#### BEFORE THE PUBLIC UTILITY COMMISSION

### **OF OREGON**

**UE 317** 

In the Matter of

PORTLAND GENERAL ELECTRIC COMPANY,

Establishes Schedule 146 Colstrip Power Plant Operating Life Adjustment to Implement into Rates.

**ORDER** 

DISPOSITION: STAFF'S RECOMMENDATION ADOPTED

This order memorializes our decision, made and effective at our December 6, 2016 Regular Public Meeting, to adopt Staff's recommendation in this matter. The Staff Report with the recommendation is attached as Appendix A.

Dated this \_\_\_\_\_ day of December, 2016, at Salem, Oregon.

Lisa D. Hardie

Chair

John Savage

Commissioner

Stephen M. Bloom

Commissioner

A party may request rehearing or reconsideration of this order under ORS 756.561. A request for rehearing or reconsideration must be filed with the Commission within 60 days of the date of service of this order. The request must comply with the requirements in OAR 860-001-0720. A copy of the request must also be served on each party to the proceedings as provided in OAR 860-001-0180(2). A party may appeal this order by filing a petition for review with the Circuit Court for Marion County in compliance with ORS 183.484.

# ORDER NO . 16 4 6 8

ITEM NO. 2

# PUBLIC UTILITY COMMISSION OF OREGON STAFF REPORT PUBLIC MEETING DATE: December 6, 2016

REGULAR	X CONSENT EFFECTIVE DATE January 1, 2017
DATE:	November 28, 2016
TO:	Public Utility Commission
FROM:	Ming Peng Mp.
THROUGH:	Jason Eisdorfer and Marc Hellman
SUBJECT:	PORTLAND GENERAL ELECTRIC: (Docket No. ADV 391/Advice No. 16-15) Establishes the Tariff Schedule 146 Colstrip Power Plant Operating Life Adjustment to implement into rates the Company's share

of the revenue requirement effect of the change in the Colstrip Power Plant Unit 3 and 4, with a requested effective date of January 1,2017.

#### STAFF RECOMMENDATION:

Staff recommends that the Commission approve Portland General Electric Company's (PGE or Company) requested changes to Tariff Schedule 146 (Tariff), Colstrip Power Plant Unit 3 and 4 (Colstrip) Operating Life Adjustment, beginning on January 1, 2017, and ending on December 31, 2030, subject to the following conditions and reporting requirements:

- PGE will submit a compliance filing annually to update Tariff Schedule 146 with rates calculated in accordance with the methodology included in PGE's Advice 16-15.
- If any new applicable laws, rules, or Commission orders are enacted or issued within the next 14-year depreciation period, PGE will comply with all applicable new mandates, and submit applications to the Commission for review and approval before updating the calculations for depreciation, revenue requirement, and corresponding tariffs.
- For any potential capital additions in decommissioning costs ("decommissioning" means removing a power plant from service), PGE will

submit the calculations for the incremental rate impacts to the Commission for review and approval.<sup>1</sup>

- 4. In the event PGE continues to have an ownership share of the Colstrip plant(s) after December 31, 2029,<sup>2</sup> and the plant(s) continue operation past that date, PGE will provide to the Commission, by no later than March 31 of each subsequent year, an informational notice stating whether PGE retains ownership of the plant(s) and an estimate of that year's forecasted annual net economic value of PGE's share of Colstrip.
- 5. After Colstrip is fully depreciated and before the plant is closed, subject to the provisions included in Senate Bill 1547, Section 1(4), PGE should pass the ongoing costs and benefits, if any, to customers during the period January 1, 2031 through December 31, 2035.<sup>3</sup>
- 6. If the Company decides to sell some or all of its fractional ownership in the future, PGE must file with the Commission an application for approval of this transaction in accordance with applicable statutes and rules. In reviewing such a future filing, Staff will consider the net gain or net loss of the sale of the plant for allocation to utility customers. In such a filing, PGE will need to estimate the impact of the sale to affected customers, the bill changes per month on Schedule 146 as a result of the property sales, and an overall annual rate impact.

#### **DISCUSSION:**

#### Issue

Whether the Company's Advice No. 16-15, establishing PGE's Tariff Schedule 146 to shorten the Colstrip's Operating Life Expectancy, is consistent with applicable law and is in its customers' interest, such that the Commission should approve the filing.

<sup>1</sup> An example of a law that could trigger this condition is the new Coal Combustion Residual (CCR) requirements the EPA issued in 2015 on Colstrip 3 & 4.

 <sup>&</sup>lt;sup>2</sup> See Senate Bill 1547. Coal plants are not to be used to serve Oregon customers beginning in 2030, although depreciation costs are included in rates through the year 2030. Colstrip though could be treated differently than other coal plants and have a five-year extension even after being fully depreciated.
 <sup>3</sup> S.B. 1547, as enacted, provides PGE the exclusive option to provide the economic value to customers even though PGE customers have fully-paid for the plant through 2030. In Staff's view this treatment of plant, of the utility having the exclusive optionality, is inconsistent with traditional ratemaking practices.

#### Applicable Law

Senate Bill 1547, enacted by the 2016 Legislature requires each electric company providing electricity to retail electricity consumers located in this state to eliminate coal-fired resources from electric company's electricity supply by January 1, 2030. See Attachment A. Senate Bill 1547, ELIMINATION OF COAL FROM ELECTRICITY SUPPLY.

Section 1(3) compels the Commission to adjust the depreciation schedule of an electric company's coal-fired resource so that the coal-fired resource is fully depreciated on or before December 31, 2030, if (1) the electric company is the minority owner of no more than one coal-fired resource with no more than four generating units, and (2) the electric company serves at least 800,000 retail electricity consumers and its service territory is located only in Oregon. PGE is the only utility that meets the requirements of this section.

Section 2 of the Bill provides the Commission with authority to allocate the net gain or loss from the sale of a coal-fired resource to customers of an electric company if that electric company makes retail sales to 25,000 or more retail electricity consumers in Oregon.

ORS 757.140(1) requires that "Every public utility shall carry a proper and adequate depreciation account. The Public Utility Commission shall ascertain and determine the proper and adequate rates of depreciation of the several classes of property of each public utility. The rates shall be such as will provide the amounts required over and above the expenses of maintenance, to keep such property in a state of efficiency corresponding to the progress of the industry. Each public utility shall conform its depreciation accounts to the rates so ascertained and determined by the commission. The commission may make changes in such rates of depreciation from time to time as the commission may find to be necessary."

OAR 860-022-0025(2) and OAR 860-022-0030(1) require that each energy utility changing existing tariffs or schedules or increasing rates in those schedules must indicate the change in rates and the number of customers affected.

ORS 757.210 (1)(b) further provides that "As used in this subsection, automatic adjustment clause means a provision of a rate schedule that provides for rate increases or decreases or both, without prior hearing, reflecting increases or decreases or both in costs incurred, taxes paid to units of government or revenues earned by a utility and that is subject to review by the commission at least once every two years."

<sup>&</sup>lt;sup>4</sup> S.B. 1547, 78th Leg., Reg. Sess. (Or 2016) ("SB 1547") at Section 1(2).

In Commission Order No. 14-297 (Docket UM 1679), the Commission adopted for PGE the changes in depreciation parameters (i.e., assets Survivor Curve-Projection Life, Net Salvage Ratio) by FERC account. In its Order, the Commission required the Company to implement the depreciation, amortization, and net salvage rates proposed in the UM 1679 parties' stipulation as of January 1, 2015. *See also* Order No. 14-442 (the general rate case order issued in Docket UE 283).

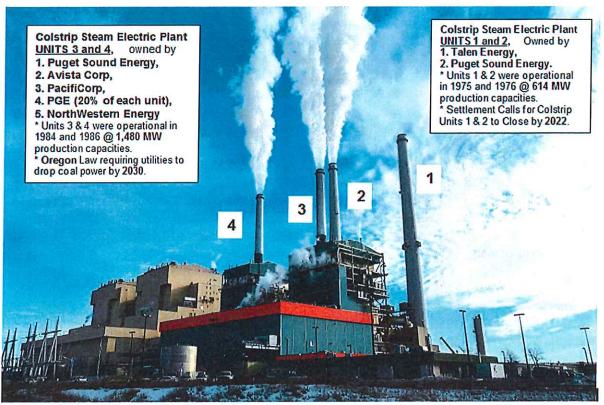

#### Analysis

#### Background

Pursuant to SB 1547 Section 1, the Company filed its Advice No. 16-15 on October 12, 2016, requesting establishment of the Tariff Schedule 146 Colstrip Power Plant Operating Life Adjustment to implement the rates for PGE's share of the revenue requirement effect of the change in the Colstrip Power Plant Unit 3 and 4 and associated common facilities, with a requested effective date of January 1, 2017. If allowed to go into effect, the Tariff will increase PGE's revenues by \$5.6 million, which translates to a 0.3 percent increase on current rates, inclusive of public purpose charges.

PGE's filing is to update the accelerated depreciation date and it also provides the calculations for incremental cost impacts on depreciation, revenue requirements, and electric tariffs. PGE also proposes an Automatic Adjustment Clause (AAC) to implement the revenue requirement effects, such that the depreciable capital investment of the coal-fired resource would be fully depreciated on or before December 31, 2030. This would be consistent with SB 1547 Section 1(3). The Company further states that it "will update Schedule 146, effective January 1, 2018, and each year thereafter, to account for updates to the load forecast and decommissioning costs, among other factors."

The Colstrip coal plant in Montana serves utility customers across the Pacific. PGE owns 20 percent each of Colstrip Units 3 and 4. At 296 net megawatt of capacity, PGE's power can light nearly 300,000 homes. The following illustration provides additional information on this topic.

Colstrip Power Plants 1-4 from right to left

On October 25, 2016, the Industrial Customers of Northwest Utilities (ICNU) filed comments recommending that the Commission reject PGE's Advice Filing 16-15. Very generally stated, ICNU's primary points are: it does not support single-issue ratemaking; it does not support the use of an AAC; and, because SB 1547 does not prescribe the timing of PGE's filing, ICNU recommends the Commission take this issue up during PGE's next rate case or depreciation case filing to adjust Colstrip's depreciable life. Staff addresses ICNU's concerns in its Staff Review.

## Staff Review

Staff's analysis consists of the following three topics:

- 1. The starting period for accelerated depreciation;
- 2. PGE's AAC filing and ICNU's single-issue ratemaking concern; and
- 3. The incremental rate impacts on depreciation, revenue requirement, and the effect of customers' rates

#### 1. The starting period for accelerated depreciation

As stated, ICNU recommends the Commission not approve the filing for several reasons. One issue is ICNU's argument that PGE has not shown that it either cannot absorb the higher depreciation rates or wait to file the change in depreciation rates when the Company files its next rate case. On the latter alternative, ICNU states that the general rate case option would allow the Commission to undertake a full and complete review of all of PGE's costs, not just higher depreciation rates.

Staff does not support ICNU's recommendation for two reasons. First, the change in Colstrip's depreciation life comes from SB 1547. SB 1547 Section 1(3)(b) requires the Commission to allow PGE to adjust its depreciation schedule for Colstrip so that it is fully depreciated on or before December 31, 2030. Therefore PGE is responding to new law. As such, PGE should not be expected to bear those additional costs that are a direct result of SB 1547.

The second reason Staff does not support ICNU's recommendation is because of the notion of "generational equity." To start, it is not a question of *whether* the Commission will allow accelerated depreciation for Colstrip. It is a given under SB 1547 that the Colstrip plants need to be fully depreciated by the end of 2030. The question thus becomes *when* will the Commission allow such accelerated depreciation to commence?

The principle of generational equity dictates that it would be unfair to future rate payers to wait to implement the accelerated depreciation of Colstrip. In other words, accepting ICNU's recommendation would allow current customers to pay lower depreciation rates, with the unfair result that future customers would pay the higher rates required by Colstrip's accelerated depreciation. Staff supports implementing the change in plant depreciable lives now in order to lower the rate impact in cents per kWh terms.

To explain this point in greater detail, without accelerated depreciation, Colstrip will have 21 years "composite" remaining life ("composite" refers to the weighted average remaining life calculated by FERC accounts). Staff compared annual depreciation expense for a remaining life of: (a) 14 years if starting from 1/1/2017, (b) 13 years remaining if starting from 1/1/2018, and (c) 12 years remaining if starting from 1/1/2019. Staff found the annual depreciation expenses are different significantly. This is illustrated in the following table:

12/31/2016	Remaining Life	Annual depr.	Annual depr.	Depr.Expense	Revenue Reqmt
Net Plant \$	Year	Expense \$	Increase \$	Increase %	Increase \$
165,409,002					
1/1/2019	12	13,784,083	7,603,389	123.0%	6,885,963
1/1/2018	13	12,723,769	6,543,075	105.9%	6,524,045
1/1/2017	14	11,814,929	5,634,234	91.2%	5,617,848
Current 2016	21	6,180,694	0	0%	0

Current annual depreciation expense, which is approximately \$6.18 million per year, has 21 years remaining life. To start accelerated depreciation on January 1, 2017, means Colstrip would have 14 years remaining life, which translates to approximately \$11.8 million annual depreciation expense. If the Commission delays the start of accelerated depreciation until January 1, 2018, Colstrip will have 13 years remaining life, and depreciation expense would be about \$12.7 million per year. Finally, if the Commission waits until January 1, 2019, there will be 12 years remaining life, which results in a depreciation expense of approximately \$13.8 million per year.

Based on the calculations above, it is clear that for any capital recovery or depreciation with a given plant termination date, the longer the wait to commence accelerating the depreciation, the shorter the payment term and the higher the pay rate (annual depreciation expenses). Therefore, Staff recommends starting accelerated depreciation as soon as possible, as PGE proposes with its requested effective date of January 1, 2017.

# 2. PGE's AAC filing and ICNU's single-issue ratemaking concern

PGE's application for an AAC in this filing is consistent with SB 1547 and is appropriate in the present circumstances.

An AAC under ORS 757.210 (1)(b) is a schedule that allows for rate increases or decreases or both, without a prior hearing. However, for tariff filing purposes, the rate change still, "is subject to review by the commission at least once every two years." ORS 757.210(1)(b). Therefore, as with all AACs, there will be opportunities for timely reviews of PGE's schedule with an AAC by the Commission.

Further, Staff believes that SB 1547's mandate for earlier elimination of coal-derived power in Oregon better answers ICNU's concern about single-issue ratemaking. As just stated above, because of generational equity concerns, recognizing the fact that it is not

# ORDER NO . 1 6 8

Advice No. 16-15 November 28, 2016 Page 8

a question of *whether* to accelerate Colstrip's depreciation but *when* to do so, Staff recommends that the Commission allow the accelerated depreciation to commence now and not wait for PGE's next general rate case to conclude at a date in the future.

3. The incremental rate impacts on depreciation, revenue requirement, and the effect of customers' rates

SB 1547's accelerated depreciation requirements will have incremental rate impacts on: (1) depreciation, (2) revenue requirement, and (3) customer rates. Staff's analyses included each of the following steps.

Staff sent out 10 data requests to PGE as well as participated in phone conferences with PGE's staff on the effect of its application on depreciation, revenue requirement, and its customers' rates.

(1) Rate impact on depreciation

In its filing, PGE applied depreciation rates as prescribed in Order No. 15-356 (UE 294) to determine the Colstrip net plant balance as of December 31, 2016. PGE then calculated the depreciation expense under the revised depreciable end of life date.

As stated, Colstrip currently has 21 years composite remaining life (weighted average remaining life calculated by FERC accounts). With accelerated depreciation, PGE will shorten Colstrip's remaining life to 14 years with rates effective as of January 1, 2017. Staff verified PGE's accelerated depreciation calculation and requested for the historic plant balance data (Attachment B. Table 2. 2012 to 2016 Plant Balances). Staff confirmed that PGE's accelerated depreciation calculations over the period of January 1, 2017 to December 31, 2030 meet the Commission requirements.

This accelerated depreciation will shorten the Colstrip composite Remaining Service Life by seven years (i.e. from 21 years remaining to 14 years – see Attachment B. Table 3, the composite remaining life calculation for Colstrip Unit 3 & 4). The result shows that the depreciation expense will be \$11.8 million per year, an increase from current the \$6.18 million per year (which is an increase of approximately \$5.6 million per year). See Attachment B. Table 1, incremental depreciation annual expense (1) depreciation@ end life of 2030, and Incremental depreciation annual expense (2) 2016 annual depreciation.

## (2) Rate impact on Revenue Requirement

Under cost of service regulation, Revenue Requirement that measured by cost of service, refers to the revenues the utility must earn to recover the cost of providing service and to earn a reasonable return on its investment. As a result of the depreciation expense increase, PGE's Revenue Requirement will be increased by \$5.6 million per year. See Attachment B. Table 5. 2017 Incremental Revenue Requirement - Colstrip Accelerated Depreciation. PGE's Accumulated Depreciation (the cost of the investment in a gross plant that is recovered through the cost-of-service as Depreciation Expense) has been correctly deducted from rate base in the revenue requirement model. Staff verified the revenue requirement model item-by-item, and confirmed that PGE's calculations meet the Commission's requirements.

## (3) Rate impact on customers

Staff reviewed the Company's rate calculations of Incremental Electric Tariff for each of 15 sub-schedules under the Schedule 146 (Attachment Table 6, Incremental Electric Tariff, Calculation of Schedule 146 Prices), including base calculation and proposed calculation, base price and proposed price as well as how the customer numbers would be affected. See Attachment B. Table 4. ESTIMATED EFFECT ON CONSUMERS' TOTAL ELECTRIC BILLS.

Depreciation is one of the Company's largest expenses in the revenue requirement. An increase to depreciation expense, with a corresponding increase to revenue requirement, PGE's customer rates will increase accordingly. Schedule 7 under the Schedule 146, shows that a typical residential customer consuming 840 kWh monthly will see a bill increase of approximately \$0.30. See Attachment B. Table 7. The Schedule 146 rates will increase for each sub-schedule. See Attachment B. Table 6.

Please note that Colstrip units 3 and 4 will "be eliminated" on January 1, 2030, at which time the site may or may not be decommissioned. This filing only deals with Colstrip accelerated depreciation calculation and costs associated with revenue requirement, and electric tariff, not including the plant decommissioning costs. In PGE's response to Staff's information request No. 7, the Company stated that it "currently plans to include a revised updated estimate of terminal decommissioning costs in PGE's next depreciation study, which we are required to complete no later than the end of 2018."

## Conclusion

Having reviewed and analyzed the PGE application as indicated above, given that the recovery of accelerated depreciation through Schedule 146 is subject to an automatic adjustment clause, Staff's prudence review focused on whether accelerated depreciation adjustments were calculated correctly. Schedule 146 rates, reflect the accelerated depreciation to be recovered from January 1, 2017 to December 31, 2030, have been correctly updated in the filed tariff sheets 146. Staff recommends that the Commission approve Docket No. ADV 391/Advice 16-15 filing and the methodology used to calculate new rates for Schedule 146.

PGE has reviewed this memo and has expressed no substantive concerns.

#### PROPOSED COMMISSION MOTION:

Approve, subject to Staff's recommended conditions and reporting requirements, PGE's requested changes to Schedule 146, to be effective January 1, 2017.

#### Attachment A. Senate Bill 1547, ELIMINATION OF COAL FROM ELECTRICITY SUPPLY

78th OREGON LEGISLATIVE ASSEMBLY-2016 Regular Session

# Enrolled Senate Bill 1547

Sponsored by Senator BEYER; Senators BATES, BURDICK, DEMBROW, DEVLIN, GELSER, HASS, MONNES ANDERSON, MONROE, RILEY, ROSENBAUM, SHIELDS, STEINER HAYWARD, Representatives VEGA PEDERSON, WILLIAMSON (Presession filed.)

CHAPTER ....

#### AN ACT

Relating to public utilities; creating new provisions; amending ORS 469A.005, 469A.020, 469A.052, 469A.055, 469A.060, 469A.075, 469A.100, 469A.120, 469A.135, 469A.140, 469A.145, 469A.210 and 757.375; repealing ORS 757.370; and declaring an emergency.

Be It Enacted by the People of the State of Oregon:

#### ELIMINATION OF COAL FROM ELECTRICITY SUPPLY

#### SECTION 1. (I) As used in this section:

(a) "Allocation of electricity" means, for the purpose of setting electricity rates, the costs and benefits associated with the resources used to provide electricity to an electric company's retail electricity consumers that are located in this state.

(b)(A) "Coal-fired resource" means a facility that uses coal-fired generating units, or that uses units fired in whole or in part by coal as feedstock, to generate electricity.

- (B) "Coal-fired resource" does not include a facility generating electricity that is included as part of a limited duration wholesale power purchase made by an electric company for immediate delivery to retail electricity consumers that are located in this state for which the source of the power is not known.
  - (c) "Electric company" has the meaning given that term in ORS 757.600.
  - (d) "Retail electricity consumer" has the meaning given that term in ORS 757.600.
- (2) On or before January 1, 2030, an electric company shall eliminate coal-fired resources from its allocation of electricity.
- (3)(a) The Public Utility Commission shall adjust any schedule of depreciation approved by the commission for an electric company's coal-fired resource if:
- (A) The electric company holds a minority ownership share in only one coal-fired resource, with no more than four generating units; and
- (B) The electric company serves at least 800,000 retail electricity consumers and only retail electricity consumers that are located in this state.
- (b) The adjusted depreciation schedule described in paragraph (a) of this subsection must require the coal-fired resource described in paragraph (a)(A) of this subsection to be fully depreciated on or before December 31, 2030.
- (4) Notwithstanding subsections (2) and (3) of this section, for the number of years requested by the electric company, not to exceed five years after the coal-fired resource is fully

Page 1

Enrolled Senate Bill 1547 (SB 1547-B)

depreciated, the commission shall authorize an electric company described in subsection (3) of this section to include in the company's allocation of electricity the costs and benefits associated with the coal-fired resource described in subsection (3)(a)(A) of this section if:

- (a) The electric company requests the commission to authorize the allocation of electricity; or
- (b) The owners of the coal-fired resource agree to close the coal-fired resource on or before the date that is five years after the date the coal-fired resource is fully depreciated.
- (5) For purposes of evaluating the prudence of an investment decision regarding a coal-fired resource made after the effective date of this 2016 Act, or an investment related to the continued operation of a coal-fired resource made after the effective date of this 2016 Act, the useful life of the coal-fired resource may not be considered to be any later than January 1, 2030, unless the commission determines otherwise.
- (6) Notwithstanding ORS 757.355, this section does not prevent the full recovery of prudently incurred costs related to the decommissioning or remediation of a coal-fired resource or the closure of a coal-fired resource, at the time those costs are incurred.

SECTION 2. The Public Utility Commission may consider the net gain or net loss upon the sale of any coal-fired resource, as defined in section 1 of this 2016 Act, for allocation to the retail electricity consumers, as defined in ORS 757.600, of an electric company that makes sales of electricity to 25,000 or more retail electricity consumers in this state.

#### AMENDMENTS TO STATUTES REGULATING RENEWABLE PORTFOLIO STANDARDS (Definitions)

SECTION 3. ORS 469A.005 is amended to read:

469A.005. As used in ORS 469A.005 to 469A.210:

- (1) "Acquires service territory" does not include an acquisition by a city of a facility, plant, equipment or service territory within the boundaries of the city, pursuant to ORS 225.020 or city charter, if the city:
- (a) Already owns, controls or operates an electric light and power system for supplying electricity to the inhabitants of the city and for general municipal purposes;
- (b) Provides fair, just and reasonable compensation to the electric company whose service territory is acquired that:
- (A) Gives consideration for the service territory rights and the cost of the facility, plant or equipment acquired and for depreciation, fair market value, reproduction cost and any other relevant factor; and
- (B) Is based on the present value of the service territory rights and the facility, plant and equipment acquired, including the value of poles, wires, transformers and similar and related appliances necessarily required to provide electric service; and
- (c) Pays any stranded costs obligation established pursuant to section 18 of this 2016 Act. [(1)] (2) "Banked renewable energy certificate" means a bundled or unbundled renewable energy certificate that is not used by an electric utility or electricity service supplier to comply with a renewable portfolio standard in a celendar year, and that is carried forward for the purpose of compliance with a renewable portfolio standard in a subsequent year.
- [(2)] (3) "BPA electricity" means electricity provided by the Bonneville Power Administration, including [all] electricity [from] generated by the Federal Columbia River Power System hydroelectric projects and [other] electricity acquired by the Bonneville Power Administration by contract.
- [(3)] (4) "Bundled renewable energy certificate" means a renewable energy certificate for qualifying electricity that is acquired;
- (a) By an electric utility or electricity service supplier by a trade, purchase or other transfer of electricity that includes the renewable energy certificate that was issued for the electricity; or
