DISPOSITION: APPLICATION FOR WAIVER APPROVED

On October 2, 2007, Qwest Corporation (Qwest) filed an application with the Public Utility Commission of Oregon (Commission) requesting a waiver of the Federal Communications Commission (FCC) requirements involving the Months to Exhaust (MTE) criterion for the Pendleton rate center. Qwest is requesting that NeuStar, the Oregon number pooling administrator, assign a block of 1,000 numbers in the company's PNTNOR56DS0 switch to allow the company to satisfy the request of its customer, Cayuse Technologies of Pendleton, Oregon for new numbers..

Related to the opening of new facilities in Pendleton, Cayuse Technologies requires 500 sequential numbers for its network dialing plan. The customer is requesting the numbers be from number blocks 2XXX, 4XXX, 5XXX, 6XXX or 7XXX. Qwest examined its PNTNOR56DS0 switch and confirms that the company does not currently have numbers available in its inventory to satisfy the customer's request.

On December 28, 2001, the FCC released Order No. 01-362 (FCC Order). The FCC delegated authority to state commissions to hear claims that a safety valve mechanism should be applied when the North American Numbering Plan Administrator (NANPA) or pooling administrator denies a specific request for numbering resources. In order to secure state commission authority for a safety valve mechanism, a carrier must make:

1. A showing that the carrier has received a customer request for numbering resources in a given rate center that it cannot meet with its current inventory.¹

OR

¹ A carrier may demonstrate such a need by providing the Commission with documentation of the customer request and current proof of utilization in the rate center.

2. A showing that even though the safety valve mechanism should be narrowly applied to meet specific customer requests or to meet a carrier's immediate numbering needs, the Commission should still consider the request from a carrier with multiple switches in a given rate center and determine whether relief is warranted on a case-by-case basis.

Qwest has made the first showing. Thus, Qwest's current request meets the requirements for a waiver of the MTE criterion. Staff recommends the Commission grant a waiver of FCC requirements involving the MTE criterion for the Pendleton rate center, and the PNTNOR56DS0 switch. Staff's memo is attached as Appendix A.

ORDER

IT IS ORDERED that Qwest Corporation's request for waiver of the Federal Communications Commission requirements involving Months to Exhaust criterion is approved.

Made, entered, and effective OCT 11 2007

A party may request rehearing or reconsideration of this order pursuant to ORS 756.561. A request for rehearing or reconsideration must be filed with the Commission within 60 days of the date of service of this order. The request must comply with the requirements in OAR 860-014-0095. A copy of any such request must also be served on each party to the proceeding as provided by OAR 860-013-0070(2). A party may appeal this order by filing a petition for review with the Court of Appeals in compliance with ORS 183.480-183.484.

PUBLIC UTILITY COMMISSION OF OREGON
INTEROFFICE CORRESPONDENCE

DATE: October 8, 2007

TO: File through Lee Sparling and Dave Booth

SUBJECT: UM 1350, Qwest Corporation (Qwest): Application for waiver of Federal Communications Commission (FCC) requirements for assignment of additional numbering resources.

On October 2, 2007, Qwest filed an application requesting a waiver of the FCC requirements involving the Months to Exhaust (MTE) criterion for the Pendleton rate center. The filing has been docketed as Docket No. UM 1350. Qwest is requesting that NeuStar, the Oregon number pooling administrator, open a block of 1,000 numbers in the company's PNTNOR56DS0 switch to allow the company to satisfy the request of Cayuse Technologies of Pendleton, Oregon for new numbers.

Qwest's customer, Cayuse Technologies, is opening a new call center in Pendleton, Oregon and will require 500 sequential numbers. The customer is requesting 500 sequential numbers in blocks 2XXX, 4XXX, 5XXX, 6XXX or 7XXX. Qwest does not have sequential numbers in its number inventory to satisfy the customer's request and asks that the new numbers be available by October 21, 2007. This request will not require authorization to open a new NXX code in the Pendleton rate center since there are currently 1,000 number blocks available in the plan administrator's (NeuStar) number inventory. Numbers in the requested block that are not assigned to Cayuse Technologies, as well as any old numbers turned back to Qwest, will be added to Qwest's number inventory for future assignment to other customers.

On October 1, 2007, Qwest requested from NeuStar the numbers to satisfy its customer. The request was immediately denied as not meeting the FCC's MTE requirements for assignment of additional numbers. According to FCC guidelines, to qualify for additional numbering resources, carriers must demonstrate that the rate center for which the numbers are requested is six months or less to exhaust, and is at 75% or more utilization. Qwest included with its application a copy of the request to NeuStar, which shows that the Pendleton rate center is at 289.7 months to exhaust and is at 67.6% utilization. Since Qwest's request to NeuStar does not meet the FCC guidelines, the company must get a waiver from the Oregon PUC for the additional numbers.

In FCC 01-362, dated December 28, 2001, the FCC adopted a safety valve mechanism to allow individual state commissions, under special circumstances, to hear claims of carriers when the North American Numbering Plan Administrator (NANPA) or Pooling Administrator denies a specific request for numbering resources. In the order, the FCC adopted one specific safety valve for "carriers that receive a specific customer request for numbering resources that exceeds their [the carrier's] available inventory;" a second safety valve was approved for "carriers experiencing rapid growth in a given rate area;" and thirdly, the FCC, in its order, gives states "some flexibility to direct the NANPA or Pooling Administrator to assign additional numbering resources to carriers that have demonstrated a verifiable need for additional numbering

resources” that don’t meet the criteria for the two safety valves. See FCC 01-362, paragraphs 61 through 66.

Qwest’s application meets the requirements of the FCC’s first safety valve, “carriers that receive a specific customer request for numbering resources that exceeds their [the carrier’s] available inventory.” Consequently, the commission should approve Qwest’s request for waiver of the FCC requirements involving MTE criterion. A proposed order has been prepared for Lee Sparling’s signature.

Qwest, UM 1350
