In the Matter of)	
)	
AVISTA CORPORATION, dba AVISTA UTILITIES.)	OPENING TESTIMONY OF THE
)	OREGON CITIZENS' UTILITY
Request for General Rate Revision.)	BOARD
_____)	

1 **Q. Please state your name, occupation, and business address.**

2 A. My name is William Gehrke. I am an Economist employed by Oregon Citizens'
3 Utility Board (CUB). My business address is 610 SW Broadway, Ste. 400
4 Portland, Oregon 97205.

5 **Q. Please describe your educational background and work experience.**

6 A. My witness qualification statement is attached as exhibit CUB/101.

7 **Q. What is the purpose of your testimony?**

8 A. I am CUB's primary witness in Avista Utilities' (Avista or the Company) 2019
9 General Rate Case. I will provide background, analysis, and recommendations
10 regarding specific issues I have reviewed in the Company's filing.

11 **Q. How is your testimony organized?**

12 A. My testimony is organized as follows:

- 13 I. Costs Related to the Avista-Hydro One Proposed Merger
- 14 II. Fixed Residential Customer Charge

1 III. Restricted Stock Units

2 IV. State Excise Tax

3 V. Decoupling

4 **I. Avista-Hydro One Proposed Merger**

5 **Q. Please summarize your adjustment.**

6 **A.** CUB proposes that Avista's customers receive a one-time credit to offset any
7 expenses they have subsidized related to the Avista-Hydro One merger (the
8 proposed merger). It is inappropriate for Avista to finance business activity and
9 expenses related to the proposed merger using Oregon ratepayer funds.
10 Undoubtedly, a portion of Avista's employee and officer time over the last year or
11 so has been dedicated to analyzing and pursuing the proposed merger. Customers
12 have borne these labor costs but have not received any benefits from the merger.
13 Pursuing a business opportunity like the proposed merger is outside the scope of a
14 utility's regulated activity, and customers do not historically bear these costs.¹

15 **Q. Please provide a timeline for the events related to this adjustment.**

16 **A.**

17 1) July 19, 2017: Avista entered into an agreement with Hydro One Limited to
18 become a wholly owned subsidiary of Hydro One.

19 2) September 14, 2017: Avista and Hydro One filed for merger approval before the
20 Oregon Public Utility Commission.

¹ See, e.g., *In the Matter of Northwest Natural Gas Company dba NW Natural, Application for Approval of Corporate Reorganization to Create a Holding Company*, Docket No. UM 1804, Order No. 17-526, pg. 7 (Dec. 28, 2017); see also Docket No. UM 1209, Order No. 06-082 at 7; see also Docket No. UM 1283, Order No. 07-221 at 5.

1 3) November 1, 2017: Avista's new margin rates were established from docket UG
2 325. These margin rates were established using a forecasted test year for the
3 twelve months that ended September 30, 2018.²

4 4) January 23, 2019: Avista and Hydro One terminated their merger agreement.
5 This merger was a major business project for Avista. Avista committed a
6 significant amount of resources to the proposed merger. Rates established in UG
7 325 were used to partially fund expenses related to the proposed merger. Since the
8 proposed merger failed to achieve regulatory approval in Washington and Idaho,
9 Avista received a termination fee from Hydro One of \$103,000,000.

10 5) January 23, 2019: Commission Staff filed for a deferral to track Avista's
11 termination fee to consider the future rate making.³

12 6) February 7, 2019: Staff withdrew its deferral application. CUB has attached the
13 letter effectuating the withdrawal as CUB Exhibit 102. Importantly, Staff states in
14 the letter that Avista assured Staff it "has gone to great lengths to account for all
15 costs associated with [the proposed merger] and the termination fee outside of
16 utility accounts and that shareholders will bear all costs with no impact to
17 ratepayers."⁴ Staff determined the aforementioned efforts "may appropriately be
18 examined in any future general rate case filed by the Company."⁵ As we are now
19 in a general rate case proceeding, CUB's intent in proposing this adjustment is to
20 hold the Company to its statement.

² UG 325 – Avista/100/Morris/Page 7, Lines 17-18.

³ See *in re Public Utility Comm'n of Oregon Application to Defer Avista Corporation's Termination Fee Revenue Resulting from Termination of Merger Between Hydro One Limited, Olympus Holding Corp., Olympus Corp., and Avista*, OPUC Docket No. UM 1996 (Jan. 23, 2019).

⁴ CUB Exhibit 102.

⁵ *Id.*

1 **Q. What has the Company proposed to do with labor expenses related to the**
2 **proposed merger?**

3 **A.** The Company has proposed to reclassify 2018 labor expenses from non-utility to
4 utility operations for work performed on the proposed merger and include these
5 expenses in rates.⁶ The Company also proposed similar treatment for executive
6 labor.⁷ The Company's reasoning for including these labor costs associated with
7 the Hydro One Merger are not recurring in nature.⁸

8 **Q. What is CUB proposal for labor associated with the proposed merger?**

9 **A.** Since Avista has already received payment from Hydro One for expenses related to
10 the merger and from customers, CUB proposes that customers receive a credit for
11 the labor costs associated with the proposed merger. As an initial estimate, CUB
12 proposes that the Company credit Oregon customers \$102,923 for costs associated
13 with the merger. CUB does not believe the record in this proceeding adequately
14 demonstrates that customers have been held harmless from costs related to the
15 proposed merger.

16
17 As an alternative, to avoid any appearance of retroactive ratemaking, CUB would
18 propose that rates be reduced by \$102,923 based on the 2018 actual labor costs.

19 **Q. Do you any other comments about the proposed merger?**

20 **A.** Yes. CUB will review the testimony of other parties related to this issue. If other
21 parties identify expenses related to the proposed merger in the Company's revenue

⁶ UG 366 – Avista/500/Smith/18/Lines 20-22.

⁷ UG 366 – Avista/500/Smith/19, Lines 3-17.

⁸ UG 366 – Avista/500/Smith/ Page 18/Lines 22-23.

1 requirement model, then CUB will examine and respond to these issues in the next
2 round of testimony.

3 **II. Fixed Customer Charges for Residential Customers**

4 **Q. Please summarize your testimony on the basic charge.**

5 **A.** The Company has proposed to increase the monthly fixed customer charge for
6 residential customers by \$2 per month, from \$10 to \$12.⁹ CUB proposes to
7 maintain the customer charge at \$10. Avista's Oregon customer charge is the
8 largest amount among peer utilities in this state. CUB believes maintaining the
9 customer charge at the current amount is appropriate because higher variable
10 charges provide a stronger incentive to conserve natural gas. The lower the
11 customer charge is, the larger the ratio is of variable charges to fixed customer
12 charges. If a larger portion of a customer's bill is volumetric based on usage, that
13 customer has an incentive to reduce consumption. CUB believes designing rates in
14 this manner furthers sound energy policy. Second, Avista's decoupling program,
15 from a financial prospective, makes the Company indifferent to the level of the
16 monthly customer charges. Finally, maintaining low customer charges reduces the
17 incentive for heat-only customers to disconnect in the summer.

18 **Q. What is Schedule 410?**

19 **A.** Schedule 410 is the rate schedule for residential customers in Avista's Oregon
20 service territory.

21 ///

22 ///

⁹ UG 366 – Avista/700/Miller/Page 9/ Lines 21-22.

1 **Q. What is a fixed customer charge?**

2 **A.** The fixed customer charge is a component of rates that is responsible for the fixed
3 costs associated with utility service. It does not change in proportion to the amount
4 on energy used. Historically, Commission policy allows the Company to set
5 customer charges at a level that collects the direct customer costs (meter, meter
6 reading, billing) from ratepayers. However, the Commission has not required
7 regulated utilities to follow such pricing, and the customer charge often does not
8 cover all fixed costs related to utility service.

9 **Q. What changes has the Company proposed to the basic charge of Schedule**
10 **410?**

11 **A.** The Company has proposed to increase the monthly customer charge for
12 residential customers by \$2 per month, from \$10 to \$12.¹⁰ The Company believes
13 that is appropriate to recover a greater portion of fixed customer costs through an
14 increased customer charge.¹¹

15 **Q. What is the impact of this increased basic charge on residential customers?**

16 **A.** All things equal, an increased basic charge would decrease the volumetric rate
17 charged to residential customers. According to the economic principal of the law
18 of demand, the reduction of the volumetric charges reduces the incentive for
19 customers to conserve natural gas consumption.

20 **Q. How does the Company's basic charge compare to other peer utilities on a**
21 **nominal basis?**

¹⁰ UG 366 – Avista/700/Miller/Page 9, Lines 21-22.

¹¹ UG 366 – Avista/700/Miller/Page 10, Lines 19-21.

- 1 **A.** The Company’s proposed basic charge is highest nominal customer charge among
2 the three regulated natural gas utilities operating in Oregon. Keeping the customer
3 charge at \$10 would avoid Avista’s customer charge from being an outlier with its
4 peers.

Utility	State	Basic Charge
NW Natural	Washington	\$7
NW Natural	Oregon	\$8
Cascade	Washington	\$5
Cascade	Oregon	\$5
Avista	Idaho	\$6
Avista	Washington	\$9.5
Avista	Oregon	Proposed Charge - \$12

- 5 **Q. What is the largest rate class on Avista’s system in Oregon?**

- 6 **A.** Residential customers are the largest customer group based in Oregon, based on
7 customer count.

- 8 **Q. What impact does full decoupling have on the Company’s recovery of its**
9 **fixed costs?**

- 10 **A.** In Oregon, Avista is fully decoupled. Residential customers are decoupled in a
11 separate mechanism from other rate schedules. The Company’s decoupling
12 mechanism allows the Company to recover variations in volumetric rate revenue
13 due to weather or demand variation. Essentially, the Company’s decoupling

1 mechanism guarantees that the Company will be able to recover its fixed costs.
2 CUB believes this obviates the need for a higher basic customer charge.

3 **III. Restricted Stock Units**

4 **Q. Please summarize your testimony on this issue.**

5 **A.** The Company proposes embedding the cost of Restricted Stock Units (RSUs) in
6 retail rates. CUB proposes to remove this expense from rates. This results in a
7 (\$148,000) adjustment to O&M expense.

8 **Q. What are restricted stock units?**

9 **A.** RSUs are a form of equity-based compensation. The Company's RSUs are time-
10 based. One third of each year's RSU vests each year over a three-year period.

11 **Q. How has the Company characterized RSUs in testimony?**

12 **A.** The Company has stated that the purpose of the incentive to provide an incentive
13 for the employee to remain with the Company.¹² The Company believes that
14 employees with a long tenure of employment are useful when managing large-scale
15 utility projects spanning multiple years.

16 **Q. What is your response to the Company's testimony?**

17 **A.** Avista competes on the labor market for qualified employees. CUB believes that
18 the total compensation, rather than keeping unvested RSUs, should serve as an
19 incentive to retain employees. CUB views RSUs as a form of compensation that
20 serves to benefit shareholders. It is inappropriate for ratepayers to pay for RSUs, as
21 they are not necessary for providing utility service. Additionally, the Company's

¹² UG 366 – Avista/500/Smith/Page 21, Lines 2-3.

1 explanation that the role of RSU's in testimony is different than the justification the
2 Company gave to its investors.

3 **Q. How has the Company characterized RSUs to its investors?**

4 **A.** “[Avista’s] Compensation Committee believes that equity-based compensation is
5 the most effective way to create a long-term link between shareholder returns and
6 the compensation provide to NEOs and other key management Through the
7 use of long-term performance awards and RSUs, the Company can compensate
8 executives for sustained increases in the Company’s stock performance.”¹³ The
9 Company’s communication with investors indicates that RSUs are in place to help
10 motivate shareholder returns, not to retain their workforce. Therefore, it is
11 inappropriate to include these costs in customer rates.

12 **Q. Do you have an additional comment on including RSU in retail rates?**

13 **A.** Yes. While CUB objects to the inclusion of RSU in rates, the Company has failed
14 to account for the retirement of its incumbent CEO Scott Morris. Avista’s CEO is
15 expected to retire on March 1, 2020. Avista’s CEO will only receive its RSU if the
16 individual is employed by the Company on the last day of each year. If the
17 Commission were to approve RSUs in rates, RSU expense associated with the
18 Company’s current CEO should be removed from rates, at the very least.

19 **IV. Oregon Excise Tax Apportion Factor Between Natural Gas and Electric**

20 **Q. Please summarize your testimony on this issue.**

21 **A.** The Company’s initial rate case filing relies on a tax apportionment factor from the
22 Company’s 2009 SB 408 filing. The Company’s proposed tax apportionment

¹³ Avista Corporation 2019 Proxy Statement.

1 factor uses the arithmetic average of three taxable amounts: Property, Payroll and
2 Sales. CUB proposes to calculate the tax apportionment factor using the weighted
3 average of the three factors. In order to normalize the taxpayer apportionment,
4 CUB's proposed apportionment factor uses the average of three years (2016-2018)
5 to provide a stable number.

6 **Q. Why is there an apportionment factor between Avista's electric and natural**
7 **gas operations?**

8 **A.** In Oregon, Avista is an only a natural gas distribution utility. Separate from its
9 natural gas operations in Oregon, Avista operates a 280 megawatt natural gas
10 combined-cycle combustion turbine in Boardman, Oregon (Coyote Springs 2).
11 This generating plant is used to serve electric customers in Washington and Idaho.
12 There are Oregon sales, payroll, and property taxes associated with the operation of
13 Coyote Springs 2. This apportionment factor allocates Oregon taxes between
14 Avista's electric customers and Avista's natural gas Oregon customers.

15 **Q. Why should a weighted average be used to calculate this appointment**
16 **factor?**

17 **A.** The Company's approach to calculating the appointment factor equally weighs
18 sales, payroll, and property. If one were to use a simple average, the payroll
19 component of this calculation would be outweighed for Oregon natural gas
20 customers. The weighted average calculation properly allocates cost to Oregon's
21 natural gas customers.¹⁴

22 ///

¹⁴ CUB Exhibit 103.

Q. What is the revenue requirement associated with this issue?

A. This adjustment will also change the conversion factor used to change the Company's net operating income to revenue requirement.¹⁵ Therefore, the size of the estimate is tied to the net operating income approved in this case. Assuming the Company's case is accepted as filed, CUB estimates a revenue requirement associated with this adjustment of (\$67,000).

IV. Decoupling

Q. What is decoupling?

A. Decoupling is an adjustable price mechanism that breaks the link between the amount of energy a utility sells and the actual, allowed revenue collected by the utility. Decoupling mechanisms are used primarily to eliminate incentives that utilities have to increase profits by increasing the volume of retail sales, and the corresponding disincentives that they have to avoid reductions in sales. Decoupling mechanisms are most often considered in the context of introducing or expanding energy efficiency efforts or other demand-side management programs.¹⁶

Q. Do utilities in Oregon have decoupling mechanisms?

A. Yes, currently Portland General Electric Company (PGE), Cascade Natural Gas Company, Avista, and NW Natural Gas Company (NWN) have decoupling mechanisms.

///

///

¹⁵ CUB Exhibit 104.

¹⁶ See Revenue Regulation and Decoupling: A Guide to Theory and Application, Regulatory Assistance Project (Nov. 2016) available at <http://www.raponline.org/wp-content/uploads/2016/11/rap-revenue-regulation-decoupling-guide-second-printing-2016-november.pdf>.

1 **Q. Please explain the history and nature of Avista's decoupling mechanism.**

2 **A.** Avista's decoupling mechanism was adopted in a stipulation that was approved by
3 the Commission in its 2016 rate case, UG 288. In that stipulation, it was
4 contemplated that Avista, Staff, or other parties could recommend future changes to
5 the decoupling mechanism.¹⁷ Under the terms of its decoupling mechanism, Avista
6 files a proposed rate adjustment (either surcharge or rebate) on or before August 1
7 of each year based on the amount of deferred revenue recorded for the prior
8 January through December time period.¹⁸ The surcharge or rebate is effective
9 November 1 of each year. Avista has two deferral accounts to explicitly account
10 for weather and conservation (non-weather) decoupling. Customers are divided
11 into two rate groups: Residential and Commercial, and the mechanism compares
12 actual decoupled revenues, by rate group, to the allowed decoupled revenues
13 determined on a per-customer basis, with any differences deferred for later rebate
14 or credit.¹⁹ The amount subject to deferral is based on the difference between
15 actual therm sales, compared with the rate case forecast. The amount approved for
16 recovery or rebate to customers is then transferred into a Regulatory Asset or
17 Regulatory Liability account for amortization.²⁰ There is a three percent annual
18 incremental rate increase cap resulting from the decoupling adjustment.²¹ Interest
19 accrues on the decoupling deferrals at Avista's authorized rate of return. Once a

¹⁷ *In re Avista Corporation dba Avista Utilities Request for a General Rate Revision and Application for Authorization to Defer Expenses or Revenues Related to the Natural Gas Decoupling Mechanism*, OPUC Dockets Nos. UG 288 and UM 1753, Order No. 16-076 at Appx. A, page 6 ("The Parties agree that, by September 2019, there will be an opportunity to review the Decoupling Mechanism, which would allow the Company, Staff, and other parties to recommend changes, if any.").

¹⁸ OPUC Order No. 16-076 at Appx. A, Page 7.

¹⁹ OPUC Order No. 16-109 at 3.

²⁰ OPUC Order No. 16-076 at Appx. A, Page 8.

²¹ OPUC Order No. 16-076 at Appx. A, Page 9.

1 deferral balance is approved for amortization, interest accrues at the Modified
2 Blended Treasury rate.²² Avista files for re-authorization of its decoupling
3 mechanism deferral annually in Docket No. UM 1753.

4 **Q. Does CUB have any issues with Avista's decoupling mechanism? If so, please**
5 **explain.**

6 **A.** Yes. It is inappropriate for Avista's shareholders to be compensated for interest at
7 the Company's authorized rate of return (AROR) while the decoupling deferral is
8 accruing each year. Further, as CUB will expand upon, we do not believe a
9 deferral is the proper mechanism to use in this instance. When a utility is given
10 interest at its AROR—or otherwise receives its AROR—it is a signal from the
11 regulator and stakeholders that it is being compensated for some type of risk. For
12 example, utility shareholders are compensated for the risk borne when they finance
13 capital projects without knowing whether they will receive regulatory approval for
14 these projects under a prudence review. Once a project is found to be prudent,
15 shareholders are able to enjoy the return on that investment at the Company's rate
16 of return, though they continue to have an operational risk that enjoying the return
17 requires the investment to be used and useful.

18 **Q. What risk does the utility have in regard to recouping the money that accrues**
19 **in its decoupling deferral accounts?**

20 **A.** CUB believes the risk to the utility is substantially less than it would bear under a
21 more traditional deferred accounting application. Deferred accounting applications
22 are an exceptional form of ratemaking that the Commission has found "should be

²² OPUC Order No. 16-076 at Appx. A, Page 8.

1 used sparingly.”²³ Often, an application for deferred accounting arises from costs
2 that are unexpected and unforeseen, and the utility has to finance this unexpected
3 cost for later potential and uncertain amortization. Avista’s decoupling mechanism
4 is updated annually and has been approved every year since its inception. It is a
5 recurring event in which the Company bears no real risk outside of the application
6 of a prudence review and earnings test. While CUB does not dispute that AROR is
7 the interest rate for deferred accounts that the Commission approved in UM 1147,²⁴
8 we also do not believe a deferral is necessary or appropriate in this instance. To
9 quote the Commission’s Order in its investigation into deferred accounting:

10 If deferral is being sought for recovery of costs caused by a recurring
11 triggering event, **a deferred account is most likely not the proper**
12 **mechanism to be used.** In exercising our discretion under [the deferral
13 statute], we will consider whether there are other, more appropriate
14 regulatory tools to address recovery of the identified costs or revenues.²⁵

15 CUB believes that a deferred account in which the Company earns its AROR is
16 inappropriate for the recurring decoupling costs Avista incurs.

17 **Q. Are there more appropriate regulatory tools to address the recovery of the**
18 **annual, recurring decoupling costs Avista currently accrues in in deferred**
19 **accounts?**

20 **A.** Yes. Given the Commission’s position that deferred accounting is likely improper
21 for recurring costs, there are different regulatory tools that can enable Avista’s
22 decoupling mechanism to continue to function as it has while alleviating CUB’s
23 concern that the deferred accounts are collecting interest at the Company’s AROR.

²³ OPUC Order No. 05-1070 at 10.

²⁴ OPUC Order No. 05-1070 at 13-14.

²⁵ OPUC Order No. 05-1070 at 10 (emphasis added).

1 CUB believes Avista should adopt the methodology PGE uses for its decoupling
2 mechanism.

3 **Q. What is the history of PGE's decoupling mechanism and how does it operate?**

4 **A.** PGE's decoupling mechanism was initially proposed and eventually adopted in its
5 2008 General Rate Case, UE 197.²⁶ PGE's decoupling adjustment is currently
6 delineated in its Tariff Schedule 123. The mechanism is a Sales Normalization
7 Adjustment (SNA), which is a simple balancing account and rate adjustment "true
8 up" mechanism with the following attributes:

9 1) it establishes the monthly fixed costs to be recovered on a per customer basis for
10 each applicable customer class (i.e., residential and non-residential below 1 aMW
11 during prior year) based on the last approved general rate case;

12
13 2) each month the mechanism determines the dollar differences (positive or
14 negative) between actual dollar amounts received from customers through their
15 energy charges for fixed costs and the dollar amount that would have been received
16 if the fixed cost rate (dollars per customer per month) had been in effect; and

17
18 3) annually determine and apply as an on-going forward basis a Schedule 123
19 adjust rate to applicable customers to either refund or collect the difference
20 described above.²⁷

21
22 The SNA uses a balancing account that reconciles, on a monthly basis, differences
23 between revenues resulting from applying distribution, transmission, and fixed
24 generation charges to weather-normalized kWh Energy sales less actual revenues.²⁸

25 The balancing account in PGE's mechanism can carry forward both positive and
26 negative balances. In approving PGE's decoupling mechanism, the Commission
27 chose to apply interest at the Blended Treasury Rate to the monthly balancing

²⁶ OPUC Order No. 09-020 at 27-30.

²⁷ UE 197 – PGE/100/Piro/17-21.

²⁸ Portland General Electric Company Schedule 123 Decoupling Adjustment, OPUC Docket No. Advice No. 18-26 (Dec. 18, 2018).

1 account. In doing so, it explicitly denied PGE's proposal to accrue interest at its
2 AROR, noting that risk is decreased with a balancing account because recovery is
3 more certain than for unamortized deferred accounts.²⁹ PGE's Schedule 123
4 decoupling mechanism is reviewed annually as an advice filing and taken up at a
5 Commission public meeting.³⁰

6 **Q. What is CUB's recommendation?**

7 **A.** CUB proposes to alter Avista's decoupling mechanism to allow it to continue to
8 function as it has, but to avoid interest unnecessarily accruing at the Company's
9 AROR. CUB proposes to make this change for residential customers and for non-
10 residential customers. Additionally, CUB proposes to make this change effective
11 for the 2020 calendar year. The interest currently accruing in the deferred accounts
12 of Avista's mechanism over-compensate the Company's shareholders with no
13 attendant risk while simultaneously over-charging customers. CUB believes
14 Avista's decoupling mechanism should more closely match PGE's—a balancing
15 account that is updated monthly and accrues interest at the Modified Blended
16 Treasury Rate. This would maintain Avista's full decoupling mechanism through a
17 more appropriate automatic adjustment clause.

18 **Q. Does this conclude your testimony?**

19 **A.** Yes.

²⁹ OPUC Order No. 09-020 at 28-29.

Re: UM 1996 – Withdrawal of Staff’s Application to Defer Avista Corporation’s Termination Fee Revenue Resulting From Termination Of Merger Agreement Between Hydro One Limited, Olympus Holding Corp., Olympus Corp., and Avista Corporation

On January 23, 2019, the Public Utility Commission of Oregon Staff (Staff) filed an application for the deferral of Avista Corporation’s termination fee revenue resulting from termination of the merger agreement between Hydro One Limited, Olympus Holding Corp., Olympus Corp., and Avista Corporation. Staff hereby withdraws its deferral application, and requests that the docket be closed.

Staff initially filed the deferral application pursuant to ORS 757.259(2)(e) on the same day as the notice of termination of the Merger Agreement was filed in Docket UM 1897, noting that the termination fee, when due, must be paid no later than two business days after the date of the applicable termination. Due to the lack of clarity in relation to this termination fee and the costs that may be borne by and benefits received by ratepayers, Staff determined that filing a deferral application was necessary to allow consideration of those issues.

Subsequently, Staff has received assurances from the Company that it has gone to great lengths to account for all costs associated with this transaction and the termination fee outside of utility accounts and that shareholders will bear all costs with no impact to ratepayers. Staff finds these efforts may appropriately be examined in any future general rate case filed by the Company.

Accordingly, Staff expects Avista Corporation will prepare and retain detailed records associated with any attempted mergers, sufficient to provide a full accounting of those costs in any future general rate proceeding, that demonstrate there is no impact on ratepayers from such activity. Such records shall demonstrate that no ratepayer resources are applied to merger activities, including but not limited to excluding any general loadings of costs to employee time, incentives associated with merger activity, consultant fees, and any additional regulatory

Docket UM 1996
February 7, 2019
Page 2

personnel. And finally, Staff expects Avista Corporation to make all such records available to Staff for review.

On consideration of the foregoing, Staff withdraws its deferral application, and requests that the docket be closed.

Sincerely,

Johanna Riemenschneider
Sr. Assistant Attorney General
Of Attorneys for Staff of the
Public Utility Commission of Oregon

Calculation of Avista's Apportionment Tax Rate					
Oregon Apportionment Rate	*	Oregon's Tax Rate	*	Natural Gas Portion Of Oregon Operations	= Oregon's Apportionment Tax Rate
9.56%	*	7.60%	*	75%	= 0.545%

Calculation of CUB's Apportionment Tax Rate						
Oregon Apportionment Rate	*	Oregon's Tax Rate	*	Natural Gas Portion Of Oregon Operations	=	Oregon's Apportionment Tax Rate
9.56%	*	7.60%	*	64%	=	0.465%

Gross up of System Apportionment Tax Rate		
Inputs		
Oregon Share of System Revenues		8.26%
Avista's Calculation of Apportionment Tax Rate		0.545%
CUB's Calculation of Apportionment Tax Rate		0.465%

Apportionment Tax Rate	/	Oregon % of Revenues	"Grossed Up" Apportionment Tax Rate
0.545%		8.26%	6.598%
0.465%		8.26%	5.630%
