processes, depending on the product being requested. If the request being expedited is for a product contained in the “Pre-Approved Expedites” section below, your ICA must contain language supporting expedited requests with a “per day” expedite rate. If the request being expedited is for a product that is not on the defined list, then the expedited request follows the process defined in the “Expedites Requiring Approval” section below.

#### Expedites Requiring Approval

For products not listed in the Pre-Approved Expedite section below, (non-designed products such as POTS, Centrex or DSL service) the following expedite process applies. Expedite charges are not applicable with the Expedites Requiring Approval process.

Following is a list of conditions where an expedite is granted:

- Fire
- Flood
- Medical emergency
- National emergency
- Conditions where your end-user is completely out of service (primary line)
- Disconnect in error by Qwest
- Requested service necessary for your end-user’s grand opening event delayed for facilities or equipment reasons with a future RFS date
- Delayed orders with a future RFS date that meet any of the above described conditions
- National Security
- Business Classes of Service unable to dial 911 due to previous order activity
- Business Classes of Service where hunting, call forwarding or voice mail features are not working correctly due to previous order activity where the end-users business is being critically affected

For any of the above conditions, expedited request can be made either prior to, or after, submitting your service request.

To request an expedite on a Local Service Request (LSR) you can either:

- Submit the request with your expedited due date and populate the EXP field. Also include in REMARKS the reason for the expedited request and then call the Qwest Call Center.
- Submit the request with a due date interval from our [SIG \(Link italicized text to: http://www.qwest.com/wholesale/guides/sig/index.html\)](http://www.qwest.com/wholesale/guides/sig/index.html) or your ICA and then call the Qwest Call Center.

In both scenarios, a call to the Qwest Call Center is required on 1-866-434-2555 to process the expedited request.

To request an expedite on service requests issued via an Access Service Request (ASR), you may use either of the options described above for LSRs to submit the ASR. You should then call 1 800-244-1271

You may be asked to provide verification of the expedited reason or situation for any of the expedite reasons listed above. In some cases, you may be asked for the service order number that caused the expedite condition, such as the service order number that caused the hunting or call forwarding expedite. The type of verification required will depend on the specific circumstances of the expedite and will be determined on an Individual Case Basis (ICB).

Once your expedite request is received, your Wholesale representative will review the request based on the previous list of available expedite scenarios to determine if the request is eligible for an expedite. If approved, the next step is to contact our Network organization to determine resource availability.

Depending on the type of service on the account, the following action is taken once the request is determined to be eligible for an expedited due date:

#### **Non-Designed/No Dispatch Required**

For requests that do not require a dispatch, the order is issued with the expedited due date.

#### **Non-Designed/Dispatch Required**

For requests that require a dispatch, the Network organization is contacted to determine Technician availability. If appointments are available on the requested due date, your expedite is granted. If no appointments are available, then Qwest will offer an alternative date, if one is available, prior to the requested due date. You can expect to receive a response to your expedited request usually within four business hours.

#### **Designed Services**

For Designed Services, the Network organization is contacted to determine resource availability for the Central Office and Outside Technicians as well as for the Testers that work with you to accept the service. You can expect to receive a response usually within four business hours.

#### **Approved Expedited Requests**

If the expedited request is approved and the original request contained the expedited due date and the EXP field was populated, Qwest will return a Firm Order Confirmation (FOC) acknowledging the agreed to expedited due date. If the expedited or agreed to due date Qwest can meet is different from what was originally submitted on the ASR or LSR and the EXP field is populated, Qwest will return a FOC with the new due date and continue to process the request. contact you and request that you supplement your request with the agreed to expedited date. The EXP field on the supplement ASR or LSR must also be populated. On LSRs, if the expedite is approved and the EXP field is not populated, Qwest will contact you and request that you supplement your ASR or request LSR with the new DDD populating and that you populate the EXP field. If the supplement is not received within four business hours, Qwest will continue to

process the ASR or LSR as if the expedited request was not received and will FOC back the standard interval or the original due date provided on the ASR or LSR if it was longer than the standard interval.

### Denied Expedited Requests

If denied, then we will provide you reasons that the request was denied or we will offer an alternative date that we could install the service. If the request is denied, and you still want to continue to have Qwest provision the service request, Qwest will return a FOC with the standard interval or the original due date provided on the FOC if it was longer than the standard interval.

### Pre-Approved Expedites

The Pre-Approved expedite process is available in all states except Washington for the products listed below when your ICA contains language for expedites with an associated per day expedite charge.

Note: Resold Designed products are automatically included based on the terms and conditions outlined in the ICA and individual state tariffs, catalogs or price lists.

For products other than the Resold Design products identified below, if your contract does not contain the appropriate expedite language, you will not be able to expedite the request unless the expedite is due to a Qwest caused reason.

The Expedites Requiring Approval section of this procedure does not apply to any of the products listed below (unless you are ordering services in the state of WA).

An expedite charge applies per ASR or LSR for every day that the due date interval is improved, based on the standard interval in the SIG, ICA, or ICB criteria as described above. It is not necessary for you to call into Qwest to have the expedite approved. To expedite a service request on an ASR or LSR you must populate the EXP field and put the desired expedited due date in the DDD field on the ASR or LSR.

Note: If the ASR/LSR you are submitting requests a same day due date, your request must be received before 12 noon MT.

When Qwest receives an ASR or LSR with the EXP populated and the DDD is less than the standard interval, Qwest will determine if the request is eligible for an expedite without a call from you. If the request meets the criteria for the Pre-Approved Expedite process, Qwest will process the request and return a FOC acknowledging the expedited due date. The appropriate expedite charge will be added to your service order.

If the due date Qwest can meet is different from what was originally requested on the ASR or LSR, Qwest will return a FOC with the new due date and continue to process the ASR or LSR. The appropriate expedite charge will be added to your service order. If the due date on the FOC does not meet your needs, you can supplement the request to a due date that is equal to or greater than standard interval as defined in Qwest SIG's, cancelling the expedite.

If the request does not meet the criteria for the Pre-Approved Expedite process, the ASR or LSR will be processed using the standard interval that is defined in the [Standard Interval Guide for Resale, UNE and Interconnection Services](http://www.qwest.com/wholesale/guides/sig/index.html) (Link italicized text to: <http://www.qwest.com/wholesale/guides/sig/index.html>).

Following is a list of the products, which require expedite language in the ICA and may be expedited that will receive the appropriate Expedite Charge:

- UBL
- UBL DID (Unbundled digital trunk)
- UBL DS1 (Unbundled digital trunk facility)
- UNE-C PL (EEL)
- UNE-P ISDN BRI
- UNE-P DSS Facility
- UNE-P DSS Trunk
- UNE-P PRI ISDN Facility
- UNE-P PRI ISDN Trunk
- UNE-P PBX Designed Trunks
- UNE-P PBX DID IN-Only Trunks
- UDIT
- LIS
- CCSAC SS7 Trunk or Facility
- Unbundled Dark Fiber

Following is a list of Resold Designed Products, which do not require an amendment, which may be expedited and will receive the appropriate expedite charge:

- Analog PBX DID
- Private Line (DS0, DS1, DS3 or above)
- ISDN PRI T1
- ISDN PRI Trunk
- ISDN BRI Trunk
- Frame Relay Trunk
- DESIGNED TRUNKS (Includes designed PBX trunks) Trunk
- MDS / MDSI (*IIS Only*)
- DPAs (multiple DPAs or FX, FCO) Trunk

Note: Any requests that are expedited due to a Qwest caused reason, do not incur an expedite charge. Additionally, if the due date of an expedited request is missed due to Qwest reasons, expedite charges do not apply.

If the order becomes a Delayed Order on the due date, Qwest will cooperatively work with you to obtain the best Ready For Service date (RFS) possible and expedite charges do not apply.

If an order becomes delayed for facilities prior to the due date, once Qwest establishes a new RFS it is communicated to you via the FOC. If you do not accept the due date that is established and request to expedite the RFS, expedite charges may apply. Each expedited delayed order request will be reviewed on an ICB to determine if expedite charges apply. If the expedited due date request results in Qwest incurring additional costs to improve the date that was FOC'd, expedite charges apply. Qwest will advise you if expedite charges apply prior to confirming the expedited request to obtain approval from you, or offer an alternate date that Qwest can meet. The expedite charges will be based on the number of days improved from the original RFS date.

If an order was delayed due to a Customer Not Ready (CNR) condition as described in the [Provisioning and Installation Overview](http://www.qwest.com/wholesale/clecs/provisioning.html) ([Link italicized text to: http://www.qwest.com/wholesale/clecs/provisioning.html](http://www.qwest.com/wholesale/clecs/provisioning.html)); and you wish to expedite the newly requested due date, supplement the request with the new Desired Due Date and populate the EXP field of the LSR/ASR. Qwest will review your expedited request for resource availability and return a FOC acknowledging the due date Qwest can meet. ~~In some cases, we may contact you to advise resources for expedite are not available or offer an alternate date.~~ Expedite charges apply and are based on the number of days the CNR standard interval is improved.

## Expedites Supporting Non-Qwest caused Restoral Requests

This process includes Restoral Requests on Resale/UNE-P/Retail to Resale or UNE-P Conversions and Transfer of Service when the service orders have completed. This process applies to Resale/UNE-P POTS, Resale/UNE-S and Resale UNE-P Centrex 21 products, including DSL.

You will follow this documented **Expedite** process as outlined when you require an expedite to a standard interval in order to restore an end-user due to a Non-Qwest caused out of service condition. An expedite restoral request is a result of your inability to complete a conversion or outside move service request where you were unable to cancel or change the due date on the service order(s) prior to order completion. Restoral requests may involve you alone, a Qwest Retail account and you, or you and a different CLEC on conversion and outside move (T & F) type service order's. Restoral requests will be accepted for both full and partial restorals.

When an expedite restoral request situation occurs, refer to the following when you prepare your service request:

- Issue the Restoral Request LSR as directed per the Decision Charts and order type scenario's.
  - Populate the RPON field with the PON used on the original LSR if available
  - Populate the EXP field
  - Populate Manual IND = Y
  - The REMARKS field can be populated with the specific reason for the request such as:
    - Restoral request Full, Resale to UNE-P conv, restore original service, Or
    - Restoral request, Partial, Resale to UNE-P conv, restore original service, Or
    - Restoral request, Partial, UNE-P to Resale conv, restore original service, Or
    - Restoral request, Full, Resale or UNE-P T&F, restore F location, etc., Or
    - Restoral Request, Restore original full service back to CLEC XXXX, Or
    - Restoral Request, Restore original partial service back to CLEC XXXX, Or
    - Restoral Request, Restore original F Loc service, full/partial back to old CLEC
    - Restoral Request, Disc service, restore original Retail service, full/partial
- Contact the Customer Service Inquiry and Education (CSIE) Center at 866-434-2555
- Open an Escalation ticket.
- 
- Request a Restoral Request for Previous Service.
- Provide LSR ID if appropriate per Decision Chart and order type scenario's.

### Benefits

- Expedited intervals for restoral of previous service
- Uniform documented process for restoral requests
- Qwest will negate the one month minimum billing on a disconnect or conversion service order as applicable.

### Restrictions

- You must issue appropriate LSRs first (if directed to do so per the Decision Chart below) followed by opening a Call Center escalation ticket. Restoral requests received prior to new LSR issuance will not be accepted, excludes Qwest Retail restorals.
- Standard intervals must be used when submitting LSRs, CSIE will expedite due date appropriately for restoral
- Expedited restoral requests must be requested within 24 hours, extending into the next business day, following the LSR completion date. Restoral requests received after 3 PM will be considered next business day work activity; this includes restoral requests received after 3 PM on Saturday based on the SIG (except for DSL)."
- Service being restored must be the same type of service with same features, same TN's, etc. as was previously provisioned. Full or partial restorals are acceptable.

- Qwest will reuse facilities when the facilities are available for the restoral.
- All applicable recurring and non-recurring charges will apply, based on order completion and physical work that was completed or needs to be completed to restore service. Retail practices will apply when restoring Qwest Retail accounts.
- When a restoral involves two CLECs, it is up to you and the old CLEC to coordinate and agree upon an expedite, prior to opening up the Call Center Escalation ticket(s).
- Expedite charges may apply based upon individual interconnection agreements, state tariffs or SGATS.

The following **Order Type Scenario's** are included in this restoral process:

1. Resale / UNE-P T & F, same CLEC
2. Resale to UNE-P Conversion as is, same CLEC
3. Resale to UNE-P Conversion as specified, same CLEC
4. UNE-P to Resale Conversion as is, same CLEC
5. UNE-P to Resale Conversion as specified, same CLEC
6. Resale / UNE-P Migration to new CLEC with move via single LSR
7. Resale to UNE-P Conversion as is, to a new CLEC
8. Resale to UNE-P Conversion as specified, to a new CLEC
9. UNE-P to Resale Conversion as is, to a new CLEC
10. UNE-P to Resale Conversion as is, to a new CLEC
11. Qwest Retail to Resale / UNE-P Conversion as is
12. Qwest Retail to Resale / UNE-P Conversion as specified
13. Qwest Retail to Resale / UNE-P Conversion with move via single LSR process

<b>Decision Chart, Scenario's 1-5, Same CLEC</b>		
<b>IF</b>	<b>AND</b>	<b>THEN</b>
Conversion, Migration and/or Move Service Order has completed	You want full or partial restoral of previous service	<ul style="list-style-type: none"> <li>• Issue Restoral Request LSR as appropriate based on order scenario and order completion, such as a New Connect, Change or Conversion with or without move, Transfer of Service or Disconnect</li> <li>• Follow expedite procedures</li> </ul>

<b>Decision Chart, Scenario's 6-10, To a New CLEC</b>		
<b>IF</b>	<b>AND</b>	<b>THEN</b>
Conversion, Migration and/or Move Service Order has completed	You want full or partial restoral of previous service	<ul style="list-style-type: none"> <li>• Either the end-user, or the new CLEC and the end-user must contact the old CLEC's Customer Contact Center and request that the end-user's service be re-established as previously provisioned for the old CLEC on Resale or UNE-P service</li> <li>• Old CLEC must follow expedite procedures</li> <li>• Old CLEC will issue Restoral Request LSR as appropriate based on order</li> </ul>

		<p>scenario and order completion, such as a New Connect, Change or Conversion with or without move</p> <ul style="list-style-type: none"> <li>• New CLEC must follow expedite procedures</li> <li>• New CLEC will issue Disconnect LSR if required based on order scenario and order completion</li> <li>• Old and new CLECs will coordinate their order activity</li> <li>• Contact your Qwest Service Manager if you require assistance with old CLEC contact</li> </ul>
--	--	--

<b>Decision Chart, Scenario's 11-13, Conversion from Qwest Retail to New CLEC</b>		
<b>IF</b>	<b>AND</b>	<b>THEN</b>
Conversion, Migration and/or Move Service Order has Completed	You want full or partial restoral of previous service	<ul style="list-style-type: none"> <li>• Contact the CSIE Center at 866-434-2555</li> <li>• Open an Escalation ticket</li> <li>• Request a warm transfer to the CSIE Tier 1 support group</li> <li>• Place a verbal Restoral Request for Previous Retail Service, full or partial restoral</li> <li>• CSIE will advise you if a new LSR will need to be issued by you</li> <li>• If a new LSR is needed and is not issued within 2 business hours, the escalation ticket will be closed. If this occurs, the CLEC must start the expedite process again once the LSR has been issued as directed.</li> </ul>

## Escalations

Escalations are a request for status or intervention around a missed critical date such as:

- Plant Test Date (PTD)
- Due Date (DD)
- Ready For Service (RFS)

Qwest's Service Centers pro-actively escalate any critical dates in jeopardy and will notify you. If, however, you find it necessary to initiate an escalation, call the assigned Qwest Wholesale Center Representative at one of the numbers listed in the Expedites section for assistance. Regardless of how initiated, by you or internally, Qwest escalation roles and responsibilities can be summarized as:

- Qwest Wholesale Center Representatives  
Local Service Request (LSR) or Access Service Request (ASR) escalations related to Rejects/Delayed orders, critical dates and Firm Order Confirmations (FOC).
- Qwest Service Manager  
Involved only after normal processes fail to resolve the escalation to your satisfaction. Evaluates the situation based on commitments managing associated resolution activities.
- Qwest Senior Service Manager/Director  
Involved only when the Service Manager's efforts are unsuccessful. Provides direction to those working the issue, partnering with Center Coaches and Team leaders.
- Qwest Senior Service Director/Vice President  
Contacted for direction and/or assistance for those working the escalation, providing timely status updates back to the prior level and you directly.

### **Escalations – Maintenance and Repair**

At your discretion, you may initiate an escalation of your trouble report through our electronic interface Customer Electronic Maintenance and Repair (CEMR) or by calling either the Wholesale Repair for Unbundled Network Elements (UNEs) and Complex services or the Repair Call Handling Center (RCHC) for Plain Old Telephone Service (POTS) and Non-Complex services. Refer to our [Maintenance and Repair Overview](#) (Link italicized text to: <http://www.qwest.com/wholesale/clecs/maintenance.html>) for additional information.

### **Escalations – Technical Escalation Process**

Additional information about the Technical Escalation Process can be obtained from Qwest's [Operations Support Systems General Information](#). (Link italicized text to: <http://www.qwest.com/wholesale/systems/generalinfo.html>)

Note: Occasionally, your end-user may find their way to the Qwest Wholesale Center or Qwest Service Manager and our Wholesale Center Representatives will explain that you are our customer and direct them to you for assistance.

Should you have questions, or need additional information related to the expedite or escalation processes defined above, contact your [Qwest Service Manager](#) (Link italicized text to: <http://www.qwest.com/wholesale/clecs/accountmanagers.html>) for assistance.

[Back to Top](#)

## **Training**

### **Local Qwest 101 "Doing Business With Qwest"**

This introductory Web-based training is designed to teach the Local CLEC and Local Reseller how to do business with Qwest. It will provide a general overview of products and services, Qwest billing and support systems, processes for submitting service requests, reports, and web resource access information. [Click here to learn more about this course and to register](#). (Link italicized text to: [http://www.qwest.com/wholesale/training/wbt\\_desc\\_lq101.html](http://www.qwest.com/wholesale/training/wbt_desc_lq101.html))

[Back to Top](#)

## **Contacts**

Qwest contact information is located in [Wholesale Customer Contacts](#). (List italicized text to: <http://www.qwest.com/wholesale/clecs/escalations.html>)

Expedites and Escalations

- Local Service Requests (LSRs)

Wholesale Center			
Tier	Responsibility	Activity	Contacts
Tier 1	Customer Service Inquiry and Education Center (CSIE)	First point of contact for CLECs	866-434-2555 Monday – Friday 8:00 AM – 6:00 PM Central, Mountain, and Pacific Time Zones <b>Note:</b> Only orders due to complete on a Saturday that require a same day cancellation, due date change or concurrence should call 612-327-0511. All other requests should be made the next business day.
Tier 2	Subject Matter Expert (SME), Team Leaders, Team Coaches	Respond to issues not resolved at Tier 1	800-366-9974 Monday – Friday 8:00 AM – 6:00 PM Central, Mountain, and Pacific Time Zones
Tier 3	Appropriate Qwest Service Manager	Respond to issues not resolved at Tier 2	Service Manager (Link italicized text to: <a href="http://www.qwest.com/wholesale/clecs/accounmanagers.html">http://www.qwest.com/wholesale/clecs/accounmanagers.html</a> )

A call center ticket is opened on every call into the CSIE Center. Upon resolution of the ticket a close code is assigned to the ticket. Upon request the close code is provided to you. [Should you disagree with the codes used to close the ticket you will use the escalation process.](#)

For a list of the close codes used at the CSIE level see the Call Center Database Ticket Reports section of the [Ordering Overview PCAT](#)(Link italicized text to: <http://www.qwest.com/wholesale/clecs/ordering.html>).

Only orders due to complete this immediate Saturday and require a cancellation or due date change or for concurrence should call 612-327-0511. All other requests should be made the next business day.

Comment:

Eschelon objects to Qwest's proposed changes to its expedites PCAT. In any event, Eschelon's interconnection agreement terms control. Eschelon provides the following comments on Qwest's proposed PCAT changes:

1. In Qwest's red-lined document, the first changes are to the emergency-based "Expedites Requiring Approval" when Qwest approves the expedite ("Approved Expedited Requests"). (Qwest adds the term "Qwest can meet," which is discussed below.) Next, Qwest proposes to insert "and the EXP field is populated" where it did not appear before and, at the same time, delete the current language under which Qwest contacts CLEC. Qwest proposes to replace that language with language indicating that Qwest will only continue to process the request if the EXP field is populated. Otherwise, Qwest will contact CLEC to supplement the request and populate the EXP field.

Will this delay orders that previously would have been expedited based upon a call after the request was submitted (as CLEC may not know at the time of submitting the request that an expedite is needed)?

Also, this change raises concerns about the relationship of this change to Qwest's systems business rules. Qwest's proposed language appears to limit the CLEC's ability to obtain emergency-based "Expedites Requiring Approval," to which Eschelon objects. Qwest requires manual handling of many orders, but Qwest's business rules do not appear to allow a CLEC to populate the EXP field when Qwest requires manual handling. Specifically, the LSOG provides the following business rule: "If EXP = 'Y', the MANUAL IND should = 'N'." The red-lined states, regardless of the option used to request the expedite (e.g. Submit the request with your expedited due date and populate the EXP field.... or Submit the request with a due date interval from our SIG or your ICA and the call the Qwest Call Center), the EXP field will need to be populated on either the original LSR or on a supplemental LSR. There are a number of Qwest processes that require manual intervention (Manual Ind = Y). Qwest's requirement of using "Y" for the Manual Indicator should not prevent a CLEC from requesting an expedited due date.

Is the above the intent and/or effect of Qwest's change?

Eschelon objects to that result. If that is not the intent and/or effect, and if this change were to be made, Qwest should revise its language to specifically address this business rule and document in the PCAT this exception to the LSOG rule(s) and re-issue for comment on that language.

2. In Qwest's red-lined document, the next change is to "Pre-Approved Expedites" for which Qwest requires an amendment and a per day fee. The first line of that change introduces a reference to a due date Qwest "can meet" outside of the context of Qwest delayed facilities. Qwest has not explained this change. The Qwest notice with the red-lined document only mentioned "updating the Expedite process to change the existing manual process . . . to return a Firm Order Confirmation" (a separate PCAT change, which is discussed below). Qwest provided no explanation of Qwest's introduction for the first time of a suggestion that Qwest "can meet" some "Pre-Approved" expedite requests but not others.

What is the basis for Qwest's proposed change in the language?

What are the criteria for whether Qwest "can meet" a "Pre-Approved" expedite request?

Are the criteria changing?

Is resource availability a factor?

Currently, resource availability is identified in the PCAT as a factor for the emergency-based "Expedites Requiring Approval" but not generally for "Pre-Approved" expedites for a fee. There is no mention of criteria such as resource availability in the Qwest expedite amendments, which provide that Qwest will process expedite orders when the CLEC pays the fee. The Expedites for Design Services Amendment does not attach any conditions, such as Qwest resource availability, that allows Qwest to arbitrarily change the CLECs requested due date for Pre-Approved Expedites.

If a CLEC has already signed that amendment and has obtained "Pre-Approved" expedites for a fee, will the terms change so now a CLEC may not obtain them in some cases? Does the PCAT change affect Qwest's offering of expedites under its template ICA or amendment proposals?

Qwest's proposed language is ambiguous. Qwest should revise it and re-issue it for comment with more clear language and more explanation.

3. In Qwest's red-lined document, the remainder of this paragraph (relating to Qwest's "Pre-Approved Expedites") appears to allow Qwest, at its sole discretion, to return an FOC with a new due date that is different than the expedited due date requested by the CLEC for which the CLEC has agreed to pay Qwest's fee. Eschelon objects to Qwest acting in this manner at its discretion. This is contrary to Qwest's own Expedites for Design Services Amendment. The Expedites for Design Services Amendment states "Qwest will process the request and return a FOC acknowledging the expedited due date" (as does the previous PCAT language). It does not contain the language that Qwest proposes to add

to the PCAT stating that Qwest may select a date different from that requested by the CLEC, return an FOC to the CLEC with that different date, and then require the CLEC to monitor for a different date and, if that "does not meet [its] needs" supplement the request. At a minimum, Qwest needs to revise and reissue this change for comment with more clearlanguage and more explanation.

4. Additionally, the red-lined language for this section indicates that the interval is "as defined in Qwest's SIG." This statement is incorrect. The interval may be in the interconnection agreement, for example. Other provisions of the PCAT refer to "interval in the SIG, ICA, or ICB criteria." If the redlined paragraph remains part of Qwest's proposal, this language should also be modified and reissued for comment.

5. Qwest stated in its notice that Qwest is updating the Expedite process to change the existing manual process to improve center efficiencies by returning an FOC with the new due date instead of calling CLECs.

Please confirm that CLECs submitting requests electronically may expect to receive an FOC from Qwest and indicate whether CLECs may rely on the information contained in the FOC sent by Qwest.

### Project Meetings

July CMP Meeting Minutes: Jill Martain – Qwest advised that this went into effect on 6/16/05. Jill asked if it was ok to close this CR. Liz Balvin advised the CR could be closed. This CR will move to Completed Status.

June CMP Meeting Minutes: Jill Martain – Qwest advised that this process is effective June 16 and we would like to move this CR to CLEC Test on June 16th. There was not any objection to change the status to CLEC Test.

May CMP Meeting Minutes: Jill Martain – Qwest advised that the PCAT documentation went out for review on May 9. The comment cycle will close on May 24 and become effective June 23, 2005. This CR will remain in Development Status.

April CMP Meeting Minutes: Jill Martain - Qwest advised that we are working internally to get the three expedite reasons implemented. Jill stated that after meeting internally, we determined that a slight modification was needed. Qwest wants the new Expedite reasons directed to our Business Services. Jill stated that in our ad hoc calls with the CLECs, we did talk about the critical impact to Business customers. Jill recapped the criteria for use of the new Expedite reasons: National Security Business Services unable to dial 911 due to previous order activity Business Service where hunting, call forwarding or voice mail features are not working correctly due to previous order activity where the customer business is being critically affected. Bonnie Johnson - Eschelon asked if there is a definition of business services.

Jill Martain - Qwest advised it would be for more complex business and 1FB type service and this excludes residential and 1FR.

Bonnie Johnson - Eschelon asked for this to be documented.

Jill Martain – Qwest confirmed it would be changed to reflect Business Classes of Service in the actual updates. Liz Balvin - Covad asked if the examples that Qwest looked at were based on Qwest customers.

Jill Martain – Qwest advised the examples were provided by both CLECs and Qwest and discussed in ad hoc meetings.

Liz Balvin – Covad agreed that we should provide definition of Business Services and also asked that the notice reflect that residential would not be included. Liz also confirmed that this does not affect the Expedite process that requires an amendment.

Jill Martain – Qwest confirmed that it does not impact that process. Jill advised the documentation will be updated and sent out for review. Bonnie said thank you for the good results.

This CR will remain in Development Status.

March CMP Meeting Minutes: Jill Martain - Qwest advised that we are still working internally on this request and are hopeful that within the next month the PCAT changes will be available to review with the three additional Expedite reasons. This CR will remain in Development Status. [Comment received from Eschelon: Jill Martain - Qwest advised that we are still working on additional scenarios internally and waiting for internal approval on this request and are hopeful that within the next month the PCAT changes will be available to review with the three additional Expedite reasons.]

February CMP Meeting Minutes: Jill Martain - Qwest advised we are still waiting for final internal approval. Qwest is hoping to have final status next month. This CR will remain in Development Status.

January CMP Meeting Minutes Cindy Harlan/Qwest advised that an ad hoc meeting was held on January 6th. Qwest proposed adding the following as valid Expedite reasons: if access to 911 is not available, if the order is for National Security, and for certain Features in specific situations. The CLECs were receptive to these changes. Qwest has started the process to get final internal review and approval. Additional status will be provided next month. This CR will remain in Development Status.

CLEC Ad Hoc Meeting PC021904-1 Expedite Process January 6, 2005

In attendance: Kari Burke – Comcast Jeff Yeager – Accenture Sharon Van Meter – ATT Chris Terrell – ATT Linda Minesola – Comcast Amanda Silva – VCI Jill Martain – Qwest Wayne Hart – Idaho PUC Kim Isaacs- Eschelon Bonnie Johnson – Eschelon Pete Staze – Eschelon Jennifer Arnold – TDS Metro Steve Kast – MCI Thomas Soto - SBC

Cindy Harlan – Qwest took attendance and reviewed the agenda. The purpose of this call is to discuss options for additional expedite reasons. Cindy explained that Qwest has been reviewing expedites and would like to discuss potentially having Features be considered as a valid expedite reason under certain circumstances. Qwest would like to discuss what the criteria would be and identify Features that cause major impact to the CLECs. We also can potentially add a valid expedite reason if you are unable to dial 911 service and to expedite for National Security reasons. Cindy asked the CLECs to identify what Features create the most impact to the CLECs so we can build some criteria. Cindy advised that Qwest is unable to open other reasons for expedites as we do not have the resources to support that effort.

Bonnie Johnson – Eschelon stated that she didn't think additional resources would be needed to support this. Bonnie said Eschelon's Expedite manager is on the call and she would like him to share with us the large impacting

items. Pete advised that when customers are unable to receive calls this impacts them as if they are out of service. For business customers if they can't receive calls it impacts their revenue.

Jill Martain – Qwest asked if normally there would be an original order to install the service and another one to correct it. Bonnie advised yes, or something changed on one of their features, such as voice mail service, either with their vendor or the equipment, and that causes a need for an expedite. The customer may not understand what they have ordered. Jill asked if it was a fair request that Qwest ask the CLEC for the order number or PON. Bonnie advised that they normally provide this anyway and it is fair, but she does not believe it should be a requirement as there are other reasons too. Jill asked if we could better define and refine the criteria for Hunting so we can go to Retail and Network and discuss further, and publish a reason that is allowable. Otherwise we would negate the standard interval if we automatically allowed expedites on all Hunting requests. Bonnie said it should be an urgent customer situation and their service is not working the way it should be. Bonnie advised that Qwest needs to trust the CLECs request and hope that the CLECs are not abusing the process. Pete Stave – Eschelon advised there are additional steps needed to expedite an order and it is not always easy so we do not request an expedite unless it is necessary.

Jill suggested that we set criteria for this to be an 'urgent customer situation where Hunting or Call Forwarding features are not working correctly and the customer can explain why and provide a service order and/or PON'. The CLECs agreed with this criteria.

Jill asked if there were other features that need to be discussed. Amanda – VCI stated that Features don't pertain to VCI very much, but what happens if a customer is disconnected in error and it is the CLECs error. This happens a few times a month usually due to a disconnect for non payment in error. Jill advised this would need to be handled as a new LSR with standard interval. Another request was made for voice mail set up incorrectly. This can be added to a wrong number for example.

Jill agreed that the items and criteria identified should be workable. Qwest needs to review this internally and determine impacts. Status will be provided at our CMP meeting and we will plan on reviewing the draft process prior to it being published in the PCAT. Another ad hoc meeting will be scheduled at that time.

December CMP Meeting Minutes Cindy Macy – Qwest advised that an ad hoc meeting is scheduled for January 6 to review and further define some options for expanded Expedite reasons. This CR will remain in Development Status.

11/17/04 November meeting minutes Cindy Macy – Qwest advised that Qwest is currently reviewing the expedite process and meeting internally to determine if there are any changes that can be made to the process. This CR will remain in Development Status.

10/20/04 October CMP Meeting Minutes Cindy Macy – Qwest advised that Qwest held an ad hoc meeting. We are reviewing the expedite reasons from the CLECs and the data gathered for potential changes. We hope to have additional information next month. Qwest will hold an ad hoc meeting to review our findings. This CR will remain in Development Status.

PC021904-1 Enhance Expedite Process Ad Hoc Meeting September 22, 2004

In Attendance: Pete Stave – Eschelon Colleen Forbes - ATT Kim Isaacs – Eschelon James Leblanc – McLeod Bonnie Johnson – Eschelon Jean Novak - Qwest Communications Lori Nelson – Mid-Continent Terri Lee - SBC Donna Osborne Miller – ATT Chris Quinstruck - Qwest Cherron Halpern - Qwest Communications Rhonda Velasco – Oregon Telecom Sue Diaz - Qwest Communications Mark Sieres – Advanced Telecom LeiLani Hines – MCI

Brandon McGovern—Advanced Telecom Valerie Estorga - Qwest Communications Roslyn Davis - MCI Christina Valdez - Qwest Communications Scott Ellefson – Qwest John Berard – Covad Dave Miller – Advanced Telecom Michelle Thacker - Qwest Communications Lydell Peterson - Qwest Phil Hunt – McLeod Leti Mudlo - Qwest Robin Jackson – Time Warner Diane Solomonson - Qwest Jolene Brown – Time Warner Stacy Berg – Time Warner Steve Kast - Qwest Communications Jim Christener – McLeod Mark Ashen Brenner – McLeod Chris Voorhees - McLeod Jennifer Fischer - Qwest Communications Diane Johnson – Qwest Michelle Sprague – McLeod Dawn Tafoya - Qwest Communications Jill Martain - Qwest Communications

Cindy Macy – Qwest Communications introduced the attendees and reviewed the agenda. Cindy advised that the purpose of this call is to discuss what is causing the need to expedite. Qwest would like to identify from a CLEC perspective why they expedite. Jill Martain – Qwest added that we would like to identify for non design documentation changes and process changes that could help reduce expedites. Cindy advised that Qwest would like to hear from each CLEC represented so we can gather input and determine what changes could be made to reduce the need for expedites.

Bonnie Johnson – Eschelon advised that Qwest's appointments for new installs and moves in some states were 3 weeks out. This was due to resource issues (no technicians available). Eschelon can not give their customers a 3 weeks due date. We are expediting from a customer service perspective. This was happening in WA/CO/AZ on POTS service.

Colleen – ATT advised that when they submit their orders they have to use appointment scheduler and the date that comes back is what they have to put on their order. They will then call and expedite as the date is not acceptable for their customers. Donna Osborn Miller – ATT advised that they also engage their account teams to help.

Stacy – Time Warner advised that when the due dates is out 2-3 weeks, we have to expedite, and then Qwest wants to charge for the expedite. It is wrong for Qwest to charge for an expedite when the due date is way past standard interval.

Colleen – ATT advised many times the customer is disconnected and needs their service. The disconnect can be due to the customer moving early, an error on Qwest or the CLECs part, the order not getting processes correctly, or a jeopardy.

Bonnie Johnson – Eschelon advised specific to features, our customers have urgent needs. If their call forwarding was set up incorrectly (gave wrong number, or error in programming), and the calls are going to another number it can cause major issues. If a business forwards these calls to a residence, or if there is an emergency and the customer is not able to receive calls it causes major issues for all parties. Call Forwarding generally has a 1-3 day standard interval and a business can not loose calls for 3 days, nor can a residence customer receive calls from a business in error for 3 days. Colleen – ATT advised other LECs have same day turnaround if the order is received before 3p.m.

Jim – McLeod advised orders that are placed in jeopardy for no access are often done in error. The customer says they were available but the technician never came to the door. Then later it is determined that the technician couldn't find the building, or couldn't gain access. Sometimes the customer does give the wrong address and they are now out of service.

Robin Jackson and Stacy Berg – Time Warner advised they have lots of trouble with orders being issued incorrectly. They put information on the LSR that matches the CSR. Then the order gets rejected for address issues. They have to send it in and fix it later, and try to get a new due date. Time Warner also reported that when they build a subscription they send it in and Qwest has to release it. The 'create' needs to be done 3 days

ahead and SOA has to concur. Time Warner wants to know if this is the official process. They work with the LNP team and this process is not working well. Cindy advised she will have the Service Manager contact Robin and Stacy. (robin.jackson@twtelecom.com, Stacey.berg@twtelecom.com)

Dave – Advanced Telecom advised they will get an FOC and the due date is okay. Then on the due date or the day before they will get a jeopardy notice which then needs to be expedited as they have given a due date to their customer.

Bonnie – Eschelon advised when there is an equipment install or vendor meet and we have to coordinate three companies it is very difficult and we usually have to expedite to get the companies represented and the services coordinated and installed.

Bonnie – Eschelon also advised that hunting causes an out of service condition as sometime equipments is needed or there are circular hunting issues and the calls go no where.

Pete – Eschelon advised that coordinated loops installed on LNP are complex and all parties have to be available to keep the customer service from going down.

Lori – Mid-Continent advised that if voice mail is not working the customer perceive this as their service not working. If the call forwarding number is incorrect (wrong area code and the voice messaging needs to be corrected) we have to place an order to fix the issue.

Nicki – Mid-Continent advised sometimes their customers have urgent needs related to their job or personal situation. For example, the customer could be on active duty and need service right away.

John Berard – Covad advised if something goes wrong in the process and the customer gets disconnected in error, it could be the CLECs error, then Covad has to issue another order with a new due date. Sometimes the order is issued as a new order and it should have been a move order so the due date is different.

Dave – Advanced Telecom advised that Qwest does not reject orders consistently. They can submit 10 orders the same and on the 11th order they get a reject. The representative interprets the business rule differently and now we are a day behind. We can talk to 4 different representatives and we can get 4 different answers.

Bonnie – Eschelon confirmed that for non design the same process and charges will apply to Retail. Jill Martain – Qwest confirmed that would occur. Jill – Qwest advised our direction is to not implement a fee for expedites on non design. We are trying to understand some reasons and causes for expedites and address them from a process and documentation perspective. Bonnie advised that is great.

Nicki – Mid-Continent advised she requested an expedite for medical reasons and was asked for a doctors note. Nicki advised this is confidential information. Jill advised it is part of the process to request a note. Our centers are trying to follow the process and make sure the expedite is valid.

Colleen – ATT advised recently we had a customer that filed a PUC complaint and it was on the news so it was a huge issue that needed to be resolved. Jill advised if there are extenuating circumstances you can go through the Escalations process. This is not the norm but under special conditions we do handle escalations.

Cindy – Qwest advised our next steps are to look at the input that was received today and the process. We will determine areas that we can

impact to reduce the need to expedite and provide status at the next CMP meeting. Additional ad hoc meetings may be held.

9/15/04 CMP Meeting Minutes Cindy Macy – Qwest advised that there is an ad hoc meeting scheduled for Wednesday, September 22 to discuss the reasons for expedites. The intent is to look at the cause of expedites to determine if there are improvements that can be made to reduce the number of expedites. This process focuses on non design services. This CR will remain in Development Status.

8/16/04 CMP Meeting Minutes Jill Martain – Qwest advised that Qwest has done additional work on this CR and determined that we won't be able to implement the same process for non design that we implemented for design. We are doing root cause analysis on the data and will determine reasons why expedites are needed. Qwest will meet with each of the CLECs after we have the data and work through the expedite reasons. John Berard – Covad asked some questions about the Expedite V14 PCAT. Jill recapped the process and advised the CLECs that if they have questions they can call her to discuss. John Berard – Covad verified if the error was caused by Qwest than there would not be a charge to expedite. Jill advised that is correct. Bonnie Johnson – Eschelon advised she tried to expedite a feature and the escalation group and Service Manager said they were not able to do this. Bonnie submitted a comment on this issue as Eschelon believes this is an existing process. Bonnie advised her definition of an existing process is if Qwest is performing the process it is an existing process. Bonnie and Jill discussed the issue and agreed that the issue was the difference between what Eschelon sees as an existing process and what Qwest views as an out of compliance. Jill told the center to go ahead and continue to handle feature expedites until we are able to resolve this issue. Bonnie appreciated this as it takes away the immediate pain to Eschelon. Bonnie advised that Eschelon has formed an internal team to review documentation against current process and previous CRs. They are focusing on DSL initially. Bonnie and Jill agreed that Eschelon should submit a CR to determine how to handle the situation when there is disagreement between when Qwest is out of compliance versus when Qwest is performing an existing process. This CR will remain in Development Status.

July 21, 2004 CMP Meeting Minutes: Cindy Macy – Qwest advised that the team held an ad hoc meeting on July 9. During the ad hoc meeting, Jill Martain reviewed the PCAT and addressed comments on the process. Cindy advised that this process is effective July 31 in most states. The following identifies exceptions: AZ 8/5, Northern Idaho and NE 8/2, NE 8/6, WA affects only Access Services. The FCC#1 is effective July 31. Qwest will continue to work on the non design process. Additional status will be provided later. Liz Balvin – MCI advised that the clarification and the updates that were discussed helped a lot. Jill advised those updates have been made. This CR will remain in Development status.

PC021904-1 Expedite Process Ad Hoc Meeting July 9, 2004 10:00 – 11:00 a.m. MT

In attendance: Eric Yohe – Qwest Liz Balvin – MCI Valerie Estorga – Qwest Susan Lorence – Qwest Jackie DeBold – US Link Steve Kast – Qwest Teresa Castro – Vartec Stephanie Prull – Eschelon Sue Lamb – 180 Comm John Berard – Covad Jill Martain – Qwest Ann Atkinson – ATT Julie Pickar – US Link Donna Osborn Miller – ATT Cindy Macy – Qwest

Cindy Macy – Qwest reviewed the history of the CR. Cindy explained that this process was notified on June 15, 2004 and then retracted on June 29, 2004. Cindy reviewed the agenda and purpose of the meeting.

Jill Martain – Qwest advised the intent of the PCAT update was to address the new expedite process on design products. Currently we are not able to include non design products in the process. We will schedule additional ad hoc meetings to discuss non design products and CLEC caused error expedite situations.

Jill advised that July 31 is the tariff effective date. Interstate filings will occur next, and there are a couple states that may go a little later, but each state is in progress of getting the tariffs approved.

Liz Balvin – MCI verified V11 only impacts design services. Jill advised the list of products that are in the pre-approved section are all design products.

Jill advised there will be two processes. 'Expedites that Require Approval' (current process) and the new process 'Approved Expedite Request' for identified design services products. Jill reviewed the PCAT and process in more detail.

Stephanie Prull – Eschelon asked how Qwest will notify the CLEC when Qwest can not meet the expedited date. Jill advised that when the CLEC calls in Qwest will get the name of the person who requested the change and work with them. Stephanie asked what happens if we use the EXP field? Jill advised Qwest would send back the FOC with the PIA value. Stephanie asked if the Retail customers get charged on the 'Expedite Requiring Approval' process. Jill advised no, and neither would the CLECs, unless they sign up for the new process.

Liz Balvin – MCI asked for more clarity on the non design process. Jill advised that the Expedite Process that requires approval applies to non design services or Interconnection Agreements that do not carry the 'per day' expedite rate. Jill agreed to clarify that all non design service expedites or design services expedites if your contract is not amended, will not carry a charge. Non design products can only be expedited for the conditions listed currently. We are still trying to accommodate some CLEC reasons for non design expedites. We will continue working on this and we will have additional calls with the CLECs. Retail follows these same procedures. Jill advised we will work on this in phases.

Jill explained that when you amend your contract there are not reasons for expedites any longer. Qwest agrees to expedite and there is a charge for all expedites.

John Berard – Covad asked if there is a separate charge on design products if there is a fire. Jill advised no, the same charge applies. If Qwest causes the error than there is not a charge.

Stephanie Prull – Eschelon asked when the amendment will be available. Jill advised the target date is July 26. Stephanie asked how this new process affects resource assignment of network technicians. Jill advised we have the resources to cover expedited requests. We have performed volume forecasts. An expedited request and a regular request are equally weighted.

Jill summarized the Pre Approved Expedite process. The CLECs must amend their ICA, the estimated cost to expedite is 200.00 per day, and eligible products are identified in the PCAT.

Stephanie Prull – Eschelon advised that currently the CLECs have special reasons for an expedite that are not included in the list. The CLEC calls the center and works with Qwest to address these situations. Jill advised we need to follow our process, and we will still handle unique conditions. They may need to be escalated.

Liz Balvin – MCI asked if this will be implemented on the Access side. Jill advised the tariff target date is July 31 for Access products. Liz asked Jill to include the tariff reference in the response to comments. Jill advised the exception is the Washington tariff is not being filed at this time.

Jill reviewed the comments to make sure she had addressed the CLECs concerns in today's meeting. The CLECs agreed that the comments have been addressed during today's meeting. Jill advised she will make updates to the PCAT based on today's call.

June 16, 2004 CMP Meeting notes: Jill Martain – Qwest advised for design product the Level 3 notification went out on June 15. For non-design we are still investigating if the process is feasible. The CR will remain in Development Status.

May 19, 2004 CMP Meeting notes: Jill Martain – Qwest advised that Qwest will accept this CR with the caveat to implement this on a product by product basis. There may be some products that this process will not be implemented for. For those products, the old process will stay in place. There will be a cost to expedite and amendments will need to be done. The approximate cost is in the \$150.00 - \$400.00 price range. A per day improvement charge would be assessed. Jill advised that the target list of phase 1 products is included in the response. Qwest is targeting July 31 for implementation. Bonnie verified that this will apply to Retail also. Jill advised yes, and a tariff would be filed. Jill will provide an update next month. This CR will move to Development Status.

April 21, 2004 CMP Meeting notes: Jill Martain – Qwest reviewed the response for this CR. Jill advised that Qwest would like to leave this CR in Evaluation Status as we look at individual products for expedites. Jill asked the CLEC community if they are willing to pay just and reasonable charges to expedite. Bonnie Johnson - Eschelon stated that these charges should apply to retail customers as well. Liz Balvin – MCI asked how this would work. Are the prices driven by what is on our Interconnection Agreement? Jill Martain advised there would be charges in the ICA, and the amendment would have to be written. Bonnie said they would have to be commission approved rates. Jill advised she is not the expert on this process but she believes so. Liz Balvin clarified that if the CLECs are not willing to opt in to the contract, then they would follow the process that is effective today. Jill advised yes. Bonnie advised we do have situations when we have requested an expedite and Qwest denies it. Then the end user customer goes directly to Qwest and the expedite occurs. Jill advised we will keep this perspective in mind. This CR will move to Evaluation Status.

March 17, 2004 CMP Meeting John Berard – Covad presented the CR and explained that Qwest's Expedite Process is written based on certain situations, such as Medical Emergencies. However if the CLEC makes an error, there isn't a process to expedite for a CLEC error reason and the CLEC has to take a regular interval. We want a process to request a faster interval, and we are willing to pay for it. Eschelon supports the request and would like to understand what type of opportunities are available for our Retail customers and if they get charged for an expedite. Bonnie advised that they have had trouble getting their customer in service, and if their customer contacts our Retail organization themselves, they get service in okay. Ervin Rae – ATT advised that he has heard that Qwest leadership is in the process of reviewing our Expedite Process. Jill Martain – Qwest advised that we can take a look at all of these aspects and also review PC081403-1 as this CR is also requesting a 'Restoral Request Process'. This CR will move to Presented Status.

Clarification Meeting February 27, 2004 1-877-552-8688 7146042#  
PC021904-1 Expedite Process for Provisioning – enhancements to existing process

Attendees John Berard – Covad Bryan Comras – Covad Mark Gonzales – Qwest Heidi Moreland – Qwest Jill Martain - Qwest Cindy Macy – Qwest

Meeting Agenda: 1.0 Introduction of Attendees Attendees introduced

2.0 Review Requested (Description of) Change John Berard – Covad reviewed the change request. John explained that Covad would like the title of the CR updated, as this is really a request for an enhancement to the existing expedite process. Cindy agreed to update the CR. John advised that the expedite process is limited today to certain types of orders and processes. For example, medical emergencies. We may find that it is Covad's error that caused the customer to be disconnected. We would like to be able to get our customers restored quicker than standard interval, when it is our error. We are willing to pay for this service. Other ILECs

provide this service. We would like the criteria to be expanded to allow an expedite when the CLEC makes an error. Cindy Macy – Qwest asked for an example of this happening today. John Berard – Covad and Bryan Comras – Covad advised this relates to the Jeopardy process. When Covad fails to complete the order, but we complete the work at the DMARC the customer has service, but we do not close out the records so Qwest doesn't think the customers service is working. Qwest issued a jeopardy notice and since we didn't respond to that notice within 30 days Qwest then cancelled the orders and the service gets disconnected. Covad then goes back and resends the order, but we have to wait the standard interval and that is too long for the end user customer to wait, especially if it is a business account. John Berard – Covad advised disconnects can also happen when the end user selects migration to a new ISP provider. This isn't as critical as the down time is usually very limited as they are hooked up to the new provider. Heidi Moreland – Qwest asked how often this happens? Bryan – Covad replied approximately 20 times per month for Qwest, or once a day on average. Bryan advised that we get faster turn around time on certain products. Heidi confirmed that Shared Loop has a shorter standard installation interval than an unbundled xDSL-capable loop. Heidi advised that the customer could be disconnected when the sync test fails and the notice is not cleared. The DSLAM port is done by the CLEC and the customer is in service. If a supplement is not sent by the CLEC, and if there is no response in 30 days, then the line gets cancelled and pulled down. Covad advised it shouldn't matter what the history or circumstances are, if we are willing to pay for the expedite.

3.0 Confirm Areas & Products Impacted DSL, Line Share, Designed and DSL Products (all products) This applies to any one that was in service and has gone out of service and needs to be set back up due to Customer or end-user error.

4.0 Confirm Right Personnel Involved Jill agreed to get with Joan Wells regarding the Workback / Restoral Request process

5.0 Identify/Confirm CLEC's Expectation Covad would like the ability to pay for an Expedited due date (restoral of disconnected end user) Covad would like to treat these like trouble reports and get the end user back in service in one day. 6.0 Identify any Dependent Systems Change Requests  
PC081403-1 Work Back Restoral Request

7.0 Establish Action Plan (Resolution Time Frame) Covad will present the CR at the March CMP Meeting Qwest will provide our Response at the April CMP Meeting

---

## **QWEST Response**

For Review by CLEC Community and Discussion at the May 19, 2004 CMP Meeting

May 12, 2004

Covad Communications John Berard, Director-Operations Support

SUBJECT: Covad's Change Request Response – CR #PC021904-1 Enhance Expedite Process for Provisioning

This letter is in response to Covad Communications Change Request (CR) PC021904-1. This CR requests that Qwest enhance the expedite process to allow for an interval that is shorter than what is currently available for the product.

Qwest will accept PC021904-1 Enhancement to existing Expedite Process, with the caveat that it will be looked at and implemented on a product by product basis. Qwest will continue to look at all of the individual products to determine if we will implement these changes. For those products which the expedite criteria/process does not change, Qwest will leave the existing expedite criteria and process in place. Additionally, as discussed

previously, expedite charges will become applicable for all expedites except those that are due to Qwest caused reasons and amendments will be required to existing Interconnection agreements to implement those charges. If a CLEC chooses not to amend their Interconnection Agreement, the current expedite criteria and process will be used.

The first phase of implementing a change to the expedite process will be around those products that are Designed Services. A list of those products is shown below. For Designed services, an expedite charge is applicable for each day that the due date is improved (unless the expedite is due to a Qwest caused reason). We are targeting an implementation date of July 31, 2004, pending approval of the Interstate FCC#1 tariff, individual state tariffs and Interconnection agreements.

Following are a list of products that will be included in Phase 1: Product UBL all except 2w/4w analog Analog PBX DID Private Line (DS0, DS1, DS3 or above) ISDN PRI T1 ISDN PRI Trunk ISDN BRI Trunk Frame Relay Trunk DESIGNED TRUNKS (Includes designed PBX trunks) Trunk MDS / MDSI DPAs (multiple DPAs or FX, FCO) Trunk UBL DID (Unbundled digital trunk)

For Review by the CLEC Community and Discussion at the April 21, 2003 CMP Meeting

April 14, 2004

Covad John Berard Director – Operations/Change Management

SUBJECT: CR # PC021904-1 Enhance Expedite Process for Provisioning

This letter is in response to Covad's Change Request (CR) PC021904-1 Enhance Expedite Process for Provisioning. This CR requests that Qwest enhance the Expedite process to allow for an interval that is shorter than what is currently available for the product.

Qwest would like to leave this CR in evaluation status as it needs to continue to look at the individual products and provisioning processes that are impacted by this request. Qwest will provide an updated response at the May CMP meeting. Qwest will move this CR to Evaluation status.

Sincerely,

Jill Martain Qwest Communications

**EXHIBIT 108**

**Announcement Date:** September 12, 2005  
**Effective Date:** October 27, 2005  
**Document Number:** PROS.09.12.05.F.03242.Expedites\_Escalations\_V27  
**Notification Category:** Process Notification  
**Target Audience:** CLECs, Resellers  
**Subject:** CMP - Expedites and Escalations V27  
**Level of Change:** Level 3  
**Associated CR Number or System Release Number:** Not Applicable

**Summary of Change:**

On September 12, 2005, Qwest will post planned updates to its Wholesale Product Catalog that include new/revised documentation for Expedites and Escalations V27. These will be posted to the Qwest Wholesale Document Review Site located at <http://www.qwest.com/wholesale/cmp/review.html>.

Qwest is changing its Expedite process to include all loop types in order to create consistencies across the product line. 2w/4w analog loops are no longer an exception in the Pre-Approved Expedite process. Additionally, Qwest is also including requests for Port In/Port Within that are associated with one of applicable designed services that are already included in the Pre-Approved Expedite Process. Customers who currently have an expedite amendment will automatically be included in this change.

Current operational documentation for this product or business procedure is found on the Qwest Wholesale Web Site at this URL: <http://www.qwest.com/wholesale/clecs/exesclover.html>.

**Comment Cycle:**

CLEC customers are encouraged to review these proposed changes and provide comment at any time during the 15-day comment review period. Qwest will have up to 15 days following the close of the comment review to respond to any CLEC comments. This response will be included as part of the final notification. Qwest will not implement the change sooner than 15 days following the final notification.

Qwest provides an electronic means for CLEC customers to comment on proposed changes. The Document Review Web Site provides a list of all documents that are in the review stage, the process for CLECs to use to comment on documents, the submit comment link, and links to current documentation and past review documents. The Document Review Web Site is found at <http://www.qwest.com/wholesale/cmp/review.html>. Fill in all required fields and be sure to reference the Notification Number listed above.

**Timeline**

Planned Updates Posted to Document Review Site	Available September 12, 2005
CLEC Comment Cycle on Documentation Begins	Beginning September 13, 2005
CLEC Comment Cycle Ends	5:00 PM, MT September 27, 2005
Qwest Response to CLEC Comments	Available October 12, 2005

**Announcement Date:** November 18, 2005  
**Effective Date:** January 03, 2006  
**Document Number:** PROS.11.18.05.F.03492.FNL\_Exp-EscalationsV30  
**Notification Category:** Process Notification  
**Target Audience:** CLECs, Resellers  
**Subject:** CMP – FINAL NOTICE and Qwest Response to  
Comment - Expedites and Escalations V30  
**Level of Change:** Level 3  
**Associated CR Number or System Release Number:** Not Applicable

Qwest recently posted proposed updates to Expedites and Escalations V30. CLECs were invited to provide comments to these proposed changes during a Document Review period from October 20, 2005 through November 3, 2005. The response has been posted to the Document Review archive web site under the original document review segment for Expedites and Escalations V30. The response will be listed in the Comments/Response bracket. The URL is [http://www.qwest.com/wholesale/cmp/review\\_archive.html](http://www.qwest.com/wholesale/cmp/review_archive.html).

Sincerely

Qwest Corporation

Note: In cases of conflict between the changes implemented through this notification and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. All information provided on the site describes current activities and process. Prior to any modifications to existing activities or processes described on the web site, wholesale customers will receive written notification announcing the upcoming change.

**Announcement Date:** May 09, 2005  
**Proposed Effective Date:** June 23, 2005  
**Document Number:** PROS.05.09.05.F.02892.Expedites\_Escalations\_V22  
**Notification Category:** Process Notification  
**Target Audience:** CLECs, Resellers  
**Subject:** CMP - Expedites and Escalations Overview V22  
**Level of Change:** Level 3  
**Associated CR Number or System Release Number:** CLEC CR # PC021904-1

**Summary of Change:**

On May 9, 2005, Qwest will post planned updates to its Wholesale Product Catalog that include new/revised documentation for Expedites and Escalations Overview V22. These will be posted to the Qwest Wholesale Document Review Site located at <http://www.qwest.com/wholesale/cmp/review.html>.

Qwest is updating the Expedites Requiring Approval section to modify/change the existing manual process by adding three additional Expedite reasons. Qwest is limiting these changes to Business Classes of Service due to the short due date intervals that already exist for Residential Classes of Service and also due to the discussion with CR PC021904-1 around business customers that are usually being impacted. Also, language is being added related to providing the service order number that caused the expedite condition.

Further information about this Change Request is available on the Wholesale Web site at URL <http://www.qwest.com/wholesale/cmp/changerequest.html>.

Current operational documentation for this product or business procedure is found on the Qwest Wholesale Web Site at this URL: <http://www.qwest.com/wholesale/clecs/exesclover.html>

**Comment Cycle:**

CLEC customers are encouraged to review these proposed changes and provide comment at any time during the 15-day comment review period. Qwest will have up to 15 days following the close of the comment review to respond to any CLEC comments. This response will be included as part of the final notification. Qwest will not implement the change sooner than 15 days following the final notification.

EXHIBIT 109

**BEFORE THE ARIZONA CORPORATION COMMISSION**

COMMISSIONERS

JEFF HATCH-MILLER, Chairman  
WILLIAM A. MUNDELL  
MARC SPITZER  
MIKE GLEASON  
KRISTIN K. MAYES

IN THE MATTER OF:  
ESCHELON TELECOM OF ARIZONA, INC.  
  
Complainant,  
  
vs  
  
QWEST CORPORATION,  
  
Respondent.

DOCKET NO. T-03406A-06-0257  
DOCKET NO. T-01051B-06-0257

**PROCEDURAL ORDER**

**BY THE COMMISSION:**

On April 14, 2006, Eschelon Telecom of Arizona, Inc. ("Eschelon") filed with the Arizona Corporation Commission ("Commission") a complaint against Qwest Corporation ("Qwest") stating that Qwest has refused to provide both repairs for disconnects in error and the capability to expedite orders for unbundled loops under the repair and expedite language of the Qwest-Eschelon Interconnection Agreement ("ICA").

On April 27, 2006, Qwest and Eschelon filed an Agreement of Parties for Extension of Time to Answer the Complaint in this matter, giving Qwest until May 12, 2006 to file its Answer.

On May 12, 2006, Qwest filed its Answer to Eschelon's Complaint.

On May 16, 2006, by Procedural Order, a procedural conference was scheduled for May 24, 2006.

On May 19, 2006, at the request of the parties, the procedural conference originally set for May 24, 2006, was rescheduled for May 23, 2006.

At the procedural conference on May 23, 2006, counsel for the parties appeared and discussed their desire to implement an interim resolution regarding repairs and the capability to expedite orders for unbundled loops through the resolution of this proceeding. Each party agreed that an accounting

1 and a “true-up” to settle outstanding financial matters would be made based upon any decision issued  
2 in this matter. The parties were not in agreement regarding the particulars of the interim resolution,  
3 and were therefore ordered to file proposed schedules and interim resolutions for the consideration of  
4 the Administrative Law Judge by procedural order issued on May 23, 2006.

5 On June 2, 2006, both Eschelon and Qwest filed their proposed schedules and interim  
6 resolutions. Eschelon proposed interim terms that apply the emergency conditions of Qwest’s  
7 existing Expedite Requiring Approval, under which, if emergency conditions are met, Qwest would  
8 expedite the order at no additional cost to Eschelon for unbundled loops. If emergency conditions are  
9 not met, Eschelon would pay \$200 per day per expedite request. Qwest proposed interim terms that  
10 would apply the expedite process established in the Change Management Process (requiring Eschelon  
11 to pay \$200 per day per expedite request, without a determination of whether emergency conditions  
12 exist) without requiring Eschelon to enter into an amendment to its ICA. Each proposal provides for  
13 a true-up upon resolution of the matters pending in this docket.

14 Qwest’s proposed interim solution would allow Eschelon to request expedites for the cost of  
15 \$200 per day per expedite, without requiring an amendment to the current ICA, with no provision for  
16 no-cost emergency expedites. Another option is to maintain the status quo. Eschelon’s proposal is a  
17 good compromise, preserving the Eschelon’s ability to obtain no-cost emergency expedites but  
18 providing for payment to Qwest for non-emergency expedites. We will adopt Eschelon’s interim  
19 proposal in this docket, as it best preserves the respective parties’ rights.

20 Likewise, each party proposed disparate timelines for testimony, discovery, and hearing dates.  
21 Eschelon has requested a somewhat compressed timeline. Qwest’s lead counsel indicated that he has  
22 prior legal obligations during July, September, and October of 2006, and therefore Qwest has  
23 requested an extended timeline.

24 Given Staff’s expertise and experience with the Change Management Process, Staff  
25 participation will be necessary in this matter.

26 Taking the parties’ schedules and requirements into account, we will adopt a modified  
27 schedule as follows:

28 . . .

1	Eschelon Testimony	July 14, 2006
2	Qwest Testimony	August 21, 2006
3	Staff Testimony	September 14, 2006
4	Eschelon & Qwest Rebuttal	September 25, 2006
5	Pre-hearing conference	September 27, 2006
6	Hearing	October 2-5, 2006

7 IT IS THEREFORE ORDERED that the parties shall apply the interim resolution for expedite  
8 process provided for in Eschelon Telecom of Arizona's June 2, 2006 filing.

9 IT IS FURTHER ORDERED that the **hearing** in this matter shall be held on **October 2, 2006**  
10 **at 10:00 a.m.** at the Commission's offices, 1200 West Washington Street, Phoenix, Arizona. The  
11 parties shall set aside time through October 5, 2006 in the event that additional hearing dates are  
12 necessary.

13 IT IS FURTHER ORDERED that Eschelon's testimony and associated exhibits to be presented  
14 at hearing shall be reduced to writing and filed on or before **July 14, 2006**.

15 IT IS FURTHER ORDERED that Qwest's testimony and associated exhibits to be presented at  
16 the hearing shall be reduced to writing and filed on or before **August 21, 2006**.

17 IT IS FURTHER ORDERED that Staff's testimony and associated exhibits to be presented at  
18 hearing shall be reduced to writing and filed on or before **September 14, 2006**.

19 IT IS FURTHER ORDERED that any rebuttal testimony and associated exhibits to be  
20 presented at hearing by Eschelon and Qwest shall be reduced to writing and filed on or before  
21 **September 25, 2006**.

22 IT IS FURTHER ORDERED that a pre-hearing conference shall be held on **September 27,**  
23 **2006** at 10:00 a.m. at the Commission's offices, 1200 West Washington Street, Phoenix, Arizona.

24 IT IS FURTHER ORDERED that all filings shall be made by 4:00 p.m. on the date the filing  
25 is due, unless otherwise indicated above.

26 IT IS FURTHER ORDERED that any objections to any testimony or exhibits which have  
27 been prefiled as of September 25, 2006, shall be made at or before the September 27, 2006, pre-  
28

1 hearing conference.

2 IT IS FURTHER ORDERED that any substantive corrections, revisions, or supplements to  
3 pre-filed testimony shall be reduced to writing and filed no later than five days before the witness is  
4 scheduled to testify.

5 IT IS FURTHER ORDERED that discovery shall be as permitted by law and the rules and  
6 regulations of the Commission, except that: any objection to discovery requests shall be made within  
7 7 days<sup>1</sup> of receipt and responses to discovery requests shall be made within 10 days of receipt; the  
8 response time may be extended by mutual agreement of the parties involved if the request requires an  
9 extensive compilation effort; and no discovery requests shall be served after **September 27, 2006**.

10 IT IS FURTHER ORDERED that discovery requests, objections, and answers may be served  
11 electronically.<sup>2</sup>

12 IT IS FURTHER ORDERED that, in the alternative to filing a written motion to compel  
13 discovery, any party seeking resolution of a discovery dispute may telephonically contact the  
14 Commission's Hearing Division to request a date for a procedural hearing to resolve the discovery  
15 dispute; that upon such a request, a procedural hearing will be convened as soon as practicable; and  
16 that the party making such a request shall forthwith contact all other parties to advise them of the  
17 hearing date and shall at the hearing provide a statement confirming that the other parties were  
18 contacted.<sup>3</sup>

19 IT IS FURTHER ORDERED that any motions which are filed in this matter and which are  
20 not ruled upon by the Commission within 20 days of the filing date of the motion shall be deemed  
21 denied.

22 IT IS FURTHER ORDERED that any responses to motions shall be filed within five days of  
23 the filing date of the motion.  
24

25 \_\_\_\_\_  
26 <sup>1</sup> "Days" means calendar days. The date of receipt of discovery requests is not counted as a day, and requests  
received after 4:00 p.m. will be considered as received the next business day.

27 <sup>2</sup> If requested by the receiving party, and the sending party has the technical capability, service electronically is  
mandatory.

28 <sup>3</sup> The parties are encouraged to attempt to settle discovery disputes through informal, good-faith negotiations  
before seeking Commission resolution of the controversy.

1 IT IS FURTHER ORDERED that any replies shall be filed within five days of the filing date  
2 of the response.

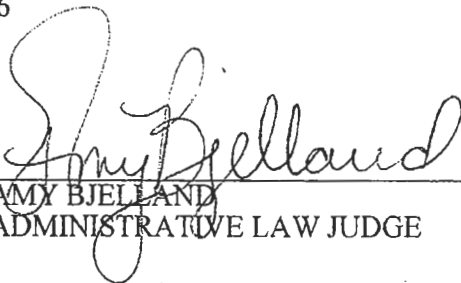

3 IT IS FURTHER ORDERED that all parties must comply with Rule 33 (c) and (d) of the  
4 Rules of the Arizona Supreme Court with respect to practice of law and admission *pro hac vice*.

5 IT IS FURTHER ORDERED that withdrawal of representation must be made in compliance  
6 with A.A.C. R14-3-104(E) and Rule 1.16 of the Rules of Professional Conduct (under Rule 42 of the  
7 Arizona Supreme Court). Representation before the Commission includes the obligation to appear at  
8 all hearings and procedural conferences, as well as all Open Meetings for which the matter is  
9 scheduled for discussion, unless counsel has previously been granted permission to withdraw by the  
10 Administrative Law Judge or the Commission.

11 IT IS FURTHER ORDERED that the Ex Parte Rule (A.A.C. R14-3-113 - Unauthorized  
12 Communications) applies to this proceeding and shall remain in effect until the Commission's  
13 Decision in this matter is final and non-appeable.

14 IT IS FURTHER ORDERED that the Presiding Officer may rescind, alter, amend, or waive  
15 any portion of this Procedural Order either by subsequent Procedural Order or by ruling at hearing.

16 Dated this 6 day of June, 2006

BEFORE THE PUBLIC UTILITY COMMISSION OF OREGON

In the Matter of the Petition of Eschelon )  
Telecom of Oregon, Inc. for Arbitration with ) Docket No. ARB 775  
Qwest Corporation, Pursuant to 47 U.S.C. )  
Section 252 of the Federal )  
Telecommunications Act of 1996 )

---

**EXHIBIT 110**

**JEOPARDY CLASSIFICATION AND FIRM ORDER CONFIRMATIONS**

Issues:

- Circuit not accepted: Qwest failure to provide Eschelon with an FOC after a Qwest jeopardy, with Qwest then applying a Customer Not Ready (CNR) jeopardy even though Eschelon could not accept the circuit because, due to the lack of an FOC, Eschelon did not know Qwest was delivering the circuit. (See CR PC081403-1)
- Circuit accepted: Qwest failure, after sending a Qwest jeopardy for a due date, to provide Eschelon with an FOC with a new due date, with Qwest calling Eschelon to deliver the circuit on a different date (*i.e.*, a date for which there is no FOC) anyway. Although Eschelon may have been able to scramble and accept the circuit, Qwest should have provided an FOC to avoid that scramble. (See CR PC081403-1)

Event Summary (see Chronology below for additional information):

- 8/14/03 In CMP, Eschelon opened a Change Request (CR PC081403-1)
- 2/26/04 In CMP, Qwest confirmed (in response to an example provided by Eschelon) that (1) an **FOC should have been sent** after CLEC received a Qwest facility (K) jeopardy; (2) the FOC should have been sent **the day before the due date**; and (3) both sending the FOC and doing so the day before the due date are **part of Qwest's delayed order process**.
- 7/21/04 In CMP (eleven months after CR submission), Qwest closed the CR by providing that CLECs will receive an FOC after a Qwest facility (K) jeopardy but before (*i.e.*, 24 hours before) delivering the facility -- with compliance issues to be addressed going forward through Qwest Service Management (rather than CMP).
- 8/14/04 Eschelon began raising compliance issues with Qwest Service Management. Eschelon started to provide data relating to DS1 capable loop jeopardies on a regular (monthly/weekly) basis.
- 4/6/05 Qwest Service Management told Eschelon that **it is not part of the Qwest process** for CLEC to receive an FOC after Qwest facility (K) jeopardy but before (*i.e.*, 24 hours before) delivering the facility.
- 4/27/05 Eschelon proposed contract language in Qwest-Eschelon ICA negotiations addressing the issue of CLECs receiving an FOC after a Qwest facility (K) jeopardy but before delivering the facility.
- 8/3/05 **Qwest Service Management told Eschelon that Eschelon should open a Change Request in CMP** if Eschelon wanted to change the process.
- 8/15/05 Eschelon responded that it had already done so and that Qwest is in non-compliance with the process that already went through CMP.
- 9/1/05 Qwest CMP Process Manager told Eschelon that its process does not require Qwest to provide **any FOC at all** (*i.e.*, not just that it did not need to be provided the day before, but also that Qwest could send no FOC) after a facility jeopardy.

- 5/26/06 Issue 12-72 at impasse. Qwest position statement says to refer the issue to CMP.
- 8/25/06 Eschelon provided modified language for Issue 12-72 to Qwest (“at least a day”)
- 10/16/06 Qwest witness, Rene Albersheim, testifies in the Minnesota Eschelon/Qwest arbitration hearing that:
- Eschelon’s proposal reflects Qwest current practice with the exception of the phrase “the day before”
  - Qwest’s current process is to provide the CLEC with an FOC after a Qwest facilities jeopardy has been cleared
  - The FOC is the agreed upon process by which Qwest informs Eschelon of the due date for a circuit
  - If Qwest did not send Eschelon an FOC, a subsequent CNR jeopardy is improper
  - Qwest should not send a subsequent CNR jeopardy when Qwest did not provide an FOC
  - In at least 8 of the 23 examples Eschelon provided to Qwest, Qwest did not send Eschelon an FOC after the jeopardy but before delivering the circuit
  - In only 3 of the 23 examples Eschelon provided to Qwest did Qwest agree that Qwest incorrectly classified the jeopardy as CNR
- 11/3/06 Eschelon sends Qwest jeopardy tracking data, per the usual weekly process.
- 11/7/06 Qwest Director of Service Management responds to Eschelon’s email and states: “Qwest has determined that due to resources Qwest will not be reviewing this report any longer. Qwest through self reporting internally will manage the process and compliance of the delayed order process.”
- Nov. 06+ Eschelon continues to send weekly data, per the usual weekly process. Qwest sent additional emails indicating that Qwest will not review the data and, since then, has simply stopped responding.

### CHRONOLOGY

8/14/03 – Eschelon submitted Change Request PC081403-1 entitled “Delayed order process modified to allow the CLEC a designated time frame to respond to a released delayed order after Qwest sends an updated FOC.” Eschelon provided the following description of the requested change and requested deliverables:

“Qwest will contact the CLEC to test and accept only after the updated FOC has been sent and a designated time frame has passed. Qwest will not put the order in a CNR (customer not ready) jeopardy status until this time frame has passed and the CLEC is not ready.

When Qwest puts a CLECs request in delayed for facilities jeopardy status, Qwest should be required to send the CLEC an updated FOC when the delayed order is released and allow the CLEC a reasonable time frame to prepare to accept the circuit. Qwest releases orders form a held status (in some cases the CLEC has not even received an updated FOC) and immediately contacts the CLEC to accept the circuit. Because Qwest does not allow the CLEC a reasonable amount of time to prepare for the release of the delayed order, the CLEC may not be ready when Qwest calls to test with the CLEC. Qwest then places the request in a CNR jeopardy status. Qwest should modify the Delayed order process, to require Qwest to send an updated FOC and then allow a reasonable amount of time for the CLEC to react and prepare to accept the circuit before contacting the CLEC for testing.” (See [http://www.qwest.com/wholesale/cmp/archive/CR\\_PC081403-1.htm](http://www.qwest.com/wholesale/cmp/archive/CR_PC081403-1.htm)).

Qwest will contact the CLEC to test and accept only after the updated FOC has been sent and a designated time frame has passed. Qwest will not put the order in a CNR (customer not ready) jeopardy status until this time frame has passed and the CLEC is not ready.”

8/26/03 – During the CMP clarification call for Change Request PC081403-1, Qwest confirmed it should be sending the CLEC an FOC. The Qwest prepared minutes state: “Phyllis explained the jep could be placed early in the morning and the tech working on the it may get a solution the same day. This creates a timing difficulty. The current process is for the order to be jep’d, **Qwest would send an FOC when they find out the issue has been taken care of**, and then if the customer is not ready the LSR is put in CNR.” See [http://www.qwest.com/wholesale/cmp/archive/CR\\_PC081403-1.htm](http://www.qwest.com/wholesale/cmp/archive/CR_PC081403-1.htm) (emphasis added)

9/17/03 –Minutes of the CMP meeting regarding Change Request PC081403-1 state: “**Jill Martain is working on the issue with not receiving an FOC**. This was brought up at the CLEC forum. Cindy Macy-Qwest asked if the changes associated to PC072303-1 – changing the time when Qwest jeps for CNR, would meet this CR. Bonnie advised no, because in this case the order is being released from delayed status and the original FOC has already occurred.” See [http://www.qwest.com/wholesale/cmp/archive/CR\\_PC081403-1.htm](http://www.qwest.com/wholesale/cmp/archive/CR_PC081403-1.htm) (emphasis added)

10/6/03 – Minutes of an ad hoc CMP meeting state: “Jill said she certainly can accommodate some time frames in between FOC and Jep. Jill referred to this as Phase 2.” See [http://www.qwest.com/wholesale/cmp/archive/CR\\_PC081403-1.htm](http://www.qwest.com/wholesale/cmp/archive/CR_PC081403-1.htm)

10/15/03 – Change Request combined/revised -- Qwest monthly CMP meeting notes state: “Changed the description of this CR as a result of synergies with PC072303-1. During the October 15 CMP meeting we discussed whether we should close/leave open/ or update CR PC081403-1 'Delayed order process modified to allow the CLEC a designated time frame to respond to a released delayed order'. The reason we wanted to close/leave open or update PC081403-1 is because PC072303-1 is meeting many of the needs. **Bonnie Johnson agreed to change this CR, as long as we retained the original CR description**” See [http://www.qwest.com/wholesale/cmp/archive/CR\\_PC081403-1.htm](http://www.qwest.com/wholesale/cmp/archive/CR_PC081403-1.htm) (emphasis added)

12/8/03 – CMP clarification call for the revised PC081403-1. Minutes state: “Bonnie Johnson – Eschelon asked about the CR request regarding when the CLEC gets a jep, and then Qwest does not allow the CLEC time to react to the FOC (4 hour minimum). Jill asked Bonnie if we could wait and determine the impact of the 6pm jep time change **as this change should reduce the number of jeps and reduce this issue**. Bonnie agreed we could discuss this later if it is still an issue.” See [http://www.qwest.com/wholesale/cmp/archive/CR\\_PC081403-1.htm](http://www.qwest.com/wholesale/cmp/archive/CR_PC081403-1.htm) (emphasis added)

1/21/04 – January CMP meeting notes state: “Bonnie sent in two examples where they did not get a subsequent FOC and the order was jep’d for CNR. Bonnie advised that Qwest needs to find a way to get the FOC to the CLEC. **The impact to our business is that we are forced to supp the order and take a new due date. Qwest no longer takes the hit on the held order in this situation too. Bonnie advised that Qwest needs to aggressively tackle this issue as it impacts our business, end users and held orders. It is high profile and critical and it needs to be fixed.** Jill Martain – Qwest advised we have the examples and we are prepared to talk in more detail at the Friday meeting.” See [http://www.qwest.com/wholesale/cmp/archive/CR\\_PC081403-1.htm](http://www.qwest.com/wholesale/cmp/archive/CR_PC081403-1.htm) (emphasis added)

1/23/04 – Ad hoc CMP call to discuss Change Request PC081403-1 and related examples provided by Eschelon. Minutes stated: “Phyllis said the next topic to discuss is the request for additional wording on jeps. Phyllis explained that we can provide more detail on subsequent jeps. The first jep that goes out is considered a preliminary jep, with a preliminary view of the issue. Qwest does not know additional details until the engineer does investigation and finds out more. **Our target is that within 72 hrs Qwest would either send an FOC or another jeopardy notification with additional detail.** Bonnie Johnson – Eschelon advised the mechanical jeps are not detailed enough. . . .

Phyllis discussed the two examples that Eschelon sent in. 1) One was a jeopardy notification sent for a PICs issue, no FOC was sent & then CNR. – This was an example of a Critical Date Jeopardy that would be addressed by the proposal of not sending Critical Date Jeopardy Notifications as the situation is cleared so that the Due Date can be met, **thus the CLEC would expect Qwest to deliver on the Due Date.**” See [http://www.qwest.com/wholesale/cmp/archive/CR\\_PC081403-1.htm](http://www.qwest.com/wholesale/cmp/archive/CR_PC081403-1.htm) (emphasis added)

2/26/04 – Qwest meeting notice<sup>1</sup> for a March 4, 2004 CMP meeting to review materials dated 2/25/06 attached to the notice related to Change Request PC081403-1. Attached 2/25/06 materials stated:

“Example #1 insufficient notice of an order being release prior to Eschelon receiving a CNR jeopardy.

1-23 Jeopardy Notification for K17, K09

1-28 FOC for 1-28

1-28 CNR

Action #1: As you can see receiving the FOC releasing the order on the day the order is due does not provide sufficient time for Eschelon to accept the circuit. Is this a compliance issue, shouldn't we have received the releasing FOC the day before the order is due? In this example, should we have received the releasing FOC on 1-27-04?

Response #1 ***This example is non-compliance to a documented process. Yes an FOC should have been sent prior to the Due Date.***<sup>2</sup>

3/4/04 –Ad hoc CMP call. Minutes state: “Bonnie confirmed that the CLEC should always receive the FOC before the due date. ***Phyllis agreed, and confirmed that Qwest cannot expect the CLEC to be ready for the service if we haven't notified you.*** Bonnie asked about the CNR in error? (When the CLEC has gotten a CNR without a FOC). Jill Martain – Qwest advised that we believe eliminating the ‘critical date’ jeopardies will take care of the bulk of the problem with CNR jeopardies.” See

[http://www.qwest.com/wholesale/cmp/archive/CR\\_PC081403-1.htm](http://www.qwest.com/wholesale/cmp/archive/CR_PC081403-1.htm) (emphasis added)

3/17/04 –CMP meeting. Minutes state: “Bonnie Johnson – Eschelon stated that she wants to make sure that we get documentation to support the process that an FOC must be sent before a customer not ready jeopardy occurs. Phyllis advised she is still working on this issue with an interdepartmental team. Phyllis advised that Jean Novak – Service Manager has had meetings with Network to respond to the examples that Eschelon forwarded as “inaccurate Jeopardy Notices and is still working on the issue. ***Jean is working on ‘inaccurate jeopardy notices’ and Phyllis is working on ‘when you don’t get an FOC’.***” See

[http://www.qwest.com/wholesale/cmp/archive/CR\\_PC081403-1.htm](http://www.qwest.com/wholesale/cmp/archive/CR_PC081403-1.htm) (emphasis added)

7/21/04 – Closed Change Request PC081403-1 entitled “Delayed order process modified to allow the CLEC a designated time frame to respond to a released delayed order after Qwest sends an updated FOC” at CMP meeting. Minutes state: “***Qwest advised that this CR was implemented May 27.*** Qwest would like to close this CR. Bonnie Johnson – ***Eschelon advised she is having a problem with compliance to this process.*** Bonnie asked if there is additional work going on for this CR? Jill advised we put the process in place to identify and work critical jeopardy codes so the CLECs do not have to worry about the interim jeopardy codes. In addition the process includes providing additional details on the jeopardy within 72 hours if we are not able to send an FOC within that time frame. Jill Martain – Qwest asked if this is a compliance issue or a process problem. Bonnie said it is hard to determine at times,

<sup>1</sup><http://www.qwest.com/wholesale/cnla/uploads/CMPR%2E02%2E26%2E04%2EF%2E01421%2EJeopardyNotifiProcess%2Edoc>

<sup>2</sup><http://www.qwest.com/wholesale/cnla/uploads/PC081403%2D1JeopNotif%2DFinalMarch4meeting%2Edoc> (emphasis changed)

but *she is willing to close this CR and handle the compliance issue with the Service Manager*. The CLECs agreed to close the CR.”  
See [http://www.qwest.com/wholesale/cmp/archive/CR\\_PC081403-1.htm](http://www.qwest.com/wholesale/cmp/archive/CR_PC081403-1.htm) (emphasis added)

8/16/04 – Email from Eschelon to Qwest Service Management. It states:

**From:** Johnson, Bonnie J.  
**Sent:** Monday, August 16, 2004 7:59 AM  
**To:** jlnovak[contact information redacted]  
**Cc:** Larson, Laurie A.; Bonnie Johnson; Karen Clauson; Kimberly Isaacs; Raymond Smith  
**Subject:** Qwest Held Order Jeopardy Process Compliance

Jean,

Qwest delayed order process compliance issues are impacting our Service Delivery organization. In our last WTM, Eschelon communicated to Qwest that Eschelon was concerned about Qwest's compliance to its newly implemented delayed order process. Eschelon said it would start measuring and reporting Qwest's delayed order compliance to process on an ad-hoc basis for the RC/WTM.<sup>3</sup>

Though Qwest and Eschelon agreed to manage this within the WTM process, Qwest's lack of adherence to its own delayed order process has created such a significant impact to our Service Delivery organization, Eschelon is asking for immediate root cause and action on the attached data.

Qwest sent a notice advising CLECs that the Qwest delayed order center work was being assigned to different centers. Eschelon heard (unofficially) that the Cheyenne, WY delayed order center was closing and in the June CMP meeting told Qwest this impacts CLECs and CLECs need to be notified this happens. When entire centers close and a new group of Qwest employees are doing work they have not performed before, this significantly impacts the CLECs involved.

As a general note, Eschelon has asked its employees that manage the Qwest delayed orders to be patient as Qwest works through its center reassignment and training. However, these Eschelon employees have reported they are having a great degree of difficulty getting answers to questions and finding someone to help. This is over and above the delay in getting any response at all. Prior to Qwest moving the work, Eschelon called the CSIE<sup>4</sup>, asked to be transferred to the delayed order group, requested the information needed, Qwest provided the information and the call was done. This is no longer the case.

**Action required** : Eschelon asks Qwest where Qwest is in the work movement process and what time frame Qwest will finish training its employees processing delayed orders.

---

<sup>3</sup> RC = Report Card (a report Eschelon provided Qwest). WTM = Working Team Meeting (Eschelon and Qwest service management monthly meeting).

<sup>4</sup> CSIE = Qwest's Customer Service Inquiry and Education (otherwise known as Interconnect Service Center (ISC)), see ICA Section 12.1.3.3.2.1.

I am attaching the analysis Kim completed for delayed orders 8/1/04 through 8/13/04. For this project Eschelon included only DS1 loop orders. To help Qwest identify where the breakdown is occurring, Eschelon has included all held orders. Qwest then see who is following process and who is not. As you will see from the summary tab, for all held orders Qwest has about a 50% process compliance rate.

**Action required:** Eschelon asks Qwest to perform root cause expeditiously and tell Eschelon what steps Qwest will take to ensure Qwest is adhering to the delayed order process. Eschelon measured; timely jeopardy, did Qwest send detail or an FOC within 72 hours, did Qwest send an FOC releasing the order at least 24 hours before the release or DD (or did Qwest send a FOC releasing the order at all) and did Qwest inappropriately apply a CNR jeopardy when Qwest did not follow the delayed order process. In addition, Eschelon asks Qwest to remove any inappropriate CNR jeopardies from service orders.

Please let me know if you have questions.

**Subject:** Qwest Held Order Jeopardy Process Compliance  
Bonnie

Attached is the jeopardy analysis completed on the examples provided to Qwest by Eschelon. Qwest would like to note:

- 1.) Five of the LSRs in the spreadsheet are where a FOC was not sent timely prior to the due date because Qwest resolved the facility condition either on PTD or on the due date. The delayed order process was not were the breakdown occurred, rather resolving the facility issue late in the process and still attempting to meet the customers due date. Qwest will continue to monitor this.
- 2.) There were a number of LSRs listed that were due to workforce, B33. It is my understanding that this was discussed in CMP and agreed to by the CLEC community to ignore B33s sent prior to the due date.

In summary:

There were several LSRs that were listed more than once and Qwest provided an explanation for the overall LSR only once.

There were approximately 26 were Qwest saw no process gaps and the CLEC should have expected us on the due date that was FOC'd.

There were 16 were Qwest has taken appropriate action. Of those 16, 5 were due to the issue described above with resolving the facility really late in the process; 5 of those will be addressed through coaching and the other 6 were miscellaneous issues addressed by Qwest.

Let me know if you have additional questions or feedback.

Thanks,  
Jean Novak

**Cc:** Larson, Laurie A.; Clauson, Karen L.; Isaacs, Kimberly D.; Smith, Raymond L; Tietz, Jeff  
**Subject:** RE: Qwest Held Order Jeopardy Process Compliance

Jean,

You are correct about the B jeps. Qwest did tell Eschelon to ignore those jeps. Eschelon told Qwest it was sending the universe of DS1 jeoaprdies to review. Eschelon communicated it did so, because Qwest could then tell what Qwest employees/groups/centers were following process and where Qwest needed to focus attention or additional training. I hope Qwest did not spend a significant amount of valuable time doing root cause on those jeopardies where Eschelon agrees Qwest followed its process. As you can see from the spreadsheet, on all but one of the B jeopardies, Eschelon agreed Qwest followed process. The B jeopardy that is marked no, was marked no because Eschelon ignored the B jeopardy, as Qwest's process states (because Qwest said in all cases Qwest meets the DD) and Qwest missed the due date. In those cases, Eschelon is unable to notify the customer until after Qwest has already missed the commitment.

In addition, on those responses Qwest said Eschelon provided duplicates, the LSR had multiple jeopardies and Eschelon was communicating each jeopardy for the LSR separately. On line 15 Eschelon agrees Qwest followed the process, however, on line 9 where Qwest states it is a duplicate, Qwest did not follow the process. Can you confirm that line 9 was addressed? The Qwest comments says duplicate see line 7 and line 7 was a different jeopardy for that LSR.

**2004-Present** – Eschelon continued to provide additional examples to Qwest on a regular (weekly to monthly) basis.

**2/28/05 - From Eschelon Issues Log for Service Manager Meetings (which is regularly provided to Qwest)<sup>5</sup> – Eschelon notes indicate:**

Qwest (Jean) said “Qwest looked at January data and found had Qwest people that did not understand process and were not following the process. Qwest is training. Qwest did see on some the 72 hour response sent when Eschelon checked no.”

**3/28/05 – Qwest email to Eschelon in response to examples. It states:**

“-----Original Message-----

**From:** Novak, Jean [contacted information redacted]

**Sent:** Monday, March 28, 2005 9:00 AM

**To:** Isaacs, Kimberly D.; Jean Novak (E-mail)

**Cc:** Novak, Jean; Nielsen, Joshua

**Subject:** Jeopardy Compliance 3 7 05

Kim,

Qwest completed on the analysis on Eschelon's February Delayed Orders that were sent on March 7, 2005 with the following results:

Missed sending the 72 hour update notification . Qwest is currently working with each department that updates information to insure the Delayed Order Group receives the information needed for processing.

Missed sending the Releasing FOC . Qwest has trained individually and with the group. In addition, tracking information from other Qwest departments which impact timely responses.

Missed providing the Circuit ID/SBN on Jep's sent prior to FOC. Qwest has trained individually and with the group.

Of all the misses due to not adhering to process, 50% were attributed to the same person. Correction action has taken place.

Thanks  
Jean Novak  
Regional Service Director  
Qwest Communications”

**4/06/05 - Discussion during the 4/6/05 Eschelon/Qwest monthly Service Delivery meeting. Eschelon later provided the following documentation to Qwest in an issues log (with emphasis added): “The delayed orders have moved to the Mpls Center. Chris believes she has addressed process and training needs for her Center personnel and Chris and Jean are working with network on the network caused issues. *Chris said there is an outstanding problem of FOC 24 hours in advance when the order had a Qwest K jeopardy.* Chris said**

---

<sup>5</sup> Eschelon provides the issues log to Qwest on a regular basis (approx. weekly). It contains information from weekly calls and monthly meetings, as well as email and other communications, between Eschelon and Qwest.

she cannot find that process and she checked with process on the issue. **Chris said Phyllis said this was not a part of the process. Bonnie said she was in disbelief to hear anyone from Qwest make that statement after all of the work in CMP.** Not having time to react to an FOC was one of the main sticking points of the whole process overhaul and Qwest send information as responses to Eschelon's examples that state Qwest should FOC 24 hours before the DD and for the examples Qwest said it was a compliance issue to an existing Qwest process. Bonnie said if Qwest wants to change or work through the process we could do that in CMP. Jean will work with Qwest CMP and review CRs , meeting minutes and ad-hoc meeting minutes on the subject."

4/27/05 - Eschelon proposed contract language in Qwest-Eschelon ICA negotiations addressing the issue of CLECs receiving an FOC after a Qwest facility (K) jeopardy but before delivering the facility

5/04/05 - **From Eschelon Issues Logs for Service Manager Meetings (which is regularly provided to Qwest)** – Eschelon notes indicate Qwest said:

"Chris Siewert was not happy with the the results of the data Kim continues to send Qwest on a daily basis. Bonnie asked if this was network related and Jean said it was also center related and Phyllis is working with network. Chris said they found an SDC that needed to be trained. Qwest has provided no additional information on FOC 24 hours before the DD."

6/27/05 - Eschelon/Qwest weekly issues call – Eschelon later provided the following documentation to Qwest in an issues log (with emphasis added):

"Jean said she had an internal call with Qwest personnel and Qwest disagrees that Qwest sending an FOIC [sic] the day before the DD is a part of the process. Bonnie said that is not true. Qwest responded to an example Kim sent to Phyllis where Qwest sent a CO1 jep on an order that Qwest sent a same day FOC for. **The Qwest response was that Qwest did not follow process and Qwest should send an FOC before the DD. Kim said this is why we did not focus on this as a part of the process. Qwest said it was already a part of the process so it did not need to change. Bonnie sent Jean the CMP notice Qwest sent February of 2004.** Jean will contact Phyllis directly to discuss."

6/27/05 – Eschelon email to Qwest. It stated:

To: Novak, Jean; Johnson, Bonnie J.  
Cc: Nielsen, Joshua  
Subject: RE: Delayed order process

Jean,

As we have discussed in a number of our meetings, Eschelon believes that on 2-25-04 Qwest communicated (see the agenda for the 3-4-05 ad hoc call on change request PC080103-1) that it is Qwest's process to provide 24 hours notice on a released delayed orders. Eschelon is very disappointed that contrary to the written statements Qwest made on 2-25-04, Qwest is maintaining that sufficient notice of an order being released from delayed status is not part of the delayed order process and that issue needs to be brought to CAMP again.

I will discuss the current status of this issue with Bonnie when she returns. Bonnie and I will discuss the alternatives and communicate our next steps to you at that time.

Thank you.

Kim Isaacs

8/16/05 – Eschelon email to Qwest. It stated:

**From:** Johnson, Bonnie J.  
**Sent:** Tuesday, August 16, 2005 9:01 AM  
**To:** Isaacs, Kimberly D.; 'Novak, Jean'; Bonnie Johnson; [cmpr@qwest.com](mailto:cmpr@qwest.com)  
**Cc:** 'Nielsen, Joshua'; Larson, Laurie A.; Henderson, Mike P.; Johnson, Bonnie J.  
**Subject:** RE: Delayed order process

All,

As Kim states below, Qwest told Eschelon (and all CLEC's in an ad-hoc meeting for delayed process through CMP) that Qwest's existing process for delayed orders is to FOC the CLEC 24 hours (or the day prior to the new DD). As a practical matter, it is unreasonable to expect a CLEC to accept a circuit when Qwest has told the CLEC the circuit is in jeopardy and Qwest has not sent the CLEC notification that the jeopardy condition no longer exists.

As CLEC's and Qwest worked through overhauling the delayed order process in 2004, Eschelon sent examples to Qwest so the CLEC's and Qwest could collaboratively determine what was and was not process and what changes needed to be made to the process. When Eschelon provided Qwest the example (attached below) when Qwest sent Eschelon an FOC on the due date for that same day due date, and then Qwest jepped the order CO1 because Eschelon was not ready to accept the circuit, Qwest said the example was Qwest non-compliance with Qwest's existing

process to send an updated FOC the day before the due date (*"This example is non-compliance to a documented process. Yes an FOC should have been sent prior to the Due Date."*). As a result there was no further discussion on this subject during the time Qwest and CLEC's collaboratively worked on the delayed order process. Qwest cannot now say it has changed its "position" because by changing its "position" Qwest is unilaterally changing its process. Qwest cannot change its process without submitting a level 4 change request through CMP. If Qwest wants to change its existing process, or work collaboratively with CLEC's to develop a new or define the existing process further, Eschelon would be willing to do so. This process would need to care for the concern that Qwest could COI jep a request in error if the CLEC cannot accept the circuit when Qwest did not send a timely updated FOC and allow the CLEC an opportunity to prepare to accept the circuit.

Until such time Qwest submits a level 4 change request through CMP to change its existing process, Eschelon will continue to note Qwest's failure to send Eschelon an FOC 24 hours (or the day before the new due date) after Qwest has sent the CLEC a Qwest jeopardy, as non-compliance to Qwest's existing jeopardy process.

Let me know if you have questions. As I have done in the past, I will enclose Qwest's CMP response to Eschelon's question.

Jill,

I am making you aware of this matter. Our Service Management Team has been unable to resolve the issue with Qwest process. Perhaps we need to gather the CMP Oversight Committee to address.

Here is the information on the receiving FOC 24 hours prior to the release due date for K Jep'd orders. The information I read you is on page two.

Here it is

**Example #1 insufficient notice of an order being release prior to Eschelon receiving a CNR jeopardy.**

**1-23 Jeopardy Notification for K17, K09**

**1-28 FOC for 1-28**

**1-28 CNR**

**Action #1: As you can see receiving the FOC releasing the order on the day the order is due does not provide sufficient time for Eschelon to accept the circuit. Is this a compliance issue, shouldn't we have received the releasing FOC the day before the order is due? In this example, should we have received the releasing FOC on 1-27-04?**

**Response #1** *This example is non-compliance to a documented process. Yes an FOC should have been sent prior to the Due Date.*

**To:** Johnson, Bonnie J.; Isaacs, Kimberly D.; Novak, Jean; cmpcr@qwest.com  
**Cc:** Nielsen, Joshua; Larson, Laurie A.; Henderson, Mike P.  
**Subject:** RE: Delayed order process

Good Afternoon Bonnie,

Your email was received and I see your note stating that you may want to take the issue to the Oversight Committee to address. If you do want to proceed in that direction, please submit your formal request to the [cmpesc@qwest.com](mailto:cmpesc@qwest.com) email address, with the appropriate supporting documentation, as outlined in section 18.2 of the Qwest Wholesale Change Management Process Document.

Thank You.”

8/17/05 – Eschelon email to Qwest. It stated (with emphasis changed):

**“From:** Johnson, Bonnie J.  
**Sent:** Wednesday, August 17, 2005 2:08 PM  
**To:** Isaacs, Kimberly D.; Novak, Jean; Johnson, Bonnie J.  
**Cc:** Nielsen, Joshua; Larson, Laurie A.; Henderson, Mike P.  
**Subject:** RE: Delayed order process

Jean,

I discussed this with Jill in CMP today. ***I told Jill that pursuing this issue is not Eschelon’s responsibility. Qwest CMP gave us a response and we discussed this existing Qwest process during ad-hoc calls. If Qwest now says this is not the process, Qwest changed the process and is in violation of CMP process which states Qwest must submit a level 3 or 4 CR. Eschelon has provided Qwest with the following response Qwest gave to CLEC’s via CMP several times.***

Example #1 insufficient notice of an order being release prior to Eschelon receiving a CNR jeopardy.  
1-23 Jeopardy Notification for K17, K09  
1-28 FOC for 1-28  
1-28 CNR

Action #1: As you can see receiving the FOC releasing the order on the day the order is due does not provide sufficient time for Eschelon to accept the circuit. Is this a compliance issue, shouldn't we have received the releasing FOC the day before the order is due? In this example, should we have received the releasing FOC on 1-27-04?

Response #1 This example is non-compliance to a documented process. Yes an FOC should have been sent prior to the Due Date.

- ***Specifically Kim's question was "Is this a compliance issue, shouldn't we have received the releasing FOC the day before the order is due?"***
- ***The Qwest response was "This example is non-compliance to a documented process. Yes an FOC should have been sent prior to the Due Date."***

Note how Qwest's response states non-compliance to a "documented" process. It just cannot be more clear. ***This exact situation was the major basis for the CR Eschelon submitted and the work Qwest and CLEC's did to overhaul the process.*** I am quite surprised, and frustrated, that we are even at this point and Eschelon has to spend time and resources attempting to resolve this.

Jill said she will review all of the work we did and contact me. In addition, to address Chris Siewert's concerns that Qwest may want to deliver the circuit after Qwest removes the Qwest jeopardy condition without a delay of 24 hours, I did reiterate that we are willing to refine the process to include short duration or even no FOC (with FOC to follow installation) as long as Qwest documents that it cannot inappropriately apply a CO1 jep if Eschelon CANNOT accept the circuit when Qwest did not send a timely FOC.

I suspect Jill will be in contact with you.

Thanks,

Bonnie J. Johnson  
Director Carrier Relations

**From:** New Cr, Cmp [mailto:cmpcr2@qwest.com]  
**Sent:** Monday, August 29, 2005 4:21 PM  
**To:** Johnson, Bonnie J.; Isaacs, Kimberly D.; Novak, Jean; cmpcr@qwest.com  
**Cc:** Nielsen, Joshua; Larson, Laurie A.; Henderson, Mike P.; Martain, Jill; Harlan, Cynthia  
**Subject:** RE: Delayed order process

Bonnie,

I have researched the documents and conversations we have had around the jeopardy notification process. I have not found any reference where Qwest has stated that its process was to send a FOC 24-hours prior to the due date on a delayed order situation.

I was also unable to find the specific LSR that you referenced in your email, but I was able to find other spreadsheets where we did analysis on the LSRs that Eschelon believed the FOC was not issued timely. In those situations where we indicated it was a process compliance issue, it was because Qwest internally knew that the jeopardy condition was resolved prior to the due date but did not get the FOC issued in a timely manner. I also found other instances where Qwest had indicated that the reason that we were not able to send a FOC prior to the due date was due to the fact that the facility condition was not resolved until the actual due date. In those instances, Qwest did not state that there was a compliance issue, rather, we documented whether we were able to work with you to actually install the service on the original DDD or whether we completed it at a later date.

*As I tried to communicate at CMP, Qwest's goal is to be able to provide you a FOC prior to the due date. However, that is not always possible as our process is to continue to work on the facility resolution in an effort to meet our customer's requested due date.* If we end up resolving the situation on the due date, Qwest still attempts to coordinate with our customers to turn up the service; and in many instances, we are successful in working with them to install the service and meet the CLECs and their end-users requested date.

I agree that we did have a lot of discussion around this issue when we worked the CR, but we believed that implementing the changes would dramatically reduce the jeopardy conditions and increase the instances when you could expect Qwest to meet the due date. I understand that there will be times when we don't really know until the due date that we can install the service, but those situations should be the exception, not the norm.

Qwest's desire is to continue to move forward with the process that is documented and continue to make every effort to meet our customers due date.

Regards,

Jill Martain

Cynthia; Johnson, Bonnie J.  
**Subject:** RE: Delayed order process

Jill,  
In your response you did not address Qwest's policy/position/process of what happens when Qwest does not provide adequate notice of release via FOC or provides no FOC at all and the CLEC cannot accept the loop. This is usually due to staffing because the CLEC did not have the loop on its schedule. Will Qwest send a CNR jeopardy? ***This is the core of the issue which was outlined in Eschelon's CR that Qwest said it completed as a part of the "overall" redesign of the jeopardy process.***

Please advise. Once Qwest provides a response we can move forward with potential documentation needs.

Thanks,

Johnson, Bonnie J.  
**Subject:** RE: Delayed order process

Jill,  
So let me confirm:

- Qwest sends Eschelon a facility jeopardy (Qwest jeopardy)
- Qwest does not send Eschelon an FOC releasing the circuit
- Qwest calls Eschelon to deliver the circuit
- Eschelon does not have the resources to accept the circuit by close of business that day
- End result - Qwest places the circuit in a CNR jeopardy status.

Please advise.

Bonnie,

Your scenario is correct. Qwest will continue strive to meet our customer’s due date even if that means that we resolve the facility situation on the due date. ***Our goal is to be able to provide you a FOC prior to the due date but there may be occasions that we were not able to do so if we did not resolve the facility condition until the due date.*** Again, this should be the exception, not the normal course of doing business.

Johnson, Bonnie J.  
**Subject:** RE: Delayed order process

Jill,  
Eschelon is glad to hear this is the exception and not the rule because this is not the process we discussed in CMP. If Qwest tries to deliver the circuit and Eschelon is not ready, this has to be a Qwest jeopardy because Qwest did not send an FOC, and Qwest cannot delay our order.

Regards,

Jill Martain  
CMP Process Manager  
Qwest"

8/25/06 - Eschelon modified its proposal for issue 12-72 as follows (in bold):

**Issue 12-71:**

12.2.7.2.4.4 A jeopardy caused by Qwest will be classified as a Qwest jeopardy, and a jeopardy caused by CLEC will be classified as Customer Not Ready (CNR).

**Issue 12-72:**

12.2.7.2.4.4.1 There are several types of jeopardies. Two of these types are: (1) CLEC or CLEC End User Customer is not ready or service order is not accepted by the CLEC (when Qwest has tested the service to meet all testing requirements.); and (2) End User Customer access was not provided. For these two types of jeopardies, Qwest

will not characterize a jeopardy as CNR or send a CNR jeopardy to CLEC if a Qwest jeopardy exists, Qwest attempts to deliver the service, and Qwest has not sent an FOC notice to CLEC after the Qwest jeopardy occurs but at least a day before Qwest attempts to deliver the service. CLEC will nonetheless use its best efforts to accept the service. If needed, the Parties will attempt to set a new appointment time on the same day and, if unable to do so, Qwest will issue a Qwest Jeopardy notice and a FOC with a new Due Date.

**Issue 12-73:**

12.2.7.2.4.4.2 If CLEC establishes to Qwest that a jeopardy was not caused by CLEC, Qwest will correct the erroneous CNR classification and treat the jeopardy as a Qwest jeopardy.

**10/5/05 - From Eschelon Issues Logs for Service Manager Meetings (which is regularly provided to Qwest) – Eschelon notes indicate:**

“Per Jean Qwest implemented a new tracking process to track network sending information so Qwest can send an FOC. Bonnie asked if Eschelon should continue to send the delayed data to Qwest. Jean said yes. in October. The tracking mechanism was implemented in Colorado sometime. Eschelon told Jean that starting in October Eschelon was going to break down the "no FOC" with more detail. Eschelon wants to ensure that Qwest is looking at multiple compliance issues orders and just because there was an FOC did not want other misses overlooked. Jean said Qwest still looks at all of the data, even the no FOC, to determine why no FOC was sent even though Qwest does not consider this non compliance.”

**5/3/06 - From Eschelon Issues Logs for Service Manager Meetings (which is regularly provided to Qwest) – Eschelon notes indicate:**

“Chris Siewert said they analyze the orders. Jean said they address coaching opportunities. Jean said if cross functional she sends to process.”

**6/7/06: -- From Eschelon Issues Logs for Service Manager Meetings (which is regularly provided to Qwest) – Eschelon notes indicate:**

“Monthly Call - Kim indicated they she has saw a decrease in the jeopardy process compliance, many of the mistakes appeared to be "rookie" mistakes. Eschelon has seen slight improvements over the last month or so. Jean indicated that the jeopardy process data is being used to coach new Qwest personnel”

**10/17/06 Excerpts from Eschelon (Q) cross examination of Qwest witness Rene Albersheim (A) at the Minnesota ICA Arbitration Hearing, OAH DOCKET NO.3 - 2 5 0 0 - 17369 – 2, PUC DOCKET NO. P 534 0 , 42 1/ I C - 06 - 768**

**Page 37 lines 11-23 -**

“Q. You say there that Eschelon's proposal does not reflect Qwest's current practice because it adds the phrase at least a day to when Qwest will provide a FOC following a Qwest jeopardy?”

A. At least a day before, yes.

Q. Other than that phrase, at least a day before, is Eschelon's proposal consistent with Qwest's practice?”

A. Current practice, yes, except for that sentence.

Q So you agree with me that Qwest's current practice is to provide the CLEC with an FOC after a Qwest facilities jeopardy has been cleared; is that right?”

A Yes.”

**Page 38 lines 17-19 -**

“Q The FOC is the agreed upon process by which Qwest informs Eschelon of the due date for a circuit?”

A Yes.”

A I'm not sure. I'd have to count how many of those that would apply to.

Q Well, you can go ahead and do that.

A Thank you. I would say that's definitely true for eight, for five it's not clear.”

**Page 98 lines 23-25**

**Page 95 lines 6-24 -**

“Q Would you agree that if Qwest didn't provide an FOC following an initial jeopardy, that it would be improper to subsequently categorize the CLEC's inability to take the circuit as a CNR jeopardy?”

A If you're speaking of in a subsequent jeopardy, yes.

Q And if Qwest comes to deliver the circuit and the CLEC can't take it, that's a subsequent jeopardy; correct? That's the way Qwest treats it?”

A Yes.

Q And if the CLEC doesn't have notice and isn't able to take the circuit, Qwest treats that as a CNR jeopardy under its current process; correct?”

A The second jeopardy, yes.

Q And you would agree that that's not proper, if the CLEC hasn't received an FOC in adequate time to be able to act on it; correct?”

A According to procedure, yes.

Q That's Qwest's procedure?”

A Yes.”

**EXHIBIT 111**

**Resources**

**Change Management Process (CMP)**

**Open Product/Process CR PC081403-1 Detail**

**Title:** Jeopardy Notification Process Changes (new title). Delayed order process modified to allow the CLEC a designated time frame to respond to a released delayed order after Qwest sends an updated FOC (old title).

<b>CR Number</b>	<b>Current Status Date</b>	<b>Area Impacted</b>	<b>Products Impacted</b>
<b>PC081403-1</b>	Completed 7/21/2004	Provisioning	Private Line, Resale, Unbundled Loop, EEL (UNE-C), UNE-P

**Originator:** Johnson, Bonnie  
**Originator Company Name:** Eschelon  
**Owner:** Sunins, Phyllis  
**Director:** Bliss, Susan  
**CR PM:** Harlan, Cindy

**Description Of Change**

Changed the description of this CR as a result of synergies with PC072303-1. During the October 15 CMP meeting we discussed whether we should close/leave open/ or update CR PC081403-1 'Delayed order process modified to allow the CLEC a designated time frame to respond to a released delayed order'. The reason we wanted to close/leave open or update PC081403-1 is because PC072303-1 is meeting many of the needs. Bonnie Johnson agreed to change this CR, as long as we retained the original CR description.

\*\*\*\*\*

Change Jeopardy Notices sent on DVA and PTD for Designed Services

After analysis of Due Dates that are being missed when jeopardy

notices are sent prior to the Due Date, Qwest is proposing that only

specific jeopardy conditions be sent to the CLEC on the critical date of DVA

and PTD. On DVA, Qwest would prefer to only send jeopardy notices for

facility and plug-in issues. The jeopardy codes would be those that start

with a "K" (facility reasons) or on a jeopardy code of V25 (PICS/BRI

plug-ins required.) For the critical date of PTD, Qwest would continue to

send all jeopardy notices except those that end in "33" (work force issues)

i.e., B33, E33, P33. The reason for eliminating the "33" jeopardy code is

due to the fact that Qwest is not missing Due Dates for this reason and is

causing unnecessary jeopardy notices being sent to the CLEC. Along with these proposed changes, Qwest would also like to hear suggestions from the CLEC community any changes they feel would benefit the overall jeopardy notification process. Changes being implemented with PC072303-01, Expanding the Jeopardy Notifications to 6 p.m. Mountain Time are also helping the overall jeopardy process.

**Expected Deliverable:**

Change the jeopardy notification process to reduce unnecessary jeopardy notices being sent to the CLEC when the Due Date is not in jeopardy and to improve the overall jeopardy notification process.

\*\*\*\*\*

Qwest will contact the CLEC to test and accept only after the updated FOC has been sent and a designated time frame has passed. Qwest will not put the order in a CNR (customer not ready) jeopardy status until this time frame has passed and the CLEC is not ready.

When Qwest puts a CLECs request in delayed for facilities jeopardy status, Qwest should be required to send the CLEC an updated FOC when the delayed order is released and allow the CLEC a reasonable time frame to prepare to accept the circuit. Qwest releases orders from a held status (in some cases the CLEC has not even received an updated FOC) and immediately contacts the CLEC to accept the circuit. Because Qwest does not allow the CLEC a reasonable amount of time to prepare for the release of the delayed order, the CLEC may not be ready when Qwest calls to test with the CLEC. Qwest then places the request in a CNR jeopardy status. Qwest should modify the Delayed order process, to require Qwest to send an updated FOC and then allow a reasonable amount of time for the CLEC to react and prepare to accept the circuit before contacting the CLEC for testing.

**Expected Deliverable:**

Qwest will modify, document and train a process, that requires Qwest to send an updated FOC and allow a CLEC a reasonable amount of time (from the time the updated FOC is sent) to prepare for testing before Qwest contacts the CLEC to test and accept the circuit. Qwest should cease applying a jeopardy status of CNR to delayed orders that are released and the CLEC has not been provided a reasonable amount of time to prepare to test/accept the circuit.

This should apply to all orders where the delayed order process is followed and testing is required.

---

10/8/03 - Sent response to CLEC

10/10/03 - Sent email to Bonnie to request change of status to withdraw due to synergy's with other CR PC072303-1

10/13/03 - Bonnie advised she would like to keep open and reference PC072303-1 and Jill's new CR when it is issued

10/15/03 - Oct CMP meeting minutes will be posted to the project meeting section

10/30/03 - Changed the description of this CR as a result of synergies with PC072303-1. During the October 15 CMP meeting we discussed whether we should close/leave open/ or update CR PC081403-1 'Delayed order process modified to allow the CLEC a designated time frame to respond to a released delayed order'. The reason we wanted to close/leave open or update PC081403-1 is because PC072303-1 is meeting many of the needs. Bonnie Johnson agreed to change this CR, as long as we retained the original CR description.

11/19/03 - Nov CMP meeting minutes will be posted to the database

12/1/03 - Scheduled CLEC ad hoc meeting for 12/8/03 to review jep codes/ content

12/5/03 - CMPR.12.05.03.F.01144.JeopardyProcessHandout

12/8/03 - Held ad hoc meeting to review jep codes / content

12/17/03 - Dec CMP Meeting notes will be posted to the database

1/21/03 - Jan CMP meeting minutes will be posted to the database

2/18/04 - Feb CMP Meeting notes will be posted to the project meeting section

3/4/04 - Held ad hoc meeting with CLECs

3/17/04 - March CMP meeting notes will be posted to the project meeting section

4/12/04 - Sent document to document review site

4/21/04 - April CMP meeting notes will be posted to the project meeting section

5/19/04 - May CMP Meeting notes will be posted to the project meeting section

6/16/04 - June CMP Meeting notes will be posted to the project meeting section

7/21/04 - July CMP Meeting notes will be posted to the project meeting section

---

## Project Meetings

July 21, 2004 CMP Meeting notes: Cindy Macy – Qwest advised that this CR was implemented May 27. Qwest would like to close this CR. Bonnie Johnson – Eschelon advised she is having a problem with compliance to this process. Bonnie asked if there is additional work going on for this CR? Jill advised we put the process in place to identify and work critical jeopardy codes so the CLECs do not have to worry about the interim jeopardy codes. In addition the process includes providing additional details on the jeopardy within 72 hours if we are not able to send an FOC within that time frame. Jill Martain – Qwest asked if this is a compliance issue or a process problem. Bonnie said it is hard to determine at times, but she is willing to close this CR and handle the compliance issue with the Service Manager. The CLECs agreed to close the CR.

June 16, 2004 CMP Meeting notes: Cindy Macy – Qwest advised this process was implemented May 27. No comments came in for this CR. We would like to move this CR to CLEC Test Status.

May 19, 2004 CMP Meeting notes: Cindy Macy – Qwest advised this process will be implemented May 27. No comments were received. Cindy thanked Phyllis Sunins and Jill Martain for all of their work on this CR. Qwest held several input sessions with the CLECs to work out issues prior to releasing the documentation. This CR will remain in Development Status.

April 21, 2004 CMP Meeting notes: Phyllis Sunins – Qwest advised that the updates to the documentation have posted to the documentation site. The comment cycle is open with customer feedback due by April 27. This CR will remain in Development Status.

March 17, 2004 CMP Meeting notes: Agreement was reached that the initial jeopardy notice would continue to be sent as documented (based on current system functionality). Qwest proposed that an updated Jeopardy Notification with additional detailed remarks would be sent within 72 hrs from when the Initial Jeopardy was sent if a solution to the delayed condition has not been reached. The proposal means that within 72 hrs from the initial Jeopardy Notification, the CLEC will receive one of the following: 1. FOC confirming original Due Date 2. FOC confirming revised Due Date based on Network resolution of the Jeopardy condition including details on the delay. 3) An "updated" Jeopardy Notification with more specific details of the Jeopardy condition. An FOC will follow when the revised Due Date has been determined.

In addition, Qwest will discontinue critical date jeopardy notifications and continue due date jeopardy notifications. (Critical date jeopardy notifications will still go out until a system enhancement can be made to change this, but the CLECs can disregard them). Phyllis will revise the PCAT to identify jeopardy codes where "The Due Date is in Jeopardy" (YES/NO) so that you can ignore "Critical Date" Jeopardy Codes that do not impact the Due Date until a separate enhancement can be made. The PCAT update has been forwarded to the external documentation team. Bonnie Johnson – Eschelon stated that she wants to make sure that we get documentation to support the process that an FOC must be sent before a customer not ready jeopardy occurs. Phyllis advised she is still working on this issue with an interdepartmental team. Phyllis advised that Jean Novak – Service Manager has had meetings with Network to respond to the examples that Eschelon forwarded as "inaccurate Jeopardy Notices and is still working on the issue. Jean is working on 'inaccurate jeopardy notices' and Phyllis is working on 'when you don't get an FOC'. Bonnie Johnson advised Qwest can contact us anytime during the day to accept the service. If we are contacted after 5PM we don't want the jeopardy to be considered a customer not ready. Bonnie advised she wants this information in the PCAT. This CR will stay in Development Status.

## PC081403-1 Jeopardy Notification Process Ad hoc meeting March 4, 2004

In attendance: Kim Isaacs – Eschelon Phyllis Sunins – Qwest Julie Pickard – US Link Bonnie Johnson – Eschelon Regina Mosely – ATT Cheryl Peterson – ATT Phyllis Burt – ATT Carla Pardee – ATT Jill Martain – Qwest Jim McClusky – Accenture Donna Osborne Miller – ATT Peggy Rehn – New Start Stephanie Prull – Eschelon

Cindy Macy – Qwest opened the call and reviewed the agenda items. Phyllis Sunins – Qwest thanked Kim Isaacs – Eschelon for providing examples that Phyllis investigated. Phyllis asked if the CLECs had the chance to review the documentation and if they had any questions.

Bonnie Johnson – Eschelon said she reviewed the documentation and summarized the changes. Bonnie verified that Qwest is proposing to omit critical jeopardy notifications, but not due date impacting jeopardy notifications. All of the CLECs agreed to this change as previous meetings so this change is okay to implement.

Bonnie asked if the mechanical notifications are the ones that will not be updated with additional information. Phyllis advised that it could be a manual notification also, as the same notification goes out, it is just that the process is manual.

Phyllis explained we could send additional information on the updated notification. Qwest does not always have enough information when we first determine a jeopardy condition. If we try to provide more information in the beginning, the chances are that the information will not be very accurate. We do not want to convey a service issue if it really isn't a problem. Phyllis advised Qwest would send additional information within 72 hours.

Bonnie confirmed that the CLEC should always receive the FOC before the due date. Phyllis agreed, and confirmed that Qwest cannot expect the CLEC to be ready for the service if we haven't notified you. Bonnie asked about the CNR in error? (When the CLEC has gotten a CNR without a FOC). Jill Martain – Qwest advised that we believe eliminating the 'critical date' jeopardies will take care of the bulk of the problem with CNR jeopardies.

Jill advised this solution would be implemented in two phases. The CLECs will get jeopardy notices, but you can ignore the 'critical date' jeopardy notices. These jeopardies are identified on the matrix that Phyllis put together. System changes are needed to stop these jeopardies and that will take awhile to get implemented. We would like to implement this process and monitor the impact and see if it has reduced the number of issues.

Cindy Macy – Qwest asked how will the CLECs know which jeopardy codes to ignore? Jill and Phyllis asked for the CLECs preference to how they would like this identified on the matrix. Agreement was reached to add a column to the matrix (3rd column) and call it 'Due Dates in Jeopardy'.

Phyllis Burt – ATT asked if these codes are going away and we wouldn't see them on the order. Phyllis – Qwest advised these are not due date impacting codes, they are interim steps before the due date. These codes will not go away until the system changes can be made. The CLECs do not need to take action on these codes.

Bonnie Johnson – Eschelon asked Stephanie about the EDI impacts. Can we ignore these or do we have to change any code? Stephanie said so far it seems as if this will work for us.

Bonnie confirmed that Qwest would provide additional information on Jeopardies within 72 hours from distribution of the initial jeopardy notification. Jill agreed and summarized that we will publish the process as a Level 3 with a comment cycle. If the CLECs need to meet again before we publish the document please advise Cindy Macy. The CLECs should monitor the process after it is implemented to determine if it has improved.

Next steps: Publish documentation Level 3.

February 18, 2004 CMP Meeting Phyllis Sunins – Qwest advised that she is working with Kim Isaacs – Eschelon and analyzing some examples that were sent in. Qwest did find a few process compliance examples that are being addressed. Cindy Macy – Qwest will provide a document to address Eschelon's examples and this will be reviewed during the ad hoc meeting the first week in March. This CR will remain in Development Status.

Ad Hoc Call January 23, 2004 PC081403-1 Jeopardy Process

In attendance: Liz Balvin – MCI Karen Severson – Telephone Associates Kim Isaacs – Eschelon Phyllis Sunins – Qwest Jill Martain – Qwest Stephanie Prull – Eschelon Trudy Hughs – Idea One Shirley Richard – Idea One Rosie Glastell – Idea One Bonnie Johnson – Eschelon Colleen Sponseller – MCI Mary Hunt – MCI Carla Pardee – ATT Linda Sanchez-Steinke – Qwest Cindy Macy – Qwest Nancy Sanders – Comcast

Cindy Macy – Qwest opened the call and reviewed the agenda. Cindy advised that we will discuss providing more detail on Jep Notices, review the improvements as a result of the CNR 6pm Jep CR, and discuss examples that were sent in regarding subsequent FOC not sent.

Jill Martain reviewed the agenda and advised that Phyllis Sunins will provide additional details regarding the work that has been completed. Phyllis will share where we have been, where we are and where we want to go with this CR.

Phyllis began the discussion and asked the CLECs how the jeopardy notification process change to 6pm is going? Kim Isaacs – Eschelon advised she had gathered a couple weeks worth of data. It does appear there has been an effect. The impact is not as great as she thought it would be, but they will continue to monitor the change. Kim explained she noticed an interesting situation and Eschelon saw that quite a few sups of due date, then FOC on due date and then Jep on sup. Kim will send examples to Phyllis to investigate.

Rosemary – Idea One asked why is Qwest holding the jep until 6 PM. Phyllis explained a CR was issued to implement a new process. Effective with the new process a jeopardy notification is not sent when a jeopardy condition is cleared the same day by 6 PM. Kim Isaacs – Eschelon advised this process is only on mechanized jeps, not manual jeps.

Phyllis said the next topic to discuss is the request for additional wording on jeps. Phyllis explained that we can provide more detail on subsequent jeps. The first jep that goes out is considered a preliminary jep, with a preliminary view of the issue. Qwest does not know additional details until the engineer does investigation and finds out more. Our target is that within 72 hrs Qwest would either send an FOC or another jeopardy notification with additional detail. Bonnie Johnson – Eschelon advised the mechanical jeps are not detailed enough.

Phyllis advised another idea that may be possible is to use HEET, which is used on the ASR side. This is a web tool to check status on delayed

orders. It may be possible to implement for LSRs. Rosemary – Idea One asked what is RTT. Phyllis advised RTT is a Referral Tracking Tool that tracks facility shortages. RTT is Engineering's database for resolving facility situations referred to them. Bonnie advised she would like to review other alternatives if HEET is not a viable solution.

Today Qwest sends jeopardy notifications for both Critical Date Jeopardies and Due Date Jeopardies. Phyllis discussed the idea of sending jeopardy notifications that would impact the Due Date only. Qwest would discontinue sending jeopardy notifications for jeopardies on Critical Dates that are cleared the same day or the next day and the Due Date is still met. As an example; Qwest sends jeopardy notifications for PICs – V25 (plug in network cards) problems. This jeopardy situation is resolved so that the Due Date is met. Another example is Jeopardy Notifications for Work Force Issues (33's). Qwest works with our Work Forces to readjust their loads so that the Due Date is met. Bonnie Johnson – Eschelon agreed they do not want to see jeps for 'interim date' issues. If the end due date is impacted, then they need to know. Idea One and MCI supported Bonnie's comment. Phyllis confirmed that the due date jep would still happen, (Qwest could discontinue the Critical Date jeopardies which are cleared by Due Date) . If the Due Date will be missed, it is part of Qwest's Network Processes to call the CLEC on the Due Date. In addition, the CLECs will receive their jeopardy notification after 6 PM. MCI verified when the jep is sent it comes as an 865 EDI transaction, and the FOC is an 855 EDI transaction.

Bonnie advised they do want more detail on what the jep'd problem is. They need to know if it is a F1 pair, or the street needs to be dug up. She would like more detail on one jep in particular: 'Local Facility not available'. Bonnie asked when does this jep occur. What situation causes this jep to be assigned?

Phyllis discussed the two examples that Eschelon sent in. 1) One was a jeopardy notification sent for a PICs issue, no FOC was sent & then CNR. – This was an example of a Critical Date Jeopardy that would be addressed by the proposal of not sending Critical Date Jeopardy Notifications as the situation is cleared so that the Due Date can be met, thus the CLEC would expect Qwest to deliver on the Due Date.

2) The other example is a Network compliance issue, which Phyllis is working with Network to correct.

Bonnie thanked Phyllis for reviewing the examples. Bonnie advised that if they receive a CNR jep, and the CLEC has not received the FOC, they would escalate the situation. Bonnie advised they want the order worked without having to sup the order and they would like the jep lifted. Bonnie advised she would like to develop a process of how we will handle this situation when we get a CNR and didn't get the FOC.

Phyllis summarized our next steps:

Kim Isaacs will send examples to Phyllis of orders sup'd on due date

CLECs will continue to monitor 6pm jeps

Jill / Phyllis will review wording of jeps to add more detail

Bonnie brought up a concern on the time required for getting funding to implement the "Due Date only" Jeopardy notifications (from a mechanical perspective). She proposed having Qwest furnish a list of "Critical Date" jeopardy notifications which could be "disregarded on an interim basis. Phyllis will research this request. This information will be worked via the

CMP process and additional meetings.

January 21, 2004 CMP Meeting Jill Martain – Qwest advised that we met with the CLECs last month and agreed to monitor the JEP process and then meet again in January to review additional information that can be put on the Jeopardy notice. We have a meeting scheduled for January 23 to discuss this further. Bonnie sent in two examples where they did not get a subsequent FOC and the order was jep'd for CNR. Bonnie advised that Qwest needs to find a way to get the FOC to the CLEC. The impact to our business is that we are forced to supp the order and take a new due date. Qwest no longer takes the hit on the held order in this situation too. Bonnie advised that Qwest needs to aggressively tackle this issue as it impacts our business, end users and held orders. It is high profile and critical and it needs to be fixed. Jill Martain – Qwest advised we have the examples and we are prepared to talk in more detail at the Friday meeting. This CR will remain in Development Status.

- December 17, 2003 CMP Meeting Jill Martain – Qwest advised we had an ad hoc meeting to review the updated Jeopardy matrix. Jill is working with the centers to provide additional information on the Jeopardy notices. The team agreed to monitor the impact of the change to 6pm jep notices and meet again next month to review any additional changes needed and to review enhanced jeopardy description information. Bonnie Johnson – Eschelon advised she will monitor internally the impact to the change in jeopardy time frames and provide feedback at our next meeting. (Included comment from Bonnie Johnson in the following sentence). Bonnie said this CR is not related to CR to change the jeopardy to 6pm). This CR will remain in Development Status.

Clarification Call PC081403-1 Jeopardy Notification Process

December 8, 2003 3:00 – 4:00

In attendance: Valerie Estorga – Qwest Valerie Star – NoaNet Oregon Marty Petrowski – WAN Tel Oregon Kim Isaacs – Eschelon Anne Atkinson – ATT Jill Martain – Qwest Phyllis Burt – ATT James McClusky – Accenture Donna Osborne Miller – ATT Steph Prull – Eschelon Ray Smith – Eschelon Cheryl Peterson – ATT Carla Pardee – ATT Wayne Hart – Idaho PUC Bonnie Johnson – Eschelon Cindy Macy – Qwest

Cindy Macy – Qwest introduced the attendees and reviewed the purpose of the call. Cindy verified the attendees had the Jeopardy Notification matrix.

Jill Martain – Qwest explained we have held discussions with the CLECs in hopes of improving the jeopardy process. Jill would like to review the matrix and allow the CLECs to ask questions and voice their concerns.

Jill explained the change to send jeopardy notification at 6pm was effective over the weekend. This applies to all mechanized jeopardy codes. The intent of this change should reduce the number of jeopardies sent, as Qwest clears many jeopardies through out the day.

Jill explained there are some manual jeopardies that are not part of this process, such as C)% and SX. Based on investigation, we are looking at sending jeopardies on Facility and Plug in equipment issues. These would be K and V25 – PICS jeps. Possibility exists to eliminate all 33 work force jeps. This will allow us to reduce the number of jeps sent on certain phases of the order.

Bonnie Johnson – Eschelon said she would be glad to try this process and see what improvement it makes.

Marty – WAN Tel asked if Qwest could send more information on the jep notification. If the description / content / reason why Qwest is placing the order in jep, would help the CLEC understand and address the problem. For example, if Qwest says there are local facility issues but does not say what kind of issue, the CLEC can not take action on the issue. It is very difficult for the CLEC to find more out about the issue too. Jill agreed she would see if we could provide more detail on why the order was placed in jeopardy. Jill said if more information can be included she would try to get that implemented as soon as possible.

Bonnie Johnson – Eschelon agreed that providing adequate information on jeopardy notices is critical for the CLEC to look at alternative solutions.

Steph Prull – Eschelon asked if the process could be revised to include the correlation between the 'reason code' and the 'jeopardy detail code' on the jeopardy notice. The Disclosure document has the reason code but does not have a correlation to the jeopardy detail code. Jill advised she would look into this.

Kim Isaacs – Eschelon asked about C09 as this code seems in conflict with the held order process. Jill advised C09 would not occur on a held order situation. Jill advised jeps are per order, not per LSR.

Bonnie Johnson – Eschelon asked about the CR request regarding when the CLEC gets a jep, and then Qwest does not allow the CLEC time to react to the FOC (4 hour minimum). Jill asked Bonnie if we could wait and determine the impact of the 6pm jep time change as this change should reduce the number of jeps and reduce this issue. Bonnie agreed we could discuss this later if it is still an issue.

Bonnie also asked if there was a CLEC forum planned for January. Cindy advised she did not know but would check on. Bonnie suggested we talk about it at the December CMP meeting, and that possibly a better time for the Forum would be in February.

Jill agreed to check on the following items:

1 – adding content to the jeopardy description to make it more informative  
2 – check how reason codes match to jep codes in the Disclosure document

Next Steps: The team agreed to meet again around the week of January 13 to review how the 6pm jeopardy change has impacted the process and to determine our next steps

Novmeber 19, 2003 CMP Meeting Jill Martain- Qwest advised this CR was revised to say that the CR was going to revisit the existing Jeopardy process, including what notices should be sent to the customer and then also discuss the content of those notices. Bonnie Johnson – Eschelon agreed updating the CR was okay. Jill Martain-Qwest advised the next step is to schedule an ad hoc meeting to review information and gather input. John Berard – Covad advised he has a jeopardy request item to be included in this CR.

Oct 15, 2003 CMP Meeting Phyllis Sunins – Qwest reported that she is doing a study of the August data and that there are synergies with this CR and PC072303-1. Jill Martain will also open a new CR to address the overall Jeopardy Process. Bonnie Johnson – Eschelon advised she would like to keep this CR open and reference it to PC072303-1 and Jill's new CR. Discussion took place regarding maybe the scope of this CR should be changed, instead of Jill creating a new CR. Cindy agreed she would talk to Jill about this. Liz Balvin – MCI advised she has some questions about

what certain jep codes mean. A documentation CR has been issued to request definition of jep codes. The team advised that Liz should respond during the comment cycle and ask about the jep codes she is interested in (C31 and C34). John Berard - Covad asked how many jeps are resolved the same day? Bonnie Johnson - Eschelon said she did not know numbers but Jill implied the majority of jeps are resolved the same day. This CR will move to Development Status.

#### 10/6/03 Ad Hoc Meeting

Lori Mendoza Allegiance Russ Urevig Qwest Deni Toye Qwest Phyllis Burt ATT Julie Pickar US Link Dave Hahn Qwest Jeanne Whisnet Qwest Laurie Dalton Qwest Ann Adkinson ATT Jill Martain Qwest Phyllis Sunins Qwest Carla Pardee ATT Jen Arnold US Link Kim Issacs Eschelon Bonnie Johnson Eschelon Donna Osborne Miller ATT Regina Mosely ATT

Jill Martain discussed the synergy's between PC072303-1 and this CR and the issue that came up in the CLEC Forum about FOCs not being sent after a delayed order is released. Jill explained she would like to implement changing the jep timeframe to 6 pm as identified in PC072303-1. As a result of this change it will address many of the issues with not enough time to respond to a jep. Jill referred to this as Phase 1. Jill will issue a Qwest CR to modify the Jep Process and make additional changes as needed. Changes such as define jep codes, determine when to send jeps, and for what conditions. Jill said she certainly can accommodate some time frames in between FOC and Jep. Jill referred to this as Phase 2. Bonnie agreed that Jill's new CR and implementing the changes for PC072303-1 will take care of this CR. Changing the jep times will take care of most of these issues.

- 9/17/03 CMP Meeting Bonnie Johnson - Eschelon presented the CR to the CLEC Community. Bonnie advised this continues to be a problem. Eschelon does not normally get an FOC after a delayed order gets released. Sometimes we get the FOC and we do not have time to react. Qwest needs to make certain that if we release an order from delayed status that the CLEC gets an FOC, and has time to react before the order is put in a CNR jep. This happens often. Our service delivery personnel escalate with the tester and the FOC group. Jill Martain is working on the issue with not receiving an FOC. This was brought up at the CLEC forum. Cindy Macy-Qwest asked if the changes associated to PC072303-1 - changing the time when Qwest jeps for CNR, would meet this CR. Bonnie advised no, because in this case the order is being released from delayed status and the original FOC has already occurred.

CLEC Change Request - PC081403-1 Clarification Meeting Tuesday August 26, 2003

1-877-552-8688 7146042#

Attendees Cindy Macy - CRPM Russ Urevig - Qwest Phyllis Sunins - Qwest Laurie Dalton - Qwest Bonnie Johnson - Eschelon Deni Toye - Qwest Stephanie Prull - McLeod Julie Picker - US Link

Introduction of Attendees Cindy Macy-Qwest welcomed all attendees and reviewed the request.

Review Requested (Description of) Change Bonnie Johnson-Eschelon reviewed the CR. Bonnie explained that 1/2 the time they do not get an FOC after the order is released. This problem is being addressed by Jill Martain and is not part of this CR but it is an issue that impacts this CR. The CLEC needs time to react to the released LSR and to accept the circuit.

Phyllis explained the jep could be placed early in the morning and the tech working on the it may get a solution the same day. This creates a timing difficulty. The current process is for the order to be jep'd, Qwest would send an FOC when they find out the issue has been taken care of, and then if the customer is not ready the LSR is put in CNR.

Bonnie advised they would like a 2-4 business hour time frame to respond to the FOC before Qwest puts the LSR in CNR.

The process today does not give a time frame on the FOC, it gives a date but no time frame.

Confirm Areas and Products Impacted Macy - Qwest confirmed that the attendees were comfortable that the request appropriately identified all areas and products impacted.

Confirm Right Personnel Involved Macy - Qwest confirmed with the attendees that the appropriate Qwest personnel were involved.

Identify/Confirm CLEC's Expectation Macy-Qwest reviewed the request to confirm Eschelon's expectation.

Identify and Dependant Systems Change Requests Macy-Qwest asked the attendees if they knew of any related change requests.

Establish Action Plan Macy-Qwest asked attendees if there were any further questions. There were none. Macy-Qwest stated that the next step was for Eschelon to present the CR at the September Monthly Product/Process Meeting and thanked all attendees for attending the meeting.

## **QWEST Response**

October 8, 2003

For Review by CLEC Community and Discussion at the October 15, 2003, CMP Product/Process Meeting

Bonnie Johnson Eschelon

SUBJECT: CLEC Change Request Response - CR # PC081403-1

This is a preliminary response regarding the Eschelon CR PC081403-1. This CR requests that the 'Delayed order process be modified to allow the CLEC a designated time frame to respond to a released delayed order after Qwest sends and updated FOC. Qwest will contact the CLEC to test and accept only after the updated FOC has been sent and a designated time frame has passed. Qwest will not put the order in a CNR (customer not ready) jeopardy status until this time frame has passed and the CLEC is not ready'.

Qwest believes this CR has synergies with the Eschelon CR PC072303-1 'Customer Not Ready (CNR) jeopardy notice should not be sent by Qwest to CLEC before 5 PM'. Qwest proposes moving this Change Request into Evaluation Status while we investigate the commonalities further and will provide a status update at the November CMP meeting.

An Ad Hoc Meeting is scheduled for Monday, October 6, 2003 from 10:00 - 11:30 a.m. MST to discuss CR# PC072303-1 and PC081403-1.

Sincerely,

Phyllis Sunins Wholesale Markets Process Organization

## Change Management Process (CMP)

## Open Product/Process CR PC072303-1 Detail

**Title: Customer Not Ready ("CNR") jeopardy notice should not be sent by Qwest to CLECs before 5 PM local time on the due date (for basic install)**

CR Number	Current Status Date	Area Impacted	Products Impacted
PC072303-1	Completed 2/18/2004	Provisioning	Any product with test and accept of a circuit on a basic install and the current process applies.

**Originator:** Johnson, Bonnie

**Originator Company Name:** Eschelon

**Owner:** Martain, Jill

**Director:** Schultz, Judy

**CR PM:** Sanchez-Steinke, Linda

### Description Of Change

Customer Not Ready ("CNR") jeopardy notice should not be sent by Qwest to CLECs before 5 PM local time on the due date (for basic install). If a CLEC is not ready to test at the time Qwest calls on the due date, the CLEC has until 5 PM to call Qwest and test and accept the circuit. Qwest should not place the Local Service Request ("LSR") in a customer not ready jeopardy status, because the customer is ready within the required time frame.

Qwest does not provide CLECs with a specified time on the due date when testing and acceptance will take place. Testing and acceptance may occur any time before 5 pm local time. As long as the CLEC is ready to test and accept the circuit before 5pm on the due date, therefore, the customer is ready on the due date. Nonetheless, Qwest places a "CNR" jeopardy on an LSR if Qwest calls a CLEC to test and accept the circuit on the due date and the CLEC is not ready to test and accept the circuit at the time Qwest calls. Even if the CLEC communicates to Qwest that it will call Qwest back on the due date and before 5 PM local time, Qwest places the request in a CNR jeopardy status. Qwest should not use the CNR jeopardy notice for this situation. CNR is not a valid jeopardy code, because the CLEC is ready before 5pm (i.e., on the due date).. By incorrectly using the CNR jeopardy for this situation, , Qwest forces CLECs to manage CNR jeopardy notices that have no validity. Qwest is causing CLECs additional work in the CLECs workflow process for no valid reason. Qwest should change the process on issuing CNR jeopardy for this situation. Eschelon has reviewed the "C" list of jeopardy codes located in the Qwest IMA User Guide, and there is no customer jeopardy ("C" list) that applies to this situation. As a matter of fact, this situation does not present a jeopardy situation at all because the order is not in "jeopardy."

Expected Deliverable

Develop, document, and train a process to manage requests for basic install circuits in situations in which the CLEC is ready on the due date (before 5pm), although perhaps not at the first time that Qwest chooses to call.. Cease using a CNR jeopardy for the situation described above, because the customer IS ready on the due date (as the Qwest basic install definition is from 8 AM to 5 PM local time).

---

## Status History

07/23/03 - CR Submitted

07/24/03 - CR Acknowledged

07/31/03 - Held Clarification Meeting

08/20/03 - August CMP Meeting - Meeting minutes will be posted to this CR's Project Meetings section.

08/26/03 - Had conversation with Bonnie Johnson and would be ok with Eschelon to hold jep until 6 p.m. Mountain time

09/17/03 - September CMP Meeting - Meeting minutes will be posted to this CR's Project Meetings section.

10/06/03 - Held Ad Hoc Meeting - Meeting minutes will be posted to this CR's Project Meetings section.

10/15/03 - October CMP Meeting - Meeting minutes will be posted to this CR's Project Meetings section.

11/19/03 - November CMP Meeting - Meeting minutes will be posted to this CR's Project Meetings section.

12/05/03 - Qwest issued PROS.12.05.03.F.01131.ProvisioningV29 proposed effective date 1/19/04

12/17/03 - December CMP Meeting - Meeting minutes will be posted to this CR's Project Meetings section.

01/02/04 - Qwest issued PROS.01.02.04.F.01222.FNL\_ProvisioningV29  
CMP FINAL NOTICE on Provisioning and Installation Overview V29.0  
effective 1/19/04

01/21/04 - January CMP Meeting - Meeting minutes will be posted to this CR's Project Meetings section.

02/18/04 - February CMP Meeting - Meeting minutes will be posted to this CR's Project Meetings section.

---

## Project Meetings

02/18/04 February CMP Meeting Jill Martain with Qwest said the final notice was sent on 1/2/04 and the PCAT was effective 1/19/04. Stephanie Prull asked if Qwest is holding the jep statuses in IMA. Jill said that a system CR would be required to hold jep statuses from the inquiry functionality, only the jeopardy notices were being held in IMA. This CR will be moved to Completed status.

01/21/04 January CMP Meeting Jill Martain with Qwest said that the final notice was sent 1/2/04 and was effective 1/19/04. It was agreed that this CR would move to CLEC Test status. 12/17/03 December CMP Meeting Jill Martain with Qwest said she would like to talk about this CR & PC081403-1 which are in Development (see PC081403-1 for more information). Additional information on jeopardies was discussed in the CLEC ad hoc meeting. Bonnie Johnson with Eschelon said she had received Susan's note this morning and this is not tied to the 6 p.m. jeopardies. This CR will remain in Development status.

11/19/03 November CMP Meeting Jill Martain with Qwest said that the CR is in progress and expects deployment in December 2003. This CR will remain in Development status.

Thu 10/23/03 3:06 PM From: Bonnie Johnson to: Linda Sanchez-Steinke  
Subject: RE: PC072303-1 Jeopardies Hi Linda, I have received no feedback. I perceive that to mean we are OK.

Bonnie J. Johnson Director Carrier Relations Eschelon Telecom, Inc. Phone 612 436-6218 Fax 612 436-6318 Cell 612 743-6724

Thu 10/23/03 2:18 PM From: Linda Sanchez-Steinke To: Bonnie Johnson  
Subject: PC072303-1 Jeopardies Hi Bonnie -

I wanted to follow up with you and find out if any CLECs provided feedback to you about holding jeopardies (those listed in the supplemental information included in the CR) until 6 p.m. Mountain time.

Would you let me know if you have received feedback from companies that did not want to move forward with the proposal?

Thank you

Linda Sanchez-Steinke CRPM Qwest 303-965-0972

10/15/03 October CMP Meeting Phyllis Sunins with Qwest said that we held an ad hoc meeting last week and at the meeting the CLECs agreed to hold jeopardy notifications until 6 p.m. Mountain time. Qwest expects to implement this change in December 2003. Jill Martain will open a Qwest initiated CR to review the jeopardy process. Bonnie Johnson with Eschelon said that at the ad hoc meeting CLECs were given time to review the list of jeopardy codes and hasn't received negative feedback from any CLECs. Bonnie will call Linda Sanchez-Steinke next week if she does receive feedback from CLECs that do not want jeopardy notification held until 6 p.m. Mountain time. Phyllis added that she is doing a study of August jeopardy data. Liz Balvin with MCI needs additional definition of C31 and C34 jeopardy codes. Phyllis said that Eschelon had asked for additional documentation around jeopardy codes and the documentation will be available at the end of the month. Liz said she would wait for the documentation to be distributed and will submit comments. This CR will remain in Development status.

Ad Hoc Meeting Minutes PC072303-1 October 6, 2003 1-877-572-8687, Conference ID 3393947# 10:00 a.m. - 10:30 a.m. Mountain Time

List of Attendees: Lori Mendoza - Allegiance Donna Osborne-Miller - AT&T Regina Mosley - AT&T Phyllis Burt - AT&T Ann Adkisson - AT&T Carla Pardee - AT&T Julie Pikar - U S Link Jen Arnold - U S Link Kim Isaacs - Eschelon Bonnie Johnson - Eschelon Jeanne Whisenant - Qwest Lori Dalton - Qwest Dave Hahn - Qwest Jill Martain - Qwest Phyllis Sunins - Qwest Deny Toye - Qwest Russ Urevig - Qwest Linda Sanchez-Steinke - Qwest

The meeting began with Qwest making introductions and welcoming all attendees. Linda Sanchez-Steinke with Qwest explained that the purpose of the meeting was to discuss CR PC072303-1 and synergies between PC081403-1.

Jill Martain with Qwest explained the attachment to the notification for the ad hoc meeting is a list of jeopardy types, other than "C" type jeopardies, that Qwest proposes be sent at 6 p.m. Mountain time. Jill further explained that the proposal eliminates sending jeopardy notifications for situation that are identified early in the day but later resolved by Qwest on the same date. Bonnie Johnson with Eschelon said there were a lot of duplicate jeopardies for weather / work force and asked for further explanation. Jill explained that Qwest tracks internally the jeopardies by work group and the work groups are identified by the letter codes. Deny Toye with Qwest said that the "B" jeps are central office and "C" jeps are customer jeps.

Jill asked if it would cause a problem to send the jeopardies listed on the spreadsheet at 6 p.m. Mountain time. Bonnie said that CLECs would be left hanging and it would be too late to contact the customer if didn't receive them until 6 p.m. Deny said that when Qwest gets to the due date that we make a call and the CLEC would have been notified via telephone call if placing the order in jeopardy. Bonnie said that helped to know that CLECs will get a call on the due date if the order is in jeopardy and then they can call customers. Deny will check all products that Qwest makes a telephone call on due date if the order is placed in jeopardy. Jill said that she will submit an additional CR to re-address the jeopardy process.

Kim Isaacs said that she has submitted a documentation request asking for additional explanation of jeopardy meaning.

Lori Mendoza will get input from Allegiance, Donna Osborne-Miller will get input from AT&T, Bonnie said she would send something out to the community asking for additional input. Linda asked if there were any additional questions. No questions were asked and Linda said that we would discuss this CR at the October CMP meeting.

09/17/03 September CMP Meeting Jill Martain with Qwest said that Qwest accepts this CR and will be making changes to a backend system to hold CNR jeopardies until 6 p.m. Mountain time. The targeted date for implementation is December 2003. Jill explained that Qwest would like to expand holding all jeopardies sent mechanically except with unbundled loop before FOC, for conditioning and facility reasons. Bonnie Johnson with Eschelon said she was not sure if they could be acting on those and if they would agree to hold until 6 p.m. There will be an ad hoc meeting scheduled and Jill will provide a list of jeps to be considered with the notification. This CR was moved to Development status.

08/20/03 - August CMP Meeting Bonnie Johnson with Eschelon presented this CR. Bonnie explained that Eschelon is asking that the circuit not be put into CNR status until 5 p.m. local time on the due date. Lori Mendoza with Allegiance supports this CR. Lori asked if Bonnie included in the CR the situation when the customer is not able to stay late when there is a Qwest problem. Bonnie said that in those situations, it would not be

appropriate to put the order in CNR status. This CR will be moved to Presented status.

#### CLEC Change Request Clarification Meeting

8:15 a.m. (MDT) / Thursday, July 31, 2003

1-877-572-8687 3393947# PC072303-1 Customer Not Ready ("CNR") jeopardy notice should not be sent by Qwest to CLECs before 5 PM local time on the due date (for basic install)

Name/Company: Bonnie Johnson, Eschelon Kim Isaacs, Eschelon Stephanie Prull, McLeod Liz Balvin, MCI Sharon Van Meter, AT&T Mike Zulevic, Covad Denny Graham, Qwest Jeanne Whisenant, Qwest Linda Sanchez-Steinke, Qwest

Introduction of Attendees Introduction of participants on the conference call was made and the purpose of the call discussed. Review Requested (Description of) Change Linda read the description of change from the CR submitted by Eschelon; Customer Not Ready ("CNR") jeopardy notice should not be sent by Qwest to CLECs before 5 PM local time on the due date (for basic install). If a CLEC is not ready to test at the time Qwest calls on the due date, the CLEC has until 5 PM to call Qwest and test and accept the circuit. Qwest should not place the Local Service Request ("LSR") in a customer not ready jeopardy status, because the customer is ready within the required time frame.

Qwest does not provide CLECs with a specified time on the due date when testing and acceptance will take place. Testing and acceptance may occur any time before 5 pm local time. As long as the CLEC is ready to test and accept the circuit before 5pm on the due date, therefore, the customer is ready on the due date. Nonetheless, Qwest places a "CNR" jeopardy on an LSR if Qwest calls a CLEC to test and accept the circuit on the due date and the CLEC is not ready to test and accept the circuit at the time Qwest calls. Even if the CLEC communicates to Qwest that it will call Qwest back on the due date and before 5 PM local time, Qwest places the request in a CNR jeopardy status. Qwest should not use the CNR jeopardy notice for this situation. CNR is not a valid jeopardy code, because the CLEC is ready before 5pm (i.e., on the due date).. By incorrectly using the CNR jeopardy for this situation, , Qwest forces CLECs to manage CNR jeopardy notices that have no validity. Qwest is causing CLECs additional work in the CLECs workflow process for no valid reason. Qwest should change the process on issuing CNR jeopardy for this situation. Eschelon has reviewed the "C" list of jeopardy codes located in the Qwest IMA User Guide, and there is no customer jeopardy ("C" list) that applies to this situation. As a matter of fact, this situation does not present a jeopardy situation at all because the order is not in "jeopardy."

Jeanne Whisenant with Qwest asked if this CR was for all orders sent through IMA. Bonnie Johnson with Eschelon answered yes this is for LSRs sent through IMA where the CNR process applies, and said Eschelon issues private line and LIS trunking orders on ASR. Jeanne explained the ASR process is manual and that CNR letters are sent by the SDC on due date and no longer than 2 business days after the due date. Bonnie said this CR doesn't apply to orders submitted via ASR because it is not an automated process.

Liz Balvin with MCI said she supports this change request, and said that MCI may not meet the time when Qwest initially calls but will get back to Qwest by the end of the day.

Sharon Van Meter with AT&T also supports this CR.

**Confirm Areas & Products Impacted** The area of this Change Request impacts orders submitted via LSR where CNR process applies.

**Confirm Right Personnel Involved** Qwest confirmed the correct personnel were on the call to resolve the CR.

**Identify/Confirm CLEC's Expectation** Develop a process where the jeopardy notice will not be sent by Qwest before 5 p.m. local time on the due date.

**Identify any Dependent Systems Change Requests** No systems change requests.

**Establish Action Plan (Resolution Time Frame)** Eschelon will present this CR at the August CMP meeting.

---

## **QWEST Response**

September 9, 2003

DRAFT RESPONSE

For Review by the CLEC Community and Discussion at the September 17, 2003 CMP Meeting

Bonnie Johnson Eschelon

**SUBJECT:** Qwest's Change Request Response - PC072303-1 Customer Not Ready ("CNR") jeopardy notice should not be sent by Qwest to CLECs before 5 PM local time on the due date (for basic install)."

QWEST Response:

Qwest accepts this change requested by Eschelon, however, a back end system change will be required to hold the CNR jeopardy notifications until 6 PM Mountain time. This system change is due to the fact that Qwest put mechanization in place previously to provide timely jeopardy notification to our CLEC community.

Qwest has targeted this process change to take place in December 2003 and will provide notification to the CLEC Community.

Sincerely,

Jill Martain Manager Process Management

**EXHIBIT 113**

February 25, 2004

**RE: CMP PC081403-1 Jeopardy Notification Process Changes**

**The following information will be used as the basis of discussion on the CMP ad-hoc call, scheduled for March 4, 2004. The purpose of the call is to continue discussions on improving the Jeopardy Notification process for both the CLECs and Qwest.**

**This document includes the information necessary to discuss two proposals:**

- 1) Qwest's proposal on when detailed information for the jeopardy condition could be provided. The second grouping labeled **Proposal 1** below, documents examples (submitted by Eschelon) and researched by Qwest to specific concerns as noted in the e-mail entries shown on the document.
- 2) A proposal to eliminate sending "Critical Date" Jeopardy Notifications. The table will allow the CLECs an opportunity to see the specifics of the proposal. Please see the attached **Proposal 2**

In researching Qwest's response for additional data to the Initial Jeopardy Notifications, it was determined that it would take a system enhancement to allow the additional comments. Additionally, through our research, we also determined that it would be better to wait for some designated period of time before we provide your requested information. Sending the initial outlook on the first jeopardy notice could, in many cases, cause "chatter" jeopardy notices, when we believe you are really wanting the final cause in an adequate time frame.

As a result of system impacts, Qwest has researched what information we actually "know" when the jeopardy condition is first determined. In many cases, the information that we initially know is "preliminary" and needs additional research to determine the exact cause of the jeopardy. Usually within the first 72 hours of the jeopardy notification being issued, Qwest knows what actual work needs to take place to resolve the jeopardy condition. By waiting for our Network partners to determine the actual jeopardy condition, Qwest would not mislead the CLEC by communicating the "first glance" at the solution to the jeopardy condition on the first jeopardy notice.

Our current documented process does not state that additional detailed information would be provided, or in what timeframes we could provide the information, however there have been times when the centers have sent subsequent jeopardy notices providing additional detail in an effort to provide better customer service. After we have reached agreement through these ad-hoc meetings, Qwest will issue the appropriate notifications through CMP and start providing that information as agreed to at these meetings. Until we have done the appropriate notification through CMP, Qwest is unable to change its current process. However, in looking at these examples, Qwest could provide the following additional information going forward within our agreed upon timelines.

Qwest is proposing that the initial jeopardy notice continue to be sent as documented (based on current system functionality). In addition, Qwest proposes that an updated Jeopardy Notification with additional detailed remarks would be sent within 72 hrs from when the Initial Jeopardy was sent if a solution to the delayed condition has not been reached.

This proposal means that within 72 hrs from the initial Jeopardy Notification, the CLEC will receive one of the following:

1. FOC confirming original Due Date
2. FOC confirming revised Due Date based on Network resolution of the Jeopardy condition including details on the delay
3. An "updated" Jeopardy Notification with more specific details of the Jeopardy condition.

The next section outlines the explanations to the examples previously provided and we will use it as a tool to facilitate that discussion of how waiting until 72-hours provides you more accurate information. Then we can determine if the proposal is acceptable and determine next steps.

#### **PROPOSAL 1 – Discussion on providing additional information on Jeopardy Notifications**

Following are examples forwarded by Eschelon in several e-mails illustrating their concerns. Qwest's research & responses are shown in *italics*.

\*\*\*\*\*E-mail dated 1-30-04\*\*\*\*\*

**Example #1 insufficient notice of an order being release prior to Eschelon receiving a CNR jeopardy. 1-23 Jeopardy Notification for K17, K09  
1-28 FOC for 1-28  
1-28 CNR**

**Action #1: As you can see receiving the FOC releasing the order on the day the order is due does not provide sufficient time for Eschelon to accept the circuit. Is this a compliance issue, shouldn't we have received the releasing FOC the day before the order is due? In this example, should we have received the releasing FOC on 1-27-04?**

**Response #1** *This example is non-compliance to a documented process. Yes an FOC should have been sent prior to the Due Date.*

**Example #2: Lack of detail on jeopardy notices. The information is not detailed enough to determine why and for how long the order may be held.**

**Action #2: As of 1-30-04, we have not received any additional jeep's that give the details of why the order is held. Please investigate solutions to providing detailed information on the jeopardies.**

**Response #2:** *The first 2 orders were examples of manually sent initial jeopardy notifications (see link to document in PCAT that translates the jeopardy code to information.)*

*The 3<sup>rd</sup> order was an example of a jeopardy notification mechanically sent as soon as the jeopardy was placed in our Network system.*

*Our current documented process does not state that additional detailed information would be provided, or in what timeframes we could provide the information, however there have been times when the centers have sent subsequent jeopardy notices providing additional detail in an effort to provide better customer service. After we have reached agreement through these ad-hoc meetings, Qwest will issue the appropriate notifications through CMP and start providing that information as agreed to at these meetings. Until we have done the appropriate notification through CMP, Qwest is unable to change its current process. However, in looking at these examples, Qwest could provide the following additional information going forward within our agreed upon timelines:*

*Within 72 hrs from the Initial Jeopardy, Qwest proposes to send 1 of the following:*

- *Send FOC confirming original Due Date*
- *Send FOC with revised Due Date (the new Ready For Service Date due to a construction job)*
- *Send an updated Jeopardy Notification with the updated jeopardy information*

**Example #3. No jeopardy code on the jeopardy notice and a lack of detail information. In this example I assume the K17 was omitted from the notice.**

**Action #3: Is this a system issue or compliance issue?**

**Response #3:** *This is an initial jeopardy notification manually sent responding to a Version 12 LSR. The accompanying jeopardy code is only visible on IMA 13.0 and later versions of a LSR.*

*1/28 Initial jeopardy was sent Internal notes indicated that Network had determined that F1 was not balanced.*

*1/29 Network determined that F1 recovered*

*1/30 order assigned*

*Since the order was assigned within 72 hrs, we would continue to provide the FOC confirming the original Due Date. Qwest resolved the facility shortage and conveyed on the FOC*

\*\*\*\*\*E-mail sent 2-6-04\*\*\*\*\*

**Example of Jeopardies lacking information on why the order is held.**

**Jeopardy Notification "CF - Company Facility"**

*1/30 Initial Jeopardy sent on Non-Designed - Internal notes indicate that 1 qualified F2is needed.  
1/30 Order Assigned*

*Since the order was assigned within 72 hrs, we would continue to provide the FOC confirming the original Due Date. Qwest resolved the facility shortage and conveyed on the FOC*

**Jeopardy Notification C05-Customer -Error or Reject Condition Identified after the FOC was Sent to the CLEC.**

**Comments: A response must be made in 4 BUS hours of this notices being sent or all order are canceled. If no response by 30<sup>th</sup> business day, the LSR is rejected.**

*Process Compliance concern. Notes should have been included concerning the address problem. This example has been referred to the Coach.*

**Jeopardy Notification - K17 - Capacity Provisioning-Local Facility Not Available.**

*1/30 Initial Jeopardy Notification sent internal remarks "No Svc Terminal exists for this address" (we frequently see this message - it is very generic)  
1/30 Internal note "Address is not XYZ, it is ABC"  
2/2 Internal note indicating address problem  
2/3 sent C05Jeopardy Notification  
2/3 Order Canceled*

*We would continue to respond to the "flag" that was raised by Engineering or there would be an updated Jeopardy Notification sent within 72 hrs from the initial Jeopardy notification.*

**Jeopardy Notification - SO Subscriber Other**

**Send a SUP to cancel or set a new DD, not to exceed 30 business days (10 for disconnects) from the initial DD. If Billing is not accepted by that time, the LSR is**

**Rejected. Cancellation charges apply, if appropriate. Disregard, if a SUP has been sent.**

*Jeopardy notification sent mechanically as soon as Jeopardy code placed in network system. Qwest is having ongoing discussions on the use of this field to better describe the situations that could be incurred externally.*

**Jeopardy Notification K17 - Capacity Provisioning-Local Facility Not Available.**

*1/30 Initial Jeopardy Notification sent - internal notes indicated no available facilities from CEV to CO.  
2/2 Internal notes indicated that a planner was involved to resolve situation  
2/2 Facility condition was resolved*

*In this situation, providing the information up-front on the initial jeopardy notification would only cause confusion to the CLECs while Qwest was still looking for facilities and determining next steps. However, by 2/2, we knew which direction to take. Usually within the first 72-hours of the jeopardy notice being issued, Qwest knows what actual work needs to take place to resolve the jeopardy condition*

**Jeopardy Notification - K18 Capacity Provisioning - Local Facility Defective (3 consecutive examples of this)**

*In researching the following three examples, there was a period of time that Qwest was determining the situation and looking to identify the proper resolution. In looking at the following information, Qwest could provide an accurate assessment of the problem within 72-hours, avoiding multiple or inaccurate information earlier in the process to the CLECs.*

*2/2 Initial Jeopardy Notification sent internal notes indicated only spare FI was defective  
2/4 CA PR on DLL cond as ADC BT remvd  
2/4 order assigned.....*

*2/2 Initial Jeopardy notification sent- internal notes indicated that FI Span defective  
2/4 Need TMU on these prs  
2/5 F2 now has LMU  
2/5 closed*

*2/2 Initial Jeopardy sent internal notes indicated that spare FI & FH were defective  
2/5 Internal notes indicated that work was done to resolve - job spliced  
2/5 closed*

*Since the order was assigned within 72 hrs, we would continue to provide the FOC confirming the original Due Date.*

**Jeopardy Notification – Local Facility Not Available (2)**

*This is an initial jeopardy notification manually sent responding to a Version 12 LSR. The accompanying jeopardy code is only visible on IMA 13.0 and later versions of a LSR.*

*2/2 Initial Jeopardy Notification sent internal notes indicate that F2 is needed  
2/3 Internal Loop loss discussion in notes  
2/3 Assigned & released*

*Since the order was assigned within 72 hrs, we would continue to provide the FOC confirming the original Due Date. Qwest resolved the facility shortage and conveyed on the FOC*

*2/3 sent Jeopardy Notification internal notes indicate that F1 is needed.  
2/5 Length discussion, metallic/digital discussion  
2/5 Needs slots  
2/6 Working to resolve design issues  
2/9 Sent FOC to confirm DD of 2/10  
2/10 Completed on DD*

*This is an example where the jeopardy condition was not resolved within 72 hrs from the Initial Jeopardy. Based on the proposal, an "updated" jeopardy notification would be sent on 2/6 with the information concerning metallic & digital work, slot work & design issues.*

**\*\*\*\*\*E-mail sent 2-13-04\*\*\*\*\***

**Example of no FOC releasing the held order.**

**1-29 Received an FOC confirming DD of 2-4-02  
1-29 K17 Local Facility Not available  
2-5 Jeopardy for Customer Not ready  
2-6 Completion notice  
Never received FOC releasing jeopardy from K17 jeopardy**

*Qwest Network non-compliance to process (Network continued to work on the Due Date & then tried to turn up on Due Date did not provide timely status to Wholesale to communicate to CLEC)  
Interdepartmental work/discussions continuing.*

**Additional Examples of insufficient jeopardy information**

**Jeopardy Notice K17 Local Facility Not Available**

**Initial jeopardy sent**

2/9 FOC sent

2/9 Initial Jeopardy Notification sent - internal notes indicated that facilities were exhausted.

2/11 Internal notes indicated that the Order was designed using repeater slot

2/11 Sent FOC confirming original DD of 2/13

2/12 CLEC sent supp requesting DD of 2-17

2/16 CLEC accepted earlier than supp'd DD

**Jeopardy Notice V25 – BRI/ICS Plug –in Problem**

Mechanically sent jeopardy notice - proposal to discontinue sending this Jeopardy code as this code is "Critical Date jeopardy – not a Due Date jeopardy. Due Date of 2/10 was met.

**Jeopardy Notification – Local Facility Not Available**

2/10 sent FOC

2/10 sent Initial jeopardy Notification - internal notes indicated that there was no Svg Terminal – verify address

2/11 Internal note indicated that the terminal was now pointed to correct address

2/11 Order assigned/released

2/11 Sent FOC to confirm DD of 2-16

Since the order was assigned within 72 hrs (in this case, next business day), we would continue to provide the FOC confirming the original Due Date.

**Jeopardy Notification K17 – Capacity Provisioning –Local Facility Not Available**

2/10 Initial jeopardy sent (no initial FOC) – internal notes indicated that "Need Rptr F2 prs & more F1 prs"

2/10 Same day internal notes indicate to assign prs that had been conditioned & reserved.

2/10 Closed

2/10 Sent FOC confirm DD of 2-16 (6 hrs later after init jeop)

2/16 Jeopardy Notification sent CNR

Since the order was assigned within 72 hrs, we would continue to provide the FOC confirming the original Due Date. Qwest resolved the facility shortage and conveyed on the FOC

**Jeopardy Notification K18 Capacity Provisioning- Local Facility Defective**

2-10 Initial jeopardy notification sent at 12:59PM – internal notes indicated "Defective F1 PR"

2/10 Internal notes indicated what cable pairs could be used

2/10 Order assigned, designed & issued

2/10 Sent FOC confirming DD of 2/16 (4 hrs after initial jeop)

2/13 CLEC accepted order

Since the order was assigned within 72 hrs, we would continue to provide the FOC confirming the original Due Date. Qwest resolved the facility shortage and conveyed on the FOC

**Jeopardy Notifications –Change Proposal 2 Feb-25, 2004**

- Discontinue "Critical Date" Jeopardy Notifications
- Continue Due Date Jeopardy Notifications –**Designed Services** for the jeopardy codes beginning with the letter **C, D or K**

- Continue Due Date Jeopardy Notifications- Non-Designed Services for the jeopardy codes of CF, SA, SL, SO, SR, and SX.

The following list (without strike-throughs) is currently available to be downloaded from the West Product Catalog public web site at

<http://www.qwest.com/wholesale/clec/provisioning.html> in the Section titled "Jeopardy

Resolution Responsibilities" & the last 3 words of the section "download Jeopardy Data". The strike throughs on the list below are for discussion purposes on March 3.

NOTE: This proposal will be discussed on the March 3, 2004 call. If the CLEC

Community agrees to this proposal, the format of this document will also be discussed.

Jeopardy Code	Responsible Party	Jeopardy Notice Description	User Friendly Jeopardy Description	Responsibilities
A34	West-Wholesale Markets	Weather/Disaster/Work Stoppage	There is a West Interconnect Center delay due to weather/disaster/work stoppage.	West will follow-up, as appropriate, when safety allows.
B14	West Field Forces	Installation/Wiring Problem	A West Network technician has identified a problem at the customer premises prior to the due date. In most cases, this is associated to a Network interface problem.	West will work to resolve.
B31	West Field Forces	Inadequate Pre-Service Testing or Conformance Testing	West Network installation is delayed due to inadequate pre-Service or Conformance testing. This could be a problem associated to location.	West will work to resolve.
B33	West Field Forces	Work Force	A West Field Force technician is not currently available to complete the job requirements for provisioning.	West personnel will continue to escalate to find resources or reschedule personnel to complete this provisioning step on time.
B34	West Field Forces	Weather/Disaster/Work Stoppage	There is a West Network Installation (field forces) delay due to weather/disaster/work stoppage.	West will follow-up, as appropriate, when safety allows.
C01	Customer	Not Ready	CLEC or CLEC End User is not ready or follow the process	The CLEC should follow the process

Jeopardy Code	Responsible Party	Jeopardy Notice Description	User Friendly Jeopardy Description	Responsibilities
			service order is not accepted by the CLEC. (Qwest has tested the service to meet all testing requirements.)	outlined in the Customer Not Ready section of the Provisioning and Installation Overview PCAT.
C02	Customer	End User Internal Access	End User access was not provided	The CLEC should follow the process outlined in the Customer Not Ready section of the Provisioning and Installation Overview PCAT.
C03	Customer	Subscriber Change in Requirements	The CLEC or End User made a change in LSR requirements prior to or on the due date. This MAY include buried drop issues where a customer must pay for buried service wire before installation can occur.	The CLEC should follow the process outlined in the Customer Not Ready section of the Provisioning and Installation Overview PCAT
C05	Customer	Reject Condition Identified After the FOC Was Sent to the CLEC	Qwest has identified a fatal reject or non-fatal error condition after the FOC has been sent to the CLEC.	The CLEC must respond to this notice within 4 business hours of this notice being sent or all associated orders will be canceled. If the error is not corrected in a timely fashion, it is possible that the due date may be missed. Also if no response is made within 30 business days, the LSR will be rejected.
C09	Customer	Problem with Related Order	Qwest has identified a problem with a related order(s). Usually this occurs when multiple Qwest service orders are necessary to provide a single CLEC request. All facilities are not	Qwest will look for a possible solution.

Jeopardy Code	Responsible Party	Jeopardy Notice Description	User Friendly Jeopardy Description	Responsibilities
			available. At least one of the service orders cannot be worked. All associated orders are in jeopardy until the service orders(s) with the defined jeopardy is satisfied.	
C12	Customer	Customer Accepts Billing/Wholesale only	The CLEC accepts billing only for Feature Group, LIS (Local Interconnection Service), hot cuts, or rollovers but physical work must still be completed.	No action required by the CLEC. The service orders in the SOP (Service Order Processors) are completed to commence billing with CLEC acceptance, but the orders within Qwest's downstream system (WFA) remains open until the service is actually accepted
C24	Customer	CLEC/ Customer Provided Conduit or Entrance Cable	There is a problem with CLEC or End User provided conduit, or entrance cable, backboard, or ground.	The CLEC must supp the LSR when the customer's work is completed.
C29	Customer	Pending Customer Status	Customer action is required to resolve a facility issue. Details of the customer action will be communicated on the jeopardy notice.	The CLEC must supp LSR to communicate that appropriate action has been taken by the customer.
C30	Customer	Unbundled order dependent on left-in	Left-in service of previous client exists at the pending order location and requires a service order be placed before this CLEC request can be completed.	Qwest will work with the CLEC to clear the working left-in.
C31	Customer	Inadequate Pre-Service Testing or Conformance Testing	Qwest Network installation is delayed due to inadequate CLEC Pre-Service or Conformance testing. This could be a	Qwest will work to resolve.

			problem associated to Co-location.	
C34	Customer	Weather/Disaster/Work Stoppage	There is a CLEC or End User delay due to weather/disaster/work stoppage. May also be due to National Emergency.	The CLEC should follow the process outlined in the Customer Not Ready section of the Provisioning and Installation Overview PCAT
C40	Customer	Project Managed Order Held For CLEC/ Customer Reason	A project-managed order is Delayed for a CLEC or End User Customer reason.	The CLEC should follow the process outlined in the Customer Not Ready section of the Provisioning and Installation Overview PCAT.
D01	Independent Companies	Not Ready	The Independent Company (ILEC) is not ready or the ILEC does not accept the request for service.	The CLEC needs to work directly with the Independent Company (ILEC) to determine the date that the ILEC will be ready or what revision must be made on the service request.
D34	Independent Companies	Weather/ Disaster/Work Stoppage	There is an Independent Company (ILEC) delay due to weather/disaster/work stoppage.	The CLEC needs to work directly with the Independent Company (ILEC) to determine when the delay can be resolved.
E14	Qwest- Central Office	Installation/ Wiring Problem	There is a Qwest Central Office installation or wiring problem.	Qwest will work to resolve the problem.
E31	Qwest- Central Office	Inadequate Pre-Service Testing or Conformance Testing	Qwest Network installation is delayed due to inadequate Central Office Pre-Service or Conformance testing. This could be a problem associate to Co-location.	Qwest will work to resolve the problem.
E33	Qwest- Central Office	Work Force	Central Office resources are not currently available to	Qwest personnel will continue to escalate to find resources or

K08	Qwest - Engineering	Local Loop Requires Conditioning	Qwest Engineering determined that the local loop requires conditioning.	Qwest will look for a possible solution.
K09	Qwest - Engineering	Problem with Related Order	Qwest Engineering has identified a problem with a related order(s). Usually this occurs when multiple Qwest service orders are necessary to provide a single CLEC request. All facilities are not available. At least one of the service orders cannot be worked. All associated orders are in jeopardy until the service order(s) with the defined jeopardy is satisfied.	Qwest will look for a possible solution.
K10	Qwest - Engineering	RTT Status will be awaiting funding/SNRE	Qwest Engineering has begun a review process to determine options and alternatives to provide the CLEC service when immediate facilities are unavailable.	The CLEC should contact their Qwest Service Manager for options.
K11	Qwest - Engineering	Dependent order has RTT issued or SNRE status	Customer action is required to resolve a facility issue on a dependent or related service order.	The CLEC should contact their Qwest Service Manager for options.
K14	Qwest - Engineering	Installation/Wiring Problem	A Qwest Engineering installation or wiring problem exists.	Qwest will work to resolve.
K15	Qwest - Engineering	Records and Physical Wiring and/or Cable Makeup Do Not Agree	Qwest Engineering records and physical wiring and /or cable make up do not agree.	Qwest will work to resolve.
K17	Qwest - Engineering	Local Facility Not Available	Qwest Engineering local facility is not available.	Qwest will look for a possible solution.
K18	Qwest - Engineering	Local Facility Defective	Qwest Engineering local facility is	Qwest will look for a possible solution.

			defective.	
K19	Qwest - Engineering	Interoffice Facility Not Available	Qwest Engineering interoffice facility is not available.	Qwest will look for a possible solution.
K20	Qwest - Engineering	Interoffice Facility Defective	Qwest Engineering interoffice facility is defective.	Qwest will look for a possible solution.
K22	Qwest - Engineering	Switch Equipment Not Available	Qwest Engineering switch equipment is not available.	Qwest will look for a possible solution.
K31	Qwest - Engineering	Inadequate Pre-Service Testing or Conformance Testing	Qwest Engineering is delayed due to inadequate Pre-Service or Conformance testing.	Qwest will work to resolve.
K33	Qwest - Engineering	Work Force	Engineering work forces are not currently available to complete construction job requirements.	Qwest personnel will continue to escalate to find resources or reschedule personnel to complete this provisioning step on time.
K34	Qwest - Engineering	Weather/Disaster/Work Stoppage	There is a Qwest Engineering delay due to weather/disaster/work stoppage.	Qwest will follow up, as appropriate, when safety allows.
K45	Qwest - Engineering	Unbundled Only/RTT Issued	Qwest Engineering found that no facility was available as a result of a Service Inquiry . Refer to the Service Inquiry for detailed status of the service order.	The CLEC should contact their Qwest Service Manager for options.
N13	Qwest-RCMAC	Translations Problem	Qwest Translation Center has identified a translations problem associated with the service order	Qwest will work to resolve.
N33	Qwest-RCMAC	Work Force	RCMAC work force personnel are not currently available to complete provisioning service requirements.	Qwest personnel will continue to escalate to find resources or reschedule personnel to complete this provisioning step on time.

Jeopardy Code	Responsible Party	Jeopardy Notice Description	User Friendly Jeopardy Description	Responsibilities
N34	Qwest-RCMAC	Weather/ Disaster/Work Stoppage	There is a Qwest RCMAC Center delay due to weather/disaster/work stoppage.	Qwest will follow up, as appropriate, when safety allows
P31	Qwest-Design Service Center	Inadequate Pre-Service Testing or Conformance Testing	Qwest Test and Design Service Center is delayed due to inadequate Pre-Service or Conformance testing.	Qwest will work to resolve problem.
P33	Qwest-Design Service Center	Work Force	Qwest Test and Design Service Center are personnel are not currently available to complete the design requirements prior to the due date	Qwest personnel will continue to escalate to find resources or reschedule personnel to complete this provisioning step on time.
P34	Qwest-Design Service Center	Weather/ Disaster/Work Stoppage	There is a Qwest Test and Design Center delay due to weather/disaster/work stoppage.	Qwest will follow up, as appropriate, when safety allows.
V25	Qwest-BRI/PICS	Plug-In Problem	Qwest Equipment Center has a Plug-In (PICs) problem.	Qwest will escalate to resolve the Plug-In (PICs) problem.
V33	Qwest-BRI/PICS	Work Force	A Qwest PICs personnel are not currently available to deliver the equipment prior to the due date	Qwest personnel will continue to escalate to find resources or reschedule personnel to complete this provisioning step on time.
V34	Qwest-BRI/PICS	Weather/ Disaster/Work Stoppage	There is a Qwest Equipment Center delay due to weather/disaster/work stoppage.	Qwest will follow up, as appropriate, when safety allows.

**Non-Designed Jeopardy Data**

Jeopardy Code	Responsible Party & Jeopardy Code Description	Jeopardy Notice Description	Responsibilities

CF	Qwest- Company Facilities	Unavailability or lack of outside plant or buried service wire. Outside plant includes all facilities -wire cable, terminals, carrier, cross connecting devices, etc. A Qwest engineering job is required to provide facilities before the service can be installed.	Qwest will work to resolve.
CL	Qwest- Can't complete /Work Load	Heavy workload conditions and/or field force shortages.	Qwest personnel will continue to escalate to find resources or reschedule personnel to complete this provisioning step on time.
CO	Qwest- Company Other	Other conditions. May include Service Order inaccuracy; marketing errors in selecting/ordering equipment; work stoppage, weather, etc.	Qwest will work to resolve or when safety allows, as appropriate.
CS	Qwest- Company Switching	Unavailability or lack of central office facilities; switching equipment, frame cross connects plug-in equipment, calling feature translations, etc.	Qwest will work to resolve.
SA	Subscriber Access	CLEC access problem: technician cannot gain physical access to the office/center or contact person is not available for information.	The CLEC should follow the process outlined in the Customer Not Ready section of the Provisioning and Installation Overview PCAT
SL	Subscriber Later	CLEC notification received prior to the due date requesting an appointment or due date later than the original desired due date.	The CLEC should follow the process outlined in the Customer Not Ready section of the Provisioning and Installation Overview PCAT.
SO	Subscriber Other	CLEC cause not covered by other codes.	The CLEC should follow the process outlined in the Customer Not Ready section of the Provisioning and Installation Overview PCAT.
SR	Working Left-In	Date change due to a Working Left-In condition.	Qwest will work with the CLEC to clear the working Left-in.
SX	Error Condition Identified After the FOC Was Sent to the CLEC	Reject Condition Identified After the FOC was sent to the CLEC.	The CLEC must respond to this notice within 4 business hours of this notice being sent or all associated orders will be canceled. If the error is not corrected in a timely fashion, it is possible that the due date may be missed.

			<b>Also if no response is made within 30 business days, the LSR will be rejected.</b>

**Telecom of Oregon, Inc. for Arbitration with            )** **Docket No. ARB 775**  
**Qwest Corporation, Pursuant to 47 U.S.C.                )**  
**Section 252 of the Federal                                    )**  
**Telecommunications Act of 1996                            )**

---

**EXHIBIT 115**

**KEY:**  
**JEOPARDY CLASSIFICATION AND FIRM ORDER CONFIRMATION:**  
**EXAMPLES OF QWEST'S FAILURE TO PROVIDE ANY FOC OR A TIMELY FOC**

**A = QWEST SAYS CLASSIFICATION CORRECT (DESPITE NO FOC AFTER PERTINENT<sup>i</sup> JEOPARDY):** Qwest (1) admits that it is supposed to send an FOC after a Qwest facility jeopardy is cleared;<sup>ii</sup> (2) admits in this example that Qwest sent NO FOC; and yet (3) claims in this example that it is ok to attribute fault by assigning a Customer Not Ready (CNR) (i.e. Eschelon-caused) jeopardy.

Row Numbers: 1, 2, 3, 4, 5, 6, 10, 4,16, 17, 18, 21 (12 total per Qwest)  
[Eschelon agrees Qwest sent no FOC, but disagrees that these should be classified as Eschelon-caused (CNR).]

**B = QWEST SAYS CLASSIFICATION CORRECT (DESPITE UNTIMELY FOC AFTER PERTINENT JEOPARDY):** Qwest (1) does not dispute that, although it sent an FOC, the FOC was not sent at least the day before; and yet (2) claims in this example that it is ok to attribute fault by assigning a Customer Not Ready (CNR) (i.e. Eschelon-caused) jeopardy. Qwest disputes that it agreed in CMP to send an FOC at least the day before.<sup>iii</sup>

Row Numbers: 7, 8, **9**, 11, **13**, 19, 20, NA (8 Total per Qwest)  
[Eschelon does not agree that a pertinent FOC was sent for Nos. 9 and 13 (*see* end note i); Eschelon disagrees that these should be classified as Eschelon-caused (CNR).]

**C = QWEST ADMITS CLASSIFICATION INCORRECT (BUT DUE TO ANOTHER QWEST FACILITY ISSUE):** Qwest (1) admits that it is supposed to send an FOC after a Qwest facility jeopardy is cleared; (2) admits in this example that Qwest sent NO FOC; (3) Qwest admits in this example that it was wrong to blame Eschelon by assigning a Customer Not Ready (CNR) jeopardy CNR; *but* (4) Qwest does not attribute the incorrect classification to the failure to send an FOC; rather, Qwest identified another facility issue (after the first one cleared) and should have sent another Qwest (*i.e.*, “Qwest-caused) facility jeopardy notice instead of a CNR jeopardy.

Row Numbers: 12, 15, 22 (3 Total per Qwest)  
[The companies agree that no FOC was sent. Eschelon agrees that the CNR classification was incorrect, but unlike Qwest considers the absence of an FOC sufficient reason to not assign CNR.]

**“Qwest error”/”Possible Qwest error”<sup>iv</sup>**

***End notes for KEY to Jeopardy Classification and Firm Order Confirmation Exhibit***  
***See next page for start of chart***

---

<sup>i</sup> Qwest asks the question “FOC Sent after *original* Jeopardy”? (emphasis added). By limiting the question to the “original” jeopardy, Qwest ignores the pertinent jeopardy. In cases with multiple Qwest facility jeopardies, the pertinent question (to determine whether CLEC had advance notice sufficient to prepare for delivery of the circuit), is whether Qwest sent an FOC after the Qwest facility jeopardy that is the *final one before delivery* (which is the question answered by Eschelon in Exhibit BJJ-6). For Row Number 9 (PON RA-R6 PON AZ591886T1FAC) and Row Number 13 (PON AZ602905T1FAC), Qwest represents that it sent an FOC after the *original* jeopardy notice without pointing out that it did not send an FOC after the *pertinent* Qwest facility jeopardy notice. For these two examples, Qwest sent an FOC after the first Qwest facility jeopardy but the order went into a Qwest facility jeopardy a second time, and Qwest *did not send* an FOC after the second Qwest facility jeopardy notice. The most recent information available to Eschelon from the jeopardy/FOC notices, therefore, was that it should not expect delivery, because Qwest had a facility problem to resolve before it could deliver a circuit.

<sup>ii</sup> MN ICA Arbitration Transcript, Vol. I, p. 37, lines 20-23 (Ms. Albersheim): “Q So you agree with me that Qwest’s current practice is to provide the CLEC with an FOC after a Qwest facilities jeopardy has been cleared; is that right? A Yes.” *See also* ICA Section 9.2.4.4.1 (quoted in note 4).

<sup>iii</sup> MN ICA Arbitration Transcript, Vol. 1, p. 37, lines 16-23 (Ms. Albersheim). Qwest claims that Eschelon’s proposed phrase “at least the day before” is not part of Qwest’s current process. *See id.* p. 37, lines 11-19. (Other than that phrase, however, Qwest admits that the remainder of Eschelon’s proposed language reflects Qwest’s current process. *See id.* p. 37, lines 16-23.)

<sup>iv</sup> For Row Numbers 10 and 21 in this exhibit (i.e., PONs WA609209T1FAC and AZ716331T1FAC, respectively), Qwest inserts a note “Qwest error” and for Row Number 22 in this exhibit (PON AZ719081T1FAC), Qwest inserts a note “possible Qwest error.” These three examples generally follow the same pattern as the others up through the point of Qwest assigning the Customer Not Ready (CNR) jeopardy. Generally, Eschelon supplements the order. In these three cases, after Eschelon supplemented the order, there was some unusual FOC activity (with Qwest sending FOCs after the completion notice). While it may have been an error for Qwest to send the additional FOC(s) after the completion notice, that type of error is not the issue here. The assignment of the CNR jeopardy when Qwest has either not sent an FOC or a timely FOC (with “timely” referring to “at least the day before”) after the pertinent Qwest facility jeopardy. In other words, the damage had already been done (with “damage” referring to a delay in delivery due to failure of Qwest to provide sufficient advance notice of delivery). Note that these three Rows (for which Qwest admits an error or possible error) do not coincide with the three for which Qwest admits its CNR classification was incorrect. Only Row 22 falls into both. For Rows 10 and 21, Qwest identifies an error but says the CNR classification was correct. It is unclear, therefore, why Qwest even raised this point.

ESCHELON DATA (FROM BJJ-6)				“QWEST REVIEW” <sup>1</sup> (FROM MN RA-30 – COPIED IN BJJ-6)		ESCHELON REVIEW <sup>2</sup> (FROM BJJ-6)	FROM RA-25	FROM RA-25	Eschelon review of RA-25
PON	LSR ID	Reason for Invalid Customer Not Ready (CNR) Jeopardy	ST	Order #			CNR Jeopardy in Error?	FOC Sent after original Jeopardy?	SEE KEY AT END FOR “A” – “C”
1. 0R462897T1FAC	12971352	Releasing FOC for K I jep never sent. Qwest applied invalid CNR jeopardy	OR	N10835043	Although Qwest did not send a FOC prior to the DD of 1/1 1/05: Qwest started working with [ER] <sup>3</sup> at Eschelon prior to 5 p.m. End result is that Eschlon was having wiring problems and	No FOC = Invalid CNR <sup>4</sup>  In addition, with respect to Qwest’s “Review”: Qwest states the 1/11/05 is the “due date,” but there is no “due date” for this request because Qwest did not send an FOC with the new due date. <sup>5</sup> Qwest	NO	NO	“A”  No FOC = Invalid CNR

<sup>1</sup> **Qwest Inconsistent Times:** Qwest does not record times consistently in its Review. Eschelon has compared the times with its own records and found that Qwest does not use military time consistently, and does not always indicate whether AM or PM, which affects the analysis.

<sup>2</sup> Qwest indicated it relied upon Qwest technical notes. See MN PUC Docket No. P-5340, 421/IC-06-768, Rebuttal Testimony of Renee Albersheim, p. 54, lines 19-24. Those notes may or may not be accurate. For purposes of this Exhibit only, Eschelon has accepted the statements in the notes.

<sup>3</sup> **Redacted:** ER = Eschelon contact name redacted.

<sup>4</sup> **ICA Section 9.2.4.4.1:** “. . . If Qwest must make changes to the commitment date, Qwest will promptly issue a Qwest Jeopardy notification to CLEC that will clearly state the reason for the change in commitment date. Qwest will also *submit a new Firm Order Confirmation* that will clearly identify the new Due Date.” (emphasis added). This language appears in the SGAT and Qwest’s negotiations template. See also the PCAT provisions (cited in footnote 5) for “DD Jeopardies” that indicate Qwest’s process is to send an FOC after the facility jeopardy notice if the condition is resolved so that the CLEC should expect delivery.

<sup>5</sup> **DD Jeopardies Mean Expect No Delivery Unless Receive New FOC:** See <http://www.qwest.com/wholesale/clecs/provisioning.html>: Qwest’s Provisioning and Installation overview V94.0 PCAT documented process states (emphasis added): “If the column contains “Yes” and Qwest has the responsibility to resolve the jeopardy condition, *we will advise you of the new DD when the jeopardy condition has been resolved.* This is usually within 72 hours.” In other words, for this type of jeopardy, the CLEC is told to do nothing to prepare unless Qwest sends a notice indicating the condition has been resolved. To disregard a jeopardy notice means to plan to prepare to accept delivery as though you had not received a notice. If “yes” is in the column, you do not prepare because you are being told that there is no need to do so *unless you receive a new FOC from Qwest.* Qwest’s PCAT states at <http://www.qwest.com/wholesale/clecs/provisioning.html>:

“Qwest differentiates between DD jeopardies and Critical Date jeopardies. DD jeopardies indicate that your due date is in jeopardy; however, Critical Date jeopardies indicate that a critical date prior to the DD is in jeopardy. Critical Date jeopardies can be ignored by you. Critical Date jeopardies are identified in the Jeopardy Data document (see download in the following paragraph) in the column labeled “Is Due Date in Jeopardy?” If the DD is not in jeopardy, this column will contain “No” and you can disregard the jeopardy notice sent for this condition and continue your provisioning process with the scheduled DD. If the column contains “Yes” and Qwest has the responsibility to resolve the jeopardy condition, we will advise you of the new DD when the jeopardy condition has been resolved. This is usually within 72 hours.”

ESCHELON DATA (FROM BJJ-6)				“QWEST REVIEW” <sup>1</sup> (FROM MN RA-30 – COPIED IN BJJ-6)		ESCHELON REVIEW <sup>2</sup> (FROM BJJ-6)	FROM RA-25	FROM RA-25	Eschelon review of RA-25
PON	LSR ID	Reason for Invalid Customer Not Ready (CNR) Jeopardy	ST	Order #			CNR Jeopardy in Error?	FOC Sent after original Jeopardy?	SEE KEY AT END FOR “A” – “C”
					[ER]at Eschelon indicated that he needed to dispatch a technician to the cage and [ER] said he would supp the order. Qwest subsequently received the supplement as indicated by Eschelon and [ER] at Eschelon accepted the service on 1/12 (Qwest installed the service prior to the supp’d due date of 1/17)	did not notify Eschelon that Qwest had cleared the K17 <sup>6</sup> jeopardy condition so Eschelon staff and prepare to accept delivery of the circuit. Had Qwest notified Eschelon that there was a new due date, Eschelon could have dispatched to the cage and completed the required wiring thus resolved the issue before Qwest attempted to deliver the circuit. Qwest’s failure to notify deprived Eschelon of this opportunity to prepare.			
2. UT474484T1FAC	13275636	Releasing FOC not sent the day prior to DD Qwest applied an	UT	N13197574	DD 2/9/05 missed due to Qwest reasons and a jeopardy	No FOC Day Prior = Invalid CNR In addition, with	NO	NO	“A” No FOC Day Prior =

<sup>6</sup> **Jeopardy Codes (“K” jeps):** Qwest Jeopardy Data Document ([http://www.qwest.com/wholesale/downloads/2005/050812/Jeopardy\\_Data\\_Provisioning\\_August2005.doc](http://www.qwest.com/wholesale/downloads/2005/050812/Jeopardy_Data_Provisioning_August2005.doc)) lists the jeopardy code (type) in the first column, the party responsible to resolve the problem in the second column, and whether the due date is in jeopardy in the third column. For example, on Page 6 of 10, in the last row, “K17” is column one; Qwest engineering is listed as the responsible party in column two; and “yes” is in column three. The example shows that: 1) The jeopardy is a K17 Qwest facility jeopardy (*i.e.* Qwest-caused); 2) Qwest engineering is the responsible party to resolve the jeopardy; and 3) The due date is null and void and CLEC is to do nothing unless Qwest sends an FOC with a new due date once the jeopardy condition has been resolved. In this Exhibit, the jeopardy code or type is provided in one of the two review columns (Qwest’s or Eschelon’s) or both. The codes are identified in Qwest Jeopardy Data Document available at [http://www.qwest.com/wholesale/downloads/2005/050812/Jeopardy\\_Data\\_Provisioning\\_August2005.doc](http://www.qwest.com/wholesale/downloads/2005/050812/Jeopardy_Data_Provisioning_August2005.doc)

ESCHELON DATA (FROM BJJ-6)				“QWEST REVIEW” <sup>1</sup> (FROM MN RA-30 – COPIED IN BJJ-6)		ESCHELON REVIEW <sup>2</sup> (FROM BJJ-6)	FROM RA-25	FROM RA-25	Eschelon review of RA-25
PON	LSR ID	Reason for Invalid Customer Not Ready (CNR) Jeopardy	ST	Order #			CNR Jeopardy in Error?	FOC Sent after original Jeopardy?	SEE KEY AT END FOR “A” – “C”
		invalid CNR jeopardy.			of K45 was shown on the order in Qwest’s systems as the original due date miss. Qwest contacted [ER] at Eschelon at 7:36 am on the DD to advise of possible miss. 2/10 at 7:18 called Eschelon and left Voice Mail that Qwest was ready to test and due date rescheduled for today. Eschelon never called back and a second DD jeopardy of C01 was posted against the order. C01 jeopardy notice	respect to Qwest’s “Review”: <i>Qwest missed Eschelon’s requested due date</i> because of a Qwest facility jeopardy. Because Qwest then classified it as CNR, Qwest’s missed due date will not count against its performance in the PIDs.  In Qwest’s review, Qwest said the time Qwest called Eschelon, on 2/9/05, to advise Eschelon Qwest would miss the due date as 7:36 <b>AM</b> . Qwest said the time Qwest called Eschelon to deliver the circuit on 2/10/05, is 7:18 but does not say whether this was AM or PM.			Invalid CNR

<sup>7</sup> Eschelon recorded the time directly from IMA while tracking DS1 capable loop jeopardies. Eschelon included the date and time in the spreadsheet it sent to its Service Management team at Qwest. As a rule, if Qwest applied the customer jeopardy to the request before 6 PM Central time on 2/10/05 (local time for this order), Eschelon should have received an automated jeopardy at 19:00 hours on 2/10/05. Eschelon recorded Qwest sending Eschelon the jeopardy at 5:50 AM the next morning. This would suggest that the Qwest may have placed the request in a customer jeopardy status after 6 PM local time on 2/10/05.

<sup>8</sup> **Business Hours:** See <http://www.qwest.com/wholesale/clecs/provisioning.html>: Qwest’s Provisioning and Installation overview V94.0 PCAT documented process says “Qwest normal business hours are Monday through Friday from 8 AM to 5 PM but may vary based on company policy, union contracts and location.”

ESCHELON DATA (FROM BJJ-6)				“QWEST REVIEW” <sup>1</sup> (FROM MN RA-30 – COPIED IN BJJ-6)		ESCHELON REVIEW <sup>2</sup> (FROM BJJ-6)	FROM RA-25	FROM RA-25	Eschelon review of RA-25
PON	LSR ID	Reason for Invalid Customer Not Ready (CNR) Jeopardy	ST	Order #			CNR Jeopardy in Error?	FOC Sent after original Jeopardy?	SEE KEY AT END FOR “A” – “C”
					was sent to CLEC on the 10th. 2/14 supp to chg DD to 2/17; however Qwest still installed on the 14th.	Qwest’s review says it sent the CO1 jeopardy on 2/10/05; however, Eschelon records show that Qwest sent Eschelon the C01 jeopardy at 5:50 AM on 2/11/05, the following morning. <sup>7</sup> If Qwest contacted Eschelon at 7:18 <b>PM</b> , Qwest’s CNR jeopardy was in error. Qwest’s hours for loop installation are 8 am to 5 pm local time. <sup>8</sup>			
NA <sup>9</sup>	NA	NA					NO	YES	NA
3. OR477412T1FAC	13349048	Releasing FOC for K I jep never sent. Qwest applied invalid CNR Jeopardy	OR	N14485305	Orig K17 jep sent 2/22 at 6:02 pm. Jeopardy condition cleared on the DD. Contacted Eschelon to attempt to turn up the circuit.	No FOC = Invalid CNR  In addition, with respect to Qwest’s “Review”: Eschelon requested a due date of 2/23/05 and Qwest sent a Qwest facility	NO	NO	“ <b>A</b> ”  No FOC = Invalid CNR

<sup>9</sup> NA = Not Applicable. PON CO477191T1FAC is included in Qwest’s Exhibit RA-25, which is supposed to be a response to Exhibit BJJ-6 (*see* Albersheim Rebuttal, p. 57), but Exhibit BJJ-6 does not contain that PON. It appears that Qwest has taken this PON from an exhibit in a different state, though Qwest does not explain that. On page 61 of Ms. Albersheim’s rebuttal testimony, she refers to 23 items, but as indicated on Eschelon’s Exhibit BJJ-6 and on page 126 (lines 7-11) of Mr. Webber’s direct testimony (adopted by Mr. Starkey): “Exhibit BJJ-6 to the testimony of Ms. Johnson includes *twenty-two examples* of situations when Eschelon was unable to accept delivery of the circuit on the due date because Qwest sent no FOC or an untimely FOC and yet Qwest erroneously classified this situation as “Customer Not Ready” when it should not have done so.” (emphasis added).

**Title: Jeopardies**

Description of change

Sprint wants USW to follow the industry-wide practice of sending FOCs prior to sending Jeopardies.

Sprint needs confirmation of the order first. Then, other arrangements can be made for installation if necessary.

USW sends the Jeopardy before the FOC if they know facilities are not available. This can occur even when availability was confirmed through the Facility Availability Query pre-order transaction (FAQ). Sprint is familiar with USW's disclaimer in its disclosure documentation that availability is not guaranteed, but did not expect the situation to occur as frequently as it does.

USW states in its disclosure document that "A FOC form will be sent to the Co-Provider when an order has been accepted by U S WEST and successfully entered into the U S WEST Service Order Processor". It does not say a Jeopardy will precede the confirmation (full text below).

**Title: Standardize Process of Receiving Jeopardy Notices**

Description of change

Qwest currently offers CLECs multiple methods for receiving jeopardy notices. CLECs can receive jeopardy notices via the tool in which the LSR was processed, i.e. EDI or GUI. They also have the option of receiving jeopardy notices via e-mail or fax.

Qwest plans to move to a consistent, mechanized method of sending jeopardy notices. Jeopardy notices will be sent to the CLEC through the same tool that was used to submit the LSR. This will allow Qwest to enhance its internal jeopardy

notification process leading to more consistent and timely notifications for the CLECs.

## Qwest's Comments on Eschelon's Jeopardy Analysis

-----Original Message-----

**From:** Novak, Jean [CONTACT INFORMATION REDACTED]  
**Sent:** Wednesday, August 25, 2004 2:44 PM  
**To:** Johnson, Bonnie J.  
**Cc:** Larson, Laurie A.; Karen Clauson; Kimberly Isaacs; Raymond Smith;  
Novak, Jean; Tietz, Jeff  
**Subject:** Qwest Held Order Jeopardy Process Compliance

Bonnie

Attached is the jeopardy analysis completed on the examples provided to Qwest by Eschelon. Qwest would like to note:

1.) Five of the LSRs in the spreadsheet are where a FOC was not sent timely prior to the due date because Qwest resolved the facility condition either on PTD or on the due date. The delayed order process was not where the breakdown occurred, rather resolving the facility issue late in the process and still attempting to meet the customers due date. Qwest will continue to monitor this.

2.) There were a number of LSRs listed that were due to workforce, B33. It is my understanding that this was discussed in CMP and agreed to by the CLEC community to ignore B33s sent prior to the due date.

In summary:

There were several LSRs that were listed more than once and Qwest provided an explanation for the overall LSR only once.

There were approximately 26 where Qwest saw no process gaps and the CLEC should have expected us on the due date that was FOC'd.

There were 16 where Qwest has taken appropriate action. Of those 16, 5 were due to the issue described above with resolving the facility really late in the process; 5 of those will be addressed through coaching and the other 6 were miscellaneous issues addressed by Qwest.

Let me know if you have additional questions or feedback.

Thanks,  
Jean Novak

**Subject:** RE: Qwest Held Order Jeopardy Process Compliance

Jean,

You are correct about the B jeps. Qwest did tell Eschelon to ignore those jeps. Eschelon told Qwest it was sending the universe of DS1 jeopardies to review. Eschelon communicated it did so, because Qwest could then tell what Qwest employees/groups/centers were following process and where Qwest needed to focus attention or additional training. I hope Qwest did not spend a

significant amount of valuable time doing root cause on those jeopardies where Eschelon agrees Qwest followed its process. As you can see from the spreadsheet, on all but one of the B jeopardies, Eschelon agreed Qwest followed process. The B jeopardy that is marked no, was marked no because Eschelon ignored the B jeopardy, as Qwest's process states (because Qwest said in all cases Qwest meets the DD) and Qwest missed the due date. In those cases, Eschelon is unable to notify the customer until after Qwest has already missed the commitment.

In addition, on those responses Qwest said Eschelon provided duplicates, the LSR had multiple jeopardies and Eschelon was communicating each jeopardy for the LSR separately. On line 15 Eschelon agrees Qwest followed the process, however, on line 9 where Qwest states it is a duplicate, Qwest did not follow the process. Can you confirm that line 9 was addressed? The Qwest comments says duplicate see line 7 and line 7 was a different jeopardy for that LSR.

### **From Eschelon Issues Logs for Service Manager Meetings**

**2/28/05 Jean said Qwest looked at January data and found had Qwest people that did not understand process and were not following the process. Qwest is training. Qwest did see on some the 72 hour response sent when Eschelon checked no.**

**3/28/05 Jean wrote "Qwest completed on the analysis on Eschelon's February Delayed Orders that were sent on March 7, 2005 with the following results: Missed sending the 72 hour update notification . Qwest is currently working with each department. that updates information to insure the Delayed Order Group receives the information needed for processing. Missed sending the Releasing FOC . Qwest has trained individually and with the group. In addition, tracking information from other Qwest departments. Correction action has taken place."**

**5/4/05 Jean said Chris Siewert was not happy with the the results of the data Kim continues to send Qwest on a daily basis. Bonnie asked if this was network related and Jean said it was also center related and Phyllis is working with network. Chris said they found an SDC that needed to be trained. Qwest has provided no additional information on FOC 24 hours before the DD.**

**8-3-05 Team Meeting Jean stated that Qwest continues to look at data and take appropriate training action, In June Eschelon reported a 74% compliance rate and Qwest believes the compliance was at 80%. Jean will provide Qwest's analysis to Kim to review. Jean once again stated that Qwest disagrees that it is Qwest's process to send the releasing FOC 24 hours prior to the FOC due date. Jean stated that Eschelon should open a CMP CR if we would like to change the process.**

**10/5/05** Per Jean Qwest implemented a new tracking process to track network sending information so Qwest can send an FOC. Bonnie asked if Eschelon should continue to send the delayed data to Qwest. Jean said yes. in October. The tracking mechanism was implemented in Colorado sometime. Eschelon told Jean that starting in October Eschelon was going to break down the "no FOC" with more detail. Eschelon wants to ensure that Qwest is looking at multiple compliance issues orders and just because there was an FOC did not want other misses overlooked. Jean said Qwest still looks at all of the data, even the no FOC, to determine why no FOC was sent even though Qwest does not consider this non compliance.

**5/3/06** Chris Siewert said they analyze the orders. Jean said they address coaching opportunities. Jean said if cross functional she sends to process.

**6/7/06: Monthly Call** - Kim indicated they she has saw a decrease in the jeopardy process compliance, many of the mistakes appeared to be "rookie" mistakes. Eschelon has seen slight improvements over the last month or so. Jean indicated that the jeopardy process data is being used to coach new Qwest personnel

Subject: Qwest/Des Moines Ticket Escalations

Tom,

The Des Moines Center has reviewed your concern. I believe the confusion is between "internal" and "external" escalations. When Qwest is working on a trouble, our testers

escalate to the organization the trouble is isolated to (i.e. central office, field, etc.). This is considered external escalations because it is outside of the Center.

At any time, the Customer can request an internal escalation to the Center management. However, the Center would still be going to whatever organization the trouble has been handed off to for trouble resolution.

On the trouble ticket OC051822 when the Customer requested to speak to the 2nd level that this trouble had been escalated to, our center tester paged the duty field manager that was involved. This was not meant to be any indication that the trouble could not be escalated to our duty supervisor, but rather going directly to the manager in the Qwest field organization that was working the trouble.

When escalating a trouble that would go from one organization to another, we would not skip from a 1st level to a 3rd level on the actual escalation, but would indicate to the manager being escalated to what level of escalation the ticket was currently at (i.e. at a 1st, 2nd or 3rd level).

On OC051822, when Victor called in at 2046 wanting to be bridged on with the 2nd level receiving the escalation. The center tester paged the duty field manager that had been involved in the escalations. This would be the appropriate action to be taken.

According to Qwest's internal process these tickets were handled appropriately. It is Qwest process to escalate to the point where the ticket is "being handled" and not add additional layers. If Omaha feels a need to contact the Omaha duty manager as well as the organization that has the ticket, as long as the call was made to the other organization process was followed. It appears that Omaha is giving a courtesy call to the Omaha duty manager but still following the Qwest documented process.

Additionally, I believe we need to determine if the escalation request was made and action was being taken and not focus on what organization was receiving the escalation. Therefore, please share with me if the request was denied and no action was taken indicating Qwest process was not followed.

Please let me know if you have further questions.

Jean Novak  
Sr. Service Manager

**Cc:** Dobesh, Mary  
**Subject:** Agenda Item for Next Month's Network Meeting - Please Invite SME if needed.

Bonnie and Kim

As previously shared with Eschelon, Qwest does not provide to external customer's Qwest's internal processes. Based on the questions below, Eschelon is asking for Qwest's internal processes. Additionally, it would be difficult to discuss every variable when testing to resolve a trouble report. Qwest believes the better way to address repair issues is to understand what issues Eschelon is experiencing with the resolution of repair on the circuit types below.

Please provide to Qwest a full overview with examples of issues Eschelon is experiencing when Qwest is working to resolve a repair on the circuit types below. Qwest will review and then be able to discuss with Eschelon a course of action to resolve any repair issues, if applicable. It would be helpful to Qwest if Eschelon shared with Qwest what Eschelon does to isolate to the trouble to the Qwest network, such as, dB loss, noise, etc.

As far as commitment on MTTR is remains the same; designed services are benchmarked at 4 hours and non design services are benchmarked at 24 hours.

Qwest will not have a SME on our call on Wednesday, November 8, to discuss Qwest's internal processes. However, we will meet with Eschelon when Qwest has had an opportunity to review Eschelon's repair issues and discuss a plan of correction, if applicable.

Thanks  
Jean Novak

ResaleV54\_UNE-PV46:Effective: 6-10-05 (CH)

Kim,

Qwest is unable to honor the request that further information regarding DSL repair processes be added to the Qwest DSL PCATs for the following reasons:

The purpose of the DSL Product Catalogs is to provide general product, process and ordering information. It is not feasible for each PCAT to go into extensive process information due to the volume of information that would entail.

The Loop Qualification Tool is simply that; it is a tool to assist in determining if certain types of products are available to end-users. Qwest is unable to guarantee 100% accuracy of the Loop Qualification Tool for a variety of reasons, two of which are noted in the following documentation:

Technical Publication 77392:

"At the time the customer requests a Qwest DSL service, the customer will be advised to the class of service speeds their loop will support. The customer may then select the service speed they desire. The selected service speed will be used to software provision the central office modem for the maximum downstream and upstream line rates to be supported on the customer's line. These software settings will determine how the two (2) modems train or synchronize  
Note: Although the customer's line may have been provisioned for a particular maximum line rate, the modems may train up at a rate lower than the maximum due to either impairments on or characteristics of the customer's loop."

Loop Qualification and Raw Loop Data - CLEC Job Aid

"Note: A response to a Facility Availability or Loop Qualification query does not reserve facilities nor does it guarantee that they will be available at the time a request for service is processed by the Service Center Representative."

In the event the DSL Technical Support Center determines that the DSL speed needs to be permanently lowered for an end-user and the Loop Qualification Tool does not match the speed you are requested to reduce you end-user to, please contact your Service Manager and they can investigate the reason for the discrepancy.

### **MEETING MINUTES**

Lee-Facilitator made introductions, reviewed the agenda (refer to Attachment 1), and asked if there were any additional items. Quintana-CPUC stated that the order from the Colorado workshop might change the agenda. The team agreed to defer this discussion until Crain-Qwest arrives in the afternoon.

Lee-Facilitator directed the team to Attachment 3 - OSS Interface CR Initiation Process Action Item Language. Dixon-WorldCom informed the team that the Arizona and Colorado commissions are aware of one impasse issue pertaining to Regulatory Change and are interested to know if there are other potential impasse issues. He suggested that the Redesign Team stay focused on priority issues. Menezes-AT&T stated that in the last couple of meetings, which Dixon-WorldCom had missed, that the team discussed whether Regulatory CRs should be implemented with a manual or

<b>Notification Category:</b>	<b>Systems Notification</b>
<b>Target Audience:</b>	<b>CLECs, Resellers</b>
<b>Subject:</b>	<b>IMA XML Implementation Guidelines</b>

On September 15, 2006 Qwest will repost the following documents to the Wholesale Web site:

- IMA XML Implementation Guidelines.

Changes to the document are explained in the change history/revision list.

The document can be found at the following URL: <http://www.qwest.com/wholesale/ima/edi/index.html>

If you have any questions or would like to discuss this notice, you may submit questions to itcomm@qwest.com, or your Qwest Service Manager, Joshua Nielsen on (801) 239-5335. Qwest appreciates your business and we look forward to our continued relationship.

Sincerely,

Qwest Corporation

Note: In cases of conflict between the changes implemented through this notification and any CLEC interconnection agreement (whether based on the Qwest SGAT or not), the rates, terms and conditions of such interconnection agreement shall prevail as between Qwest and the CLEC party to such interconnection agreement.

The Qwest Wholesale Web Site provides a comprehensive catalog of detailed information on Qwest products and services including specific descriptions on doing business with Qwest. All information provided on the site describes current activities and process. Prior to any modifications to existing activities or processes described on the web site, wholesale customers will receive written notification announcing the upcoming change.

## **XML Implementation Guidelines – for Interconnect Mediated Access (IMA) Release 21.0 Version 6**

### **Date**

April 6, 2007

---

### **Prepared by:**

Qwest Communications, Inc. (Qwest)  
Electronic Interface Services Team

For questions regarding this document, please contact

Electronic Interface Services —Team Lead  
(720) 947-2547  
1860 Lincoln St. Floor 11  
Denver, Colorado 80202

---

### **Abstract:**

This document will assist CLECs in understanding and successfully managing the process of implementing XML trading capabilities between their organization and Qwest. The information in this document is specific to the use of the XML interface to Interconnect Mediated Access system and should not be construed as being applicable to other XML interfaces available from Qwest.

---

## Document Information

Document Owner: Electronic Interface Services–Team Lead

---

### Document History

All revisions made to this document are listed here in chronological order.

<b>Version</b>	<b>Date</b>	<b>Description</b>
1.0	7/7/06	New Document for XML Interface 20.0
2.0	9/15/06	Add SATE WSDL, update Connectivity section re: Digital Certificates, updated the Implementation Overview, Negotiations, Connectivity and Progression Testing process diagrams, update Connectivity and Technical Information sections to provide additional configuration and technical information
3.0	10/16/06	Corrected the pull maximum – number of notices that can be requested per pull transaction from 500 to 100.
4.0	10/30/06	Corrected Production WSDL URLs.
5.0	02/05/07	Made updates to Technical Information section.
6.0	03/09/07	Made updated to Technical Section. Minor updates throughout.

**Important:** This document has been through a formal review process. To the best of our knowledge it is accurate. Qwest Communications, Inc. reserves the right to make further modifications, as necessary.

### 3. Implementation Activities

---

The use of XML provides an effective mechanism to automate the communication and processing of Order information and to reduce manual processes. The XML Implementation Process will progress according to an agreed upon plan and timeline. The typical project phases for CLECs implementing a given release will include:

1. **Initial Communications:** During this phase, all activities to initiate a CLEC's implementation are conducted, including the Kickoff conference call.
2. **Implementation or Migration Project Plan Negotiation:** During this phase, the Implementation or Migration Project Plan is proposed and negotiated.
3. **Requirements Review:** The Requirements Review phase provides an opportunity for a CLEC to review Qwest's XML system and business requirements and ask any questions they may have regarding those requirements.
4. **Connectivity Testing:** During this phase, CLEC connectivity is established and tested. This phase includes the set up of the Trading Partner configuration.
5. **Progression Testing:** This phase affords the CLEC the opportunity to validate their technical development efforts and to quantify LSR processing results in Qwest's Stand Alone Test Environment (SATE).
6. **Controlled Production:** This phase consists of the controlled submission of CLEC requests to the Qwest production environment for provisioning as production orders. Qwest and the CLEC use Controlled Production results to determine operational readiness for full Production turn-up.
7. **Production:** The CLEC is certified and able to submit full volumes of production LSRs and pre-order transactions to Qwest.

## Migration

### Release Lifecycles

The Qwest XML interface architecture provides the capability for multiple releases to be in production at a given time. This design allows a CLEC to continue production use of a particular release while performing the development necessary to migrate to a more current release. It is important that the CLEC be aware of the retirement date for the current release they are implementing, or currently using, and be prepared to migrate to a subsequent release as appropriate. XML releases have predetermined sunset timeframes, after which point they will be unavailable for use. It is the CLEC's responsibility to be aware of these timeframes and plan accordingly. Release timeframes are updated and posted to the CMP website located at:

<http://www.qwest.com/wholesale/cmp/ossalendar.html>

Note: Use of the GUI interface, which is always the most current release, concurrently with a prior version of XML may not be viable due to differences between the two releases.

### Migrating to a New Release

Qwest supports a multi-release strategy for its XML Interface. Information regarding the release schedule is posted on Qwest's Wholesale website. The Recertification memo for a new release is issued forty-five (45) days prior to the date the release is implemented in Production and contains specific XML-related dates for the release.

Qwest currently uses the following guidelines regarding the availability and retirement of releases:

- Each new release is scheduled to be available in the SATE environment thirty (30) days prior to its implementation in the production environment.
- IMA XML releases are supported six (6) months after the next release is implemented.
- Release guidelines in the Recertification memo are provided to the CLECs forty-five (45) days prior to a release. These include the dates by which a CLEC must begin Progression testing for a given release and when transactions on that release must be in Production by the CLEC. If these dates are not met by the CLEC, the CLEC must implement the next release.

These guidelines are designed to ensure the CLEC's successful implementation or migration and to minimize the risk associated with development and deployment of new software. Variations to this schedule may become necessary and any such changes will likewise be published to CLECs via the normal CMP communication channels.

## **Recertification Requirements**

Recertification is the process by which CLECs demonstrate the ability to correctly generate and accept transactions that were updated for the new release. For each release, Qwest will determine which transactions require the CLEC to perform recertification testing. For a given release, it is possible that only some of the transactions will require recertification by the CLEC. That decision by Qwest will be based upon the following factors:

- Mapping changes
- Changes to Qwest business rules enforced by the system

Transactions requiring recertification will be made known to the CLEC in the Recertification Memo, issued with the Disclosure Documents for the new release. As detailed in the minimum requirements below, a migration test will be required for each product.

At the time a CLEC migrates to a new release, any transaction(s) that the CLEC does not yet have in production using a current IMA version is considered to be a new implementation effort. These transactions must be implemented using all Phases of the implementation lifecycle as defined in this document. In some releases, existing transactions are updated with significant additions that add business rules and/or large schema changes. If the CLEC intends to continue use of the product, they will be required to perform a new product implementation of this transaction. This will entail Progression Testing and Controlled Production submittal of scenarios that reflect the new functionality.

Please note that point releases and/or patches do not require recertification and should have no development impacts.

To recertify or migrate a given transaction, the CLEC must perform the following minimum test requirements in the SATE environment:

### **IMA Pre-Order Transactions - Recertification/migration minimum requirements:**

Recertification or Migration:

The CLEC must successfully test every transaction being migrated as indicated in the Recertification Memo. A successful transaction is one that receives a positive Response Type (i.e. 'Good' or 'Exact Match' response).

### **IMA LSR Order Transactions – Recertification/migration minimum requirements:**

Recertification:

The CLEC must successfully test each product being migrated if the product is listed in the Recertification Notice and at least one supplemental transaction (supp can be tested on any product). Qwest may suggest specific activity types and preorder query types to be tested based on the changes implemented for the specific release. Test transactions should use the suggested activity/query types being migrated to ensure the Qwest changes have been tested successfully. A successful transaction is one that passes the IMA system edits (i.e. does not receive a System Reject).

**Migration Trading Partner Configuration Verification (TCV):**

The CLEC must successfully test at least one transaction for each product being migrated if the product is not listed in the Recertification Notice. A successful transaction is one that passes the IMA system edits (i.e. does not receive a System Reject).

**IMA Post-Order Transactions - Recertification/migration minimum requirements:**

**Recertification:**

The CLEC must test every notice response type being migrated if listed in the Recertification Notice. Please note that if the LR is changing Qwest will indicate the appropriate RT value to be tested.

**Migration:**

The CLEC must test each notice response type being migrated if not listed in the Recertification Notice. Please note that the LR may be any RT Value.

There are many factors that will influence the CLEC's migration plan. These influences and the process for migration are discussed further in the following section of this document.

**Migration Activities**

CLECs will be reminded in writing of their need to migrate to a new release prior to the next release being implemented. For migration, the CLEC will follow the same process as an initial implementation except that Controlled Production is not required on any XML transaction that successfully completed Controlled Production testing in a prior release. Any product not successfully tested in Controlled Production in a prior release will not be migrated under this exemption.

The following steps will be followed by the CLEC:

1. Contact the Qwest-assigned Single Point of Contact (EIS REP).
2. Attend an initial migration kickoff call to discuss Recertification, migration strategy, and 'mid-cycle' data conversion.
3. Develop a migration Project Plan and mutually agree to assist in the scheduling of appropriate resources. This plan will identify the mutually-agreed-upon migration date and acknowledge the 'blackout dates' during which resources and systems may be unavailable to the Recertification/migration project.
4. Complete a Test Plan that includes tests to comply with all minimum testing requirements for a new release.
5. Perform the Progression Testing Phase – following the Migration Testing requirements outlined in the Recertification Memo.
6. Conduct Migration Readiness Assessment after the completion of testing.

## **XML Implementation Guidelines – for Interconnect Mediated Access (IMA) 20.0 Version 4**

### **Date**

October 30, 2006

---

**Prepared by:**  
Qwest Communications, Inc. (Qwest)  
Electronic Interface Services Team

For questions regarding this document, please contact

Electronic Interface Services —Team Lead  
(303) 965-4315  
1005 17<sup>th</sup> St. RM 1050  
Denver, Colorado 80202

---

### **Abstract:**

This document will assist CLECs in understanding and successfully managing the process of implementing XML trading capabilities between their organization and Qwest. The information in this document is specific to the use of the XML interface to Interconnect Mediated Access system and should not be construed as being applicable to other XML interfaces available from Qwest.

---

## Document Information

Document Owner: Electronic Interface Services–Team Lead

---

### Document History

All revisions made to this document are listed here in chronological order.

<b>Version</b>	<b>Date</b>	<b>Description</b>
1.0	7/7/06	New Document for XML Interface
2.0	9/15/06	Add SATE WSDL, update Connectivity section re: Digital Certificates, updated the Implementation Overview, Negotiations, Connectivity and Progression Testing process diagrams, update Connectivity and Technical Information sections to provide additional configuration and technical information
3.0	10/16/06	Corrected the pull maximum – number of notices that can be requested per pull transaction from 500 to 100.
4.0	10/30/06	Corrected Production WSDL URLs.

**Important:** This document has been through a formal review process. To the best of our knowledge it is accurate. Qwest Communications, Inc. reserves the right to make further modifications, as necessary.

### 3. Implementation Activities

---

The use of XML provides an effective mechanism to automate the communication and processing of Order information and to reduce manual processes. The XML Implementation Process will progress according to an agreed upon plan and timeline. The typical project phases for CLECs implementing a given release will include:

1. **Initial Communications:** During this phase, all activities to initiate a CLEC's implementation are conducted, including the Kickoff conference call.
2. **Implementation or Migration Project Plan Negotiation:** During this phase, the Implementation or Migration Project Plan is proposed and negotiated.
3. **Requirements Review:** The Requirements Review phase provides an opportunity for a CLEC to review Qwest's XML system and business requirements and ask any questions they may have regarding those requirements.
4. **Connectivity Testing:** During this phase, CLEC connectivity is established and tested. This phase includes the set up of the Trading Partner configuration.
5. **Progression Testing:** This phase affords the CLEC the opportunity to validate their technical development efforts and to quantify LSR processing results in Qwest's Stand Alone Test Environment (SATE).
6. **Controlled Production:** This phase consists of the controlled submission of CLEC requests to the Qwest production environment for provisioning as production orders. Qwest and the CLEC use Controlled Production results to determine operational readiness for full Production turn-up.
7. **Production:** The CLEC is certified and able to submit full volumes of production LSRs and pre-order transactions to Qwest.

## Migration

### Release Lifecycles

The Qwest XML interface architecture provides the capability for multiple releases to be in production at a given time. This design allows a CLEC to continue production use of a particular release while performing the development necessary to migrate to a more current release. It is important that the CLEC be aware of the retirement date for the current release they are implementing, or currently using, and be prepared to migrate to a subsequent release as appropriate. XML releases have predetermined sunset timeframes, after which point they will be unavailable for use. It is the CLEC's responsibility to be aware of these timeframes and plan accordingly. Release timeframes are updated and posted to the CMP website located at:

<http://www.qwest.com/wholesale/cmp/osscalendar.html>

Note: Use of the GUI interface, which is always the most current release, concurrently with a prior version of XML may not be viable due to differences between the two releases.

### Migrating to a New Release

Qwest supports a multi-release strategy for its XML Interface. Information regarding the release schedule is posted on Qwest's Wholesale website. The Recertification memo for a new release is issued forty-five (45) days prior to the date the release is implemented in Production and contains specific XML-related dates for the release.

Qwest currently uses the following guidelines regarding the availability and retirement of releases:

- Each new release is scheduled to be available in the SATE environment thirty (30) days prior to its implementation in the production environment.
- IMA XML releases are supported six (6) months after the next release is implemented.
- Release guidelines in the Recertification memo are provided to the CLECs forty-five (45) days prior to a release. These include the dates by which a CLEC must begin Progression testing for a given release and when transactions on that release must be in Production by the CLEC. If these dates are not met by the CLEC, the CLEC must implement the next release.

These guidelines are designed to ensure the CLEC's successful implementation or migration and to minimize the risk associated with development and deployment of new software. Variations to this schedule may become necessary and any such changes will likewise be published to CLECs via the normal CMP communication channels.

## **Recertification Requirements**

Recertification is the process by which CLECs demonstrate the ability to correctly generate and accept transactions that were updated for the new release. For each release, Qwest will determine which transactions require the CLEC to perform recertification testing. For a given release, it is possible that only some of the transactions will require recertification by the CLEC. That decision by Qwest will be based upon the following factors:

- Mapping changes
- Changes to Qwest business rules enforced by the system

Transactions requiring recertification will be made known to the CLEC in the Recertification Memo, issued with the Disclosure Documents for the new release. As detailed in the minimum requirements below, a migration test will be required for each product.

At the time a CLEC migrates to a new release, any transaction(s) that the CLEC does not yet have in production using a current IMA version is considered to be a new implementation effort. These transactions must be implemented using all Phases of the implementation lifecycle as defined in this document. In some releases, existing transactions are updated with significant additions that add business rules and/or large schema changes. If the CLEC intends to continue use of the product, they will be required to perform a new product implementation of this transaction. This will entail Progression Testing and Controlled Production submittal of scenarios that reflect the new functionality.

Please note that point releases and/or patches do not require recertification and should have no development impacts.

To recertify or migrate a given transaction, the CLEC must perform the following minimum test requirements in the SATE environment:

### **IMA Pre-Order Transactions - Recertification/migration minimum requirements:**

Recertification or Migration:

The CLEC must successfully test every transaction being migrated as indicated in the Recertification Memo. A successful transaction is one that receives a positive Response Type (i.e. 'Good' or 'Exact Match' response).

### **IMA LSR Order Transactions – Recertification/migration minimum requirements:**

Recertification:

The CLEC must successfully test each product being migrated if the product is listed in the Recertification Notice and at least one supplemental transaction (supp can be tested on any product). Qwest may suggest specific activity types and preorder query types to be tested based on the changes implemented for the specific release. Test transactions should use the suggested activity/query types being migrated to ensure the Qwest changes have been tested successfully. A successful transaction is one that passes the IMA system edits (i.e. does not receive a System Reject).

**Migration Trading Partner Configuration Verification (TCV):**

The CLEC must successfully test at least one transaction for each product being migrated if the product is not listed in the Recertification Notice. A successful transaction is one that passes the IMA system edits (i.e. does not receive a System Reject).

**IMA Post-Order Transactions - Recertification/migration minimum requirements:**

**Recertification:**

The CLEC must test every notice response type being migrated if listed in the Recertification Notice. Please note that if the LR is changing Qwest will indicate the appropriate RT value to be tested.

**Migration:**

The CLEC must test each notice response type being migrated if not listed in the Recertification Notice. Please note that the LR may be any RT Value.

There are many factors that will influence the CLEC's migration plan. These influences and the process for migration are discussed further in the following section of this document.

**Migration Activities**

CLECs will be reminded in writing of their need to migrate to a new release prior to the next release being implemented. For migration, the CLEC will follow the same process as an initial implementation except that Controlled Production is not required on any XML transaction that successfully completed Controlled Production testing in a prior release. Any product not successfully tested in Controlled Production in a prior release will not be migrated under this exemption.

The following steps will be followed by the CLEC:

1. Contact the Qwest-assigned Single Point of Contact (SPOC).
2. Attend an initial migration kickoff call to discuss Recertification, migration strategy, and 'mid-cycle' data conversion.
3. Develop a migration Project Plan and mutually agree to assist in the scheduling of appropriate resources. This plan will identify the mutually-agreed-upon migration date and acknowledge the 'blackout dates' during which resources and systems may be unavailable to the Recertification/migration project.
4. Complete a Test Plan that includes tests to comply with all minimum testing requirements for a new release.
5. Perform the Progression Testing Phase – following the Migration Testing requirements outlined in the Recertification Memo.
6. Conduct Migration Readiness Assessment after the completion of testing.

### Document History

All revisions made to this document are listed here in chronological order.

<u>Version</u>	<u>Date</u>	<u>Description</u>
1.0	01/07/00	Initial Distribution
2.0	04/12/00	Revised Distribution
3.0	12/08/00	Revised Distribution
4.0	04/23/01	Revised Distribution Note:  VER 4.00 represents a rearrangement of prior IMA EDI information and the incorporation of Facility-Based Directory Listing implementation guidance. Changes to this document are reflected in archived redline/revision copies. Also, Certification Testing is now known as Controlled Production.
5.0	07/25/01	Revised to include Stand Alone Test Environment Implementation guidance and Service Bureau EDI Implementation Guidelines
6.0	10/11/01	The requirement for BANs to be loaded for EDI users was removed and a supplemental Order flow to Section 3, was added to the Technical Information.
7.0	11/09/01	Changed 'Testing' to 'Progression'. Added SATE data addition process. Moved information to Appendix A. Updated Appendix B - Service Bureau. URL links are live. Explained use of TPRs. Explained External Address Worksheet.
8.0	11/30/01	Clarifications included: Process for addition of data to the SATE environment -Process for negotiating manually-generated responses during the Progression Phase - Interaction of the Interoperability environment with Qwest OSS - Minimum FBDL testing requirements for Progression and Controlled Production - URLs were added/updated as necessary.
9.0	01/21/02	Section of FBDL removed- now an IMA product. Explanation of SATE VICKI added. Flow diagrams added. Staffing Plan added as Appendix C
9.0	02/18/02	Flow diagrams changed. Clarification of

April 24, 2006

Qwest Communications International, Inc.

EDI Implementation Guidelines – for Interconnect Mediated Access (IMA)  
- Version 19.2

		Combining Interoperability and SATE in Progression Testing. The inability to submit a supplemental order via the GUI when initial order was sent via EDI and vice versa. Clarification on Non-Fatals sent after an FOC. Clarification of minimum test requirements for Implementation and Migration
10.0	05/03/02	Restructure of process information to improve flow. Clarification of minimum test requirements for Implementation and Migration.
11.0	10/02/02	Question log process expanded. Sate product list and hours of availability updated. Clarification of negative 997 testing. FBDL testing process updated.
12.0	02/20/03	Added requirement for FBDL that CLECs need to test additional listings. Clarified Jeopardy flow. Revised roles and responsibilities.
13.0	06/20/03	Updated Service Bureau requirements for connectivity and digital certificates. Updated X-12 examples to reference 13.0 standards. Clarified the process for responses that will be sent during Regression Testing. Further clarified Service Bureau section, pertaining to Qwest’s requirements. Update the information surrounding Qwest responses due to the new LR response replacing the FOC, JEOP, NF, and FATAL. Updated SATE Product list.
14.0	10/24/03	Updated Requirements review activities and timelines associated with Question Logs. Updated IMA Data Conversion to include information regarding dates. Changes to Appendix A. Updated Migration Requirements. Added new FBDL testing requirements.
15.0	3/5/04	Updated the following process elements: Requirements Review: Question Log, Implementation/Migration processes (Negotiations, Controlled Production), Minimum Testing Criteria, Production Support, Template requirements.
15.1	5/3/04	Clarified Controlled Production Minimum Testing Criteria, Updated Service Bureau Lead definition
16.0	9/3/04	Update “Scenario Summary” and “Testing Status Log” to “Test Plan”, Updated all Visio process diagrams, Clarified Migration language, Updated Router Configuration timelines, Clarified Digital Certificate coordination information; Updated CLEC requirements for migration projects in the Service Bureau appendix; Removed Appendix C: Qwest’s EDI Implementation Staff Plan and Organizational Information

April 24, 2006

Qwest Communications International, Inc.

EDI Implementation Guidelines – for Interconnect Mediated Access (IMA)  
- Version 19.2

17.0	2/25/05	Added information regarding setup of Subscriber Responses for DLEC & LOA-authorized provisioning agreements, Updated Entrance/Exit Criteria for Controlled Production, Production and Migration Readiness Assessments, Removed the 14.0 information in the Question Log section, Updated Technical Information section with more current examples, Updated list of products available in SATE
17.1	6/27/05	Remove all references to the Interoperability Environment – Interop retired 6/27/05.
18.0	08/26/05	Updated hours of operation, Made updates related to Disclosure changes (removed reference to appendices etc.), clarified the response requirements.
19.0	02/24/06	Clarified Question Log posting when there are no updates, clarified the SATE Data Request process re: request denials and restriction against live production accounts, updated SATE product list, changed references to BPL Reject (RT value Z) to the new RT value V.
19.1	3/10/06	Corrected SATE product list to remove BRI ISDN Resale Order Submittal (contact Qwest for data), Updated Appendix C
19.2	4/24/06	Updated the Production: CLEC Roles and Responsibilities section to include limitations on health check statusing and gateway availability statusing. Updated the Requirements Review section to more clearly state the limitation regarding submission of a supplemental order via the GUI when initial order was sent via EDI and vice versa. Updated TPAI information –Trading Partner Relationship/Transport section to identify that Qwest is compliant with the Interactive Agent Issue 2 standards for Basic Messaging only.

**Important:** This document has been through a formal review process. To the best of our knowledge it is accurate. Qwest Communications, Inc. reserves the right to make further modifications, as necessary.

## Migrating to a New Release

### Release Lifecycles

The Qwest EDI interface architecture provides the capability for multiple releases to be in production at a given time. This design allows a CLEC to continue production use of a particular release while performing the development necessary to migrate to a more current release. It is important that the CLEC be aware of the retirement date for the current release they are implementing, or currently using, and be prepared to migrate to a subsequent release as appropriate. EDI releases have predetermined sunset timeframes, after which point they will be unavailable for use. It is the CLEC's responsibility to be aware of these timeframes and plan accordingly. Release timeframes are updated and posted to the CMP website located at:

<http://www.qwest.com/wholesale/cmp/osscalendar.html>

Note: Use of the GUI interface, which is always the most current release, concurrently with a prior version of EDI may not be viable due to differences between the two releases.

### Migrating to a New Release

Qwest supports a multi-release strategy for its EDI Interface. Information regarding the release schedule is posted on Qwest's Wholesale website. The Recertification memo for a new release is issued forty-five (45) days prior to the date the release is implemented in Production and contains specific EDI-related dates for the release.

Qwest currently uses the following guidelines regarding the availability and retirement of releases:

- Each new release is scheduled to be available in the SATE environment thirty (30) days prior to its implementation in the production environment.
- IMA EDI releases are supported six (6) months after the next release is implemented.
- Release guidelines in the Recertification memo are provided to the CLECs forty-five (45) days prior to a release. These include the dates by which a CLEC must begin Progression testing for a given release and when transactions on that release must be in Production by the CLEC. If these dates are not met by the CLEC, the CLEC must implement the next release instead.

These guidelines are designed to ensure the CLEC's successful implementation or migration and to minimize the risk associated with development and deployment of new software. Variations to this schedule may become necessary and any such changes will likewise be published to CLECs via the normal CMP communication channels.

April 24, 2006

Qwest Communications International, Inc.

EDI Implementation Guidelines – for Interconnect Mediated Access (IMA)  
- Version 19.2

### Recertification Requirements

Recertification is the process by which CLECs demonstrate the ability to correctly generate and accept transactions that were updated for the new release. For each release, Qwest will determine which transactions require the CLEC to perform recertification testing. For a given release, it is possible that only some of the transactions will require recertification by the CLEC. That decision by Qwest will be based upon the following factors:

- Mapping changes
- Changes to Qwest business rules enforced by the system

Transactions requiring recertification will be made known to the CLEC in the Recertification Memo, issued with the Disclosure Documents for the new release. As detailed in the minimum requirements below, a migration test will be required for each product.

**IMPORTANT:** For transmission of **post order responses** from Qwest to the CLECS (including: Provider Notification, Status Updates, Billing Completion Notifications, Pending Service Order Notifications and Batch Hot Cut Status Notifications):

If any one CLEC (identified as an individual RSID/ZCID) elects to receive a given post-order response from Qwest (for either GUI or EDI responses), all other Trading Partners who also provision services using that RSID/ZCID will be configured to receive those post-order responses. This applies to all DLEC arrangements as well as to any other Shared RSID/ZCID or LOA arrangements that CLECS might have in place for provisioning purposes.

The Main CLEC/Trading Partner must test the response transaction as part of the certification process. Any other Trading Partners using the RSID/ZCID of the Main CLEC/Trading Partner may elect to test that post-order response transaction and certify receipt of that subscriber response in Controlled Production or may elect in writing (e-mail is okay) to waive testing of that subscriber response. If the latter, then the customer must acknowledge that they understand they will still be receiving those transactions even though they have not implemented a map to translate the transaction.

At the time a CLEC migrates to a new release, any transaction(s) that the CLEC does not yet have in production using a current IMA EDI version is considered to be a new implementation effort. These transactions must be implemented using all Phases of the implementation lifecycle as defined in this document. In some releases, existing transactions are updated with significant additions that add business rules and/or large map changes. If the CLEC intends to use the new functionality, they will be required to perform a new product implementation of this transaction. This will entail Progression Testing and Controlled Production submittal of scenarios that reflect the new functionality. CLECs not intending to use the new functionality will be allowed to recertify existing functionality that is still available in the new release.

April 24, 2006

Qwest Communications International, Inc.

EDI Implementation Guidelines – for Interconnect Mediated Access (IMA)  
- Version 19.2

### **Migration Process**

CLECs will be reminded in writing of their need to migrate to a new release prior to the next release being implemented. For migration, the CLEC will follow the same process as an initial implementation except that Controlled Production is not required on any EDI transaction that successfully completed Controlled Production testing in a prior release. Any product not successfully tested in Controlled Production in a prior release will not be migrated under this exemption.

When ready to begin the migration, the following steps will be followed by the CLEC:

1. Contact the Qwest-assigned EDI Single Point of Contact (SPOC).
2. Attend an initial migration meeting call to discuss Recertification, migration strategy, and 'mid-cycle' data conversion.
3. Develop a migration Project Plan and mutually agree to assist in the scheduling of appropriate resources. This plan will identify the mutually-agreed-upon migration date and acknowledge the 'blackout dates' during which resources and systems may be unavailable to the Recertification/migration project.
4. Complete a Test Plan that includes tests to comply with all minimum testing requirements for a new release.
5. Perform the Progression Testing Phase per the minimum testing requirements for those transactions that are to be migrated to the new release. The CLEC will be expected to execute the required minimum test case scenarios in the SATE environment and provide Qwest the PONs of the successful Scenarios. This will allow Qwest to verify during its Migration Readiness Assessment that the CLEC is ready to move into production on the new release.
6. Conduct Migration Readiness Assessment after the completion of testing.

### **Migration Exit Criteria**

Migration will be considered complete when the CLEC has met all of the following criteria:

- CLEC has completed all agreed upon scenarios as identified in the migration Test Plan.
- CLEC has demonstrated the ability to send valid 850 and 860 transactions.
- CLEC can confirm their ability to receive from Qwest the 997, 855, and 865 transactions and appropriate preorder response transactions.
- CLEC has demonstrated the ability to generate 997 functional acknowledgements in response to Qwest 855 and 865 transactions.
- CLEC can confirm their ability to notify users of responses generated by Qwest, to indicate whether the submitted transaction was successfully processed.
- CLEC can confirm their ability to detect transaction processing failure within any component of the EDI environment.

## **Migration Process**

CLECs will be reminded in writing of their need to migrate to a new release prior to the next release being implemented. For migration, the CLEC will follow the same process as an initial implementation except that Controlled Production is not required on any EDI transaction that successfully completed Controlled Production testing in a prior release. Any product not successfully tested in Controlled Production in a prior release will not be migrated under this exemption.

When ready to begin the migration, the following steps will be followed by the CLEC:

1. Contact the Qwest-assigned EDI Single Point of Contact (SPOC).
2. Attend an initial migration meeting call to discuss Recertification, migration strategy, and 'mid-cycle' data conversion.
3. Develop a migration Project Plan and mutually agree to assist in the scheduling of appropriate resources. This plan will identify the mutually-agreed-upon migration date and acknowledge the 'blackout dates' during which resources and systems may be unavailable to the Recertification/migration project.
4. Complete a Test Plan that includes tests to comply with all minimum testing requirements for a new release.
5. Perform the Progression Testing Phase per the minimum testing requirements for those transactions that are to be migrated to the new release. The CLEC will be expected to execute the required minimum test case scenarios in the SATE environment and provide Qwest the PONs of the successful Scenarios. This will allow Qwest to verify during its Migration Readiness Assessment that the CLEC is ready to move into production on the new release.
6. Conduct Migration Readiness Assessment after the completion of testing.

## **Migration Exit Criteria**

Migration will be considered complete when the CLEC has met all of the following criteria:

- CLEC has completed all agreed upon scenarios as identified in the migration Test Plan.
- CLEC has demonstrated the ability to send valid 850 and 860 transactions.
- CLEC can confirm their ability to receive from Qwest the 997, 855, and 865 transactions and appropriate preorder response transactions.
- CLEC has demonstrated the ability to generate 997 functional acknowledgements in response to Qwest 855 and 865 transactions.
- CLEC can confirm their ability to notify users of responses generated by Qwest, to indicate whether the submitted transaction was successfully processed.
- CLEC can confirm their ability to detect transaction processing failure within any component of the EDI environment.
